EXECUTIVE SUMMARY

Introduction

1. This is the 10th Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Limited for the “Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel” (the Project). This report documents the findings of EM&A Works conducted in January 2009.
2. The site activities undertaken in the reporting month included:
 - Further establishment of project organization and staffing;
 - Initial tunnel excavation, construction of intake cofferdam & River Channel and installation of temporary facilities at Eastern Portal;
 - Arch tunnel excavation, shallow & deep excavation works, base slab construction and installation of temporary facilities at Western Portal;
 - Ground Investigation (GI) works at Intake SM1;
 - Approved in Principle (AIP) & Detailed Design Approval (DDA) submissions for temporary works at both portals;
 - AIP & DDA submissions for temporary and permanent works for 32 nos. Intakes;
 - AIP & DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays;
 - Environmental impact monitoring; and
 - TBM fabrication; delivery, inland transportation and assembly planning.

Environmental Monitoring Works

3. Environmental monitoring for the Project was performed in accordance with the updated EM&A Manual and the monitoring results were checked and reviewed. Site audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.

4. Summary of the non-compliance of the reporting month is tabulated in Table I.

Table I Summary Table for Non-compliance Recorded in the Reporting Month

| Parameter | No. of Exceedance | | No. of Exceedance Due to the Project | | Action Taken |
|----------------|-------------------|-------------|--------------------------------------|-------------|--------------|
| | Action Level | Limit Level | Action Level | Limit Level | |
| Eastern Portal | | | | | |
| 1-hr TSP | 0 | 0 | 0 | 0 | N/A |
| 24-hr TSP | 0 | 0 | 0 | 0 | N/A |
| Noise | 0 | 0 | 0 | 0 | N/A |
| Western Portal | | | | | |
| 1-hr TSP | 0 | 0 | 0 | 0 | N/A |
| 24-hr TSP | 0 | 0 | 0 | 0 | N/A |
| Noise | 0 | 0 | 0 | 0 | N/A |
| Water | 0 | 0 | 0 | 0 | N/A |

Eastern Portal

1-hour TSP Monitoring

5. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

6. All 1-hour TSP monitoring was conducted as scheduled in the reporting month except the 24-hour TSP monitoring on 30 January 2009 at AQ1 was cancelled due to True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Construction Noise

7. All construction noise monitoring was conducted as scheduled in the reporting month except the noise monitoring on 30 January 2009 at NC1 was cancelled due to True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Western Portal

1-hour TSP Monitoring

8. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

9. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

10. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Water Quality

11. All water quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Environmental Licenses and Permits

12. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, An Environmental Permit No. EP-272/2007 was issued on 26 April 2007 and Environmental Permit No. EP-272/2007/A was issue on 26 October 2007. Later, the further Environmental Permit (FEP-01/272/2007/A) was issued on 28 January 2008 to Dragages-Nishimatsu Joint Venture as the Permit Holder.
13. Registration of Chemical Waste Producer (License: 5213-148-D2393-02 for Eastern Portal and No. 5213-172-D2393-01 for Western Portal), Water Discharge License (License No.: EP860/W10/XY0175 for Area of Mount Butler Office, EP860/W10/XY0177 for Eastern Portal, EP820/W9/XT086 for Western Portal and EP680/W10/XY0183 for Intake W0) and Construction Noise Permit (License No.: GW-RS0035-09 for Eastern Portal and GW-RS0894-08 for Western Portal).

Key Information in the Reporting Month

14. Summary of key information in the reporting month is tabulated in Table II.

Table II Summary Table for Key Information in the Reporting Month

| Event | Event Details | | Action Taken | Status | Remark |
|---|---------------|---|--|-----------------------|--------|
| | Number | Nature | | | |
| Complaint received | 1 | Water Quality at Western Portal | Muddy Water Discharged into Sea at Western Portal (Investigation report was submitted) | Under reviewed by IEC | --- |
| Changes to the assumptions and key construction / operation activities recorded | 0 | --- | N/A | N/A | --- |
| Status of submissions under EP | 2 | Monthly EM&A Report (December 08) Baseline Noise Monitoring Report for Intakes (Part II) | Submitted to EPD on 15 January 2009 (EP condition 3.3) Submitted to EPD on 20 January 2009 (EP condition 3.2) | Verified by IEC | --- |
| Notifications of any summons & prosecutions received | 0 | --- | N/A | N/A | --- |

Future Key Issues:

Major site activities for the coming month include:

- Tunnel excavation by blasting method, intake cofferdam and temporary cofferdam for River Channel at Eastern Portal;
- Tunnel excavation by mechanical method, shallow and deep excavation and base slab construction at Western Portal;
- Preliminary works, preparation works and temporary cofferdam at Intake W0;
- Utilities trial pits and additional site investigation works at available intakes;
- Casting of tunnel segments in China;
- Test and disassembly in factory of West TBM; and
- Assembly in factory of East TBM.

1. INTRODUCTION

Background

- 1.1 Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel is a Designated Project (hereafter referred to as “the Project”) under the Environmental Impact Assessment Ordinance (Cap. 449). A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, ecological, construction waste, landscape and visual, land use, cultural impacts, and identify possible mitigation measures associated with the works. An EIA Report was approved by the Environmental Protection Department (EPD) on 7 April 2006.
- 1.2 The project comprises the construction of a drainage tunnel deep into the ground in Mid-levels of the Northern Hong Kong Island from Tai Hang to Pokfulam to intercept and convey the stormwater from the upper catchment directly to the sea near Cyberport. The Drainage tunnel alignment starts from the Eastern Portal near Haw Par Mansion in Tai Hang and ends at the Western Portal located to the north of Cyberport running underneath the Pok Fu Lam, Tai Tam, Aberdeen and Lung Fu Shan Country Parks. The underground main drainage tunnel is 6.25m-7.25m in diameter and about 11km long. Two portals and a series of connecting adits and drop shafts are also been constructed. The general layout of the Project is shown in **Figure 1.1**.
- 1.3 An Environmental Permit (EP) No. EP-272/2007 was issued on 26 April 2007 for Drainage Improvement in Northern Hong Kong Island – Hong Kong West Drainage Tunnel to Drainage Services Department as the Permit Holder. Later, the further Environmental Permit (FEP-01/272/2007/A) was issued on 28 January 2008 to Dragages-Nishimatsu Joint Venture as the Permit Holder.
- 1.4 Cinotech Consultants Limited was commissioned by the Dragages-Nishimatsu Joint Venture (the Contractor) to undertake the Environmental Monitoring and Audit (EM&A) works for the Project. The Updated EM&A Manual was prepared by Cinotech to fulfill the requirements of the EP. The construction commencement of this Contract at Eastern Portal was on 17th April 2008 and 2nd May 2008 at Western Portal (land-based). The marine construction works was commenced on 30 May 2008. This is the 10th monthly EM&A report summarizing the EM&A works for the Project in January 2009 at Eastern and Western Portals.

Project Organizations

- 1.5 Different parties with different levels of involvement in the project organization include:
- Project Proponent – Drainage Services Department (DSD).
 - The Supervising Officer or Supervising Officer's Representative (SO or SOR) – Ove Arup & Partners (ARUP).
 - Environmental Team (ET) – Cinotech Consultants Limited (CCL).
 - Independent Environmental Checker (IEC) – Allied Environmental Consultants Limited (AEC).
 - Contractor - Dragages-Nishimatsu Joint Venture (DNJV).

1.6 The responsibilities of respective parties are detailed in Sections 1.14 to 1.28 of the updated EM&A Manual of the Project.

1.7 The key contacts of the Project are shown in Table 1.1 and the organization chart of ET is shown in **Figure 2.1**.

Table 1.1 Key Project Contacts

| Party | Role | Name | Position | Phone No. | Fax No. |
|----------|-----------------------------------|--------------------|-----------------------------------|-----------|-----------|
| DNJV | Permit Holder | Mr. ALTIER Daniel | Project Manager | 2671 7333 | 2671 9300 |
| | | Mr. UETAKE H. | Deputy Project Manager | | |
| ARUP | Supervising Officer | Mr. Ted Tang | CRE | 6117 6639 | 2436 1012 |
| | | Mr. Jackson Wong | SRE | 6117 6636 | |
| | | Mr. Alan Ng | RE | 9668 8350 | |
| | | Mr. Bernard Cheng | RE | 98614939 | |
| Cinotech | Environmental Team | Dr. Priscilla Choy | ET Leader | 2151 2089 | 3107 1388 |
| | | Mr. Alex Ngai | Project Coordinator | 2151 2076 | |
| | | Ms. Ivy Tam | Audit Team Leader | 2151 2095 | |
| | | Mr. Henry Leung | Monitoring Team Leader | 2151 2087 | |
| AEC | Independent Environmental Checker | Ms. Claudine Lee | Independent Environmental Checker | 2815 7028 | 2815 5399 |
| DNJV | Contractor | Mr. Ben Ho | Environmental Officer | 2671 7333 | 2671 9300 |

Construction Programme

1.8 The site activities undertaken in the reporting month included:

- Further establishment of project organization and staffing;
- Initial tunnel excavation, construction of intake cofferdam & River Channel and installation of temporary facilities at Eastern Portal;
- Arch tunnel excavation, shallow & deep excavation works, base slab construction and installation of temporary facilities at Western Portal;
- Ground Investigation (GI) works at Intake SM1;
- Approved in Principle (AIP) & Detailed Design Approval (DDA) submissions for temporary works at both portals;

- AIP & DDA submissions for temporary and permanent works for 32 nos. Intakes;
- AIP & DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays;
- Environmental impact monitoring; and
- TBM fabrication; delivery, inland transportation and assembly planning.

Table 1.2 Construction programme showing the Inter-Relationship with Environmental Protection/Mitigation Measures

| Construction Works | Major Environmental Impact | Control Measures |
|--|--|--|
| Further establishment of project organization and staffing | Nil | Nil |
| Initial tunnel excavation, construction of intake cofferdam & River Channel and installation of temporary facilities at Eastern Portal | Noise, dust impact, water quality and waste generation | Provided water spraying during excavation works On-site waste sorting and implementation of trip ticket system Appropriate desilting/sedimentation devices provided on site for treatment before discharge |
| Arch tunnel excavation, shallow & deep excavation works, base slab construction and installation of temporary facilities at Western Portal | Noise, dust impact and waste generation | Provided water spraying during excavation works On-site waste sorting and implementation of trip ticket system |
| Ground Investigation (GI) works at Intake SM1 | Noise, dust impact, water quality and waste generation | Provided water spraying on exposed surfaces On-site waste sorting Appropriate water recycling tank provided on site |
| Approved in Principle (AIP) & Detailed Design Approval (DDA) submissions for temporary works at both portals | Nil | Nil |
| AIP & DDA submissions for temporary and permanent works for 32 nos. Intakes | Nil | Nil |
| AIP & DDA submissions for Adit/Main Tunnel Intersection, Adits, Stilling Chambers and Turning Bays | Nil | Nil |
| Environmental impact monitoring | Nil | Nil |
| TBM fabrication; delivery, inland transportation and assembly planning | Noise Impact and ground water | Double-shielded Tunnel Boring Machine to minimize seepage of groundwater |

Summary of EM&A Requirements

- 1.9 The EM&A programme requires construction phase monitoring construction noise, air quality and water quality and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
- All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event Action Plans;
 - Environmental mitigation measures, as recommended in the project EIA study final report; and
 - Environmental requirements in contract documents.
- 1.10 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 5 of this report.
- 1.11 This report presents the monitoring results, observations, locations, equipment, period, methodology and QA/QC procedures of the required monitoring parameters, namely air quality, water quality and noise levels and audit works for the Project in January 2009.

