#### 1. Introduction

This submission outline the method and the layout to deploy silt screen for the Marine Works of HK/2010/06 Wan Chai Development Phase II – Central-Wan Chai Bypass over MTR Tsuen Wan Line.

With reference to the Condition 2.9 of Part C of FEP-05/356/2009, silt screens shall be deployed for the seawater intakes affected by the marine work of this project. A Silt Screen Deployment shall be submitted to the Director of the Environmental Protection showing the detail on the design, operation and maintenance requirements.

# 2. Scope of Works

Silt screen shall be provided for the water intake at Fenwick Pier during dredging and construction of bored pile and sheetpile.

The Silt Screen will be installed at the water intake for Telecom House, Hong Kong Academy for Performing Arts and Shui On Centre located near our site area.

# 3. Installed Silt Screen by Other and Our Proposed Backup Arrangement

Contract HK/2009/01 has previously install a silt screen under FEP-02/356/2009 for that particular intake. They shall maintain the silt screen in good condition until removal or handover to us.

If Contract HK/2009/01 decides to removal the current silt screen system, we will install a new silt screen system following the procedure in Section 4 to 8.

In case the existing silt screen is taken over by us, we will provide the inspection and rectification works following the procedure in Section 5 to 8

To limit pollution of water, woven geotextile shall be used as silt screen system that is sustained by floating foam and in such a way that tidal rise and fall is accommodated. Concrete anchor block is used as self-weight to fix the silt screen is appropriate location.

Details of silt screen system as shown on drawing in Appendix A.

#### 4. Use of Material

Bonar SG110/110 woven geotextile, manufactured by BONTEC, is proposed as the silt screen system for this project. Catalogue of the material is attached in Appendix B. BONTEC is operated in accordance with an ISO 9001:2000 quality assurance system and ISO 14001 environmental management system to provide a good quality product. The Bonar geotextile is widely used in recent port works construction such as CV/2003/06 – Stanley waterfront improvement project, CV/2004/02 – Reconstruction of Wong Shek and Ko Lau Wan public pier project, CV/2002/04 – Penny's Bay Reclamation Stage 2 and HK12/02 – CED, Central Reclamation Phase III, Engineering Works (Please refer to Appendix B). The properties of Bonar geotextile is satisfactory and fulfill the requirement as stipulated in particular specification. Visual inspection of the silt screen shall be carried in a daily basis.

According to the Environmental Monitoring and Auditing Manual, regularly water monitoring of water quality shall be carried out by Environmental Team in order to complies statutory regulation and maintain quality of water during the construction activities being undertaken.

# 5. Silt Screen Installation Methodology

- a. Liaise with the owners and the operators of the water intakes.
- b. Carry out condition survey to the existing screen frame of water intake.
- c. Assemble the silt screen system on land as the details shown in Appendix A.
- d. Delivery the silt screen system to the location of water intake by means of marine vessel.
- e. Crane boat to place the weight sunker onto the seabed.
- f. Install M24 anchor bolt to seawall above high sea level by means of pneumatic drill for further fixing of silt screen system.
- g. Attach the anchorage steel chains to the weight sunker and silt screen system, and then deploy the silt screen system to the position.
- h. Fix both end of silt screen system to M24 anchor bolts to secure the silt screen system in position.
- i. The entire installation process shall be assisted by divers.
- j. Water sampling shall be taken on the open top of the floating silt screen system.

#### 6. Silt Screen Removal

After completion of the marine works, the silt screen shall be removed as elaborated as follows:

- a. Prior to decommission of silt screen, make sure all marine works shall be completed.
- b. Loosen the fixing end of the silt screen on seawall onboard of water boat.
- c. Deposition of silt screen system by means of work boat.
- d. Detach the anchorage steel chains from silt screen system and weight sunker.
- e. Lift up and remove weight sunker by crane boat.

