## **EXECUTIVE SUMMARY**

### **Introduction**

- A1. The Project, Integrated Waste Management Facility (IWMF), is a Designated Project under the Environmental Impact Assessment Ordinance (Cap. 499) (EIAO) and is currently governed by a Further Environmental Permit (FEP No. FEP-01/429/2012/A) for the construction and operation of the Project.
- A2. In accordance with the Updated Environmental Monitoring and Audit (EM&A) Manual for the Project, EM&A works for marine water quality, noise, waste management and ecology should be carried out by Environmental Team (ET), Acuity Sustainability Consulting Limited (ASCL), during the construction phase of the Project.
- A3. This is the 3<sup>rd</sup> Monthly EM&A Report, prepared by ASCL, for the Project summarizing the monitoring results and audit findings of the EM&A programme at and around Shek Kwu Chau (SKC) during the reporting period from 1 September 2018 to 30 September 2018.

### **Summary of Main Works Undertaken & Key Mitigation Measures Implemented**

- A4. Key activities carried out in this reporting period for the Project included the following:
- Marine Site Investigation Works
  - Coring of DCM samples conducted at site trial location
  - Collecting Marine Sediment Samples
  - DCM installation for DCM Site Trial Re-trial
  - Laying of Geotextile and Sand Blanket for DCM Injection Works
- A5. The major environmental impacts brought by the above construction activities include:
- Water quality impact from DCM installation
  - Disturbance and possible trapping of Finless Porpoise by silt curtains
- A6. The key environmental mitigation measures implemented for the Project in this reporting period associated with the construction activities include:
- Reduction of noise from equipment and machinery on-site;
  - Installation of silt curtains for DCM installation;
  - Sorting and storage of general refuse and construction waste;
  - Management of chemicals and avoidance of oil spillage on-site; and
  - Implementation of MMEZ (Marine Mammal Exclusion Zone) and inspection of enclosed environment within silt curtains as per DMPFP (Detailed Monitoring Programme of Finless Porpoise)

### **Summary of Exceedance & Investigation & Follow-up**

- A7. The EM&A works for construction noise, water quality, construction waste, coral, marine mammal and White-Bellied Sea Eagle (WBSE) were conducted during the reporting period in accordance with the Updated EM&A Manual.
- A8. No exceedance of the Action or Limit Levels in relation to the construction noise, construction waste, coral and WBSE monitoring was recorded in the reporting month.
- A9. Twenty nine of the water quality monitoring results for Suspended Solid (SS) obtained during the reporting period had exceeded the relevant Action or Limit Levels, where findings from investigations carried out immediately for each of the exceedance cases had showed that these exceedances were unrelated to the Project, except for the exceedances on 20, 27 and 29 September 2018, where the investigation is undergoing and the investigation results will be presented in the next monthly report.
- A10. No project-related Action Level & Limit Level exceedance was recorded from 1 to 19 and 24 September 2018.
- A11. Weekly site inspections of the construction works by ET were carried out on 4, 11, 20 and 26 September 2018 to audit the mitigation measures implementation status. Monthly joint site inspection was carried out on 20 September 2018 by ET and IEC. Observations have been recorded in the site inspection checklists and provided to the contractors together with the appropriate follow-up actions where necessary.

#### **Baseline Water Quality Monitoring during Wet Season**

- A12. Baseline marine water quality monitoring in wet season is being carried out from 13 August 2018 to 7 September 2018 at all fourteen water quality monitoring stations, which is located at and around SKC. Only the following construction activities were carried out during the baseline water quality monitoring:

- Ground Investigation Works for Marine Works
- Collect marine sediment samples
- Coring of DCM samples conducted at site trial location

All of the above construction activities shall not affect the Baseline Water Quality Monitoring results considering the limited scale and nature of works.

#### **Complaint Handling and Prosecution**

- A13. No project-related environmental complaint was received during the reporting period.
- A14. Neither notifications of summons nor prosecution was received for the Project.

#### **Reporting Change**

- A15. There were no changes to be reported that may affect the on-going EM&A programme.

#### **Summary of Upcoming Key Issues and Key Mitigation Measures**

- A16. Key activities anticipated in the next reporting period for the Project will include the following:

- Marine Site Investigation Works
- Coring of DCM samples conducted at site trial location
- Collecting Marine Sediment Samples
- DCM installation for DCM Site Trial Re-trial
- Laying of Geotextile and Sand Blanket for DCM Injection Works

A17. The major environmental impacts brought by the above construction activities will include:

- Water quality impact from laying of sand blanket
- Water quality impact from DCM installation
- Disturbance and possible trapping of Finless Porpoise by silt curtains

A18. The key environmental mitigation measures for the Project in the coming reporting period associated with the construction activities will include:

- Reduction of noise from equipment and machinery on-site;
- Installation of silt curtains for the sand blanket laying works and DCM installation works;
- Sorting, recycling, storage and disposal of general refuse and construction waste;
- Management of chemicals and avoidance of oil spillage on-site, especially under heavy rains and adverse weather; and
- Implementation of MMEZ and inspection of enclosed environment within silt curtains as per DMPFP

## 1. BASIC PROJECT INFORMATION

### 1.1 Background

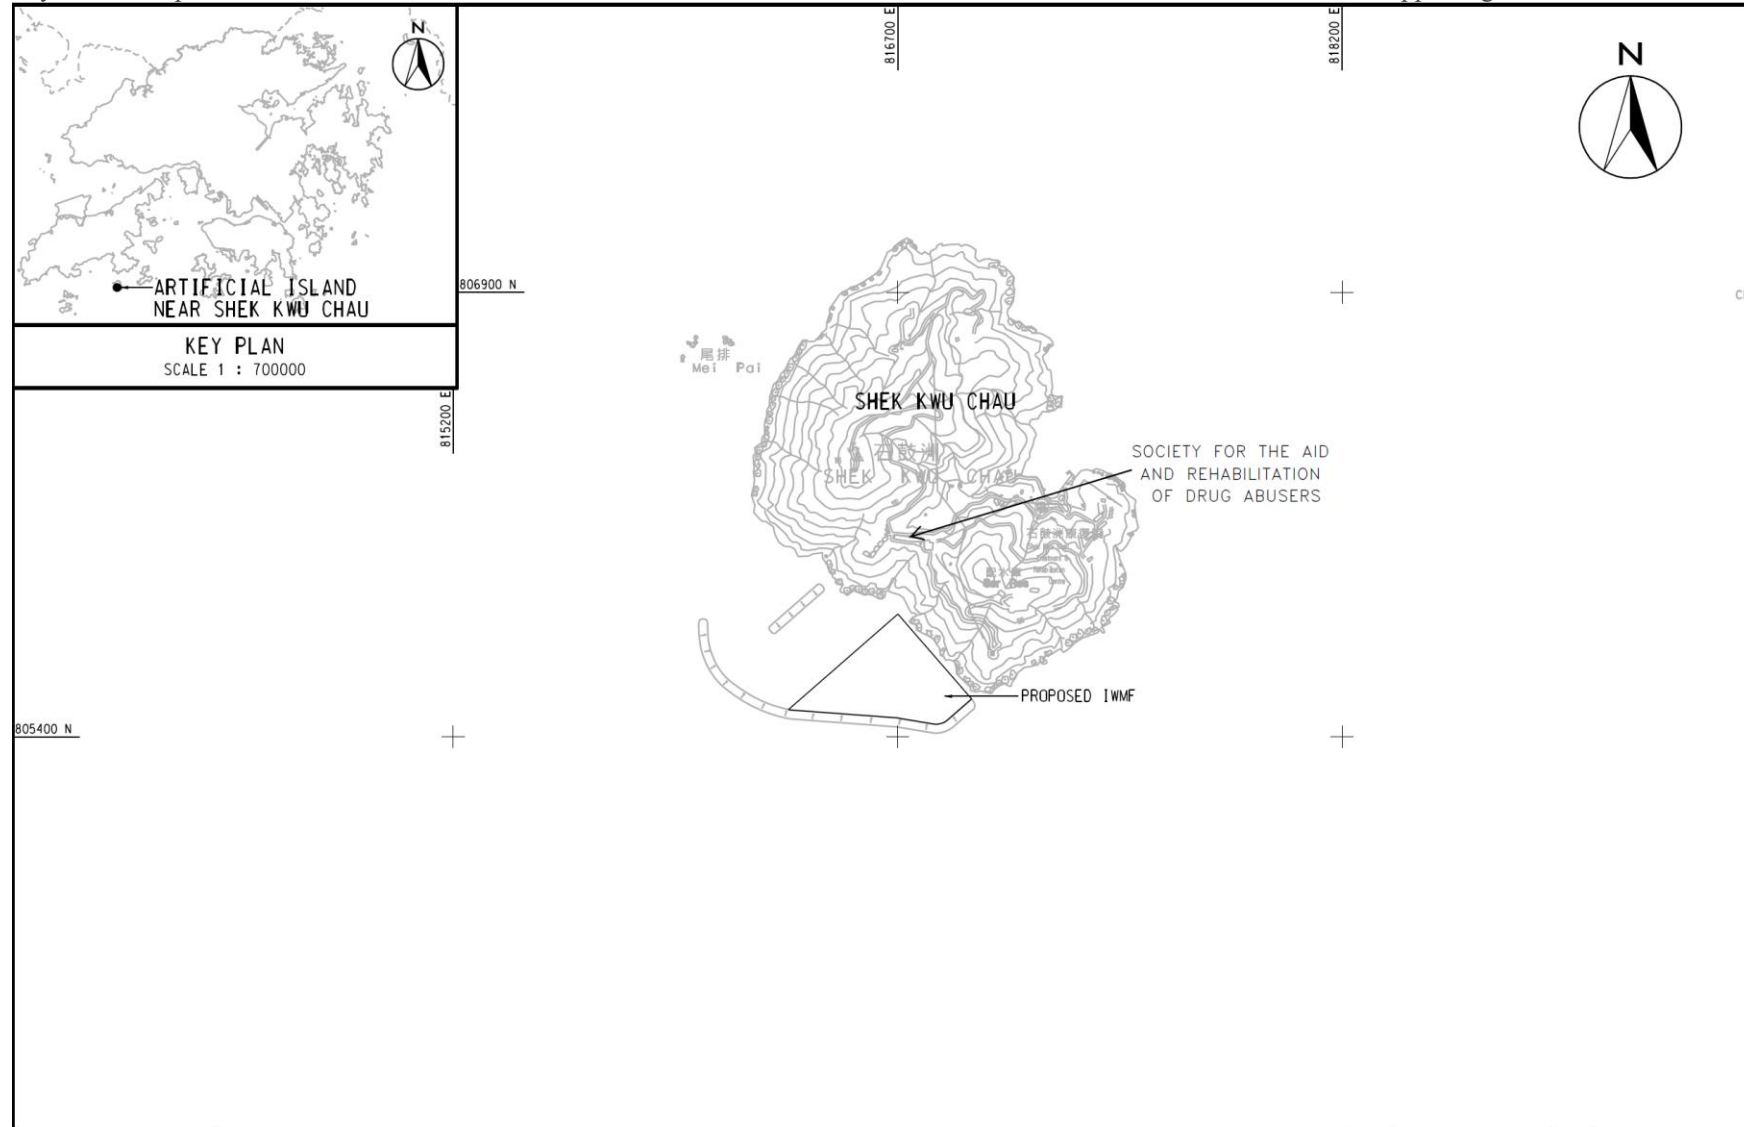

1.1.1 The Government of Hong Kong SAR will develop the Integrated Waste Management Facilities (IWMF) Phase 1 (hereafter “the Project”) with incineration to achieve substantial bulk reduction of unavoidable municipal solid waste (MSW) and to recover energy from the incineration process. The IWMF will be on an artificial island to be formed by reclamation at the south-western coast of Shek Kwu Chau. Keppel Seghers – Zhen Hua Joint Venture (KSZHJV) was awarded the contract under Contract No. EP/SP/66/12 Integrated Waste Management Facilities Phase 1 to construct and operate the Project.

1.1.2 An environmental impact assessment (EIA) study for the Project have been conducted and the EIA Report was approved under the Environmental Impact Assessment Ordinance on 17 January 2012. An Environmental Permit (EP) (EP No.: EP-429/2012) was granted to EPD on 19 January 2012 for the construction and operation of the Project. Subsequently, the EP was amended (EP No.: EP-429/2012/A) and a further EP (FEP) (EP No.: FEP-01/429/2012/A) was granted to the Keppel Seghers – Zhen Hua Joint Venture (KSZHJV) on 27 December 2017.

1.1.3 The key design and construction elements of the Project include the Design and the Works including but not limited to the design, engineering procurement, construction, testing and commissioning of the Facility including:

- Ground Treatment works;
- Seawall and Breakwater construction;
- Non-dredged Reclamation;
- Other Marine works and Harbour and Port Facilities,
- Site formation,
- Municipal Solid Waste (MSW) Treatment Processes,
- Energy Recovery for Power Generation and Surplus Electricity export,
- Wastewater treatment process,
- Desalination and water treatment process,
- Civil works;
- Building and Structural works,
- Electrical and Mechanical works,
- Building Services,
- Architectural and Landscaping works, and
- All other design and works required for the operation and maintenance of the Facility
- according to the Contract requirements

1.1.4 The location of the IWMF near Shek Kwu Chau (SKC) and general layout of IWMF are shown in **Figure 1.1** and **Figure 1.2** respectively.

**Figure 1.1 Location of the IWMF at the Artificial Island near SKC**

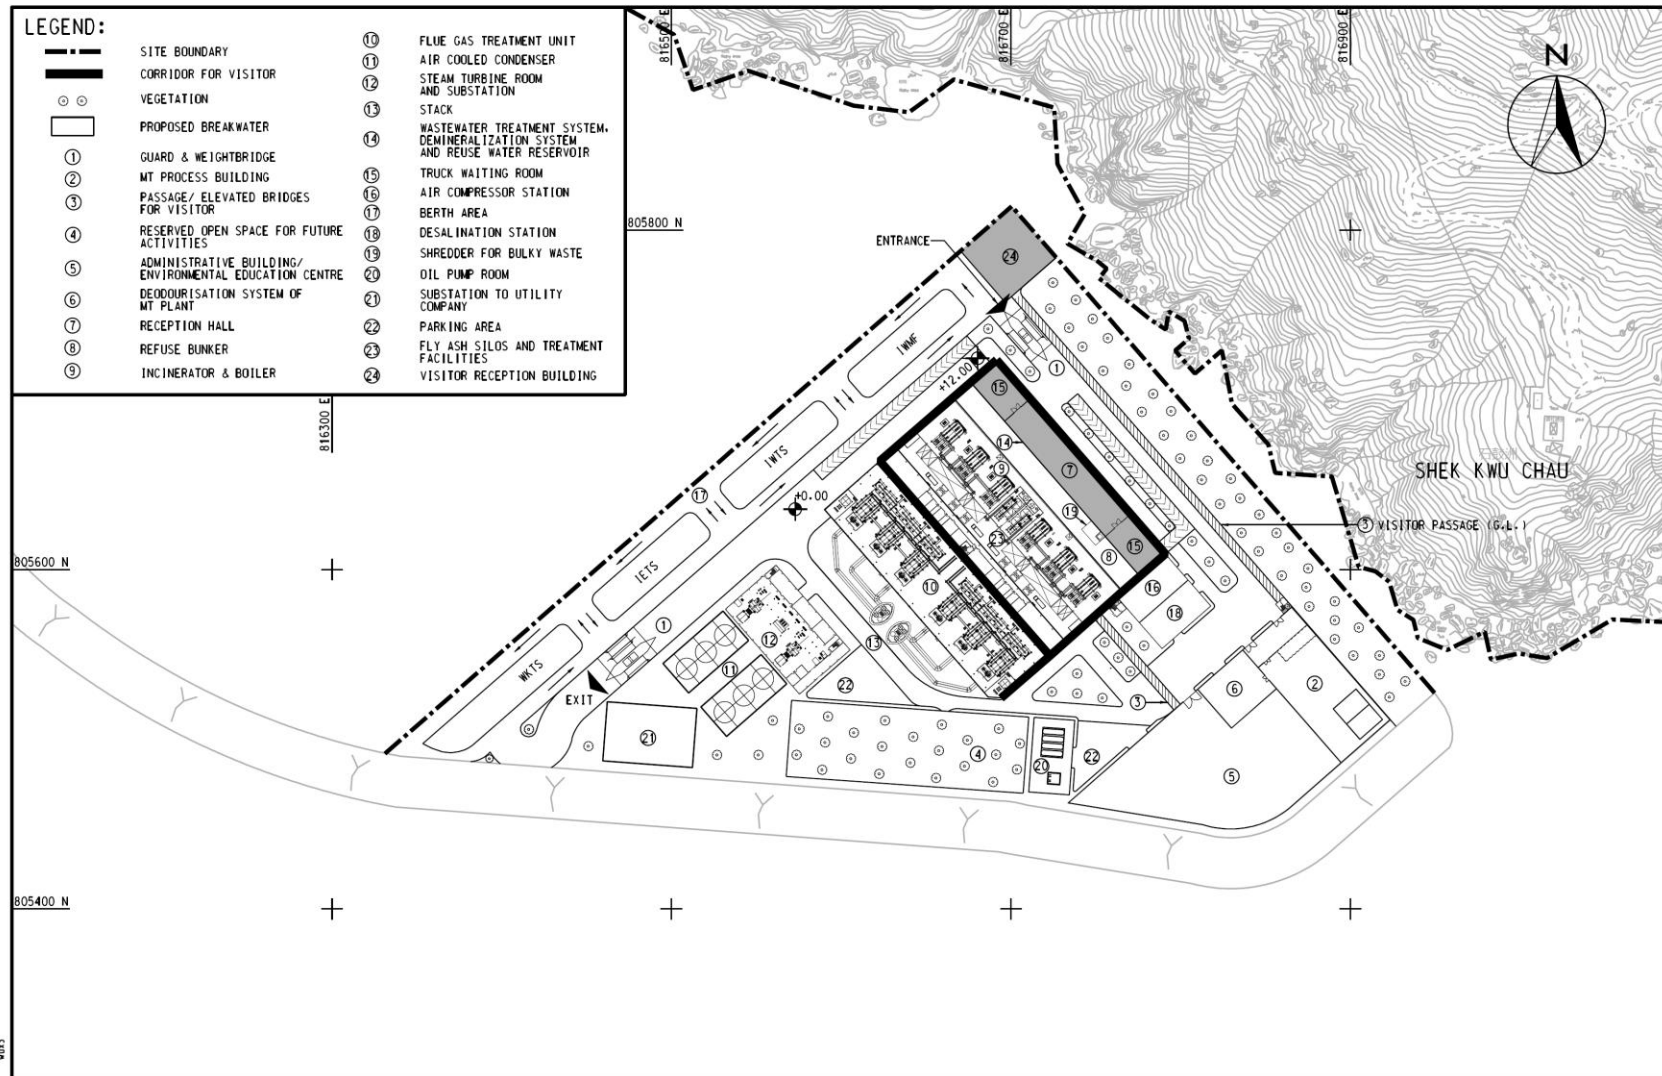

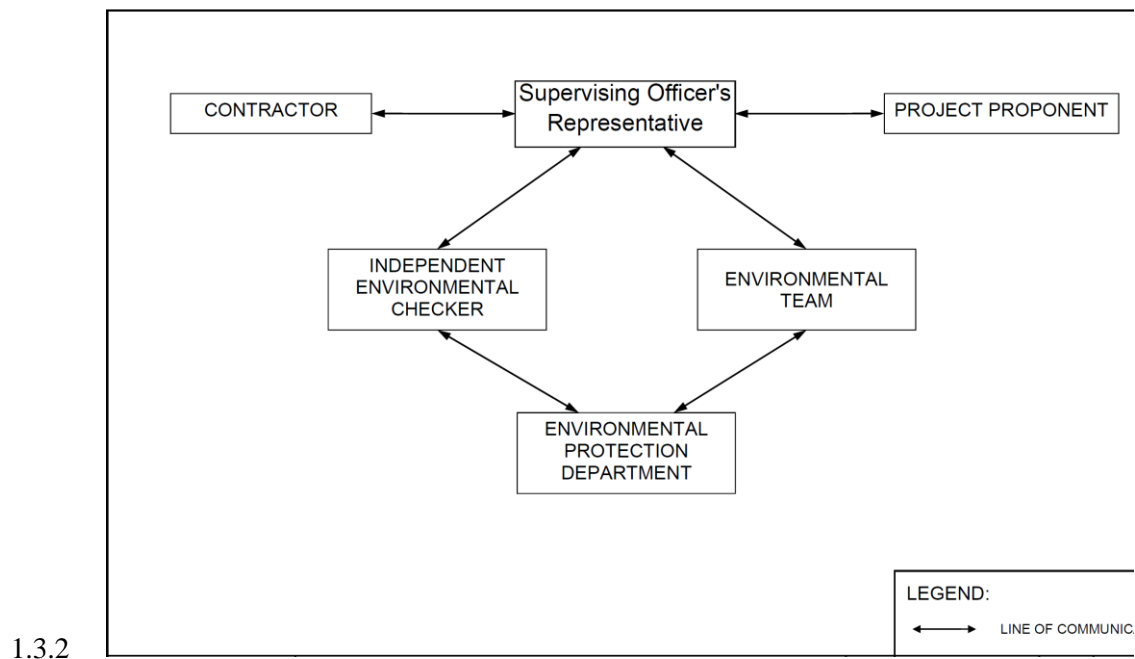

Figure 1.2 General Layout of the IWMF at the Artificial Island near SKC

## 1.2 The Reporting Scope

1.2.1 This is the 3<sup>rd</sup> Monthly EM&A Report for the Project which summarizes the key findings of the EM&A programme during the reporting period from 1 September 2018 to 30 September 2018.

