Noise Monitoring

vii. Noise monitoring during day time and evening time were conducted at the M1a, M2b, M3a, M4b and M5b on a weekly basis in the reporting quarter. The limit level exceedances recorded in the reporting quarter are listed below. Investigation found that exceedances were not related to the Project. Investigation found that exceedances were not related to the Project.

- Eleven limit level exceedances at M1a on 15 and 24 and 30 March, 7, 12, 19 and 27 April, 4, 11, 17 and 24 May 2011 during the evening time period; and
- One action level exceedance was recorded due to the receipt of noise complaint from the resident of Victoria Centre on 19 and 20 April 11 at mid-night. Since there was no construction works undertaken under the EP-356/2009 during the concern time period, it is considered as invalid complaint under this Project.

Real-time Noise Monitoring

viii. Real-time noise monitoring at FEHD Hong Kong Transport Section Whitefield Depot and Oil Street Community Centre have been commenced on 5 October 2010 for the filling works of Contract no. HY/2009/11 and HY/2009/15. No project-related exceedance was recorded in the reporting quarter.

ix. Baseline noise level review for the noise level monitoring stations which do not have an appropriate baseline was conducted in this reporting period. Details of the results showed in Section 3.

x. Reference line for noise level during night time period real time noise monitoring was reviewed in this reporting period. No alternation was made for the two monitoring stations in this reporting period. Details of the results showed in Section 3.11.

Air Quality Monitoring

xi. 1hr and 24hr TSP monitoring were conducted at CMA1b, CMA2a, CMA3a, CMA4a, CMA5a and CMA6a in the reporting quarter. No exceedance was recorded during the reporting quarter.

Water Quality Monitoring

xii. Water quality monitoring was conducted at 18 monitoring stations namely WSD7, WSD9, WSD10, WSD15, WSD17, WSD19, WSD20, WSD 21, C1, C2, C3, C4e, C4w, C5e, C5w, C6, C8 and C9 during the reporting period.

xiii. Total 18 turbidity exceedances and 21 SS exceedances were recorded during mid-flood while 1 DO excedance, 23 turbidity exceedances and 26 SS exceedances were recorded during mid-ebb in the reporting period. Investigations were found that the most of exceedances are not related to the Project works. The exceedances of turbidity and SS level at C3 recorded on 31 March and 18 April 2011 might potential relate to the filling operation and insufficient silt screen maintenance. Apart from the exceedances record at C3 on 31 March and 18 April 2011, the SS and turbidity exceedances at C3 recorded on 5 and 7 May 2011 were caused by silt screen defect and improper maintenance of deployed silt curtain as identified during regular site inspections. In additional, the exceedances at C3 on 16, 18 and 19 May 2011 were caused by improper control and management of deployed silt curtain as identified during site inspections and monitoring. The details of the recorded exceedances can be referred to the Section 5.4.

Complaints, Notifications of Summons and Successful Prosecutions

xiv. There were two environmental complaints recorded in the reporting quarter regarding dust impact and a concern of mosquito breeding complaint at Victoria Centre on 15 April 2011 and episode of night-time noise at Victoria Centre on 19 and 20 April 2011 at 2:50 am and the noise lasted for 30 minutes per night.

xv. Investigations revealed that the complaints were considered as invalid and preventive actions were recommended to the Contractor. Details can be referred to the Section 6.0.

2. PROJECT BACKGROUND

2.1 Background

2.1.1. "Wan Chai Development phase II and Central-Wan Chai Bypass" and "Central-Wan Chai Bypass and Island Eastern Corridor Link" (hereafter called "the Project") are Designed Project (DP) under the Environmental Impact Assessment Ordinance (Cap. 499) (EIAO). The Environmental Impact Assessment (EIA) Reports for Central-Wan Chai Bypass and Island Eastern Corridor Link (Register No. AEIAR-041/2001) and Wan Chai Development phase II and Central-Wan Chai Bypass (Register No.: AEIAR-125/2008) have been approved on 31 August 2001 and 11 December 2008 respectively.

2.1.2. The key purpose of Wan Chai Development Phase II (WDII) is to provide land at Wan Chai North and North Point for construction of the Central-Wan Chai Bypass and Island Eastern Corridor Link (CWB). Land formed under the project will be developed as a world-class waterfront promenade joining that at the new Central waterfront for public enjoyment.

2.1.3. There is a compelling and present need for the CWB to provide relief to the very congested east-west Connaught Road Central/Harcourt Road / Gloucester Road Corridor (the Corridor) which is currently operating beyond its capacity. The CWB will provide relief to the existing congestion along the Corridor and cater for the anticipated growth of traffic on Hong Kong Island. Without the CWB and its access roads, there will not be sufficient capacity to serve the heavy traffic demands at both strategic and local levels.

2.2 Scope of the Project and Site Description

2.2.1. The Project is located mainly in Wan Chai North, Causeway Bay and North Point, and is demarcated by Gloucester Road and Victoria Park Road to the south, Fenwick Pier Street to the west and Tong Shui Road Interchange to the east, as shown in ***Figure 2.1***.

