Mott MacDonald Hong Kong Limited (MMHK) has been commissioned by the Architectural Services Department (ArchSD) as the Environmental Team (ET) to carry out Environmental Monitoring and Audit (EM&A) services for the construction of a secondary boundary fence (SBF) at Section 4 along the boundary in the Frontier Closed Area (FCA).

This is the 6th Monthly EM&A Report for the works carried out during the reporting month from 1 to 30 November 2010, and presents a summary of the environmental monitoring and audit works, list of activities, and mitigation measures implemented during the abovementioned reporting month.

#### Site Activities

The following major construction activities took place during the reporting month:

#### Works Order No. 1 (ASD 010962):

• No major works. (Substantial completion was certified on 12 October 2010.)

#### Works Order No. 2 (ASD 010969):

- Welding to post at yard;
- Construction of footing of the steel fence;
- Formation of fence wall kerb and fence wall footing; and
- Excavation works for footing of steel fence.

#### Works Order No. 3 (ASD 010974):

- Excavation and reinstatement of trial pits;
- Excavation at the new check point site; and
- Erection of hoarding for the new check point.

#### **Breach of Action and Level Limits**

There was no breach of Action or Limit levels for noise level (measured as L<sub>eq</sub>) in the reporting month.

#### Complaints

There was no record of complaints received in the reporting month.

#### Notification of Summons and Successful Prosecutions

There was no record of Notification of summons and successful prosecution in the reporting month.

#### **Reporting Changes**

There are no reporting changes in the reporting month.

#### **Future Key Issues**

Future key issues to be considered in the forthcoming month include:

#### Air

- Regular maintenance of all plant and equipment;
- Handling of any excavated dusty materials or stockpile of dusty materials;
- Spraying of water prior to any loading, unloading or transfer of dusty materials; and
- Washing of vehicles before leaving the construction sites.

#### Noise

- Location of noisy equipment and noisy activities relative to the NSRs;
- Avoiding the operation of unused equipment, and minimising the use of PME and parallel use of noisy equipment / machinery;
- Adoption of Level 1 site-specific direction mitigation measures (use of quiet plant and movable noise barrier) for construction/demolition work undertaken at a distance of 60m or less to the NSRs; and
- Regular maintenance of all plant and equipment.

#### Water Quality

- No discharge of silty water into the storm drain and drainage channel within and the vicinity of the site;
- Removal off-site of construction plant causing pollution to water system due to leakage of oil or fuel; and
- Temporary stockpiling of excavated soil in a specially designated area with provision of tarpaulin cover.

#### Waste

- Control measures at the stockpiling area to prevent the generation of dust and pollution of stormwater channels, fish ponds or river channels;
- Segregation, storage, transportation and disposal of different types of waste; and
- Keeping of records of quantities of wastes generated, recycled and disposal (with locations).

#### Ecology

- Good site practices for controlling the dust and water quality; and
- Clear definition of works limit to avoid impact on adjacent habitats.

#### Landscape and Visual

- Precautionary area around trees to be retained equal to half of the tree canopy diameter;
- Prohibition of the storage of materials including fuel, the movement of construction vehicles, and the refuelling and washing of equipment including concrete mixers within the precautionary area;
- Pruning of the branches of existing trees identified for transplantation and retention;
- Rectification and repair of damaged vegetation following the construction phase to its original condition; and
- Enforcement of construction site controls including storage of materials, location and appearance of site accommodation and the careful design of site lighting to prevent light spillage.

Environmental mitigation measures will be implemented on site as recommended and weekly site audits will be carried out to ensure that the environmental conditions are acceptable.

216727/ENL/10/14/A 14 December 2010

## 1. Introduction

## 1.1 Background

The Frontier Closed Area (FCA) is an integral part of the package of measures aimed at maintaining the integrity of the boundary of the Hong Kong Special Administrative Region (HKSAR) with mainland China, and combating illegal immigration and other cross-boundary criminal activities. Following a recent review, the HKSAR Government has concluded that with the erection of a secondary boundary fence (SBF) along the boundary patrol road (BPR) and construction of new sections of the BPR and primary boundary fence (PBF) at certain sections along the boundary, the FCA coverage can be substantially reduced without affecting the objective of maintaining the integrity of the boundary. The PBF and SBF (hereafter referred to as 'The Project') will be erected along the northern and southern curbs of the realigned BPR respectively to facilitate the Hong Kong Police Force (HKPF) in combating cross-boundary criminal activities. The reduced FCA will comprise a narrow strip of land covering the realigned BPR and areas to its north, together with the points of crossing the boundary (i.e. the Boundary Control Points and Sha Tau Kok town). Areas south of the SBF will generally be excised from the FCA.

An Environmental Impact Assessment (EIA) for the proposed works was carried out under the EIA Ordinance (EIAO, Cap 499) and approved by the Environmental Protection Department (EPD) in April 2009 (Register No. AEIAR-136/2009). The entire length of the proposed works is about 21.7 km from west of Pak Hok Chau to east of Sha Tau Kok and is divided into four sections. A general layout plan of the Project site is presented in Figure 1.1, while the location of the SBF at Section 4 in Sha Tau Kok is presented in Figure 1.2.

An Environmental Permit (EP) covering the overall proposed works was issued in June 2009 (Permit No. EP-347/2009). An application for Variation of the Environmental Permit (VEP) (Application No. VEP-314/2010) was subsequently submitted on 24 May 2010 and the amended Environmental Permit (Permit No. EP-347/2009/A) was issued by EPD on 9 June 2010. With regard to Section 4, an application for a Further Environmental Permit (FEP) covering the works under Works Order No. ASD 010962 (also known as Works Order No. 1) was submitted to EPD on 2 March 2010 (Application No. FEP-104/2010) and this was granted on 29 March 2010 (Permit No. FEP-03/347/2009). Furthermore, another application for an FEP covering the works under Works Order Nos. ASD 010969 and ASD 010974 (also known as Works Order Nos. 2 and 3 respectively) – including a new section of SBF consisting of transparent panel, a new checkpoint and kiosk – was submitted to EPD on 13 August 2010 (Application No. FEP-112/2010) and was granted on 7 September 2010 (Permit No. FEP-04/347/2009/A).

The Architectural Services Department (ArchSD) has been entrusted with the management of the Project by the Project Proponent – the Secretary for Security of the HKSAR Government. Mott MacDonald Hong Kong Limited (MMHK) has in turn been commissioned by ArchSD as the consulting engineer for the entire Project under Consultancy Agreement No. 9SN005, and is the Engineer's Representative (ER) for construction of the Project.

