# **Executive Summary**

This report has been prepared to document the impact environmental monitoring works conducted for KCRC West Rail Contract CC601 – Civil and Infrastructure Works. Impact air, noise and water quality monitoring were carried out between 1 and 31 May 2003. No exceedance of Action and Limit Levels was recorded for air, noise and water quality.

ETS-Testconsult Limited (ETL) has been commissioned by Zen Pacific - China State - Ngo Kee Joint Venture (ZPCSNKJV) as Environmental Team (ET) to provide impact Environmental Monitoring and Audit (EM&A) services for the KCRC West Rail Contract CC601 – Civil and Infrastructure Works. ETL is responsible for providing technical staff and monitoring equipment to conduct monitoring procedures for the captioned project.

The Independent Environmental Checker (IEC) carried out monthly site audit on 13 May 2003. By the field observation, several remarks were also made. First, follow up the previous audit on chemical waste, the diesel drums were covered by tarpaulin sheets; Second, follow up the previous audit on air quality, the site entrance and the haul road are wetted; Third, rubbish was stockpile inside storage area. The Contractor was instructed to remove the rubbish immediately and provide photo for record. Moreover, trip tickets for chemical wastes and general refuse were inspected and were found in order.

No generation rate of chemical waste record in this month and no record of surplus excavated materials produced to the public dump in this month.

The IEC had no comment on the April 2003 Monthly EM&A report.

With reference to the work program and by routine site inspection on 19 May 2003, the major environmental impact in May was general earthwork. The Contractor was requested to improve dust suppression measures. The major construction activities from June 2003 to August 2003 include general earth works, passing vehicles, E&M works and landscaping works. In the following three months, the major impacts on the environment will be dust emission from major haul roads. The Contractor was reminded to spray water on haul roads frequently and adopted other suitable dust suppression measures to reduce fugitive dust emission.

Due to the construction works have been substantially completed, some monitoring locations are no longer required effect on 11 March 2003. With approved by IEC and KCRC, following monitoring locations have been terminated:

| Monitoring             | Terminated Monitoring Stations |
|------------------------|--------------------------------|
| Water Monitoring       | WU1A, WU1C, WD1A               |
| Noise Monitoring       | NSR-3                          |
| Air Quality Monitoring | ASR-3                          |

#### 1. INTRODUCTION

1.1 Purpose

The purpose of this report is to present the results for environmental monitoring and audit carried out in May 2003 for the KCRC West Rail's Contract CC-601, Civil and Infrastructure Works. This serves as an indicator to verify whether the construction, operation and post completion phases of an engineering development have an adverse impact on the environment.

#### 2. PROJECT INFORMATION

2.1 Background

As the project background, program and organization are the same as in the Zen Pacific-China State-Ngo Kee Joint Venture (ZPCSNKJV) EM&A Manual, and being approved by KCRC and EPD. For details, please refer to the ZPCSNKJV EM&A Manual.

2.2 Project Program

Please refer to the ZPCSNKJV EM&A Manual.

2.3 Project Organization

The organization and lines of communication with respect to environmental works are shown in Figure 2.1. For other details, please refer to the ZPCSNKJV EM&A Manual.

2.4 Construction Program

According to the construction program provided by ZPCSNKJV, the major construction activities in June 2003 and August 2003 are:

Major construction activities to be carried out in June 2003:

- E & M Works
- Planting
- Landscaping Works

Major construction activities to be carried out in July 2003:

- Planting
- Landscaping works
- E &M Works
- Finishing works

Major construction activities to be carried out in August 2003:

- Landscaping work
- Planting
- E & M Works
- Finishing Works
- 2.5 Permit/License Status

The permits and licenses applicable are listed in Figure 2.2.

### 3. ENVIRONMENTAL MONITORING AND AUDIT REQUIREMENTS

- 3.1 Monitoring Parameters
  - 3.1.1 Air Quality Monitoring

24-hr Total Suspended Particulate (TSP) levels in  $\mu$ g/m<sup>3</sup> were measured. 1-hr TSP levels in  $\mu$ g/m<sup>3</sup> were measured at monitoring locations where there are no supply of electricity to substitute for 24-hr TSP measurements temporarily.

