Contract No. HY/2009/18
Central – Wan Chai Bypass – Central Interchange

Landscape Plan

Prepared by:

Donald Ip
Environmental Engineer

Approved by:

Desmond Sze
Site Agent

About this Document

This document is available for all project employees via the project network. We regularly revise this document and the latest version is always available electronically. Once printed, the document should no longer be considered to be the latest version. It may be distributed to the Highways Department and the Engineer on the understanding that any such document may not be the latest version or it may be distributed to the Highways Department and the Engineer as a controlled document in which case the front cover is to be stamped “Controlled Copy” in red and a copy number added.

The Environmental Officer is responsible for updating and maintaining the plan, including the original hard copy, which is signed by the person in charge of the project to indicate approval.

The status of this plan is identified by a revision number and date on each page. On revision, the plan will be uploaded as a whole to the project server or within the Incite Keystone. The Environmental Officer maintains a record of the revision status of the plan, which is available on request.

If you have any enquiry relating to this plan, please contact the Environmental Officer.

Introduction

The purpose of this Landscape Plan is to fulfil the Condition 2.10 under Environmental Permit number: FEP-05/364/2009/A.

This Landscape Plan shows the details, locations, implementation programme, maintenance and management schedules, and drawings of the landscape and visual mitigation measures for mitigation of the landscape and visual impact arising from the construction of the Central-Wan Chai Bypass – Central Interchange Project. Layout plans showing the site boundary and locations of the sensitive receivers are attached in Appendix A.

The Figure 7.5 in Appendix A was extracted from the Central – Wan Chai Bypass and IEC Link EIA Report (Register No.: AEIAR-041/2001) (EIA Report) and the locations of key visual sensitive receivers refer to Table 7.4 of the EIA Report for summary of visual impact assessment – impacts on visual receivers.

It is identified that VSR numbers 1-26, 28-29, 78-85 and 98-99 would be the key visual sensitive receivers related to this Project.

With reference to the Urban Design Study for the New Central Harbourfront (UDS) and the Master Greening Plan (MGP), it is noted that the development in the UDS area might require associated transplanting to be addressed in the future. However, the development works in the UDS area and the associated MGP is not covered in the project scope of HY/2009/18.

The operational phase mitigation measures as mentioned in EIA Reports, will not be carried out under this contract. The permanent landscape works covered under this contract are included in the Appendices E, F & G in this Plan.

Part A – Landscape Works

1. Soil Mix

1.1. New soil mix shall be used for new planting areas.

1.2. Soil mix shall be tested by HOKLAS accredited laboratory and submitted to the Engineer's Representative for approval before installation.

1.3. Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical.

2. Tree Preservation, Transplanting, Felling and Planting

2.1. Initial tree survey was carried out before the commencement of major works of the Project and the tree survey report with schedules and photos was submitted to the Engineer's Representative for approval.

2.2. The existing trees recommended to be retained shall be protected by means of fencing to prevent vehicular, construction machines or pedestrian intrusion which may potentially damage tree canopies, trunks and root zones.

2.3. Tree inspection would be carried out bi-monthly for retained trees and reports would be submitted to the Engineer's Representative.

2.4. The method statement for tree preservation and protection is attached in *Appendix B*.

2.5. The tree preservation, transplanting and felling plans for the Project are attached in *Appendix C*.

2.6. The existing trees which are recommended for transplanting in situation that the final location would be available before the construction works would be relocated directly to the receptor site.

2.7. The existing trees which are recommended for transplanting in situation that the final location would be available after the construction works would be relocated to suitable nursery approved by the Engineer's Representative.

2.8. Tree inspection would be carried out bi-monthly for transplanting trees and reports would be submitted to the Engineer's Representative.

2.9. Tree progress report and Tree Preservation Report would be submitted to the Planning Department directly by the Contractor on bi-monthly basis.

2.10. The method statement for tree transplanting is attached in *Appendix D*.

2.11. The tree planting plans for the Project are attached in *Appendix E*.

2.12. The shrub planting plans for the Project are attached in *Appendix F*.

2.13. The hard landscape sections and details are attached in *Appendix G*.

2.14. In order to facilitate the construction of Elevated Lay-by at Man Po Street, some trees near the Elevated Lay-by construction area have to be felled or transplanted to allow access for works, tree felling approval from DLO is attached in Appendix K, the compensatory plan, tree preservation and protection plan are attached in Appendix L.

2.15. In case of additional trees required to be felled during the construction phase, proposal and compensation scheme will be submitted to relevant government department(s) for approval and implemented accordingly upon receipt of approval.

Part B – Hoarding

1. Screen Hoarding

1.1. Screen hoarding with height of at least 2m shall be erected in stages according to the procession of site area and progress of the Works.

1.2. The hoarding plans (in stages) for the Project are attached in *Appendix H*.

2. Hoarding Surface Treatment

2.1. Surface treatment suitable to the urban context shall be applied to the screen hoarding.

2.2. The surface treatment figures are attached in *Appendix I*.

Part C – Control of Night Lighting

1. Night Lighting Arrangement

1.1. Any night-time works required would be carefully planned to minimise the amount of unnatural lighting.

1.2. The usage of lighting equipments would be minimised, assessment would be conducted carefully to evaluate the necessity basing on the work tasks.

1.3. The lighting equipments shall be directed to the site area and controlled to divert from adjoining residential and hotel development.

1.4. The layout and alignment of construction activities would be carefully planned to reduce the lighting impact.

2. On-site Supervision

2.1. During night-time works, the lighting impact would be monitored, assessed and controlled by designated site supervision staff.

2.2. Upon receipt of any public concerns and/or complaints, the lighting equipments would be repositioned, shielded, redirected, dimmed and/or lowered where necessary.

Part D – Implementation Programme, Maintenance and Management Schedule

1. Implementation Programme

1.1. Under the Contract HY/2009/18, no tree was highlighted in the EIA reports (AEIAR-041/2001 and AEIAR-125/2008). Therefore, all trees under the Contract HY/2009/18 will be maintained and managed under contract requirements and mitigation measures listed in the below table.

1.2. Under the Contract HY/2009/18 PS Clause 1.114, trees temporarily stored at CWB(T1) Contract's holding nursery will be transplanted to Central Interchange. The transplanting works will be carried out by the CWB(CI) Contractor from the temporary holding nursery to permanent locations within the Site as indicated in the planting plan.

Item	Mitigation Measures	Location / Timing
A1.	Approved new soil-mix for new planting areas.	New planting areas / Entire construction period.
A2.	Retention and protection of existing trees where feasible and transplanting of trees those are in conflict with the road works (where practical). All in accordance with the tree preservation, transplanting and felling plans.	Entire works area / Entire construction period. (tree protection and transplanting to be carried in stages to suit the programme of the works)
B.	Screen hoarding to be installed, where appropriate, with surface treatment suitable to the urban context.	Entire works area / Entire construction period. (hoarding erection to be carried in stages to suit the programme of the works)
C.	Control of night time lighting.	Entire works area / Entire construction period.

The above mitigation measures are in compliance with relevant requirements in EIA Reports.

2. Maintenance and Management Schedule

Item	Maintenance and Management Schedule
A1.	Soil mix shall be tested and submitted to Engineer's Representative for approval before installation.
A2.	Tree protection measures shall be checked during routine inspections and shall be repaired wherever necessary. Tree transplanting works would only be carried out by experienced transplanting sub-contractor and under the supervision of a registered landscape architect / certified arborist / experienced transplanting supervisor approved by the Engineer's Representative. Transplanted trees would be closely monitored and maintained by the experienced transplanting sub-contractor.
B.	Screen hoarding and surface treatment figures shall be checked during routine inspections and shall be repaired wherever necessary.
C.	Spotlights (if any) shall be checked every night to ensure that they are controlled to divert from adjoining residential and hotel development.

Implementation status of the mitigation measures are shown in Appendix J - Landscape Checklist.

Appendix B
Method Statement for
Tree Preservation and Protection

1 Introduction

1.1 Overview

This Tree Preservation and Protection Plan is written for the Contract No. HY/2009/18 Central – Wan Chai Bypass Central Interchange to meet the contract requirements as stated in the General Specification Clause 26.02.

The works description for this Contract comprises the followings:

a) Approach roads leading to the CWB tunnel west portal;
b) At grade slip roads and associated roads;
c) The bridge deck for the westbound carriageway of Rumsey Street Flyover Extension;
d) The eastbound Slip Road D flyover;
e) Modification/demolition of the existing dual 2-lane tunnel under Man Yiu Street;
f) Cut-and cover tunnel between the CWB tunnel west portal and the limit of tunnel to be completed under the CRIII contract;
g) Sub-structure, basement and foundations for the West Ventilation Building;
h) Civil works provisions for tunnel Electrical & Mechanical and Traffic Control and Surveillance System works;
i) Widening/modification of existing Man Yiu Street; and junction for road P1;
j) Associated road works and drainage/sewerage works; and
k) Landscaping works including tree transplanting.

1.2 Purpose of the Plan

This Plan provides guidance on the physical and appropriate precautionary measures required in order to reduce significant or detrimental impact on the health or amenity of retained and transplant trees.

2 Preservation and Protection

2.1 General

a) The proper color label should be fixed on the tree trunk in order to identify the status of preservation, (Green – Retaining on Site)
b) The existing trees recommened to be retained shall be protected by means of fencing to prevent vehicular, construction machines or pedestrian intrusion which may potentially damage tree canopies, trunk and root zones.
c) The trees to be felled or transplant, which are adjacent to, or which lie within a continuous canopy of the preserved trees, shall be carefully removed, and if necessary in sections but not using bulldozers in any circumstances, so as not to cause damage to the preserved trees such as scraping bark off trunks or breaking branches of trees,
d) No stripping of surface vegetation or top layer of soil, and no paving or earth filling shall be carried out within the tree protection zones unless otherwise agreed by the

Engineer.

e) Where it is necessary to clear the existing undergrowth within the tree protection zones to allow access and visibility for, and operation of any construction work,
- Shrubs shall be pruned and grass or other herbaceous plants shall be cut to a height of not less than 50 mm above the ground level but not pulled out by equipment in any circumstances
- The agreement of the Engineer shall be obtained before vegetation clearance commences

f) No concrete mixing, gas tank filling, paintbrush and tool cleaning, or equipment maintenance shall be carried out within the tree protection zones,

g) Allowance shall be made for the slope of the ground so that damaging materials such as concrete washings, mortar or diesel oil cannot run towards the trees,

h) All materials should be covered when idled.

i) No accumulation of debris to excessive shall be permitted.

j) Store the material in a designated area for temporary storage. The designated area should be kept a reasonable distance from the working area such that it will not obstruct the public and workers.

k) Repair any damage to the trees in accordance with the requirements stipulated in General Specification 26.16,

2.2 Tree Protection Zone

a) The tree protection zone of the retained trees will be the area within the dripline of the tree crown of individual tree.

b) Use of temporary protective mulching to cover the entire tree protection zones.

c) Any necessary scarification or cultivation within the tree protection zones shall be carried out carefully by hand so as not to cause damage to the trees, in particular the bark and the roots,

2.3 Branch Cutting

a) Branch cutting with diameter more than 25 mm will be carried out according to the following situation. The individual Tree Assessment Report is required and to be approved by the Project Manger of the project.
- Hazardous branches is necessary to remove branches of a tree when they are damaged in order to give clearance e.g. for pedestrian and vehicular traffic by taking away the lower branches, to help the tree to form a balanced crown and to remove crossed branches.
- Defect branches are necessary to remove branches of a tree when they are diseased, dying or dead.

b) Carefully lower all cut branches to the ground to prevent any damage to limbs being retained.

c) The procedure of the branch cutting as followed.
- If the location of cutting branch is located at the height higher than 3 meter. The Lifting platform will be used to lift the skilled labour to a suitable level for branch cutting.
- Two ropes will be used to fix at the tip of the cut branch that will be held by 2

labours on the ground in order to guide the direction of the falling branches.
- Cutting of branches will be carried out using 3-cut method in order to prevent tearing of tree bark in branch cutting.
- Pre-cut is carried out at the under-side of the tree to about 1/4 of the diameter of the cutting branch.
- A safety rope will be used to fix the ends of the remaining portion for 2nd cut.