For Section 4 of the Project, MMHK and ENVIRON Hong Kong Limited (ENVIRON) have been commissioned as the Environmental Team (ET) and Independent Environmental Checker (IEC) respectively to undertake the Environmental Monitoring and Audit (EM&A) programme as described in the approved EM&A Manual of the Project. Also, the Contract to undertake and perform the construction works for Section 4 was awarded to Chun Wo Construction & Engineering Company Limited ('The Contractor') and is scheduled to last for approximately 18 months. It formally commenced on 28 May 2010, and the

construction works and EM&A programme under the above-mentioned EP and FEP also commenced on this date. The construction works programme is presented in Appendix A.

This monthly EM&A report summarises the environmental monitoring and audit works, list of activities and mitigation measures implemented at Section 4 during the period of 1 to 30 November 2010 inclusive ('reporting month').

The scope of works for Section 4 consists of:

- Erection of an SBF from the entrance of the Sha Tau Kok town (i.e. the location of 'Gate One') to the Sha Tau Kok Control Point (approximately 0.5 km);
- Use of transparent panel for a section of an SBF;
- Provision of a two-storey high checkpoint at 'Gate One';
- Addition of a kiosk/guard house on an existing footpath of Sha Tau Kok Road; and
- Removal of the existing checkpoint at Shek Chung Au.

## 1.2 **Project Organisation**

The organisation chart and lines of communication with respect to the on-site environmental management structure together with the contact information of the key personnel are shown in Appendix B.

## **1.3 Works Undertaken in the Reporting Month**

The following activities have taken place during the reporting month:

#### Works Order No. 1 (ASD 010962):

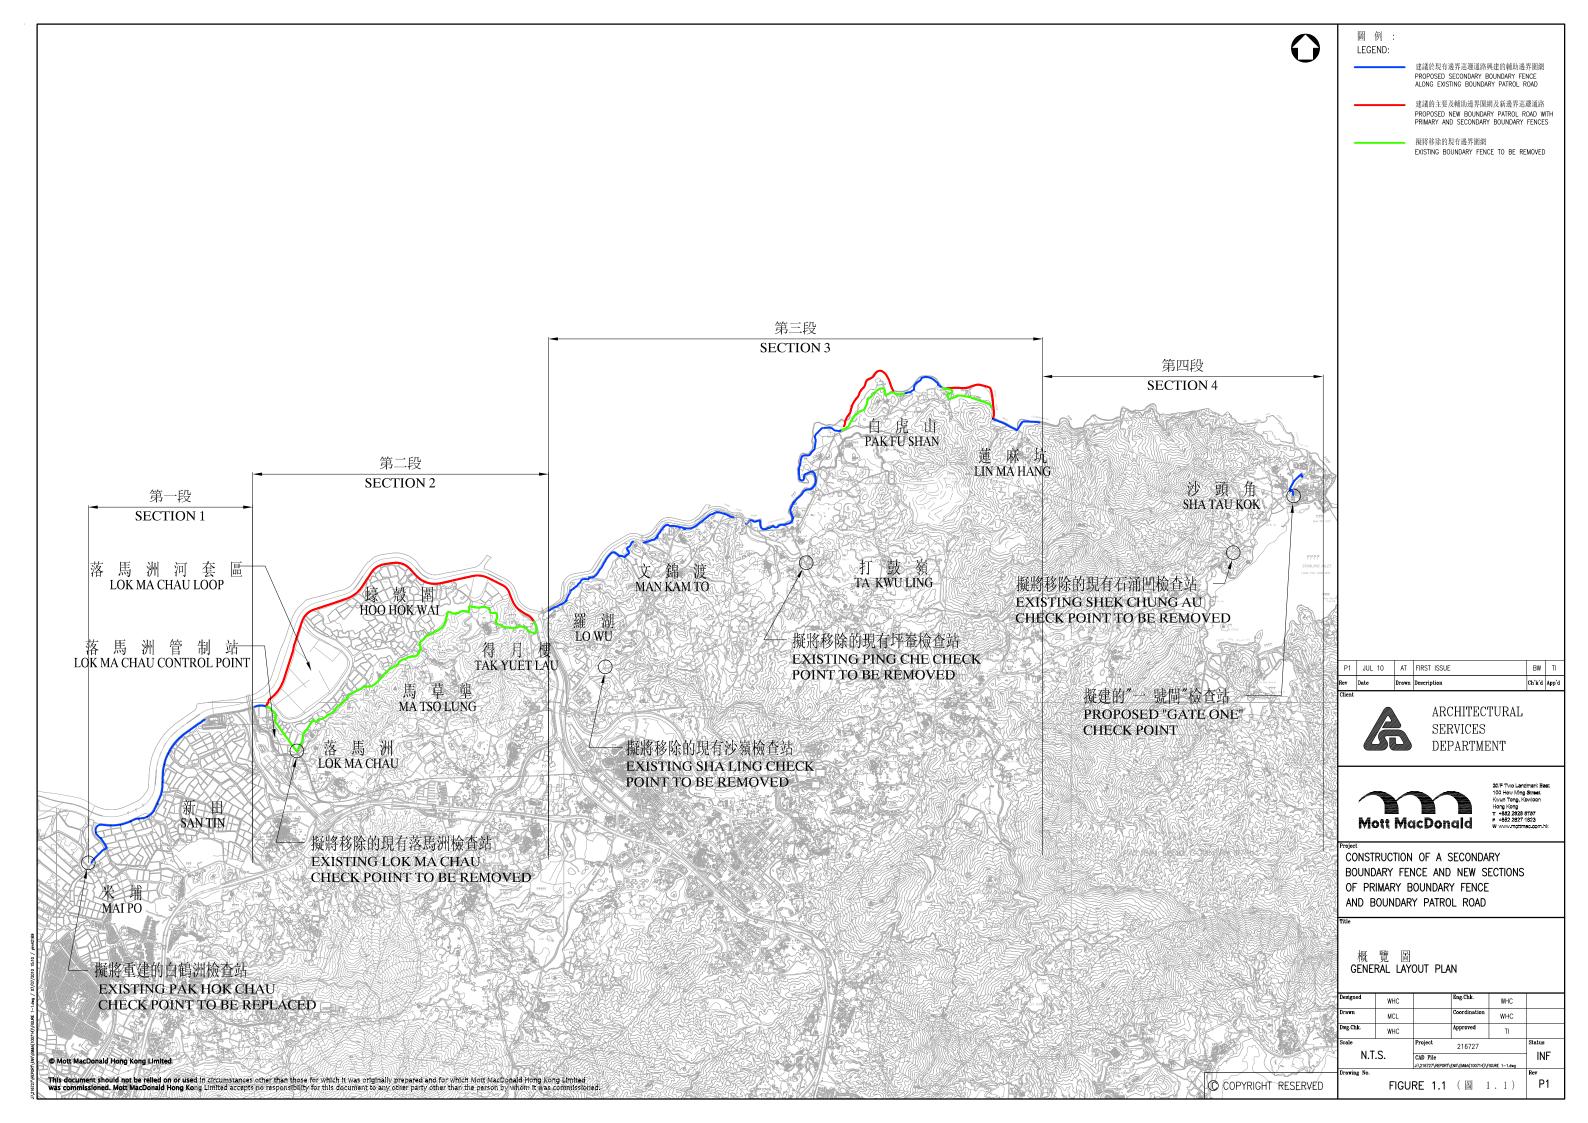

• No major works. (Substantial completion was certified on 12 October 2010.)

