Date:

8 February 2017

Attention: Mr Michael Leung

BY EMAIL & POST (email: hkleung@dsd.gov.hk)

Dear Sirs

Agreement No.: SP 01/2015 Environmental Monitoring and Audit for Advance Works for Shek Wu Hui Sewage Treatment Works – Further Expansion Phase 1A Quarterly EM&A Report for October to December 2016

We refer to emails of 2 and 8 February 2017 attaching a Quarterly EM&A Report for October to December 2016 for the captioned project prepared by the Environmental Team (ET).

We have no further comment and hereby verify the Quarterly EM&A Report.

Please do not hesitate to contact the undersigned at 2618 2836 should you have any queries.

Yours faithfully ANEWR CONSULTING LIMITED

Independent Environmental Checker

LYMA/CYYH/csym

cc Tsun Yip – Mr Ken Wong (email: kenwong@tsunyip.hk) AUES – Ms Nicola Hon (email: nicolahon@fordbusiness.com)

## **EXECUTIVE SUMMARY**

ES.01 This is the 5<sup>th</sup> Quarterly Environmental Monitoring and Audit Summary Report for DSD Contract No. DC/2013/09 – Advance Works for Shek Wu Hui Sewage Treatment Works – Further Expansion Phase 1A and Sewerage Works at Ping Che Road (hereinafter referred as "the Contract") under Environmental Permit number FEP-01/474/2013, covering the period from 1 October to 31 December 2016 (the Reporting Period).

### **ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES**

ES.02 Environmental monitoring activities under the EM&A program in this Reporting Period are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Air Quality	1-hour TSP	96
All Quality	24-hour TSP	32
Construction Noise	L <sub>Aeq(30min)</sub> Daytime	26
Inspection / Audit	ET Regular Environmental Site Inspection	13
Inspection / Audit	IEC Monthly Environmental Site Audit	3

## BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES.03 In the Reporting Period, no exceedance of air quality and construction noise monitoring were recorded. No Notification of Exceedance (NOE) was, therefore, issued. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table.

Environmental	Monitoring	Action	Limit	Event & Action		
Issues	Parameters	Level	Level	NOE Issued	Investigation	Corrective Actions
Air Quality	1-hour TSP	0	0	0	-	-
All Quality	24-hour TSP	0	0	0	-	-
Construction Noise	LAeq(30min)	0	0	0	-	-

Note: NOE – Notification of Exceedance

#### SITE INSPECTION

ES.04 In the Reporting Period, 13 events of joint site inspection to evaluate the site environmental performance by the RE, ET and the Contractor were carried out. No non-compliance was noted.

#### **ENVIRONMENTAL COMPLAINT**

ES.05 No environmental complaint was recorded or received in this Reporting Period.

#### NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.06 No environmental summons or successful prosecutions were recorded in this Reporting Period.

#### **REPORTING CHANGE**

ES.07 No reporting changes were made in the Reporting Period.

#### **FUTURE KEY ISSUES**

- ES.08 As dry season is approached, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures properly.
- ES.09 Air quality mitigation measures including wheel wash facilities, watering of haul roads and covering of dusty materials with tarpaulin sheet, etc. should be properly maintained. Moreover, the contractor should be to prevent mosquito breeding on site.

## 1 INTRODUCTION

#### **1.1 PROJECT BACKGROUND**

- 1.1.1 The existing Shek Wu Hui Sewage Treatment Works (hereafter referred as "SWHSTW") with secondary level treatment to sewage collected from Sheung Shui, Fanling and adjacent areas is operated and maintained by Drainage Services Department (hereafter referred as "DSD"). Based on the preliminary design of the Project, the scope of works for the Project comprises the following major components:
  - (a) Demolition of the existing Inlet Works and construction of the new Inlet Works, including inlet pumping station, screening and degritting facilities;
  - (b) Demolition of 4 existing circular Primary Sedimentation Tanks (PSTs) and construction of new rectangular PSTs;
  - (c) Construction of new pre-membrane screens;
  - (d) Modification of existing Bioreactor (BR) 1 and 2 to suit the proposed membrane bioreactor (MBR) process;
  - (e) Construction of a new standby Bioreactor;
  - (f) Demolition of 4 existing circular Final Sedimentation Tanks (FSTs) and construction of new Membrane Tanks and Membrane Facility Building;
  - (g) Reconstruction of sludge treatment facilities, including thickening, anaerobic digestion, biogas handling, sludge holding and dewatering facilities; and
  - (h) Other ancillary works.
- 1.1.2 According to the Project implementation programme, the construction of most of the above proposed works (hereinafter referred to as "Main Works") will be commencement in 2016 and completion in 2022. Furthermore, Advance Works as part of the above proposed works will carry out before Main Works commencement. The Advance Works will be commencement in third quarter of 2015 and comprise the following major components:
  - (a) Modification of BR1, through upgrading of electrical and mechanical (E&M) equipment and minor civil works, to suit the proposed MBR process;
  - (b) Demolition of FSTs 1 and 2 and construction of Membrane Tanks and the first phase of Membrane Facility Building; and
  - (c) Tree felling and transplanting, to facilitate timely construction of the new Inlet Works during the implementation of Main Works (under review).
- 1.1.3 The general layout of Advance Works and Main Works of SWHSTW Further Expansion Phase 1A show in *Appendix A*. Subsequent to Further Expansion Phase 1A, the SWHSTW will be further expanded under separate projects (namely Further Expansion Phase 1B and Phase 2).
- 1.1.4 In July 2015, Tsun Yip Waterworks Construction Co Ltd (hereinafter referred as "Tsun Yip" or "the Contractor") has awarded the DSD Contract No. DC/2013/09 Advance Works for Shek Wu Hui Sewage Treatment Works Further Expansion Phase 1A and Sewerage Works at Ping Che Road (hereinafter referred as "the Contract"). The Contract is the Advance Works for Shek Wu Hui Sewage Treatment Works as part of SWHSTW Further Expansion which is a Designated Project under Environmental Permit number FEP-01/474/2013 (hereinafter referred as "the FEP-01/474/2013" or "the EP").
- 1.1.5 The works under the Contract at Shek Wu Hui Sewage Treatment Works will be included the conversion of one existing bioreactor and two existing final sedimentation tanks into one membrane bioreactor. Moreover, construction of about 1.5 kilometres length of sewers at Ping Che Road and other ancillary works will be undertaken. The works of Contract are scheduled to be conduct about 25 months. Layout plan of the Contract is shown in *Appendix B*.
- 1.1.6 Action-United Environmental Services & Consulting (hereinafter referred as "AUES") was

appointed by the Contractor as an Environmental Team (hereinafter referred as "the ET") to implement the relevant EM&A program in accordance with the Updated EM&A Manual, as well as the associated duties.