2.4 Tree surgery

a) Cut out rotten wood from cavities, without exposing clean healthy wood.
b) The contractor shall carry out all necessary work of repair of any damage to the preserved trees and other plants affected.

2.5 Treatment of Wounds

a) All loose, dead or damaged barks should be removed. The back of crushed edges to undamaged wood should be trimmed with all margins round.
b) Any cut or wound over 25mm diameter should be painted with an approved fungicidal bituminous sealing compound afterwards.

2.6 Post-planting Fertilizer

Post-planting fertilizer shall be applied after the tree pruning, weeding and treatment of wounds.

2.7 Disease and Pest Control

a) The inspection will be carried out by the specialist bi-monthly and identify the infected area of tree body.
b) The approved chemical pesticide and fungicide will be applied using manual or gasoline sprayer according manufacturer's instruction

2.8 Tree Trunk Protection

a) The tree trunk should be wrapped and covered from the ground level and up to 2m of the tree trunk by armouring the Hessian Mat.
b) Removal of temporary protective armouring and mulching upon completion of work.

2.9 Bi-Monthly Inspection

An inspection report comprising updated photographic records should be submitted in every two month to identify the required horticultural maintenance works.

3 Risk assessment

Risk assessment is an important tool to identify the hazards associated with work activities to be carried out on site, and to develop and implement appropriate control measures to eliminate / minimize the risk of accident / incident caused by these hazards.

In term of tree preservation and protection plan, the project management should carry out a detail assessment to identify the potential hazards (e.g. Hit by live traffic) and their causes (e.g. narrow road) in the planning stage for identifying the special arrangements and/or control measures to deal with such hazards.

Table 3-1 Risk Summary of the Tree Preservation and Protection

Hazard	Risk Level	Action
a) Hit by live traffic	Medium	- Enclose the work area with suitable barriers or traffic cones - Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Reflective vest shall be mandatory and be worn all time on site - Provide trained banksman for traffic diversion if necessary - All the workers should be briefed in daily basis to remind the job hazard and remedial measures
b) Hit by Falling branches / equipment	Medium	- Fence off the working area - Provide competent tree surgeons - Provide safety helmet with chinstrap to workers (meets EN397 or equivalent) - Tie up the branch being cut off to control the fall and fasten up the equipment while in use - Branches to be cut in small section
c) Hit by moving crane / cherry picker	Medium	- Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Display sign and warning notices to aware the general public - Properly fencing should be provided to fence off the public - Secure the trees those near the trench work before excavation commence

d) Tree falling	Medium	- Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Display sign and warning notices to aware the general public - Properly fencing should be provided to fence off the public - Secure the trees those near the trench work before excavation commence
e) Tripping	Low	- Safety shoes shall be manadatory and be worn all the time on site - Provision of good housekeeping
f) Hand or back injury during manual handling operation	Low	- Provide sufficient labour force to carry out manual lifting works - Conduct manual handling training / briefing - Split work into small sections, avoid bending for long periods
g) Long exposure under the sun	Medium	- Ensure workers carrry enough water when working on site - Take short breaks if working for long periods
h) High noise level	Medium	- Conduct noise assessment and demarcate ear protection zone - Provide and ensure to wear approved type ear protector by person within ear protection zone (meets EN352 or equivalent)
i) Contact with overhead lines / Use of electric hand tools	Medium	- Check and ensure no work to be carried out in the vicinity of overhead line cables - Inspect the electrical hand tools by Registered Electrical Worker to ensure tools are in good working condition before use - Use low voltage electric hand tools (110V) - Use waterproof socket / plug, amour cable in outdoors - Provide fire extinguisher
j) Inhalation of wood dust and wood dust getting into eyes	Medium	- Provide and ensure to use safety eye protector (meet EN166 or equivalenet) during work - Provide and ensure to use mouth mask (N95 or equivalent)
k) Cut by sharp tools	Medium	- Provide proper gloves to workers - Provide training briefing to the workers

l) Toppling of crane / cherry picker / Man cage failure	Medium	- Inspect the ground to ensure stable condition before setting up of crane - Appoint licensed crane operator to operate crane - Appoint trained cherry picker operator to operate cherry picker - Display valid test certificate on crane - Inspect the crane by operator on weekly basis, include ASLI - Inspect the cherry picker at regular intervals - Extend the outrigger completely of the crane if practicable - Use tested lifting gear with marking and safe working load - Apply colour code system to LG - Check condition of lifting gear before use - Provide and ensure to use fall arresting device (meets EN361 or equivalent)
m) Contact with chemicals	Medium	- Provide masks if required - Ensure tree surgeons wear hand gloves and proper PPE to avoid contact with skin - Provide goggles - Perform the safety precautions those listed in MSDS

4 Emergency Contact

All Preservation and Protection related accident/ incident occurred within works area of this project shall be promptly reported to project safety department. Rescue, investigation and further reporting procedures shall follow the requirements as stated in the Safety Management Plan.

5 Inspection and Testing Requirements

Complete photograph record of entire transplanting operation at various stages of works. ER will be informed to participate at various stages.

Contents

1. Scope

This Method Statement provides guidance on the physical and appropriate precautionary measures required in order to reduce significant or detrimental impact on the health or amenity of transplant trees.

2. Construction Procedure

2.1 Preparatory Work

1) All safety equipments will be checked before use.
2) All safety tools and machinery certificates will be checked before use.
3) All the temporary traffic arrangements should be set up.
4) Safety precautions shall be taken to protect those engaged in operation as well as people and properties in the vicinity. Safety fence/barrier will be set up around the working area at outer 2 meters to avoid people walking closely and against the hazards of the falling objects.
5) Working area shall be restricted from outsiders.
6) The correct tree label with unique color should be marked in order to identify the correct tree to be transplanted.
7) All works should be supervised by our on-site tree work supervisor.
8) The extent of branch pruning should be identified as per the attachment prior to the pruning work.

2.2 Crown Pruning

1) To reduce water loss through transpiration by removal of foliage as necessary. The natural shape and form of a balanced crown shall be preserved. A crown may be reduced to not more than 1/3 of its original crown by selective pruning such as the removal of crossing or malformed branches.
2) During the branch pruning operation, a natural shape and form of a balanced crown shall be preserved.
3) Large branches shall be cut and removed by 3-cut method. In the beginning stage with the removal of the main weight of the branch with the final cut as close as to the main stem as possible without damaging the bark.
4) Small branches and twist shall be cut and removed by using clean, sharp implements to give a single, sloping surface, the ragged edges of bark shall be trimmed with hand saws or secateurs.
5) All cuts shall be made to avoid splintering or tearing of the bark.
6) Cracks, cavities or rotten wood shall be cut back to living tissue.
7) The dead and/or damaged branches of transplanting tree shall be pruned to produce a well-shaped balance crown.
8) The extent of the crown thinning shall be determined and approved by the ER as stipulated in PS 3.97(19).

2.3 Root Pruning

1) Provision shall be included to secure the trees on the site immediately during the root pruning.
2) The diameter of root ball to be cut shall be determined by the Contractor and approved by the ER. The rootball to be cut should be 8-10 times the trunk diameter at breast height and

not less than 1500mm diameter, and 750 – 1000mm deep. A maximum size of root ball will be maintained whereas practical and necessary to ensure the higher survival rate for transplanted trees. The rootball size will be determined and marked on the ground around the tree to get approval of the ER before root pruning

3) Roots which are severed in the course of root pruning shall be cut cleanly.

4) After completion of each stage of root pruning, trenches shall be backfilled with soil mix to encourage new growth of roots.

5) Root activator shall be applied at regular intervals according to the manufacturer's instruction.

6) Root pruning and lifting shall be carried out in four stages at one-month interval.

7) The circle will be divided into 6 equal segments. Before lifting, the outer edge of the previously dug trenches shall be loosened from the surrounding soil and the root ball will be undercut to allow the tree to be lifted free from the ground with the root ball intact.

- The first stage shall involve digging a trench on the outside of the marked circumference, in only two opposing segments
- The second stage shall involve digging a trench on the outside of the marked circumference, in only two opposing segments.
- The third stage shall involve digging a trench on the outside of the marked circumference in the last remaining two opposing segments.
- The last stage shall be the cutting of the underside of the root ball, followed by uplifting and transplanting.

8) The trunk and lower branches will be wrapped with approved hessian and tied with jute string at least one day prior to rootball preparation.

9) After the completion of each stage of root pruning, trenches made are to be backfilled with soil mix. Root ball shall be watered and kept moist from time to time during the preparatory period to stimulate re-generation of new roots.

10) At each stage of root pruning, those trees to be transplanted shall be inspected for signs of deterioration in their health. Any such signs shall be brought to the attention of the Engineer.

2.4 Preparation in Holding Nursery

1) Wooden or metal box shall be prepared in holding nursery before uplifting of transplanting tree.

2) Box shall have dimensions which are 500 mm greater than the size of the root ball of the tree to be transplanted.

2.5 Tree Lifting and transportation

1) Coir mat shall be used to wrap and protect the trunk, large branches and root ball.

2) Prior to lifting, the root ball shall have been thoroughly soaked with clean water. A crane lorry shall be used to lift trees using nylon straps fastened securely on the rootball.

3) Upon lifting, the root ball shall be wrapped and tied with coir mat and kept moist from the time of lifting until it is transplanted.

4) Trees shall be transplanted to the designated pit within 2 hours after lifting. The lifted trees will be placed lying flat on the truck platform. The whole tree including the aerial parts shall be immediately covered with a tarpaulin to protect against excessive sunlight, wind and drought. Care shall be taken in packing to prevent over-heating with its resultant loss of foliage.

2.6 Planting in Holding Nursery

1) The root balls must be supported by soil underneath to break-up for 300mm and then settled by water.
2) Trees shall be off loaded carefully to ensure that no damage is done to the root ball, trunk or branches. Trees will be planted in an upright position, allowing adequate space for growth.
3) Soil mix shall be used to backfill the prepared root ball box. Backfilling shall be done in layers each being firmly consolidated to eliminate air pockets.
4) Metal Tripod will be fixed in order to secure the transplanted tree.

2.7 Maintenance Work in Holding Nursery

1) Watering shall be carried out daily with automatic irrigation system
2) Weed removal and pest control will be carried out as necessary.
3) Monthly inspection and reporting will be carried out.

2.8 Tree Pit Preparation in Final Location

1) The location of the planting pit shall be agreed with the Engineer's representative at least 7 days' in advance prior to the transplanting work.
2) Tree pits shall be prepared in final location before uplifting for those trees required to be transplanted.
3) The depth of the tree pit should be 300-500mm greater than the size of the root ball of the tree to be transplanted. The base of tree pit shall be broken to a depth of 150mm and filled with water 24 hours before planting to ensure free drainage.

2.9 Planting at Final Location

1) Coco peat with 1/3 of the excavated soil shall be thoroughly incorporated into the existing soil excavated from the pits prior to backfilling.
2) The root balls must be supported by soil underneath to breakup to 300mm and settled by water.
3) Trees shall be off loaded carefully to ensure that no damage is done to the root ball, trunk or branches. Tree will be planted in an upright position, allowing adequate space for growth.
4) Once placed in the prepared pit, soil mix shall be used to backfill the prepared pit. Backfilling shall be done in layers each being firmly consolidated to eliminate air pockets.
5) Each tree shall be secured using 3 nos. of iron stake or wire guy.
6) The tree shall be thoroughly watered after planting.

3. Health and Safety Aspects

1) All personnel shall wear appropriate PPE when carrying out the works including but not limited to Safety Hat, High Visibility Vest and Safety Boots when carrying out the works.
2) Certified Competent Person will conduct the utilities detection.
3) All working areas, access points and dangerous openings shall be properly secured, fenced off from the general public and illuminated.
4) Any unsafe obstruction such accumulation of debris or shrubs shall be removed to enable the competent person to carry out the survey in a safe manner.
5) A detailed risk assessment will be conducted prior to the commencement of the works to assess all of the potential risk and its remedial measures to ensure that the works are carried out in a safe manner.
6) At no time will the competent person be allowed to conduct surveying public roads without the appropriate TTA in place to ensure his safety.