2.2.2. The study area encompasses existing developments along the Wan Chai, Causeway Bay and North Point shorelines. Major land uses include the Hong Kong Convention & Exhibition Centre (HKCEC) Extension, the Wan Chai Ferry Pier, the ex-Wan Chai Public Cargo Working Area (ex-PCWA), the Royal Hong Kong Yacht Club (RHKYC), the Police Officers' Club, the Causeway Bay Typhoon Shelter (CBTS) and commercial and residential developments.

2.2.3. The scope of the Project comprises:

- Land formation for key transport infrastructure and facilities, including the Trunk Road (i.e. CWB) and the associated slip roads for connection to the Trunk Road and for through traffic from Central to Wan Chai and Causeway Bay. The land formed for the above transport infrastructure will provide opportunities for the development of an attractive waterfront promenade for the enjoyment of the public
- Reprovisioning / protection of the existing facilities and structures affected by the land formation works mentioned above

- Extension, modification, reprovisioning or protection of existing storm water drainage outfalls, sewerage outfalls and watermains affected by the revised land use and land formation works mentioned above
- Upgrading of hinterland storm water drainage system and sewerage system, which would be rendered insufficient by the land formation works mentioned above
- Provision of the ground level roads, flyovers, footbridges, necessary transport facilities and the associated utility services
- Construction of the new waterfront promenade, landscape works and the associated utility services
- The Trunk Road (i.e. CWB) within the study area and the associated slip roads for connection to the Trunk Road.

2.2.4. The project also contains various Schedule 2 DPs that, under the EIAO, require Environmental Permits (EPs) to be granted by the DEP before they may be either constructed or operated. ***Table 2.1*** summarises the five individual DPs under this Project. ***Figure 2.1*** shows the locations of these Schedule 2 DPs.

2.3 Division of the Project Responsibility

2.3.1. Due to the multi-contract nature of the Project, there are a number of contracts sub-dividing the whole works area into different work areas to be commenced. Contractors of individual contracts will be required by the EP holder to apply Further Environmental Permits (FEP) such that the impact monitoring stations are sub-divided accordingly to facilitate the implementation of EM&A programme and to streamline the EM&A reporting for individual FEP holders correspondingly.

2.3.2. In the reporting period, Contract no. HK/2010/06 - Wan Chai Development Phase II-Central-Wan Chai Bypass over MTR Tsuen Wan Line under the Project was commenced on 22 March 2011. The details of individual contracts are summarized in ***Table2.2***.

NOISE MONITORING PARAMETERS, FREQUENCY AND DURATION

3.1.2. The construction noise level shall be measured in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}). $L_{eq\ (30\ minutes)}$ shall be used as the monitoring parameter for the time period between 0700 and 1900 hours on normal weekdays. For all other time periods, $L_{eq\ (5\ minutes)}$ shall be employed for comparison with the Noise Control Ordinance (NCO) criteria. Supplementary information for data auditing, statistical results such as L10 and L90 shall also be obtained for reference.

3.1.3. Noise monitoring shall be carried out at all the designated monitoring stations. The monitoring frequency shall depend on the scale of the construction activities. The following is an initial guide on the regular monitoring frequency for each station on a weekly basis when noise generating activities are underway:

- one set of measurements between 0700 and 1900 hours on normal weekdays.

3.1.4. If construction works are extended to include works during the hours of 1900 – 0700 as well as public holidays and Sundays, additional weekly impact monitoring shall be carried out during respective restricted hours periods. Applicable permits under NCO shall be obtained by the Contractor.

3.1.5. If construction works are extended to include works during the hours of 1900 – 0700 as well as public holidays and Sundays, additional weekly impact monitoring shall be carried out during respective restricted hours periods. Applicable permits under NCO shall be obtained by the Contractor.

3.1.6. Real time noise shall be carried out at the designated monitoring stations. The following is an initial guide on the regular monitoring frequency for each station on a 24 hours daily basis when noise generating activities are underway:

- One set of measurements between 0700 and 1900 hours on normal weekdays.
- One set of measurements between 1900 and 2300 hours on normal weekdays and 0700 and 2300 hours on public holidays.
- One set of measurements between 2300 and 0700 hours on next day on everyday.

3.1.7. Noise baseline level review was commenced in this reporting period. Detailed review report showed in ***Appendix 3.2***.

3.1.8. Real time noise baseline level review at night time period (2300 to 0700) was commenced in this reporting period. Detailed review report showed in ***Appendix 3.3***.

3.2. Air Monitoring

* Remarks: As per the ENPC meeting in January 2011, the monitoring stations CMA3a - Future CWB site office at Wanchai Waterfront Promenade and CMA6a - Future AECOM site office at Work Area were renamed as remark.

AIR MONITORING PARAMETERS, FREQUENCY AND DURATION

3.2.2. One-hour and 24-hour TSP levels should be measured to indicate the impacts of construction dust on air quality. The 24-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B.

3.2.3. All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper, and any other local atmospheric factors affecting or affected by site conditions, etc., shall be recorded down in detail.

3.2.4. For regular impact monitoring, the sampling frequency of at least once in every six-days, shall be strictly observed at all the monitoring stations for 24-hour TSP monitoring. For 1-hour TSP monitoring, the sampling frequency of at least three times in every six-days should be undertaken when the highest dust impact occurs.