- 1.1.7 As part of the EM&A program, baseline monitoring is required to determine the ambient environmental conditions. Hence baseline monitoring including air quality and noise were carried out between 28 August 2015 and 12 September 2015 at the proposed locations before construction work commencement. The "Baseline Monitoring Report (TCS00757/15/600/R0014 Version 2)" had submitted to EPD by the DSD before commencement of major construction works and verified by the IEC on 30 September 2015. Further to Tsun Yip's instructions, the EM&A program was commenced on 1 October 2015 and the monitoring schedule had been issued to relevant parties on 29 September 2015.
- 1.1.8 This is the 5<sup>th</sup> Quarterly EM&A Report for the Project presenting the monitoring results and inspection findings for the reporting period from 1 October to 31 December 2016.

## **1.2 REPORT STRUCTURE**

1.2.1 The Quarterly Environmental Monitoring and Audit (EM&A) Summary Report is structured into the following sections:-

Section 1	INTRODUCTION
SECTION 2	<b>PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS</b>
SECTION 3	SUMMARY OF MONITORING REQUIREMENTS
SECTION 4	IMPACT MONITORING RESULTS
Section 5	WASTE MANAGEMENT
SECTION 6	SITE INSPECTIONS
Section 7	ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE
SECTION 8	IMPLEMENTATION STATUES OF MITIGATION MEASURES
Section 9	Impact Forecast
Section 10	<b>CONCLUSIONS AND RECOMMENDATION</b>

## 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

### 2.1 PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.1.1 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix C*.

#### 2.2 CONSTRUCTION PROGRESS

2.1.2 Master Construction Program of the Contract is enclosed in *Appendix D* and the major construction activities undertaken in this Reporting Period are illustrated in *Appendix B* and listed below:-

#### **October 2016**

- Concreting for pile cap (At membrane facility building)
- Backfilling the void between base slab and sheetpile (At membrane facility building)
- Removal of 2nd layer of shoring system (At membrane Facility Building)
- Concreting the blinding layer of Membrane Tank
- Welding for Pile Head Steel Plate (At Membrane Tank)
- Formwork and rebar fixing (At membrane tank)
- Erection of working platform (At Bioreactor No.1)
- Removal and dismental of existing pipe works (At Bioreacotr No.1)
- Excavation, Laying of DN900 permeate pipe (Near FST No.3)
- Excavation, Laying of DN150 Cable Duct (Near FST No.4)
- Laying Porous Paving Block (Near Control No.2)
- Construction of Field Equipment Pit #2 (Near Bioreactor No.2

## November 2016

- Erection of formwork, installation of waterstop and final cleaning before concreting
- works (At membrane facility building, membrane tank)
- Concreting for pile cap (at +3.9mPD) (At membrane facility building)
- Concreting for De-Oxygen Tank and Permeate Storage Tank at +3.9mPD (At
- membrane facility building)
- Excavation, Laying DN900 permeate pipe (Near FST No.3)
- Excavation, Laying DN150 Cable Duct and Reinstatement Works (Near FST No.4)
- Laying Porous Paving Block (Trial Panel #2) (Near Control No.2)
- General Cleaning, Dismantle pipe works inside BR1 (At Bioreactor No.1)
   December 2016
- Curing, Dismantle formworks (At membrane facility building, membrane tank)
- Concreting wall stem (at +3.9mPD) (At membrane facility building Grid A-E)
- Erection of formworks, reinforcement works, and erection of temporary metal falsework (At membrane facility building, membrane tank)
- Backfilling the void between the sheetpiling and structure
- Removal of 2nd Strut (at membrane facility building and membrane tank)
- Excavation, Laying DN900 permeate pipe (Near MFB)
- Excavation, Laying Cable Duct and reinstatement works (Near FST No.4)
- Excavation, concreting for Trial panel #3 (Near Primary Sedimentation No.7)
- Diversion of existing public light (Near Bioreactor No.1)
- Demolish the existing part of Bioreactor No.1 for excavation of Pre-treatment screen chamber (Near Bioreactor No.1)

#### 2.3 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.1.3 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Period is presented in *Table 2-1*.

Table 2-1Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust) Regulation	Notified EPD on 30 July 2015
2	Chemical waste Producer Registration	Application date: 19/08/2015
	(WPN: 5213-624-T3148-04)	Date approved: 18/9/2015
3	Water Pollution Control Ordinance	Application date: 19/08/2015
	(Discharge License: WT00022503-2015)	Date approved: 18/9/2015
4	Billing Account for Disposal of Construction Waste	Granted on 02/09/2015
	(Account Number: 7022898)	

- 2.1.4 In accordance with the Further EP No. FEP-01/474/2013 Condition 2.3, an Updated Environmental Monitoring and Audit (EM&A) Manual (TCS00757/15/600/R0012v3) which certified by the Environmental Team (ET) Leader and verified by the Independent Environmental Checker (IEC), has submitted to DSD and EPD endorsement.
- 2.1.5 Baseline Monitoring Report (TCS00757/15/600/R0014v2) as certified by the ETL and verified by the IEC was submitted to the EPD on 30 September 2015 for endorsement.

## **3 SUMMARY OF IMPACT MONITORING REQUIREMENT**

#### 3.1 GENERAL

3.1.1 The Environmental Monitoring and Audit requirements are set out in the Updated EM&A manual. Environmental issues such as air quality and construction noise were identified as the key issues during the construction phase of Advance Works of the Project. A summary of EM&A programme of construction phase are presented in the sub-sections below.

#### 3.2 MONITORING PARAMETERS

- 3.2.1 The EM&A programmes of construction phase shall cover the following environmental issues:
  - Air quality; and
  - Construction noise
- 3.2.2 A summary of the monitoring parameters is presented in *Table 3-1* below

Environmental Issue	Parameters		
Air Quality	<ul> <li>1-hour TSP by Real-Time Portable Dust Meter; and</li> <li>24-hour TSP by High Volume Air Sampler.</li> </ul>		
Construction Noise	<ul> <li>Leq<sub>(30min)</sub> during normal working hours; and</li> <li>Leq<sub>(15min)</sub> for the construction works undertaken in Restricted Hours, if necessary.</li> </ul>		

Table 3-1Summary of EM&A Requirements

### **3.3** MONITORING LOCATIONS

3.3.1 According to the *Updated EM&A Manual of* Advance Works which submitted to EPD on 25 *August 2015*, three air quality sensitive receivers and two construction noise sensitive receivers are proposed to monitor the environmental performance of the Contract. The proposed monitoring locations are summarized in *Table 3-2* and shown in *Appendix E*.

 Table 3-2
 Proposed Air Quality and Construction Noise Monitoring Locations

Aspect	Station ID	Location	Parameter
	AM1	No. 31 Wai Loi Tsuen	1- hour and 24- hour TSP
Air Quality	AM2	Fu Tei Au	1- hour
	AM2a	RE's Site Office	24- hour TSP
Noise	NM1	No. 31 Wai Loi Tsuen	Leq(30min)
NOISC	NM2	Fu Tei Au	L <sub>eq(30min)</sub>

### 3.4 MONITORING FREQUENCY AND PERIOD

3.4.1 The requirements of baseline monitoring are stipulated in *Sections 2.1.7 and 3.2.5* of the Updated *EM&A Manual* and presented as follows.