7) Safety is the highest priority for all project at Leighton's. The ultimate aim of strive for L.I.F.E is to change the safety behaviour of all staff and workers on site. As part of this programme, all personnel will be required to attend a 1 day "Advance Safety Induction Certificate Training" at Leighton's training facility at Strive for Life Knowledge and Skills Training Center

14th Floor, Unit B,
Wyler Center 2
Tai Lin Pai Road
Kwai Fong

8) All personnel shall also undertake site specific induction and be briefed on the system of works to ensure that all members including the subcontractor and its employees are aware of the risk involved.
9) Ad-hoc site tool box meetings shall be conducted to continuously refresh personnel to the associated risks and control measures in order to maintain a safe working environment. Training records of the workers shall be submitted to SO for record.
10) Ensure all works to be carried out in accordance with the current statutory regulations regarding safety and health at work.

4. Environmental Protection Requirements

Air: Regular cleaning of loading & unloading area and general surrounding areas to reduce dust emission.
Regular maintenance of the plant equipments to reduce the generation of undesirable exhausts fumes.

5. Subcontractors and Suppliers

Toyo Greenland Company Limited works closely with the landscaping works undertakers, contractors in a number of Landscaping contracts for the HKSAR Government Departments such as Highways Department (HD), Civil Engineering and Development (CEDD) etc.

Landscaping job Reference:
- Smithfield Extension - The Link & Pofulam Open Space (HY/94/20)
- Highways Department Term Contract (Management and Maintenance of High Speed Roads in New Territories West and Kowloon, and Roads in the Hong Kong Port Area 2008-2016)

7. Materials

- Peatmoss
- Root activator
- Tarpaulins

8. Storage and Handling

1) All materials should be covered when idled.
2) No accumulation of debris to excessive shall be permitted.
3) Store the material in a designated area for temporary storage. The designated area should be kept a reasonable distance from the working area such that it will not obstruct the public and workers.

9. Inspection and Testing Requirements

Complete photograph record of entire transplanting operation at various stages of works. ER and landscape specialist will be informed to participate at various stages.

10. Risks

Refer to Appendix A - Risk Assessment

RISK ASSESSMENT REPORT

Job No. / Name Doc. Ref. No.	H2540 Central - Wan Chai Bypass - Central Interchange	Assessor(s) :	Casey Lau, Eric Yuen, Benjamin Sung, MC Cheng
Activity :	Tree Transplanting Works	Anticipated commencement date: 20 Dec 2010	Assessment purpose : (Preparation/Supplementary to method statement /Following accident, review etc.)

Job / Task	People at Risk	Cause to Adverse Effect	Adverse Effect	Pre-assessment			Control Measure	Responsible Person	Re-assessment			Further Control Measure
				Likelihood	Severity	RFN			Likelihood	Severity	RR	
1. Preparation and Crown Pruning	Tree surgeons / labour	Falling branches / equipment	Body injury / Property damage	3	4	12	a) Fence off the working area	Foreman	1	3	3	
							b) Provide competent tree surgeons	Sub agent / Foreman				
							c) Provide trained signaller if required	Sub agent / Foreman				
							d) Tie up the branch being cut off to control the fall and fasten up the equipment while in use	Foreman				
							e) Branches to be cut in small section	Labour / Foreman				
							f) Provide safety helmet with chinstrap to workers (meets EN397 or equivalent)	Foreman				
							g) Check and ensure no work to be carried out in the vicinity of overhead line cables	Foreman				
	Tree surgeons	Contact with overhead lines / Use of electric hand tools	Body injury / Electric shock	2	5	10	a) Check and ensure no work to be carried out in the vicinity of overhead line cables	Foreman	1	3	3	
							b) Inspect the electrical hand tools by Registered Electrical Worker to ensure tools are in good working condition before use	Foreman				
							c) Use low voltage electric hand tools (110V)	Foreman				
							d) Use waterproof socket / plug, amour cable in outdoors	Foreman				
							e) Provide fire extinguisher	Foreman				
	Tree surgeons / Labour / Operator	Toppling of crane / cherry picker / Man cage failure	Fall of person / Body injury / Plant damage	3	4	12	a) Inspect the ground to ensure stable condition before setting up of crane	Foreman	1	4	4	
							b) Appoint licensed crane operator to operate crane	Foreman				
							c) Appoint trained cherry picker operator to operate cherry picker	Foreman				
							d) Display valid test certificate on crane	Foreman				
							e) Inspect the crane by operator on weekly basis, include ASLI	Foreman / Operator				

Job / Task	People at Risk	Cause to Adverse Effect	Adverse Effect	Pre-assessment			Control Measure	Responsible Person	Re-assessment			Further Control Measure
				Likelihood	Severity	RFN			Likelihood	Severity	RR	
							f) Inspect the cherry picker at regular intervals	Foreman / Operator				
							g) Extend the outrigger completely of the crane if practicable	Foreman / Operator				
							h) Use tested lifting gear with marking and safe working load	Foreman				
							i) Apply colour code system to LG	Foreman				
							j) Check condition of lifting gear before use	Foreman / Rigger				
							k) Provide and ensure to use fall arresting device (meets EN361 or equivalent)	Foreman				
	Labour, People nearby	Hit by moving crane / cherry picker	Body injury	2	4	8	a) Fence off the working area	Foreman	1	4	4	
							b) Appoint trained signaller to direct the movement of crane / cherry picker	Sub agent / Foreman				
							c) Appoint licensed crane operator to operate crane	Sub agent / Foreman				
							d) Appoint trained cherry picker operator to operate cherry picker	Sub agent / Foreman				
	Tree surgeons / Labour	Cut by chainsaw / hand saw	Body injury	2	4	8	a) Install guard to dangerous parts of the chainsaw	Foreman	2	2	4	
							b) Provide and ensure to use eye protector (meets EN166 or equivalent)	Foreman				
							c) Provide proper gloves to workers if required	Foreman				
	Tree surgeons / Labour	High noise level	Potential hearing loss	2	4	8	a) Conduct noise assessment and demarcate ear protection zone.	Foreman / Safety Officer	2	2	4	
							b) Provide and ensure to wear approved type ear protector by person within ear protection zone (meets EN352 or equivalent)	Foreman				
2. Root Pruning	Tree surgeons / labour	Manual excavation and back filling	Body injury	3	2	6	a) Provide sufficient labour force to carry out manual lifting works.	Foreman	2	2	4	
							b) Conduct manual handling training	Foreman / Safety Officer				
	Tree surgeons / Labour	Cut by chainsaw / hand saw	Body injury	2	4	8	a) Install guard to dangerous parts of the chainsaw	Foreman	2	2	4	
							b) Provide and ensure to use eye protector (meets EN166 or equivalent)	Foreman				
							c) Provide proper gloves to workers if required	Foreman				
	Tree surgeons / Labour	High noise level	Potential hearing loss	2	4	8	a) Conduct noise assessment and demarcate ear protection zone	Foreman / Safety Officer	2	2	4	

Job / Task	People at Risk	Cause to Adverse Effect	Adverse Effect	Pre-assessment			Control Measure	Responsible Person	Re-assessment			Further Control Measure
				Likelihood	Severity	RFN			Likelihood	Severity	RR	
							b) Provide and ensure to wear approved type ear protector by person within ear protection zone (meets EN352 or equivalent)	Foreman				
	Tree surgeons / Labour	Tree falling	Body injury	2	4	8	a) Fence off the working area	Foreman	1	4	4	
							b) Secure the tree before commencement of work	Foreman				
3. Tree Lifting and Transportation	Tree surgeons / Labour / Operator	Toppling of crane / cherry picker / Man cage failure	Fall of person / Body injury / Plant damage	3	4	12	a) Inspect the ground to ensure stable condition before setting up of crane	Foreman	1	4	4	
							b) Appoint licensed crane operator to operate crane	Sub agent / Foreman				
							c) Appoint trained cherry picker operator to operate cherry picker	Sub agent / Foreman				
							d) Display valid test certificate on crane	Foreman				
							e) Inspect the crane by operator on weekly basis, include ASLI	Foreman / Operator				
							f) Inspect the cherry picker at regular intervals	Foreman / Operator				
							g) Extend the outrigger completely of the crane if practicable	Foreman / Operator				
							h) Use tested lifting gear with marking and safe working load	Foreman				
							i) Apply colour code system to LG	Foreman				
							j) Check condition of lifting gear before use	Foreman / Rigger				
							k) Provide and ensure to use of fall arresting device (meets EN361 or equivalent)	Foreman				
	Labour	Hit by moving crane / cherry picker	Body injury	2	4	8	a) Fence off the working area	Foreman	1	4	4	
							b) Appoint trained signaller to direct the movement of crane / cherry picker	Sub agent / Foreman				
							c) Appoint licensed crane operator to operate crane	Sub agent / Foreman				
							d) Appoint trained cherry picker operator to operate cherry picker	Sub agent / Foreman				
	Tree surgeons / labour	Falling branches / Failure of lifting gear during lifting	Body injury / Property damage	3	4	12	a) Fence off the work place	Foreman	1	4	4	
							b) Provide trained rigger and signaller	Foreman				
							c) Use tested lifting gear with marking and safe working load	Foreman				

Job / Task	People at Risk	Cause to Adverse Effect	Adverse Effect	Pre-assessment			Control Measure	Responsible Person	Re-assessment			Further Control Measure
				Likelihood	Severity	RFN			Likelihood	Severity	RR	
							d) Apply colour code system	Foreman				
							e) Check condition of lifting gear before use	Foreman / Rigger				
	Road users/ Pedestrians	Tree/Tree branches falling from transport vehicle	Body injury, damage to other motor vehicles	2	4	8	a) Secure the tree on vehicle before the vehicle moves	Foreman	1	4	4	
	Tree surgeons / labour	Hit by live traffic	Body injury	2	4	8	a) Fence off the work place	Foreman	1	4	4	
							b) Provide trained banksman for traffic diversion if necessary	Sub agent / Foreman				
	Labour	Manual lifting	Cut, sprain, strain	3	2	6	a) Provide sufficient labour force to carry out manual lifting works.	Foreman	2	2	4	
							b) Provide protective gloves to workers	Foreman				
4. Planting and Holding in Nursery	refer to item 3.											
5. Tree Pit Preparation in Final Location	Tree surgeons / labour	Manual excavation and back filling	Body injury	3	2	6	a) Provide sufficient labour force to carry out manual lifting works	Foreman	2	2	4	
							b) Conduct manual handling training	Foreman / Safety Officer				
6. Planting at Final Location	refer to item 3.

Tree Planting Plans

GENERAL NOTES FOR LANDSCAPE WORKS:

1. GENERAL INFORMATION
   THESE DRAWING PACKAGES INTENDS TO SHOW SOFT LANDSCAPE TREATMENT ONLY. FOR SETTING OUT AND STRUCTURAL DESIGNS, REFER TO ENGINEERING PACKAGE. FOR CONSTRUCTION OF ALL ENGINEERING WORKS INCLUDING ROADWAYS, BRIDGE AND UTILITIES, REFER TO ENGINEERING DRAWING PACKAGE. THE CONTRACTOR SHALL REPORT TO THE SUPERVISING OFFICER IMMEDIATELY FOR ANY DISCREPANCY BETWEEN THE ENGINEERING AND LANDSCAPE DRAWINGS.
2. DRAWING DIMENSIONS
   ALL DIMENSIONS ARE IN MILLIMETRES UNLESS OTHERWISE STATED.
3. EXISTING TREES/VEGETATION
   THE CONTRACTOR SHALL PROTECT ALL TREES TO BE RETAINED ON SITE AS STIPULATED IN G.S. SECTION 26. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REINSTATING EXISTING/RETAINED VEGETATION AFFECTED BY THE CONSTRUCTION WORKS.
4. TREE FELLING
   NO TREES SHALL BE FELLED OR REMOVED WITHOUT THE DLO APPROVAL.
5. GROUND PREPARATION WORKS
   GROUND PREPARATION WORKS SHALL BE CARRIED OUT TO ALL AREAS (EXCEPT SLOPE AREA) TO BE PLANTED AS SPECIFIED.
6. SOIL MIX AND SOIL CONDITIONER
   SOIL MIX SHALL CONSIST OF FRIABLE COMPLETELY DECOMPOSED GRANITE AND SOIL CONDITIONER IN THE PROPORTIONS 3:1 BY VOLUME AND SHALL BE FREE OF DELETERIOUS MATERIALS AS SPECIFIED IN G.S. CLAUSE 3.30 - SOIL-MIX AND G.S. CLAUSE 3.31 FOR SOIL CONDITIONER.
7. MULCHING
   TREE PLANTING AND SHRUB AREAS SHALL BE MULCHED TO A DEPTH OF 50mm. FINISH LEVEL OF MULCH SHALL BE 25mm BELOW ADJECENT FINISHED SURFACES, AND COMPLY WITH G.S. CLAUSE 3.32.
8. PLANT NAME
   BOTANICAL NAME SHALL TAKE PRECEDENCE TO ENGLISH AND CHINESE NAME.
9. PLANTING PATTERN
   ALL PLANTS ARE TO BE PLANTED IN STAGGERED PATTERN AT SPACING INDICATED IN THE SCHEDULE. CLIMBING PLANTS SHALL BE PLANTED AGAINST SUPPORTING STRUCTURE.
10. TREE PLANTING
    LOCATION OF TREES IS SHOWN ON THE DRAWING. SPACING INDICATED IN THE PLANT SCHEDULE IS INDICATIVE. TREES SHALL BE LOCATED TO AVOID ANY UNDERGROUND UTILITIES. ALL SOIL LEVELS SHALL BE SURVEYED AND VERIFIED PRIOR TO COMMENCEMENT OF PLANTING.
11. STAKING
    BAMBOO STAKES SHALL BE USED FOR ALL TREES EXCEPT WHIPS AS SPECIFIED IN G.S. 3.36. TREE TRUNKS SHALL BE PROTECTED BY USING RUBBER HOUSE PROTECTIVE SLEEVING OR SIMILAR, AND SHALL BE LOOSENED TWICE A YEAR.
12. DRAINAGE
    ALL PLANTER DRAINAGE DETAILS AND WEEPHOLES DETAILS SHOULD REFER TO ENGINEER DRAWING.
13. UNDERGROUND UTILITIES
    UTILITY COVERS SERVICES SHOWN ON THE PLANTS ARE INDICATIVE, EXACT LOCATIONS TO BE CONFIRMED BY THE ENGINEER. NO TREES SHALL BE PLANTED WITHIN 1m OF A MANHOLE OR DRAINAGE U-CHANNLEL. THERE SHALL BE NO PLANTING WITHIN THE SPACE OF 1.5m AROUND THE COVER OF ANY HYDRANT VALVE OR THE COVER OF WSD'S VALVES, OR WITHIN A DISTANCE OF 1m FROM ANY HYDRANT OUTLET. NO TREES SHALL BE PLANTED WITHIN 2m OF A ROAD KERB OR ENGINEERING STRUCTURE.
14. WATERING
    THE CONTRACTOR SHALL PROVIDE ADEQUATE WATERING TO ALL PLANTED AREAS AS SPECIFIED IN G.S. 3.84-WATERING.

PLANTING SCHEDULE TREE PLANTING

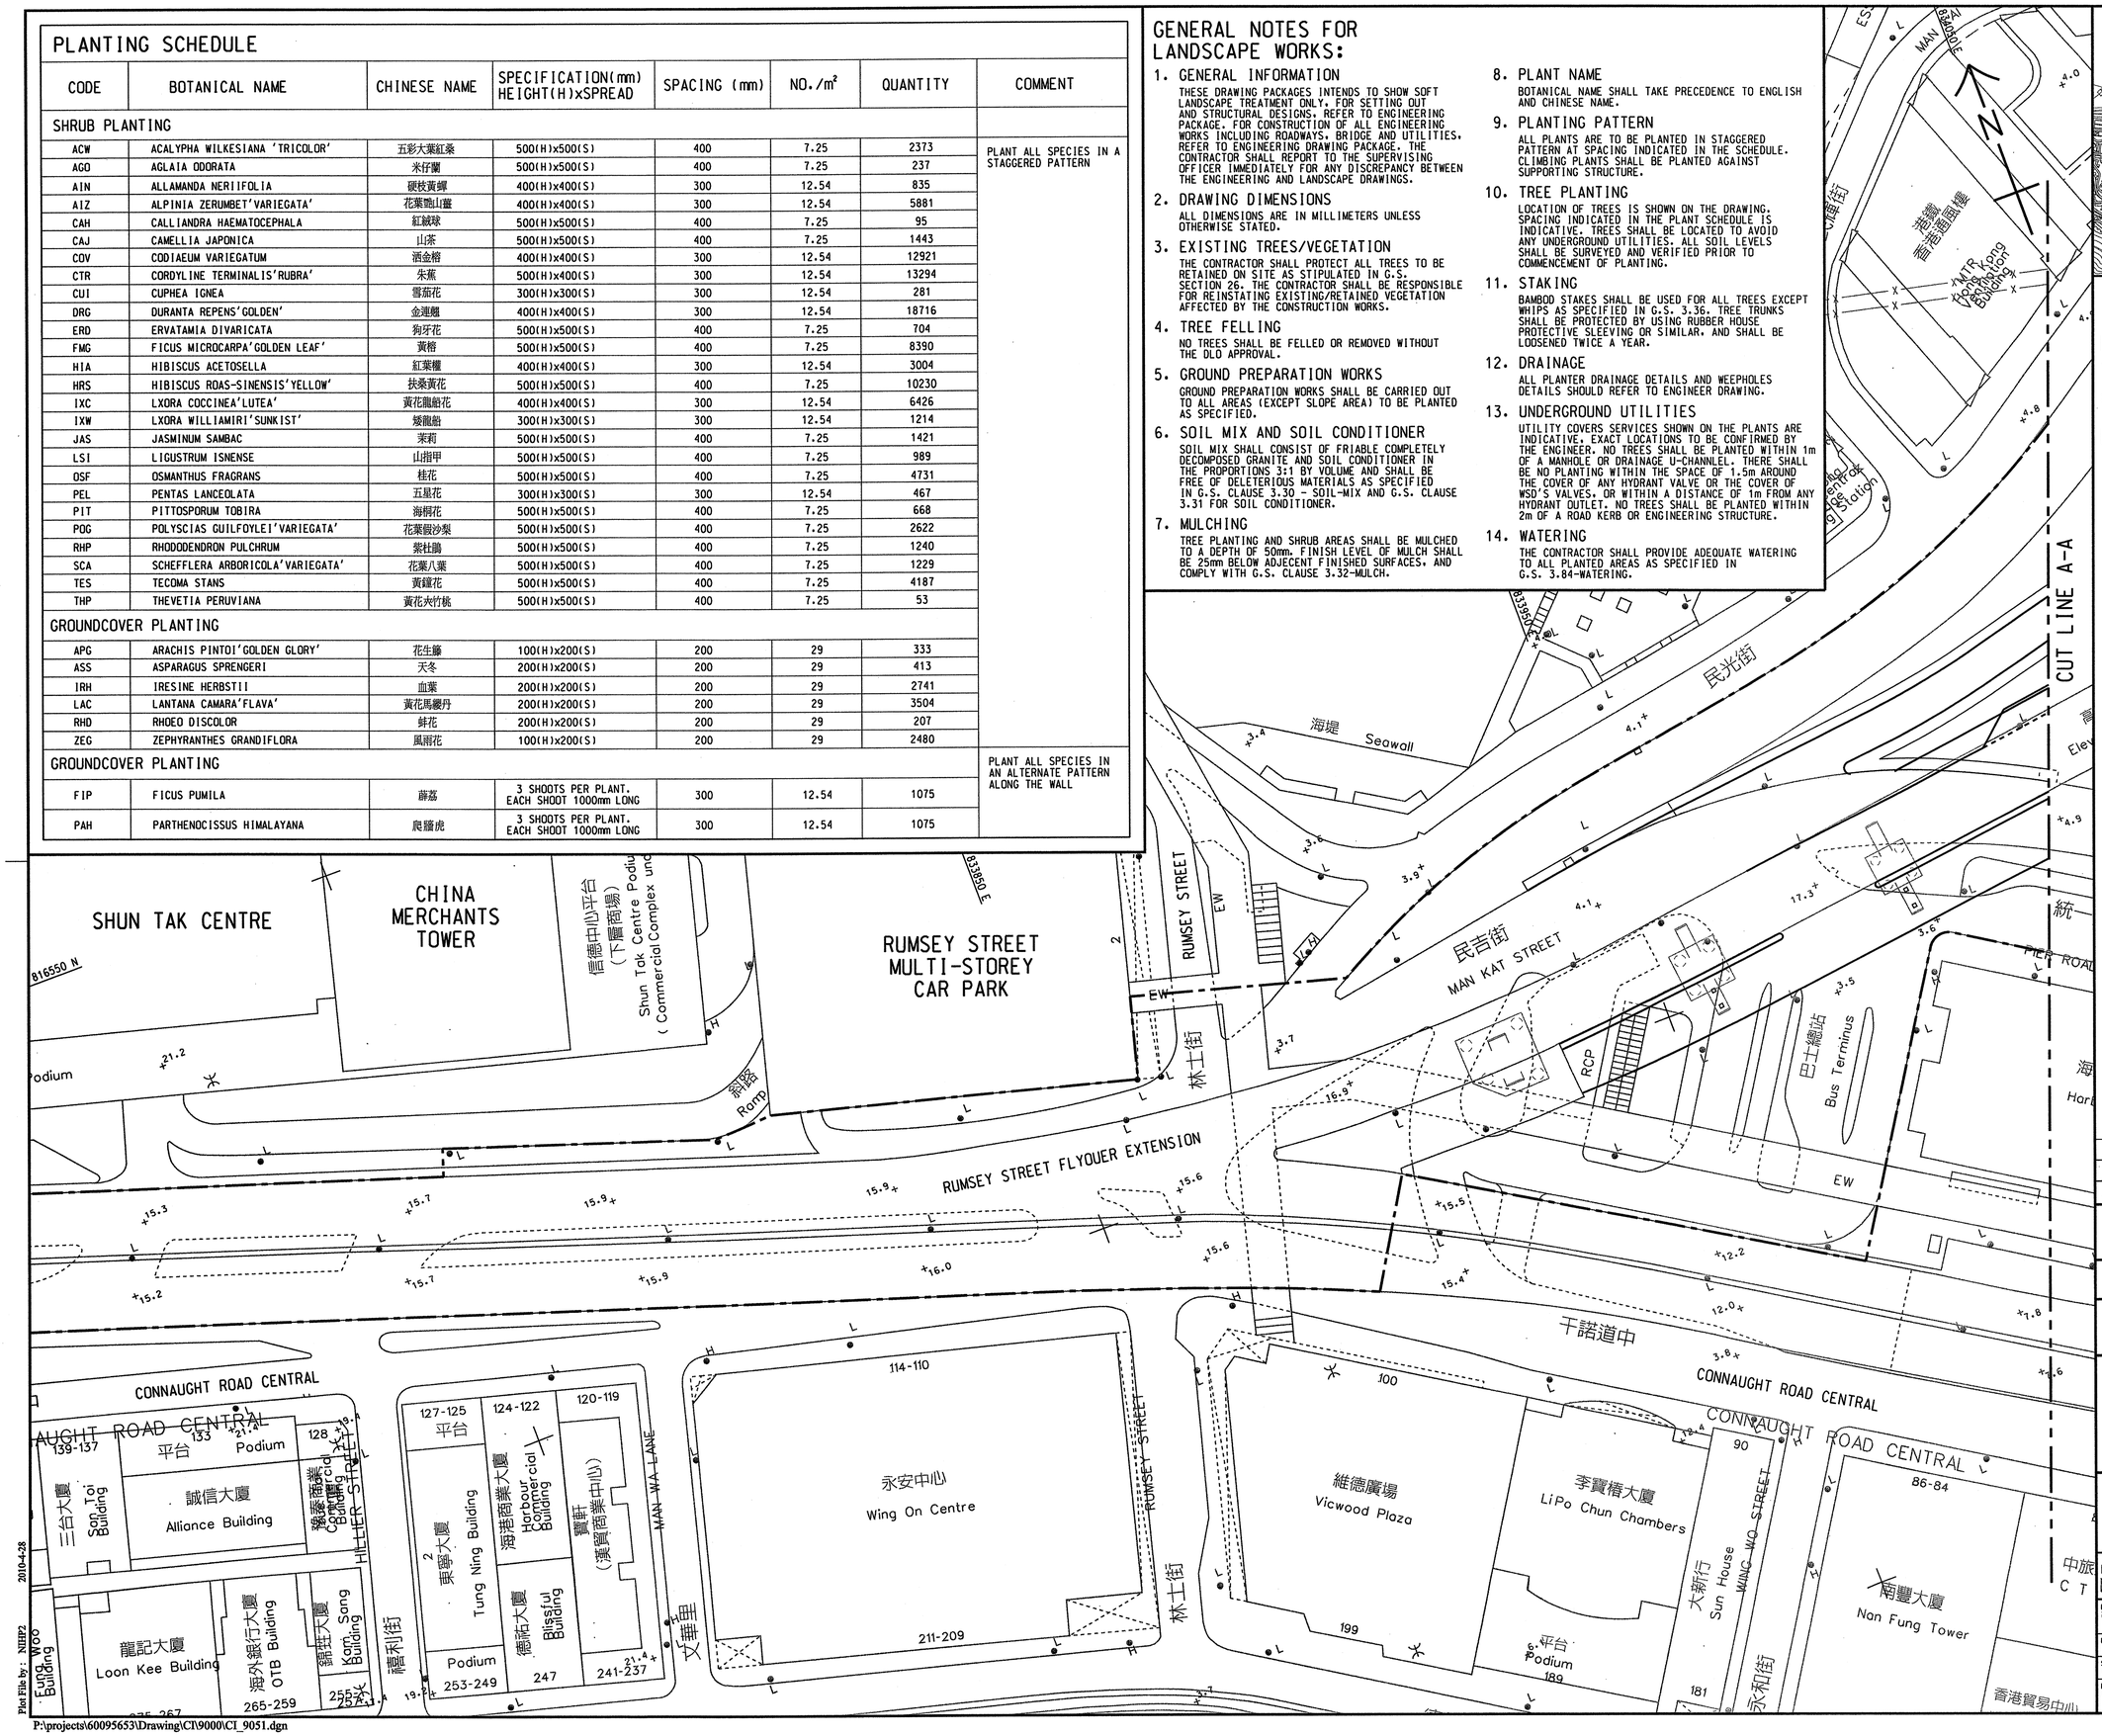
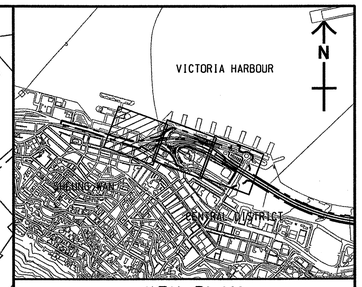
THE CONTRACTOR SHALL REPORT TO THE SUPERVISING OFFICER IMMEDIATELY FOR ANY DISCREPANCY BETWEEN THE ENGINEERING AND LANDSCAPE DRAWINGS.
2. **DRAWING DIMENSIONS**
   ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE STATED.
3. **EXISTING TREES/VEGETATION**
   THE CONTRACTOR SHALL PROTECT ALL TREES TO BE RETAINED ON SITE AS STIPULATED IN G.S. SECTION 26. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REINSTATING EXISTING/RETAINED VEGETATION AFFECTED BY THE CONSTRUCTION WORKS.
4. **TREE FELLING**
   NO TREES SHALL BE FELLED OR REMOVED WITHOUT THE DLO APPROVAL.
5. **GROUND PREPARATION WORKS**
   GROUND PREPARATION WORKS SHALL BE CARRIED OUT TO ALL AREAS (EXCEPT SLOPE AREA) TO BE PLANTED AS SPECIFIED.
6. **SOIL MIX AND SOIL CONDITIONER**
   SOIL MIX SHALL CONSIST OF FRIABLE COMPLETELY DECOMPOSED GRANITE AND SOIL CONDITIONER IN THE PROPORTIONS 3:1 BY VOLUME AND SHALL BE FREE OF DELETERIOUS MATERIALS AS SPECIFIED IN G.S. CLAUSE 3.30 - SOIL-MIX AND G.S. CLAUSE 3.31 FOR SOIL CONDITIONER.
7. **MULCHING**
   TREE PLANTING AND SHRUB AREAS SHALL BE MULCHED TO A DEPTH OF 50mm. FINISH LEVEL OF MULCH SHALL BE 25mm BELOW ADJACENT FINISHED SURFACES, AND COMPLY WITH G.S. CLAUSE 3.32-MULCH.
8. **PLANT NAME**
   BOTANICAL NAME SHALL TAKE PRECEDENCE TO ENGLISH AND CHINESE NAME.
9. **PLANTING PATTERN**
   ALL PLANTS ARE TO BE PLANTED IN STAGGERED PATTERN AT SPACING INDICATED IN THE SCHEDULE. CLIMBING PLANTS SHALL BE PLANTED AGAINST SUPPORTING STRUCTURE.
10. **TREE PLANTING**
    LOCATION OF TREES IS SHOWN ON THE DRAWING. SPACING INDICATED IN THE PLANT SCHEDULE IS INDICATIVE. TREES SHALL BE LOCATED TO AVOID ANY UNDERGROUND UTILITIES. ALL SOIL LEVELS SHALL BE SURVEYED AND VERIFIED PRIOR TO COMMENCEMENT OF PLANTING.
11. **STAKING**
    BAMBOO STAKES SHALL BE USED FOR ALL TREES EXCEPT WHIPS AS SPECIFIED IN G.S. 3.36. TREE TRUNKS SHALL BE PROTECTED BY USING RUBBER HOUSE PROTECTIVE SLEEVING OR SIMILAR, AND SHALL BE LOOSENED TWICE A YEAR.
12. **DRAINAGE**
    ALL PLANTER DRAINAGE DETAILS AND WEEPHOLES DETAILS SHOULD REFER TO ENGINEER DRAWING.
13. **UNDERGROUND UTILITIES**
    UTILITY COVERS SERVICES SHOWN ON THE PLANTS ARE INDICATIVE. EXACT LOCATIONS TO BE CONFIRMED BY THE ENGINEER. NO TREES SHALL BE PLANTED WITHIN 1m OF A MANHOLE OR DRAINAGE U-CHANNEL. THERE SHALL BE NO PLANTING WITHIN THE SPACE OF 1.5m AROUND THE COVER OF ANY HYDRANT VALVE OR THE COVER OF WSD'S VALVES, OR WITHIN A DISTANCE OF 1m FROM ANY HYDRANT OUTLET. NO TREES SHALL BE PLANTED WITHIN 2m OF A ROAD KERB OR ENGINEERING STRUCTURE.
14. **WATERING**
    THE CONTRACTOR SHALL PROVIDE ADEQUATE WATERING TO ALL PLANTED AREAS AS SPECIFIED IN G.S. 3.84-WATERING.