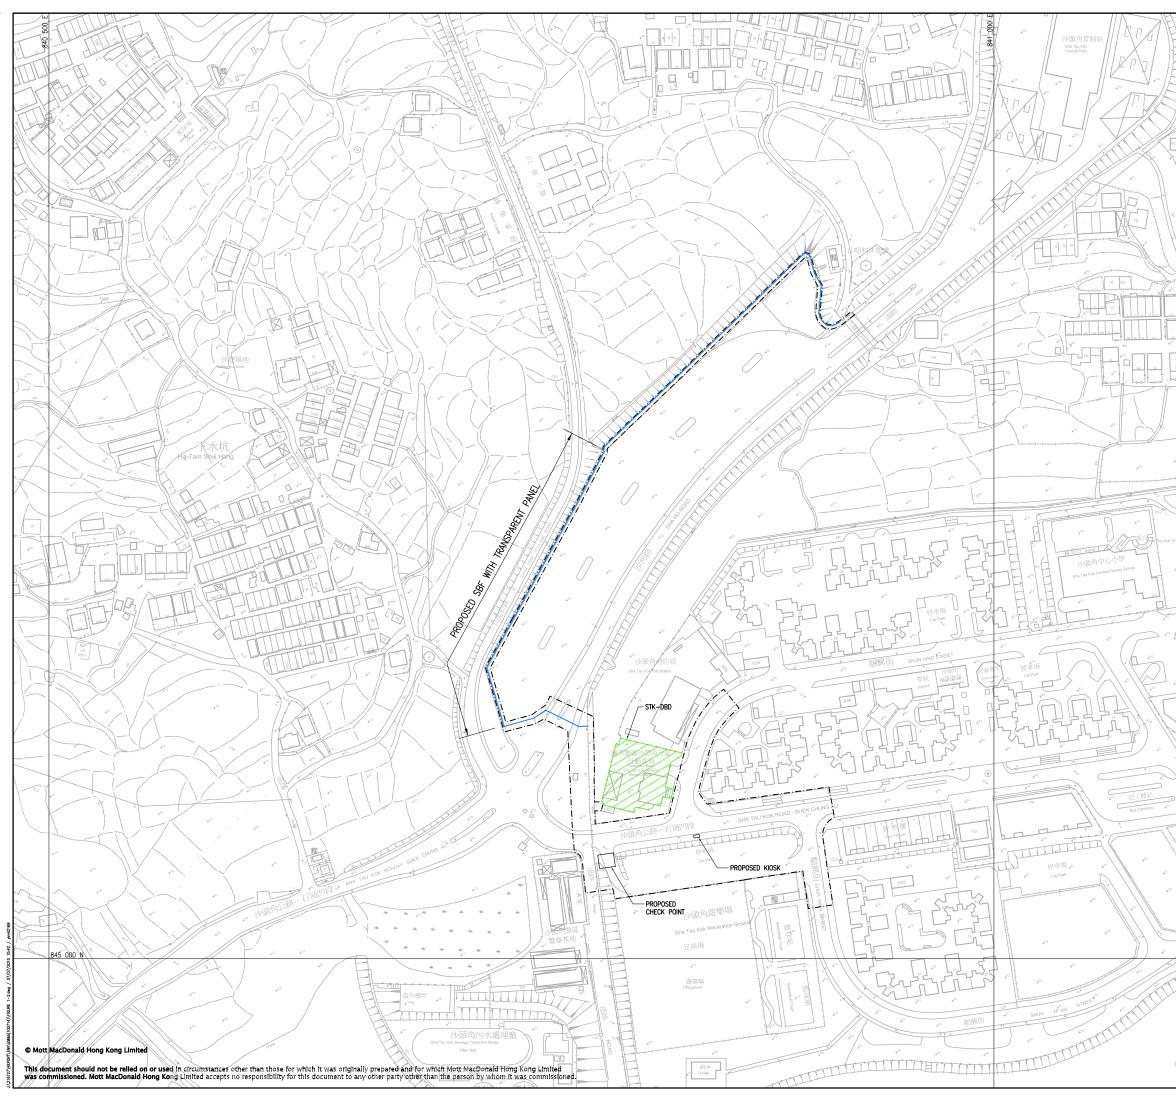

#### Works Order No. 2 (ASD 010969):

- Welding to post at yard;
- Construction of footing of the steel fence;
- Formation of fence wall kerb and fence wall footing; and
- Excavation works for footing of steel fence.

#### Works Order No. 3 (ASD 010974):

- Excavation and reinstatement of trial pits;
- Excavation at the new check point site; and
- Erection of hoarding for the new check point.

## 2. EM&A Requirements

## 2.1 Summary of EM&A Requirements

The EM&A programme requires environmental monitoring of construction noise as well as environmental site inspections for air quality, noise, water quality, waste management, ecology, landscape and visual, as specified in the approved EM&A Manual.

Originally, the EM&A Manual designated two locations as noise monitoring stations during the construction phase. However, currently noise levels at only one of these monitoring stations (as shown in Figure 1.2) are monitored. The reasons for this arrangement are detailed in Section 3.2.

A summary of impact EM&A requirements is presented in Table 2.1. The Environmental Quality Performance Limits and the Event and Action Plans (for construction noise only) are shown in Appendix C and Appendix D respectively.

Parameters	Description	Location(s)	Frequency	Duration
Air	On-site Inspection	Active Works Sites	Weekly	During Construction
Noise	L <sub>eq</sub> , 30min	STK-DBD	Weekly	During Construction
Waste management	On-site Waste Audit	Active Works Sites	Weekly	During Construction
Wastewater	On-site Waste Inspection On-site Wastewater Audit	Active Works Sites	Weekly	During Construction
Ecology	On-site Audit of Recommended Ecological Mitigation Measures	Active Works Sites	Periodically (by Contractor)	As specified in EM&A Manual (see Table E.5)
Landscape and Visual	On-site Audit of Recommended Landscape and Visual Mitigation Measures	Active Works Areas	Regular intervals (by Contractor/ Landscape Sub-Contractor)	As specified in EM&A Manual (see Table E.6)
General Site Conditions	Environmental Site Inspection	Works areas and areas affected by works	Weekly	During Construction

#### Table 2.1: Summary of EM&A Impact Requirements

## 2.2 Implementation of Environmental Mitigation Measures

The Contractor is required to implement mitigation measures listed in the latest valid EP and FEP (where applicable), EIA Report and EM&A Manual. During routine site inspections, the Contractor's implementation of mitigation measures, if any, are to be inspected and reviewed. A schedule of the implementation of mitigation measures identified at the EIA stage is given in Appendix E.