3.1.2 Noise Monitoring

30 minutes of L<sub>eq</sub> (Equivalent continuous sound pressure level), L<sub>10</sub> (10 percentile sound pressure level) and L<sub>90</sub> (90 percentile sound pressure level) in A-Weighting measurements were obtained. Six consecutive 5 minutes measurement were used to obtain the 30 minutes L<sub>eq</sub>, L<sub>10</sub> and L<sub>90</sub>.

3.1.3 Water Quality Monitoring

Please refer to the EM&A Manual.

3.2 Environmental Quality Performance Limits

With reference to the Baseline Monitoring data in the CC-601 EIA report, the Action and Limit (A/L) Levels for air, noise and water quality are tabulated as follows: -

| Monitoring<br>Station | Location                                     | Parameters | Action level<br>(μg/m <sup>3</sup> ) | Limit level<br>(µg/m <sup>3</sup> ) |
|-----------------------|--|------------|--------------------------------------|-------------------------------------|
| *ASR-10               | Village houses along Kam<br>Sheung Road      | 1-hr TSP   | 310                                  | 500                                 |
| *ASR-16               | Village houses to the east<br>of Ko Po Tsuen | 1-hr TSP   | 310                                  | 500                                 |

Table 3.1 – Action and Limit Levels for 1-hr TSP

\*Action and Limit Levels were not provided in the baseline report because no baseline monitoring was conducted at these locations. References were made from the nearest air quality monitoring stations.

| <b>—</b> |       |        |     |        |        | -   | <b>.</b>              |     |

#### Table 3.3 – Noise Action and Limit Levels

Table 3.4 – Water Quality Action and Limit Levels

| Monitoring<br>Locations | Parameter       | Action Level   | Limit Level  |  |
|-------------------------|-----------------|--|--|--|
|                         | DO (mg/L)       | 0.44   | 0.42   |  |
| U1B                     | SS (mg/L)       | 626 mg/L and 120% of the<br>upstream control station's SS at<br>the same tide on the same day          | 709 mg/L and 130% of the<br>upstream control station's SS at<br>the same tide on the same day          |  |
|                         | Turbidity (NTU) | 506 NTU and 120% of the<br>upstream control station's<br>turbidity at the same tide on the<br>same day | 564 NTU and 130% of the<br>upstream control station's<br>turbidity at the same tide on the<br>same day |  |
|                         | DO (mg/L)       | 0.44   | 0.42   |  |
| D2                      | SS (mg/L)       | 626 mg/L and 120% of the<br>upstream control station's SS at<br>the same tide on the same day          | 709 mg/L and 130% of the<br>upstream control station's SS at<br>the same tide on the same day          |  |
|                         | Turbidity (NTU) | 506 NTU and 120% of the<br>upstream control station's<br>turbidity at the same tide on the<br>same day | 564 NTU and 130% of the<br>upstream control station's<br>turbidity at the same tide on the<br>same day |  |

#### 3.3 Event-Action Plans

Please refer to the ZPCSNKJV EM&A Manual for details.

3.4 Implementation Status of Environmental Protection, Mitigation and Pollution Control Measures

To alleviate adverse impacts on the environment during construction phase, the Contractor has taken mitigation and pollution control measures. The implementation status will be audited each month and is attached in Appendix A.

### 4. IMPACT ENVIRONMENTAL MONITORING

#### 4.1 Monitoring Program

With reference to the West Rail EM&A Manual, the following environmental monitoring program has been implemented:

| Table 4.1 – Environm | ental Monitorii | ng Program |
|----------------------|-----------------|------------|
|----------------------|-----------------|------------|

| Type of Monitoring                           | Parameters  | Location               | Frequency            |
|--|---|------------------------|----------------------|
| Air Quality Impact Monitoring<br>(24-hr TSP) | 1 set of 24-hour TSP  | ASR- 14                | Once every 6 days    |
| Air Quality Impact Monitoring<br>(1-hr TSP)  | 3 sets of 1-hour TSP  | ASR- 10 * and 16 *     | Once every 6 days    |
| Noise Monitoring                             | 6 sets of 5 min. $L_{eq}$ , $L_{10}$ & $L_{90}$               | NSR- 10, 13, 14 and 16 | Once every 6 days    |
| Water Quality Impact<br>Monitoring           | DO, DO% saturation, turbidity, temperature, salinity, pH & SS | U1B and D2             | Three times per week |