2. AIR QUALITY

Monitoring Requirements

2.1 1-hour and 24-hour TSP monitoring were conducted to monitor the air quality at Eastern and Western Portals. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Locations

2.2 Three designated monitoring stations, AQ1, AQ2 and AQ3 were selected for impact dust monitoring. Table 2.1 describes the air quality monitoring locations, which are also depicted in **Figure 3.1a-b**.

Table 2.1 Locations for Air Quality Monitoring

| Monitoring Stations | Locations |
|---------------------|---|
| AQ1 | True Light Middle School of Hong Kong |
| AQ2 | Outside Aegean Terrace |
| AQ3 | Outside The Site Office at Western Portal |

Monitoring Equipment

2.3 Table 2.2 summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

Table 2.2 Air Quality Monitoring Equipment

| Equipment | Model and Make | Quantity |
|-----------------------|-------------------------------------|----------|
| Calibrator | G25A; S/N: 1536 | 1 |
| 1-hour TSP Dust Meter | Laser Dust Monitor – Model LD3 | 1 |
| HVS Sampler | GMWS 2310 c/w of TSP sampling inlet | 2 |

Monitoring Parameters, Frequency and Duration

2.4 Table 2.3 summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

Table 2.3 Impact Dust Monitoring Parameters, Frequency and Duration

| Parameters | Frequency |
|------------|----------------------|
| 1-hr TSP | Three times / 6 days |
| 24-hr TSP | Once / 6 days |

Monitoring Methodology and QA/QC Procedure

1-hour TSP Monitoring

Measuring Procedures

2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:

- Pull up the air sampling inlet cover
- Change the Mode 0 to BG with once
- Push Start/Stop switch once
- Turn the knob to SENSI.ADJ and press it
- Push Start/Stop switch once
- Return the knob to the position MEASURE slowly
- Push the timer set switch to set measuring time
- Remove the cap and make a measurement

Maintenance/Calibration

2.6 The following maintenance/calibration was required for the direct dust meters:

- Check the meter at a 3-month interval and calibrate the meter at a 1-year interval throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

Instrumentation

2.7 High volume (HVS) samplers (Model GMWS-2310 Accu-Vol) completed with appropriate sampling inlets were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

Operating/Analytical Procedures

2.8 Operating/analytical procedures for the operation of HVS were as follows:

- A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
- No two samplers were placed less than 2 meters apart.
- The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
- A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
- A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
- No furnaces or incineration flues were nearby.

- Airflow around the sampler was unrestricted.
 - The sampler was more than 20 meters from the drip line.
 - Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.
- 2.9 Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 1.1 m³/min. and 1.4 m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- 2.10 For TSP sampling, fiberglass filters (G810) were used [Note: these filters have a collection efficiency of > 99% for particles of 0.3 mm diameter].
- 2.11 The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.
- 2.12 The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting screen.
- 2.13 The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- 2.14 The shelter lid was closed and secured with the aluminum strip.
- 2.15 The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- 2.16 After sampling, the filter was removed and sent to the HOKLAS laboratory (Wellab Ltd.) for weighing. The elapsed time was also recorded.
- 2.17 Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%.

Maintenance/Calibration

- 2.18 The following maintenance/calibration was required for the HVS:
- The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
 - High volume samplers were calibrated at bi-monthly intervals using GMW-25 Calibration Kit throughout all stages of the air quality monitoring.

Results and Observations

Eastern Portal (AQ1)

- 2.19 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.20 All 24-hour TSP monitoring was conducted as scheduled in the reporting month except the 24-hour TSP monitoring on 30 January 2009 was cancelled due to True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Western Portal (AQ2)

- 2.21 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Western Portal (AQ3)

- 2.22 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.23 Wind data was obtained from the Meteorological Observations for King's Park Automatic Weather Station for Eastern Portal and Wong Chuk Hang Automatic Weather Station for Western Portal. These wind data for the reporting period is summarized in **Appendix J**.
- 2.24 The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.
- 2.25 In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website <http://www.cinotech.com.hk/projects/WestDrainageTunnel/>.
- 2.26 According to our field observations, the identified dust sources at the monitoring stations were mainly from the rock breaking inside the tunnel, excavation works, loading/unloading activities and the road traffic for Eastern and Western Portals.

Table 2.4 Summary Table of Air Quality Monitoring Results during the reporting month

| Parameter | Date | Concentration (µg/m ³) | Action Level, µg/m ³ | Limit Level, µg/m ³ |
|-----------------------|-----------|------------------------------------|---------------------------------|--------------------------------|
| Eastern Portal | | | | |
| 1-hr TSP (AQ1) | 2-Jan-09 | 201.6 | 345 | 500 |
| | 5-Jan-09 | 217.0 | | |
| | 8-Jan-09 | 163.6 | | |
| | 9-Jan-09 | 190.0 | | |
| | 13-Jan-09 | 227.4 | | |
| | 15-Jan-09 | 221.9 | | |
| | 16-Jan-09 | 99.0 | | |
| | 20-Jan-09 | 114.8 | | |
| | 21-Jan-09 | 176.9 | | |
| | 22-Jan-09 | 132.8 | | |
| | 29-Jan-09 | 229.7 | | |
| 30-Jan-09 | 182.5 | | | |
| 24-hr TSP (AQ1) | 2-Jan-09 | 145.9 | 201 | 260 |
| | 8-Jan-09 | 98.3 | | |
| | 14-Jan-09 | 159.2 | | |
| | 20-Jan-09 | 71.1 | | |
| | 24-Jan-09 | 130.9 | | |
| Western Portal | | | | |
| 1-hr TSP (AQ2) | 2-Jan-09 | 55.0 | 321 | 500 |
| | 5-Jan-09 | 50.3 | | |
| | 8-Jan-09 | 56.5 | | |

| | 21-Jan-09 | 48.8 | | |
| | 22-Jan-09 | 66.0 | | |
| | 29-Jan-09 | 42.8 | | |
| 30-Jan-09 | 46.8 | | | |
| 24-hr TSP (AQ3) | 2-Jan-09 | 105.9 | 156 | 260 |
| | 8-Jan-09 | 141.7 | | |
| | 14-Jan-09 | 144.9 | | |
| | 20-Jan-09 | 105.9 | | |
| | 24-Jan-09 | 64.0 | | |
| | 30-Jan-09 | 100.9 | | |

3. NOISE

Monitoring Requirements

3.1 Three noise monitoring stations, namely NC1, NC2 and NC3 were selected for impact monitoring. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

Monitoring Locations

3.2 Noise monitoring was conducted at three designated monitoring stations as listed in Table 3.1. **Figure 3.1a-b** shows the locations of these stations.

Table 3.1 Noise Monitoring Stations

| Monitoring Stations | Locations |
|---------------------|---|
| NC1/NC1a | True Light Middle School of Hong Kong/Outside True Light Middle School of Hong Kong |
| NC2 | The Legend |
| NC3 | Outside Aegean Terrace |

Monitoring Equipment

3.3 Table 3.2 summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

Table 3.2 Noise Monitoring Equipment

| Equipment | Model and Make | Qty. |
|-------------------------------|----------------|------|
| Integrating Sound Level Meter | B&K Model 2238 | 3 |
| Calibrator | B&K 4231 | 2 |

Monitoring Parameters, Frequency and Duration

3.4 Table 3.3 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

Table 3.3 Noise Monitoring Parameters, Frequency and Duration

| Monitoring Stations | Parameter | Period | Frequency | Measurement |
|---------------------|--|---|---------------|-------------|
| NC1 NC2 NC3 | L ₁₀ (30 min.) dB(A) L ₉₀ (30 min.) dB(A) L _{eq} (30 min.) dB(A) | 0700-1900 hrs on normal weekdays | Once per week | Façade |
| NC1a NC2 NC3 | L _{eq} (5 min.) dB(A) L ₉₀ (5 min.) dB(A) L _{eq} (5 min.) dB(A) | 1900 - 2300 hrs on all other days 0700 - 2300 hrs holidays & 2300 – 0700 hrs of next day | | |

Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels were adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - frequency weighting : A
 - time weighting : Fast
 - time measurement : 30 minutes / 5 minutes
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the L_{eq}, L₉₀ and L₁₀ were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

Maintenance and Calibration

- 3.5 The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- 3.6 The sound level meter and calibrator were checked and calibrated at yearly intervals.

- 3.7 Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

Results and Observations

- 3.8 Noise monitoring (0700-1900 hrs on normal weekdays, 1900-2300 hrs on all other days, 2300-0700 hrs of next day and 0700-1900 hrs on holidays) at the three designated locations (NC1/NC1a (for restricted hours), NC2 and NC3) was conducted as scheduled in the reporting month except the noise monitoring (0700-1900 hrs) on 30 January 2009 was cancelled due to True Light Middle School of Hong Kong was closed.
- 3.9 As noise monitoring for evening time inside the True Light Middle School of Hong Kong (NC1) throughout the construction period will cause disturbance to them. Thus, the noise monitoring for evening time will be conducted at outside the school (NC1a) at the nearest of the staff accommodation. As no baseline noise monitoring has been conducted at NC1a and the major noise source was the traffic noise along Tai Hang Road. The noise monitoring results will be adjusted with the reference baseline noise level at NC1 (1900-2300 on all other days and 0700 - 2300 hrs holidays & 2300 – 0700 hrs of next day) and will be used as reference only.

Eastern Portal (NC1 & NC2) - 0700-1900 hrs on normal weekdays

- 3.10 No Action/Limit Level exceedance was recorded.

Eastern Portal (NC1a & NC2) - 1900-2300 hrs on all other days and 0700-2300 hrs on holidays

- 3.11 No Action/Limit Level exceedance was recorded.

Eastern Portal (NC1a & NC2) - 2300-0700 hrs of next day

- 3.12 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) - 0700-1900 hrs on normal weekdays

- 3.13 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) - 1900-2300 hrs on all other days and 0700-2300 hrs on holidays

- 3.14 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) – 2300-0700 hrs of next day

- 3.15 No Action/Limit Level exceedance was recorded.