3.3. Water Quality Monitoring

3.3.1. The EIA Report has identified that the key water quality impact would be associated with the dredging works during the construction phase. Marine water quality monitoring for dissolved oxygen (DO), suspended solid (SS) and turbidity is therefore recommended to be carried out at selected WSD flushing water intakes. The impact monitoring should be carried out during the proposed dredging works to ensure the compliance with the water quality standards.

Water Quality Monitoring Stations

3.3.2. It is proposed to monitor the water quality at 9 WSD salt water intakes and 14 cooling water intakes along the seafront of the Victoria Harbour. The proposed water quality monitoring stations of the Project are shown in ***Table 3.4*** and ***Figure 3.1***. ***Appendix 3.1*** shows the established Action/Limit Levels for the monitoring works.

- The cessation of seawater intake operation for C6 was confirmed on 17 May 2011, the water monitoring at C6 was then terminated since 17 May 2011.

WATER QUALITY PARAMETERS AND FREQUENCY

3.3.3. Monitoring of dissolved oxygen (DO), turbidity and suspended solids (SS) shall be carried out at WSD flushing water intakes and cooling water intakes. DO and Turbidity are measured in-situ while SS is determined in laboratory.

3.3.4. In association with the water quality parameters, other relevant data shall also be measured, such as monitoring location/position, time, sampling depth, water temperature, pH, salinity, dissolved oxygen (DO) saturation, weather conditions, sea conditions, tidal stage, and any special phenomena and work underway at the construction site etc.

3.3.5. The interval between two sets of monitoring should not be less than 36 hours except where there are exceedances of Action and/or Limit Levels, in which case the monitoring frequency will be increased. ***Table 3.5*** shows the proposed monitoring frequency and water quality parameters. Duplicate in-situ measurements and water sampling should be carried out in each sampling event. For selection of tides for in-situ measurement and water sampling, tidal range of individual flood and ebb tides should be not less than 0.5m.

The monitoring of dissolved oxygen are to be carried out 3 days per week, at mid-flood and mid-ebb tides for 3 water depths (1m below water surface, mid-depth and 1m above sea bed, except where the water depth less than 6m, the mid-depth may be omitted. If the water depth be less than 3m, only the mid-depth will be monitored).

DAILY SS MONITORING AND 24 HOURS TURBIDITY MONITORING SYSTEM

3.3.9. During dredging of the sediment at the south-western corner of the Causeway Bay Typhoon Shelter, daily monitoring of suspended solids and 24 hour monitoring of turbidity at the cooling water intakes (C6 and C7) shall be conducted.

3.3.10. The 24 hours monitoring of turbidty at the cooling water intakes (C6 and C7) shall be established by setting up a continuous water quality monitoring station in front of the intakes during the dredging activities. The monitoring system include the turbidity sensor and data logger which is capable of data capturing at every 5 minutes. The data sahll be downloaded daily and compared with the Action and Limit level determined during the baseline water qualtiy monitoring at the cooling water intake locations.

Remarks: - The cessation of seawater intake operation for C6 was confirmed on 17 May 2011, the water monitoring at C6 was then terminated since 17 May 2011.

- Considering the absence of intake pump operation at Windsor House intake (C7), this sensitive receiver was apparently not exist during this period so that no water quality monitoring at C7 for compliance checking was undertaken in this reporting quarter.

4.4.7. The enhanced water quality monitoring at C6, C7, Ex-WPCWA-SW and Ex-WPCWA-SE was commenced on 13 January 2011. One dissolved oxygen level at Ex-WPCWA-SE on 25 May 2011 during mid-ebb was exceeded.

4.4.8. As no dredging of the sediment at the south-western corner of the Causeway Bay Typhoon Shelter in reporting quarter, no daily monitoring of suspended solids and 24 hours monitoring of turbidity at the cooling water intakes at C6 and C7 were required.

4.4.9. The maintenance works and testing of flush water pump system at Windsor House intake (C7) have been carried out in the reporting quarter. The silt screen at C7 was then removed on 15 February 2011 and then reinstated on 29 March 2011 to facilitate their maintenance works as per the intake owner's request. Considering the absence of intake pump operation at Windsor House intake (C7), this sensitive receiver was apparently not exist during this period so that no intake water quality monitoring at C7 for compliance checking was undertaken in this reporting period.

4.4.10. As per the meeting with the representative of Excelsior Hotel and World Trade Centre on 17 May 2011, they confirmed that the seawater intake for The Excelsior was no longer in use and replaced by the connected permanent water supply from WSD pipelines since 11 January 2011. Thus, the impact water quality monitoring for the cooling intake - C6 was terminated effective from 26 May 2011.

4.4.11. Water monitoring results measured in this reporting period are reviewed and summarized in **Table 4.14**. Details of water quality monitoring results and graphical presentation can be referred in ***Appendix 4.3***.

Remarks: - It was not included the exceedances recorded at C3 in the daily monitoring from 17 May to 27 May 2011.

- The cessation of seawater intake operation for C6 was confirmed on 17 May 2011, the water monitoring at C6 was then terminated since 17 May 2011.

