Dear Sirs

Agreement No. CE 5/2019 (EP)
Independent Environmental Checker for First Stage of
Tseung Kwan O Desalination Plant – Investigation
Verification of Monthly EM&A Report No.19 (September 2021)

We refer to emails of 26 and 28 October 2021 attaching Monthly EM&A Report No.19 (September 2021) for the captioned project prepared by the ET.

We have no further comments and hereby verify the captioned report in accordance with Clause 3.5 of the Environmental Permit no. EP-503/2015/A and Further Environmental Permit no. FEP-01/503/2015/A.

Should you have any queries regarding the above, please do not hesitate to contact the undersigned on 2618 2831.

Yours faithfully ANEWR CONSULTING LIMITED

Louis Kwan

Independent Environmental Checker

Exceedance Report(s)

Appendix 0

#### **EXECUTIVE SUMMARY**

#### **INTRODUCTION**

- A1. The Project, Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant (TKODP), is a Designated Project under the Environmental Impact Assessment Ordinance (Cap. 499) (EIAO) and is currently governed by a Further Environmental Permit (EP No. FEP 01/503/2015/A) for the construction and operation of the Project.
- A2. In accordance with the Environmental Monitoring and Audit (EM&A) Manual for the Project, EM&A works for marine water quality, noise, waste management and ecology should be carried out by Environmental Team (ET), Acuity Sustainability Consulting Limited (ASCL), during the construction phase of the Project.
- A3. This is the 19th Monthly EM&A Report, prepared by ASCL, for the Project summarizing the monitoring results and audit findings of the EM&A programme at and around Tseung Kwan 0 Area 137 (TKO 137) during the reporting period from 1 September 2021 to 30 September 2021.
- A4. The EM&A programme for this contract has covered environmental monitoring on construction noise level at selected NSRs and Contractor's environmental performance auditing in the aspects of construction dust, construction noise, water quality, waste management, Landscape and Visual and Ecology.

#### SUMMARY OF MAIN WORKS UNDERTAKEN & KEY MITIGATION MEASURES IMPLEMENTED

A5. Key activities carried out in this reporting period for the Project included the followings:

- Land Survey;
- Construction of ActiDAFF perimeter wall and water tank;
- Construction of Reverse Osmosis (RO) Building column and wall from Basement to Roof, beams and slabs for Roof Floor; water tank; Electrical Building roof floor slab, columns and wall;
- Construction of Product Water Storage Tank (PWST) perimeter wall and Electrical Building's 1/F slab;
- Construction of manhole no. 10 adjacent to PWST;
- Construction of Post Treatment Building footing;
- Construction of ground floor slab of Administration Building;
- Construction of reinforced concrete (R.C) footing of Inspection Corridor;
- Internal finishing work in Central Chiller Plant Building;
- 610mm diameter socketed H-piles installation at Outfall Shaft and rockfill removal;
- Sinking of 610mm diameter casings at Outfall Shaft;
- Commissioned 610mm pipe piling at Outfall Shaft;
- Installation of socket H beam inside sunken pipe piles at Outfall Shaft;

## Contract No. 13/WSD/17 Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

- Material lifting and welding work inside its hopper at Outfall Shaft;
- Excavation & Lateral Support (ELS) erection at Intake Shaft;
- Modification of temporary working platform and welding works at Intake Shaft;
- Demobilization of piling rig and 5.5T lifting crane at Intake Shaft;
- Material lifting and struts and railing installation at Intake shaft;
- Sheet pile welding works at Intake Shaft;
- Preparing H-beams and materials inside the hopper of the derrick barge at Intake Shaft;
- Rock filling in sunk 610mm pipe piles at Intake Shaft;
- Jacking pipe launching equipment setup at Combined Shaft and commencement of pipe jacking;
- Cable drawpit construction;
- Glass Reinforced Plastic (GRP) pipe lamination;
- Construction of structural wall of Chemical Building;
- Wan Po Road Sewage Works Temporary Traffic Arrangement (TTA), excavation and laying High-Density Polyethylene (HDPE) pipe
- Construction of On-Site Chlorine Generation (OSCG) Building footing;
- Excavation and lateral support (ELS) at Pump house

#### A6. The major environmental impacts brought by the above construction works include:

- Construction dust and noise generation from marine construction works, excavation works, ELS installation works, breaking of concrete surface and construction works; pipe piling driving works and sheetpiling works
- Waste generation from the construction activities
- Impact on water quality from marine construction works and inland construction works