## 1.3 Project Organization

1.3.1 The Project Organization structure for Construction Phase is presented in **Figure 1.3**.

**Figure 1.3 Project Organization Chart**

1.3.3 Contact details of the key personnel are presented in **Table 1.1** below:

**Table 1.1 Contact Details of Key Personnel**

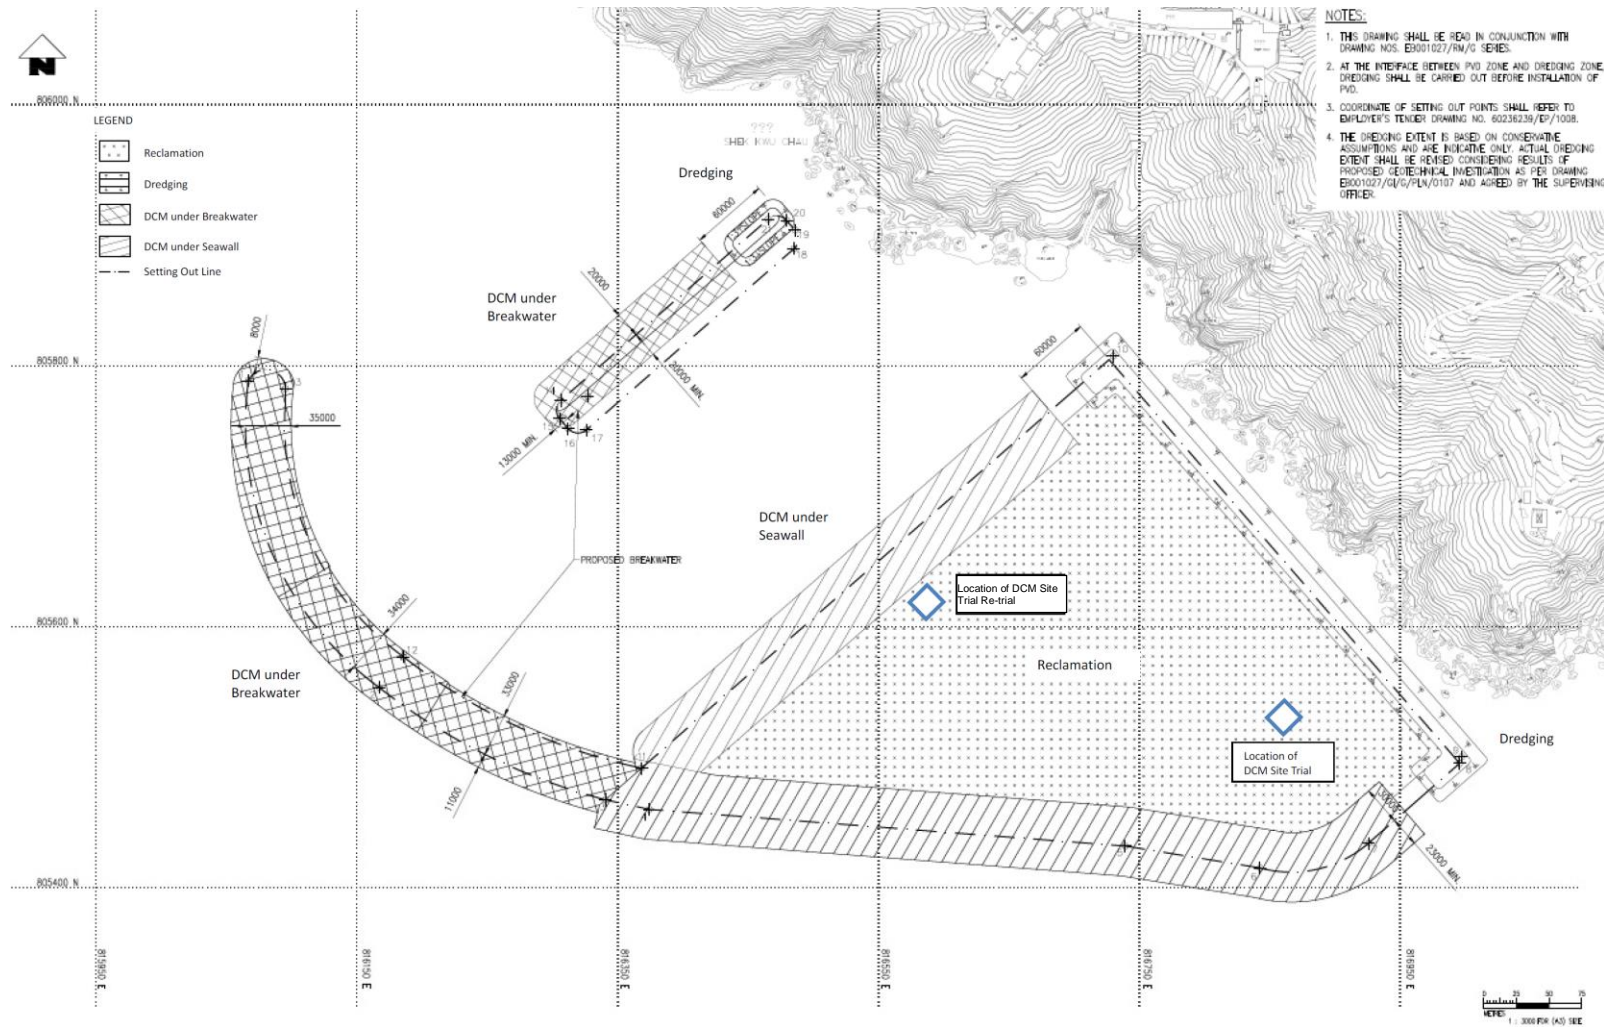

| Party                                    | Position                          | Name        | Telephone no. |
|--|-----------------------------------|-------------|---------------|
| Keppel Seghers – Zhen Hua Joint Venture  | Project Manager                   | Kenny Yu    | 2192-0606     |
| Acuity Sustainability Consulting Limited | Environmental Team Leader         | Gabriel Lam | 2698-6833     |
| ERM-Hong Kong, Limited                   | Independent Environmental Checker | Mandy To    | 2271-3000     |

## 1.4 Summary of Construction Works

1.4.1 Details of the major construction activities undertaken in this reporting period are shown in **Table 1.2** and **Figure 1.4** below. The construction programme is presented in **Appendix A**.

**Table 1.2 Summary of the Construction Activities Undertaken during the Reporting Month**

| <b>Location of works</b>            | <b>Construction activities undertaken</b>   | <b>Remarks on progress</b>  |
|-------------------------------------|---|---|
| Seawall and breakwater locations    | <ul style="list-style-type: none"> <li>• Marine site investigation works</li> </ul>       | <ul style="list-style-type: none"> <li>• 31 out of 51 drill holes were completed</li> </ul> |
| Location of DCM Site Trial          | <ul style="list-style-type: none"> <li>• Coring of DCM samples</li> </ul>                 | <ul style="list-style-type: none"> <li>• Completed</li> </ul>                               |
| Seawall locations                   | <ul style="list-style-type: none"> <li>• Collecting of Marine Sediment Samples</li> </ul> | <ul style="list-style-type: none"> <li>• 5 out of 7 drill holes were completed</li> </ul>   |
| Location of DCM Site Trial Re-trial | <ul style="list-style-type: none"> <li>• DCM installation</li> </ul>                      | <ul style="list-style-type: none"> <li>• On-going</li> </ul>                                |
| Seawall and breakwater locations    | <ul style="list-style-type: none"> <li>• Laying of Geotextile and Sand Blanket</li> </ul> | <ul style="list-style-type: none"> <li>• Commenced on 30 September 2018</li> </ul>          |

## 1.5 Summary of Environmental Status

1.5.1 A summary of the valid permits, licences, and /or notifications on environmental protection for this Project is presented in **Table 1.3**

**Table 1.3 Summary of the Status of Valid Environmental Licence, Notification, Permit and Documentations**

| Permit/ Licences/ Notification  | Reference            | Validity Period         | Remarks           |
|---|----------------------|-------------------------|-------------------|
| Variation of Environmental Permit   | EP-429/2012/A        | Throughout the Contract |                   |
| Further Environmental Permit  | FEP-01/429/2012/A    | Throughout the Contract |                   |
| Notification of Construction Works under the Air Pollution Control (Construction Dust) Regulation (Form NA) | Ref No.: 428778      | 15/12/2017-22/09/2024   |                   |
| Wastewater Discharge Licence  | -                    | -                       | Under Application |
| Chemical Waste Producer Registration  | WPN0017-933-K3301-01 | Throughout the Contract |                   |
|   | WPN5213-961-K3301-02 | Throughout the Contract |                   |
| Construction Noise Permit   | GW-RS0534-18         | 22/6/2018-20/12/2018    |                   |
| Billing Account for Disposal of Construction Waste  | A/C No.:7029768      | Throughout the Contract |                   |

1.5.2 The status for all environmental aspects is presented **Table 1.4**.

**Table 1.4 Summary of Status for Key Environmental Aspects under the Updated EM&A Manual**

| Parameters   | Status  |
|--|---|
| Water Quality  |   |
| Baseline Monitoring under Updated EM&A Manual and Detailed Plan on DCM | The baseline water quality monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under FEP Condition 3.4 |
| Impact Monitoring  | On-going  |
| Regular DCM Monitoring   | On-going  |
| Initial Intensive DCM Monitoring                                       | To be commenced according to the Detailed Plan on DCM   |
| Baseline Water Quality of wet season                                   | Being carried out from 13 August 2018 to 7 September 2018   |
| Noise  |   |
| Baseline Monitoring  | The baseline noise monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under FEP Condition 3.4         |

| Parameters  | Status  |
|---|---|
| Impact Monitoring   | On-going  |
| Waste Management  |   |
| Mitigation Measures in Waste Monitoring Plan  | On-going  |
| Coral   |   |
| Pre-translocation Survey and Coral Mapping  | The Coral Translocation Plan was submitted and approved by EPD under EP Condition 2.12  |
| Coral Translocation   | Completed on 28 March 2018  |
| Post-Translocation Coral Monitoring   | On-going, survey obstructed due to missing of translocated and tagged coral colonies after typhoons                                       |
| Pre-construction Coral Survey and Tagging   | Completed on 26 June 2018   |
| Tagged Coral Monitoring   | On-going, survey obstructed due to missing of tagged coral colonies after typhoons  |
| Marine Mammal   |   |
| Baseline Monitoring   | The baseline marine mammal monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under FEP Condition 3.4 |
| Impact Monitoring   | On-going  |
| White-bellied Sea Eagle   |   |
| Baseline Monitoring   | The baseline WBSE monitoring result has been reported in Baseline Monitoring Report and submitted to EPD under FEP Condition 3.4          |
| Impact Monitoring   | On-going  |
| Environmental Audit   |   |
| Site Inspection covering Measures of Air Quality, Noise Impact, Water Quality, Waste, Ecological Quality, Fisheries, Landscape and Visual | On-going  |
| Mitigation Measures in Marine Mammal Watching Plan (MMWP)   | On-going  |
| Mitigation Measures in Detailed Monitoring Programme on Finless Porpoise (DMPFP)  | On-going  |
| Mitigation Measures in Vessel Travel Details  | On-going  |

1.5.3 Other than the EM&A works by ET, environmental briefings, trainings and regular environmental management meetings were conducted, in order to enhance environmental awareness and closely monitor the environmental performance of the contractors.

1.5.4 The EM&A programme has been implemented in accordance with the recommendations presented in the approved EIA Report and the Updated EM&A Manual, except for the investigation on water quality monitoring exceedances on 20, 27 and 29 September 2018, where the investigation is undergoing and the investigation results will be presented in the next monthly report. A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix B**.

## 2. MARINE WATER QUALITY MONITORING

### 2.1 Water Quality Requirements

2.1.1 To ensure no adverse water quality impact, water quality monitoring is recommended to be carried out at the nearby water sensitive receivers (WSRs) during construction phase including proposed reclamation, breakwater construction, etc.

2.1.2 In accordance with the Updated EM&A Manual, impact water quality monitoring were conducted 3 days per week at mid-flood and mid-tide to obtain impact water quality levels at the eleven monitoring stations during general water quality monitoring and fourteen monitoring stations during regular DCM monitoring for the construction period.

### 2.2 Water Quality Parameters, Time, Frequency

2.2.1 Dissolved Oxygen (DO), Turbidity, Suspended Solids (SS), Salinity and pH have been undertaken at the eleven monitoring stations during general water quality monitoring. Beside the above parameters, monitoring for Total Alkalinity, Current Velocity and Current Direction have been undertaken at all fourteen monitoring stations (including S1, S2 and S3) during regular DCM monitoring. While the same parameters monitored during regular DCM monitoring would be undertaken at twelve immediate upstream and downstream area to the DCM works location during intensive DCM monitoring. Intensive DCM monitoring was not undertaken during the reporting period.

2.2.2 Current velocity and direction, DO , temperature, salinity, turbidity and pH have been measured in-situ and the SS, Total Alkalinity have been assayed in a HOKLAS laboratory.

2.2.3 In associate with the water quality parameters, other relevant data were also measured, such as monitoring location/position, time, water depth, sampling depth, tidal stages, weather conditions and any special phenomena or work underway nearby were also recorded. The monitoring schedule is provided in **Appendix C**.

2.2.4 Impact water quality monitoring was conducted 3 days per week in the reporting period. All parameters were monitored during mid-flood and mid-ebb tides at three water depths for general water quality monitoring. The interval between two sets of monitoring has not been less than 36 hours.

2.2.5 **Table 2.1** summarizes the monitoring parameters, frequency and duration of the impact water quality monitoring during construction phase.

**Table 2.1 Water Quality Monitoring Parameters, Frequency and Duration**

| Parameter, unit   | Frequency  | No. of Depths   |
|---|--|---|
| <ul style="list-style-type: none"> <li>• Water Depth(m)</li> <li>• Temperature(°C)</li> <li>• Salinity(ppt)</li> <li>• pH (pH unit)</li> <li>• Dissolved Oxygen (DO)(mg/L and % of saturation)</li> <li>• Turbidity(NTU)</li> <li>• Suspended Solids (SS),</li> </ul> | Impact monitoring:<br>3 days per week, at mid-flood<br>and mid-ebb tides | 3 water depths: 1m below sea surface, mid-depth and 1m above sea bed.<br><br>If the water depth is less than 3m, mid-depth sampling only.<br><br>If water depth less than 6m, mid-depth may be omitted. |

| Parameter, unit   | Frequency | No. of Depths |
|---|-----------|---------------|
| mg/L<br>• Total alkalinity<br>• Current velocity<br>• Direction |           |               |

### 2.3 Water Quality Monitoring Locations

2.3.1 Impact water quality monitoring was conducted at eleven monitoring locations (B1-B4, H1, C1, C2, F1, CR1, CR2 & M1) during general water quality monitoring and was conducted at fourteen water monitoring locations (B1-B4, H1, C1, C2, F1, S1-S3, CR1, CR2 & M1) during regular DCM monitoring, as shown in **Figure 2.1**.

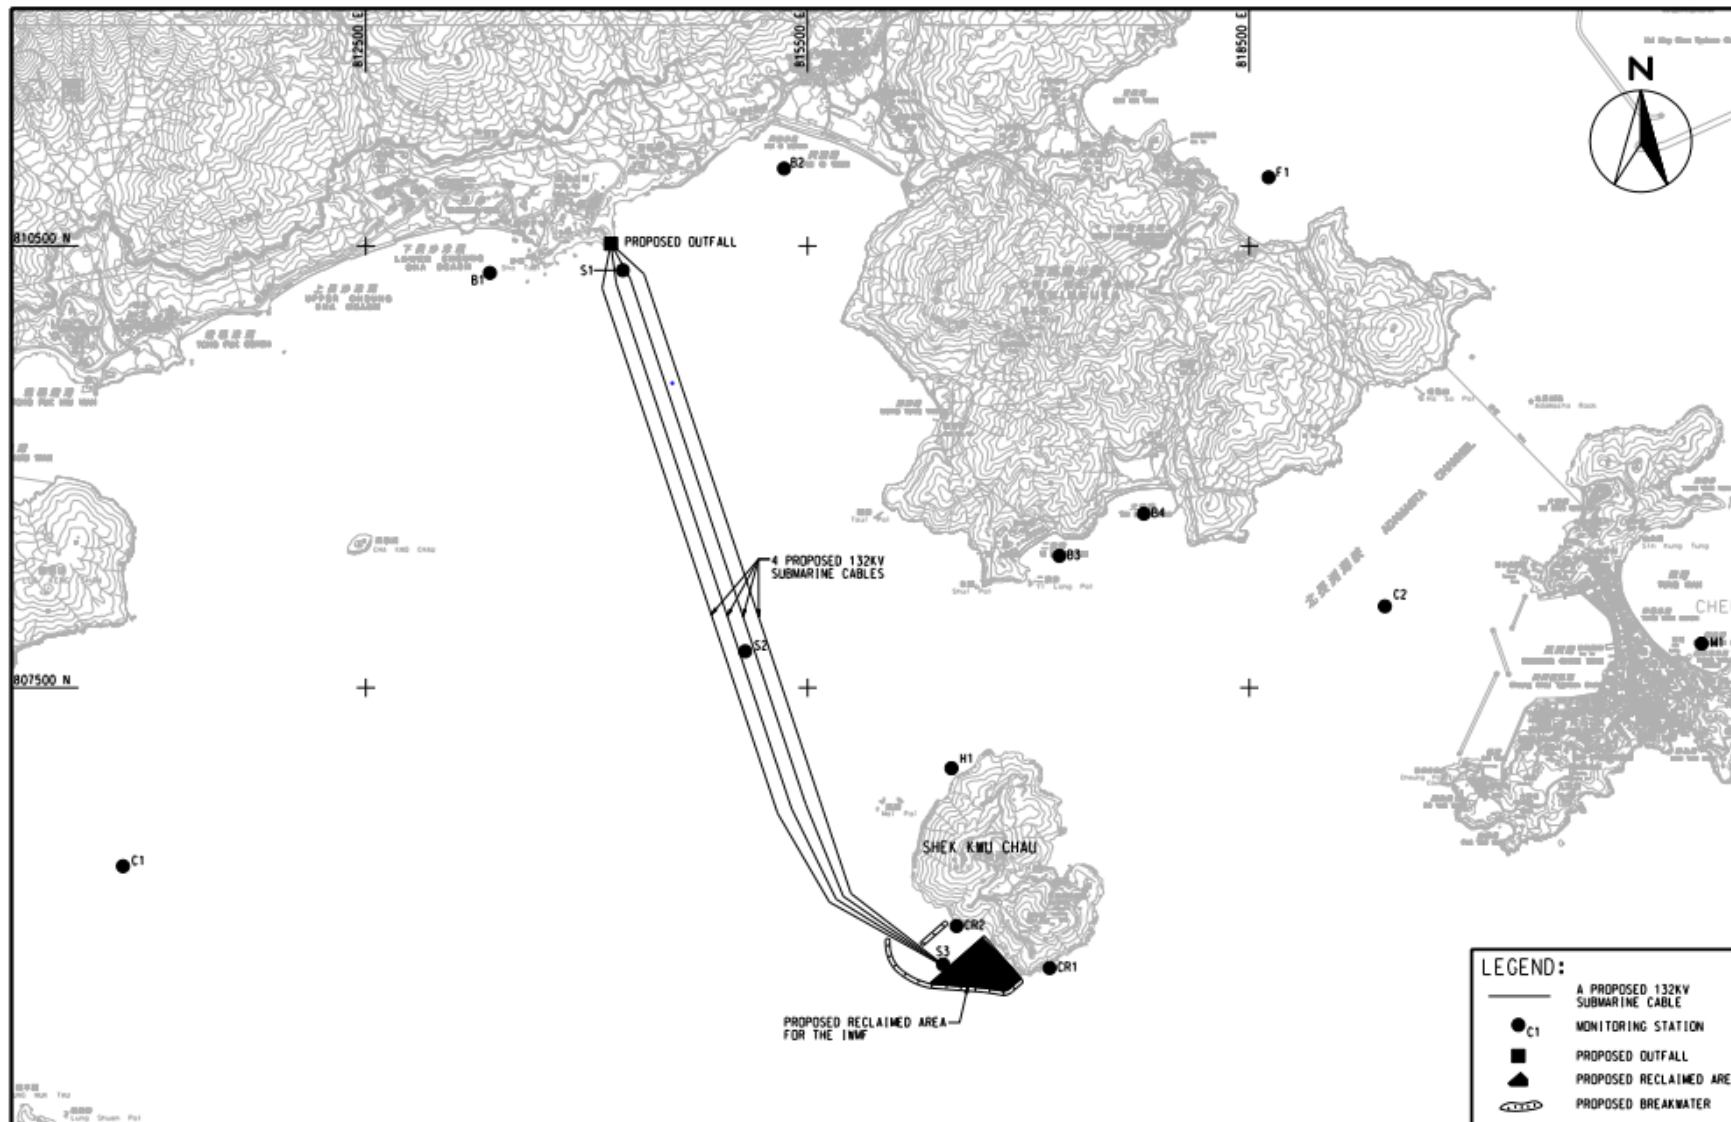

Figure 2.1 Water monitoring locations at Artificial Island near SKC

2.3.2 B1 to B4 are located at 4 beaches respectively at the southern shore of Lantau Island. Monitoring station H1 is located at the horseshoe crab habitat at northern SKC, while CR1 and CR2 are located at the coral communities at southwestern shore of SKC. Monitoring station F1 is located at the Cheung Sha Wan Fish Culture Zone while monitoring station M1 is located at Tung Wan at Cheung Chau. S1, S2 and S3 are located at the northern landing site, midway and southern landing site of the proposed submarine cable, respectively. S1, S2 and S3 are required for monitoring due to the laying of submarine cable. Control stations C1 and C2 at far field locations are for comparison.