4.4.12. Most of exceedances have been investigated and were considered unlikely to be related to project works. The exceedances of turbidity and SS level at C3 recorded on 31 March and 18 April 2011 might potentially relate to the filling operation and insufficient silt screen maintenance. Apart from the exceedances record at C3 on 31 March and 18 April 2011, the SS and turbidity exceedances at C3 recorded on 5 and 7 May 2011 were caused by silt screen defect and improper maintenance of deployed silt curtain as identified during regular site inspections. In additional, the exceedances at C3 on 16, 18 and 19 May 2011 were caused by improper control and management of deployed silt curtain as identified during site inspections and monitoring. Water monitoring results measured in this reporting period are reviewed and summarized. Details of graphical presentation can be referred in ***Appendix 4.2***.

Remarks: - It was not included the exceedances recorded at C3 in the daily monitoring from 17 May to 27 May 2011.

- The cessation of seawater intake operation for C6 was confirmed on 17 May 2011, the water monitoring at C6 was then terminated since 17 May 2011.
- Considering the absence of intake pump operation at Windsor House intake (C7), this sensitive receiver was apparently not exist during this period so that no water quality monitoring at C7 for compliance checking was undertaken in this reporting quarter.

5.3.2. Investigations were found that the most of exceedances are not related to the Project works. The exceedances of turbidity and SS level at C3 recorded on 31 March and 18 April 2011 might potentially relate to the filling operation and insufficient silt screen maintenance.

5.3.3. Apart from the exceedances record at C3 on 31 March and 18 April 2011, the SS and turbidity exceedances at C3 recorded on 5 and 7 May 2011 were caused by silt screen defect and improper maintenance of deployed silt curtain as identified during regular site inspections. In additional, the exceedances at C3 on 16, 18 and 19 May 2011 were caused by improper control and management of deployed silt curtain as identified during site inspections and monitoring.

5.5. Site Audit

5.5.1. There was no non-compliance from the site audits in the reporting period. During environmental site inspections conducted during the reporting quarter, minor deficiencies were noted. However, the Contractor rectified all deficiencies after receipt of notification.

5.4.2. An incident on dispersed muddy boom was observed by the IEC on 1 April 2011 in the area between outside the government helipad and eastern temporary seawall at WCR1. Silt curtain at the breakwater of TPCWA was maintained while the silt curtain for the reclamation shoreline subzone at TPCWAE was opened at the time of observation and some localized muddy boom at TPCWA was observed. Further investigation by ET revealed that:

- Muddy discharge from unknown source generated from the existing Box Culvert N was considered to be the major cause, possibly due to local discharge from unknown

source at the stormdrain upstream to Box Culvert N. Muddy boom was further dispersed by current movement outside the government helipad.

- Localized mud plume emerged within the ex-Cargo area was not properly enclosed by silt curtain producing some minor impact around the breakwater at TPCWA.
- Defects found for the silt curtains deployed in TPCWAE reduced the effectiveness of the silt curtain system.

5.4.3. Contractor of HY/2009/15 was urged to rectify the defects found for the silt curtains. Further independent diver inspection on the silt curtain on 14 Apr 2011 confirmed the silt curtain was in proper condition. Silt curtain deployment plan was subsequently revised to include specific details on the marine access for TPCWAE. No further dispersion was observed after a week's operation and this case was closed.

5.4.4. Frequent muddy boom dispersion were observed around the marine entrance to the TPCWA on 2, 5 & 6 April 2011, resulting in escape of muddy boom through the marine access of the ex-Cargo Area. Further investigation by ET revealed that escape of silt from the filling area at TPCWA eventually lead to frequent dispersion of muddy boom by routine towing action. Filling operation was immediately suspended by contractor of HY/2009/15 for review of silt curtain and towing operation. Site trial towing was conducted on 14 Apr 2011 and found that a reduced towing speed of 0.5 nautical miles per hour could control the dispersion of muddy boom within the area enclosed by silt curtain. No further dispersion was observed after a week's operation and this case was closed.

5.6. Review of the Reasons for and the Implications of Non-compliance

5.6.1. There was no non-compliance from the site audits in the reporting period.

5.6.2. There were exceedances of turbidity and/or SS level recorded at C3 on 5, 7, 16, 18 and 19 May 2011 that were considered in relation to the deployed silt screen and silt curtain as identified during the site inspection and monitoring.

5.7. Summary of action taken in the event of and follow-up on non-compliance

5.7.2. When the exceedance was recorded during water quality monitoring, repeated in-situ measurement and additional turbidity measurement were immediately taken outside the silt screen when the Action Level or Limit Level exceedance was recorded inside the silt screen for checking of relation from the filling works. Diver inspection on the silt screen and silt curtain was conducted on 5 May 2011. The maintenance works of geotextile was then conducted on 6 and 7 May 2011. Additional silt curtains have been installed in HKCEC water channel on 7 May 2011.

5.7.3. In response to further recorded exceedances at water monitoring station C3, the frequency of water quality monitoring has been increased to daily from 17 May 2011 so as to keep in view of any further deterioration of water quality in water channel. Filling operation was then suspended from 19 May 2011 morning until 23 May 2011 morning.

5.7.4. A discharge pipe for HKCEC was discovered located in between the C3 intake inlets and inside the silt screen by Contractor on 24 May 2011. A site investigation with ARE and SIOW

from AACL, ET, IEC, Contractor and stakeholder was conducted on 27 May 2011 to confirm the location of the discharge pipe. The monitoring frequency was then resumed to normal monitoring frequency on 27 May 2011. The diversion of the discharge pipe is under liaison with stakeholder.