## 3. Noise Impact Monitoring

## 3.1 Monitoring Parameters, Frequency and Duration

Following the requirements in the EM&A Manual for noise, noise monitoring has to be carried out during the construction phase. Continuous noise monitoring for the A-weighted levels  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  is undertaken once per every week during daytime hours (between 07:00 and 19:00) on normal weekdays.

Table 3.1 summarizes the monitoring parameters, frequency and duration of air quality monitoring. The noise monitoring schedule during the reporting month is presented in Appendix F.

Table 3.1	Noise Monitoring F	Parameters F	Frequency	and Duration
10010-0.1.	Noise Monitoring I	arameters, r	requeries	

Monitoring Station	Parameter	Frequency	Duration
STK-DBD	L <sub>eq</sub> , L <sub>90</sub> & L <sub>10</sub>	Once every week	30 min

### 3.2 Monitoring Location

Originally, two construction noise monitoring stations were proposed in the EM&A Manual, namely: STK03 (Block 1, Sha Tau Kok Estate) and STK05 (Village House at Sha Tau Kok). STK03 was mainly selected for the construction works related to the SBF and the new checkpoint in Sha Tau Kok, while STK05 was mainly selected for the removal of the existing checkpoint at Shek Chung Au.

However, access to STK03 to perform noise monitoring was not granted, therefore an alternative nearby location – STK-DBD (HKPF Operation Base, Sha Tau Kok Division, Border District) – was proposed by ET and agreed to by IEC and EPD. Baseline noise monitoring was subsequently conducted at STK-DBD from 16 to 29 March 2010.

Currently, there is no solid timetable or programme for the demolition works of the existing checkpoint at Shek Chung Au, although the end of 2011 has been proposed as a possible commencement date. This is subject to future confirmation of the demolition programme by the Security Bureau and HKPF. No noise monitoring at STK05 has been carried out at this stage.

As a result, only one noise impact monitoring station is included in the current EM&A programme for Section 4. The location of the agreed noise quality monitoring station is listed in Table 3.2 and shown in Figure 1.2.

 Table 3.2:
 Noise Impact Monitoring Location

Monitoring Station	Description of Location	Type of measurement
STK-DBD	HKPF Operational Base,	Façade
	Sha Tau Kok Division, Border District	

## 3.3 Monitoring Equipment

Integrating Sound Level Meter will be used for noise monitoring. It is a Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level ( $L_{eq}$ ) and percentile sound pressure level ( $L_{x}$ ). They comply with International Electrotechnical

P:\Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). Table 3.3 summarizes the noise monitoring equipment model being used.

Table 3.3: Noise Monitoring Equipment

Equipment	Model(s)
Integrating Sound Level Meter	Rion NL-31
Acoustic Calibrator	Castle GA607

## 3.4 Equipment Calibration

The calibration frequencies of the monitoring equipment are provided in Table 3.4.

Table 3.4:	Noise Monitoring Equipment Calibration Frequencies
Table 3.4.	Noise Monitoring Equipment Calibration Frequencies

Equipment, Model and Serial Number	Calibration Frequency	Calibration Due Date(s)
Integrating Sound Level Meter	Every year	10 May 2011
Rion NL-31 (serial number 01262786)		
Acoustic Calibrator	Every year	20 Dec 2010
Castle GA607 (serial number 040162)		

The calibration certificates are presented in Appendix G.

## 3.5 Monitoring Methodology

#### 3.5.1 Field Monitoring

- The Sound Level Meter was set on a tripod at a height of at least 1.2 m above the ground.
- Façade measurements were made at the monitoring locations.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting: A
  - time weighting: Fast
  - time measurement: 5-minute intervals (between 07:00 and 19:00); L<sub>eq</sub> (30 min) was determined by calculating the logarithmic average of six L<sub>eq</sub> (5-min) data.
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement was more than 1 dB, the measurement would be considered invalid and have to be repeated after re-calibration or repair of the equipment.
- During the monitoring period, the L<sub>eq</sub>, L<sub>10</sub> and L<sub>90</sub> noise levels were recorded. In addition, any site observations and noise sources were recorded on a standard record sheet.

### 3.5.2 Maintenance and Calibration

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.

## 3.6 Results of Impact Monitoring

The measured construction noise levels, in terms of  $L_{eq}$  (30-min), during the reporting month are summarised in Table 3.5. Detailed results, including general weather conditions and graphical presentations are presented in Appendix H.

Table 3.5: Results of Noise Impact Monitoring

Monitoring Station	Measured L <sub>eq</sub> (30-min) Range, dB(A)	Limit Level for $L_{eq}$ , dB(A)
STK-DBD	63 – 67	75

Note: All figures are rounded off to the nearest whole number.

No exceedance of Action / Limit Levels for construction noise was recorded.

No direct comparison between the measured noise levels and the construction noise levels predicted in the EIA Report for this Project was possible due to the minor nature of site works conducted during the reporting month.

Wind data obtained from the nearest Hong Kong Observatory monitoring station, at Ta Kwu Ling, covering all noise monitoring days during the reporting month is included in Appendix K.

## 4. Environmental Site Inspection and Audit

## **4.1** Site Inspections

Environmental site inspections were carried out on a weekly basis to monitor the proper implementation of environmental pollution control and mitigation measures for Section 4. In the reporting month, one monthly site inspection was carried out jointly by the ER, Contractor, ET and IEC on 4 November 2010, and additional weekly site inspections were carried out by the ER, Contractor and ET on 10, 18 and 26 November 2010. The EM&A schedule is presented in Appendix F.

Major findings provided jointly by the ET and IEC during the joint monthly site inspection, and provided by ET during the additional weekly site inspections, are summarised in Table 4.1. In general, the works site areas were found to be in compliance with the environmental mitigation requirements listed in the EM&A Manual and no adverse impacts were found.