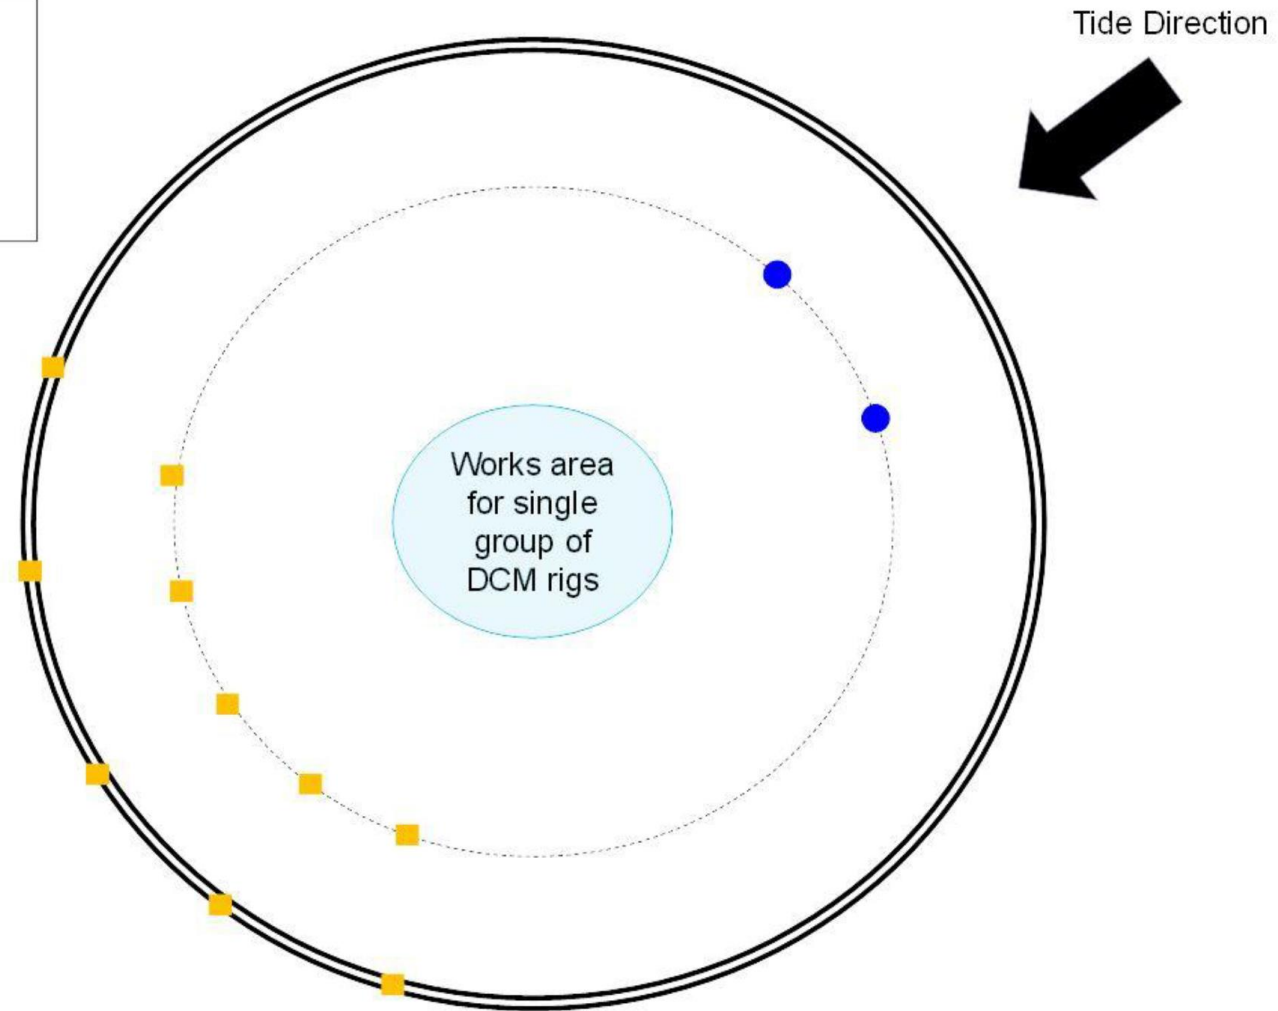

2.3.3 Fourteen monitoring stations are listed in **Table 2.2**:

**Table 2.2 - Locations of Marine Water Quality Stations**

| Monitoring station | Description                      | Easting | Northing |
|--------------------|----------------------------------|---------|----------|
| B1                 | Beach - Cheung Sha Lower         | 813342  | 810316   |
| B2                 | Beach - Pui O                    | 815340  | 811025   |
| B3                 | Beach - Yi Long Wan              | 817210  | 808395   |
| B4                 | Beach - Tai Long Wan             | 817784  | 808682   |
| H1                 | Horseshoe Crab - Shek Kwu Chau   | 816477  | 806953   |
| C1                 | Control Station                  | 810850  | 806288   |
| C2                 | Control Station                  | 819421  | 808053   |
| F1                 | Cheung Sha Wan Fish Culture Zone | 818631  | 810966   |
| S1                 | Submarine Cable Landing Site     | 814245  | 810335   |
| S2                 | Submarine Cable                  | 815076  | 807747   |
| S3                 | Submarine Cable Landing Site     | 816420  | 805621   |
| CR1                | Coral                            | 817144  | 805597   |
| CR2                | Coral                            | 816512  | 805882   |
| M1                 | Tung Wan                         | 821572  | 807799   |

2.3.4 For initial intensive DCM monitoring, mobile impact monitoring stations shall be located within fixed distances from the DCM group works area to obtain water quality information in the immediate upstream and downstream area. A total of 12 nos. monitoring stations will be deployed with the following arrangement and illustrated in **Figure 2.2**:

- Two monitoring stations upstream and at 150 m envelope of DCM group works area (Representative Control stations).
- Five monitoring stations downstream and at 150 m envelope of DCM group works area (Impact 1 stations).
- Five monitoring stations downstream and at 250 m envelope of DCM group works area (Impact 2 stations).
- Monitoring stations should be at least 50 m apart;
- Downstream monitoring stations should be perpendicular to the tidal direction.

Note: Drawing is not to scale

**Figure 2.2 Water monitoring locations during intensive DCM monitoring**

## 2.4 Impact Monitoring Methodology

- 2.4.1 General water quality monitoring was conducted three days per week, at mid-flood and mid-ebb tides, at the designated water quality monitoring stations during the reporting period.
- 2.4.2 The interval between 2 sets of monitoring was not less than 36 hours. Sampling was collected at three water depths, namely, 1m below water surface, mid-depth and 1m above seabed, except where the water depth is less than 6m, the mid-depth was omitted. If the water depth was less than 3m, only the mid-depth station was monitored.
- 2.4.3 All observations and results were recorded in the data record sheets in **Appendix D**. Duplicate in-situ measurements and water sampling were carried out in each sampling event. The monitoring probes were retrieved out of water after the first measurement and then redeployed for the second measurement. When the difference in value between the first and second readings of DO or turbidity is more than 25% of the value of the first reading, the reading was discarded and further readings were taken.

### In-situ Measurement

- 2.4.4 Levels of DO, pH, temperature, turbidity and salinity would be measured in-situ by portable and weatherproof measuring instrument, e.g. YSI ProDSS and Horiba U-53 Multiparameter complete with cable and sensor. (Refer to <http://www.ysi.com/ProDSS> for YSI ProDSS technical specification and <http://www.horiba.com/process-environmental/products/water-treatment-environment/details/u-50-multiparameter-water-quality-checker-368/> for Horiba U-53 technical specification ). Water current velocity and Water Current direction would be measured by portable and weatherproof current meter, e.g. SonTek Hydrosurveyor (Refer to <https://www.sontek.com/media/pdfs/riversurveyor-s5-m9-brochure.pdf> for SonTek Hydrosurveyor M9 technical specification). Parameters measured by in-situ measurement is tabulated in **Table 2.3**

**Table 2.3 - Parameters Measured by In-situ Measurement**

| Parameter               | Resolution | Range       |
|-------------------------|------------|-------------|
| Temperature             | 0.1 °C     | -5-70 °C    |
| Dissolved Oxygen (DO)   | 0.01 mg/L  | 0-50.0 mg/L |
| Turbidity               | 0.01 NTU   | 0-1000 NTU  |
| pH                      | 0.01 pH    | pH 0-14     |
| Salinity                | 0.01 ppt   | 0-40 ppt    |
| Water Current Velocity  | 0.001m/s   | ±20m/s      |
| Water Current Direction | ±1°        | ±2°         |

### Laboratory Analysis

- 2.4.5 Analysis of Total Alkalinity and SS should be carried out in a HOKLAS accredited laboratory, as shown in **Appendix E**. Sufficient water samples shall be collected at the monitoring stations for carrying out the laboratory determinations. The determination work should be started within 24 hours after collection of the water samples. Analytical methods and detection limits for SS and total alkalinity are present in **Table 2.4**.

**Table 2.4 - Analytical Methods Applied to Water Quality Samples**

| Parameter            | Analytical method        | Detection Level |
|----------------------|--------------------------|-----------------|
| Suspended Solids, SS | APHA 2540 D <sub>i</sub> | 1 mg/L          |
| Total Alkalinity     | APHA 2320                | 0.01 mg/L       |

Footnote:

- i. "APHA 2540 D" stands for American Public Health Association Standard Methods for the Examination of Water and Wastewater, 23<sup>rd</sup> Edition.

### Field Log

2.4.6 Other relevant data was recorded, such as: monitoring location / position, time, water depth, weather conditions and any special phenomena underway near the monitoring station.

## 2.5 Baseline Water Quality Monitoring for Wet Season

2.5.1 Baseline marine water quality monitoring was undertaken in accordance with the requirements provided in the EM&A Manual between 26 February and 26 March 2018 during the dry season (October - March). A Baseline Monitoring Report was submitted on 14 June 2018 to fulfil Condition 3.3 of the FEP. It is proposed to supplement the marine water quality monitoring data in wet season (April – September) so as to further improve the baseline data to take into account potential variations within a year due to natural fluctuations and also enhance the representativeness of the water quality monitoring parameters.

2.5.2 A detailed Proposal for Review Baseline Marine Water Quality prepared by KSZHJV has been submitted to EPD and approved on 22 August 2018 on the above proposed actions as attached in **Appendix Q**.

## 2.6 Monitoring Equipment

2.6.1 Equipment used in the impact water quality monitoring programme is summarized in **Table 2.5** below. Calibration certificates for the water quality monitoring equipment are attached in **Appendix F**.

**Table 2.5 Impact Water Quality Monitoring Equipment**

| Monitored Parameter                         | Equipment              | Brand and Model                         |
|---|------------------------|---|
| DO, Temperature, Salinity, pH and Turbidity | Multi-functional Meter | Horiba U-53                             |
| Coordinates                                 | Positioning Equipment  | Garmin GPSMAP 78s                       |
| Water depth                                 | Water Depth Detector   | Hummingbird 160 Portable                |
| SS  | Water Sampler          | Wildco 2 L Water Sampler with messenger |

### 2.6.2 Dissolved Oxygen and Temperature Measuring Equipment

The instrument was a portable and weatherproof DO probe mounted on the multi-functional meter complete with cable and sensor, and use a DC power source. The equipment was capable of measuring:

- A DO level in the range of 0 - 50 mg/L; and
- Temperature of -5 - 70 degree Celsius.

### 2.6.3 Turbidity Measurement Instrument

The instrument was a portable and weatherproof turbidity-measuring probe mounted on the multi-functional meter using a DC power source. It had a photoelectric sensor capable of measuring turbidity between 0 - 1000 NTU.

### 2.6.4 pH Measurement Instrument

The probe was consisted of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device mounted on the multi-functional meter. It was readable to 0.1 pH in a range of 0 to 14. Standard buffer solutions of at least pH 7 and pH 10 were used for calibration of the instrument before and after use.

### 2.6.5 Salinity Measurement Instrument

A portable salinometer mounted on the multi-functional meter capable of measuring salinity in the range of 0-40 parts per thousand (ppt) was provided for measuring salinity of the water at each monitoring location.

### 2.6.6 Sampler

The water sampler comprised a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.

### 2.6.7 Sample Containers and Storage

Water samples for SS were stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen) and delivered to the laboratory and analysed as soon as possible after collection. Sufficient volume of samples was collected to achieve the detection limit stated in **Table 2.4**.

### 2.6.8 Water Depth Detector

A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station. This unit could either be hand held or affixed to the bottom of the work boat, if the same vessel is to be used throughout the monitoring programme.

### 2.6.9 Monitoring Position Equipment

Hand-held digital Differential Global Positioning System (DGPS) with way point bearing indication and Radio Technical Commission for maritime (RTCM) Type 16 error message 'screen pop-up' facilities (for real-time auto-display of error messages and DGPS corrections from the Hong Kong Hydrographic Office) was provided and used to ensure that the water sampling locations were correct during the water quality monitoring work.

## 2.7 Maintenance and Calibration

- 2.7.1 The multi-functional meters were checked and calibrated before use. Multi-functional meters were certified by a laboratory accredited under HOKLAS or any other

international accreditation scheme, and subsequently re-calibrated at three monthly intervals throughout all stages of the water quality monitoring. Responses of sensors and electrodes were checked with certified standard solutions before each use. Wet bulb calibration for a DO meter was carried out before commencement of monitoring and after completion of all measurements each day. Calibration was not conducted at each monitoring location as daily calibration is adequate for the type of DO meter employed.

2.7.2 Sufficient stocks of spare parts were provided and maintained for replacements when necessary. Backup monitoring equipment was prepared for uninterrupted monitoring during equipment maintenance or calibration during monitoring.

## 2.8 Action and Limit Levels

2.8.1 The Action and Limit Levels have been set based on the derivation criteria specified in the Updated EM&A Manual and Detailed DCM Plan, as shown in **Table 2.6** below.

**Table 2.6 Criteria of Action and Limit Levels for Water Quality**

| Parameters                                  | Action  | Limit   |
|---|---|---|
| <b>Construction Phase Impact Monitoring</b> |   |   |
| DO in mg/L                                  | ≤ 5 %-ile of baseline data  | ≤ 4   |
| SS in mg/L                                  | ≥ 95 %-ile of baseline data or 120% of control station's SS at the same tide of the same day of measurement, whichever is higher        | ≥ 99 %-ile of baseline data or 130% of control station's SS at the same tide of the same day of measurement, whichever is higher        |
| Turbidity in NTU                            | ≥ 95 %-ile of baseline data or 120% of control station's turbidity at the same tide of the same day of measurement, whichever is higher | ≥ 99 %-ile of baseline data or 130% of control station's turbidity at the same tide of the same day of measurement, whichever is higher |
| Temperature in °C                           | 1.8°C above the temperature recorded at representative control station at the same tide of the same day                                 | 2°C above the temperature recorded at representative control station at the same tide of the same day                                   |
| Total Alkalinity in mg/L                    | ≥ 95 %-ile of baseline data or 120% of representative control station at the same tide of the same day, whichever is higher             | ≥ 99 %-ile of baseline data or 130% of representative control station at the same tide of the same day, whichever is higher             |

2.8.2 Based on the baseline monitoring data and the derivation criteria specified above, the Action/Limit Levels have been derived and are presented in **Table 2.7**.

**Table 2.7 Derived Action and Limit Levels for Water Quality Monitoring**

| Parameters                                  | Action | Limit |
|---|--------|-------|
| <b>Construction Phase Impact Monitoring</b> |        |       |

| Parameters               | Action  | Limit   |
|--------------------------|---|---|
| DO in mg/L               | $\leq 7.13$   | $\leq 4$  |
| SS in mg/L               | $\geq 8$ or 120% of control station's SS at the same tide of the same day of measurement, whichever is higher                 | $\geq 10$ or 130% of control station's SS at the same tide of the same day of measurement, whichever is higher                |
| Turbidity in NTU         | $\geq 5.6$ or 120% of control station's turbidity at the same tide of the same day of measurement, whichever is higher        | $\geq 12.81$ or 130% of control station's turbidity at the same tide of the same day of measurement, whichever is higher      |
| Temperature in °C        | 1.8°C above the temperature recorded at representative control station at the same tide of the same day                       | 2°C above the temperature recorded at representative control station at the same tide of the same day                         |
| Total Alkalinity in mg/L | $\geq 116$ or 120% of control station's Total Alkalinity at the same tide of the same day of measurement, whichever is higher | $\geq 118$ or 130% of control station's Total Alkalinity at the same tide of the same day of measurement, whichever is higher |

Notes:

- i. "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
- ii. For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- iii. For turbidity, SS and Salinity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

2.8.3 If exceedances were found during water quality monitoring, the actions in accordance with the Event and Action Plan shall be carried out according to **Appendix G**.

## 2.9 Monitoring Results and Observations

2.9.1 DCM injection works for DCM Site Trial Re-trial was commenced on 11 September 2018, and then suspended on 12 September 2018 due to typhoons, and then resumed on 19 September 2018, and then paused on 24 & 25 September 2018 due to Mid-Autumn Festival, and now resumed since 26 September 2018. During the reporting period, general water quality monitoring was conducted on 3, 5, 7, 10, 12, 14, 18 and 24 September 2018 at all the eleven monitoring stations. Regular DCM monitoring including monitoring station S1, S2 and S3 were conducted on 20, 22, 27 and 29 September 2018. Monitoring results of 7 key parameters: Salinity, DO, turbidity, SS, pH, temperature and total alkalinity in this reporting month, are summarized in **Table 2.8**, and details results are presented in **Appendix D**.

**Table 2.8 Summary of Impact Water Quality Monitoring Results**

| Locations |      | Parameters     |                         |        |      |                 |                         |            |                                    |
|-----------|------|----------------|-------------------------|--------|------|-----------------|-------------------------|------------|------------------------------------|

Notes:

- i. "Avg", "Min" and "Max" is the average, minimum and maximum respectively of the data from measurements conducted under mid-flood and mid-ebb tides at three water depths, except that of DO where the data for "Surface & Middle" and "Bottom" are calculated separately.
- ii. Total alkalinity test only conducted on 20/09/2018, 22/09/2018, 27/09/2018 and 29/09/2018

2.9.2 Addition monitoring was carried out during the reporting period for Salinity, DO, turbidity, SS, pH and temperature at S1, S2 and S3 for the purpose of baseline monitoring for wet season, **Table 2.8** only shows the impact monitoring results while the baseline monitoring results for wet season will be presented in a separate submission.

- 2.9.3 Monitoring originally scheduled on 12 and 19 September 2018 were cancelled due to the typhoons, monitoring after 19 September has therefore been shifted for one day as shown in **Appendix C**.
- 2.9.4 The weather conditions during the monitoring period were mainly fine and cloudy. Sea conditions for the majority of monitoring days were either slight or moderate. No major pollution source and extreme weather which might affect the results were observed during the impact monitoring.
- 2.9.5 During the impact monitoring period for September 2018, twenty nine exceedances of the Action and Limit for SS were recorded. Investigations were conducted and results indicated the SS exceedances were not attributable to the Project works, except for the exceedances on 20, 27 and 29 September 2018, where the investigation is undergoing and the investigation results will be presented in the next monthly report. Details of the exceedance are presented in **Section 8**.
- 2.9.6 Implemented mitigation measures minimizing the adverse impacts on water are listed in the implementation schedule given in **Appendix B**.

### 3. NOISE MONITORING

#### 3.1 Monitoring Requirements

3.1.1 To ensure no adverse noise impact, noise monitoring is recommended to be carried out at the nearby noise sensitive receivers (NSRs) during construction phase.

3.1.2 In accordance with the Updated EM&A Manual, baseline noise level at the noise monitoring stations were established as presented in the Baseline Monitoring Report. Impact noise monitoring was conducted once per week in the form of 30-minutes measurements  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  levels recorded at each monitoring station between 0700 and 1900 on normal weekdays.

#### 3.2 Noise Monitoring Parameters, Time, Frequency

3.2.1 Impact noise monitoring was conducted weekly in the reporting period between 0700-1900 on normal weekdays.

3.2.2 Construction noise level measured in terms of the A-weighted equivalent continuous sound pressure level ( $L_{Aeq}$ ).  $L_{eq\ 30min}$  was used as the monitoring parameter for the time period between 0700 and 1900 hours on normal weekdays. **Table 3.1** summarizes the monitoring parameters, frequency and duration of the impact noise monitoring. The monitoring schedule is provided in **Appendix C**.

**Table 3.1 Noise Monitoring Parameters, Time, Frequency and Duration**

| Monitoring Station                 | Time  | Duration   | Parameters                     |
|------------------------------------|---|--|--------------------------------|
| M1/ N_S1,<br>M2/ N_S2,<br>M3/ N_S3 | Daytime:<br>0700-1900 hrs<br>(during normal<br>weekdays, not include<br>Sunday or general<br>holiday) | Once per week<br>$L_{eq\ 5min}/L_{eq\ 30min}$<br>(average of 6<br>consecutive $L_{eq\ 5min}$ ) | $L_{eq}$ , $L_{10}$ & $L_{90}$ |

#### 3.3 Noise Monitoring Locations

3.3.1 Three noise monitoring locations for impact monitoring at the nearby sensitive receivers are shown in **Figure 3.1**

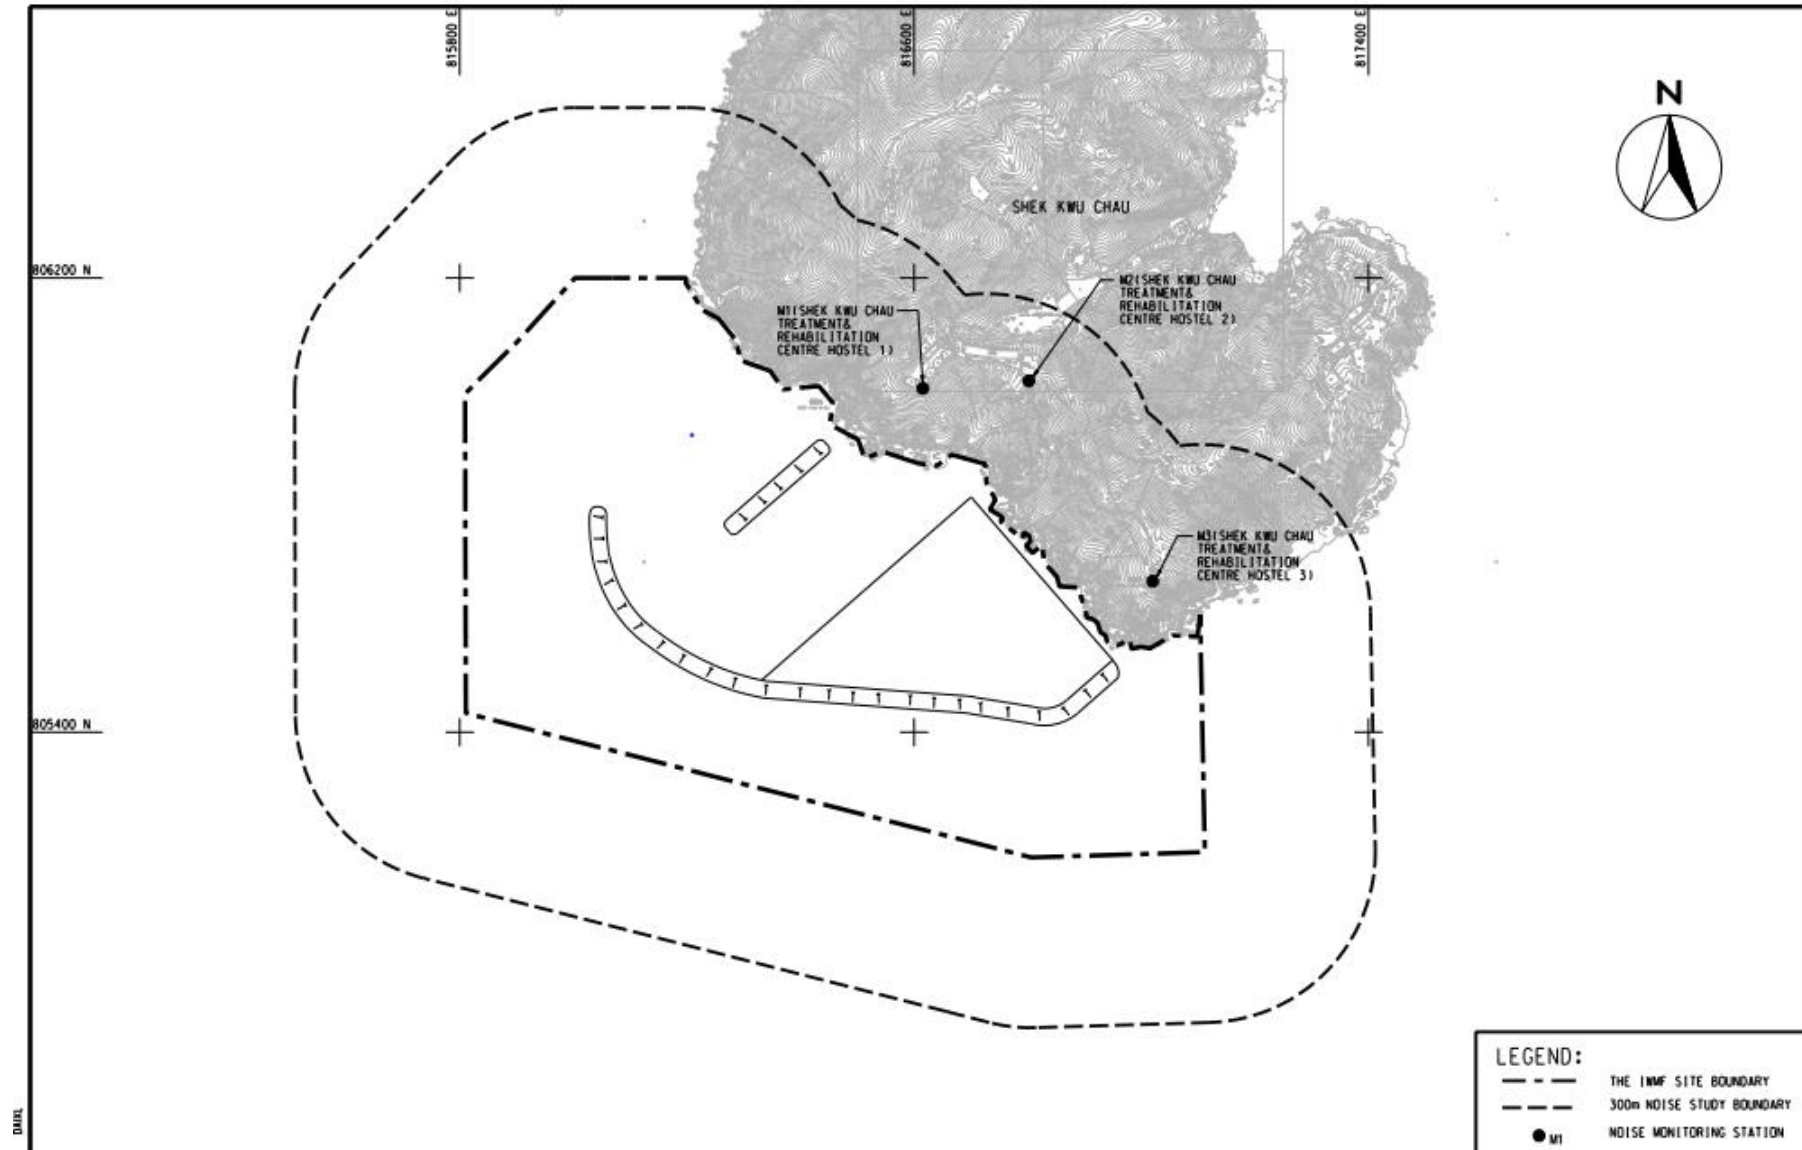

Figure 3.1 Noise monitoring locations at SKC

3.3.2 M1, M2 and M3 are Shek Kwu Chau Treatment and Rehabilitation Centre Hostel 1, 2 and 3 respectively of The Society for the Aid and Rehabilitation of Drug Abusers (SARDA) located at southern part of Shek Kwu Chau.