- 3.16 All the Construction Noise Levels (CNLs) reported in this report were adjusted with the corresponding baseline level (i.e. Measured Leq – Baseline Leq = Measured CNL), in order to facilitate the interpretation of the noise exceedance. The baseline noise level and the

Noise Limit Level at each designated noise monitoring station are presented at Table 3.4.

- 3.17 Noise monitoring results and graphical presentations are shown in **Appendix G**. In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website <http://www.cinotech.com.hk/projects/WestDrainageTunnel/>.
- 3.18 The major noise source identified at the designated noise monitoring stations was the traffic noise, rock breaking inside the tunnel, loading/unloading activities and excavation works for Eastern Portal and Western Portal.

Table 3.4 Baseline Noise Level and Noise Limit Level for Monitoring Stations

| Station | Baseline Noise Level, dB (A) | Noise Limit Level, dB (A) |
|---|--|---|
| NC1 – True Light Middle School of Hong Kong | 70.2 (at 0700 – 1900 hrs on normal weekdays) | 70* (at 0700 – 1900 hrs on normal weekdays) |
| NC1a – Outside True Light Middle School of Hong Kong (the nearest of staff accommodation) | 65.8 (at 0700 - 2300 hrs holidays & 1900 - 2300 hrs on all other days) 60.7 (at 2300 – 0700 hrs of next day) (reference) | 65 (at 0700 - 2300 hrs holidays & 1900 - 2300 hrs on all other days) 50 (at 2300 – 0700 hrs of next day) |
| NC2 – The Legend | 64.8 (at 0700 – 1900 hrs on normal weekdays) 59.1 (at 0700 - 2300 hrs holidays & 1900 - 2300 hrs on all other days) 53.9 (at 2300 – 0700 hrs of next day) | 75 (at 0700 – 1900 hrs on normal weekdays) 65 (at 0700 - 2300 hrs holidays & 1900 - 2300 hrs on all other days) |
| NC3 – Outside Aegean Terrace | 57.7 (at 0700 – 1900 hrs on normal weekdays) 53.8 (at 0700 - 2300 hrs holidays & 1900 - 2300 hrs on all other days) 52.0 (at 2300 – 0700 hrs of next day) | 50 (at 2300 – 0700 hrs of next day) |

(*) reduce to 65 dB(A) during school examination periods.

Table 3.5 Summary Table of Noise Monitoring Results during the Reporting Month

| Parameter | Date | Construction Noise Level : Leq(30min) dB (A) | Action Level | Limit Level, |
|---|--------------------------------|---|---|--------------|
| Eastern Portal | | | | |
| NC1 | 2-Jan-09 | 66.5, Measured \leq Baseline | When one documented complaint is received | 70*dB(A) |
| | 9-Jan-09 | 66.1, Measured \leq Baseline | | |
| | 16-Jan-09 | 67.2, Measured \leq Baseline | | |

4. WATER QUALITY

Monitoring Requirements

4.1 Dissolved oxygen (DO concentration in mg/L and DO saturation in percentage), Turbidity (Tby in NTU), Suspended Solid (SS in mg/L), pH, salinity and both water and ambient temperature monitoring were conducted to monitor the water quality. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

Monitoring Locations

4.2 Locations of designated Water Quality Monitoring Stations are shown in **Figure 4.1a-b** and described in Table 4.1. Samples shall be taken at all designated Monitoring and Control Stations.

Table 4.1 Locations for Water Quality Monitoring

| Monitoring Stations | Coordinates | |
|-------------------------|-------------|---------|
| | Northing | Easting |
| <i>Control Stations</i> | | |
| CE (Ebb) | 814956 | 830026 |
| CF (Flood) | 812420 | 831778 |
| <i>Impact Stations</i> | | |
| I1 | 813654 | 831088 |
| I2 | 813582 | 831105 |
| Intake A | 813044 | 831603 |
| Intake B | 814583 | 830606 |

Monitoring Equipment

4.3 Table 4.2 summarizes the equipment used in the water quality monitoring program. All the monitoring equipment complied with the specifications stipulated in the Updated EM&A Manual. Copies of the calibration certificates of the equipment are shown in **Appendix B**.

Table 4.2 Water Quality Monitoring Equipment

| Equipment | Model and Make | Qty. |

Monitoring Methodology, Calibration Details and QA/QC Procedures

Instrumentation

4.5 A multi-parameter meter (Model YSI 6820 C-M) was used to measure DO, DO saturation, turbidity, salinity and temperature.

Operating/Analytical Procedures

4.6 At each measurement, two consecutive measurements of DO concentration, DO saturation, salinity, turbidity and temperature were taken. Where the difference in the value between the first and second readings of each set was more than 25% of the value of the first reading, the reading was discarded and further readings were taken.

4.7 For SS measurement, duplicate water samples for SS were taken and analysed at each

monitoring station at each sample depth. The sample bottles were then packed in cool-boxes (without being frozen), and delivered to a HOKLAS accredited laboratory for analysis of suspended solids concentrations within 24 hours.

Maintenance and Calibration

- 4.8 Before each round of monitoring, a zero check in distilled water was performed with the turbidity probe of YSI 6820-C-M. The probe was then calibrated with a solution of known NTU.
- 4.9 QA/QC procedures as attached in **Appendix C** are available for the SS analyzed in the HOKLAS-accredited laboratory, WELLAB Ltd.

Results and Observations

- 4.10 All water quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. The monitoring data and graphical presentations of the monitoring results are shown in **Appendix H**.
- 4.11 In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website <http://www.cinotech.com.hk/projects/WestDrainageTunnel/>.
- 4.12 During the water quality monitoring, the areas of inspection included the general environmental conditions in the vicinity of the site, pollution control and mitigation measures within the site; and also review on the environmental conditions outside the site area that are likely to be affected, directly or indirectly, by site activities. The findings have been recorded in our Field Record Sheets.
- 4.13 No Action/Limit Level exceedance was recorded.
- 4.14 The summary of exceedance record in reporting month is shown in **Appendix I**.

Underground water level

- 4.15 Ground water levels were measured once per month during the construction phase in order to ensure the water levels at those intakes near to the natural stream courses and thus on the surrounding habitats will not be significantly affected.
- 4.16 Locations of designated ground water level (borehole with piezometer) monitoring station UC1 at Eastern Portal has been changed to ADH48 which was verified by IEC on 5th June 2008. Ground water level monitoring location is shown in **Figure 4.2** and the Monitoring data are shown in Table 4.4.

Table 4.4 Ground Water Level Monitoring Data at Location ADH48

| Date | Water Level (from ground)/m |
|-----------------|------------------------------------|
| 5 January 2009 | 9.61 |
| 22 January 2009 | 9.98 |

5. ENVIRONMENTAL AUDIT

Site Audits

- 5.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix K**.
- 5.2 Site audits were conducted on 7th, 14th, 22nd and 29th January 2009. IEC site inspections were conducted on 14th January 2009. No non-compliance was observed during the site audits.

Review of Environmental Monitoring Procedures

- 5.3 The monitoring works conducted by the monitoring team were inspected regularly. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations within and outside the construction site.
- The monitoring team recorded the temperature and weather conditions on the monitoring days.

Noise Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- Major noise sources were identified and recorded. Other intrusive noise attributing to the result was trimmed off by pausing the monitoring temporarily.

Water Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- The monitoring team recorded the weather condition on the monitoring day.

Status of Environmental Licensing and Permitting

- 5.4 All permits/licenses obtained for the Project are summarized in Table 5.1.

Status of Waste Management

- 5.5 The waste management of the Project has to follow the requirements and procedures stated in the Waste Management Plan which was prepared by the Contractor.

- 5.6 During this reporting period, a total 7 nos. of dump trucks of waste were delivered to SENT landfill and 1782 nos. of C&D waste was delivered to Public Fill Reception Facilities (Chai Wan Baring Point). Both the trip ticket system and chit accounting system for disposal of waste were operating smoothly to date. No overloading case was recorded during this reporting period. No disposal of inert C&D material to public sorting facilities and no dump truck without cover were reported from CEDD. In respect of the dump truck cover, DNJV keeps on take record photos and inspection to ensure that all dump trucks have fully covered the skip before leaving the site.
- 5.7 The amount of wastes generated by the activities of the Project during the reporting month is shown in **Appendix P**.

Table 5.1 Summary of Environmental Licensing and Permit Status

| Permit No. | Valid Period | | Details | Status |
|--|--------------|----------|--|--------|
| | From | To | | |
| Environmental Permit (EP) | | | | |
| FEP-01/272/2007/A | 28/1/08 | N/A | Construction of a 6.25m-7.25m in diameter and about 11 km long underground main drainage tunnel, 2 portals and a series of connecting adits and drop shafts. | Valid |
| Effluent Discharge License | | | | |
| EP860/W10/XY0175 | 23/06/08 | 30/06/13 | Industrial discharge (Area of Mount Butler Office) | Valid |
| EP860/W10/XY0177 | 23/06/08 | 30/06/13 | Industrial discharge (Eastern Portal Site) | Valid |
| EP820/W9/XT086 | 22/07/08 | 31/07/13 | Industrial discharge (Western Portal Site) | Valid |
| EP680/W10/XY0183 | 19/11/08 | 30/11/13 | Industrial discharge (Intake W0, Stubbs Road, Wan Chai, HK) | Valid |
| Registration of Chemical Waste Producer | | | | |
| 5213-148-D2393-02 | --- | N/A | Chemical waste types: Spent oil | Valid |
| 5213-172-D2393-01 | --- | N/A | Chemical waste types: Spent oil | Valid |
| Construction Noise Permit (CNP) | | | | |
| GW-RS0035-09 | 19/01/09 | 18/07/09 | Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at Hong Kong West Drainage Tunnel (Eastern Portal) (DSD Contract No. DC/2007/10), Tai Hang Road, Causeway Bay, Hong Kong. | Valid |
| GW-RS0894-08 | 19/12/08 | 18/03/09 | Construction Noise Permit for the use of powered mechanical equipment for carrying out construction work at Hong Kong West Drainage Tunnel (Western Portal), Cyberport Road, Cyberport, Hong Kong (DSD Contract No. Dc/2007/10). | Valid |

Implementation Status of Environmental Mitigation Measures

- 5.8 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 5.2.