KEY PLAN
SCALE A1 1 : 20000
A3 1 : 40000

NOTES:

1. THIS DRAWING SHALL BE READ IN CONJUNCTION WITH DRG. NO. 60095653/CI/9052 AND 9053.
2. EXISTING TREES NOT SHOWN WILL NOT BE AFFECTED BY THE PROJECT.

Proposal Mitigation Measures for CWB within CRI and CRIII

EIA Ref	Environmental Protection Measures / Mitigation Measures	Location / Timing	Implementation Agent	Implementation Stages				Relevant Legislation and Guidelines	Implementation status	Ref.
				Des	C	O	Dec			
S7.6	Site hoarding to be installed, where appropriate, with surface treatment suitable to the urban context.	Entire works area during entire construction period	Contractor		√			-	Implemented, relocation works would be continuously carried out to suit the progress of the works	Part D - S.1 – Item B
S7.6	Control of night time lighting	Entire works area during entire construction period	Contractor		√			-	Implemented	Part D - S.1 - Item C
S7.6	Approved new soil-mix for new planting areas.	New planting areas	Contractor		√			WBTC 18/94 and LCSD's Annex 1	Works at new planting areas not yet started	Part D - S.1 - Item A1
S7.6	Soil mounding to be implemented at expansive amenity areas. Mounding to be profiled to ensure ease of maintenance.	Work sites within CRI & CRIII as shown in Figure 7.6.1 to 7.6.3 Mitigation Measures of the approved EIA Report**.	HyD's Landscape consultant & contractor	√	√	√		WBTC 18/94	Not Applicable	-
S7.6	Reinstatement of road and amenity planting and roadside mass screening (Approximately 37, 000 m^3)	Work site within CRI & CRIII as shown in Figure 7.6.1 to 7.6.3 Mitigation Measures of the approved EIA Report**	HyD's Landscape consultant & contractor	√	√	√		WBTC 18/94 and LCSD's Annex 1	Not Applicable	-

S7.6	Soft landscape treatment under elevated structures and on columns (where practical) by use of suitably shade tolerant plant material.	At area where optimum light levels allow. Subject to detailed design.	HyD's Landscape consultant & contractor	√	√	√		WBTC 18/94 and LCSD's Annex 1	Works on elevated structures not yet started	Part D - S1 - Item A2, and App. G
S7.6	Landscape design within boundary of ancillary service buildings. Inclusive of soft landscape treatment.	Work sites within CRI & CRIII as shown in Figures 7.2.1 to 7.2.2 Works Layout Plans of the approved EIA Report**	HyD's Landscape consultant & contractor	√	√	√		WBTC 18/94	Not Applicable	-
S7.6	Retention and protection of existing trees where feasible and transplanting of trees that are in conflict with the road works (where practical). All in accordance with Tree Survey Report/Felling Application. Advance planning and programming to be initiated.	As shown with Tree Survey Report as mentioned in the approved EIA Report**	HyD's Landscape consultant & contractor	√	√	√		WBTC 24/94	Implemented, protection and/or transplanting works in progress	Part D - S.1 - Item A2

S7.6.3	Quality and integrated design f Ancillary Buildings, tunnel portals wing walls abutments, noise barrier systems and landscape screen wall panel.	Work sites within CRI & CRIII as shown in Figures 7.2.1 to 7.2.2 and Figure 7.6.1 to 7.6.3 Mitigation Measures of the approved EIA Report**	HyD's Architectural Landscape consultant	√	√	√		ACABAS	Not Applicable	-
Table 7.3	Advance planning and programme of transplanting of existing trees and reinstatement of roadside planting to early completion areas or unaffected areas.	At roadside amenity areas.	HyD's Landscape consultant & contractor	√	√			WBCT 24/94	Implemented, transplanting works in progress	Part D - S.1 - Item A2

Des – Design, C – Construction, O – Operation, and Dec – Decommissioning
LCSD's Annex I: General Requirements of Soft Landscaping Design for Areas under LCSD's Maintenance Responsibilities.
** Central – Wan Chai Bypass and Island Eastern Corridor Link Environmental Impact Assessment Report (Register No.: AWIAR-041/2001)

Implementation Schedule for Landscape and Visual

Contract No. HY/2009/18
Central – Wan Chai Bypass – Central Interchange

Application to (A) Felling 30 nos. and (B) Transplanting 5 nos. of tree at the planter adjacent to Man Kat Street

I refer to your Consultant, AECOM Asia Co. Limited's letter dated 3 October 2012 ("the Submission") and its subsequent e-mails dated 6 February and 4 March 2013 regarding a Tree Treatment Proposal for (A) felling 30 nos. of tree and (B) transplanting of 5 nos. of tree at the planter adjacent to Man Kat Street to facilitate the construction of an Elevated Lay-by at Rumsey Street Flyover and its associated piling works.

2. Approval is hereby given to (A) felling of 30 nos. of tree [Tree Nos. T1727, T1730, T1732, T1736, T1739, T1742, T1771, T1781-1785, T1789-Y1796, T1798-T1799, T1801-T1803, T1806 and AT023-AT026] and (B) transplanting of 5 nos. of tree [Tree Nos. AT22, AT28, T1807, T1811 and T1817] as shown in Appendix B of the Submission subject to following conditions:

In respect of (A) Felling 30 nos. of trees :-

(a) Compensatory planting of 33 nos. of tree with DBH 75mm as shown in Appendix F – Compensatory Plan – Option 2 of the Submission, but the 33 compensatory trees should be of the same species of Bauhinia variegate 宮粉羊蹄甲 instead of four different species as proposed in Appendix F of the Submission.