3.3.3 Measurement at M1, M2 and M3 were conducted at a point 1m from the exterior of the sensitive receivers building façade and at a position 1.2m above the ground. The noise monitoring stations are summarized in **Table 3.2** below.

**Table 3.2 Noise Monitoring Location**

| Station | NSR ID in EIA Report | Noise Monitoring Location                                | Type of sensitive receiver(s) | Measurement Type |
|---------|----------------------|--|-------------------------------|------------------|
| M1      | N_S1                 | Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 1 | Residential                   | Façade           |
| M2      | N_S2                 | Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 2 | Residential                   | Façade           |
| M3      | N_S3                 | Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 3 | Residential                   | Façade           |

#### 3.4 Impact Monitoring Methodology

3.4.1 At each designated monitoring location, measurements of six 5-minutes A-weighted equivalent sound pressure level [ $L_{eq, 5min}$ ] was carried out between 0700 and 1900 for daytime measurements on a normal weekdays (exclude Sunday or general holiday). The measured six impact noise levels at each monitoring location shall then be averaged in logarithmic scale and expressed in terms of the 30 minutes A-weighted equivalent continuous sound pressure level ( $L_{eq, 30min}$ ) for the time period between 0700 and 1900 hours on normal weekdays.

3.4.2 The monitoring procedures are as follows:

- The microphone head of the lead level meter was normally positioned 1m exterior of the noise sensitive façade and lowered sufficiently so that the building’s external wall acts as a reflecting surface.
- The battery condition was checked to ensure good functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - Frequency weight: A
  - Time weighting: Fast
  - Measurement time: 5 minutes
- Prior to and after noise measurement, the meter was calibrated using the calibrator for 94.0 dB at 1000Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement was considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.
- Noise monitoring was carried out for 30 mins by sound level meter. At the end of the monitoring period, noise levels in term of  $L_{eq}$ ,  $L_{10}$ , and  $L_{90}$  were recorded. In addition, site conditions and noise sources were recorded when the equipment were checked and inspected.
- All the monitoring data within the sound level meter system was downloaded through the computer software.

#### 3.5 Monitoring Equipment

- 3.5.1 Integrated sound level meter was used for the noise monitoring. The meter shall be in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications.
- 3.5.2 Equipment used in the impact noise monitoring programme is summarized in **Table 3.3** below. Calibration certificates for the noise monitoring equipment are attached in **Appendix H**.

**Table 3.3 Impact Noise Monitoring Equipment**

| Equipment                    | Brand and Model |
|------------------------------|-----------------|
| Sound Level Meter            | Nti XL2         |
| Sound Level Meter Calibrator | Pulsar 105      |

### 3.6 Maintenance and Calibration

3.6.1 The maintenance and calibration procedures were as follows:

- The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- The sound level meter and calibrator were checked and calibrated at yearly intervals
- Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0dB.

### 3.7 Action and Limit Levels

3.7.1 The Action/Limit Levels in line with the criteria of Practice Note for Professional Persons (ProPECC PN 2/93) “Noise from Construction Activities – Non-statutory Controls” and Technical Memorandum on Environmental Impact Assessment Process issued by HKSAR Environmental Protection Department [“EPD”] under the Environmental Impact Assessment Ordinance, Cap 499, S.16 are presented in **Table 3.4**.

**Table 3.4 Action and Limit Levels for Noise**

| Time Period                      | Action                                    | Limit (dB(A)) |
|----------------------------------|---|---------------|
| 0700-1900 hrs on normal weekdays | When one documented complaint is received | 75 dB(A)      |

3.7.2 If exceedances were found during noise monitoring. The actions in accordance with the Event and Action Plan shall be carried out according to **Appendix I**.

### 3.8 Monitoring Results and Observations

3.8.1 Impact monitoring for noise impact was carried out on 3, 10, 18 and 24 September 2018. The impact noise levels at Noise Monitoring Stations at SKC (i.e. M1/ N\_S1 to M3/ N\_S3) are summarized in **Table 3.6**. Details of noise monitoring results are presented in **Appendix J**.

- 3.8.2 Major construction activity, major noise source and extreme weather which might affect the results were recorded during the impact monitoring.
- 3.8.3 According to our field observations, the major noise source identified at the designated noise monitoring station in the reporting month are summarised in **Table 3.5**:

**Table 3.5 Summary of Field Observation**

| Monitoring Station | Major Noise Source            |
|--------------------|-------------------------------|
| M1                 | Nil                           |
| M2                 | Nil                           |
| M3                 | Air-conditioning units nearby |

- 3.8.4 No data from impact monitoring has exceeded the stipulated limit level at 75 dB(A).

**Table 3.6 Summary of Impact Noise Monitoring Results**

| Location | Noise in dB(A)           |                         |                         |
|----------|--------------------------|-------------------------|-------------------------|
|          | Range of $L_{eq\ 30min}$ | Range of $L_{10\ 5min}$ | Range of $L_{90\ 5min}$ |
| M1       | 48.2 – 53.3              | 50.4 – 62.1             | 40.6 – 58.4             |
| M2       | 55.7 – 59.3              | 57.9 – 68.5             | 50.1 – 57.6             |
| M3       | 46.9 – 51.7              | 48.1 – 60.5             | 41.2 – 49.5             |

## 4. WASTE

- 4.1 The waste generated from this Project includes inert construction and demolition (C&D) materials, and non-inert C&D materials. Non-inert C&D materials are made up of general refuse, vegetative wastes and recyclable wastes such as plastics and paper/cardboard packaging waste. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials.
- 4.2 As advised by the Contractor, no C&D material was generated on site in the reporting month. For C&D waste, no metals was generated and collected by registered recycling collector. No paper cardboard packing were generated on site and collected by registered recycling collector. No plastic and chemical waste were collected by registered recycling collector and licensed chemical waste collectors respectively. No other types of wastes (e.g. general refuse) were generated on site and disposed of at Landfill. 2,961.9 m<sup>3</sup> of sand was imported during the reporting period.
- 4.3 With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in **Table 4.1**. Details of cumulative waste management data are presented as a waste flow table in **Appendix K**.

**Table 4.1 Quantities of Waste Generated from the Project**

| Reporting Month          | Actual Quantities of Inert C&D Materials Generated Monthly |  |                          |                          |                          |                          |             |      | Actual Quantities of C&D Wastes Generated Monthly |                             |                       |                |            |  |   |
|--------------------------|--|--|--------------------------|--------------------------|--------------------------|--------------------------|-------------|------|---|-----------------------------|-----------------------|----------------|------------|--|---|
|                          | Total Quantity Generated                                   | Hard Rock and Large Broken Concrete (see Note 1) | Reused in the Contract   | Reused in other Projects | Disposed as Public Fill  | Imported Fill            |             |      | Metals  | Paper / cardboard packaging | Plastics (see Note 2) | Chemical Waste |            | Others, e.g. general refuse (see Note 3) |   |
|                          |  |  |                          |                          |                          | Sand                     | Public Fill | Rock |   |                             |                       |                |            |  |   |

Notes:

1. Broken concrete for recycling into aggregates.
2. Plastic refer to plastic bottles / containers, plastic sheets / foam from packaging materials.
3. Use the conversion factor: 1 full load of dumping truck being equivalent to 6.5m<sup>3</sup> by volume.

4.4 Although there is not much waste generation anticipated in the coming month from the Project, the Contractor is advised to sort and store any solid and liquid waste on-site properly prior to disposal.

## 5. CORAL

### 5.1 Coral Monitoring Requirements

5.1.1 To monitor the health condition of corals during different phases, corals located within areas likely to be affected by the Project, corals located at control sites (areas unlikely to be affected by the Project), the trans-located coral colonies as well as the tagged natural coral colonies at the recipient site were chosen, in order to identify any adverse indirect impact from the marine works. The size, percentage cover and health condition of corals (i.e. any sign of abnormal appearance, such as layer of mucus, bleaching, partial mortality etc.) at representative transects should be recorded during each monitoring.

### 5.2 Coral Monitoring Parameters, Time, Frequency

5.2.1 REA survey was conducted at the suggested control site and indirect impact site within two week before commencement of the construction work. 10 selected hard coral colonies with the similar species were tagged at both control and indirect impact site. Following coral translocation in the recipient site R3, 16 coral colonies attached to rocks less than 50 cm in diameter were translocated and tagged, as well as 10 selected natural coral colonies, at the recipient site.

5.2.2 Tagged coral colonies at the suggested control site and indirect impact site are being monitored weekly for the first month and followed by monthly monitoring for three months. Quarterly monitoring will be carried out after the first three-months monthly monitoring for until the end of the construction phase. The selected Control Site is located at Yuen Kong Chau of Soko Islands about 7 km away from the project area. Tagged coral colonies at the proposed recipient site are being monitored quarterly for one year. The selected recipient site R3 is located the opposite side of the Project area at about 2 km away. The detailed survey of the Control Site and Impact Site were conducted before the commencement of the Construction Phase.

5.2.3 Monitoring recorded the following parameters (using the same methodology adopted during the pre-translocation survey); the size, presence, health conditions (percentage of mortality/bleaching) and percentage of sediment of each tagged coral colony. The general environmental conditions including weather, sea, and tidal conditions of impact site, control site and recipient site were monitored.

5.2.4 **Table 5.1** summarizes the monitoring locations, time and frequency of the tagged coral colonies monitoring. The monitoring schedule is provided in **Appendix C**.

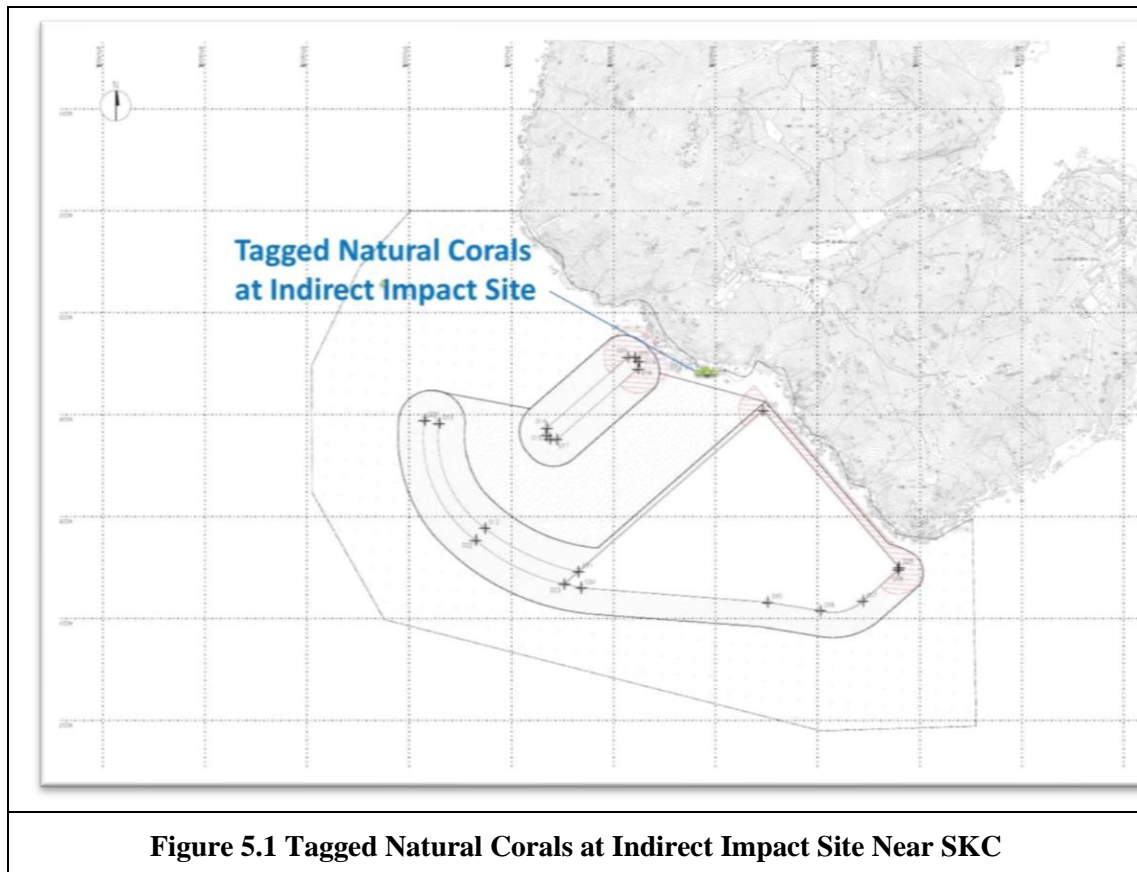

**Table 5.1 Tagged Coral Monitoring Locations, Time and Frequency**

| Monitoring Location  | Monitoring Month/Year   | Frequency  | No. of Monitoring Survey |
|--|---|--|--------------------------|
| 10 selected hard coral colonies at control site / indirect impact site | 1 <sup>st</sup> Month   | Weekly Survey  | 4                        |
|  | 2 <sup>nd</sup> to 3 <sup>th</sup> Months   | Monthly Survey   | 2                        |
|  | 4 <sup>th</sup> Month (postponed to 5 <sup>th</sup> month due to diver accident in Shek Kwu Chau in October 2018) | Re-tagging of Coral Colonies in Indirect Impact Site and Control Site after Typhoon Mangkhut |                          |
|  | 5 <sup>th</sup> Month (postponed to 6 <sup>th</sup> month due to diver accident in Shek                           | Post Re-tagging Monthly Survey   | 1                        |

|  |  |                  |    |
|--|--|------------------|----|
|  | Kwu Chau in October 2018)  |                  |    |
|  | 6 <sup>th</sup> to 7 <sup>th</sup> Months (postponed to 7 <sup>th</sup> to 7 <sup>th</sup> month due to diver accident in Shek Kwu Chau in October 2018) | Quarterly Survey | 23 |
| 16 translocated hard coral colonies and 10 selected natural hard coral colonies at recipient site R3 | 1 <sup>st</sup> Year   | Quarterly Survey | 4  |

### 5.3 Coral Monitoring Locations

5.3.1 Location of the ten tagged coral colonies at each of the proposed indirect impact site, control site and the recipient site R3 are shown in **Figure 5.1**, **Figure 5.2** and **Figure 5.3** respectively:

**Figure 5.1 Tagged Natural Corals at Indirect Impact Site Near SKC**

**Figure 5.2 Tagged Natural Corals at Control Site Near Yuen Kong Chau**

**Figure 5.3 Tagged Translocation Corals at Recipient Site R3 near SKC**

5.3.2 The GPS coordinates of the tagged coral colonies were shown in **Table 5.2** and **Table 5.3**.

**Table 5.2 Tagged Natural Corals at Indirect Impact Site Near SKC**

| Coral # | GPS Coordinates |                |
|---------|-----------------|----------------|
| 1       | N22°09'45.96"   | E113°54'57.81" |
| 2       | N22°09'45.88"   | E113°54'57.89" |

| 12      | N22°11'29.08"   | E113°59'09.06" |
| 13      | N22°11'29.01"   | E113°59'09.21" |
| 14      | N22°11'29.01"   | E113°59'09.29" |
| 15      | N22°11'29.00"   | E113°59'09.37" |
| 16      | N22°11'29.00"   | E113°59'09.50" |
| 17      | N22°11'28.94"   | E113°59'09.48" |
| 18      | N22°11'28.99"   | E113°59'09.36" |
| 19      | N22°11'28.95"   | E113°59'09.29" |
| 20      | N22°11'29.00"   | E113°59'09.18" |

5.3.3 The ET leader will review the number and location of monitoring stations and parameters every six months, or on as needed basis, in order to cater for any changes in the surrounding environment and the nature of works in progress.

#### 5.4 Impact Monitoring Methodology

5.4.1 Health status of coral was assessed by the following criteria:

- Gorgonian coral: Percentage of branches exhibiting partial mortality, secretion of mucus and degree of sedimentation;
- Hard coral: Percentage of surface area exhibiting partial mortality and blanched/bleached area of each coral colony and degree of sedimentation.

#### 5.5 Action and Limit Levels

5.5.1 Monitoring result was reviewed and compared against the below Action Level and Limit Level (AL/LL) as set with the below **Table 5.4** and **Table 5.5**.

**Table 5.4 Action and Limit Levels for Construction Phase Coral Monitoring**

| Parameter | Action Level  | Limit Level  |
|-----------|---|--|
| Mortality | If during Impact Monitoring a 15% increase in the percentage of partial mortality on the corals occurs at more than 20% of the tagged indirect impact site coral colonies that is not recorded on the tagged corals at the control site, then the Action Level is exceeded. | If during Impact Monitoring a 25% increase in the percentage of partial mortality on the corals occurs at more than 20% of the tagged indirect impact site coral colonies that is not recorded on the tagged corals at the control site, then the Limit Level is exceeded. |

**Table 5.5 Action and Limit Levels for Post-Translocation Coral Monitoring**

| Parameter | Action Level   | Limit Level   |
|-----------|--|---|
| Mortality | If during Post-Translocation Monitoring a 15% increase in the percentage of partial mortality on the corals occurs at more than 20% of the translocated coral colonies that is not recorded on the original corals in the recipient site, then the Action Level is exceeded. | If during Post-Translocation Monitoring a 25% increase in the percentage of partial mortality on the corals occurs at more than 20% of the translocated coral colonies that is not recorded on the original corals in the recipient site, then the Limit Level is exceeded. |

5.5.2 If exceedance was found during coral monitoring. The actions in accordance with the Event and Action Plan should be carried out according to **Appendix L**.

#### 5.6 Monitoring Results and Observations

5.6.1 The third month construction phase monitoring was performed on 20<sup>th</sup> September 2018 for the both Indirect Impact Site and Control Site (**Figure 5.1** and **5.2** respectively); and the weather conditions were summarized in **Table 5.6**.

**Table 5.6 Weather Condition for the Third Month Construction Phase Monitoring**

| Date | Condition | Average Underwater Visibility |
|------|-----------|-------------------------------|
|------|-----------|-------------------------------|

| Date              | Condition                                    | Average Underwater Visibility |
|-------------------|--|-------------------------------|
| 20 September 2018 | - Southwest force 3 to 4,<br>- Sunny periods | Less than 0.5m                |

5.6.2 Ten (10) hard coral colonies were monitored at each site of Control and Indirect Impact sites as suggested in the Coral Monitoring Plan. The general health conditions (size, condition, mortality, bleaching and sediment) at Control and Indirect Impact sites were recorded and summarized in **Table 5.8** and **Table 5.9** respectively. Photos of each \ tagged corals colonies were taken and shown in **Photo Plates 5.1 and 5.2**.

5.6.3 The second Post-translocation Monitoring was performed on 20<sup>th</sup> September 2018 for the Recipient Site R3 (Figure 5.3) and the weather conditions were summarized in **Table 5.7**.

**Table 5.7 Weather Condition for the Second Coral Translocation Monitoring**

| Date              | Condition                              | Average Underwater Visibility |
|-------------------|--|-------------------------------|
| 20 September 2018 | - Southeast force 3<br>- Sunny periods | Less than 0.5 m               |

5.6.4 Sixteen (16) and ten (10) hard coral colonies were monitored at Recipient Site R3 as suggested at Coral Translocation Plan. The general health conditions (size, condition, mortality, bleaching and sediment) at Recipient site were recorded and summarized in **Table 5.10** and **Table 5.11** respectively. Photos of each tagged corals colonies were taken and shown in **Photo Plates 5.3 and 5.4**.