Date of Inspection	Major Observations	Status
4 Nov 2010	A new copy of the master EP should be provided as soon as possible.	Copies of the master EP and both FEPs were posted at the site entrance, as observed on 10 Nov 2010. (closed)
	The copy of FEP no. FEP-03/347/2009 was missing and should be replaced as soon as possible.	Copies of the master EP and both FEPs were posted at the site entrance, as observed on 10 Nov 2010. (closed)
	Tree protection measures for trees under Works Order No. 2 should be provided as soon as possible.	Temporary fencing was provided to mark the precautionary areas around trees which are to be retained under Works Order No. 2, as observed on 18 Nov 2010. (closed)
10 Nov 2010	Construction material should be stored away from the trees under Works Order No. 2.	It was noted that no construction material was stored inside the precautionary areas marked around the trees, as observed on 18 Nov 2010. (closed)
	Standing water was observed in a drip tray.	Standing water was cleared from the drip tray, as observed on 18 Nov 2010. (closed)
18 Nov 2010	The Contractor is reminded to place all site refuse in the designated bins. Recyclable items such as used plastic bottles should be separated from general refuse.	Plastic bottles had been removed from site, as observed on 26 Nov 2010.All site refuse was put in the waste bin, as observed on 1 Dec 2010. (closed)
26 Nov 2010	Some construction material was not properly stockpiled. The Contractor was reminded to rectify as soon as possible.	Stockpiling of the relevant construction material was in a better state, as observed on 1 Dec 2010. (closed)

Table 4.1: Summary of Environmental Site Inspections

## 4.2 Environmental Meetings

During the reporting month, one environmental meeting was held on 4 November 2010.

## 4.3 Status of Environmental Submissions, Permits and Licences

A summary of status of all environmental submissions, valid permits/licences, and/or notifications to EPD for this Project during the reporting month is presented in Table 4.2. A summary of submissions made under the valid EP and FEP for Section 4 during the same period is presented in Table 4.3.

## 4.4 Advice on the Solid and Liquid Waste Management Status

The construction and demolition (C&D) material and general refuse generated by Section 4 of the Project in the reporting month are shown in Appendix I. Wastes were handled and disposed from site in accordance with the EM&A Manual and all relevant legislation and regulations.

## 4.5 Review of Environmental Monitoring Procedures

The monitoring works conducted by the Environmental Team have been reviewed regularly. No changes in the environmental monitoring procedures are considered necessary at this stage.

## 4.6 Implementation Status of Environmental Mitigation Measures

An Implementation Schedule of Mitigation Measures from the EIA Report / EM&A Manual is provided in Appendix E, in the following order (see Table 4.4):

Table 4.4: Implementation Schedule of M	illigation measures
Parameter	Table
Air Quality	Table E.1
Noise	Table E.2
Water Quality	Table E.3
Waste Management	Table E.4
Ecology	Table E.5

 Implementation Schedule of Mitigation Measures

P:\Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

# Record of Non-compliance, Complaints, Notifications of Summons and Successful Prosecutions

## 5.1 Non-compliance of Action and Limit Levels

There was no breach of Action or Limit Levels for construction noise impact monitoring in the reporting month.

## 5.2 Environmental Complaints

No environmental complaints were received or made against Section 4 of the Project during the reporting month. The complaint log is presented in Appendix J.

## 5.3 Notifications of Summons and Successful Prosecutions

No notifications of summons or successful prosecution were received or made against Section 4 of the Project during the reporting month.

## 6. Future Key Issues

## 6.1 Construction Programme for the Next Reporting Month

The major construction works forecast for Section 4 in December 2010 will be:

#### Works Order No. 1 (ASD 010962):

No major works forecast.

#### Works Order No. 2 (ASD 010969):

- Tree felling and pruning work;
- Tree transplant;
- Delivery of materials to site;
- Excavation works for footing of steel fence;
- Construction of footing of the steel fence;
- Fabrication works for the steel fence; and
- Erection of steel frame along the boundary fence.

#### Works Order No. 3 (ASD 010974):

- Erection of hoarding for the new check point;
- Excavation at the new check point site; and
- Erection of hoarding for the new kiosk and shelter.

## 6.2 Key Issues for the Next Reporting Month

Based on the forecast major construction works listed in Section 6.1, the key environmental issues to be considered in December 2010 include:

#### 6.2.1 Air

- All plant and equipment to be maintained to prevent any undue air emissions.
- Any excavated dusty materials or stockpile of dusty materials should be covered entirely by impervious sheeting or sprayed with water so as to maintain the entire surface wet, and recovered or backfilled or reinstated within 24 hours of the excavation or unloading;
- All dusty materials should be sprayed with water prior to any loading, unloading or transfer; and
- Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites.

#### 6.2.2 Noise

- Noisy equipment and noisy activities should be located as far away from the NSRs as is practical;
- Unused equipment should be turned off. PME should be kept to a minimum and the parallel use of noisy equipment / machinery should be avoided;
- Adoption of Level 1 site-specific direction mitigation measures (use of quiet plant and movable noise barrier) for construction/demolition work undertaken at a distance of 60m or less to the NSRs; and
- Regular maintenance of all plant and equipment.

#### 6.2.3 Water Quality

• No discharge of silty water into the storm drain and drainage channel within and the vicinity of the site;

- Any construction plant which causes pollution to the water system due to leakage of oil or fuel shall be removed off-site immediately; and
- Excavated soil which needs to be temporarily stockpiled should be stored in a specially designated area and provided with a tarpaulin cover to avoid runoff into the drainage channels.

### 6.2.4 Waste

- Control measures should be taken at the stockpiling area to prevent the generation of dust and pollution of stormwater channels, fish ponds or river channels;
- Different types of waste should be segregated, stored, transported and disposed of in accordance with the relevant legislative requirements and guidelines; and
- Records of quantities of wastes generated, recycled and disposal (with locations) shall be kept.

#### 6.2.5 Ecology

- Good site practices for controlling the dust and water quality (avoid stockpiles adjacent to wetlands, covering the stockpiles with impervious sheeting, control of vehicle speed, no discharge of silty water to the rivers, streams and drainage channels); and
- Clear definition of works limit to avoid impact on adjacent habitats.

#### 6.2.6 Landscape and Visual

- Creation of precautionary area around trees to be retained equal to half of the tree canopy diameter.
   Precautionary area to be fenced;
- Prohibition of the storage of materials including fuel, the movement of construction vehicles, and the refuelling and washing of equipment including concrete mixers within the precautionary area;
- Pruning of the branches of existing trees identified for transplantation and retention to be based on the principle of crown thinning maintaining their form and amenity value;
- The rectification and repair of damaged vegetation following the construction phase to its original condition prior to the commencement of the works or replacement using specimens of the same species, size and form where appropriate to the design intention of the area affected; and
- Construction site controls should be enforced including the storage of materials, the location and appearance of site accommodation and the careful design of site lighting to prevent light spillage.

## 6.3 Monitoring Schedule for the Next Reporting Month

The tentative schedule for environmental monitoring in December 2010 is provided in Appendix F. Actual monitoring dates may change due to unforeseen events such as inclement weather.

## 7. Conclusions and Recommendations

## 7.1 Conclusions

The construction phase and EM&A programme for Section 4 commenced on 28 May 2010. EM&A was performed from 1 to 30 November 2010 during which some minor site works have commenced. All monitoring and audit results in the reporting month were checked and reviewed.