(b) Compensatory planting of 2 nos. of tree with DBH 75mm as shown on Tree Planting Plan Drg. No. 60095653/CI/9012B of e-mail dated 4 March 2013.

(c) Compensatory planting of 1 no. of tree with tree DBH 75mm as shown on Tree Planting Plan Option 2 with Sketch No. 60095653/CI/DF0206 of e-mail dated 4 March 2013.

(d) Compensatory planting of 13 nos. of tree with tree DBH 75mm at original location of Tree No. T1736, T1739, T1742, T1781, T1784, T1785, T1789 – T1791, T1801 – T1803 and T1806 as shown on Proposed Treatment of Trees Plan in Appendix B of the Submission.

(e) Compensatory planting of 4 nos. of tree with tree DBH 75mm at original location of Tree No. AT23 – AT26 as shown on Proposed Treatment of

Trees Plan in Appendix B of the Submission.

In respect of (B) Transplanting 5 nos. of tree :-

(f) Replanting AT28, T1807 and T 1811 at original location as shown on Proposed Treatment of Trees Plan in Appendix B of the Submission.

(g) Transplanting AT22 to the recipient site as shown on Final Transplant Location Plan of AT22 with Sketch No. 60095653/CI/DF0286 attached to e-mail dated 4 March 2013.

(h) Transplanting AT1817 to the recipient site as show on Final Transplant Location Plan of T1817 with Sketch No. 60095653/CI/DF0285 attached to e-mail dated 4 March 2013.

In respect of both (A) Felling 30 nos. of trees and (B) Transplanting 5 nos. of tree :-

(i) You should ensure good workmanship and proper techniques for compensatory planting and tree transplanting works.

(j) Adequate aftercare and maintenance work shall be arranged for the transplanted trees by the horticultural contractor throughout the course of tree nursing period

(k) You shall maintain an establishment period of 1 to 3 years for the trees when they are replanted back to the site. Joint site meetings with LSCD's colleagues shall be arranged by your horticultural contractor before commencement and after satisfactory completion of the establishment period.

(l) Regarding the proposed location of the tree works which falls upon the site tentatively allocated in-principle to CE3/MW, MWPMO, HyD for demolition of the Rumsey Street Flyover for a period of 2 years from 1.1.2017 or such other date as advised by me, please liaise and sort out with CE3/MW, MWPMO to ensure that the tree works will not be affected by the flyover demolition works.

(m) You shall consult MTR Corporation Limited prior to commencing works and take adequate and proper precautions to ensure that the tree felling, transplanting and replanting works will not affect MTR Corporation Limited's railway protection boundary, railway reserve (Airport Railway Area Plan No. 24B) and MTR Lot No. 2 RP.

Dear Sir / Madam,

Contract No. HY/2009/18
Central - Wan Chai Bypass – Central Interchange

Revised Tree Treatment Proposal for the Works under Elevated Lay-by of Rumsey Street Flyover

Further to my previous letter ref. CWB/(HY/2009/18)M45/800/18B003163 dated 5 June 2012 and Ms. Tam's (LCSD) email (see attached) dated 9 August 2012 regarding a Tree Treatment Proposal to facilitate the construction of elevated lay-by at Rumsey Street Flyover and its associated piling work at the planter adjacent to Man Kat Street, a revised submission from our Contractor (ref. H2540/CSF/OPR/01029-R3) is attached herewith for your comment/approval. I would be grateful if you could provide your comment/approval on or before 31 October 2012 in accordance with Technical Circular 3/2006.

Should you have any queries, please contact my RE, Mr. Nelson Chin at 6461 8784.

Yours faithfully,
For and on behalf of
AECOM Asia Co. Ltd.

Tree Treatment Proposal for Works at Elevated Lay-by in Portion VI

Contract No. : HY/2009/18

Project : Central - Wan Chai Bypass - Central Interchange

Location : Portion VI

Main Contractor : Leighton Contractors (Asia) Limited

Prepared By : Toyo Greenland Co., Ltd

Date : 13 September 2012

TABLE OF CONTENT

Appendix

Tree Treatment Proposal for Works at Elevated Lay-by in Portion VI

1. Introduction

To facilitate the construction of the proposed Elevated Lay-by at Man Po Street and its associated piling works at the lawn area adjacent to Man Kat Street, some of the existing trees have to be transplanted to allow access for the work. Together with those trees which originally need to be transplanted under the Contract, proposal for treatment to the affected trees is hereby submitted for necessary application to relevant Authorities.

As per joint site inspection amongst LSCD, AECOM and LCAL on 28th March 2012 and the subsequent conversation on 7th August 2012 via e-mail. We submit this proposal regarding the comments from various parties.

This tree treatment proposal aims at evaluating the condition of trees, providing the recommendations for the trees to be retained, transplanted or felled.

Revision Date: 12 September 2012

Tree Survey Schedule for Elevated Layby Area

Tree No.	Tree Species	Chinese Name	Size			Tree Form (Good, Fair, Poor)	Health (Good, Fair, Poor, Dead)	Amenity Value (High, Medium, Low)	Survival of Transplantation (High, Medium, Low)	Propose Recommendation (Retain / Transplant / Fell)	mPD (m)	Justification	Remark	Remark after Typhoon No. 10		Final Location
			Tree Height (m)	Diameter at Breast Height (mm)	Tree Crown Spread (m)									Defect After Typhoon No. 10	Remark After Typhoon No. 10 (Retain/ Transplant /Fell)	
AT022	*Bauhinia blakeana*	洋紫荊	6.0	100	5.0	Fair	Fair	Medium	Low	Transplant	4.6	Affected by proposed roadworks	1/ Lean 20 degree 2/ Poor structure	Leaning, damaged branches	Transplant	To be coordinated by Project Office
AT023	*Macaranga tanarius*	血桐	7.0	120	7.0	Fair	Fair	Medium	Medium	Transplant	4.7	Affected by temporary work access.	1/ Lean 20 degree 2/ Unbalance form	Main trunk broken by typhoon, recommend fell	Fell	To be re-planted to orignial location
AT024	*Macaranga tanarius*	血桐	7.0	155	6.0	Fair	Fair	Medium	Low	Fell	4.6	We highly believe a cohesive root system have been developed with T1806 and T1804, this tree is supressed for its life time, The transplanting work for T1806 and T1804 will expose this previous supressed tree into wild open environment. High possibility of whole tree falling. We assessed that this tree condition is not suitable for transplant, reasons at Remarks colum. Our final suggestion is to fell this tree	1/ Serious insects infection 2/ Horizontal decay in main trunk 3/ Sign of internal decay	Main trunk broken by typhoon, recommend fell	Fell	To be re-planted with compensatory trees at original location
AT025	*Bauhinia variegata*	宮粉羊蹄甲	6.5	115	6.0	Fair	Poor	Low	Low	Fell	4.4	Affected by temporary work access.	1/ Abnormal lean 2/ Not recommend for transplant	Serious leaning / Broken Bark / Exposed Root	Fell	To be re-planted with compensatory trees of same species at original location
AT026	*Bauhinia variegata*	宮粉羊蹄甲	7.0	115	10.0	Fair	Fair	Medium	Medium	Fell	4.4	Affected by temporary work access.	1/ Serious decay and splitting on main trunk 2/ Insects infection	Leaning / 3 Trunks	Fell	To be re-planted with compensatory trees of same species at original location
AT027	*Bauhinia variegata*	肯氏南洋杉	6.0	120	2.0	-	Dead	-	-	Fell	4.4	Dead Tree	Dead Tree	Removed by Others	-	-
AT028	Bauhinia variegata	肯氏南洋杉	7.0	95	2.0	Fair	Fair	Medium	Medium	Transplant	4.4	Affected by temporary work access.	Broken Bark	Half of the branches broken by typhoon. Recommend pruning before transplant.	Transplant	To be re-planted to orignial location
T1727	*Roystonea regia*	王棕	10.0	370	4.5	Fair	Fair	Medium	Medium	Fell	4.3	Affected by proposed roadworks	1/ Bottle neck trunk 2/ Poor taper	Not affected	Fell	Refer to Planting Plan Dwg. 60095653/CI/9013B and to be re-planted with compensatory trees of same species
T1730	*Bauhinia variegata*	宮粉羊蹄甲	8.0	130	5.0	Poor	Fair	Low	Medium	Transplant	4.3	Affected by proposed roadworks	-	Abrupt bend, poor tree form. Recommend fell	Fell	To be coordinated by Project Office
T1732	*Bauhinia variegata*	宮粉羊蹄甲	7.0	120	7.0	Poor	Fair	Low	Low	Fell	4.3	Affected by proposed roadworks	1/Poor form 2/ Abrupt bends 3/ Lean 30 degree	Main trunk broken by typhoon, recommend fell	Fell	Refer to Planting Plan Dwg. 60095653/CI/9012B and to be replanted with compensatory trees of same species
T1736	*Bauhinia blakeana*	洋紫荊	10.0	200	10.0	Fair	Fair	Medium	Medium	Transplant	4.4	Affected by temporary work access.	1/ Lean 20 degree	Main trunk broken by typhoon, serious leaning, poor tree form, recommend fell	Fell	To be re-planted to orignial location
T1739	*Bauhinia blakeana*	洋紫荊	11.0	320	10.0	Fair	Fair	Medium	Medium	Transplant	4.5	Affected by temporary work access.	1/ Lean 2/ On slope 3/ Unbalance form 4/ Bark crack	Most branches broken by typhoon, serious leaning, poor tree form, recommend fell	Fell	To be re-planted to orignial location
T1742	*Bauhinia variegata*	宮粉羊蹄甲	8.0	240	8.0	Fair	Fair	Low	Medium	Fell	4.5	Affected by temporary work access.	1/ Multipal trunk, included bark 2/ Unbalance form 3/ Broken branch	Poor tree from, very low live crown ratio, multipal trunks with included bark, recommend fell	Fell	To be re-planted with compensatory trees of same species at original location
T1769	Bauhinia blakeana	洋紫荊	7.0	220	6.0	Fair	Fair	Medium	Medium	Fell	4.6	Affected by proposed roadworks	1/ Abnormal swelling 2/ Bad taper 3/ Lean 15 degree	Tree Failure / Broken Bark / Exposed Root	Felled by Others	Refer to Planting Plan Dwg. 60095653/CI/9012B and to be re-planted with compensatory trees of same species
T1771	*Ficus elastica*	印度榕(印度橡樹)	9.0	610	10.0	Fair	Fair	Medium	Low	Transplant	4.7	Affected by proposed roadworks	-	Main trunk broken by typhoon, poor tree form, not possible to transplant due to the DBH 610mm, recommend fell	Fell	Refer to Planting Plan Dwg. 60095653/CI/9012B and to be re-planted with compensatory trees of same species
T1780	Bauhinia variegata	宮粉羊蹄甲	10.0	240	8.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Lean 45 degree 2/ Exposed very strong reation roots 3/ Trunk cavity and decay 4/ Internal structural problem with swelling 5/ Insects infection	Leaning / Broken Bark / Exposed Root / Trunk Cavity	Felled by Others	To be re-planted with compensatory trees of same species at original location
T1781	*Bauhinia variegata*	宮粉羊蹄甲	9.0	170	8.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Lean 5-10 degree 2/ 1M decay in trunk 3/ Unbalance crown 4/ Splitting main trunk	Leaning / Broken Bark / Trunk Cavity / Trunk bend / Main trunk broken	Fell	To be re-planted with compensatory trees of same species at original location
T1782	*Bauhinia variegata*	宮粉羊蹄甲	8.0	230	8.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Main trunk with abnormal sunk 2/ Lean 10 degree 3/ Main trunk splitting	Leaning / Broken Bark / Damaged Branch / Trunk bend / Main trunk broken	Fell	To be transplanted to other Contract and replanted with compensatory trees of same species
T1783	*Bauhinia variegata*	宮粉羊蹄甲	8.0	208	9.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Serious trunk decay over 1meter 2/ Lean 14 degree	Leaning / Broken Bark / Damaged Branch / Trunk Cavity / Main trunk is broken	Fell	To be transplanted to other Contract and replanted with compensatory trees of same species
T1784	*Bauhinia variegata*	宮粉羊蹄甲	10.0	170	8.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Lean 45 degree 2/ Cavity in root collar 3/ Unbalance crown 4/ Splitting main trunk	Serious leaning / Broken Bark	Fell	To be re-planted with compensatory trees of same species at original location
T1785	*Bauhinia blakeana*	洋紫荊	10.0	200	10.0	Poor	Poor	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ 1.5M bark crack with sign of decay 2/ Splitting branches 3/ Co-dominant branch 4/ Suspected topping before	Main trunk broken by typhoon, recommend fell	Fell	To be re-planted with compensatory trees of same species at original location
T1789	*Bauhinia variegata*	宮粉羊蹄甲	8.0	210	7.0	Fair	Fair	Medium	Medium	Fell	4.8	Affected by proposed roadworks	1/ Multipal trunks (3) just 10cm above soil 2/ Poor structure 3/ Wound on one of the trunk 4/ Not recommend for transplant	Broken Bark / Damaged branches	Fell	To be re-planted with compensatory trees of same species at original location