**Table 5.8 Sizes, Condition, Mortality, Bleaching and Sediment of 10 Natural Coral Colonies at Control Site during Third Month Construction Phase Monitoring**

| Tag # | Species                         | Size (cm) – Max. Diameter | Condition | Mortality (%) |        | Bleaching (%) |        | Sediment (%) |        |
|-------|---------------------------------|---------------------------|-----------|---------------|--------|---------------|--------|--------------|--------|
|       |                                 |                           |           | Baseline      | 20-Sep | Baseline      | 20-Sep | Baseline     | 20-Sep |

- 5.6.5 After the super typhoon Mangkhut hitting Hong Kong on 15<sup>th</sup> and 16<sup>th</sup> September 2018. The whole bottom at the Indirect Impact Site were covered with 1 m thick of sand and mud in which the all ten tagged hard coral colonies were all missing during the third month monitoring. At the control site of Soko Island, most of the rocks at the bottom were turned over by the super typhoon Mangkhut, however only 4 tagged coral colonies were missing during the monitoring survey.
- 5.6.6 All remaining tagged coral colonies at Control Site still showed either fair or good health condition during the Third Month Construction Phase Monitoring. Tagged coral #1 and #9 showed 5% of increased mortality of the whole colony, while tagged coral #3 and #6 showed increased sediment coverage of 10% and 5% respectively. There was not increased level of mortality, bleaching and sediment of the tagged colonies #4 and #8 when compared with the baseline results.
- 5.6.7 Since all tagged coral colonies at Indirect Impact Site and 4 tagged coral at Control Site were missing during the third month monitoring, it is suggested to re-tag all the missing corals. The re-tagging activity should be done before the next monitoring survey. As the missing tagged coral colonies was caused by the Super Typhoon Mangkhut, the AL/LL will not be applied at this time.
- 5.6.8 The second post-translocation coral monitoring was carried out on 20 September 2018. Sixteen (16) movable hard coral colonies were monitored at the recipient site R3. However, 9 translocated coral colonies were missing during the second monitoring survey and only 7 left (**Table 5.9**). The remaining translocated coral colonies also showed an increased mortality from 5% to 15% (**Table 5.9**). The missing colonies probably were swept away by the strong wave action caused by the Super Typhoon Mangkhut hitting Hong Kong on 15<sup>th</sup> and 16<sup>th</sup> September 2018.
- 5.6.9 Ten (10) natural hard coral colonies were also monitoring at the recipient site as control and 1 coral colony was missing during the monitoring survey (**Table 5.10**). Similar to the translocated coral colonies, the missing tagged coral colony probably was swept away by the strong wave action caused by the Super Typhoon Mangkhut hitting Hong Kong on 15<sup>th</sup> and 16<sup>th</sup> September 2018.
- 5.6.10 Since all missing tagged coral colonies at the Recipient Site R3 were caused by the Super Typhoon Mangkhut, the AL/LL will not be applied at this time. Post-translocation monitoring survey will be continued to monitor the remaining tagged coral colonies for both translocated coral and natural coral colonies.
- 5.6.11 Further details of the survey findings including overall cumulative trending and photo records will be analysed and presented in the coming Quarterly EM&A Report.

## 6. MARINE MAMMAL

### 6.1 Monitoring Requirements

- 6.1.1 The marine mammal monitoring programme would focus on Finless Porpoise, as the study area near Shek Kwu Chau has been identified as a hotspot for this species, while the Chinese White Dolphins rarely occurred there in the past.
- 6.1.2 The monitoring would verify the predicted impacts on marine mammals, and examine whether the mitigation measures recommended in the EIA report have been effectively implemented to protect marine mammals from negative impacts from construction activities.
- 6.1.3 The Vessel-based Line-transect Survey, the Passive Acoustic Monitoring and the Land-based Theodolite Tracking will be conducted to provide systematic, quantitative measurements of occurrence, encounter rate, habitat use, movement and behavioural patterns of marine mammals within or near the Project Area during construction and operational phases.
- 6.1.4 The mammal monitoring works during construction consist of the following three survey methods:
- Vessel-based Line-transect Survey – to monitor the occurrence of Finless Porpoises (and Chinese White Dolphins) in the study area during construction works, by comparing with the findings of the pre-construction marine mammal monitoring;
  - Passive Acoustic Monitoring – to study the usage of the Project Area and two control sites in South Lantau Waters by Finless Porpoise during construction works, in reference with the baseline findings of the pre-construction marine mammal monitoring; and
  - Land-based Theodolite Tracking – to study the movement and behavioral pattern of Finless Porpoise within and around the Project Area during construction works.
- 6.1.5 The marine mammal observation works of Marine Mammal Exclusion Zone (MMEZ) and Marine Mammal Watching as two of the specific mitigation measures recommended in the approved EIA report shall be fully and properly implemented for the Project to minimize disturbance on Finless Porpoise during construction and operational phases.

### 6.2 Survey Methods

#### 6.2.1 Vessel-based Line-transect Survey

For the vessel-based marine mammal surveys, the monitoring team adopted the standard line-transect method (Buckland et al. 2001) as same as that adopted during the EIA study and pre-construction phase monitoring to allow fair comparison of marine mammal monitoring results.

Eight transect lines are set at Southeast Lantau survey area, including Shek Kwu Chau, waters between Shek Kwu Chau and the Soko Islands, inshore waters of Lantau Island (e.g. Pui O Wan) as well as southwest corner of Cheung Chau as shown in **Figure 6.1** below:

The surveys should cover all 4 seasons in order to take natural fluctuation and seasonal variations into account for data analysis of distribution, encounter rate, density and habitat use of both porpoises and dolphins (if any). In comparison to the baseline monitoring results, results from the analysed construction phase monitoring data would allow the detection of any changes of their usage of habitat, in response to the scheduled construction works. The monitoring surveys shall be conducted throughout the construction phase involving marine construction work with the frequency shown in **Table 6.1** below:

**Table 6.1 Vessel-based Line-transect Survey Frequency**

| Season          | Months  | Frequency       |
|-----------------|---|-----------------|
| Peak Season     | December, January, February, March, April & May   | Twice per month |
| Non-peak Season | June, July, August, September, October & November | Once per month  |

For each vessel survey, a 15-m inboard vessel with an open upper deck (about 4.5 m above water surface) would be used to make observations from the flying bridge area. Two experienced marine mammal observers (a data recorder and a primary observer) would make up the on-effort survey team, and the survey vessel would transit different transect lines at a constant speed of 13-15 km per hour. The data recorder shall search with unaided eyes and fill out the datasheets, while the primary observer shall search for dolphins and porpoises continuously through 7 x 50 marine binoculars. Both observers shall search the sea ahead of the vessel, between 270° and 90° (in relation to the bow, which is defined as 0°). Two additional experienced observers shall be available on the boat to work in shift (i.e. rotate every 30 minutes) in order to minimize fatigue of the survey team members. All observers shall be

experienced in small cetacean survey techniques and identifying local cetacean species with extensive training by marine mammal specialist of the ET

During on-effort survey periods, the survey team shall record effort data including time, position (latitude and longitude), weather conditions (Beaufort sea state and visibility), and distance travelled in each series (a continuous period of search effort) with the assistance of a handheld GPS (Garmin eTrex Legend). Data including time, position and vessel speed would also be automatically and continuously logged by handheld GPS throughout the entire survey for subsequent review.

When porpoises or dolphins are sighted, the survey team shall end the survey effort, and immediately record the initial sighting distance and angle of the porpoise or dolphin group from the survey vessel, as well as the sighting time and position. Then the research vessel shall be diverted from its course to approach the animals for species identification, group size estimation, assessment of group composition, behavioural observations, and collection of identification photos (feasible only for Chinese White Dolphin). The perpendicular distance (PSD) of the porpoise or dolphin group to the transect line would then be calculated from the initial sighting distance and angle, which shall be used in the line-transect analysis for density and abundance estimation.

The line-transect survey data shall be integrated with a Geographic Information System (GIS) to visualize and interpret different spatial and temporal patterns of porpoise and dolphin distribution using their sighting positions collected from vessel surveys. Location data of porpoise and dolphin groups would be plotted on map layers of Hong Kong using a desktop GIS (e.g. ArcView© 3.1) to examine their distribution patterns in details. The encounter rate could be used as an indicator to determine areas or time periods of importance to porpoises within the study area. For encounter rate analysis of finless porpoises, only survey data collected under Beaufort 2 or below condition would be used for encounter rate analysis.

To take into account of the variations of survey effort across different sections within survey area, the quantitative grid analysis of habitat use would be conducted to examine finless porpoise usage among 1-km<sup>2</sup> grids within the Southeast Lantau survey area. For the grid analysis, SPSE (sighting density) and DPSE (porpoise density) values would be deduced for evaluation on level of porpoise usage. First, positions of on-effort porpoise sightings from the study period are plotted onto 68 grids (1 km x 1 km each) within the survey area. Sighting density grids and porpoise density grids shall then be normalized with the amount of survey effort conducted within each grid. The total amount of survey effort spent on each grid shall be calculated by examining the survey coverage on each line-transect survey to determine how many times the grid had been surveyed during study period. With the amount of survey effort calculated for each grid, the sighting density and porpoise density of each grid shall be further normalized (i.e. divided by the unit of survey effort).

The newly-derived unit for sighting density was termed SPSE, representing the number of on-effort sightings per 100 units of survey effort. In addition, the derived unit for actual porpoise density was termed DPSE, representing the number of dolphins/porpoise per 100 units of survey effort. Among the 1-km<sup>2</sup> grids that were partially covered by land, the percentage of sea area was calculated using GIS tools, and their SPSE and DPSE values were adjusted accordingly. The following formulae shall be used to estimate SPSE and DPSE in each 1-km<sup>2</sup> grid within the study area:

$$SPSE = ((S / E) \times 100) / SA\%$$

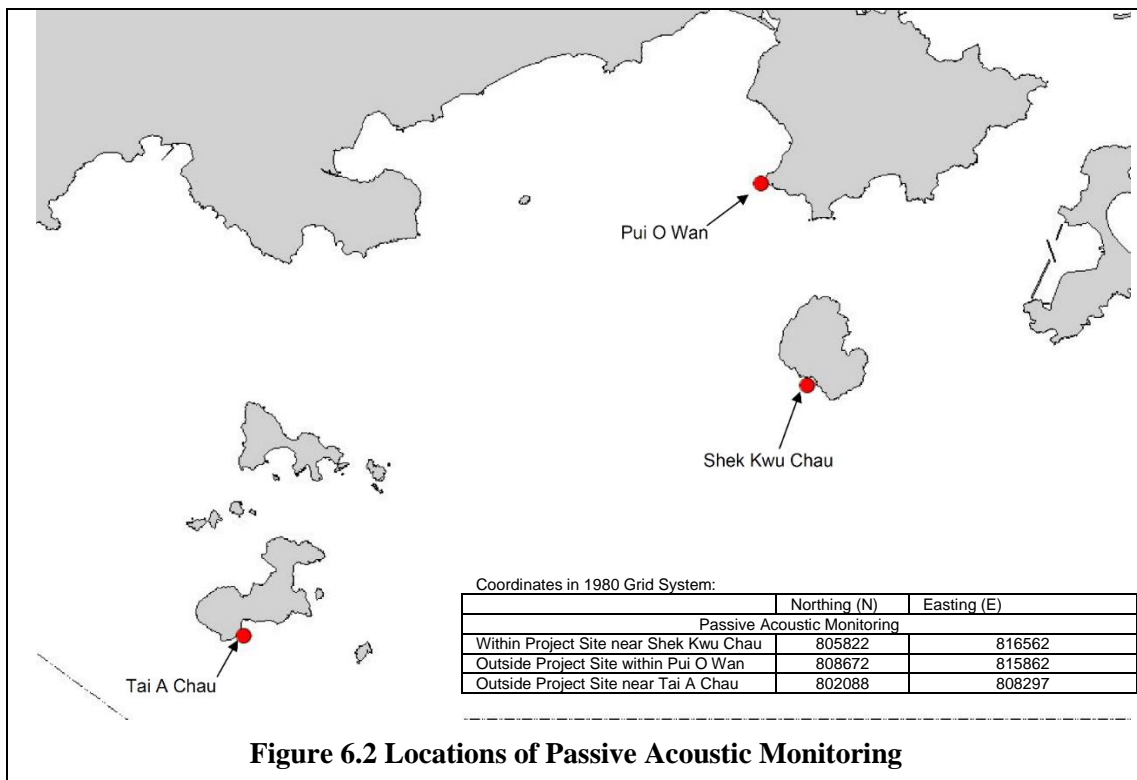

$$DPSE = ((D / E) \times 100) / SA\%$$

where S = total number of on-effort sightings  
 D = total number of dolphins/porpoises from on-effort sightings  
 E = total number of units of survey effort  
 SA% = percentage of sea area

### 6.2.2 Passive Acoustic Monitoring (PAM)

The PAM aims to study the usage of an area by Finless Porpoise by using an array of automated static porpoise detectors (e.g. C-POD) which would be deployed at different locations to detect the unique ultra-high frequency sounds produced by Finless Porpoise. During the construction period, the PAM survey will be conducted including placement of two passive porpoise detectors outside the Project Area as control site (i.e. within Pui O Wan and to the south of Tai A Chau) and one porpoise detector within the Project Area (i.e. near Shek Kwu Chau) as shown in **Figure 6.2** below.

**Figure 6.2 Locations of Passive Acoustic Monitoring**

6.2.3 These three detectors will be deployed on-site to carry out 24-hours monitoring for a period listed as **Table 6.2** below during the construction phase.

**Table 6.2 PAM Deployment Period**

| Season      | Months   | Deployment Period   |
|-------------|--|---|
| Peak Season | December, January, February, March, April or May | At least 30 days during the peak months of porpoise occurrence in South Lantau waters |

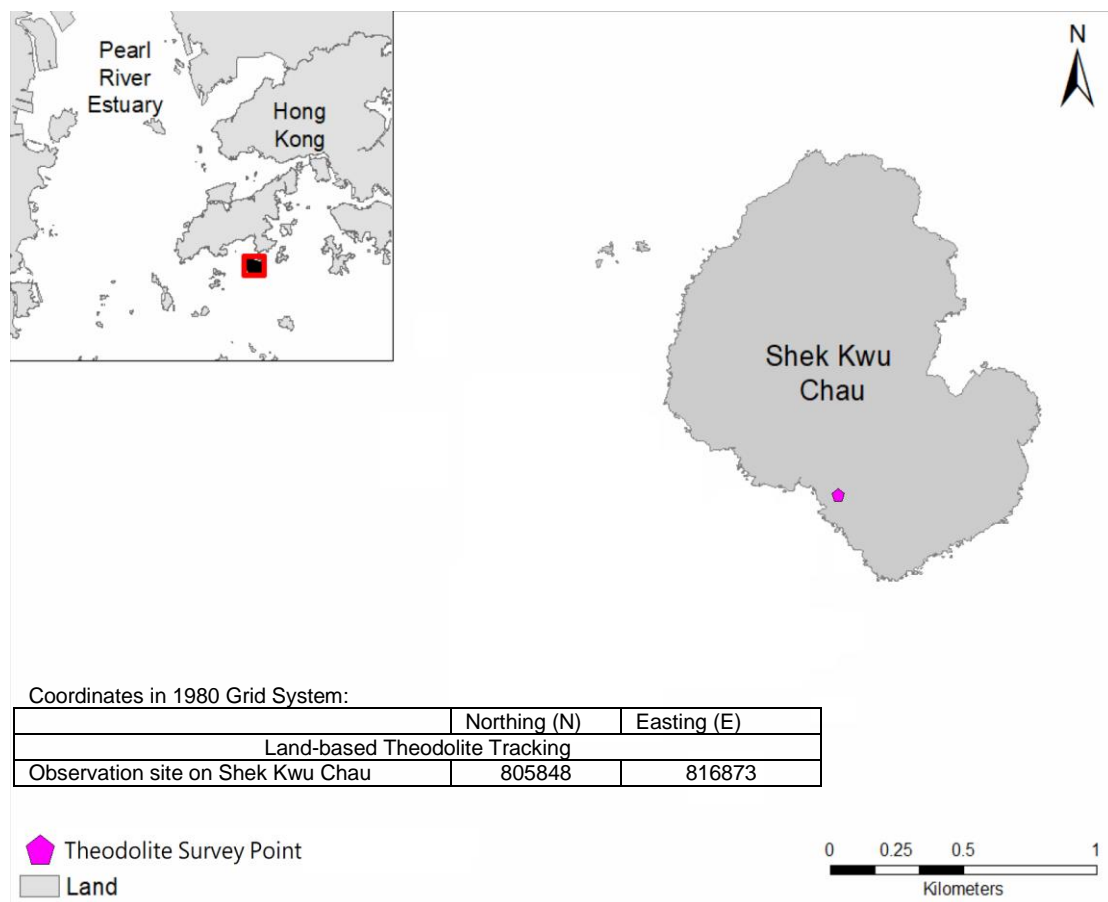

The automated static porpoise detectors shall detect the presence and number of finless porpoise and Chinese White Dolphins respectively over the deployment period, with the false signal such as boat sonar and sediment transport noise distinguished and filtered out. The detectors shall be deployed and retrieved by professional dive

team on the seabed of the three selected location shown in **Figure 6.2**. During each deployment, the C-POD unit serial numbers as well as the time and date of deployments shall be recorded. Information including the GPS positions and water depth at each of the deployment locations shall also be obtained.

The diel patterns (i.e. 24-hour activity pattern) of finless porpoise occurrence among the three sites at Shek Kwu Chau, Tai A Chau and Pui O Wan shall be analyzed. Peaks and troughs of finless porpoise occurrence per hour of day would be identified and compared with the results obtained from pre-construction monitoring.

#### 6.2.4 Land-based Theodolite Tracking

The Land-based Theodolite Tracking study would use the same station as in the AFCD monitoring study (same as the baseline monitoring location), which is situated at the southwest side of Shek Kwu Chau (GPS position: 22°11.47' N and 113°59.33' E) as shown in below **Figure 6.3**. The station was selected based on its height above sea level (at least 20 metres), close proximity to shore, and relatively unobstructed views of the entire Project Area to the southwest of Shek Kwu Chau. The height of the Shek Kwu Chau Station established by the HKCRP team is 74.6 m high at mean low water, and only a few hundred metres to the IWMF reclamation site, which is ideal for the purpose for the present behavioural and movement monitoring of finless porpoises as well during construction phase considering there as an un-obstructed vantage point at a height above the Project Site.

**Figure 6.3 Locations of Land-based Theodolite Tracking**

During the construction phase, Land-based Theodolite Tracking will be carried out for approximately six hours of tracking for each day of field work for a period listed as **Table 6.3** below, preferably at the initial stage of the construction period (i.e. December 2018 to May 2019).

**Table 6.3 Land-based Theodolite Tracking Survey Period**

| Season      | Months   | Survey Period  |
|-------------|--|--|
| Peak Season | December, January, February, March, April or May | 30 days during the peak months of porpoise occurrence in South Lantau waters |

The monitoring period for land-based theodolite tracking will be proposed to be overlapped with the PAM. The monitoring team consists of one experienced theodolite operator and at least two field observers for assistance. To conduct theodolite tracking, our observers will search systematically for Finless Porpoise using the unaided eye and 7 x 50 handheld binoculars on each survey day throughout the study area. When an individual or group of porpoises is located, a theodolite tracking session will be initiated and focal follow methods will be used to track the porpoise(s). Behavioural state data (i.e. resting, milling, travelling, feeding and socializing) shall also be recorded every 5 minutes for the focal individual or group. Positions of porpoises and boats shall be measured using a digital theodolite connected to a laptop computer. This tracking survey will be conducted during the peak season between December 2018 and May 2019 for 30 surveys spanning across 15-16 weeks during the peak season to provide good temporal coverage during the initial stage of the construction period.

### 6.3 Specific Mitigation Measures

#### 6.3.1 Monitored exclusion zones

During the installation/re-installation/relocation process of floating type silt curtains, in order to avoid the accidental entrance and entrapment of marine mammals within the silt curtains, a monitored exclusion zone of 250 m radius from silt curtain should be implemented. The exclusion zone should be closely monitored by an experienced marine mammal observer (MMO) for at least 30 minutes before the start of installation/re-installation/relocation process. If a marine mammal is noted within the exclusion zone, all marine works should stop immediately and remain idle for 30 minutes, or until the exclusion zone is free from marine mammals. The experienced marine mammal observer should be well trained to detect marine mammals. Binoculars should be used to search the exclusion zone from an elevated platform with unobstructed visibility. The marine mammal observer(s) shall be independent of the construction contractor and shall form part of the Environmental Team and have the power to call-off construction activities.

According to the Condition 2.25 of the FEP, MMEZ should be implemented during the installation/re-installation/relocation process of floating type silt curtains in order to avoid the accidental entrance and entrapment of marine mammals within the silt curtains. Also, marine construction works expected to produce underwater acoustic disturbance as per Condition 2.27 of the FEP, especially within December and May, would require the implementation of MMEZ, which currently all those specific construction activities have been replaced by less acoustically disturbing construction methods such as Deep Cement Mixing (DCM) and Precast Concrete Blocks Installation as discussed in Section 5.3 of the Detailed Monitoring Programme on Finless Porpoise, however, MMEZ would also be implemented for precautionary purpose for DCM works.

A MMEZ with 250 m distance from the boundary of a work area shall be established during the above situation. A typical MMEZ is indicated in **Figure 6.4** for reference. The MMEZ serves as a monitoring approach to provide appropriate and immediate actions once finless porpoise or Chinese White Dolphin is sighted within the MMEZ. All MMEZ will be monitored by competent Marine Mammal Observers (MMOs) to be provided by the Environmental Team (ET) for the IWMF and trained by the Marine Mammal Monitoring Specialist of the ET who is independent from JV.

**Figure 6.4 Illustration of Typical MMEZ**

Prior to the commencement of construction activity, our MMOs shall ensure the boundary of a marine work area and setting up of the MMEZ for the work area and get access to the monitoring location on a barge or a lookout point where there is no obstructed views for monitoring the MMEZ during the construction activity. The MMEZ shall be scanned thoroughly by a MMO for any presence of marine mammal e.g. finless porpoise for an initial period of 30 minutes. Construction activity shall only be commenced after the MMO has confirmed that the MMEZ is clear of the marine mammal for the initial period of 30 minutes. The MMO shall then inform the construction superintendent through mobile phone or handheld transceivers to certify the commencement of construction activity. The MMEZ monitoring shall be carried on throughout the period for all active construction activities requiring implementation of MMEZ.