3 sets of 1-hour TSP were measured, temporarily, at locations with an asterisk due to shortage of power supply. The table below shows the monitoring schedule for June 2003 to August 2003.

| Type of Monitoring                    | June 2003  | July 2003  | August 2003  |
|---------------------------------------|--|--|--|
| Air Quality Monitoring<br>(24-hr TSP) | 02, 07, 13, 19, 25,<br>30                                | 05, 11, 17, 23, 29                                       | 04, 09, 15, 21, 27                                       |
| Air Quality Monitoring<br>(1-hr TSP)  | 02, 07, 13, 19, 25,<br>30                                | 05, 11, 17, 23, 29                                       | 04, 09, 15, 21, 27                                       |
| Noise Monitoring                      | 02, 07, 13, 19, 25,<br>30                                | 05, 11, 17, 23, 29                                       | 04, 09, 15, 21, 27                                       |
| Water Quality Monitoring              | 02, 06, 07, 09, 11,<br>13, 16, 18, 20, 23,<br>25, 27, 30 | 02, 04, 07, 09, 11,<br>14, 16, 18, 21, 23,<br>25, 28, 30 | 01, 04, 06, 08, 11,<br>13, 15, 18, 20, 22,<br>25, 27, 29 |

Table 4.2 – Monitoring Schedule from June 2003 to August 2003

#### 4.2 Air Quality Monitoring

4.2.1 Monitoring Method

Detail of the monitoring method is attached in Appendix B.

4.2.2 Monitoring Equipment and Calibration Details

Detail of the monitoring equipment and calibration information is attached in Appendix B. Copies of calibration certificates are provided to the Engineer.

4.2.3 Parameters Monitored

24-hr and 1-hr TSP levels in  $\mu$ g/m<sup>3</sup> were measured. Information such as weather conditions during monitoring and other factors that might affect the monitoring results were also recorded.

#### 4.2.4 Monitoring Locations

Three locations were identified as the Air Sensitive Receivers (ASRs) and therefore are chosen as air quality monitoring stations. They are namely ASR-10 (Village houses along Kam Sheung Road), ARS-14 (Kat Hing Garden) and ASR-16 (Village houses to the East of Ko Po Tsuen) respectively. Locations of the monitoring stations are shown in Figure 4.1. As construction works have been substantially completed, monitoring locations; ASR-1, ASR-2, ASR-4, ASR-6, ASR-8, ASR-11 and ASR-13 were terminated from 11 January 2003. Moreover, location ASR-3 was terminated from11 March 2003.

#### 4.2.5 Monitoring Frequency, Duration and Period

Air quality monitoring was carried out at six-day intervals. At each monitoring station for 24-hr TSP sampling was conducted. Due to shortage of electricity supply, two sets of 1-hr TSP measurements were conducted at ASR - 10 and 16 temporarily. The table below shows the time schedule for air quality monitoring in May 2003.

Table 4.3 – Schedule for 24-hr TSP Air Quality Monitoring

| 10010 1.0 |  |            |            |            |            |  |
|-----------|--|------------|------------|------------|------------|--|
| Location  | Date and Start Time of Monitoring (May 2003) |            |            |            |            |  |
| ASR-14    | 03/05/2003                                   | 09/05/2003 | 15/05/2003 | 21/05/2003 | 27/05/2003 |  |

|          | 21/05/2003                             | 21/05/2003    | 27/05/2003    | 27/05/2003    | 27/05/2003    |  |
|          | (15:32-16:32)                          | (16:44-17:44) | (14:42-15:42) | (15:42-16:42) | (16:42-17:42) |  |

### 4.2.6 Monitoring Results

There was no exceedance of A/L Levels. The main contributing factors to air quality include excavation, general earthwork and passing by vehicles and dump trucks. Details of the air quality monitoring results are tabulated in Appendices C and D.