Table 5.2 Observations and Recommendations of Site Inspections

| Parameters | Date | Observations and Recommendations | Follow-up |
|----------------------|-------------|---|--|
| <i>Water Quality</i> | 07/01/2009 | Standing water with oil was observed at the drip tray at Western Portal. The Contractor was reminded to clear them properly. | The item was not rectified during the follow-up audit session. |
| | 07/01/2009 | Silty water was observed discharging at the existing stream at Eastern Portal. The Contractor rectified the item immediately. However, The Contractor was reminded that all wastewater should be treated before discharging out and the wastewater treatment unit should be checked regularly to ensure these facilities can function properly at all time. | Rectification/improvement was observed during the follow-up audit session. |
| | 07/01/2009 | Muddy water and sediment was observed accumulate at the paved area at Eastern Portal. The Contractor was reminded to provide sand bag bund to surround the open channels to direct the silty runoff for treatment before discharging out. | The item was not rectified during the follow-up audit session. |
| | 14/01/2009 | Standing water at the pit area was observed at Eastern Portal. The Contractor was reminded to pump it out and treated before discharging. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Milky water was observed at the U-Channel at Eastern Portal. The Contractor was reminded to provide mitigation measures to prevent any wastewater from discharging out. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Standing water was observed at the drip tray at Western Portal. The Contractor was reminded to dry it out. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | General refuse with standing water was observed at nullah at Western Portal. The Contractor was reminded to clear the waste and spray with larvicide to prevent mosquito breed. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | Mud and sediment were observed accumulate near the U-Channel at Eastern Portal. The Contractor was reminded to clear them and erect sand bag bund for protecting the open channel to prevent any silt from getting to the channel and discharging out. | Rectification/improvement was observed during the follow-up audit session. |
| <i>Air Quality</i> | 07/01/2009 | Opened cement bags were observed at Western Portal. The Contractor was reminded to cover it with tarpaulin to control dust emission. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Cement bags (>20 bags) were observed without cover at Western Portal. The Contractor was reminded to cover them with tarpaulin to prevent dust emission. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Dry unpaved area was observed at Western Portal. The Contractor was reminded to provide water-spray to prevent dust generation. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | Cement bags (>20 bags) were observed | Rectification/improvement |

| Parameters | Date | Observations and Recommendations | Follow-up |
|------------------------------------|------------|--|--|
| | | without cover at Eastern Portal. The Contractor was reminded to cover them with tarpaulin to prevent dust emission. Cement bags were then covered with tarpaulin immediately. | was observed during the follow-up audit session. |
| | 29/01/2009 | Dry unpaved area was observed at Western Portal. The Contractor was reminded to provide water spray regularly to prevent dust emission. | Rectification/improvement was observed during the follow-up audit session. |
| Waste / Chemical Management | 07/01/2009 | Oil drums were observed standing on the bare ground at Western Portal. The Contractor was reminded to provide drip tray or store it properly. | Rectification/improvement was observed during the follow-up audit session. |
| | 07/01/2009 | Standing water with oil was observed at the drip tray at Western Portal. The Contractor was reminded to clear them properly. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Oil leakage was observed at underneath of plant equipment at Eastern Portal. The Contractor was reminded to clear the oil stains and well-maintained the plants to prevent further oil leakage. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | General refuse with standing water was observed at nullah at Western Portal. The Contractor was reminded to clear the waste and spray with larvicide to prevent mosquito breed. | Rectification/improvement was observed during the follow-up audit session. |
| | 14/01/2009 | Chemical oil drum was observed without chemical label at Western Portal. The Contractor was reminded to provide appropriate label and attach at the oil drum. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | Generator was observed to be placed outside the site and without drip tray at Intake W0. The Contractor was reminded to provide it with drip tray to prevent oil leakage. Generator was then placed within the site immediately. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | C&D waste were observed accumulate in the material skip at Eastern Portal. The Contractor was reminded to clear the waste regularly. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | Chemical oil drums were observed without chemical label and not stored properly at Eastern Portal. The Contractor was reminded to attach it with appropriate labels and stored properly. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | C&D waste was observed not stored properly at Intake W0. The Contractor was reminded to provide material skip for temporary storage of C&D waste before disposing them. | The item was not rectified during the follow-up audit session. |
| | 29/01/2009 | Empty chemical containers were observed accumulate at Western Portal. The Contractor was reminded to clear them regularly. | Rectification/improvement was observed during the follow-up audit session. |
| | 29/01/2009 | Material skip was still observed not provided at Intake W0. The Contractor was reminded | Rectification/improvement was observed during the |

| Parameters | Date | Observations and Recommendations | Follow-up |
|-----------------------|------------|---|--|
| | | to provide it as soon as possible. | follow-up audit session. |
| <i>Ecology</i> | 07/01/2009 | Silty water was observed discharging at the existing stream at Eastern Portal. The Contractor rectified the item immediately. However, The Contractor was reminded that all wastewater should be treated before discharging out and the wastewater treatment unit should be checked regularly to ensure these facilities can function properly at all time. | Rectification/improvement was observed during the follow-up audit session. |
| <i>Marine Ecology</i> | 22/01/2009 | Silty water was observed within the silt curtain at Western Portal. The Contractor was reminded to provide mitigation measures and well-maintained the silt curtain to prevent any silty water from getting out. | The item was not rectified during the follow-up audit session. |
| <i>Reminders</i> | 07/01/2009 | The Contractor was reminded of the followings: - Construction works at near the existing stream at Eastern Portal should be carried out carefully to prevent any disturbance / damage to the stream. | *Follow-up action was needed for the item. |
| | 07/01/2009 | The Contractor was reminded of the followings: - Keep clear the standing water in the label bags that secure around the trees at Eastern, Western Portals and Intake sites. | *Follow-up action was needed for the item. |
| | 14/01/2009 | The Contractor was reminded of the followings: - Construction works at near the existing stream at Eastern Portal should be carried out carefully to prevent any disturbance / damage to the stream. | *Follow-up action was needed for the item. |
| | 14/01/2009 | The Contractor was reminded of the followings: - Keep clear the standing water in the label bags that secure around the trees at Eastern, Western Portals and Intake sites. | *Follow-up action was needed for the item. |
| | 22/01/2009 | The Contractor was reminded of the followings: - Construction works at near the existing stream at Eastern Portal should be carried out carefully to prevent any disturbance / damage to the stream and causing silty water discharging out. | Rectification/improvement was observed during the follow-up audit session. |
| | 22/01/2009 | The Contractor was reminded of the followings: - Keep clear the standing water in the label bags that secure around the trees at Eastern, Western Portals especially the Intake sites. | *Follow-up action was needed for the item. |
| | 29/01/2009 | The Contractor was reminded of the followings: - Silt curtain should be fully enclosed the work area to prevent any silty water from discharging out. | Rectification/improvement was observed during the follow-up audit session. |
| | 29/01/2009 | The Contractor was reminded of the followings: | *Follow-up action was needed for the item. |

| Parameters | Date | Observations and Recommendations | Follow-up |
|------------|------|---|-----------|
| | | - Keep clear the standing water in the label bags that secure around the trees at Eastern, Western Portals especially the Intake sites. | |

Note: (*) The Environmental deficiencies have been rectified by the Contractor. However, the item was reoccurred during the follow-up site audit due to construction activities/rainstorm. The Contractor was reminded to rectify the deficiencies more frequently.

5.9 The monthly IEC audit was carried out on 14th January 2009, the observations were recorded and they are presented as follows:

5.10 Follow-up and rectification works in response to IEC observations on 29 December 2008 were satisfied.

14th January 2009

Eastern Portal

- New wastewater treatment plant was observed. However, chemical drums other than those for treatment system were also place in the same compartment. Prompt removal is necessary.
- Vegetation waste at slope side was observed. Proper temporary storage area should be provided.
- It is observed that there was an opening at manhole which allowed the mixing of surface runoff from outside and treated effluent. No mixing should be allowed. The arrangement of drainage should be reviewed.
- Water ponding at piling area above nullah was observed. Prompt cleaning up is needed.

Western Portal

- Stagnant water was observed at several areas. E.g. slope, drip tray. I-beam and cable trench. Prompt cleaning up is needed.
- The haul road and exposed slope were dry. More frequent watering is necessary.
- No chemical label was provided for an oil drum located near the eastern side of the site.
- Chemical spillage was found near the oil drum as mentioned in item above.
- Cement bags were not covered next to the grouting machine. Dust control measures should be provided promptly.

Non-compliance Recorded during Site Inspections

5.11 No non-compliance was recorded in the reporting month.

Summary of Mitigation Measures Implemented

5.12 The Contractor has implemented the mitigation measures as recommended in the EIA and the updated EM&A Manual in the reporting period except those mitigation measures not applicable at this stage. Status of the implementation of mitigation measures is presented in Table 1.2 and **Appendix L**.

5.13 According to the updated EM&A Manual and EP condition, mitigation measures such as noise enclosure and use of quiet PME are required to be implemented.

- 5.14 The actual implementation status of major mitigation measures required under the EP is as follows:
- Installation of silt curtain during the course of marine works.
 - Design of noise enclosure at Eastern Portal.
 - Submitted the Alternative Plant Inventory (EP condition 2.8(c)).
- 5.15 An updated summary of the EMIS is provided in **Appendix L**.

Implementation Status of Event Action Plans

- 5.16 The Event Action Plans for air quality and noise are presented in **Appendix M**.

Eastern Portal

1-hr TSP Monitoring

- 5.17 No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

- 5.18 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

- 5.19 No Action/Limit Level exceedance was recorded in the reporting month.

Western Portal

1-hr TSP Monitoring

- 5.20 No Action/Limit Level exceedance was recorded in the reporting month.

24-hr TSP Monitoring

- 5.21 No Action/Limit Level exceedance was recorded in the reporting month.

Construction Noise

- 5.22 No Action/Limit Level exceedance was recorded for construction noise.

Water Quality

- 5.23 No Action/Limit Level exceedance was recorded for water quality.

Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

- 5.24 One environmental complaint was received in the reporting month. For the details, please refer to the following table: -

| Complaint No. | Date | Complaint Details |
|----------------------|-----------------|--|
| COM-2009-01-021 | 21 January 2009 | Muddy water was observed from discharging into the sea at Western Portal Site. |

- 5.25 No warning, summon and notification of successful prosecution was received in the reporting month.
- 5.26 There were a total of 11 environmental complaints, no warning, summons and successful prosecution received since the commencement of the Project. The Complaint Log is attached in **Appendix N**.

6. FUTURE KEY ISSUES

Key Issues for the Coming Month

6.1 Key environmental issues at both Eastern and Western Portals in the coming month include:

Both Eastern and Western Portal

- Noise from operation of the equipment, especially for rock-breaking activities and machinery on-site;
- Dust generation from stockpiles of dusty materials, excavation works and rock breaking activities;
- Runoff from exposed slope;
- Wastewater and runoff discharge from site;
- Regular removal of silt, mud and sand along u-channels and sedimentation tanks;
- Review and implementation of temporary drainage system for the surface runoff;
- Proper storage of construction materials on site;
- Storage of chemicals/fuel and chemical waste/waste oil on site;
- Watering for rock breaking activity, soil nailing and on haul road;
- Accumulation of general and construction waste on site.

Only at Western Portal

- Contamination of marine water.