When any mammal marine, e.g. Finless Porpoise, is detected by the MMO within the MMEZ during construction, the MMO shall inform the construction superintendent immediately through mobile phone or handheld transceivers to cease construction activity within the MMEZ. Construction activity shall not be re-commenced until the MMO confirms that the MMEZ is continuously clear of marine mammal for a period of 30 minutes. The MMO shall then inform the construction superintendent through mobile phone or handheld transceivers to certify the re-commencement of construction activity.

As there could be a number of Contractors working at the same time within a work area for the IWMF project, a full contact list of MMEZ monitoring team members of the ET and the relevant responsible construction superintendents of the Contractor at the site shall be prepared, updated regularly and circulated to all parties involved in the MMEZ monitoring. With a full contact list, our MMOs shall be able to find out the contacts of corresponding persons in case of marine mammal sighting within and near the MMEZ or emergent occurrence of any unpredictable impact on marine mammal.

If a marine mammal is still observed in close vicinity but outside the MMEZ, the MMO shall inform the construction superintendent about the presence of marine mammal. The MMO shall remain in position and closely observe the movement of the marine mammal as well as searching for the appearance of any other marine mammal within the MMEZ. No matter the marine mammal is observed within or in close vicinity but outside the MMEZ, the construction superintendent or relevant persons shall inform all vessel captains involved in construction activities around the MMEZ to pay special attention of the presence of the marine mammal in order to reduce chance of collision with them. In case of injury or live-stranded marine mammal being found within the MMEZ, the marine mammal observer shall immediately inform the construction superintendent to suspend construction activities within the works area and contact AFCD through “1823” marine mammal stranding hotline.

### 6.3.2 Marine mammal watching plan

Upon the completion of silt curtain installation/re-installation/relocation, all marine works would be conducted within a fully enclosed environment within the silt curtain. Hence exclusion zone monitoring would no longer be required. Subsequently, a marine mammal watching plan would be implemented.

Before commencement of dredging/sand blanket laying work at each designated area, a trained MMO shall check whether position frame silt curtains are ready, well prepared and operated without any obvious damage. Also, the MMO shall confirm the presence of the relevant frontline staff of the main contractor or its sub-contractors and engineers on board to ensure the effective communication, coordination and implementation of the response plan in relation to any incidents involving marine mammals within the waters surrounded by the position frame type silt curtains and the work areas. Also, there are lookout points at an elevated level on each barge, clear and safe access at the edges of the derrick lighter/ flag-top barge for inspection during dredging/sand blanket laying works, provision of sufficient lighting is required if working at night.

During the operation, the inspection will be conducted daily. The MMO will walk along the edge of derrick lighter (DL) and flag-top barge (FB) along the position frame silt curtain or proper location without obstacles where appropriate to inspect the position frame silt curtain with naked eyes, the MMO will check that the position

frame silt curtains are maintained in the correct positions with no obvious defects / entanglement and there is no observable muddy water passing through the position frame silt curtain system. Any floating refuse trapped by the silt curtain shall be removed as part of the regular inspection. For night inspection, spotlight will be used to provide sufficient brightness to assist the inspection in dark condition.

For the localized silt curtain re-deployment, MMO will conduct visual inspection to confirm that there is no presence of marine mammal within the localized silt curtain. Visual inspection will be conducted every an hour by MMO till confirming that there is not any marine mammal observed in the surrounding area of the frame type silt curtain. The duration will be subject to various conditions, e.g. weather or angle of observation. The works can only commence after confirming that the surrounding waters of the localized silt curtains has not contain any marine mammal. Thereafter, frontline staff, i.e. foremen, site agent, superintendents and engineers will assist our MMO in implementing the plan from the active work fronts within the waters surrounded by the silt curtains throughout the work period. The MMO will conduct regular check every 60 minutes to observe the presence of any marine mammal around the localized silt curtain or being trapped by the localized silt curtain. The MMOs will also check if the localized silt curtains are in correct positions..

The MMO shall fill up our Marine Mammal Sighting Record Sheet. After inspection, those records should be kept properly and submitted to the project team. In case there is any marine mammal being found, the MMO should carry out the response actions and communicate with relevant parties to stop and then resume work after the discovered marine mammal leaves. After lifting up and mobilization of silt curtain, the MMO will repeat the procedures of regular and visual inspection until the end of the construction works.

Details of the lookout points at derrick lighter (DL) and flat-top barge (FB) for dredging/sand blanket filling are shown in **Figure 6.4** and **Figure 2.2** respectively. Each lookout point will have an unobstructed view to waters around the DL and FB. The MMO will move around the DL and FB to establish a clear and unobstructed view as much as they can without compromising the safety concern. When appropriate, the lookout point can be replaced by a proper location if unobstructed view can be assured.

## 6.4 Results and Observations

### 6.4.1 Vessel-based Line-transect Survey

The monthly survey was conducted on 11 September 2018. As this is the designated off-peak season (June-November), only one survey was completed. A total on effort (transects only) survey length of 38.7km was completed, 21.7km at Beaufort Sea State 2 or better (**Table 6.4**). No sightings of marine mammals were recorded.

**Table 6.4 Summary of Vessel-based Line-transect Survey Effort**

| Date      | Area* | Beaufort | Effort (km) | Season | Vessel | Effort Type** |
|-----------|-------|----------|-------------|--------|--------|---------------|
| 11-Sep-18 | SEL   | 1        | 18.2        | AUTUMN | SMRUHK | P             |
| 11-Sep-18 | SEL   | 2        | 3.5         | AUTUMN | SMRUHK | P             |
| 11-Sep-18 | SEL   | 3        | 17.0        | AUTUMN | SMRUHK | P             |

\* As shown in **Figure. 6.1**

\*\* P (from AFCD) denotes the ON EFFORT survey on the transect line, not the adjoining passages

A review of the long term AFCD marine mammal monitoring programme, the EIA and the pre-construction baseline monitoring report for this project was conducted. Both the EIA and the pre-construction baseline monitoring were conducted during the peak porpoise months (Dec 2008 to May 2009 and Feb-April 2018, respectively), and, as such, these data are not directly comparable to this survey month which is a porpoise off-peak month. Therefore, a comparison can only be made to the AFCD long term marine mammal monitoring data.

A review of the Beaufort Sea state September survey conditions between 2009 and 2017 (only data available from AFCD at time of writing; (AFCD 2018<sup>1</sup>; 2017<sup>2</sup>; 2016<sup>3</sup>; 2015<sup>4</sup>; 2014<sup>5</sup>; 2013<sup>6</sup>; 2012<sup>7</sup>; 2011<sup>8</sup>; 2010<sup>9</sup>)) show that between 33% and 72% of survey effort has been conducted at Beaufort Sea State 2 or better in the past (Table 2). For this project in September 2018, 56% of the survey was conducted at Beaufort Sea State 2 or better and, as such, survey conditions in September 2018 were within the % limits of previous AFCD surveys.

A review of all the porpoise sightings in the survey area for September between for 2009-2017 indicate that there are fluctuations between the number of sightings usually recorded in September. For all weather conditions, and for the nine years data available, 3 years recorded no (0) sightings (2009, 2010 and 2015), 3 years recorded 1 sighting (2011, 2016 and 2017), 1 year recorded 3 sightings (2012) and 1 year recorded 4 sightings (2014). Effort varied between years and the average number of sightings (per 100km) varied between 0 and 10.1 100km (Average 2.8 100km). As detailed in Table 2, there is no trend in encounter rates recorded by the AFCD long term monitoring programme, i.e., the highest encounter rates were recorded in 2012 and 2014, with encounter rates of less than 2 porpoise per 100km in 2016 and 2017. Given the similar survey conditions and the low encounter rate recorded for porpoise in the project area during this survey month, no sightings within this area in September 2018 is not deemed to be significantly different from normal, with reference to the AFCD long term marine mammal monitoring data.

It is difficult to draw conclusions with regards to impacts on marine mammals as predicted in the EIA and the effectiveness of project mitigation measures during the initial phase of construction activities when porpoise sightings are typically absent or very low during the survey month. As surveys continue for this project, data shall be constantly re-evaluated across survey months to discern trends and impacts, if any.

#### 6.4.2 PAM and Land-based Theodolite Tracking

These tracking surveys will be conducted during the peak season between December 2018 and May 2019 for 30 surveys spanning across 15-16 weeks during the peak season to provide good temporal coverage during the initial stage of the construction period.

#### 6.4.3 Specific Mitigation Measures

Silt curtains were deployed for sand blanket laying works and DCM trial during the reporting period. At least two MMO were on duty for continuous monitoring of the Marine Mammal Exclusion Zone (MMEZ) for DCM trial works and installation/re-installation/relocation process of silt curtains, and the marine mammal trapping checking and silt curtains inspection in accordance with the Detailed Monitoring Programme of Finless Porpoise and Marine Mammal Watching Plan respectively. Trainings for the MMO were provided by the ET prior to the aforementioned works, with a cumulative total of 13 individuals being trained and the training records kept by the ET. From the Marine Mammal Watching observation

records and MMEZ monitoring log records, no Finless Porpoise or other marine mammals were observed within or around the MMEZ and silt curtains in the reporting month.

## 7. WHITE-BELLIED SEA EAGLE

### 7.1 Monitoring Requirement

7.1.1 On Shek Kwu Chau Island, a nest of WBSE is located about 60 m above ground within a hillside shrubland habitat, 130 m in-land from shore, about 550 m away from the proposed reclaimed land, with no human access. 3 phases monitoring programme will be comprise including: pre-construction phase, construction phase and operation phase.

7.1.2 The Pre-Construction WBSE monitoring was started on 30 January 2018 and the location of WBSE nest was confirmed on 21 February 2018 and it is located at the western part of SKC Island (Figure 1). Two adults and two chicks were also recorded on 5<sup>th</sup> March 2018 survey till the end of the Pre-construction monitoring on 15<sup>th</sup> May 2018. Construction Phase monitoring were carried out followed by the commencement of the Construction Phase on 28<sup>th</sup> June 2018.

### 7.2 WBSE Monitoring Parameters, Time, Frequency

7.2.1 The objective of the construction phase monitoring should be to verify the utilisation of the area by WBSE, their responses to construction disturbance, as well as the effectiveness of the proposed mitigation measures. Throughout the construction phase, field surveys should be conducted twice per month during their core breeding season (from December to May), and once per month outside their core breeding season (from June to November). The monitoring frequency should be increased to weekly during the incubation period of each year. In order to confirm their foraging ground near the construction site, it is necessary to conduct daily monitoring during the first week of nestling period in each year. The monitoring schedule during the reporting period is provided in **Appendix C**.

### 7.3 Monitoring Location

7.3.1 Since there is no suitable land-based along the coast of SKC, only boat surveys were conducted. On Shek Kwu Chau Island, a nest of WBSE is located about 60 m above ground within a hillside shrubland habitat, 130 m in-land from shore, about 550 m away from the proposed reclaimed land, with no human access.

### 7.4 Monitoring Methodology

7.4.1 Information to be collected included feeding, perching/rousing, preening, soaring, flying, nesting and territorial guarding and the time spent on each activity. The responses and reactions to any disturbance to the WBSEs were also recorded and examined in conjunction with the construction noise and/or other events in the vicinity. Other disturbances such as weather condition, or invasion by other fauna species were also recorded.

7.4.2 Binocular, scope, camera, lens and GPS device used are summarized as **Table 7.1** below:

**Table 7.1 List of Equipment Used during Construction Phase Monitoring**

| Equipment                       | Quantity |
|---------------------------------|----------|
| Swarovski EL 8.5 x 42 Binocular | 1        |

| Equipment   | Quantity |
|---|----------|
| Swarovski EL Range 8 x 42 Binocular                 | 1        |
| Swarovski ATX 25-60 x 85 Spotting Scope             | 1        |
| Canon 1Dx Mark II Camera                            | 1        |
| Canon EF300mm F2.8 Lens with Canon 2x Teleconverter | 1        |
| Canon PowerShot G7X Camera                          | 1        |
| Garmin GPSMAP 64S                                   | 1        |

7.4.3 If event such as absence of White-bellied Sea Eagle during a whole day of monitoring was found during WBSE monitoring, the actions in accordance with the Event and Action Plan should be carried out according to **Appendix M**.

## 7.5 Results and Observations

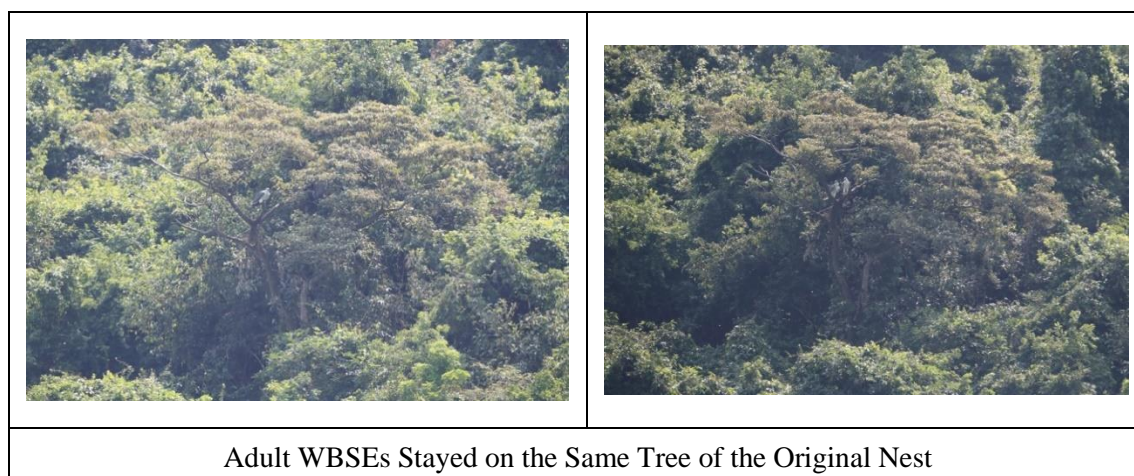

7.5.1 The third monthly construction phase monitoring was conducted on 20<sup>th</sup> September 2018. Since there is no landing point along the western part of SKC, boat survey were used for the monitoring survey. In order to increase the chance of finding the WBSEs, monitoring survey was carried out early in the morning. The weather conditions of monitoring survey were shown in **Table 7.2**.

**Table 7.2 Weather Conditions during the WBSE Monitoring**

| Date            | Condition                     | Temperature (°C) |
|-----------------|-------------------------------|------------------|
| 20-September-18 | - Southeast 3 to 4<br>- Sunny | 33               |

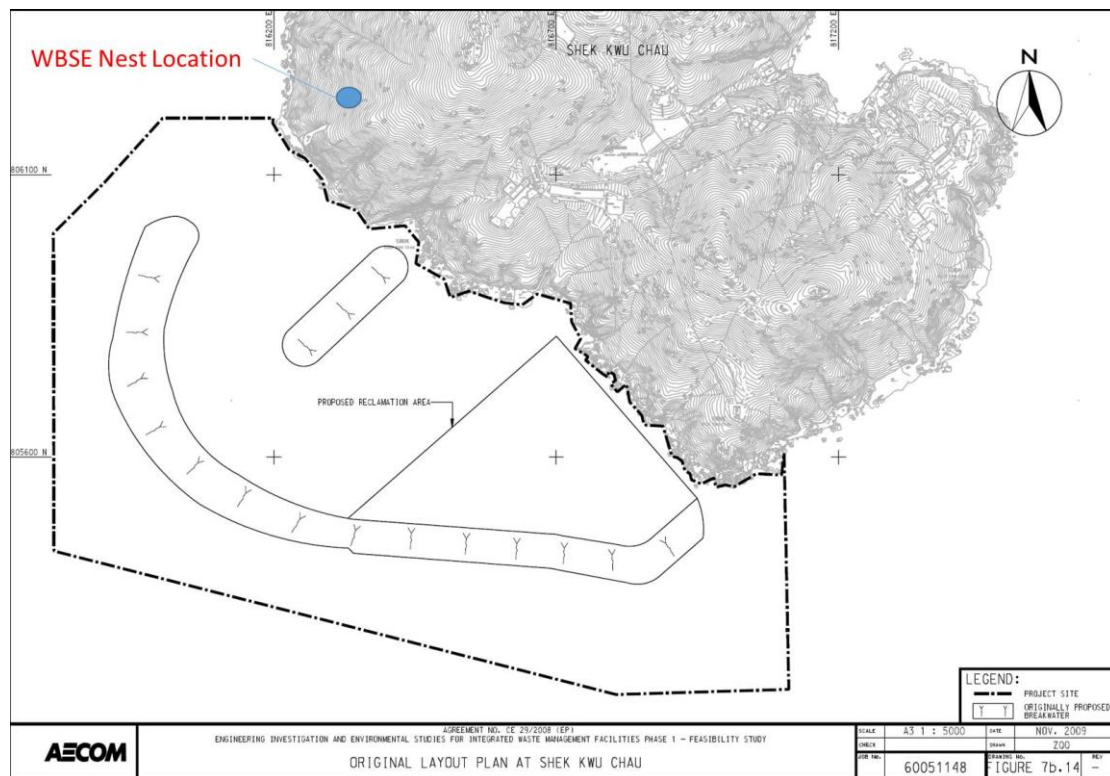

7.5.2 The nest was gone after the super typhoon Mangkhut and only two adults WBSE were recorded during this monitoring survey. They were both staying on the same tip of the same tree where the original nest was built. During the monitoring survey, both WBSE were bringing tree branches from other area in SKC to the nesting tree and trying to re-build the nest again. The new WBSE nest was being built at the same location as the old one, which is located at the western part of SKC Island (**Figure 7.1**) quite away from the Shek Kwu Chau Treatment and Rehabilitation Centre. Photo records of the WBSE taken during the reporting period are presented in **Photo plate 7.1**.

**Photo plate 7.1 Third monthly WBSE monitoring**

7.5.3 Any disturbances from anthropogenic activities on the island were not recorded during the monitoring survey. However, there were fishing boats moving close the shore were recorded. Since the nesting tree is about 160m away from the shore and it is not accessible, fishing boat activities didn't show any direct disturbance to the WBSE nest.

**Figure 7.1 Location of WBSE Nest on SKC**

7.5.4 No invasion of other fauna species was recorded and no sign of using the construction site as a foraging ground was recorded as well.

7.5.5 During the third month construction phase monitoring, no abnormal behaviour of the recorded adult was shown. All marine works during the third month construction period did not show any influence to the WBSE.

- 7.5.6 A construction phase monitoring will be continued outside their core breeding season (between June to November) in order to monitor the utilization of the area by WBSE and their responses to construction disturbance.
- 7.5.7 Further details of the survey findings including photo records will be presented in the coming Quarterly EM&A Report.

## 8. SUMMARY OF MONITORING EXCEEDANCE, COMPLAINTS, NOTIFICATION OF SUMMONS AND PROSECUTIONS

8.1 The Environmental Complaint Handling Procedure is shown in below **Figure 8.1**:

**Figure 8.1 Environmental Complaint Handling Procedure**

- 8.2 No exceedance of the Action and Limit Levels of the regular construction noise, coral and WBSE monitoring was recorded during the reporting period.
- 8.3 Twenty nine of the water quality monitoring results for Suspended Solid (SS) obtained during the reporting period had exceeded the relevant Action or Limit Levels as summarized in **Table 8.1** and **Table 8.2**, where findings from investigations carried out immediately for each of the exceedance cases had showed that these exceedances were unrelated to the Project as shown in **Appendix N**, except for the exceedances on 20, 27 and 29 September 2018, where the investigation is undergoing and the investigation results will be presented in the next monthly report.
- 8.4 Investigations on exceedances has also been made during the wet season baseline monitoring period confirming no improper site practice or construction activities that might contribute to deterioration of water quality was existed in the Project site.

**Table 8.1 Summary of SS Compliance Status at Impact Stations (Mid-Ebb Tide)**

| Date                         | B1                                | B2       | B3       | B4       | CR1      | CR2      | F1       | H1       | S1       | S2       | S3       | M1       |
|------------------------------|-----------------------------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| 3-9-2018                     |                                   |          |          |          |          |          |          |          |          |          |          |          |
| 5-9-2018                     |                                   |          |          |          |          |          |          |          |          |          |          |          |
| 7-9-2018                     |                                   |          |          |          |          |          |          |          |          |          |          |          |
| 10-9-2018                    |                                   |          |          |          |          |          |          |          |          |          |          |          |
| 12-9-2018                    | Cancelled due to Typhoon BARIJAT  |          |          |          |          |          |          |          |          |          |          |          |

Note 1: Detailed results are presented in **Appendix D**

Note 2: The investigation on 20/09/2018, 27/09/2018 and 29/09/2018 are undergoing

Legend:

|  |   |
|--|---|
|  | No exceedance of Action Level and Limit Level   |
|  | Exceedance of Action Level recorded at monitoring station located downstream of the Project based on dominant tidal flow  |
|  | Exceedance of Action Level recorded at monitoring station located upstream/unrelated stream (neither upstream nor downstream, far away) of the Project based on dominant tidal flow |
|  | Exceedance of Limit Level recorded at monitoring station located downstream of the Project based on dominant tidal flow   |
|  | Exceedance of Limit Level recorded at monitoring station located upstream/unrelated stream of the Project based on dominant tidal flow  |
|  | Upstream/unrelated stream station with respect to IWMF Project during the respective tide based on dominant tidal flow  |
|  | Downstream station with respect to IWMF Project during the respective tide based on dominant tidal flow/station within the Project site   |
|  | Cancelled due to adverse weather  |

- 8.6 No project-related Action Level & Limit Level exceedance was recorded from 1 to 19 and 24 September 2018. Exceedance on 20, 27 and 29 September 2018 are under investigation and the investigation results will be presented in the next monthly report.
- 8.7 No notification of summons and prosecution was received in the reporting period.
- 8.8 Statistics on complaints, notifications of summons and successful prosecutions are summarized in **Appendix O**.

## 9. EM&A SITE INSPECTION

9.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures under the Contract. In the reporting period, site inspections were carried out on 4, 11, 20 and 26 September 2018 at the site portions list in **Table 9.1** below.

**Table 9.1 Site Inspection Record**

| Date              | Inspected Site Portion        | Time        |
|-------------------|-------------------------------|-------------|
| 4 September 2018  | Portion 1, 1A & 1B (near SKC) | 10:30-12:30 |
| 11 September 2018 | Portion 1, 1A & 1B (near SKC) | 10:15-12:15 |
| 20 September 2018 | Portion 1, 1A & 1B (near SKC) | 10:30-12:30 |
| 26 September 2018 | Portion 1, 1A & 1B (near SKC) | 10:00-12:00 |

9.2 One joint site inspection with IEC was carried out on 20 September 2018.

9.3 Environmental deficiencies were observed during weekly site inspection. Key observations during the site inspections are summarized in **Table 9.2**.