Construction noise monitoring was carried out in the reporting month. As no noise-related complaint was received or follow-up by ET during the reporting month, no Action Level exceedance was recorded. All noise monitoring results obtained complied with the Limit Level.

Environmental site inspections were carried out four times during the reporting month. During the site audits, recommendations on remedial actions were given to the Contractor for any deficiencies identified.

Wastes were handled and disposed from site in accordance with the EM&A Manual and all relevant legislation and regulations.

No environmental complaints, notification of summons of successful prosecutions were received or made against Section 4 of the Project during the reporting month.

Overall, the EM&A programme for Section 4 during the reporting month was in compliance with the relevant EIA Report, EM&A Manual, EP and FEP and all relevant legislation and regulations.

## 7.2 Recommendations

No further recommendations were made at this stage pending more site progress achieved.

Construction of a Secondary Boundary Fence and New Sections of Primary Boundary Fence and Boundary Patrol Road Section 4 – Lin Ma Hang Village to Sha Tau Kok Monthly EM&A Report for Nov 2010

Appendix D. Event and Action Plans

#### Table D.1: Event and Action Plan for Construction Noise

EVENT	AC	TION		_				
	ET	Leader	IEC	:	ER		Cor	ntractor
Action Level	1. 2. 3. 4. 5.	Notify IEC and the Contractor. Carry out investigation. Report the results of investigation to IEC and the Contractor. Discuss with the Contractor and formulate remedial measures. Increase monitoring frequency to check mitigation measures.	1. 2. 3.	Review with analyzed results submitted by ET. Review the proposed remedial measures by the Contractor and advise ER accordingly. Supervise the implement of remedial measures.	1. 2. 3. 4.	Confirm receipt of notification of exceedance in writing. Notify the Contractor. Require the Contractor to propose remedial measures for the analyzed noise problem. Ensure remedial measures are properly implemented.	1. 2.	Submit noise mitigation proposals to IEC. Implement noise mitigation proposals.
Limit Level	<ol> <li>1.</li> <li>2.</li> <li>3.</li> <li>4.</li> <li>5.</li> <li>6.</li> <li>7.</li> </ol>	Identify the source. Notify IEC, ER, EPD and the Contractor. Repeat measurement to confirm findings. Increase monitoring frequency. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented. Inform IEC, ER, and EPD the causes & actions taken for the exceedances. Assess effectiveness of the Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	1. 2.	Discuss amongst ER, ET Leader and the Contractor on the potential remedial actions. Review the Contractor's remedial actions whenever necessary to assure their effectiveness and advise ER accordingly. Supervise the implementation of remedial measures.	1. 2. 3. 4.	Confirm receipt of notification of exceedance in writing. Notify the Contractor. Require the Contractor to propose remedial measures for the analyzed noise problem. Ensure remedial measures are properly implemented. If exceedance continues, consider what activity of the work is responsible and instruct the Contractor to stop	1. 2. 3. 4. 5.	Take immediate action to avoid further exceedance. Submit proposals for remedial actions to IEC within 3 working days of notification. Implement the agreed proposals. Resubmit proposals if problem still not under control. Stop the relevant activity of works as determined by the ER until the exceedance is
	8.	If exceedance stops, cease additional monitoring.				that activity of work until the exceedance is abated.		abated.

Table E.3:	Recom	mended Mitigation Measures – Water Quality			
EIA Ref.	EM&A Manual Ref.	Recommended Mitigation Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
4.7.1	5.3.1	<ul> <li>Good site practices in addition to the implementation of mitigation measures would minimize the impact to the surrounding environment.</li> <li>General Prevention and Precaution Measures: <ul> <li>The site should be confined to avoid silt runoff to the site.</li> <li>No discharge of silty water into the storm drain and drainage channel within and the vicinity of the site.</li> <li>Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials.</li> <li>Stockpiles to be covered by tarpaulin to avoid spreading of materials during rainstorms;</li> <li>Suitable containers shall be used to hold the chemical wastes to avoid leakage or spillage during storage, handling and transport;</li> <li>Chemical waste containers shall be labelled with appropriate warning signs in English and Chinese to avoid accidents. there shall also be clear instructions showing what action to take in the event of an accidental;</li> <li>Storage areas shall be allocated to the storage area;</li> <li>Any construction plant which causes pollution to the water system due to leakage of oil or fuel shall be removed off-site immediately;</li> <li>Spillage or leakage of chemical waste to be controlled by using suitable absorbent materials;</li> <li>Chemicals will always be stored on drip trays or in bunded areas where the volume is 110% of the stored volume;</li> <li>Regular clearance of domestic waste generated in the temporary sanitary facilities to avoid waste water spillage.</li> </ul> </li> </ul>	Contractor	DC	✓, REC
4.7.2 - 4.7.3	5.3.2 - 5.3.3	<b>Concreting Work</b> A temporary drainage channel and associated facilities should be provided to collect the runoff generated and prevent concrete- contaminated water from entering watercourses. Adjustment of pH can be achieved by adding a suitable neutralising reagent to wastewater prior to discharge.	Contractor	DC	N/A
		The concreting works should be temporarily isolated with proper methods, such as by placing of sandbags or silt curtains with lead edge at bottom and properly supported props.			
4.7.4	5.3.4	Soil Excavation and Stockpiling Excavated soil which needs to be temporarily stockpiled should	Contractor	DC	V
		be stored in a specially designated area and provided with a tarpaulin cover to avoid runoff into the drainage channels.			

P:\Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

EIA Ref.		EM&A Manual Ref.	Recommended Mitigation Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
4.7.5 - 4.7.6		5.3.5 - 5.3.6	Site Depot All compounds in works areas should be located on areas of hard standing with provision of drainage channels and settlement ponds where necessary to allow interception and controlled release of settled/treated water. Hard standing compounds should drain via an oil interceptor. The oil interceptor should be regularly inspected and cleaned to avoid wash-out of oil during storm conditions. A bypass should be provided to avoid overload of the interceptor's capacity. Any contractor generating waste oil or other chemicals as a result of his activities should register as a chemical waste producer. Disposal of the waste oil should be done by a licensed collector.	Contractor	DC	Ρ
			Good housekeeping practices should be implemented to minimise careless spillage and to keep the storage and the work space in a tidy and clean condition. Appropriate training including safety codes and relevant manuals should be given to the personnel who regularly handle the chemicals on site.			
4.7.7	Ę	5.3.7	Construction of Checkpoint Sewage system should be constructed to divert domestic	Contractor	DC	N/A
			sewage, which will be generated from the sanitary facilities provided in the new checkpoint at Sha Tau Kok, to public sewer connected to government sewage treatment facilities.			
Legend:	(1)	DC	- During Construction			
	(2)	₽ × REC (REC) N/A	<ul> <li>Implemented</li> <li>Partially Implemented</li> <li>Not Implemented</li> <li>Rectified by Contractor</li> <li>Partially Rectified by Contractor</li> <li>Not Applicable</li> </ul>			