6.2 The tentative program of major site activities and the impact prediction and control measures for the coming two month, i.e. February 2009 to March 2009 are summarized as follows:

| Construction Works | Major Impact Prediction | Control Measures |
|---|--|---|
| - Main tunnel excavation, intake shaft, river channel and access road construction at Eastern Portal. - Invert slab of TBM rectangular transitional tunnel construction, spoil | Air impact (dust) | a) Frequent watering of haul road and unpaved/exposed areas; b) Frequent watering or covering stockpiles with tarpaulin or similar means; and c) Watering of any earth moving activities. |
| | Water quality impact (surface run-off) | d) Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains; e) Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge; f) Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and g) Provision of measures to prevent discharge into the stream. |

| Construction Works | Major Impact Prediction | Control Measures |
|---|-------------------------|--|
| basin excavation and fabrication of the TBM at Western Portal. - Preparation work & cofferdam construction at Intake W0. | Noise Impact | h) Scheduling of noisy construction activities if necessary to avoid persistent noisy operation; i) Controlling the number of plants use on site; j) Regular maintenance of machines; and k) Use of acoustic barriers if necessary. |

Monitoring Schedule for the Next Month

6.3 The tentative environmental monitoring schedules for the next month are shown in **Appendix D**.

Construction Program for the Next Month

6.4 The tentative construction program for the Project is provided in **Appendix O**.

7. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 7.1 Environmental monitoring works were performed in the reporting month and all monitoring results were checked and reviewed.

1-hr TSP Monitoring

- 7.2 All 1-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hr TSP Monitoring

- 7.3 All 24-hour TSP monitoring was conducted as scheduled in the reporting month except the 24-hour TSP monitoring on 30 January 2009 was cancelled due to True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Construction Noise Monitoring

- 7.4 All construction noise monitoring was conducted as scheduled in the reporting month except the noise monitoring (0700-1900 hrs) on 30 January 2009 was cancelled due to True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Water Quality

- 7.5 All water quality monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Complaint and Prosecution

- 7.6 One environmental complaints and no environmental prosecution were received in the reporting month.

Recommendations

- 7.7 According to the environmental audit performed in the reporting period, the following recommendations were made:

Air Quality Impact

- To prohibit any open burning on site.
- To regularly maintain the machinery and vehicles on site.
- To implement dust suppression measures on all haul roads, stockpiles, dry surfaces and excavation works.
- To provide hoarding

Noise Impact

- To inspect the noise sources inside the site.
- To space out noisy equipment and position the equipment as far away as possible from sensitive receivers.
- To provide temporary noise barriers for operations of noisy equipment near the noise sensitive receivers in an appropriate location.

Water Impact

- To prevent any surface runoff discharge into any stream course.
- To review and implement temporary drainage system.
- To identify any wastewater discharges from site.
- To ensure properly maintenance for de-silting facilities.
- To clear the silt and sediment in the sedimentation tanks.
- To review the capacity of de-silting facilities for discharge.
- To divert all the water generated from construction site to de-silting facilities with enough handling capacity before discharge.
- To avoid accumulation of stagnant and ponding water on site.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site.
- To ensure the performance of sorting of C&D materials at source (during generation);
- To carry out inspection of dump truck at site exit to ensure inert and non-inert C&D materials are properly segregated before removing off site.
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site.
- To avoid improper handling or storage of oil drum on site.

| Orifice Transfer Standard Information | | | | | |
|---------------------------------------|-----------|--|--------|---------------|--------|
| Equipment No.: | A-04-06 | Slope, mc | 0.0575 | Intercept, bc | 0.0395 |
| Last Calibration Date: | 10-Mar-08 | $mc \times Qstd + bc = [\Delta H \times (Pa/760) \times (298/Ta)]^{1/2}$ | | | |
| Next Calibration Date: | 9-Mar-09 | $Qstd = \{[\Delta H \times (Pa/760) \times (298/Ta)]^{1/2} - bc\} / mc$ | | | |

| Calibration of TSP Sampler | | | | | |
|----------------------------|------------------------------------|--|---------------------|------------------------------|---|
| Calibration Point | Orifice | | | HVS | |
| | ΔH (orifice), in. of water | $[\Delta H \times (Pa/760) \times (298/Ta)]^{1/2}$ | Qstd (CFM) X - axis | ΔW (HVS), in. of oil | $[\Delta W \times (Pa/760) \times (298/Ta)]^{1/2}$ Y-axis |
| 1 | 12.1 | 3.53 | 60.68 | 8.6 | 2.97 |
| 2 | 10.7 | 3.32 | 57.02 | 7.2 | 2.72 |
| 3 | 7.4 | 2.76 | 47.30 | 5.0 | 2.27 |
| 4 | 5.1 | 2.29 | 39.15 | 3.3 | 1.84 |
| 5 | 3.2 | 1.81 | 30.87 | 1.9 | 1.40 |

By Linear Regression of Y on X

Slope, mw = 0.0518 Intercept, bw = -0.1952
 Correlation coefficient* = 0.9993

*If Correlation Coefficient < 0.990, check and recalibrate.

Set Point Calculation

From the TSP Field Calibration Curve, take Qstd = 43 CFM
 From the Regression Equation, the "Y" value according to

$$mw \times Qstd + bw = [\Delta W \times (Pa/760) \times (298/Ta)]^{1/2}$$

Therefore, Set Point; W = $(mw \times Qstd + bw)^2 \times (760 / Pa) \times (Ta / 298) =$ 4.02

Certificate of Calibration

Item for calibration:

Description : RS232 Integral Vane Digital Anemometer
Manufacturer : AZ Instrument
Model No. : 451104
Serial No. : 9020746
Equipment No. : A-03-01

Test conditions:

Room Temperature : 21 degree Celsius
Relative Humidity : 65%
Pressure : 101.3 kPa

Methodology:

The anemometer has been calibrated in accordance with the documented procedures and using standard(s) and instrument(s) which are recommended by the manufacturer, or equivalent.

Results:

| | Reference Set Point | Instrument Readings |
|-----------------------------|---------------------|---------------------|
| Measuring Air Velocity, m/s | 2.00 | 2.00 |
| Temperature, °C | 21.0 | 21.0 |

Certificate of Calibration

Item for Calibration:

Description : Laser Dust Monitor
 Manufacturer : Sibata
 Model No. : LD-3
 Serial No. : 281835
 Sensitivity (K) 1 CPM : 0.001 mg/m³
 Sen. Adjustment Scale Setting : 666 CPM
 Equipment No. : A-02-02

Test Conditions:

Room Temperature : 21 degree Celsius
 Relative Humidity : 62%

Test Specifications & Methodology:

1. Instruction and Operation Manual High Volume Sampler, Andersen Samplers, Inc.
2. In-house method in according to the instruction manual: The Laser Dust Monitor was compared with a calibrated High Volume Sampler and the result was used to generate the Correlation Factor (CF) between the Laser Dust Monitor and High Volume Sampler.

Results:

| | |
|-------------------------|--------|
| Correlation Factor (CF) | 0.0032 |
|-------------------------|--------|

Test conditions:

| | |
|-------------------|---------------------|
| Room Temperature | : 23 degree Celsius |
| Relative Humidity | : 63% |

Test Specifications:

Conductivity & Salinity Sensor, Model: 6560, S/N: 05A1209

1. Conductivity performance check with Potassium Chloride standard solution
2. Salinity performance check with Sodium Chloride standard solution

Dissolved Oxygen Sensor, Model: 6562, S/N: 04A0145

1. Performance check against Winkler titration

Turbidity Sensor, Model: 6136, S/N: 05A1610AJ

1. Calibration check with Formazin standard solution

pH Meter, Model: 6561, S/N: 01J

1. Calibration check with standard pH buffer

Depth Meter

1. Calibration check at 1m water level depth

Methodologies:

1. YSI 6-Series Sonde Environmental Monitoring System Instruction Manual
2. In-house method with reference to APHA and ISO standards

APPENDIX I
SUMMARY OF EXCEEDANCE

Contract No. DC/2007/10 – Design and Construction of Hong Kong West Drainage Tunnel

Exceedance Report

Eastern Portal

- (A) Exceedance Report for Air Quality (1 hour TSP)
(NIL in the reporting month)**
- (B) Exceedance Report for Air Quality (24 hours TSP)
(NIL in the reporting month)**
- (C) Exceedance Report for Construction Noise
(NIL in the reporting month)**

Western Portal

- (D) Exceedance Report for Air Quality (1 hour TSP)
(NIL in the reporting month)**
- (E) Exceedance Report for Air Quality (24 hours TSP)
(NIL in the reporting month)**
- (F) Exceedance Report for Construction Noise
(NIL in the reporting month)**
- (G) Exceedance Report for Water Quality
(NIL in the reporting month)**

**APPENDIX K
SITE AUDIT SUMMARY**

*Contract No. DC/2007/10
Design and Construction of Hong Kong West Drainage Tunnel*

Weekly Site Inspection Record Summary

Inspection Information

| | |
|----------------------------|----------------------------|
| Checklist Reference Number | 90107 |
| Date | 7 January 2009 (Wednesday) |
| Time | 14:00 – 18:00 |

| Ref. No. | Non-Compliance | Related Item No. |
|-----------|---|------------------|
| - | None identified | - |
| Ref. No. | Remarks/Observations | Related Item No. |
| | A. Water Quality | |
| 90107-O02 | • Standing water with oil was observed at the drip tray at Western Portal. The Contractor was reminded to clear them properly. | B15 |
| 90107-O04 | • Silty water was observed discharging at the existing stream at Eastern Portal. The Contractor rectified the item immediately. However, The Contractor was reminded that all wastewater should be treated before discharging out and the wastewater treatment unit should be checked regularly to ensure these facilities can function properly at all time. | B9 |
| 90107-O05 | • Muddy water and sediment was observed accumulate at the paved area at Eastern Portal. The Contractor was reminded to provide sand bag bund to surround the open channels to direct the silty runoff for treatment before discharging out. | B5 |
| | B. Air Quality | |
| 90107-O03 | • Opened cement bags were observed at Western Portal. The Contractor was reminded to cover it with tarpaulin to control dust emission. | D6 |
| | C. Noise | |
| | • No environmental deficiency was identified during site inspection. | |
| | D. Waste / Chemical Management | |
| 90107-O01 | • Oil drums were observed standing on the bare ground at Western Portal. The Contractor was reminded to provide drip tray or store it properly. | F3i. |
| 90107-O02 | • Standing water with oil was observed at the drip tray at Western Portal. The Contractor was reminded to clear them properly. | F8 |
| | E. Ecology | |
| 90107-O04 | • Silty water was observed discharging at the existing stream at Eastern Portal. The Contractor rectified the item immediately. However, The Contractor was reminded that all wastewater should be treated before discharging out and the wastewater treatment unit should be checked regularly to ensure these facilities can function properly at all time. | G1 |
| | F. Marine Ecology | |
| | • No environmental deficiency was identified during site inspection. | |
| | G. Reminders | |
| 90107-R06 | • Construction works at near the existing stream at Eastern Portal should be carried out carefully to prevent any disturbance / damage to the stream. | G1 |
| 90107-R07 | • Keep clear the standing water in the label bags that secure around the trees at Eastern, Western Portals and Intake sites. | B15 |
| | H. Others | |
| | • Follow-up on previous audit section (Ref. No.:81229), follow-up action is needed for the items (81229-O03, O05, O08, O09 and R10, R11) | |