**Table 9.2 Site Observations**

| Date              | Environmental Observations   | Follow-up Status  |
|-------------------|--|---|
| 4 September 2018  | <u>Observation(s) and Recommendation(s)</u><br>1. On FTB 16 and ES-750, drip trays were found without plug.<br>2. On FTB 16, oil stains were found drip trays.<br>3. On FTB 16, oil accumulated on drip trays should be cleaned up.<br>4. On FTB 16, oil absorbents should be disposed as chemical wastes after cleaning up oil stains.<br>5. Good housekeeping should be maintained especially general refuse.<br>6. On ES-750, chemical should be stored properly. | 1. The hole of drip trays was closed.<br>2. Oil stain was cleaned up.<br>3. Oil accumulated on drip trays was cleaned up.<br>4. Oil absorber has been stored at chemical waste storage tank.<br>5. The general refuse was removed.<br>6. The chemical has been stored properly. |
| 11 September 2018 | <u>Observation(s) and Recommendation(s)</u><br>Reminder:<br>1. On FTB 20, generator should be maintained in good condition to avoid generating loud noise.   | -   |
| 20 September 2018 | <u>Observation(s) and Recommendation(s)</u><br>1. On ES-750, NRMM label of driller is found missing.<br>Reminder:<br>1. Silt curtains shall be properly installed and checked prior to the DCM operation.<br>2. Chemical Waste Storage Tank shall be properly locked with functional locks.  | 1. NRMM label of driller has been posted.   |
| 26 September 2018 | <u>Observation(s) and Recommendation(s)</u><br>1. On FTB 16, Environmental Permit and Construction Noise Permit should be printed out for checking.<br>2. On FTB 16, Improper plug was used for  | 1. EP and CNP have been posted out on FTB 16.<br>2. Proper drain plug has been provided in hole of drip tray on FTB 16.   |

| Date | Environmental Observations  | Follow-up Status                           |
|------|---|--|
|      | drip tray.<br>3. On FTB 20, Usage of washing basin not connected to sewage treatment/storage system should be prohibited.<br>Reminder:<br>1. Chemical should be put in drip tray.<br>2. Bottom of silt curtain should be made sure of reaching the seabed during DCM operation. | 3. The washing basin was closed on FTB 20. |

9.4 The Contractor has rectified all of the observations identified during environmental site inspections in the reporting period.

9.5 According to the EIA Study Report, Environmental Permit, contract documents and Updated EM&A Manual, the mitigation measures detailed in the documents are implemented as much as practical during the reporting period, except for the outstanding on-site checking record for the verification of implementation status on the deployed silt curtains. An updated Implementation Status of Environmental Mitigation Measures (EMIS) is provided in **Appendix B**.

## 10. FUTURE KEY ISSUES

10.1 Works to be undertaken in the next reporting month are:

- Marine Site Investigation Works
- Coring of DCM samples conducted at site trial location
- Collecting Marine Sediment Samples
- DCM installation for DCM Site Trial Re-trial
- Laying of Geotextile and Sand Blanket for DCM Injection Works

10.2 Potential environmental impacts arising from the above construction activities are mainly associated with water quality, construction noise, waste management and ecology.

10.3 The key environmental mitigation measures for the Project in the coming reporting period expected to be associated with the construction activities include:

- Reduction of noise from equipment and machinery on-site;
- Installation of silt curtains for the sand blanket laying works and DCM installation works;
- Sorting, recycling, storage and disposal of general refuse and construction waste;
- Management of chemicals and avoidance of oil spillage on-site, especially under heavy rains and adverse weather; and
- Implementation of MMEZ and inspection of enclosed environment within silt curtains as per DMPFP

10.4 The tentative schedule of regular construction noise, water quality and ecology monitoring in the next reporting period is presented in **Appendix P**. The regular construction noise, water quality and ecology monitoring will be conducted at the same monitoring locations in the next reporting period.

## **11. CONCLUSION AND RECOMMENDATIONS**

- 11.1 This 3<sup>rd</sup> monthly Environmental Monitoring and Audit (EM&A) Report presents the EM&A works undertaken during the period from 1 September 2018 to 30 September 2018 in accordance with the Updated EM&A Manual and the requirement under EP-429/2012/A and FEP-01/429/2012/A.
- 11.2 Construction noise, water quality, construction waste, coral, marine mammal and White-Bellied Sea Eagle (WBSE) monitoring were carried out in the reporting period. No project-related exceedance of the Action and Limit Level was recorded during the reporting period, except for the water quality exceedances on 20, 27 and 29 September 2018, where the investigation is undergoing and the investigation results will be presented in the next monthly report.
- 11.3 Weekly environmental site inspection was conducted during the reporting period. Environmental deficiencies were observed during site inspection and were rectified.
- 11.4 According to the environmental site inspections performed in the reporting month, the Contractor is reminded to pay attention on maintaining site tidiness and avoidance of oil spillage on-site, especially under heavy rains and adverse weather.
- 11.5 Regarding to the deployment of silt curtains as a principal water quality impact mitigation measures on various marine works, the Contractor is reminded to follow strictly to the design and checking procedure as specified in the Silt Curtain Deployment Plan. The Contractor is reminded that all measures recommended in the deposited silt curtain deployment plan shall be fully and properly implemented for the Project as per EP condition 2.6 of the FEP.
- 11.6 No environmental complaint was received in the reporting period.
- 11.7 No notification of summons or prosecution was received since commencement of the Contract.
- 11.8 The ET will continue the outstanding water quality exceedance investigation and keep track on the construction works to confirm compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

## Appendix A Master Programme

|-----------|--|--|----------------------|------------------------|---|---|-----|-------------------------------------|-----------------------------------|
|           |  |  |                      | Des                    | C | O | Dec |                                     |                                   |
| S5b.8.1.1 | <p><u>Drainage and Construction Site Runoff</u></p> <p>The site practices outlined in ProPECC PN 1/94 “Construction Site Drainage” should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. These practices include the following items:</p> <ul style="list-style-type: none"> <li>• At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented to the commencement of construction.</li> <li>• Boundaries of earthworks should be surrounded by dykes or embankments for flood protection, as necessary.</li> <li>• Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM-DSS. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94, which states that the retention time for silt/sand traps should be 5 minutes under maximum flow conditions. The detailed design of the sand/silt traps shall be undertaken by the contractor</li> </ul> | Work site / During the construction period | Contractor           |                        | ✓ |   |     | EIAO-TM; ProPECC PN 1/94; WPCO      | N/A                               |

|-----------|---|--|----------------------|------------------------|---|---|-----|-------------------------------------|---|
|           |   |  |                      | Des                    | C | O | Dec |                                     |   |
|           | collected, handled and disposed of properly to avoid entering to the nearby watercourses and public drainage system. Rubbish and litter from construction sites should also be collected to prevent spreading of rubbish and litter from the site area.   | construction period                        |                      |                        |   |   |     | WPCO                                | but rectified by the Contractor                                   |
| S5b.8.1.3 | There is a need to apply to EPD for a discharge license for discharge of effluent from the construction site under the WPCO. The discharge quality must meet the requirements specified in the discharge license. All the run-off and wastewater generated from the works areas should be treated so that it satisfies all the standards listed in the TM-DSS. The beneficial uses of the treated effluent for other on-site activities such as dust suppression and general cleaning etc., can minimize water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring should be carried out in accordance with the relevant WPCO license which is under the ambit of regional office of EPD. | Work site / During the construction period | Contractor           |                        | ✓ |   |     | EIAO-TM; ProPECC PN 1/94; WPCO      | Deficiency of Mitigation Measures but rectified by the Contractor |
| S5b.8.1.4 | <u>Accidental Spillage</u><br>Contractor must register as a chemical waste producer if chemical wastes would be produced from construction activities. | 30  |  |  |   |   |   |   |  |

Remarks:  
 1. Daytime Noise Monitoring (07:00-1900), Evening Time Noise Monitoring (1900-2300), Night Time Noise Monitoring (2300-0700)  
 2. Water Quality Monitoring for S1,S2 and S3 will only conduct during DCM works, refer to Detailed DCM Plan  
 3. Water Quality Monitoring for S1, S2 and S3 will perform on 3, 5 & 7 Sep for baseline monitoring during wet season  
 Note:  
 \* - cancelled due to adverse weather  
 ^ - rescheduled due to adverse weather

Remarks:

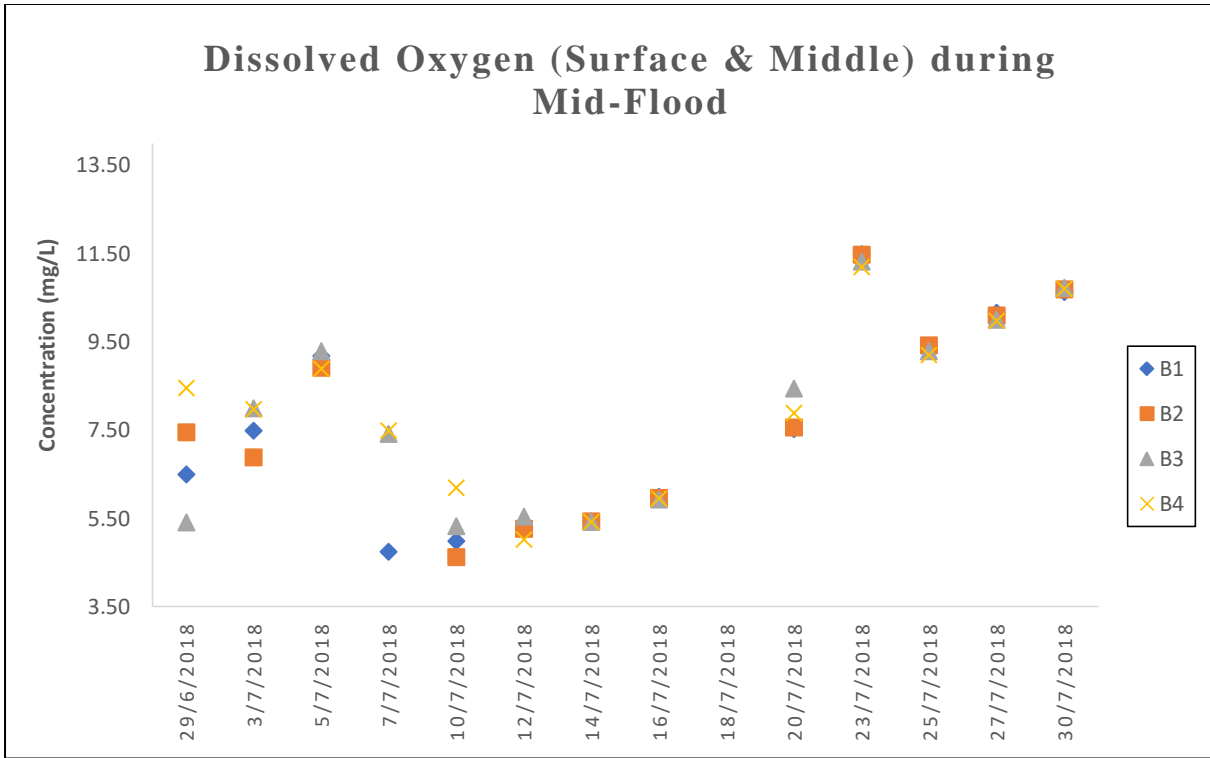

note 1: S – Surface M – Middle B – Bottom

note 2: Measurements of current velocity, total alkalinity tests and detections of current direction were only conducted during DCM work period on 20/09/2018, 22/09/2018, 27/09/2018 and 29/09/2018.

Note: The Action and Limit Level of dissolved oxygen can be referred to **Table 2.7** of the monthly EM & A report.

Note: The Action and Limit Level of dissolved oxygen can be referred to **Table 2.7** of the monthly EM & A report.

Note: The Action and Limit Level of dissolved oxygen can be referred to **Table 2.7** of the monthly EM & A report.

Note: The Action and Limit Level of dissolved oxygen can be referred to **Table 2.7** of the monthly EM & A report.

Note: The Action and Limit Level of dissolved oxygen can be referred to **Table 2.7** of the monthly EM & A report.

### COMMENTS

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

The "Tolerance Limit" quoted is the acceptance criteria applicable for similar equipment used by the ALS Hong Kong laboratory or quoted from relevant international standards.

The "Next Calibration Date" is recommended according to best practice principle as practised by the ALS Hong Kong laboratory or quoted from relevant international standards.

## PARAMETERS:

### pH Value

Method Ref: APHA (21st edition), 4500H:B

| Expected Reading (pH unit) | Displayed Reading (pH unit) | Tolerance (pH unit) |
|----------------------------|-----------------------------|---------------------|
| 4.0                        | 3.95                        | -0.05               |
| 7.0                        | 6.84                        | -0.16               |
| 10.0                       | 10.08                       | +0.08               |
|                            | Tolerance Limit (pH unit)   | ±0.20               |

### Turbidity

Method Ref: APHA (21st edition), 2130B

| Expected Reading (NTU) | Displayed Reading (NTU) | Tolerance (%) |
|------------------------|-------------------------|---------------|
| 0                      | 0.78                    | --            |
| 4                      | 4.06                    | +1.5          |
| 40                     | 36.1                    | -9.8          |
| 80                     | 78.9                    | -1.4          |
| 400                    | 409                     | +2.3          |
| 800                    | 809                     | +1.1          |
|                        | Tolerance Limit (%)     | ±10.0         |

Remark: "Displayed Reading" presents the figures shown on item under calibration / checking regardless of equipment precision or significant figures.

Brand Name: HORIBA Water Quality Monitor  
Model No.: U-5000  
Serial No.: BGY9CKD  
Equipment No.: --  
Date of Calibration: 04 July, 2018 Date of Next Calibration: 04 October, 2018

## PARAMETERS:

### Salinity

Method Ref: APHA (21st edition), 2520B

| Expected Reading (ppt) | Displayed Reading (ppt) | Tolerance (%) |
|------------------------|-------------------------|---------------|
| 0                      | 0.00                    | --            |
| 10                     | 9.90                    | -1.0          |
| 20                     | 19.50                   | -2.5          |
| 30                     | 28.30                   | -5.7          |
|                        | Tolerance Limit (%)     | ±10.0         |

### Redox Potential

Method Ref: APHA (21st edition), 2580B

Method Ref: Orion Research Instruction Manual and the Laboratory Manual  
the Environmental of Water, Wastewater and Soil (2nd edition), Rump & Krist (1992)

| Expected Reading (mV) | Displayed Reading (mV) | Difference of A and B (mV) |
|-----------------------|------------------------|----------------------------|
| Solution A (~234mV)   | 188                    |                            |
| Solution B (~300mV)   | 272                    | +84                        |
|                       | Tolerance Limit (mV)   | >66                        |

### Temperature

Method Ref: Section 6 of International Accreditation New Zealand Technical  
Guide No. 3 Second edition March 2008: Working Thermometer Calibration Procedure.

| Expected Reading (°C) | Displayed Reading (°C) | Tolerance (°C) |
|-----------------------|------------------------|----------------|
| 10.5                  | 11.27                  | +0.8           |
| 21.0                  | 21.64                  | +0.6           |
| 40.0                  | 39.43                  | -0.6           |
|                       | Tolerance Limit (°C)   | ±2.0           |

Remark: "Displayed Reading" presents the figures shown on item under calibration / checking regardless of equipment precision or significant figures.

|  | ET  | IEC  | SO  | Contractor  |
| Limit level being exceeded by one sampling day | <p>Inform the SO and confirm notification of the non-compliance in writing;<br/>                     Rectify unacceptable practice;<br/>                     Check all plant and equipment;<br/>                     Consider changes of working methods;<br/>                     Discuss with Contractor, IEC and SO and propose mitigation measures to IEC and SO within 3 working days;<br/>                     Implement the agreed mitigation measures.<br/>                     (The above actions should be taken within 1 working day after the exceedance is identified)</p> | <p>Discuss with ET and Contractor on the mitigation measures;<br/>                     Review proposals on mitigation measures submitted by Contractor and advise the SO accordingly;<br/>                     Assess the effectiveness of the implemented mitigation measures.<br/>                     (The above actions should be taken within 1 working day after the exceedance is identified)</p> | <p>Discuss with IEC, ET and Contractor on the proposed mitigation measures;<br/>                     Request Contractor to critically review the working methods;<br/>                     Make agreement on the mitigation measures to be implemented.<br/>                     Assess the effectiveness of the implemented measures.<br/>                     (The above actions should be taken within 1 working day after the exceedance is identified)</p> | <p>Inform the SO and confirm notification of the non-compliance in writing;<br/>                     Rectify unacceptable practice;<br/>                     Check all plant and equipment;<br/>                     Consider changes of working methods;<br/>                     Discuss with ET, IEC and SO and propose mitigation measures to IEC and SO within 3 working days;<br/>                     Implement the agreed mitigation measures.<br/>                     (The above actions should be taken within 1 working day after the exceedance is identified)</p> |

| Event   | Action   |  |   |   |
|---|--|--|---|---|
|   | ET   | IEC  | SO  | Contractor  |
| Limit level being exceeded by more than one consecutive sampling days | <p>Identify source(s) of impact; Inform IEC, Contractor and EPD; Check monitoring data, all plant, equipment and Contractor’s working methods. Discuss mitigation measures with IEC, SO and Contractor. Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit level for two consecutive days. (The above actions should be taken within 1 working day after Limit Level being exceeded by two consecutive sampling days)</p> | <p>Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the SO accordingly; Assess the effectiveness of the implemented mitigation measures. (The above actions should be taken within 1 working day after Limit Level being exceeded by two consecutive sampling days)</p> | <p>Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented. Assess the effectiveness of the implemented measures. Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit level. (The above actions should be taken within 1 working day after Limit Level being exceeded by two consecutive sampling days)</p> | <p>Inform the SO and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Consider changes of working methods; Discuss with ET, IEC and SO and propose mitigation measures to IEC and SO within 3 working days; Implement the agreed mitigation measures; As directed by the SOR, to slow down or to stop all or part of the marine work or construction activities. (The above actions should be taken within 1 working day after Limit Level being exceeded by two consecutive sampling days)</p> |

## Appendix H Noise Monitoring Equipment Calibration Certificate

輝創工程有限公司

Sun Creation Engineering Limited  
Calibration and Testing Laboratory

# Certificate of Calibration

## 校正證書

Certificate No. : C176148  
證書編號

ITEM TESTED / 送檢項目 ( Job No. / 序引編號 : IC17-1542 )      Date of Receipt / 收件日期 : 26 October 2017

Description / 儀器名稱 : Audio Analyzer  
Manufacturer / 製造商 : NTi  
Model No. / 型號 : XL2  
Serial No. / 編號 : A2A-09696-E0  
Supplied By / 委託者 : Acumen Environmental Engineering and Technologies Co., Ltd.  
Lot 11, Tam Kon Shan Road, North Tsing Yi, N.T.

### TEST CONDITIONS / 測試條件

Temperature / 溫度 : (23 ± 2)°C      Relative Humidity / 相對濕度 : (55 ± 20)%  
Line Voltage / 電壓 : ---

### TEST SPECIFICATIONS / 測試規範

Calibration check

DATE OF TEST / 測試日期 : 3 November 2017

### TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only.  
The results do not exceed manufacturer's specification.  
The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via :

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Agilent Technologies / Keysight Technologies
- Rohde & Schwarz Laboratory, Germany
- Fluke Everett Service Center, USA

Tested By :   
測試 : K C Lee  
Engineer

Certified By :   
核證 : H C Chan  
Engineer

Date of Issue : 7 November 2017  
簽發日期

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.  
本證書所載校正用之測試器材均可溯源至國際標準。局部複印本證書需先獲本實驗室書面批准。

# Certificate of Calibration 校正證書

Certificate No. : C176148  
證書編號

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- Self-calibration using the laboratory acoustic calibrator was performed before the test from 6.1.1.2 to 6.3.2.
- The results presented are the mean of 3 measurements at each calibration point.
- Test equipment :

| Equipment ID | Description                         | Certificate No. |
|--------------|-------------------------------------|-----------------|
| CL280        | 40 MHz Arbitrary Waveform Generator | C170048         |
| CL281        | Multifunction Acoustic Calibrator   | PA160023        |

5. Test procedure : MA101N.

6. Results :

6.1 Sound Pressure Level

6.1.1 Reference Sound Pressure Level

6.1.1.1 Before Self-calibration

| UUT Setting |                     |                | Applied Value |             | UUT Reading (dB) |
|-------------|---------------------|----------------|---------------|-------------|------------------|
| Range (dB)  | Frequency Weighting | Time Weighting | Level (dB)    | Freq. (kHz) |                  |
| 30 - 130    | A                   | FAST           | 94.00         | 1           | 93.9             |

6.1.1.2 After Self-calibration

| UUT Setting |                     |                | Applied Value |             | UUT Reading (dB) | IEC 61672 Class 1 (dB) |
|-------------|---------------------|----------------|---------------|-------------|------------------|------------------------|
| Range (dB)  | Frequency Weighting | Time Weighting | Level (dB)    | Freq. (kHz) |                  |                        |
| 30 - 130    | A                   | FAST           | 94.00         | 1           | 94.0             | ± 1.1                  |

6.1.2 Linearity

| UUT Setting |                     |                | Applied Value |             | UUT Reading (dB) |
|-------------|---------------------|----------------|---------------|-------------|------------------|
| Range (dB)  | Frequency Weighting | Time Weighting | Level (dB)    | Freq. (kHz) |                  |
| 30 - 130    | A                   | FAST           | 94.00         | 1           | 94.0 (Ref.)      |
|             |                     |                | 104.00        |             | 104.0            |
|             |                     |                | 114.00        |             | 114.0            |

IEC 61672 Class 1 Spec. : ± 0.6 dB per 10 dB step and ± 1.1 dB for overall different.

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

Certificate No. : C176148

證書編號

Remarks : - Mfr's Spec. : IEC 61672 Class 2

- Uncertainties of Applied Value : 94 dB : 63 Hz - 125 Hz :  $\pm 0.35$  dB  
250 Hz - 500 Hz :  $\pm 0.30$  dB  
1 kHz :  $\pm 0.20$  dB  
2 kHz - 4 kHz :  $\pm 0.35$  dB  
8 kHz :  $\pm 0.45$  dB  
12.5 kHz :  $\pm 0.70$  dB  
104 dB : 1 kHz :  $\pm 0.10$  dB (Ref. 94 dB)  
114 dB : 1 kHz :  $\pm 0.10$  dB (Ref. 94 dB)

- UUT Microphone Model No. : MA220 (ACO7052) & S/N : 62324

- The uncertainties are for a confidence probability of not less than 95 %.