6. COMPLAINTS, NOTIFICATION OF SUMMONS AND PROSECUTION

6.0.1. There were two environmental complaints received in this quarter.

6.0.2. Dust impact and mosquitoes breeding complaint from Government Complaint Hotline ICC direct referral (ICC#1- 281451236) was received by ET on 18 April 2011. The complaint was reported by the resident, Mr Law at Victoria Centre that dust generated at 10:04 on 15 April in which suspected the filling operation was part of North Point Reclamation.

6.0.3. The concerned stockpile was a working stockpile and was covered at night time after work. Water spraying on the haul road and potential dust generating material at least 4 times a day was conducted by contractor that complies with the requirement. It is considered invalid but preventive actions can be taken because the stockpile is relatively large and easily visible by complainant. The concern of mosquitoes breeding is not under the scope of EM&A, the follow-up action are not reported in this EM&A report.

6.0.4. Another complaint was reported from a resident, Ms Chiu at Victoria Centre via the Government Complaint Hotline ICC direct referral (ICC# 1-272874759) regarding the episode of night noise on 19 and 20 April 2011 at 2:50 am and the noise lasted for 30 minutes per night. According to the RSS's record, there was no construction works undertaken under the EP-356/2009 during the concern time period. Besides, there was no abnormal real-time noise monitoring data recorded in RTN1 - FEHD Hong Kong Transport Section Whitefield Depot which is next to the Victoria Centre. As such, it is considered as invalid complaint under this Project.

6.0.5. The details of cumulative complaint log and summary of complaints are presented in ***Appendix 6.1***.

6.0.6. No notification of summons or prosecution was received in the reporting period. Cumulative statistic on complaints and successful prosecutions are summarized in ***Table 6.1*** and ***Table 6.2*** respectively.

7. CUMULATIVE CONSTRUCTION IMPACT DUE TO THE CONCURRENT PROJECTS

7.0.1. According to Condition 3.4 of the EP-356/2009, this section addresses the relevant cumulative construction impact due to the concurrent activities of the current projects including the Central Reclamation, Central-WanChai Bypass and Island Eastern Corridor Link projects.

7.0.2. According to the construction programme of Wan Chai Development Phase II, Central-Wan Chai Bypass and Island Eastern Corridor Link projects, the major construction activities under Wan Chai Development Phase II were the filling works at North Point Reclamation Shoreline Subzone (NPR2E) and (NPR1& NPR2W), the filling at WCR1 and dredging at Wan Chai Reclamation Shoreline Subzone (Submarine sewage pipeline) respectively, filling at HKCEC1 and dredging at TCBR and filling at TPCEAE, and the dredging works at MTR Tunnel Crossing in the quarter. The major environmental impact was water quality impact at North Point and Wan Chai.

7.0.3. The major environmental impacts generated from the filling work at Central Reclamation Phase III were only located along the coastline of Central and Admiralty while the adverse water impact was located in the HKCEC water channel in relation to the filling operation causing exceedances at station C3 in this reporting quater. Other than the exceedances recorded at C3, it was concluded not related to the Project works. Thus, it was unlikely to have cumulative impact from CRIII. It is evaluated the cumulative construction impact from the concurrent projects including Wan Chai Development Phase II and Central Reclamation Phase III was insignificant.

8. CONCLUSION

8.0.1. The EM&A programme was carried out in accordance with the EM&A Manual requirements, minor alterations to the programme proposed were made in response to changing circumstances.

8.0.2. No non-compliances were noted and no prosecutions were received during the reporting quarter.

8.0.3. The construction programmes of individual contracts are provided in ***Appendix 8.1***.

S3.8.1	Implementation of dust suppression measures stipulated in Air Pollution Control (Construction Dust) Regulation. The following mitigation measures, good site practices and a comprehensive dust monitoring and audit programme are recommended to minimise cumulative dust impacts. • Strictly limit the truck speed on site to below 10 km per hour and water spraying to keep the haul roads in wet condition; • Watering during excavation and material handling; • Provision of vehicle wheel and body washing facilities at the exit points of the site, combined with cleaning of public roads where necessary; and • Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations. S3.5.6	For the dredging activities carried out in the vicinity of Police Officers' Club, the dredging operation will be restricted to only 1 small close grab dredger to minimise the odour impact during the dredging activity. The dredging rate should be reduced as much as practicable for the area in close proximity to the Police Officers' Club. The sediments contain highly contaminated mud which may be disposed with the use of geosynthetic containers (details shall refer to Section 6), grab dredger has to be used for filling up the geosynthetic containers on barges. the dredging rate for the removal of the sediments at the south-west corner of the typhoon shelter shall be slowed down or restricted to specific non-popular hours in weekdays when it is necessary during construction. Construction Phase								
For DP3 – Reclamation Works, DP5 (Wan Chai East Sewage Outfall), DP6 (Cross-Harbour Water Mains from Wan Chai to Tsim Sha Tsui), DP1 – CWB (within the Project Boundary)								
S5.8	A phased reclamation approach is planned for the WDII. Containment of fill within each of the reclamation phases by seawalls is proposed, with the seawall constructed first (above high water mark) with filling carried out behind the completed seawalls. Any gaps that may need to be provided for marine access will be shielded by silt curtains to control sediment plume dispersion away from the site. Filling for seawall construction should be carried out behind the silt curtain	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO
S5.8	Dredging shall be carried out by closed grab dredger for the following works: • Seawall construction in all the reclamation areas; • Construction of the CWB Tunnel • Construction of the proposed WSD water mains; and • Construction of the proposed Wan Chai East sewage outfall pipelines.	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO
S5.8, Figure 5.3	Dredging for the Wan Chai East sewage outfall pipelines shall not be carried out concurrently with the following activities: • Dredging along the proposed cross-harbour water mains; • Dredging along the seawall in the Wan Chai Reclamation (WCR) zone (area between HKCEC Extension and PCWA).	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO

S5.8	The water body behind the temporary reclamations within the Causeway Bay typhoon shelter shall not be fully enclosed.	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO
S5.8	As a mitigation measure, to avoid the accumulation of water borne pollutants within the temporary embayment between CRIII and HKCEC1, an impermeable barrier, suspended from a floating boom on the water surface and extending down to the seabed, will be erected by the contractor before the HKCEC1 commences. The barrier will channel the stormwater discharge flows from Culvert L to the outside of the embayment. The contractor will maintain this barrier until the reclamation works in HKCEC2W are carried out and the new Culvert L extension is constructed.	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO
S5.8, Figure 5.3	The total dredging rates in each of the marine works zones shall not be more than the maximum production rates stated in the table below. These are the production rates without considering the effect of silt curtain.	Work site / During the construction period	Contractor		√			EIAO-TM, WPCO

	• before commencement of the reclamation works, the holder of Environmental Permit has to submit plans showing the phased construction of the reclamation, design and operation of the silt curtain.							
S5.8	Silt screens are recommended to be deployed at the seawater intakes during the reclamation works period. Installation of silt screens at the seawater intake points may cause a potential for accumulation and trapping of pollutants, floating debris and refuse behind the silt screens and may lead to potential water quality deterioration at the seawater intake points. Major sources of pollutants and floating refuse include the runoff and storm water discharges from the nearby coastal areas. As a mitigation measure to avoid the pollutant and refuse entrapment problems and to ensure that the impact monitoring results are representative, regular maintenance of the silt screens and refuse collection shall be performed at the monitoring stations at regular intervals on a daily basis. The Contractor shall be responsible for keeping the water behind the silt screen free from floating rubbish and debris during the impact monitoring period. S5.8	Dredging of contaminated mud is recommended as a mitigation measures for control of operational odour impact from the Causeway Bay typhoon shelter. In recognition of the potential impacts caused by dredging activities close to the seawater intakes, only 1 small close grab dredger shall be operated within the typhoon shelter (for the dredging to mitigate odour impact) at any time to minimize the potential impact. Double silt curtains shall be deployed to fully enclose the closed grab dredger during the dredging operation. In addition, an impermeable barrier, suspended from a floating boom on the water surface and extended down to the seabed, shall be erected to isolate the adjacent intakes as much as possible from dredging activities. For example, if dredging is to be carried out at the southwest corner of the typhoon shelter, physical barriers shall be erected to west of the cooling water intake for Excelsior Hotel so that the intake would be shielded from most of the SS generated from the dredging operation to the west of the intake. For area in close proximity of the cooling water intake point, the dredging rate shall be reduced as much as practicable. Site audit and water quality monitoring shall be carried out at the seawater intakes during the dredging operations. Daily monitoring of SS at the cooling water intake shall be carried out, and 24 hour monitoring of turbidity at the intakes shall be implemented during the dredging activities. If the monitoring results indicate that the dredging operation has caused significant changes in water quality conditions at the seawater intakes, appropriate actions shall be taken to stop the dredging and mitigation measures such as slowing down the dredging rate shall be implemented. S6.7.2	***Marine Sediments*** The dredged marine sediments would be loaded onto barges, transported to and disposed of at the designated disposal sites at South of Cheung Chau, East of Ninepin, East of Tung Lung Chau, South of Tsing Yi or East of Sha Chau to be allocated by the MFC depending on their level of contamination or at other disposal sites after consultation with the MFC and EPD. In accordance with the ETWB TCW No. 34/2002, the contaminated material must be dredged and transported with great care. The mitigation measures recommended in Section 5 of the EIA Report shall be incorporated. The dredged contaminated sediment must be effectively isolated from the environment upon final disposal and shall be disposed of at the Type 2 confined marine disposal contaminated mud pit.	Work site / During the construction period	Contractor		√			ETWB TCW No. 34/2002
S6.7.3	Based on the biological screening results, the Category H (>10xLCEL) sediment which failed the biological testing would require Type 3 special disposal. The volume of Category H sediment from the Causeway Bay typhoon shelter which would require special disposal arrangements is estimated to be approximately 0.05 Mm^3. A feasible containment method is proposed whereby the dredged sediments are sealed in geosynthetic containers and, at the disposal site, the containers would be dropped into the designated contaminated mud pit where they would be covered by further mud disposal and later by the mud pit capping, thereby meeting the requirements for fully confined mud disposal.

1. INTRODUCTION

1.1.1. According to the Section 3.5.3 of Updated EM&A Manual for EP-356/2009 and Section 3.4.3 of Updated EM&A Manual for EP-364/2009/A, an appropriate set of baseline reference to be used in the exceptional cases of insufficient baseline monitoring data or questionable results shall be submitted to the ER and IEC for agreement and EPD for approval.