#### 4.3 Noise Monitoring

4.3.1 Monitoring Methodology

Detail of the methods used is presented in Appendix B.

4.3.2 Monitoring Equipment and Calibration Details

Detail of the monitoring equipment and calibration details is attached in Appendix B.

4.3.3 Parameters Monitored

Six consecutive 5-min  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$ , in other words  $L_{eq}$  (30min), were measured at all noise monitoring locations during non-restricted hours. Other information such as weather conditions and factors affecting the monitoring results were also recorded.

4.3.4 Monitoring Locations

Four locations were identified as the Noise Sensitive Receivers (NSRs) and were chosen as the noise monitoring stations. They are: NSR-10 (Village houses to the South of Kam Sheung Road), NSR-13 (Low-rise residential DD109, Lot336Kam Sheung Road, Kam), NSR-14 (Kat Hing Garden) and NSR-16 (Village houses to the East of Ko Po Tsuen. The locations of monitoring stations are shown in Figure 4.1. As construction works have been substantially completed, monitoring locations; NSR-1, NSR-2, NSR-4, NSR-6, NSR-8 and NSR-11 were terminated from 11 January 2003. Moreover, location NSR-3 was terminated from11 March 2003.

#### 4.3.5 Monitoring Frequency, Duration and Period

Noise monitoring was carried out once every six days. At each monitoring station, 6 sets of 5-minute  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  were measured. Table 4.5 shows the schedule for noise monitoring in May 2003.

| Station<br>No. | Date and Start Time of Monitoring (May 2003)      |            |            |            |            |  |  |  |  |  |
|----------------|---|------------|------------|------------|------------|--|--|--|--|--|
| NSR-10         | 03/05/2003 09/05/2003 15/05/2003 21/05/2003 27/05 |            |            |            |            |  |  |  |  |  |
|                | ()  | (15:53)    | (08:28)    | (18:00)    | (14:02)    |  |  |  |  |  |
| NSR-13         | 03/05/2003  | 09/05/2003 | 15/05/2003 | 21/05/2003 | 27/05/2003 |  |  |  |  |  |
|                | ()  | (18:07)    | (09:55)    | (17:00)    | (14:45)    |  |  |  |  |  |
| NSR-14         | 03/05/2003  | 09/05/2003 | 15/05/2003 | 21/05/2003 | 27/05/2003 |  |  |  |  |  |
|                | ()  | (17:25)    | (10:48)    | (15:50)    | (15:28)    |  |  |  |  |  |
| NSR-16         | 03/05/2003  | 09/05/2003 | 15/05/2003 | 21/05/2003 | 27/05/2003 |  |  |  |  |  |
|                | ()  | (15:42)    | (09:12)    | (14:32)    | (14:45)    |  |  |  |  |  |

Table 4.5 – Schedule for Noise Monitoring

Remark: The monitoring on 03 May 2003 was cancelled due to rainy

#### 4.3.6 Monitoring Results

There was no exceedance of A/L Levels this month. The main contributing factors to noise level were lifting, excavation passing by dump trucks and vehicles, and general earthwork. Details of noise monitoring results are shown in Appendix E.

#### 4.4 Water Quality Monitoring

#### 4.4.1 Monitoring Method

Detail of the monitoring method is attached in Appendix B.

#### 4.4.2 Monitoring Equipment and Calibration Details

Details of monitoring equipment and calibration records are attached in Appendix B.

#### 4.4.3 Parameters Monitored

Monitoring of turbidity in Nephelometric Turbidity Units (NTU), Dissolved Oxygen (DO) in mg/L and Suspended Solids (SS) in mg/L were carried out to ensure that deterioration in water quality could be readily detected and timely action could be taken to rectify the situation. The former two parameters were measured in-situ while the latter was determined in the laboratory.

In association with the water quality parameters, some relevant data were also measured, such as monitoring location/position, time, water depth, water temperature, pH, salinity, DO saturation, weather conditions and work underway at the construction site.