### Air Quality Monitoring

- 3.4.2 Monitoring frequency for air quality baseline monitoring is as follows:
  - 1-Hour TSP 3 sets of 1-hour TSP monitoring shall be carried out once in every six days.
  - 24-Hour TSP 24-hour shall be carried out once in every six days.

## Noise Monitoring

3.4.3 Construction noise monitoring should be carried out at the designated monitoring station when there are Project-related construction activities being undertaken within a radius of 300m from the monitoring stations. The monitoring frequency should depend on the scale of the

construction activities. An initial guide on the monitoring is to obtain one set of 30-minute measurement at each station between 0700 and 1900 hours on normal weekdays at a frequency of once a week when construction activities are underway.

3.4.4 If construction works are extended to include works during the hours of 1900 - 0700, additional weekly impact monitoring shall be carried out during evening and night-time works. Applicable permits under NCO shall be obtained by the Contractor.

## 3.5 MONITORING EQUIPMENT

Air Quality Monitoring

- 3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B.* If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve.
- 3.5.2 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.
- 3.5.3 All equipment as used air quality monitoring is listed in *Table 3-3*.

## Table 3-3Air Quality Monitoring Equipment

Equipment	Model		
24-Hr TSP			
High Volume Air Sampler	TISCH High Volume Air Sampler, HVS Model TE-5170		
Calibration Kit	TISCH Model TE-5025A		
1-Hour TSP			
Portable Dust Meter	Sibata LD-3 Laser Dust monitor Particle Mass Profiler &		
Foltable Dust Meter	Counter		

## Wind Data Monitoring Equipment

3.5.4 According to the Updated EM&A Manual Sections 2.1.3.8, alternative methods to obtain representative wind data was proposed by the ET. Meteorological information as extracted from "the Hong Kong Observatory Ta Kwu Ling Station" is alternative method to obtain representative wind data. For Ta Kwu Ling Station, it is located nearby the Project site. Moreover, this station is situated the sea level above 15mPD. The station's wind data monitoring equipment is set above the existing ground ten meters in compliance with the general setting up requirement. Furthermore, this station also can be to provide the humidity, rainfall, and air pressure and temperature etc. meteorological information. In Hong Kong of a lot development projects, weather information extracted from Hong Kong Observatory is common alternative method if weather station installation not allowed.

### Noise Monitoring

- 3.5.5 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s-1.
- 3.5.6 Noise monitoring equipment to be used for baseline monitoring is listed in *Table 3-4*.

### Table 3-4Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	Rion NL-52
Calibrator	Rion NC-73 / BK4231

Z:\Jobs\2015\TCS00757 (Shek Wu Hui)\600\EM&A Report\Impact\Quarterly EM&A Report\5th Quarterly (Oct - Dec 2016)\R0066v2.doc Page 6

ſ	Equipment	Model
	Portable Wind Speed Indicator	Testo Anemometer

3.5.7 Sound level meters listed above comply with the *International Electrotechnical Commission Publications 651: 1979 (Type 1)* and *804: 1985 (Type 1)* specifications, as recommended in TM issued under the NCO. The acoustic calibrator and sound level meter to be used in the baseline monitoring will be calibrated yearly.

#### **3.6 DETERMINATION OF ACTION/LIMIT (A/L) LEVELS**

3.6.1 According to the baseline monitoring results and the Updating Environmental Monitoring and Audit Manual stipulation, the air quality and construction noise criteria were set up, namely Action and Limit levels are listed in *Tables 3-5 & 3-6* as below.

Table 3-5 Action and Limit Levels for 24-Hr TSP and 1-Hr TSP Air Quality, µg m<sup>-3</sup>

Monitoring Stations	Action Le	evel (µg/m <sup>3</sup> )	Limit Level (µg/m <sup>3</sup> )	
Monitoring Stations	1-hour	24-hour	1-hour	24-hour
AM1	286	147	500	260
AM2	276	NA	500	NA
AM2a	NA	155	NA	260

## Table 3-6 Action and Limit Levels for Construction Noise

Monitoring Stations	Action Level	Limit Level in dB(A)					
Time Period: 0700-1900 hours on normal weekdays							
NM1 and NM2	When one documented complaint is received	>75* dB(A)					

*Note:* (\*) *Reduces to 70 dB(A) for schools and 65 dB(A) during the school examination periods.* 

### 3.7 EVENT ACTION PLAN

3.7.1 If non-compliance or exceedance of the Action/Limit Levels is occurred, actions shall be taken in accordance with the Event Action Plan in *Appendix F*.

#### 4 MONITORING METHDOLOGY

#### 4.1 **AIR QUALITY MONITORING**

#### Monitoring Location

4.1.1 The detailed information of air quality monitoring stations referred to *Table 3-2* and the graphical plot of monitoring locations shown in *Appendix E* in this report.

#### **Monitoring Equipment**

4.1.2 All the monitoring equipment to be used in the EM&A program as listed in *Table 3-3* has been agreed with the IEC.

#### **Monitoring Procedures**

1-hour TSP

- 4.1.3 The 1-hour TSP monitor, a Sibata LD-3 Laser Dust monitor Particle Mass Profiler & Counter was used for baseline monitoring, which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90<sup>o</sup> light scattering. The 1-hour TSP monitor consisted of the following:
  - a. A pump to draw sample aerosol through the optic chamber where TSP is measured;
  - b. A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
  - c. A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.
- 4.1.4 The 1-hour TSP meter used is within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument was checked before and after each monitoring event. Operation of the 1-hour TSP meter was follow manufacturer's Operation and Service Manual. A valid calibration certificate is attached in *Appendix G*.

#### <u>24-hour TSP</u>

- 4.1.5 The equipment used for 24-hour TSP measurement is a Tisch Environmental, Inc. Model TE-5170 TSP high volume air sampling system, which complied with EPA Code of Federal Regulation, Appendix B to Part 50. The High Volume Air Sampler (HVS) consists of the following:
  - a. An anodized aluminum shelter;
  - b. A 8"x10" stainless steel filter holder;
  - c. A blower motor assembly;
  - d. A continuous flow/pressure recorder;
  - e. A motor speed-voltage control/elapsed time indicator;
  - f. A 7-day mechanical timer, and
  - g. A power supply of 220v/50 hz
- 4.1.6 Prior of 24-hour TSP monitoring, the HVS was calibrated in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5028A). The 24-hour TSP Monitoring using the HVS was also processed in accordance with the manufacturer's Operations Manual. A valid calibration certificate of the calibration kit with the certificate of HVS calibrated is attached in *Appendix G*.
- 4.1.7 24-hour TSP was collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The ET keeps all the sampled 24-hour TSP filters in normal air conditioned room conditions, i.e. 70% HR (Relative Humidity) and 25°C, for six months prior to disposal.