1.1.2. In accordance with the baseline noise monitoring reports for EP no. EP-356/2009 and EP-364/2009/A, baseline noise monitoring at total 7 monitoring locations were conducted in December 2009. However, most of access permissions could not be obtained from the Noise Sensitive Receivers (NSRs) during the impact noise monitoring. Alternative noise monitoring stations were proposed to monitor the construction noise impact arising to the noise sensitive receivers. Supplementary baseline noise level at the alternative noise monitoring stations should be reviewed and obtained for the baseline noise reference.

1.1.3. The purpose of this report is to review the baseline noise level at the impact noise monitoring stations which have insufficient baseline monitoring data and the monitoring results will be reported in this report.

2. NOISE MONITORING

2.1 Noise Monitoring Stations

2.1.1. The noise monitoring stations for the baseline noise monitoring conducted in December 2009 and alternative noise monitoring stations for the impact noise monitoring are presented in the ***Table 2.1*** and ***Figure 2.1***.

2.2 Monitoring Equipments

2.2.1. As referred to in the Technical Memorandum (TM) issued under the NCO, sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration level from before and after the noise measurement agree to within 1.0 dB.

2.3 Monitoring Parameters, Frequency and Duration

2.3.1. The construction noise level shall be measured in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}). $L_{eq\ (30\ minutes)}$ shall be used as the monitoring parameter for the time period between 0700 and 1900 hours on normal weekdays. For the other time periods, $L_{eq\ (5\ minutes)}$ shall be employed for comparison with the Noise Control Ordinance (NCO) criteria. Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference.

2.3.2. The monitoring parameters, frequency and duration of the noise monitoring are summarized in ***Table 2.2***.

Table 2.2 Noise Monitoring Parameters, Frequency and Duration

Time Period	Duration	Parameters
0700-1900hrs on normal weekdays	$L_{eq(30min)}$	L_{eq}, L_{10} and L_{90}
Time period other than 0700-1900hrs on normal weekdays	$L_{eq(5min)}$	

2.4 Monitoring Methodology

2.4.1. Each proposed location will be monitored for a consecutive 7 days (including Sunday and general holiday) to measure the supplementary baseline noise levels for the proposed time period showed in **Table 2.3**. If the numbers of monitoring performed are less than that specified in **Table 2.3**, the monitoring period will be extended beyond 7 days (including Sunday and general holiday) in order to have sufficient monitoring events.

Table 2.3 Number of Monitoring in Different Time Periods

Time Periods	Period for Non-construction Hours	Minimum no. of monitoring per day	Duration of each Monitoring
Non-restricted hours	0700-1900hrs (normal weekdays)	2	30 min
Restricted hours	1900-2300hrs (normal weekdays)	6	5 min
	0700-2300hrs (Sunday and Public Holiday)	6	5 min
	2300-0700hrs (all days)	6	5 min

2.4.2. Measured noise level in first consecutive 7 days (including Sunday and general holiday) should be compared with the approved baseline results. Another 7 consecutive days (including Sunday and general holiday) at the concerned location to re-establish the baseline may be conducted if the averaged measured noise level in the concern time period deviate from the approved baseline result ±3dB(A) depends on the total numbers of results recorded. Less than 14 days (including Sunday and general holidays) of baseline monitoring will be conducted if IEC agrees with the baseline results and the measured supplementary baseline noise level can be adopted.

2.4.3. There shall not be any construction activities in the vicinity of the stations during the baseline noise monitoring. To avoid any construction activities undertaken during the proposed time period of the monitoring, monitoring will be arranged and liaised with Contractor's programme before the commencement of the baseline noise monitoring.

2.4.4. Since there are several contracts works undertaken near the monitoring stations, there will be limitation on conducting baseline noise monitoring during non-construction hours. The minimum number of monitoring for conducting the baseline noise monitoring is proposed as in Table 2.3 if there is no construction works undertaken. The scheduled date and time will be confirmed with Contractor prior to monitoring so as to ensure no project construction work will be undertaken. If condition allow, more baseline noise monitoring events shall be carried out. ET shall explore the possibility to maximum the number and time coverage of the baseline noise monitoring.

2.5 Monitoring Procedure

2.5.1. The noise monitoring shall follow the following procedures.

- The microphone head of the sound level meter shall be positioned 1m from the exterior of the sensitive receiver building façade and at 1.2m above ground shall be made at all monitoring station, Table 2.4 showed the types of measurement in each station.

Table 2.4 Type of measurement in each monitoring station

Station I.D.	Type of measurement
M7e	Facade
M7w	Facade
M1a	Facade
M2b	Facade
M3a	Facade
M4b	Facade
M5b	Façade
M6*	Façade

*Review of baseline noise level at M6 is unnecessary

- The battery condition shall be checked to ensure good functioning of the meter;
- Prior to and after noise measurement, the meter was calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement was considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.
- Noise measurements shall not be made in fog, rain, wind with a steady speed exceeding 5 m s^{-1} or wind with gusts exceeding 10 m s^{-1}. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s^{-1}.
- Noise measurement was paused during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- At the end of the monitoring period, the L_{eq}, L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.