Table E.4:	Recomm	nended Mitigation Measures – Waste Management			
EIA Ref.	EM&A Manual Ref.	Recommended Mitigation Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
5.6.7	6.3.6	Site Clearance	Contractor	DC	~
		The topsoil and vegetation removed and excavated material may have to be temporarily stockpiled on-site. Control measures should be taken at the stockpiling area to prevent the generation of dust and pollution of stormwater channels, fish ponds or river channels. However, to eliminate the risk of blocking drains in the wet season, it is recommended that stockpiling of excavated materials during the wet season should be avoided as far as practicable.			
5.6.10 -	6.3.8	Construction and Demolition Materials	Contractor	DC	~
5.6.12		Careful design, planning and good site management can minimize over-ordering and generation of waste materials such as concrete mortars and cement grouts. The design of formwork should maximize the use of standard wooden panels so to achieve high reuse levels. Alternatives such as steel formwork or plastic facing should be considered to increase the potential for reuse.			
		The Contractor should recycle as much of the C&D materials as possible on-site. Proper segregation of waste on-site will increase the feasibility of certain components of the waste stream by the recycling contractors. Different areas of the worksite shall be designated for such segregation and storage wherever site conditions permit.			
		Trip-ticket system should be employed to monitor the disposal of C&D material and solid at public filling facilities and landfills, and to control fly-tipping. Government has established a differentiated charging scheme for the disposal of waste to landfill, construction waste sorting facilities and public fill facilities. This will provide additional incentives to reduce the volume of waste generated and to ensure proper segregation of wastes.			
5.6.13 -	6.3.9 -	Chemical Waste	Contractor	DCP	N/A
5.6.14	6.3.13	For those processes which generate chemical waste, it may be possible to find alternatives which generate reduced quantities or even no chemical waste, or less dangerous types of chemical waste.			
		Chemical waste that is produced, as defined by Schedule 1 of the Waste Disposal (Chemical Waste) (General) Regulation, should be handed in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Waste as follows:			
		<ul> <li>Containers used for the storage of chemical wastes should:</li> <li>be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition, and securely closed:</li> <li>have a capacity of less than 450 litres unless the specification have been approved by the EPD; and</li> <li>display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Regulations,</li> </ul>			
		The storage area for chemical wastes should:			
016707/55	1014414 44	<ul> <li>be clearly labelled and used solely for the storage of chemical waste;</li> <li>be enclosed on at least 3 sides;</li> <li>have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area</li> <li>December 2010</li> </ul>			

P:Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

EIA Ref.	EM& A Manual	Ref.	Recommended Mitigation Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
			<ul> <li>whichever is the greatest;</li> <li>have adequate ventilation;</li> <li>be covered to prevent rainfall entering (water collected within the bund must be tested and disposed as chemical waste if necessary); and</li> <li>be arranged so that incompatible materials are adequately separated.</li> <li>Disposal of chemical waste should:</li> <li>be via a licensed waste collector; and</li> <li>be to a facility licensed to receive chemical waste, such as the Chemical Waste Treatment Facility which also offers a chemical waste collection service and can supply the necessary storage containers, or</li> <li>to be re-user of the waste, under approval from the EPD.</li> </ul>			
5.6.16	6.3	3.15	<b>General Refuse</b> Should be stored in enclosed bins or compaction units separate from C&D and chemical wastes. The Contractor should employ a reputable waste collector to remove general refuse from the site, separate from C&D and chemical wastes, on a regular basis to minimise odour, pest and litter impacts. Burning of refuse on construction sites is prohibited by law.	Contractor	DC	✔, REC
5.6.18	6.3	3.16	<b>Construction Waste Management Plan</b> A construction waste management plan (CWMP) should be prepared and developed by the contractor to ensure proper collection, treatment and disposal of waste on site. This CWMP will also take into account the requirement to handle chemical wastes on site which will need to be managed by a licensed waste collection contractor.	Contractor	DC	V

		Transplantation of Existing Trees			
Table 7-13 CP5	Table 9-1	The tree transplanting works should be implemented by approved Landscape Contractors and inspected and approved on site by a qualified Landscape Architect. A tree protection / transplanting specification would be included within the contract documents.	Contractor	PTCPW	N/A
		Design of the Fence and associated Structures			
Table 7-14 OP1	Table 9-2	Design of Boundary Fence, Boundary Patrol Road and Police Check Point – These structural elements will be designed in accordance with security requirement from Police Force and incorporate design features as part of design mitigation measures including: 1. Integrated design approach – the boundary fence	ArchSD	TDP	Р
216727/E	NI /10/14/	<ul> <li>Integrated design approach and boundary feace should integrated, as far as technically feasible, with existing built structures such as existing road, footpath and track and embankment of fishponds, river and drainage channel as part of design mitigation measures to reduce the potential cumulative impact of the proposed works. The location and orientation of the police check points should be away from landscape and visually sensitive areas such wetland, fishpond and agricultural field.</li> <li>Building massing - the proposed use of simple</li> <li>A 14 December 2010</li> </ul>			

P:\Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

EIA Ref.	EM&A Manual Ref.	Recommended Mitigation Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
		<ul> <li>responsive design for the built structures with a low building height profile to reduce the potential visual mass of the structure within a rural context.</li> <li>3. Treatment of built structures - the architectural design should seek to reduce the apparent visual mass of the facilities further through the use of natural materials such as wooden frame, vertical greening or other sustainable materials such as recycled plastic.</li> <li>4. Responsive building and fence finishes - In terms of the proposed finishes natural tones should be considered for the colour palette with non-reflective finishes are recommended to reduce glare effect. The use of colour blocking on the proposed fence could be used to break up the visual mass of the structure.</li> <li>5. Responsive lighting design – Aesthetic design of architectural and track lighting with following glare design measures: <ul> <li>Directional and full cut off lighting is recommended for safety and security reasons;</li> <li>Limited lighting intensity to meet the minimum safety and operation requirement; and</li> <li>High-pressure sodium road lighting is recommended for more stringent light control reducing spillage and thus visual impacts.</li> </ul> </li> </ul>			
		Compensatory Planting Proposals			
Table 7-14 OP2	Table 9-2	<ul> <li>Utilise native to Hong Kong will be utilized within the buffer planting areas.</li> </ul>	Contractor	TDP	Р
Table 7-14 OP2/3	Table 9-2	A qualified or registered landscape architect will be involved in the design, construction supervision and monitoring, and maintenance period to oversee the implementation of the recommended landscape and visual mitigation measures including the tree preservation and landscape works on site.	Contractor	TDP	V
Table 7-14 OP2	Table 9-2	Tree and Shrub Planting – Given the rural nature of the proposed alignment it is recommended that the where possible tree and shrub species which are native to Hong Kong be used. In addition where possible the planting of new trees and shrubs will aim to link together existing woodland areas and small tree groups to improve the connectivity between habitats and create more coherent landscape framework. The planting of small groups of trees along the alignment of the proposed fence will serve to de-emphasise the horizontality of the fence structure and provide for better sense of visual integration with the landscape context. Where practicable vertical greening measures should also be considered on engineering structures.	Contractor	TDP	Ρ
Table 7-14 OP2	Table 9-2	Compensatory Planting Proposals – Given the works extent is largely limited along existing roadside embankment to minimise impact to existing village settlements and valuable landscape resources such as wetland, fishpond, stream course and existing trees, and considered the importance of	Contractor	TDP	Р