**APPENDIX L
ENVIRONMENTAL MITIGATION
IMPLEMENTATION SCHEDULE (EMIS)**

Appendix L - Summary of Environmental Mitigation Implementation Schedule

| Types of Impacts | Mitigation Measures | Status |
|---|---|--------|
| Construction Dust | <i>Dust Mitigation Measures</i> | |
| | <ul style="list-style-type: none"> The Contractor shall undertake at all times to prevent dust nuisance as a result of his activities. Effective dust suppression measures should be installed to minimize air quality impacts, at the boundary of the site and at any sensitive receivers. | ^ |
| | <ul style="list-style-type: none"> No blasting shall be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted (unless prior permission of the Commissioner of Mines is obtained). | ^ |
| | <ul style="list-style-type: none"> Effective water sprays shall be used during the delivery and handling of all raw sand, aggregate and other similar materials, when dust is likely to be created, to dampen all stored materials during dry and windy weather. Watering of exposed surfaces shall be conducted as often as possible depending on the circumstances. | * |
| | <ul style="list-style-type: none"> A watering programme of once every 2 hours in normal weather conditions, and hourly in dry/windy conditions. | ^ |
| | <ul style="list-style-type: none"> Any stockpile of dusty material cannot be immediately transported out of the Site shall be either: a) covered entirely by impervious sheeting; b) placed in an area sheltered on the top and the three sides; or c) sprayed with water or a dust suppression chemical so as to maintain the entire surface wet. | * |
| | <ul style="list-style-type: none"> Should a conveyor system be used, the Contractor shall implement the following precautionary measures. Conveyor belts shall be fitted within windboards. Conveyor transfer points and hopper discharge areas shall be enclosed to minimize dust emission. All conveyors under control of the Contractor, and carrying materials which have the potential to create dust, shall be totally enclosed and fitted with belt cleaners. | N/A |
| | <ul style="list-style-type: none"> Any dusty materials being discharged to vehicle from a conveying system at fixed transfer point, three-sided roofed enclosed with a flexible curtain across the entry shall be provided. Exhaust fans shall be provided for this enclosure and vented via a suitable fabric filter system. | N/A |
| | <ul style="list-style-type: none"> The heights from excavated spoils are dropped should be minimise to reduce the fugitive dust arising from unloading/loading. | ^ |
| | <ul style="list-style-type: none"> The Contractor shall confine haulage and delivery vehicles to designated roadways inside the site. If in the opinion of the Engineer, any motorising vehicle is causing dust nuisance, the Engineer may require that the vehicle be restricted to a maximum speed of 15km per hour while within the site area. | ^ |
| <ul style="list-style-type: none"> Areas within the site where there is a regular movement of vehicles shall have an approved hard surface, be kept clear of loose surface materials and / or be regularly watered. | ^ | |
| <ul style="list-style-type: none"> Wheel cleaning facilities shall be installed for both portals and used by all vehicles leaving the site. No earth, mud, debris, dust and the like shall be deposited on public roads. Water in the wheel cleaning facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit details of proposals for the wheel cleaning facilities to the Engineer prior to construction of the facility. Such wheel cleaning facilities shall be usable prior to any earthwork excavation activity on site. The Contractor shall provide a hard-surfaced road between any cleaning facility and the public road. | ^ | |
| <ul style="list-style-type: none"> Chemical wetting agents shall only be used on completed cuts and fills to reduce wind erosion. | N/A | |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
 N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
 * Recommendation was made during site audit but improved/rectified by the contractor;
 # Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|---|--|
| | <ul style="list-style-type: none"> • No vehicle exhausts shall be directed towards the ground or downwards to minimize dust nuisance. • Ventilation system, equipped with proprietary filters, should be provided to ensure the safe working environment inside the tunnel. Particular attention should be paid to the location and direction of the ventilation exhausts. The exhausts should not be allowed to face any sensitive receivers directly. Consideration should also be given to the location of windows, doors and direction of prevailing winds in relation to the nearby sensitive receivers. • In the event of any spoil or debris from construction works being deposited on adjacent land, or stream, or any silt being washed down to any area, then all such spoil, debris or material and silt shall be immediately removed and the affected land and areas restored to their natural state by the Contractor to the satisfaction of the Engineers. <p>In addition, based on the <i>Air Pollution Control (Construction Dust) Regulation</i>, any works involved regulatory and notifiable works, such as stockpiling, loading and unloading of dusty materials, shall take precautions to suppress dust nuisance.</p> <ul style="list-style-type: none"> • The working area of any excavation or earthmoving operation shall spray with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet; • Exposed earth shall be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies; and • Any stockpile of dusty materials (greater than 20m³) shall be either covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides; and sprayed with water or a dust suppression chemical so as to maintain the entire surface wet. • Other suitable dust control measures as stipulated in <i>Air Pollution Control (Construction Dust) Regulation</i>, where appropriate, should be adopted. | <p>^</p> <p>^</p> <p>*</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|----------------------------------|---|---|
| <p>Construction Noise</p> | <p><u>Air borne noise</u></p> <p>In general, potential construction noise impact can be minimized or avoided by imposing a combination of the following mitigation measures:</p> <ul style="list-style-type: none"> • Noisy equipment and activities should be sited by the Contractor as far from close-proximity sensitive receivers as practical. Prolonged operation of noisy equipment close to dwellings should be avoided. • The Contractor should minimise construction noise exposure to the schools (especially during examination periods). The Contractor should liaise with the school and the Examination Authority to ascertain the exact dates and times of all examination periods during the course of the works contract and to avoid noisy activities during these periods. • Noisy plant or processes should be replaced by quieter alternatives. Silenced diesel and gasoline generators and power units, as well as silenced and super-silenced air compressor, can be readily obtained. • Noisy activities should be scheduled to minimise exposure of nearby sensitive receivers to high levels of construction noise. For example, noisy activities can be scheduled for midday, or at times coinciding with periods of high background noise (such as during peak traffic hours). • Idle equipment should be turned off or throttled down. Noisy equipment should be properly maintained and used no more often than is necessary. • The power units of non-electric stationary plant and earth-moving plant should be quietened by vibration isolation and partial or full acoustic enclosures for individual noise-generating components. • Construction activities should be planned so that parallel operation of several sets of equipment close to a given receiver is avoided, thus reducing the cumulative impacts between operations. The numbers of operating items of powered mechanical equipment should be minimised. Noise can be reduced by increasing the distance between the operating equipment and the NSRs or by reducing the number of items of equipment and/or construction activity in the area at any one time. • The use of quiet plant working methods can further reduce noise level. Quiet plant is defined as Powered Mechanical Equipment (PME) whose actual sound power level is less than the value specified in the TMs for the same piece of equipment. To allow the Contractor some flexibility to select equipment to suit his needs, it is considered too restrictive to specify which specific items of silenced equipment to be used for the construction operations. It should be noted that various types of silenced equipment can be found in Hong Kong and are readily available on the market. BS 5228 also provides examples of quiet construction plant and their SWL. • Construction plant should be properly maintained (well-greased, damage and worn parts promptly replaced) and operated. Construction equipment often has silencing measures built in or added on, e.g. bulldozer silencers, compressor panels, and mufflers. Silencing measures should be properly maintained and utilised. Rubber or damping materials should be introduced between metal panels to avoid rattle and reverberation of noise. • Equipment known to emit sound strongly in one direction should be oriented so that the noise is directed away from nearby NSRs. • Materials stockpile and other structures (such as site offices) should be effectively utilised to shield construction noise. Noise | <p>^</p> <p>^</p> <p>N/A</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|---|---|
| | <p>can also be reduced by construction of temporary noise barriers which screen the lower floors from viewing the sites. Temporary noise barriers should be installed at active parts of construction areas where construction equipment is being operated in close proximity to NSRs.</p> <ul style="list-style-type: none"> • It is noted that under the WBTC No. 19/2001, all construction sites are required to use metallic site hoarding can be slightly modified (with the addition of steel backings) into temporary noise barriers. These barriers should be gap free and have a surface mass density of at least 7kg/m². • All hand-held percussive breakers and air compressors should comply the Noise Control (Hand-held Percussive Breakers) Regulations respectively under the NCO (Ordinance No. 75/88, NCO Amendment 1992 No.6). <p>The Contractor shall devise, arrange methods of working and carry out the works in such manner as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these measures are implemented properly.</p> <p><u>Level 2 Use of Barriers</u></p> <p>Level 2 mitigation measures include providing movable barriers for sites which have sufficient space for installation, full enclosures during the drilling activities at Eastern Portal and at muck pit areas for Eastern portals and cantilever-typed high rise noise barrier for intake W5 (P) and W8.</p> <p>Before construction of the full enclosure at muck pit area, the use of full enclosure noise barrier (Stage A) for the drilling activities at the Eastern Portal area is required. A full enclosure for the muck pit area will then be constructed at this later stage (Stage B). The full enclosure shall be gap free apart from necessary entrance/exits, which shall face towards the entrance of eastern portal to minimize the amount of noise generated from affecting the nearest RNSRs especially school (True Light Middle School of Hong Kong).</p> <p>5m high cantilever-typed hoarding barrier to be built at W5 (P) and W8. These enclosures/barriers should have no gaps and have a superficial surface density of at least 10kg/m². Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period. To schedule the noise barrier erection and dismantling to the non sensitive periods of school to avoid adverse impact to W8/3.</p> <p>Movable barriers of 3 to 5m height with a small cantilevered upper portion and skid footing to be located within about 5 m or more for mobile equipment such that the line of sight is blocked. To provide purposes-built noise barriers or screens constructed of appropriate materials (minimum superficial density of 10kg/m²) located close to the operating PME.</p> <p>Pre-drilling following by chemical splitting instead of using large excavator mounted breaker should be used as mitigation measure for rock breaking and rock drilling.</p> | <p>^</p> <p>^</p> <p>^</p> <p>^</p> <p>N/A</p> <p>^</p> <p>^</p> <p>^</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|--|---------------------|
| | <p>No construction activity is recommended during the examination period.</p> <p><u>Ground borne noise</u></p> <p>The noise level should be measured on the ground floor inside the nearest building during the TBM construction work in the daytime. If the daytime monitored ground borne noise exceeds the relevant evening/night ground borne noise criteria, evening/night construction work would not be carried out for the concerned tunnel section. Evening/night time construction work is subject to CNP application under the control of NCO.</p> <p>Public relationship strategy with 24-hour hotline system.</p> | <p>^</p> <p>N/A</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|--|--|