Note :

Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

## Appendix I Event / Action Plan for Noise Exceedance

| Event                       | Actions to be taken by Environmental Team as immediate as practicable  | Actions to be taken by Independent Environmental Checker as immediate as practicable  | Actions to be taken by Supervising Officer's Representative as immediate as practicable   | Actions to be taken by Contractor as immediate as practicable  |
|-----------------------------|--|---|---|--|
| Action Level being exceeded | <ol style="list-style-type: none"> <li>1. Notify IEC and Contractor;</li> <li>2. Carry out investigation;</li> <li>3. Report the results of investigation to the IEC, SO and Contractor;</li> <li>4. Discuss with the IEC and Contractor on remedial measures required;</li> <li>5. Increase monitoring frequency to check mitigation effectiveness. (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol>   | <ol style="list-style-type: none"> <li>1. Review the investigation results submitted by the ET;</li> <li>2. Review the proposed remedial measures by the Contractor and advise the SO accordingly;</li> <li>3. Advise the SO on the effectiveness of the proposed remedial measures. (The above actions should be taken within 2 working days after the exceedance is identified).</li> </ol> | <ol style="list-style-type: none"> <li>1. Confirm receipt of notification of failure in writing;</li> <li>2. Notify Contractor;</li> <li>3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented;</li> <li>4. Supervise the implementation of remedial measures. (The above actions should be taken within 2 working days after the exceedance is identified).</li> </ol>  | <ol style="list-style-type: none"> <li>1. Submit noise mitigation proposals to IEC and SO;</li> <li>2. Implement noise mitigation proposals. (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol>   |
| Limit Level being exceeded  | <ol style="list-style-type: none"> <li>1. Inform IEC, SO, Contractor and EPD;</li> <li>2. Repeat measurements to confirm findings;</li> <li>3. Increase monitoring frequency;</li> <li>4. Identify source and investigate the cause of exceedance;</li> <li>5. Carry out analysis of Contractor's working procedures;</li> <li>6. Discuss with the IEC, Contractor and SO on remedial measures required;</li> <li>7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and SO informed of the results;</li> <li>8. If exceedance stops, cease additional monitoring. (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol> | <ol style="list-style-type: none"> <li>1. Discuss amongst SO, ET, and Contractor on the potential remedial actions;</li> <li>2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the SO accordingly; (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol>                                  | <ol style="list-style-type: none"> <li>1. Confirm receipt of notification of failure in writing;</li> <li>2. Notify Contractor;</li> <li>3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented;</li> <li>4. Supervise the implementation of remedial measures;</li> <li>5. If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated. (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol> | <ol style="list-style-type: none"> <li>1. Take immediate action to avoid further exceedance;</li> <li>2. Submit proposals for remedial actions to IEC and SO within 3 working days of notification;</li> <li>3. Implement the agreed proposals;</li> <li>4. Submit further proposal if problem still not under control;</li> <li>5. Stop the relevant portion of works as instructed by the SO until the exceedance is abated. (The above actions should be taken within 2 working days after the exceedance is identified)</li> </ol> |

## Appendix J Noise Monitoring Data

Location: Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 1 (M1 / N\_S1)

Monitoring date: 3, 10, 18 and 24 September 2018

Parameter:  $L_{eq\ 30min}$

Noise source other than construction activities from the Project: Nil

Noise Monitoring data:

| Date       | Start time |   | End time | Weather | $L_{eq\ 30min}$<br>dB(A) |
|------------|------------|---|----------|---------|--------------------------|
| 03-09-2018 | 11:24      | - | 11:54    | Cloudy  | 50.4                     |
| 10-09-2018 | 11:30      | - | 12:00    | Cloudy  | 49.3                     |
| 18-09-2018 | 11:15      | - | 11:45    | Sunny   | 48.2                     |
| 24-09-2018 | 11:34      | - | 12:04    | Cloudy  | 53.3                     |

Location: Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 2 (M2 / N\_S2)

Monitoring date: 3, 10, 18 and 24 September 2018

Parameter :  $L_{eq\ 30min}$

Noise source other than construction activities from the Project: Nil

Noise Monitoring data:

| Date       | Start time |   | End time | Weather | $L_{eq\ 30min}$<br>dB(A) |
|------------|------------|---|----------|---------|--------------------------|
| 03-09-2018 | 10:52      | - | 11:22    | Cloudy  | 59.0                     |
| 10-09-2018 | 10:58      | - | 11:28    | Cloudy  | 59.3                     |
| 18-09-2018 | 10:42      | - | 11:12    | Sunny   | 55.7                     |
| 24-09-2018 | 11:00      | - | 11:30    | Cloudy  | 59.0                     |

Location: Shek Kwu Chau Treatment & Rehabilitation Centre Hostel 3 (M3 / N\_S3)

Monitoring date: 3, 10, 18 and 24 September 2018

Parameter :  $L_{eq\ 30min}$

Noise source other than construction activities from the Project: Air-conditioning units nearby

Noise Monitoring data:

| Date       | Start time |   | End time | Weather | $L_{eq\ 30min}$<br>dB(A) |

- Notes:
- (1) Broken concrete for recycling into aggregates.
  - (2) Plastics refer to plastic bottles/ containers, plastic sheets/ foam from packaging materials.
  - (3) Use the conversion factor : 1 full load of dumping truck being equivalent to 6.5m<sup>3</sup> by volume.

- Notes:
- (1) Broken concrete for recycling into aggregates.
  - (2) Plastics refer to plastic bottles/ containers, plastic sheets/ foam from packaging materials.
  - (3) Use the conversion factor : 1 full load of dumping truck being equivalent to 6.5m<sup>3</sup> by volume.

## Appendix L Event / Action Plan for Coral Monitoring

| Event                   | Action   |  |   |  |
|-------------------------|--|--|---|--|
|                         | ET Leader  | IEC  | SO  | Contractor   |
| Action Level Exceedance | 1. Check monitoring data<br>2. Inform the IEC, SO ,and Contractor of the findings;<br>3. Increase the monitoring to at least once a month to confirm findings;<br>4. Propose mitigation measures for consideration | 1. Discuss monitoring with the ET and the Contractor;<br>2. Review proposals for additional monitoring and any other measures submitted by the Contractor and advise the SO accordingly. | 1. Discuss with the IEC additional monitoring requirements and any other measures proposed by the ET;<br>2. Make the agreement on the measures to be implemented. | 1. Inform the SO and confirm notification of the non-compliance in writing;<br>2. Discuss with the ET and the IEC and propose measures to the IEC and the SO;<br>3. Implement the agreed measures. |
| Limit Level Exceedance  | 1. Undertake Steps 1-4 as in the Action Level Exceedance. If further exceedance of Limit Level, propose enhancement measures for consideration.  | 1. Discuss monitoring with the ET and the Contractor;<br>2. Review proposals for additional monitoring and any other measures submitted by the Contractor and advise the SO accordingly. | 1. Discuss with the IEC additional monitoring requirements and any other measures proposed by the ET;<br>2. Make the agreement on the measures to be implemented. | 1. Inform the SO and confirm notification of the non-compliance in writing;<br>2. Discuss with the ET and the IEC and propose measures to the IEC and the SO;<br>3. Implement the agreed measures. |

## Appendix M Event / Action Plan for White-Bellied Sea Eagle

| Event  | Action   |   |  |
|--|--|---|--|
|  | Environmental Team   | Audit Team  | Contractor                                     |
| Absence of White-bellied Sea Eagle during a whole day of monitoring. | <p>Inform audit team.</p> <p>Increase monitoring frequency to daily.</p> | <p>Inform site engineer and contractor.</p> <p>If the absence remains:</p> <ul style="list-style-type: none"> <li>• Review construction activities and noise monitoring records of the associated period;</li> <li>• Identify potential causes of the absence;</li> <li>• Propose remedial measures, such as change of construction method and sequence;</li> <li>• Confirm the feasibility of the proposed remedial measures with site engineer and contractor;</li> <li>• Discuss with environmental team about the effectiveness of the proposed remedial measures.</li> </ul> | <p>Implement the agreed remedial measures.</p> |

## Appendix N Exceedance Report

## Statistical Summary of Exceedances in the Reporting Period

| Water Quality |              |             |       |
|---------------|--------------|-------------|-------|
| Location      | Action Level | Limit Level | Total |

Dear Mr. CHUNG

**Contract No. EP/SP/66/12  
 Integrated Waste Management Facilities Phase 1  
Proposal for Review Baseline Marine Water Quality**

I refer to your above referenced letter dated 14 August 2018 sending us the subject revised Proposal for Review Baseline Marine Water Quality.

Please note that we have no further comment on the Proposal.

The above is advisory and administrative in nature and shall not pre-empt any statutory decision under the EIA Ordinance. As pointed out to you previously, please be reminded to follow any necessary procedures and submission requirements under the EM&A programme controlled by the Further Environmental Permit No. FEP-01/429/2012/A for the IWMF Phase 1 project.

Yours sincerely,

(Raymond L. Y. LAI)  
 Environmental Protection Officer  
 for Director of Environmental Protection

-

## 1 INTRODUCTION

The Government of Hong Kong SAR will develop the Integrated Waste Management Facilities (IWMF) Phase 1 (hereafter “the Project”) with incineration to achieve substantial bulk reduction of unavoidable municipal solid waste (MSW) and to recover energy from the incineration process. The IWMF will be on an artificial island to be formed by reclamation at the south-western coast of Shek Kwu Chau. Keppel Seghers – Zhen Hua Joint Venture (KSZHJV) was awarded the contract under Contract No. EP/SP/66/12 Integrated Waste Management Facilities Phase 1 to construct and operate the Project.

An environmental impact assessment (EIA) study for the Project have been conducted and the EIA Report was approved under the Environmental Impact Assessment Ordinance on 17 January 2012. An Environmental Permit (EP) (EP No.: EP-429/2012) was granted to EPD on 19 January 2012 for the construction and operation of the Project. Subsequently, the EP was amended (EP No.: EP-429/2012/A) and a further EP (FEP) (EP No.: FEP-01/429/2012/A) was granted to the Keppel Seghers – Zhen Hua Joint Venture (KSZHJV) on 27 December 2017.

Baseline marine water quality monitoring was undertaken in accordance with the requirements provided in the EM&A Manual between 26 February and 26 March 2018. A Baseline Monitoring Report was submitted on 14 June 2018 to fulfill Condition 3.3 of the FEP. It is proposed to supplement the marine water quality monitoring data in wet season (April – September) so as to further improve the baseline data to take into account potential variations within a year due to natural fluctuations and also enhance the representativeness of the water quality monitoring parameters.

## 2 PURPOSE AND SCOPE

As the baseline marine water quality monitoring was undertaken during the dry season (October – March), it is proposed to supplement the marine water quality monitoring data in wet season (April – September) so as to further improve the baseline data to take into account potential variations within a year due to natural fluctuations and also enhance the representativeness of the water quality monitoring parameters.

Under the latest construction programme, DCM site trial shall be carried out in the designated location as shown in **Figure 1**.

---

The construction sequence of DCM site trial is summarized as below:

1. Carrying out site investigation to determine the property, grading, chemical composition of the sediment;
2. Obtaining sediment samples for laboratory investigation to produce design mix of cement slurry;
3. Laying geotextile and placing of sand blanket, with at least 2m thickness, to cover the seabed at the area where DCM site trial would be carried out;
4. Positioning of marine DCM barge;
5. Inserting piling pile of mixing treatment equipment into the soft layer at the designated level;
6. Pulling up of piling pipe together with the injection of cement slurry and mixing of soft material by the agitator;
7. Monitor, control, review and adjust the cement slurry content during mixing;
8. Repositioning of the marine DCM barge and repeat the mixing procedure until the required pattern of strengthened material is formed;
9. Wait for 28 days to allow cement mixed marine sediment to grow strength prior to conducting Unconfined Compressive Strength (UCS) Test; and
10. Coring out the cement mixed marine sediment to carry out UCS test and determine the mixing ratio of cement: marine sediment.

After obtaining the results from the UCS test, KSZHJV will conduct the static loading test at the designated location as shown in **Figure 1** and the construction sequence of static loading test is summarized as below:

1. Laying Geotextile at seabed;
2. Laying of sand blankets with at least 2m thickness on top of geotextile, cage type silt curtain shall be deployed while laying sand blanket;
3. Conduct DCM work, procedures as stated in Points 4 -8 of the construction sequence of DCM site trial, using the cement mixing ratio as determined by DCM site trial;
4. Laying Grade 400 aggregate on top of sand blanket to form a rubble mound, cage type silt curtain shall also be deployed while laying of Grade 400 aggregate; and
5. Placing concrete blocks on top of rubble mound to form a platform to install the survey monitoring equipment.

Therefore, it is proposed to make use of the marine water quality monitoring data to be collected in the period during cement mixed marine sediment to grow 28 days strength prior to conducting UCS test to represent the baseline monitoring data for wet season. At that period of time, the key construction activities will be operating at most 3 nos. of drill rigs for site investigation works. No marine construction works will be undertaken.

---

### 3 WATER QUALITY MONITORING REQUIREMENTS

#### 3.1 Water Quality Parameters to be Monitored

The following water quality parameters to be monitored are summarized in **Table 1**.

**Table 1 – Water Quality Parameters**

| Water Quality Parameters                                  | Baseline Monitoring for Wet Season |
|---|------------------------------------|
| Dissolved Oxygen (DO) / Dissolved Oxygen Saturation (DO%) | x                                  |
| pH  | x                                  |
| Temperature   | x                                  |
| Turbidity   | x                                  |
| Suspended Solids (SS)                                     | x                                  |
| Water depth   | x                                  |
| Salinity  | x                                  |

x – Parameters to be tested

#### 3.2 Monitoring Equipment and Procedures

Monitoring of DO, DO%, pH, temperature, turbidity, water depth and salinity should be measured in-situ whereas SS should be sampled and then determined by laboratory. The equipment required for each type of monitoring are specified below.

Data record sheets shall be completed for each monitoring location. Sample data record sheets based on the one presented in the “EM&A Guideline for Development Projects in Hong Kong” are shown in **Appendix A**.

##### *In-situ Monitoring*

- Dissolved Oxygen Measuring Equipment – the instrument should be portable and weatherproof using a DC power source. It should be capable of measuring a dissolved oxygen level in the range of 0-50mg/L and 0-200% saturation.
- pH Measuring Equipment – a portable pH meter capable of measuring a range between 0.0 and 14.0 should be provided to measure pH under the specified conditions according to the Standard Methods, APHA.
- Temperature Measuring Equipment – the instrument should be portable and weatherproof using a DC power source. It should be capable of measuring a temperature of 0-45 degree

Celsius with a capability of measuring to  $\pm 0.1$  degree Celsius.

- Turbidity Measuring Equipment – the instrument should be portable and weatherproof using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000NTU.
- Positioning Device – a hand held or boat fixed type differential Global Positioning System (dGPS) with way point bearing indication or other equivalent instrument of similar accuracy should be provided and used during monitoring to ensure the monitoring vessel is at the correct location before taking measurements
- Water Depth Detector – a portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. The unit would either be handheld or affixed to the bottom of the work boat, if the same vessel is to be used throughout the monitoring programme.
- Salinity - the instrument should be portable and weatherproof using a DC power source. It should be capable of measuring salinity in the range 0-40ppt.

#### *Calibration of In-situ Instruments*

All in-situ monitoring instrument should be checked, calibrated and certified by a laboratory accredited under the Hong Kong Laboratory Accreditation Scheme (HOKLAS) or other international accreditation scheme that is HOKLAS-equivalent before use, and subsequently re-calibrated at three monthly intervals throughout all stages of the water quality monitoring. Responses of sensors and electrodes should be checked with certified standard solutions before each use.

For the on-site calibration of field equipment, the BS 1427:2009, Guide to on-site test methods for the analysis of waters should be observed.

Sufficient stocks of spare parts should be maintained for replacements when necessary. Backup monitoring equipment should also be made available so that monitoring can proceed uninterrupted even when some equipment is under maintenance, calibration etc.

#### *Water Samples for Laboratory Testing*

##### Collection of Water Samples

Water samples for all monitoring parameters should be collected, stored, preserved and analysis according to the Standard Methods, APHA 22<sup>nd</sup> ed. and/or other methods as agreed by the EPD.

A water sampler comprises a transparent PVC cylinder, with a capacity of not less than two litres, and could be effectively sealed with latex cups at both ends should be used. The sampler should

---

have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth. Kahlsico Water Sampler or a similar instrument approved by the ET and SO should be used.

Water samples should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4 °C without being frozen), delivered to the laboratory within 24 hours of collection.

#### Laboratory Measurement / Analysis

Analysis of SS should be carried out in a HOKLAS accredited laboratory (or other international accredited laboratory that is HOKLAS-equivalent). Sufficient water samples should be collected at the monitoring stations for carrying out the laboratory determination. The laboratory determination work should start within 24 hours after receipt of the water samples. The analysis should follow the standard methods summarised in **Table 2**.

**Table 2:** Laboratory analysis for SS

| Parameters            | Instrumentation    | Analytical Method | Reporting Limit |
|-----------------------|--------------------|-------------------|-----------------|
| Suspended Solids (SS) | Analytical Balance | APHA 2540D        | 1 mg/L          |

Additional duplicate samples may be required by EPD for inter laboratory calibration. Remaining samples after analysis should be kept by the laboratory for three months in case repeat analysis is required.

## 4 BASELINE MONITORING FOR WET SEASON

### 4.1 Purpose

The purpose of the baseline monitoring for wet season is to supplement the baseline data to take into account the potential variations within a year due to natural fluctuations and to enhance the representativeness of the water quality monitoring parameters. These baseline conditions shall be established by measuring DO, DO%, pH, temperature, turbidity, salinity and SS at designated monitoring stations.

### 4.2 Timing

It is proposed to make use of the marine water quality monitoring data to be collected in the period during cement mixed marine sediment to grow 28 days strength prior to conducting UCS test to

---

represent the baseline monitoring data for wet season. At that period of time, the key construction activities will be operating approximately 3 nos. of drill rigs for site investigation works. No marine construction works will be undertaken.

#### 4.3 Monitoring Locations

Baseline water quality for wet season will be measured at the monitoring stations as listed in **Table 3** and illustrated in **Figure 2**. The monitoring stations will be the same as those for the IWMF's marine water quality monitoring stations during construction phase. DO, DO%, pH, temperature, turbidity, salinity and SS are measured at all monitoring stations.

**Table 3 – Proposed Monitoring Stations**

| Station | Description                      | Easting | Northing | Parameters  |
|---------|----------------------------------|---------|----------|---|

| M1      | Tung Wan                         | 821572  | 807799   |   |

#### 4.4 Monitoring Procedures

The measurements will be taken three days per week, at mid-flood and mid-ebb tides, for a period of four weeks when there are no marine construction activities to be carried out. The interval between two sets of monitoring will be not less than 36 hours.

Samples will be taken at three depths (at 1m below surface, at mid-depth, and at 1m above bottom) for locations with water depth >6m. For locations with water depth between 3m and 6m, two depths (surface and bottom) were taken. Locations with water depth < 3m, only surface depth will be taken. Duplicate water samples will be taken and analysed.

#### 4.5 Action and Limit Levels

The Action and Limit levels are defined in **Table 4** in accordance with the Updated EM&A Manual.

**Table 4 - Action and Limit Levels for Water Quality Parameters**

| Parameters                                  | Action Level   | Limit Level  |
|---|--|--|
| <b>Construction Phase Impact Monitoring</b> |  |  |
| DO in mg/L                                  | ≤ 5 percentile of baseline data  | ≤ 4mg/L  |
| Suspended Solids (SS) in mg/L               | 95 percentile of baseline data or 120% of upstream control station at the same tide at the same day, whichever is higher | 99 percentile of baseline data or 130% of upstream control station at the same tide of the same day, whichever is higher |
| Turbidity in NTU                            | 95 percentile of baseline data or 120% of upstream control station at the same tide at the same day, whichever is higher | 99 percentile of baseline data or 130% of upstream control station at the same tide of the same day, whichever is higher |
| <b>Operational Phase Impact Monitoring</b>  |  |  |
| Salinity in ppm                             | 95 percentile of baseline data or 105% of upstream control station at the same tide at the same day, whichever is higher | 99 percentile of baseline data or 109% of upstream control station at the same tide of the same day, whichever is higher |

Notes:

1. For DO, non-compliance of water quality results when monitoring results are lower than the limits.
2. Depth-averaged results are used unless specified otherwise
3. For SS and Turbidity, non-compliance of water quality results when monitoring results are higher than the limits.
4. Baseline data to be adopted in the marine water quality monitoring are specified in the Baseline Monitoring Report.
5. With reference to Plate 5b.8 of the approved EIA report EIA-201/2011, the upstream control station shall be C2 during flood tide and C1 during ebb tide.

#### 4.6 Event and Action Plan

The actions in accordance with the Event and Action Plan in **Table 5** should be carried out if the water quality assessment criteria are exceeded at the impact monitoring stations.

**Table 5** - Event and Action Plan for Marine Water Quality Monitoring

| Event   | Action  |   |  |   |
|---|---|---|--|---|
|   | Environmental Team (ET)   | Independent Environmental Checker (IEC)   | Supervising Officer (SO)   | KSZHJV  |
| Action level being exceeded by one sampling day | <ol style="list-style-type: none"> <li>1. Repeat in-situ measurement to confirm findings;</li> <li>2. Identify reasons for non-compliance and sources of impact;</li> <li>3. Inform IEC and KSZHJV;</li> <li>4. Check monitoring data, all plant, equipment and KSZHJV's working methods;</li> <li>5. Discuss mitigation measures with IEC and KSZHJV;</li> <li>6. If not already undertaking daily monitoring, increase monitoring frequency.</li> </ol> | <ol style="list-style-type: none"> <li>1. Discuss with ET and KSZHJV on the mitigation measures;</li> <li>2. Review proposals on mitigation measures submitted by KSZHJV and advise SO accordingly;</li> <li>3. Assess the effectiveness of the implemented mitigation measures.</li> </ol> | <ol style="list-style-type: none"> <li>1. Discuss with IEC on the proposed mitigation measures;</li> <li>2. Make agreement on the mitigation measures to be implemented;</li> <li>3. Assess the effectiveness of the implemented mitigation measures.</li> </ol> | <ol style="list-style-type: none"> <li>1. Inform SO and confirm receipt of ET's notification of the non-compliance in writing;</li> <li>2. Rectify unacceptable practice;</li> <li>3. Check all plant and equipment;</li> <li>4. Provide report of the status and condition of plant, equipment and mitigation measures to ET;</li> <li>5. Consider changes of working methods;</li> <li>6. Discuss with ET and IEC and propose mitigation measures.</li> </ol> |

#### **4.7 Reporting**

The monitoring data to be collected at the baseline monitoring for wet season shall be used to supplement the baseline monitoring data to be collected between 26 February 2018 and 26 March 2018 so as to further improve the baseline data to take into account potential variations within a year due to natural fluctuations and also enhance the representativeness of the water quality monitoring parameters. Baseline Monitoring Report shall follow the relevant reporting requirements as specified in the EM&A Manual. The Baseline Monitoring Report shall be certified by ET leader and verified by the IEC.