#### 4.2 CONSTRUCTION NOISE MONITORING

#### Monitoring Location

4.2.1 The detailed information of construction noise monitoring stations referred to *Table 3-2* and the graphical plot of monitoring locations shown in *Appendix E* in this report.

#### **Monitoring Equipment**

- 4.2.2 All the monitoring equipment to be used in the EM&A program as listed in *Table 3-3* has been agreed with the IEC.
- 4.2.3 Sound level meter listed in *Table 3-4* is complied with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum (TM) issued under the Noise Control Ordinance (NCO). A valid of calibration certificates including sound level meter and an acoustic were shown in *Appendix G*.

#### **Monitoring Procedures**

- 4.2.4 The noise measurement was performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30min) in six consecutive Leq(5 min) measurements were used as the monitoring parameter throughout the baseline monitoring period.
- 4.2.5 During the monitoring, the sound level meter was mounted on a tripod at a height of about 1.2 m and placed at the monitoring locations and oriented such that the microphone was pointed to the site with the microphone facing perpendicular to the line of sight. The windshield was fitted for the measurement. For construction noise monitoring, all monitoring stations were conducted 1 m from the exterior of the building façade.
- 4.2.6 Prior noise measurement, the accuracy of the sound level meter was checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The calibration level from before and after the noise measurement agrees to within 1.0dB.
- 4.2.7 During the noise measurement, a portable wind speed meter was used to check wind speed (m/s). For baseline noise monitoring, no wind speed was exceeding 5m/s or gusts exceeding 10m/s. Also, noise measurement in time was no fog and rain.

## 4.3 DATA MANAGEMENT AND DATA QA/QC CONTROL

- 4.3.1 The monitoring data were handled by the ET's in-house data recording and management system.
- 4.3.2 The monitoring data recorded in the equipment were downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data were input into a computerized database properly maintained by the ET. The laboratory results were input directly into the computerized database and checked by personnel other than those who input the data.
- 4.3.3 For monitoring parameters that require laboratory analysis, the local laboratory shall follow the QA/QC requirements as set out under the HOKLAS scheme for the relevant laboratory tests.

## 5 IMPACT MONITORING RESULTS

#### 5.1 GENERAL

5.1.1 Since the major construction work of the Project commenced on 1 October 2015, air quality and nose monitoring at the designated locations were therefore performed.

#### 5.2 **RESULTS OF AIR QUALITY MONITORING**

5.2.1 In the Reporting Period, a total of **96** events of 1-hour TSP and **32** events of 24-hour TSP monitoring were performed. The summary of air quality monitoring in the Reporting Period is shown in *Tables 5-1* and the relevant graphical plots are shown in *Appendix G*.

Monitoring	1-hour TSP (µg/m <sup>3</sup> )			24-hour TSP (μg/m <sup>3</sup> )		
Location	Min	Max	Average	Min	Max	Average
AM1	13	113	65	16	124	74
Record Date	23-Nov-16	28-Dec-16	48 events	6-Oct-16	3-Dec-16	16 events
AM2/ AM2a	18	118	67	22	111	60
Record Date	23-Nov-16	28-Dec-16	48 events	16-Nov-16	30-Dec-16	16 events

 Table 5-1
 Summary of Air Quality Monitoring Results

5.2.2 In the Reporting Period, the 24-hour and 1-hour TSP monitoring results were below the Action/ Limit Level. No Notification of Exceedances (NOE) of air quality criteria or corrective action was therefore required.

#### 5.3 **RESULTS OF CONSTRUCTION NOISE MONITORING**

5.3.1 In the Reporting Period, a total of 26 event noise measurements were carried out at the designated locations. During construction noise monitoring, the sound level meter was set in 1m from the exterior of the building façade. Therefore, no façade correction (+3dB(A)) is added according to acoustical principles and EPD guidelines. The construction noise monitoring results at the designated locations are summarized in *Table 5-2* and the relevant graphical plots are shown in *Appendix G*.

Monitoring	Leq, 30min (dB((A))		
Location	Min	Max	
NM1	50	61	
Record Date	3-Oct-16, 25-Oct-16	11-Nov-16	
NM2	47	65	
Record Date	31-Oct-16, 22-Dec-16	11-Nov-16	

 Table 5-2
 Summary of Construction Noise Monitoring Results

5.3.2 As shown in *Table 5-2*, the noise level measured at the designated monitoring locations were below 75dB(A). Furthermore, there was no noise complaints (Action Level exceedance) received by the RE, Contractors or DSD in the Reporting Period. Therefore, no Action or Limit Level exceedance was triggered and no corrective action was required.

#### 5.4 CONCLUSION

5.4.1 In view of the monitoring result throughout the Reporting Period, there were no exceedances recorded in respect to air quality and noise monitoring. It indicated that the implemented mitigation measures are effectively to minimize the impact attributable to the construction works. Moreover, the set of data collected under monitoring work are with statistical power to categorically identify or confirm the absence of impact attributable to the works.

## 6 WASTE MANAGEMENT

## 6.1 GENERAL WASTE MANAGEMENT

6.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

#### 6.2 **RECORDS OF WASTE QUANTITIES**

- 6.2.1 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;
  - Chemical Waste;
  - General Refuse; and
  - Excavated Soil.
- 6.2.2 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 6-1* and *6-2* and the Summary Waste Flow Table is shown in *Appendix I*. Whenever possible, materials were reused on-site as far as practicable.

			Quantity	y		Disposal
Type of Waste	Previous months	Oct 16	Nov 16	Dec 16	Cumulated	-
C&D Materials (Inert) (in '000m <sup>3</sup> )	12.526	1.151	0.266	0.52	14.921	
Hard Rock and Large Broken Concrete (Inert) (in '000m <sup>3</sup> )	1.289	0.0	0.0	0.022	1.311	
Reused in this Project (Inert) (in '000 m <sup>3</sup> )	0.872	0.3	0.1	0.1	1.372	
Reused in other Projects (Inert) (in '000 m <sup>3</sup> )	2.228	0.0	0.0	0.0	2.228	
Disposal as Public Fill (Inert) (in '000 m <sup>3</sup> )	8.137	0.851	0.166	0.398	9.552	Tuen Mun 38

Table 6-1Summary of Quantities of Inert C&D Materials for the Project

### Table 6-2Summary of Quantities of C&D Wastes for the Project

	Quantity					Disposel
Type of Waste	Previous months	Oct 16	Nov 16	<b>Dec 16</b>	Cumulated	Disposal Location
Metals ('000kg)	118.23	0	14.7	0	132.93	
Paper / Cardboard Packing ('000kg)	0	0	0	0	0	
Plastics ('000kg)	0	0	0	0	0	
Chemical Wastes ('000kg)	0	0	0	0	0	
General Refuses ('000m <sup>3</sup> )	0.149	0.013	0.028	0.019	0.209	NENT

## 7 SITE INSPECTION

#### 7.1 **REQUIREMENTS**

7.1.1 According to the Updated EM&A Manual, the environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections should carry out to confirm the environmental performance.