Contract No. : HY/2009/18

T1798	*Bauhinia blakeana*	洋紫荊	9.0	130	9.0	Poor	Fair	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Co-dominant stem, poor structure and taper, decay in the V point 2/ Dead trunk 3/ Lean 4/ Sign of termite infection before	Main trunk broken by typhoon, recommend fell	Fell	Refer to Planting Plan Dwg. 60095653/CI/9012B and to be replanted with compensatory trees of same species
T1799	*Bauhinia variegata*	宮粉羊蹄甲	9.0	160	9.0	Poor	Fair	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Lean 35 degree 2/ Decay in previous pruning wound	Tree was collasped by typhoon, recommend remove.	Fell	To be transplanted to other Contract and replanted with compensatory trees of same species
T1800	Bauhinia blakeana	洋紫荊	7.0	208	7.0	Poor	Fair	Low	Low	Fell	4.7	Affected by proposed roadworks	1/ Lean over 45 degree 2/ Poor structure and tree form 3/ Abrupt bends 4/ Not recommend for transplant	Tree failure / Broken Bark	Felled by Others	To be transplanted to other Contract and replanted to compensatory trees of same species
T1801	*Bauhinia blakeana*	洋紫荊	10.0	180	8.0	Poor	Fair	Low	Low	Transplant	4.7	Affected by proposed roadworks	1/ Lean 40 degree 2/ Poor tree structure and tree form	Serious leaning / Broken Bark	Fell	To be re-planted to orignial location
T1802	*Bauhinia blakeana*	洋紫荊	10.0	220	8.0	Poor	Fair	Low	Low	Fell	4.7	Affected by temporary work access.	1/ Lean 40 degree 2/ Poor tree structure and tree form 3/ Splitting main branch 4/ Topping before	Serious leaning / Broken Bark	Fell	To be re-planted with compensatory trees of same species at original location
T1803	*Delonix regia*	鳳凰木	13.0	355	12.0	Poor	Fair	Low	Low	Fell	4.7	Tree located just 3.7M next to the pile cap. High possibility affected by the excavation, within the drip line, we estimated over 40-50% structural, lateral and absorbing roots will be damaged. Damage over 40% of root system is a extreme stress factor,	1/ Insects infection 2/ Lean 20 degree 3/ Serious branch damaged 4/ It is negotiated that this tree is location at the middle of the site, Pile Cap located 2.6M next to the tree, estimate over 40% of root system will be seriously damaged or cut. 5/ It is not possbile for transplant, due to heaving topping on main trunk to 9M (not included root ball), also crown reduction to within 2.5M, in order to load to the 40ft platform trailer. This mature tree will be survive accroding to this kind of pruning 6/ Recommend for fell.	Most branches broken by typhoon, remain around 10% live crown ratio, tree will not survive after root pruning, recomment fell	Fell	To be re-planted with compensatory trees of same species at original location
T1804	Delonix regia	鳳凰木	15.0	335	10.0	Fair	Fair	Medium	Low	Fell	4.6	Tree located just 2.6M next to the pile cap. High possibility affected by the excavation, within the drip line, we estimated over 40-50% structural, lateral and absorbing roots will be damaged. Damage over 40% of root system is a extreme stress factor,	1/ Insects infection 2/ It is negotiated that this tree is location at the middle of the site, Pile Cap located 3.7M next to the tree, root system will be seriously damaged, which must be removed or transplanted. 3/ It is not possbile for transplant, due to heaving topping on main trunk to 9M (not included root ball), also crown reduction to within 2.5M, in order to load to the 40ft platform trailer. This mature tree will be survive accroding to this kind of pruning 4/ Recommend for fell.	Cavity at basal area / Wilting	Felled by Others	To be re-planted with compensatory trees of same species at original location

Tree Survey Schedule for Elevated Layby Area

Tree No.	Tree Species	Chinese Name	Size			Tree Form (Good, Fair, Poor)	Health (Good, Fair, Poor, Dead)	Amenity Value (High, Medium, Low)	Survival of Transplantation (High, Medium, Low)	Propose Recommendation (Retain / Transplant / Fell)	mPD (m)	Justification	Remark	Remark after Typhoon No. 10		Final Location
			Tree Height (m)	Diameter at Breast Height (mm)	Tree Crown Spread (m)									Defect After Typhoon No. 10	Remark After Typhoon No. 10 (Retain/ Transplant /Fell)	
T1806	*Delonix regia*	鳳凰木	14.0	530	16.0	Fair	Fair	Medium	Low	Fell	4.6	Tree located just 8.4M next to the pile cap. High possibility affected by the excavation, within the drip line, we estimated over 40-50% structural, lateral and absorbing roots will be damaged. Damage over 40% of root system is a extreme stress factor,	1/ Insects infection 2/ It is negotiated that this tree is location at the middle of the site, Pile Cap located 8.4M next to the tree, root system will be seriously damaged,which must be removed or transplanted. 3/ It is not possbile for transplant, due to heaving topping on main trunk to 9M (not included root ball), also crown reduction to within 2.5M, in order to load to the 40ft platform trailer. This mature tree will be survive accroding to this kind of pruning 4/ Recommend for fell.	Most branches broken by typhoon, remain around 10% live crown ratio, tree will not survive after root pruning, recomment fell	Fell	To be replanted with compensatory trees of same species at original location
T1807	*Macaranga tanarius*	血桐	7.0	180	6.0	Fair	Fair	Medium	Low	Transplant	4.6	Tree located just 2.9M next to the pile cap. High possibility affected by the excavation, we estimated over 40-50% structural, lateral and absorbing roots will be damged. We highly suggest for transplant.	-	Not affected	Transplant	To be re-planted to orignial location
T1811	*Roystonea regia*	王棕	11.0	300	4.5	Fair	Fair	Medium	Medium	Transplant	4.5	Tree located just 7.0M next to the pile cap, tree trunk may be damaged by excavator during excavation work. It is measured low possibility for setting up tree protetion zone, due to the different grading level.	-	Not affected	Transplant	To be re-planted to original location
T1817	*Ficus elastica*	印度榕(印度橡樹)	5.0	108	3.0	Fair	Fair	Medium	Low	Fell	4.4	Tree located just 3.4M next to the pile cap. Highly posibility affected by the excavation, we estimated over 30-40% structural, lateral and absorbing roots will be damged. We assessed that this tree condition is not suitable for transplant, reasons at R	1/ Leaning 2/Trunk Cavity 3/ Broken branch with decay	Leaning / Broken Bark / Trunk Cavity / Trunk bend	Transplant	To be transplanted to other Contract and replanted with compensatory trees of same species

About this Document

This document is available for all project employees via the project network. We regularly revise this document and the latest version is always available electronically. Once printed, the document should no longer be considered to be the latest version. It may be distributed to the Highways Department and the Engineer on the understanding that any such document may not be the latest version or it may be distributed to the Highways Department and the Engineer as a controlled document in which case the front cover is to be stamped "Controlled Copy" in red and a copy number added.

The status of this plan is identified by a revision number and date on each page. Changes to the document are identified by a vertical single line in the right-hand margin. On revision, the plan will be uploaded as a whole to the project server or within the Leighton Asia Document Management System Technical Documents Module.

If you have any enquiry relating to this plan, please contact the Construction Manager (Roadworks).

1 Introduction

1.1 Overview

This Tree Preservation and Protection Plan is written for the Contract No. HY/2009/18 Central – Wan Chai Bypass Central Interchange to meet the contract requirements as stated in the General Specification Clause 26.02.

The works description for this Contract comprises the followings:

a) Approach roads leading to the CWB tunnel west portal;
b) At grade slip roads and associated roads;
c) The bridge deck for the westbound carriageway of Rumsey Street Flyover Extension;
d) The eastbound Slip Road D flyover;
e) Modification/demolition of the existing dual 2-lane tunnel under Man Yiu Street;
f) Cut-and cover tunnel between the CWB tunnel west portal and the limit of tunnel to be completed under the CRIII contract;
g) Sub-structure, basement and foundations for the West Ventilation Building;
h) Civil works provisions for tunnel Electrical & Mechanical and Traffic Control and Surveillance System works;
i) Widening/modification of existing Man Yiu Street; and junction for road P1;
j) Associated road works and drainage/sewerage works; and
k) Landscaping works including tree transplanting.

1.2 Purpose of the Plan

This Plan provides guidance on the physical and appropriate precautionary measures required in order to reduce significant or detrimental impact on the health or amenity of retained and transplant trees.

2 Preservation and Protection

2.1 General

a) The proper color label should be fixed on the tree trunk in order to identify the status of preservation, (Green – Retaining on Site)
b) The existing trees recommened to be retained shall be protected by means of fencing to prevent vehicular, construction machines or pedestrian intrusion which may potentially damage tree canopies, trunk and root zones.
c) The trees to be felled or transplant, which are adjacent to, or which lie within a continuous canopy of the preserved trees, shall be carefully removed, and if necessary in sections but not using bulldozers in any circumstances, so as not to cause damage to the preserved trees such as scraping bark off trunks or breaking branches of trees,
d) No stripping of surface vegetation or top layer of soil, and no paving or earth filling shall be carried out within the tree protection zones unless otherwise agreed by the

Engineer.

e) Where it is necessary to clear the existing undergrowth within the tree protection zones to allow access and visibility for, and operation of any construction work,
- Shrubs shall be pruned and grass or other herbaceous plants shall be cut to a height of not less than 50 mm above the ground level but not pulled out by equipment in any circumstances
- The agreement of the Engineer shall be obtained before vegetation clearance commences

f) No concrete mixing, gas tank filling, paintbrush and tool cleaning, or equipment maintenance shall be carried out within the tree protection zones,

g) Allowance shall be made for the slope of the ground so that damaging materials such as concrete washings, mortar or diesel oil cannot run towards the trees,

h) All materials should be covered when idled.

i) No accumulation of debris to excessive shall be permitted.

j) Store the material in a designated area for temporary storage. The designated area should be kept a reasonable distance from the working area such that it will not obstruct the public and workers.

k) Repair any damage to the trees in accordance with the requirements stipulated in General Specification 26.16,

2.2 Tree Protection Zone

a) The tree protection zone of the retained trees will be the area within the dripline of the tree crown of individual tree.

b) Use of temporary protective mulching to cover the entire tree protection zones.

c) Any necessary scarification or cultivation within the tree protection zones shall be carried out carefully by hand so as not to cause damage to the trees, in particular the bark and the roots,

2.3 Branch Cutting

a) Branch cutting with diameter more than 25 mm will be carried out according to the following situation. The individual Tree Assessment Report is required and to be approved by the Project Manger of the project.
- Hazardous branches is necessary to remove branches of a tree when they are damaged in order to give clearance e.g. for pedestrian and vehicular traffic by taking away the lower branches, to help the tree to form a balanced crown and to remove crossed branches.
- Defect branches are necessary to remove branches of a tree when they are diseased, dying or dead.

b) Carefully lower all cut branches to the ground to prevent any damage to limbs being retained.

c) The procedure of the branch cutting as followed.
- If the location of cutting branch is located at the height higher than 3 meter. The Lifting platform will be used to lift the skilled labour to a suitable level for branch cutting.
- Two ropes will be used to fix at the tip of the cut branch that will be held by 2

labours on the ground in order to guide the direction of the falling branches.
- Cutting of branches will be carried out using 3-cut method in order to prevent tearing of tree bark in branch cutting.
- Pre-cut is carried out at the under-side of the tree to about 1/4 of the diameter of the cutting branch.
- A safety rope will be used to fix the ends of the remaining portion for 2nd cut.