2.6 Maintenance and Calibration

2.6.1. Maintenance and calibration procedures shall be as follows:

- The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals;
- The sound level meter and calibrator shall be checked and calibrated at yearly intervals.
- Calibration certificates of the sound level meters and acoustic calibrators are provided in **Appendix A**.

2.7 Results and observations

2.7.1. Total numbers of monitoring in each monitoring station are summarized in **Table 2.5.**
2.7.2. Noise level results comparisons with approved baseline are summarized in **Table 2.6.**
2.7.3. There was no other major activity influencing the measured noise level during the baseline noise monitoring period. The dominant noise sources were from community noises and nearby traffic.
2.7.4. Baseline noise monitoring was conducted according to the schedule showed in **Appendix C**.
2.7.5. Supplementary baseline noise monitoring results are summarized in **Table 2.6, 2.7 and 2.8.** Detailed noise monitoring results are presented in **Appendix B**.

3 CONCLUSION

3.1 Supplementary baseline noise monitoring was carried out from 11 April 2011 to 8 June 2011. The Action Level of construction noise is based on documented complaints received, while the Limit Level is the level at a specific limit according to EIAO-TM.

3.2 Noise review was conducted at least 7 days (including Sunday and general holiday).

1. INTRODUCTION

1.1.1. Real time noise monitoring stations FEHD Hong Kong Transport Section Whitefield Depot (RTN1) and Oil Street Community Liaison Centre (RTN2) were commenced in August 2010. Stated in section 10.3.1 of the EM&A manual under Environmental Permit No. EP/356/2009 and EP-364/2009/A, the results and findings of all EM&A work required in the Manual shall be recorded in the monthly EM&A reports prepared by the ET Leader. Real time noise results were presented in the monthly report since October 2010. However, as there is no construction works conducted during night-period period (2300 – 0700 hours), conduct the compliance checking in the report may be considered unnecessary.

1.1.2. Baseline noise monitoring of real-time noise monitoring stations FEHD Hong Kong Transport Section Whitefield Depot (RTN1) and Oil Street Community Liaison Centre (RTN2) was conducted in August 2010 and September 2010.

1.1.3. Section 10.3.2 of the EM&A manual under Environmental Permit No. EP/356/2009 and EP-364/2009/A, the ET leader shall review the number and location of monitoring stations and parameters on as needed basis, in order to cater for any changes in the surrounding environment and the nature of works in progress. In spite of the results during night time period may not need to conduct a compliance check, review the results measured by the real-time noise monitoring stations shall be required based on the needed of the special surrounding environment during night time period.

1.1.4. The purpose of this report is to review the noise level for the measured results during 2300 – 0700 hours during the period December 2010 to May 2011 in the real-time noise monitoring stations (RTN1 & RTN2), and to report the review trend for the consecutively 6-monthly period.

2. NOISE LEVEL REVIEW

2.1 Noise Level Review Stations

2.1.1. The Noise Level Review stations for the real-time noise monitoring are presented in the ***Table 2.1*** and ***Figure 2.1***.

Table 2.1 Noise Level Review stations

District	Station	Description	Type of measurement
Tin Hau	RTN1	FEHD Hong Kong Transport Section Whitefield Depot	Facade
North Point	RTN2	Oil Street Community Liaison Centre	Free-field

2.2 Monitoring Equipments

2.2.1. As referred to in the Technical Memorandum ™ issued under the NCO, sound level meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration level from before and after the noise measurement agrees to within 1.0 dB.

2.3 Monitoring Parameters, Frequency and Duration

2.3.1. The noise level shall be measured in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}). $L_{eq\ (5\ minutes)}$ shall be employed for comparison with the Noise Control Ordinance (NCO) criteria. Supplementary information for data auditing, statistical results such as L10 and L90 shall also be obtained for reference.

2.3.2. Noise Level Review shall be carried out at the designated monitoring stations. The following is the monitoring frequency for each station during night time period:

- One set of measurements between 2300 and 0700 hours on every day.

2.4 Monitoring Methodology

2.4.1. Review the noise level in each monitoring stations during 2300 – 0700 hours measured between Dec 2010 and May 2011. As no construction work was conducted during the period, all measured results will be taken as data.

2.4.2. The range and average of the monitoring results would be reported separately in monthly intervals from December 2010 to May 2011.

2.5 Results and observations

2.5.1. There was no other major activity influencing the noise level taken. The dominant noise sources were from community noises and nearby traffic.

2.5.2. Noise Level Review was conducted for consecutively half years, from December 2010 to May 2011.

2.5.3. The Noise Level Review are summarized in Table 2.2 and the detailed of them presented in Appendix B.

2.5.4. The results revealed that the averaged noise levels for RTN1 and RTN2 from December 2010 to May 2011 were generally in line during the review period, as no significant environment changes were identified surrounding the monitoring locations.

3 CONCLUSION

3.1. Noise level review was carried out from Dec 2010 to May 2011 at FEHD Hong Kong Transport Section Whitefield Depot (RTN1) and Oil Street Community Liaison Centre (RTN2) during 2300 – 0700 hours.

3.2. The results revealed that the averaged noise levels for RTN1 and RTN2 from December 2010 to May 2011 were generally in line during the review period, as no significant environment changes were identified surrounding the monitoring locations.