## 7.2 FINDINGS / DEFICIENCIES DURING THE REPORTING PERIOD

- 7.2.1 In the Reporting Period, joint site inspection to evaluate the site environmental performance by the RE, ET and the Contractor has been carried out on 6, 11, 17, 25 and 31 October 2016, 7, 14, 21 and 29 November 2016, 5, 12, 22 and 30 December 2016. Furthermore, IEC attend site inspection was on 25 October 2016, 29 November 2016 and 22 December 2016. No non-compliance was noted.
- 7.2.2 Observations for the site inspections and audit within this Reporting Period are summarized in *Table 7-1*.

Date	Findings / Deficiencies	Follow-Up Status
6 October 2016	• The Contractor was reminded to clean the sandstone on the ground after excavation.	• Not required for reminder.
11 October 2016	• The Contractor was reminded to cover stockpiles on-site to avoid dust emission.	• Not required for reminder.
17 October 2016	<ul> <li>Stockpile without covering was observed. The contractor was advised to cover it with tarpaulin sheets.</li> <li>The Contractor was reminded to clean the sludge on public road after construction work.</li> </ul>	<ul> <li>Stockpile was removed.</li> <li>Not required for reminder.</li> </ul>
25 October 2016	• Scattered general refuse was observed at site area. The Contractor should ensure all the general refuse was put into the waste container to improve the site tideness.	• Scattered general refuse was removed. Last observation closed.
31 October 2016	<ul> <li>Accumulation of general waste was observed. The contractor was advised to dispose general waste regularly and perform on-site sorting of waste.</li> <li>The contractor was reminded to provide enough rubbish bin to collect general waste at work area near entrance.</li> </ul>	<ul> <li>Accumulation of general waste was disposed. Last observation closed.</li> <li>Not required for reminder.</li> </ul>
7 November 2016	• Dry unpaved haul road was observed. The contractor was advised to spray water o avoid dust emission.	• Water spraying was implemented on-site. Last observation closed.
14 November 2016	<ul> <li>The Contractor was reminded to keep the scattered general refuse out of the site.</li> <li>The Contractor was reminded to spray water regularly on site to reduce dust generation.</li> </ul>	• Not required for reminder.
		• Not required for reminder.
21	• Cans were observed on the work area. The	• Site housekeeping
November	contractor was advised to perform	was improved and

#### Table 7-1Site Observations

Date	Findings / Deficiencies	Follow-Up Status
2016	housekeeping throughout construction period.	no scattered general refuse was observed.
	• The Contractor was reminded to dispose general refuse and construction waste regularly.	• Not required for reminder.
29 November 2016	• No adverse environmental issue was observed.	• Nil
5 December 2016	• Dry unpaved haul road was observed. The contractor was advised to spray water regularly.	• Water spraying was observed on-site. Last observation closed.
12 December 2016	• Accumulation of stagnant water was observed. The contractor was advised to clean it as soon as possible.	• Stagnant water was cleared. Last observation closed.
22 December 2016	• No adverse environmental issue was observed on site.	• Nil.
30 December 2016	• No adverse environmental issue was observed on site.	• Nil.

## 8 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

#### 8.1 Environmental Complaint, Summons and Prosecution

8.1.1 No environmental complaint, summons and prosecution was received in this reporting period. The statistical summary table of environmental complaint, environmental summons and environmental prosecution are presented in *Tables 8-1, 8-2* and *8-3*.

#### Table 8-1 Statistical Summary of Environmental Complaints

Domonting Domind	Environmental Complaint Statistics				
Reporting Period	Frequency	Cumulative	<b>Complaint Nature</b>		
1 – 31 October 2016	0	0	NA		
1 – 30 November 2016	0	0	NA		
1 – 31 December 2016	0	0	NA		

#### Table 8-2 Statistical Summary of Environmental Summons

1 – 30 November 2016	0	0	NA		
1 – 31 December 2016	0	0	NA		

## 9 IMPLEMENTATION STATUS OF MITIGATION MEASURES

## 9.1 GENERAL REQUIREMENTS

- 9.1.1 The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the Updated EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in *Appendix J*.
- 9.1.2 The Contract under the Project shall be implementing the required environmental mitigation measures according to the Updated EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by the Contract in this Reporting Period are summarized in *Table 9-1*.

Issues	Environmental Mitigation Measures
Water Quality	• Wastewater to be treated by the filtration systems i.e. sedimentation tank before to discharge.
Air Quality	<ul> <li>Maintain wet surface on access road</li> <li>All vehicles must use wheel washing facility before off site</li> <li>Sprayed water during breaking works</li> <li>A cleaning truck was regularly performed on the public road to prevent fugitive dust emission</li> </ul>
Noise	<ul> <li>Restrain operation time of plants from 07:00 to 19:00 on any working day except for Public Holiday and Sunday.</li> <li>Keep good maintenance of plants</li> <li>Shut down the plants when not in used.</li> </ul>
Waste and Chemical Management	<ul><li>On-site sorting prior to disposal</li><li>Follow requirements and procedures of the "Trip-ticket System"</li></ul>
General	• The site was generally kept tidy and clean.

 Table 9-1
 Environmental Mitigation Measures

9.1.3 Based on monitoring results including air quality and construction noise, it is considered that the environmental mitigation measures implemented by the Contractor in this Reporting Period are effective.

## 10 CONCLUSIONS AND RECOMMENTATIONS

#### **10.1 CONCLUSIONS**

- 10.1.1 This is the 5<sup>th</sup> Quarterly EM&A Report for the Project presenting the monitoring results and inspection findings for the reporting period from 1 October 2016 to 31 December 2016.
- 10.1.2 No 24-hour or 1-hour TSP monitoring results that triggered the Action or Limit Levels were recorded. No NOEs or the associated corrective actions were therefore issued.
- 10.1.3 No noise complaint (which is an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this Reporting Period. No NOEs or the associated corrective actions were therefore issued.
- 10.1.4 No documented complaint, notification of summons or successful prosecution was received.
- 10.1.5 In the Reporting Period, 13 events of joint site inspection to evaluate the site environmental performance by the RE, ET and the Contractor were carried out. No non-compliance was noted.
- 10.1.6 No site inspection was undertaken by any external party in this Reporting Period.