2.4 Tree surgery

a) Cut out rotten wood from cavities, without exposing clean healthy wood.
b) The contractor shall carry out all necessary work of repair of any damage to the preserved trees and other plants affected.

2.5 Treatment of Wounds

a) All loose, dead or damaged barks should be removed. The back of crushed edges to undamaged wood should be trimmed with all margins round.
b) Any cut or wound over 25mm diameter should be painted with an approved fungicidal bituminous sealing compound afterwards.

2.6 Post-planting Fertilizer

Post-planting fertilizer shall be applied after the tree pruning, weeding and treatment of wounds.

2.7 Disease and Pest Control

a) The inspection will be carried out by the specialist bi-monthly and identify the infected area of tree body.
b) The approved chemical pesticide and fungicide will be applied using manual or gasoline sprayer according manufacturer's instruction

2.8 Tree Trunk Protection

a) The tree trunk should be wrapped and covered from the ground level and up to 2m of the tree trunk by armouring the Hessian Mat.
b) Removal of temporary protective armouring and mulching upon completion of work.

2.9 Bi-Monthly Inspection

An inspection report comprising updated photographic records should be submitted in every two month to identify the required horticultural maintenance works.

3 Risk assessment

Risk assessment is an important tool to identify the hazards associated with work activities to be carried out on site, and to develop and implement appropriate control measures to eliminate / minimize the risk of accident / incident caused by these hazards.

In term of tree preservation and protection plan, the project management should carry out a detail assessment to identify the potential hazards (e.g. Hit by live traffic) and their causes (e.g. narrow road) in the planning stage for identifying the special arrangements and/or control measures to deal with such hazards.

Table 3-1 Risk Summary of the Tree Preservation and Protection

Hazard	Risk Level	Action
a) Hit by live traffic	Medium	- Enclose the work area with suitable barriers or traffic cones - Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Reflective vest shall be mandatory and be worn all time on site - Provide trained banksman for traffic diversion if necessary - All the workers should be briefed in daily basis to remind the job hazard and remedial measures
b) Hit by Falling branches / equipment	Medium	- Fence off the working area - Provide competent tree surgeons - Provide safety helmet with chinstrap to workers (meets EN397 or equivalent) - Tie up the branch being cut off to control the fall and fasten up the equipment while in use - Branches to be cut in small section
c) Hit by moving crane / cherry picker	Medium	- Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Display sign and warning notices to aware the general public - Properly fencing should be provided to fence off the public - Secure the trees those near the trench work before excavation commence

d) Tree falling	Medium	- Flash light & signage arrangement should be strictly placed according to the approved TTA drawing - Display sign and warning notices to aware the general public - Properly fencing should be provided to fence off the public - Secure the trees those near the trench work before excavation commence
e) Tripping	Low	- Safety shoes shall be manadatory and be worn all the time on site - Provision of good housekeeping
f) Hand or back injury during manual handling operation	Low	- Provide sufficient labour force to carry out manual lifting works - Conduct manual handling training / briefing - Split work into small sections, avoid bending for long periods
g) Long exposure under the sun	Medium	- Ensure workers carrry enough water when working on site - Take short breaks if working for long periods
h) High noise level	Medium	- Conduct noise assessment and demarcate ear protection zone - Provide and ensure to wear approved type ear protector by person within ear protection zone (meets EN352 or equivalent)
i) Contact with overhead lines / Use of electric hand tools	Medium	- Check and ensure no work to be carried out in the vicinity of overhead line cables - Inspect the electrical hand tools by Registered Electrical Worker to ensure tools are in good working condition before use - Use low voltage electric hand tools (110V) - Use waterproof socket / plug, amour cable in outdoors - Provide fire extinguisher
j) Inhalation of wood dust and wood dust getting into eyes	Medium	- Provide and ensure to use safety eye protector (meet EN166 or equivalenet) during work - Provide and ensure to use mouth mask (N95 or equivalent)
k) Cut by sharp tools	Medium	- Provide proper gloves to workers - Provide training briefing to the workers

l) Toppling of crane / cherry picker / Man cage failure	Medium	- Inspect the ground to ensure stable condition before setting up of crane - Appoint licensed crane operator to operate crane - Appoint trained cherry picker operator to operate cherry picker - Display valid test certificate on crane - Inspect the crane by operator on weekly basis, include ASLI - Inspect the cherry picker at regular intervals - Extend the outrigger completely of the crane if practicable - Use tested lifting gear with marking and safe working load - Apply colour code system to LG - Check condition of lifting gear before use - Provide and ensure to use fall arresting device (meets EN361 or equivalent)
m) Contact with chemicals	Medium	- Provide masks if required - Ensure tree surgeons wear hand gloves and proper PPE to avoid contact with skin - Provide goggles - Perform the safety precautions those listed in MSDS

4 Emergency Contact

All Preservation and Protection related accident/ incident occurred within works area of this project shall be promptly reported to project safety department. Rescue, investigation and further reporting procedures shall follow the requirements as stated in the Safety Management Plan.

5 Inspection and Testing Requirements

Complete photograph record of entire transplanting operation at various stages of works. ER will be informed to participate at various stages.

Appendix H – Tree Planting Plan (Contract Drawings No. 60095653/CI/9011B, 60095653/CI/9012B)

GENERAL NOTES FOR LANDSCAPE WORKS:

1. GENERAL INFORMATION
   THESE DRAWING PACKAGES INTENDS TO SHOW SOFT LANDSCAPE TREATMENT ONLY. FOR SETTING OUT AND STRUCTURAL DESIGNS, REFER TO ENGINEERING PACKAGE. FOR CONSTRUCTION OF ALL ENGINEERING WORKS INCLUDING ROADWAYS, BRIDGE AND UTILITIES, REFER TO ENGINEERING DRAWING PACKAGE. THE CONTRACTOR SHALL REPORT TO THE SUPERVISING OFFICER IMMEDIATELY FOR ANY DISCREPANCY BETWEEN THE ENGINEERING AND LANDSCAPE DRAWINGS.
2. DRAWING DIMENSIONS
   ALL DIMENSIONS ARE IN MILLIMETRES UNLESS OTHERWISE STATED.
3. EXISTING TREES/VEGETATION
   THE CONTRACTOR SHALL PROTECT ALL TREES TO BE RETAINED ON SITE AS STIPULATED IN G.S. SECTION 26. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REINSTATING EXISTING/RETAINED VEGETATION AFFECTED BY THE CONSTRUCTION WORKS.
4. TREE FELLING
   NO TREES SHALL BE FELLED OR REMOVED WITHOUT THE DLO APPROVAL.
5. GROUND PREPARATION WORKS
   GROUND PREPARATION WORKS SHALL BE CARRIED OUT TO ALL AREAS (EXCEPT SLOPE AREA) TO BE PLANTED AS SPECIFIED.
6. SOIL MIX AND SOIL CONDITIONER
   SOIL MIX SHALL CONSIST OF FRIABLE COMPLETELY DECOMPOSED GRANITE AND SOIL CONDITIONER IN THE PROPORTIONS 3:1 BY VOLUME AND SHALL BE FREE OF DELETERIOUS MATERIALS AS SPECIFIED IN G.S. CLAUSE 3.30 - SOIL-MIX AND G.S. CLAUSE 3.31 FOR SOIL CONDITIONER.
7. MULCHING
   TREE PLANTING AND SHRUB AREAS SHALL BE MULCHED TO A DEPTH OF 50mm. FINISH LEVEL OF MULCH SHALL BE 25mm BELOW ADJECENT FINISHED SURFACES, AND COMPLY WITH G.S. CLAUSE 3.32.
8. PLANT NAME
   BOTANICAL NAME SHALL TAKE PRECEDENCE TO ENGLISH AND CHINESE NAME.
9. PLANTING PATTERN
   ALL PLANTS ARE TO BE PLANTED IN STAGGERED PATTERN AT SPACING INDICATED IN THE SCHEDULE. CLIMBING PLANTS SHALL BE PLANTED AGAINST SUPPORTING STRUCTURE.
10. TREE PLANTING
    LOCATION OF TREES IS SHOWN ON THE DRAWING. SPACING INDICATED IN THE PLANT SCHEDULE IS INDICATIVE. TREES SHALL BE LOCATED TO AVOID ANY UNDERGROUND UTILITIES. ALL SOIL LEVELS SHALL BE SURVEYED AND VERIFIED PRIOR TO COMMENCEMENT OF PLANTING.
11. STAKING
    BAMBOO STAKES SHALL BE USED FOR ALL TREES EXCEPT WHIPS AS SPECIFIED IN G.S. 3.36. TREE TRUNKS SHALL BE PROTECTED BY USING RUBBER HOUSE PROTECTIVE SLEEVING OR SIMILAR, AND SHALL BE LOOSENED TWICE A YEAR.
12. DRAINAGE
    ALL PLANTER DRAINAGE DETAILS AND WEEPHOLES DETAILS SHOULD REFER TO ENGINEER DRAWING.
13. UNDERGROUND UTILITIES
    UTILITY COVERS SERVICES SHOWN ON THE PLANTS ARE INDICATIVE, EXACT LOCATIONS TO BE CONFIRMED BY THE ENGINEER. NO TREES SHALL BE PLANTED WITHIN 1m OF A MANHOLE OR DRAINAGE U-CHANNEL. THERE SHALL BE NO PLANTING WITHIN THE SPACE OF 1.5m AROUND THE COVER OF ANY HYDRANT VALVE OR THE COVER OF WSD'S VALVES, OR WITHIN A DISTANCE OF 1m FROM ANY HYDRANT OUTLET. NO TREES SHALL BE PLANTED WITHIN 2m OF A ROAD KERB OR ENGINEERING STRUCTURE.
14. WATERING
    THE CONTRACTOR SHALL PROVIDE ADEQUATE WATERING TO ALL PLANTED AREAS AS SPECIFIED IN G.S. 3.84-WATERING.

3. Analysis

Propose Treatment of Trees	Contract Trees	Additional Trees for works access
No. of trees to be transplanted	8 Nr.	5 Nr.
	13 Nr.	
No. of trees to be felled DBH 100-199	11 Nr.	4 Nr.
No. of trees to be felled DBH 200-299	6 Nr.	3 Nr.
No. of trees to be felled DBH 300-399	2 Nr.	2 Nr.
No. of trees to be felled DBH over 400	1 Nr.	1 Nr.
Total No. of trees to be felled	20 Nr.	10 Nr.
	30 Nr.	
Total DBH of the felled trees	4208 mm	2370 mm
	6578 mm	
Compensatory Trees	57 Nr. @ original DBH	33 Nr. @ DBH 75mm

* Contract Tree means Trees that are transplanted under Contract

Recommendations

There will be total 16 Nr. of trees to be felled with DBH 100-199.
With normal compensatory tree DBH 75-95mm, within 3-5 years, canopy rate will be recovered to original.

There will be total 9 Nr. of trees to be felled with DBH 200-299.
With normal compensatory trees with DBH 75-95mm, within 6-12 years, canopy rate will be recovered to original.

There will be total 4 Nr. of trees to be felled with DBH 300-399.
With normal compensatory trees with DBH 75-95mm, according to our estimation, it will take minimum 12 -20 years to recover to original canopy rate.

There will be total 2 Nr. of trees to be felled with DBH over 400.
With normal compensatory trees with DBH 75-95mm, according to our estimation, it will take minimum 15 -25 years to recover to original canopy rate.

Conclusion:

For this proposal, within 20 years, estimate canopy rate will be recovered to recover the canopy rate to 90-95%.

Dear Madam,

Contract No.: HY/2009/18
Central - Wan Chai Bypass - Central Interchange
Submission of Location Plan for the Transplanted Trees in Holding Nursery

We would like to submit herewith the tree location plan for the transplanted trees in Kam Tin holding nursery for your perusal.

If you require further information, please feel free to contact our Ms. Rachel YAN on 3760 1930 or the undersigned on 9090 9912.

Yours faithfully,
TOYO GREENLAND CO., LTD.

Mr. HO Tat Pui, Daniel
Managing Director