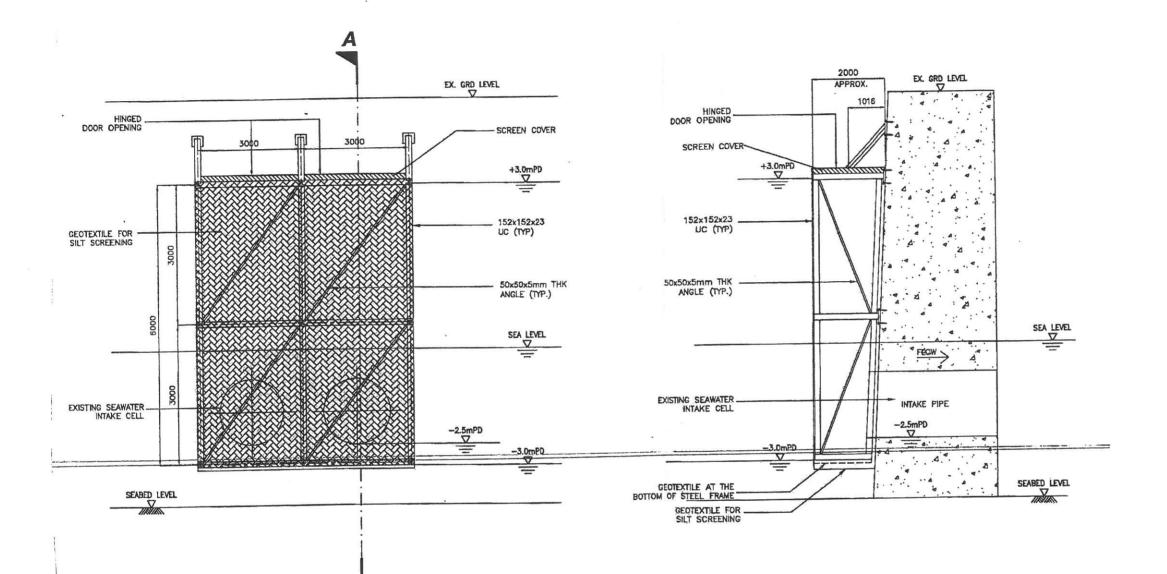

# 7. Inspection and Rectification Works

- a. Diver inspection shall be carried out to inspect the installation of silt screen to ensure proper installation and functioning of the silt screen according to the design drawing.
- b. During the entire construction period, daily visual inspection shall be carried out to ensure proper functioning of the silt screen system.
- c. Cleaning of silt screen by means of brush onboard of works in low tide period will be carried monthly or when required by Independent Environmental Checker.
- d. Refuse around the silt screen system shall be collected at regular intervals on daily basis so that the water behind the silt screen kept free of floating debris.
- e. According to the Environmental Monitoring and Auditing Manual, regularly water monitoring of water quality shall be carried out by Environmental Team in order to complies statutory regulation and maintain quality of water during the construction activities being undertaken.
- f. The Environmental Team shall supervise the entire installation and decommissioning processes. The Environmental Team shall also closely monitor the effectiveness of the silt screen and report any irregularities which may affect its proper functioning so as to trigger early rectification by the Contractor.
- g. In case of any malfunction of the silt screen, diver inspection shall be carried out to check whether there is any damage or defect of the silt screen and the situation will be immediately reported to the Environmental Team. If the screen is found damaged and repairing works are identified, the dredging work within 50m from the location of damage will be temporarily suspended. The silt screen will then be lift up by grab dredger/ derrick barge. A new piece of geotextile with sufficient overlapping length (1m) will be attached to the existing silt screen. The dredging works will resume after repairing work.
- h. the rectification works shall be carried out to maintain well-function of silt screen after the Environmental Team Leader agrees on the rectification methods.
- i. 20 linear meter additional geotextile will be ready for use and keep on site for emergency replacement in case damage or defect is observed of the silt screen.

#### OFFICIAL ANNOUNCEMENT

I would like to inform you that geotextile Bontec SG100/100 is upgraded to SG110/110 effective immediately, and that SG100/100 has become obsolete. The performance of SG110/110 is superior to that of SG100/100.

No adjustment and adaptation are necessary to the current application, installation method, packaging and quality control assurance program with the improved properties of SG110/110.

Bonar Technical Fabrics is Europe's premier manufacturer of woven and nonwoven geotextile products, with continuous commitment to quality, product development and production improvement. One of Bonar's many advantages is that they are vertically integrated. This means they have their own fiber production which helps ensure consistent product performance. Bonar also has a high production capacity with the facility locates in close proximity to the Antwerp port. These translate into more efficient supply.

I have attached the manufacturer's letter here about the change for your reference. We would be happy to answer any questions that you may have.

Thank you for your kind attention.

Best regards

Gary Ng

Your reference: Bontec® SG 110/110		
	Our reference:	G&E07052010.doc

Dear Gary,

We are pleased to confirm that the old name of the Bontec® SG100/100 has been replaced with the Bontec® SG 110/110.