#### **10.2 RECOMMENDATIONS**

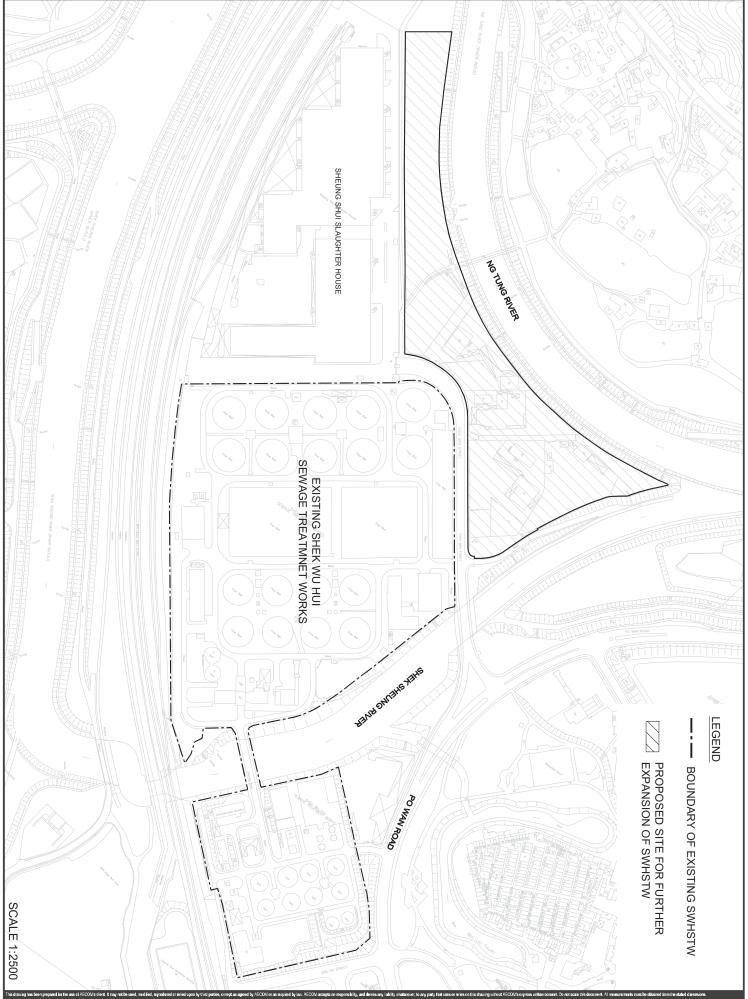

- 10.2.1 As dry season is approached, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures properly.
- 10.2.2 Air quality mitigation measures including wheel wash facilities, watering of haul roads and covering of dusty materials with tarpaulin sheet, etc. should be properly maintained.
- 10.2.3 To control the site performance on waste management, Tsun Yip shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge licence and the chemical waste producer registration. Tsun Yip is also reminded to implement the recommended environmental mitigation measures according to the Updated Environmental Monitoring and Audit Manual.

### **Construction Noise**

# Appendix H

## **METEOROLOGICAL INFORMATION**

### The weather of October 2016

October 2016 was marked by record-breaking high mean temperatures, despite a succession of cyclonic systems passing by in the vicinity of Hong Kong and the duration of sunshine falling under 80 percent of the October normal. The monthly mean maximum temperature of 29.1 degrees, monthly mean temperature of 26.8 degrees and monthly mean minimum temperature of 25.0 degrees were all 1.3 degrees above their respective normals and were the highest ever on record for October. After the passage of the remnant circulation of Severe Typhoon Megi over southern China in late September, Tropical Storm Aere hovered for days over the coastal waters of Guangdong at the doorstep of Hong Kong in early October. Then came Super Typhoon Sarika and Super Typhoon Haima in less than a week between 16 and 21 October. The former brought torrential rain that broke the October hourly rainfall record and triggered the Black Rainstorm Warning on 19 October, while the latter led to the issuance of the No. 8 Gale or Storm Signal on 21 October. The monthly rainfall recorded at the Hong Kong Observatory was 624.4 millimetres, more than six times the October normal of 100.9 millimetres and the second highest on record for October. The accumulated rainfall of 2888.9 millimetres up to the end of October was about 24 percent above the normal figure of 2334.0 millimetres for the same period.

### The weather of November 2016

November 2016 was characterized by relatively warm weather during the first three weeks, followed by rainy and cooler weather in the latter part of the month. Overall, the month was warmer and much wetter than usual. The mean temperature for the month was 22.3 degrees, 0.5 degree above the normal figure of 21.8 degrees. The monthly total rainfall recorded at the Hong Kong Observatory was 131.3 millimetres, more than three times the November normal of 37.6 millimetres and the eighth highest on record for November. The accumulated rainfall of 3020.2 millimetres up to end of November was about 27 percent above the normal figure of 2371.7 millimetres for the same period.

### The weather of December 2016

With the northeast monsoon over the south China coastal areas remaining relatively weak for most of the month, December 2016 was warmer than usual. The monthly mean temperature of 19.6 degrees was 1.7 degrees above the normal figure of 17.9 degrees and the third highest for December since record began in 1884. The total rainfall recorded in the month was only 6.6 millimetres, less than one quarter of the normal figure of 26.8 millimetres. But in terms of rainfall for the whole year, the annual total of 3026.8 millimetres was about 26 percent above the yearly normal of 2398.5 millimetres.

Air Qualit										
\$2.4.1.3	<ul> <li>Dust suppression measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices:</li> <li>Any excavated or stockpile of dusty material should be covered entirely by impervious sheeting or sprayed with water to maintain the entire surface wet and then removed or backfilled or reinstated where practicable within 24 hours of the excavation or unloading;</li> <li>Any dusty material remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads;</li> <li>A stockpile of dusty material should not be extended beyond the pedestrian barriers, fencing or traffic cones;</li> <li>The load of dusty materials on a vehicle leaving a construction site should be covered entirely by impervious sheeting to ensure that the dusty materials do not leak from the vehicle;</li> <li>Where practicable, vehicle washing facilities with high pressure water jet should be provided at every discernible or designated vehicle exit point. The area where vehicle washing takes place and the road section between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores;</li> <li>When there are open excavation and reinstatement works, hoarding of not less than 2.4m high should be provided as far as practicable along the site boundary with provision for public crossing. Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period.</li> <li>The portion of any road leading only to construction site that is within 30m of a vehicle entrance or exit should be kept clear of dusty materials;</li> <li>Surfaces where any pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation takes place should be sprayed with water or a dust suppression chemical continuously;</li> <li>Any area that involves demolition activities should be sprayed with water or a dust suppression chemical immediately prio</li></ul>	To minimize the dust impact	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	Air Pollution Control Ordinance (APCO) and Air Pollution Control (Construction Dust) Regulation				

Advance Works for Shek Wu Hui Sewage Treatment Works – Further Expansion Phase 1A and Sewerage Works at Ping Che Road