P:\Hong Kong\INF\Projects2\216727-Boundary Fence\Environmental\Environmental Team\Section 4\Deliverable\Monthly EM&A Report\2010-11\EM&A Report (Nov 2010) Rev A.doc

ElA Ref.	EM&A Manual	Ref. Recommended Measures	Who to implement?	When to implement? (1)	Implementation Status (2)
		tree retention within the works area, new tree planting will concentrate in selected new amenity areas along the alignment, infilling between retained and transplanted trees. The preliminary planting proposals for the proposed works include the planting of some 357 new trees utilising a combination of mature to light standard sized stock (i.e. approximately 15% of mature trees, 75% of standard trees, and 10% light standard trees). These trees will be planted in woodland clumps and small tree groups at strategic locations to de-emphasise the horizontality of the fence alignment. Based on preliminary findings the proposed planting will result in a compensatory planting ratio of 1:1 (new planting: trees recommended for felling). This compares favourably with the report's assertion that some 357 trees would be felled due to the proposed works. With the proposed preservation of existing trees, transplantation of trees in conflict with the proposals and the planting of new trees the project area will contain approximately 2000 trees. Trees forming part of the new planting will provide screening to neighbourhood villagers and will utilise species native to Hong Kong. These proposals will be subject to review at detailed design stage of the project.

### **Calibration Certificate**

Certificate No.	02315		Page	1 of 4	Pages
Customer :	Mott MacDonald Hong Kong Lim	ited			
Address :	20/F, Two Landmark East, 100 H	low Ming Street, Kv	vun Tong, Kowlo	on, Hong Kor	ıg.
Order No. :	Q00564		Date of receipt	:	6-May-10
Item Tested					
Description :	Precision Integrating Sound Leve	el Meter			
Manufacturer :	Rion				
Model :	NL-31		Serial No.	: 012627	86
Test Conditi	ons				
Date of Test :	7-May-10		Supply Voltage	ə :	
Ambient Temp	•		Relative Humic	dity:(50 ± 2	5) %
Test Specifi	cations				
Calibration cheo Ref. Document/	ck. /Procedure : Z01.				
Test Results	3				
All results were	within the IEC 651 Type 1 & IEC	804 Type 1 specific	ation.		
	shown in the attached page(s).	•	• *		
Main Test equip	oment used:				
Equipment No.	Description	<u>Cert. No.</u>	<u>Due Date</u>	Traceable to	2
S017A	Multi-Function Generator	00804	22-Feb-11	SCL-HKSAF	२
S024	Sound Level Calibrator	93758	16-Jul-10	NIM-PRC &	SCL-HKSAR
•					
will not include allo	this Calibration Certificate only relate to wance for the equipment long term drift, vandling, or the capability of any other labo	ariations with environme	ental changes, vibrati	on and shock du	iring transportation,

The test equipment used for calibration are traceable to International System of Units (SI). The test results apply to the above Unit-Under-Test only

Calibrated by

P.F. Wong

for any loss or damage resulting from the use of the equipment.

Approved by : Dorothy Cheuk Date: 11-May-10

This Certificate is issued by: C Hong Kong Calibration Ltd. Unit 8B, 24/F., Well Fung Industrial Centre, No. 58-76, Ta Chuen Ping Street,Kwai Chung, NT,Hong Kong. Tel: 2425 8801 Fax: 2425 8646

### 3. Linearity

3.1 Level Linearity

UUT Range	Applied	UUT Reading	Variation	IEC 651 Type 1 Spec.
(dB)	Value (dB)	(dB)	(dB)	(Primary Indicator Range)
130	114.0	113.9	0.0	± 0.7 dB
130	104.0	104.0	+0.1	
120	94.0	93.9 (Ref.)		
110	84.0	83.9	0.0	
100	74.0	73.9	0.0	
90	64.0	64.0	+0.1	
80	54.0	54.0	+0.1	

Uncertainty :  $\pm 0.1 \text{ dB}$ 

3.2 Differential level linearity

UUT Range	Applied	UUT Reading		
(dB)	Value (dB)	(dB)	Variation (dB)	IEC 651 Type 1 Spec.
120	84.0	83.8	-0.1	± 0.4 dB
	94.0	93.9 (Ref.)		
	95.0	94.9	0.0	± 0.2 dB

Uncertainty :  $\pm 0.1 \text{ dB}$ 

### 4. Frequency Weighting

### A weighting

Frequency	Attenuation (dB)	IEC 651 Type 1 Spec.
31.5 Hz	-39.8	- 39.4 dB, ± 1.5 dB
63 Hz	-26.6	- 26.2 dB, ± 1.5 dB
125 Hz	-16.5	- 16.1 dB, ± 1 dB
250 Hz	-9.0	- $8.6 \text{ dB}, \pm 1 \text{ dB}$
500 Hz	-3.5	- $3.2 \text{ dB}, \pm 1 \text{ dB}$
1 kHz	0.0 (Ref.)	$0 \text{ dB}, \pm 1 \text{ dB}$
2 kHz	+1.4	$+ 1.2 \text{ dB}, \pm 1 \text{ dB}$
4 kHz	+1.3	+ 1.0 dB ,± 1 dB
8 kHz	-1.0	- $1.1 \text{ dB}$ , + $1.5 \text{ dB}$ ~ - $3 \text{ dB}$
16 kHz	-6.5	- 6.6 dB, + 3 dB ~- $\infty$

Uncertainty :  $\pm 0.1 \text{ dB}$ 

## **Calibration Certificate**

### Certificate No. 02315

Page 4 of 4 Pages

### 5. Time Averaging

Applied Burst duty Factor	Applied Leq Value (dB)	UUT Reading (dB)	IEC 804 Type 1 Spec.
continuous	40.0	40.0	
. 1/10	40.0	39.9	± 0.5 dB
$1/10^{2}$	40.0	40.0	
$1/10^{3}$	40.0	39.9	± 1.0 dB
1/10 <sup>4</sup>	40.0	40.5	

Uncertainty :  $\pm 0.1 \text{ dB}$ 

Remark : 1. UUT : Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. Atmospheric Pressure : 998 hPa.