Bonar constantly strives to increase the performance of the products over time. Thanks to improved polymers, extrusion and weaving techniques we managed to produce stronger geotextiles with the same unit weight. Hydraulic characteristics were not affected either.

Bonar uses very strict -in house- and ISO 9001:2000 quality and ISO 14001 environmental standards (in annex) and is using electricity generated from 100 % renewable sources.

We send hereby the newest datasheet as well for your information.

Should you require any further information, please do not hesitate to contact us. Best regards

# Bontec SG110/110 Woven Polypropylene Geotextile

Installation Guideline

BONTEC: Woven and Non Woven Geotextiles manufactured by Bonar Technical Fabrics - Belgium.

#### RECOMMENDATION FOR THE INSTALLATION OF GEOTEXTILES

- The BONTEC geotextiles shall be kept in its original packaging in order to protect it from damaging UV-rays and high temperatures.
- The BONTEC geotextiles shall be stored protected from wind, rain, excess moisture or sunlight.
- The BONTEC geotextiles shall only be unpacked just before use. The material shall be covered within 1 week
- The BONTEC geotextiles shall be labelled and show the following data:
  - roll number
  - quality
  - name of the manufacturer
  - roll length & width
  - roll weight
- The BONTEC geotextiles shall be laid with the longitudenal ascis down slopes
- A minimum overlap of 500 mm between the different sheets shall be respected. Sewing of the different fabrics shall be done with a double prayer stitching technique with non deteriorating thread.
- Wherever visibility or installation of the BONTEC geotextile is poor an extra safety overlap of +/- 1 m shall be respected
- The surfaces to be covered with BONTEC geotextiles shall be smooth and free of sticks, roots, sharp objects, and all debris that may damage the fabric. The surface to be covered shall be firm and unyielding, with no sudden changes or brakes in grade.
- The compacted sub-base shall be maintained in a smooth, uniform and compacted condition during installation of the fabric.
- In area's where wind is prevalent, fabric installation shall be started at the upwind side of the project and proceed downwind. The leading edge of the fabric shall be secured at all times with sandbags or other means sufficient to hold it down during high winds. Sandbags or rubber tires may be used as required to hold the fabric in position during installation. Tires shall not have exposed teel cords or other sharp edges which may snag or cut the fabric. Materials, equipment or other items shall not be dragged across the fabric or be allowed to slide down slopes on the fabric.
- Should the fabric be damaged during any step of the installation, the damaged section shall be repaired by covering it with a piece of fabric which extends at least 0,6 meter in all directions beyond the damaged area. The fabric shall be secured as directed by the engineer.
- Smoking shall not be permitted by personnel working on the fabric.

Dear Sirs,

# Contract No. CV/2004/82 Reconstruction of Wong Shek and Ko Law Wan Public Piers

# Material Submission - Geotextile for Silt Curtain

I refer to your letter of 14.1.2005 enclosing the particulars of the geotextile for fabrication of silt cortain.

In accordance with PS Clause 26.08(2), the proposed "SG 100/100" woven geotextile manufactured by Bonar Technical Fabrics is approved to be used under the captioned Contract.

Pursuant to PS Clause 26.08(1), you are required to submit details of the silt curtains 3 weeks before their deployment.

I refer to your letter ref. NL1/C/0097/008/MM/145 of 10/6/92 submitting materials for subsoil drains for our approval.

I have the following comments:

- The proposed subsoil drain material i.e. 300mm diameter ADS corrugated polyethylene subsoil drain pipes from Benpak Waterwise company is acceptable.
- 2) The proposed Geotextile SG17/15 from UCO (2 layers) as protection for subsoil drainage is acceptable in principal. Please submit further technical specification such as lapping and she storage requirements recommended by the manufacturer.
- 3) The proposed Greenfix Eromat Special type 5 from CCL is still under review. You will be notified of the outcome if a decision is made.

Yours faithfully

Dear Sir.

Contract No. DC/2007/06 River Improvement Works in Upper Lam Tsuen River, She Shan River and Upper Tal Po River

# Proposed Geolextile at Gabion Wall in She Shan River and Upper Taj Po River

I refer to your letter dated 7 November 2008 and 12 November 2008 respectively.

Please be advised that since the water flow rate of the proposed geotextile model Bontec SG100/100 meets the requirements in accordance with P.S. Clause 7.150, I have no further objections to your proposed use of woven geotextile model Bontec SG100/100, supplied by "G and E Company Ltd." at gabion wall in She Shan River and Tai Po River, subject to its satisfactory performance on site.

Yours faithfully.