#### 4.4.4 Monitoring Locations

With reference to the ZPCSNKJV EM&A Manual, the two monitoring locations chosen are: WU1B and WD2. The locations for water monitoring are shown in Figure 4.2.

Please note that water sampling was ceased in location D1 from 12 July 2000 owing to the diverted river. With the approval from EPD and KCRC, the Contractor had selected another monitoring location at D1A.

As construction works have been substantially completed, monitoring locations WU2 was terminated from 11 January 2003. Moreover, locations WU1A, WU1C and WD1A were terminated from11 March 2003.

#### 4.4.5 Monitoring Frequency, Duration and Period

Water quality monitoring was carried out three times per week. Table 4.7 shows the schedule for water quality monitoring in May 2003.

#### 4.4.6 Monitoring Results

There was no exceedance of action and limit level for all collected data. The main contributing factors to water quality included passing dump trucks and general earthwork. Details of the water quality monitoring results are in Appendix F.

|        |        |         | May 2003   |          |        |          |

#### Table 4.7 – Schedule for Water Quality Monitoring

▼ Water quality monitoring at U1A, U1B, U1C, U2, D1A and D2.

#### 4.5 Waste Management

#### 4.5.1 Excavated Materials

According to the Contractor, the surplus excavated materials produced were disposed in the public filling area in Tuen Mun. The earth dumping in private lots was ceased in July 2001. Excavated materials dumping quantities are listed in Appendix I. No excavated materials disposed in this month.

#### 4.5.2 Chemical Waste

The storage areas for chemical wastes were used solely for the temporary storage of chemical waste. Chemical waste collector should be collected the chemical wastes regularly. Mainly chemical waste was spent lubricant oil, fuel and grease. No chemical waste was generated in this month.

#### 4.5.3 Construction Waste

Careful design, planning and good site management, the ordering and wasting of materials such as concrete, mortars and cement grouts were minimized. Wooden panels were reused.

#### 4.5.4 General refuse

General refuse was generated largely by food service activities for site workers. Bins were provided for containment prior to disposal of such waste. Aluminum cans and individual collectors often recover glass bottles from the waste stream if they are segregated or easily accessible, so separate labeled bins for their deposit was provided wherever feasible. Office wastes were reduced through recycling of paper if volumes are large enough to warrant collection. There was encourage environmental awareness and to reduce waste by:

• Reducing the number of photo copies to a minimum

• By copying on both sides of paper for internal documents and external documents where appropriate. General refuse generated on-site was stored in enclosed bins and collected by Strong Base Environmental Services & Engineering Co. Ltd.

The total amount of office waste produced in this month was recorded 6 of trucks of rubbishes. The records were inspected by IEC on site audit.

### 5. SITE INSPECTION

The Independent Environmental Checker (IEC) carried out monthly site audit on 13 May 2003. By the field observation, several remarks were also made. First, follow up the previous audit on chemical waste, the diesel drums were covered by tarpaulin sheets; Second, follow up the previous audit on air quality, the site entrance and the haul road are wetted; Third, rubbish was stockpile inside storage area. The Contractor was instructed to remove the rubbish immediately and provide photo for record. Moreover, trip tickets for chemical wastes and general refuse were inspected and were found in order.

Furthermore, the ET was conducted site inspection on 19 May 2003. No non-compliance and other observations made in this month.

### 6. RESULTS

All noise-monitoring results were complied with the A/L Levels this month. The sources of noise observed from construction site include passing by dump trucks/vehicles and general earth works. Other sources of noise contributing to the noise levels were adjacent construction sites activities and dogs barking.

In general, the air monitoring results in May 2003 was satisfactory. No exceedance of the A/L Levels was recorded. Although dust levels measured were within A/L Levels, the Contractor was still reminded by the IEC to spray water more frequency on haul roads, paved road outside Contractor's storage area and transported materials in order to reduce fugitive dust generation.

For the water quality monitoring, No exceedance was found at the downstream station therefore the pollution source was probably not evolved from construction activities within this site. For the results were satisfactory in this month. As observed by the ET, the main construction activities at the site were general earthworks and site transportation. The Contractor was reminded that silt surface run-off and ground water should be treated properly before discharging.