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve				
Air Quali	Air Quality Impact									
	<ul> <li>Where a scaffolding is erected around the perimeter of a building under construction, effective dust screens, sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building, or a canopy should be provided from the first floor level up to the highest level of the scaffolding;</li> <li>Any skip hoist for material transport should be totally enclosed by impervious sheeting;</li> <li>Every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides;</li> <li>Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed;</li> <li>Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system; and</li> <li>Exposed earth should be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shortcrete or other suitable surface stabilizer within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies.</li> </ul>									

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Noise Imp	act					
S3.4.1.1	Use of movable barrier, enclosure, acoustic mat and quiet plant. Use of wooden frames barrier with a small-cantilevered upper portion of superficial density not less than 14kg/m <sup>2</sup> on a skid footing with 25mm thick internal sound absorptive lining.	To minimize construction noise impact arising from the Project at the affected noise sensitive receivers (NSRs)	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM, Noise Control Ordinance (NCO)
S3.4.1.2	<ul> <li>Good Site Practice:</li> <li>Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program.</li> <li>Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program.</li> <li>Mobile plant, if any, should be sited as far away from NSRs as possible.</li> <li>Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum.</li> <li>Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.</li> <li>Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities.</li> </ul>	To minimize construction noise impact arising from the Project at the affected NSRs	Contractor	Work Sites	Construction period of Advance Works and Main Works of Phase 1A	EIAO-TM, NCO

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Ecological		r	r	1	I	
S4.2.1.1	Solid dull green noise/visual barriers of at least 2m high shall be erected and maintained between active works area and all areas of ecological importance.	Minimize noise and human disturbances during construction phase.	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM
\$4.2.1.2	Avoid unnecessary lighting.	Minimize mortality impacts on birds.	Design / Contractor/ Plant Operator	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM
S4.2.1.3	Good construction site practice to minimise dust generation should be followed on all construction sites. Measures to avoid, minimise and mitigate impacts on air quality are detailed in this schedule	Minimize dust generation from construction sites.	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM
S4.2.1.4	<ul> <li>The following measures to avoid, minimise and mitigate impact on water quality during construction phase shall be implemented</li> <li>Temporary sewerage and drainage to be designed and installed to collect wastewater and prevent it from entering water bodies;</li> <li>Proper locations well away from nearby water bodies should be used for temporary storage of materials (i.e. equipment, filling materials, chemicals and fuel) and temporary stockpiles of construction debris and spoil, and these should be identified before commencement of works;</li> <li>To prevent muddy water entering nearby water bodies, work sites close to nearby water bodies should be isolated, using such items as sandbags or silt curtains with lead edge at bottom and properly supported props. Other protective measures should also be taken to ensure that no pollution or siltation occurs to the water gathering grounds of the work sites;</li> <li>Construction debris and spoil should be covered and/or properly disposed of as soon as possible to avoid these being washed into nearby water bodies;</li> <li>Proper locations for discharge outlets of temporary wastewater treatment facilities well away from sensitive receivers should be identified;</li> </ul>	Avoid, minimise and mitigate impact on water quality	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM

Advance Works for Shek Wu Hui Sewage Treatment Works – Further Expansion Phase 1A and Sewerage Works

		ty to September 2010)				
EM&A Ref.	<b>Recommended Mitigation Measures</b>	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Ecological	Impact					
	<ul> <li>Adequate lateral support should be erected where necessary in order to prevent soil/mud from slipping into water bodies;</li> <li>Site boundaries should be clearly marked and any works beyond the boundary strictly prohibited;</li> <li>Regular water monitoring and site audit should be carried out at adequate points along any watercourses where construction works are underway upstream within their catchments and also on the Ng Tung, Sheung Yue and Shek Sheung Rivers. If the monitoring and audit results show that pollution occurs, adequate measures including temporarily cessation of works should be considered;</li> <li>Excavation profiles should be properly designed and executed with attention to the relevant requirements for environment, health and safety;</li> <li>Where soil to be excavated is situated beneath the groundwater table, it may be necessary to lower the groundwater table, it may be necessary to lower the groundwater table by installing well points or similar means;</li> <li>Stockpiling sites should be lined with impermeable sheeting and bunded. Stockpiles should be properly covered by impermeable sheeting to reduce dust emission during dry season or contaminated run-off during rainy season. Watering should be avoided on stockpiles of contaminated soil to minimize contaminated runoff and construction materials should be properly covered and located away from nearby water bodies; and</li> <li>Supply of suitable clean backfill material after excavation, if required.</li> <li>Vehicles containing any excavated materials should be suitably covered to limit potential dust emissions or contaminated run-off, and truck bodies and tailgates should be sealed to prevent discharge during transport or during wet season;</li> <li>Speed control for the trucks carrying contaminated materials should be enforced;</li> <li>Vehicle wheel washing facilities at construction sites' exit points should be established and used, where necessary; and</li> </ul>					

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Water Qu	ality Impact					
\$5.2.2.1	Construction Site Runoff Practices and measures provided in the Practice Note for Professional Persons on Construction Site Drainage, (PROPECC PN1/94) should be followed where applicable.	Control construction runoff	Contractors	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM, WPCO, EIAO
\$5.2.2.2 	<ul> <li>Sewage from Workforce</li> <li>Portable chemical toilets and sewage holding tanks should be provided for handling the construction sewage generated by the workforce. A licensed Contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance.</li> <li>Notices should be posted at conspicuous locations to remind the workers not to discharge any sewage or wastewater into the nearby environment during the construction phase of the Project. Regular environmental audit on construction site should be conducted in order to provide an effective control of any malpractices and achieve continual improvement of environmental performance on site. It is anticipated that sewage generation during the construction phase of the Project would not cause water quality impact after undertaking all required measures</li> </ul>	Handling of site sewage	Contractors	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	EIAO-TM, WPCO, EIAO

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Waste Man						
\$6.2.2.1	<ul> <li>Good Site Practices and Waste Reduction Measures:</li> <li>Nomination of an approved person, such as a site manager, to be responsible for the implementation of good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site;</li> <li>Training of site personnel in site cleanliness, appropriate waste management procedures and concepts of waste reduction, reuse and recycling;</li> <li>Provision of sufficient waste disposal points and regular collection for disposal;</li> <li>Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers;</li> <li>Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors;</li> <li>An Environmental Management Plan (EMP) should be prepared by the contractor and submitted to the Engineer for approval.</li> </ul>	Minimize waste generation during construction	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	Waste Disposal Ordinance (WDO)
\$6.2.3.1	<ul> <li>Waste Reduction Measures:</li> <li>Segregate and store different types of waste in different containers, skip or stockpiles to enhance reuse or recycling of materials and their proper disposal;</li> <li>Proper storage and site practices to minimize the potential for damage and contamination of construction materials;</li> <li>Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste;</li> <li>Sort out demolition debris and excavated materials from demolition works to recover reusable/recyclable portions (i.e. soil, broken concrete, metal etc.); and</li> <li>Provide training to workers on the importance of appropriate waste management procedures, including waste reduction, reuse and recycling.</li> </ul>	Reduce waste generation	Contractor	Work Sites	Prior to the commencement of construction of Advance Works and Main Works of Phase 1A	WDO
\$6.2.4.1 - \$6.2.4.2	<ul> <li>Storage, Collection and Transportation of Waste Should any temporary storage or stockpiling of waste is required, recommendations to minimize the impacts include:</li> <li>Waste, such as soil, should be handled and stored well to ensure secure</li> </ul>	Minimize waste impacts arising from waste storage	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	WDO