| Water Quality | <p><u>Precautionary measures for construction work near natural streams</u></p> <p>The government provides guidelines (ETWB TCW NO. 5/2005 and DSD TC 2/2004) are providing guidelines to minimize impacts when there is construction work carried out at near natural streams course. Relevant mitigation measures for the intakes are summarised as follows:</p> <ul style="list-style-type: none"> • Temporary site access to the work sites should be carefully planned and located to minimize disturbance caused to the substrates of streams/ivers and riparian vegetation by construction plant. • Locations well away from the rivers/streams for temporary storage of materials (e.g equipment, filling materials, chemicals and fuel) and temporary stockpile of construction debris and spoil should be identified before commencement of works. • Proposed works site areas inside, or in the proximity of, natural rivers and streams should be temporarily isolated to prevent adverse impacts on the stream water qualities. • Stockpiling of construction materials, if necessary, should be completely properly covered and located away from any natural stream/river. • Construction debris and spoil should be covered up and/or properly disposed of as soon as possible to avoid being washed into nearby rivers/streams by rain and local runoff. | <p>*</p> <p>*</p> <p>*</p> <p>*</p> <p>*</p> |
| | <p><u>Construction of temporary berthing point at the Western Portal</u></p> <p>A refuse collection vessel shall be provided to collect refuse or materials lost into the sea.</p> | <p>^</p> |
| | <p>The respective areas of the marine works will be completely enclosed by the silt curtain. The curtain shall be extended from water surface down to the seabed where it is anchored using sinker blocks. The Contractor shall inspect the silt curtain on regular basis to ensure its integrity and it is serviceable for all times.</p> | <p>*</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|--|--------|
| | <p>Transfer of armour rock onto the seabed from barge at the temporary pier location should be conducted by careful grabbing and unloading to the seabed (to minimize sediment migration).</p> | ^ |
| | <p>The conveyor belt should be completely covered and muddy effluent from the temporary barge should be contained, treated and disposed. Where there is transfer of excavated wastes, the Contractor should provide appropriate measures to ensure that the waste is free from floatables, putrescibles, organic wastes and toxic materials and when required a refuse collection vessel be provided to collect float refuse.</p> | N/A |
| | <p><u>Construction of stilling basin at Western Portal outfall</u></p> | |
| | <p>All construction for the basin should be carried out inside the temporary cofferdam which is a temporary watertight enclosure built in the water and pumped dry to expose the bottom so that construction of stilling basin can be undertaken.</p> | * |
| | <p>During the dewatering process, appropriate desilting/sedimentation devices should be provided on site for treatment before discharge. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.</p> | ^ |
| | <p>The cofferdam will remain on site until after the construction of stilling basin has been completed. The coffer dam shall be regularly inspected and maintained to ensure no spillage of waste or wastewater into the sea. Conveyance of dredged materials from the coffer dam shall be carried out cautiously to avoid spillage into the sea.</p> | * |
| | <p>The filled material for the stilling basin should be contained inside the temporary cofferdam. The top level of the cofferdam shall be constructed higher than the final backfilled level.</p> | * |
| | <p>The Contractor shall be responsible for the design, installation and maintenance of the silt curtains to minimize the impacts on the water quality and the protection of water quality. The design and specification of the silt curtains shall be submitted by the Contractor to the Engineer for approval.</p> | ^ |
| | <p>Silt curtains shall be formed from tough, abrasion resistant, permeable membranes, suitable for the purpose, supported on floating booms in such a way as to ensure that the sediment plume shall be restricted to within the limit of the works area. The silt curtain shall be formed and installed in such a way that tidal rise and fall are accommodated, with the silt curtains always extending from the surface to the bottom of the water column and held with anchor blocks. The removal and reinstallation of such curtains during typhoon conditions shall be as agreed with the Director of Marine Department. The contractor shall regularly inspect the silt curtains and check that they are moored and marked to avoid danger to marine traffic. Any damage to the silt curtain shall be repaired by the Contractor promptly and the works shall be stopped until the repair is fixed to the satisfaction of the Engineer.</p> | * |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|--|--------|
| | <p>Transfer of rock fill material (armor rock) from the barge onto the site location should be conducted by grabbing and placement on the seabed to minimize sediment migration. No free dropping of the material will be allowed.</p> | ^ |
| | <p>Prior to the construction of armor rock based panel, a silt curtain shall also be installed prior to carry out any marine works as a preventive mitigation measure.</p> | ^ |
| | <p><u>Construction of TBM tunnel at both portals and intakes</u></p> | |
| | <p>Recycled water will be used at the cutter face for cooling purposes. Used water will be collected and discharged to a settling tank for settlement. Excess water from the settling tank will be transferred to the water treatment plant on site where the addition of flocculants will assist in settlement of solids. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.</p> | N/A |
| | <p>During the drilling process, all flushing water will be recycled for use. Discharge of the treated water to nearby drainage system shall be allowed provided that it has been treated to a level meeting with statutory requirements.</p> | ^ |
| | <p>Water flow at streams should be maintained by a temporary diversion system during the construction phase of intakes and manhole drop shafts.</p> | N/A |
| | <p><u>General Construction Activities and Workforce</u></p> | |
| | <p>A. Surface runoff</p> | |
| | <p>Effluent produced from construction activities are subjected to WPCO control. Effluent produced from sites should be diverted away from stream courses. Construction works near stream course should be scheduled in the dry season as far as practical to avoid excessive site runoff discharge.</p> | * |
| | <p>Under the <i>Water Pollution Control Ordinance</i> (WPCO), turbid water from construction sites must be treated to minimize the solids content before being discharged into storm drains. The suspended solids load can be reduced by directing the runoff into temporary sand traps or other silt-removal facilities, and other good and appropriate site management practices. Advice on the handling and disposal of construction site discharge is provided in the ProPECC Paper (PN 1/94) on Construction Site Drainage.</p> | * |
| | <p>A drainage system layout should be prepared by the Contractor for each of the works areas (portals and intakes), detailing the facilities and measures to manage pollution arising from surface runoff from those works areas. The drainage layout and an associated drainage management plan to reduce surface runoff sediments and pollutants entering watercourses, should be submitted to the Engineer for approval and to EPD for agreement.</p> | * |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|--|---|
| | <p>The system should be capable of handling stormwater from the site and directing it to sediment removal facilities before discharge. If oil and grease is used on the site or brought to the site, the stormwater should pass through oil interceptors before discharge. The interceptors should have a bypass to prevent washout in heavy storms.</p> <p>A temporary channel system or earth bunds or sand barriers should be provided in works areas on site to direct stormwater to silt-removal facilities. Stockpiled materials, if susceptible to erosion of rain or wind, should be covered with tarpaulins (or/similar fabric) or hydroseedings as far as practicable especially during the wet season.</p> <p>Silt removal facilities should be checked and the deposited silt and grit should be removed regularly to ensure these facilities are in good working condition and to prevent blockages.</p> <p>Vehicle washing areas should be drained into a settlement basin to settle out the suspended solid before discharge to storm water drains. The water should be recycled on site whenever possible. It is suggested that the wash water from the wheel wash basin is either reused for road watering or pumped to the on-site settling tanks for treatment. Water used for dust depression purposes should be minimized and an alternative soil holding agent should be considered.</p> <p>B. Spillage, Oil and Solvents Any contractor generating waste oil or other chemicals as a result of his activities should register as a chemical waste producer and provide a safe storage area for chemicals on site. Oil interceptors need to be regularly inspected and cleaned to avoid wash-out of oil during storm conditions. A bypass should be provided to avoid overload of the interceptor's capacity.</p> <p>Any spillage should be cleaned up immediately and the resulting contaminated absorbent material should be properly managed according to Waste Disposal Regulations. Spills should be contained to avoid spreading and contaminating the water resources.</p> <p>Oil and fuels should be used and stored properly in designated area. All fuel tanks and storage areas should be provided with locks and be sited on within sealed areas within surrounded by bunds of with a capacity equal to 110% of the storage capacity of the largest tank.</p> <p>Good housekeeping practices are required to minimize careless spillage and keep the work space in a tidy and clean condition. Appropriate training, including safety codes and relevant manuals, should be given to the personnel who regularly handle the chemicals on site.</p> | <p>^</p> <p>*</p> <p>^</p> <p>^</p> <p>^</p> <p>*</p> <p>*</p> <p>*</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|------------------|---|--|
| | <p>C. On-Site Effluent Generation</p> <p>Sewage arising from the additional population of workers on site should be collected in a suitable storage facility (chemical mobile toilets). Most of the work site locations are close to the public sewerage system, and therefore the use of septic tanks isare, therefore, not encouraged. Portable toilets should be used coupled with tickering away services provided by a licensed collector. They should be positioned at appropriate locations across the site to ensure no direct discharge of foul water off-site.</p> <p>D. Protection of Existing Flora and Fauna</p> <p>The Contractor should provide details of the plant and operation plans at each site for approval by the Engineer before commencing construction. The plans should include how the existing flora and fauna will be protected. Locations required for groundwater levels monitoring are Eastern Portal, PFLR1(P), THR2(P), TP5, TP789 and W12.</p> <p>The construction and demolition of the temporary pier may create short term impacts on the local marine water quality. The situation will be restored once the work is finished by proper phasing of the works programme and implementation of the adequate mitigation measures (e.g. silt curtain) the impacts will be minimized.</p> <p><u>Maintaining Baseflow in Downstream Watercourses</u></p> <p>The final design will be developed during the detailed design stage. The exact base flow rates to be maintained at each of the intakes will be subject to detailed site investigation at design stage.</p> <ul style="list-style-type: none"> • Purpose of the by-pass device is to maintain the base-flow of the affected stream course. • The by-pass system comprises an approach link and a trapezoidal channel. • The approach link is section with inclined profiled surface at a gradient of 1 in 100. It is used to direct the base flow to the bypass trapezoidal channel at its down stream end during the normal days. • The trapezoidal channel is sized such that it could handle the base flow in the affected stream course which is estimated to be no more than 20 l/s. • Whenever the flow in the stream course exceeding the base flow rate, the excessive flow will overflow into the intake structure via the bottom rack structure. The bottom rack structure has bar screen on the top and inclined channel at the bottom. The top level of the bar screen is level with the by-pass channel with an aim to receive the overflow from the by-pass channel. • The by-pass channel is designed requiring minimum maintenance. However, it is recommended that the maintenance authority carry out regular maintenance inspection prior to onset of seasons and after significant rainstorm event to prevent blockage of the by-pass and bottom rack structure. | <p>^</p> <p>^</p> <p>^</p> <p>N/A</p> <p>N/A</p> <p>N/A</p> <p>N/A</p> <p>N/A</p> <p>N/A</p> |