## 7. RECORD OF COMPLAINTS AND NOTIFICATION OF SUMMONS

No summon was received this month. A summary record of notification of summons for Contract CC-601 is tabulated below for reference.

| Month             | Date     | Location   |  | Follow-up action                                |

### 8. CONCLUSION

Environmental monitoring and site inspection were performed as scheduled in May 2003. All monitoring results were checked and reviewed.

No Action / Limit Level exceedance on 1-hour TSP, 24-hour TSP, noise and water quality were recorded in the reporting month.

Environmental mitigation measures recommended in the EM&A manual for the construction activities were implemented in the reporting month. There was no complaint, notification of summons and prosecution received in this month.

The environmental performance of the Project was generally satisfactory.

### 9. FUTURE KEY ISSUES

The major construction works planned to be carried out in next three months and their possible impact is tabulated below for reference.

| Month  | Works Planned to be Carried Out | Impact Prediction | Mitigation Measures                   |
|--------|---------------------------------|-------------------|---------------------------------------|
| June   | - Planting                      | - Dust generated  | - Water haul road                     |
| 2003   | - Landscaping works             | from dry haul     | - Restrict the vehicle speed limit of |
|        | - E & M Works                   | road and          | 15 kph.                               |
|        | - Finishing Works               | transported       | - Provide wheel washing facilities    |
|        |                                 | materials         |                                       |
| July   | - Planting                      | - Dust generated  | - Water haul road                     |
| 2003   | - Landscaping works             | from dry haul     | - Restrict the vehicle speed limit of |
|        | - E & M Works                   | road and          | 15 kph.                               |
|        | - Finishing Works               | transported       | - Provide wheel washing facilities    |
|        |                                 | materials         |                                       |
| August | - Planting                      | - Dust generated  | - Water haul road                     |
| 2003   | - Landscaping works             | from dry haul     | - Restrict the vehicle speed limit of |

Monitoring Methodology and Calibration Details of Monitoring Equipment

# Summary of Monitoring Method

| Type of<br>Monitoring | Method   |
|-----------------------|--|
| Water                 | Water samples will be taken at mid-depth   |
|                       | For in-situ parameters, turbidity and D.O. measurements shall be made during the descending and ascending of the sensor. If the difference between the measured values at any one depth is greater than 25%, the measurement shall be repeated until and acceptable match is made. If no match is achieved than the equipment shall be checked for accurate calibration or malfunction.  |
|                       | Water samples shall be taken from flouring water whenever possible. Samples collected shall be stored in plastic bottles and packed in ice-pack (cooled to 4°C without being frozen) and delivered to laboratory as soon as possible for suspended solids determination.   |
| Air                   | 24-hr TSP level is measured in accordance with the standard high volume sampling method as set out in the Title 40 of the Code of Federal Regulations (40CFR), Chapter 1 (Part 50), Appendix B. With this method, air is drawn through a high volume sampler (HVS) fitted with a pre-conditioned and pre-weighted filter paper at a controlled rate. After sampling for 24 hours, the filter paper with retained particles is collected and returned to laboratory for drying in a desiccator followed by accurate weighing. The 24-hr TSP levels are then calculated from the ratio of the mass of particulates retained on the filter paper to the total volume of air samples. The portable dust meter was used to measure the short-term (1 hour) air quality. Prior to each sampling event, the dust meter was zeroed and the flow was checked as per the requirements of the manufacturer. During sampling, the dust meter was positioned at least 1m from ground and facing the work site. Regular maintenance of the equipment manufacturer. |
| Noise                 | 30 minutes of $L_{eq}$ , $L_{10}$ and $L_{90}$ in A-weighting were conducted at logging interval of 5 minutes. Sound level meter and calibrator are complied with the International Electro technical Commission (IEC) Publication 651: 1979 (Type 1) and 804: 1985 (Type 1) specification. The sound level meter is supplied and used with manufacturers recommended windshield and with a tripod. The monitoring is performed at a height approximately 1.2m above the ground in free field condition.   |