Advance Works for Shek Wu Hui Sewage Treatment Works – Further Expansion Phase 1A and Sewerage Works

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Waste Ma				-	-	
	<ul> <li>containment, thus minimizing the potential of pollution;</li> <li>Stockpiling area should be provided with covers and water spraying system to prevent materials from wind-blown or being washed away; and</li> <li>Different locations should be designated to stockpile each material to enhance reuse.</li> <li>Remove waste in timely manner;</li> <li>Employ the trucks with cover or enclosed containers for waste transportation;</li> <li>Obtain relevant waste disposal permits from the appropriate authorities; and</li> </ul>					
\$6.2.5.2	<ul> <li>Disposal of waste should be done at licensed waste disposal facilities.</li> <li>C&amp;D Materials from Site Formation</li> <li>Maintain temporary stockpiles and reuse excavated fill material for backfilling;</li> <li>Carry out on-site sorting;</li> <li>Make provisions in the Contract documents to allow and promote the use of recycled aggregates where appropriate;</li> <li>Adopt "selective demolition" technique to demolish the existing structure and facilities with a view to recovering broken concrete effectively for recycling purpose, where possible; and</li> <li>Implement a trip-ticket system for each works contract to ensure that the disposal of C&amp;D materials are properly documented and verified.</li> </ul>	Minimize waste impacts from excavated and C&D materials	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	Land (Miscellaneous Provisions) Ordinance, WDO, ETWB TCW No. 19/2005
\$6.2.5.3	<ul> <li>C&amp;D Material from Buildings Demolition and New Building Construction</li> <li>The Contractor should recycle as much as possible of the C&amp;DM on-site. Public fill and C&amp;DM waste should be segregated and stored in different containers or skips to enhance reuse or recycling of materials and their proper disposal. For example, concrete and masonry can be crushed and used as fill, and steel reinforcing bar can be used by scrap steel mills. Different areas of the work sites should be designated for such segregation and storage.</li> <li>The use of wooden hoardings shall not be allowed. An alternative material, such as metal, aluminium or alloy etc, could be used.</li> <li>Government has developed a charging policy for the disposal of waste to landfill at present. It will provide additional incentive to reduce the volume of generated waste and ensure proper segregation to allow</li> </ul>	Minimize waste impacts from building demolition and new building construction	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	Land (Miscellaneous Provisions) Ordinance, WDO, ETWB TCW No. 19/2005

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
Waste Ma	nagement			-	-	
	<ul> <li>reuse of the inert material on site when implemented.</li> <li>In order to minimize the impacts of the demolition works, the generated wastes must be cleared as quickly as possible after demolition. Therefore, the demolition and clearance works should be undertaken simultaneously. To facilitate proper segregation of inert and non-inert C&amp;D material arising from demolition works, selective demolition method should be adopted.</li> </ul>					
S6.2.5.4	<ul> <li>Chemical Waste</li> <li>If chemical wastes are produced at the construction site, the Contractors should register with EPD as chemical waste producers.</li> <li>Chemical wastes should be stored in appropriate containers and collected by a licensed chemical waste contractor. Chemical wastes (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while the chemical waste that cannot be recycled should be disposed of at either the Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation</li> </ul>	Control the chemical waste and ensure proper storage, handling and disposal	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	Waste Disposal (Chemical Waste General) Regulation, Code of Practice on the Packaging, Labelling and Storage of Chemical Waste
\$6.2.5.5	<ul> <li>General Refuse</li> <li>General refuse should be stored in enclosed bins separately from construction and chemical wastes.</li> <li>Recycling bins should also be placed to encourage recycling.</li> <li>Preferably enclosed and covered areas should be provided for general refuse collection and routine cleaning for these areas should also be implemented to keep areas clean.</li> <li>A reputable waste collector should be employed to remove general refuse on a daily basis.</li> </ul>	Minimize production of the general refuse and avoid odour, pest and litter impacts	Contractor	Work Sites	Construction phase of Advance Works and Main Works of Phase 1A	WasteDisposal(ChemicalWasteGeneral)Regulation,Code ofPractice onthePackaging,Labelling and StorageofChemical Waste

EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measure	When to implement the measures?	What requirements or standards for the measure to achieve
	e and Visual			1	1	1
\$7.3.1.1	<ul> <li>Good Site Practices</li> <li>For areas unavoidably disturbed by the Project on a short term basis e.g. works areas, the general principle to try and restore these to their former state to suit future land use, should be adhered to.</li> <li>With regard to topsoil, where identified, it should be stripped, treated appropriately, and where suitable and practical stored for re-use in the construction of the soft landscape works such as roadside amenity strips, and open space sites.</li> </ul>	Minimize the impact to the landscape and visual	Contractor	Work Sites	Prior to construction and construction phase	
\$7.3.2.1	<ul> <li>MM4 - Tree Protection &amp; Preservation</li> <li>Existing trees to be retained within the Project Site should be carefully protected during construction. In particular Old and Valuable Trees (OVTs) will be preserved according to ETWB TC (Works) No. 29/2004. Detailed Tree Protection Specification shall be provided in the Contract Specification. Under this specification, the Contractor shall be required to submit, for approval, a detailed working method statement for the protection of trees prior to undertaking any works adjacent to all retained trees, including trees in Contractor's works areas. A detailed tree survey will be carried out for the Tree Removal Application (TRA) process which will be carried out at the later detailed design stage of the Project. The detailed tree survey will propose which trees should be retained, transplanted or felled and will include details of tree protection measures for those trees to be retained.</li> </ul>	Protect and Preserve Trees	Designer / Contractor	Work Sites	Prior to construction and construction phase	ETWB TCW No. 10/2013, 29/2004 and 3/2006
S7.3.2.1	<ul> <li>MM5 - Tree Transplantation</li> <li>Trees unavoidably affected by the Project works should be transplanted where practical. Trees should be transplanted straight to their final receptor site and not held in a temporary nursery as far as possible. A detailed Tree Transplanting Specification shall be provided in the Contract Specification, where applicable. Sufficient time for necessary tree root and crown preparation periods shall be allowed in the project programme. A detailed transplanting proposal will be submitted to relevant government departments for approval in accordance with ETWBTC 2/2004 and 3/2006 and final</li> </ul>	Transplant Trees where suitable for transplantation	Designer / Contractor	Work Sites where possible. Otherwise consider offsite locations	Prior to construction, construction phase and operation phase	WB TCW No. 10/2013, 3/2006 and 2/2004