|-----------------------|---|--|
| Waste/Chemical | <p><u>General</u></p> <p>A proper waste management plan should be implemented to promote waste minimisation at source. Where waste generation is unavoidable then the potential for recycling or reuse should be explored and opportunities taken. If wastes cannot be recycled then the recommended disposal routes should be followed.</p> | * |
| | <p>All waste materials shall be segregated into categories covering:</p> <ul style="list-style-type: none"> • Excavated material or construction waste suitable for reuse on-site • Excavated material or construction waste suitable for public filling areas • Remaining C&D waste for landfill • Chemical waste, and • General refuse | <p>^</p> <p>^</p> <p>^</p> <p>^</p> <p>^</p> |
| | <p>Proper segregation and disposal of construction waste should be implemented. Separate containers for inert and non-inert wastes should be provided. The inert waste should be taken to public filling area and the non-inert waste should be transported to strategic landfills.</p> | ^ |
| | <p>A trip-ticket system on the solid waste transfer/disposal operations should be included as one of the contractual requirements (ETWB TCW No. 31/2004). The Independent Environmental Checker (IEC) should be responsible for auditing this system.</p> | ^ |
| | <p>IEC should also be responsible for auditing the well-documented record system which includes: (i) quantity of waste generation, (ii) quantity of recycled material, (iii) quantity of disposed material, (iv) disposal methods and (v) sites should be implemented during construction phase.</p> | ^ |
| | <p>Regular cleaning and maintenance of the waste storage area should be conducted throughout the construction stage.</p> | ^ |
| | <p><u>Excavated spoil</u></p> <p>Control measures for soil temporarily stockpiled on-site should be taken in order to minimize the noise, generation of dust, pollution of water and visual impact. Key impacts include:</p> | ^ |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|----------------------------|---|-------------------------------------|
| Terrestrial Ecology | <p>During the detailed design stage, the following issues should also be considered as possible to further minimise the impacts:</p> <ul style="list-style-type: none"> • Adjustment of site boundary to minimise temporary loss of natural stream habitat during construction. • Adjustment of site boundary to minimise use of mixed woodland as temporary works area. In particular, the woodland habitat in temporary works area of the Eastern Portal will be avoided, thereby greatly reducing the area of temporary loss of woodland habitat. • Minimizing felling of large trees. • About 20% of trees within the works area will be transplanted. The individual of <i>Artocarpus hypargyreus</i> recorded within the temporary works area of HKU1, if to be encroached, would also be transplanted. | <p>^</p> <p>^</p> <p>^</p> <p>^</p> |
| | <p>Standard site practices including the following, should be enforced to minimise the disturbance to the surroundings:</p> <ul style="list-style-type: none"> • Treat any damage that may occur to large individual trees in the adjacent area using materials and methods appropriate for tree surgery. • Reinstate work sites/disturbed areas immediately after completion of the construction works, in particular, through on-site tree/shrub planting along the woodland and shrubland section within the temporary works area. Tree/shrub species used should make reference from those in the surrounding area. • Regularly check the work site boundaries to ensure that they are not exceeded and that no damage occurs to surrounding areas. | <p>^</p> <p>^</p> <p>^</p> |
| | <p>A total of 1.02 ha would be replanted with woodland species, reaching almost a 1.5:1 ratio for compensatory planting. Tree/shrub species used should be based on those in the surrounding areas, including those which are commonly recorded during the baseline surveys.</p> | <p>^</p> |
| | <p>A low-flow channel would be provided within the channelised section to maintain a deeper water depth in the expanded channel, in particular during dry season as well as a basin at the end of the channelised section to provide living space for aquatic life. Step chute in the form of a series of descending water pools would be constructed between the low flow channel and the undisturbed stream course. There would also be openings for aquatic fauna between each chute step (pool). These could work like a “ladder” to help avoid isolating the aquatic fauna in the channelised section from natural habitats.</p> | <p>^</p> |
| | <p>Measures are also needed to maintain the flow of all affected streams/nullahs during the construction stages. Temporary bypass should be provided if the stream/nullah flows will be cut off by the construction works. After the construction works are finished, sections of temporary loss should be reinstated. Construction materials, wastes, and equipment should be cleared from the sites.</p> | <p>^</p> |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;
N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;
* Recommendation was made during site audit but improved/rectified by the contractor;
Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|-----------------------|---|------------------------------|
| | <p>Surveys of amphibians at E4(P), PFLR1(P), W12(P), MB16, E5(B)(P), TP789(P) and P5(P) prior to commencement of construction is recommended. Frogs, including Hong Kong Cascade Frog and Lesser Spiny Frog, and tadpoles found at work areas of these proposed intake points will be collected and translocated to nearby streams that will not be affected by the project. These procedures should be performed by experienced herpetologists. A detailed translocation proposal will be submitted during the detailed design stage.</p> <p>Measures should also be taken to avoid runoff to streams and marine habitats. Stream/channel which could potentially be affected during construction should be prevented from sedimentation by erection of sediment barriers. Site runoff should be desilted by siltation traps in streams/channels or diverted, to reduce the potential for suspended sediments, organics and other contaminants to enter the local stream environment.</p> | <p>^</p> <p>^</p> |
| Marine Ecology | <p>Silt curtains will be deployed during the construction and demolition of the temporary berthing point. Deployment of silt curtains around the berthing point area would effectively avoid adverse water quality impacts due to barge filling. No significant ecological impact is anticipated.</p> <p>The invert of the stilling basin would be at -5.4 mPD. A cofferdam in the form of pipe-pile wall is to be constructed outside the stilling basin prior to the construction of basin. The cofferdam will be dewatered to provide a working area for construction of the stilling basin. The boulders from the seawall will then be removed by landbased grabs.</p> <p>Although the speed of the working vessels to be used in the Project (mainly barges) would not be high, a speed limit for marine traffic is proposed as a precautionary measure. A speed limit of 10 knots should be strictly enforced in the works area, in particular in the waters between the outfall location and the navigation channel in East Lamma Channel.</p> | <p>^</p> <p>N/A</p> <p>^</p> |

|----------------------|--|--------|
| Landscape and Visual | The proposed landscape and visual mitigation measures during the construction phase include: | |
| | CM1 - Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. | ^ |
| | CM2 - Existing trees to be retained on site should be carefully protected during construction. The detailed proposal for any trees felling and transplantation is subject to Lands Department's approval on tree felling application at the detailed design stage. | ^ |
| | CM3 - Trees unavoidably affected by the works should be transplanted where practical. | ^ |
| | CM4 - Compensatory tree planting should be provided to compensate for felled trees. | ^ |
| | CM5 - The extent of disturbance on the existing stream course should be minimized. Any temporary works areas within the stream course shall be reinstated after construction. | ^ |
| | CM7 – Control of night-time lighting | ^ |
| | CM8 – Erection of decorative screen hoarding | ^ |

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

| Types of Impacts | Mitigation Measures | Status |
|-------------------|---|--------|
| Cultural Heritage | <p>The Cultural Heritage Impact Assessment has identified the following resources which will require mitigation measures during the construction stage;</p> | |
| | <p><u>Haw Par Mansion (including boundary wall and gate)</u> A condition survey must be undertaken by a qualified professional prior to the commencement of construction works for the tunnel portal in order to assess the structural integrity of the mansion, wall and gate (with special attention paid to any fragile architectural features). A report containing description of the types of construction, identification of fragile elements, an appraisal of the condition and a photographic record must be prepared. The report must also provide an assessment indicating whether further precautionary measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, including monitoring for vibration control to ensure that no damage to the structure and fabric of the house, wall and gate results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place.</p> | ^ |
| | <p>A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the boundary wall/gate and the temporary works area (during construction works associated for both the tunnel portal and the permanent vehicle access ramp). This is to enable access for routine maintenance works on the wall and to ensure that the wall is not damaged by machinery operation or related construction activities. The temporary works area will be enclosed by standard DSD site hoarding.</p> | ^ |
| | <p><u>Former Explosive Magazine of Victoria Barracks</u> A condition survey must be undertaken by a qualified professional prior to the commencement of construction works in order to assess the structural integrity of the retaining wall and the extent of damage from cracks and vegetation growth. A report containing a description of the wall's construction materials, identification of fragile and/or endangered elements, an appraisal of the condition and a photographic record of the retaining wall must be prepared. The report must also provide an assessment indicating whether further precautionary measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, such as monitoring for vibration control, to ensure that no damage to the retaining wall results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place.</p> <p>A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the retaining wall and the temporary works area (for the duration of the construction phase). The works area will be enclosed by standard DSD site hoarding.</p> | ^ |

Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

| Types of Impacts | Mitigation Measures | Status |
|-----------------------|---|--------|
| Fisheries | Silt curtain will be deployed during the construction and demolition of the temporary berthing point. With the deployment of silt curtains around the berthing point area, adverse water quality impact associated with the filling would not be anticipated. No significant fisheries impact is anticipated. | ^ |
| | The invert of stilling basin will be found at -5.4 mPD. A cofferdam in the form of pipe-pipe wall is to be constructed outside the stilling basin prior to the construction of basin. The cofferdam will be dewatered to provide a working space for the construction of stilling basin. The boulders from the seawall will then be removed by landbased grabs. | N/A |
| Hazard to Life | There will be no overnight storage of explosives for this project. Transportation of explosives to site for the construction of adit will be undertaken on a daily basis. The contractor is required to destroy any unused explosives before nightfall. If contractor wishes to set up magazines for overnight storage of explosives, it is necessary to carry out risk assessment and seek the relevant approval following the EIAO process. | ^ |

| Aug-08 | | | 1100 m ³ | | 904 m ³ | 2404 m ³ | | 2 m ³ | | 0.2 m ³ | 34 m ³ |
| Sep-08 | | | 1620 m ³ | | 64 m ³ | 11504 m ³ | | | | | 11 m ³ |
| Oct-08 | | | 650 m ³ | | 2488 m ³ | 1882 m ³ | | | | | 28 m ³ |
| Nov-08 | | | | | 4211 m ³ | 102 m ³ | | 3 m ³ | | 0.2 m ³ | 22 m ³ |
| Dec-08 | | | | | 9226 m ³ | | | 3 m ³ | | | 28 m ³ |
| Jan-09 | | | 129 m ³ | | 9530 m ³ | | | 2 m ³ | | 1.3 m ³ | 39 m ³ |
| Feb-09 | | | | | | | | | | | |
| Mar-09 | | | | | | | | | | | |
| Total | 0 | 0 | 3499 m ³ | 0 | 28826 m ³ | 18926 m ³ | 0 | 12 m ³ | 0 | 2.3 m ³ | 410 m ³ |

- Notes:
- (1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
 - (2) Plastics refer to plastic bottles/containers, plastic/foam from packaging material.
 - (3) Broken concrete for recycling into aggregates.
 - (4) The Figures for January 2008 are as of 31-01-09.