## A7. The key environmental mitigation measures implemented for the Project in this reporting period associated with the above construction works include:

- Dust suppression by regular wetting and water spraying for construction works
- Reduction of noise from equipment and machinery on-site and regular inspection to machinery and plants/vehicles on-site to ensure proper functioning
- Sorting and storage of general refuse and construction waste
- Deployment of temporary silt curtain in the area where marine construction works were conducted and deployment of water sedimentation tanks for treatment of wastewater at inland areas before discharge

#### SUMMARY OF EXCEEDANCE & INVESTIGATION & FOLLOW-UP

- A8. No noise monitoring was conducted during the reporting period since there are no project-related construction activities undertaken within a radius of 300m from the monitoring locations. No project-related exceedance of the Action Level was recorded during the reporting period.
- A9. The EM&A works for water quality were conducted during the reporting period in accordance with the EM&A Manual.
- A10. Fifty-Three (53) of the general water quality monitoring results of suspended solids (SS) obtained had exceeded the Action Level. Thirty (30) of the general water quality monitoring results of SS obtained during the reporting period had exceeded the Limit Level.
  - A11. Details of the exceedance are presented in **Appendix 0**.
  - A12.Investigation on the reason of exceedance has been carried out, where the exceedances of SS on 02/09, 04/09, 07/09, 09/09, 11/09, 14/09, 16/09, 18/09, 21/09 and 25/09 were concluded to be unrelated to the project as detailed in the Incident Reports on Action Level or Limit Level Non-compliance along with supporting materials in **Appendix 0**.
  - A13. It was concluded that all exceedances recorded in September were unrelated to the project.
  - A14.In this reporting period, 50 times of landfill gas monitoring was recorded. No exceedance of action and limit levels for methane, oxygen and carbon dioxide was observed. Monitoring was conducted when excavations at 1m depth or more within the consultation zone were conducted and workers entered the excavation on the day.
  - A15. Joint site inspections of the construction work by ET and IEC were carried out on 7, 13, 21, and 28 September 2021 to audit the mitigation measures implementation status. Observations were recorded in the site inspection checklists and provided to the contractors together with the appropriate follow-up actions where necessary.

#### **COMPLAINT HANDLING AND PROSECUTION**

A16.No project-related environmental complaint was received during the reporting period.

A17. Neither notifications of summons nor prosecution was received for the Project.

#### **REPORTING CHANGE**

A18. There was no change to be reported that may affect the on-going EM&A programme.

#### **SUMMARY OF UPCOMING KEY ISSUES AND KEY MITIGATION MEASURES**

A19.Key activities anticipated in the next reporting period for the Project will include the followings:

- Land Survey;
- Construction of ActiDAFF perimeter wall and water tank;
- Construction of Reverse Osmosis (RO) Building column and wall from Basement to Roof;
   beams and slabs for Roof Floor; water tank; Electrical building Roof Floor slab, columns and wall;
- Construction of Product Water Storage Tank (PWST) perimeter wall and Electrical Building's roof slab;
- Construction of manhole no. 8 and no. 9 adjacent to PWST;
- Construction of Post Treatment Building 1/F;
- Construction of ground floor slab and first floor columns and beams of Administration Building;
- Construction of reinforced concrete (RC) footing of Inspection Corridor;
- Internal finishing work in Central Chiller Plant Building;
- Rockfill removal and dewatering at Outfall Shaft;
- Excavation & Lateral Support (ELS) erection and commencement of marine dredging at Intake Shaft:
- Commencement of pipe jacking works at Combined Shaft for Intake & Outfall pipelines;
- Cable drawpit construction;
- Glass Reinforced Plastic (GRP) pipe lamination and laying;
- Construction of structural wall of Chemical Building;
- Wan Po Road Sewage Works Temporary Traffic Arrangement (TTA), excavation and laying of High-Density Polyethylene (HDPE pipes);
- Construction of On-Site Chlorine Generation (OSCG) Building footing;
- Excavation and lateral support (ELS) at Pump house

A20. The major environmental impacts brought by the above construction works will include:

- Construction dust and noise generation from construction and ELS works, pipe piling driven works and marine dredging and construction works
- Waste generation from construction activities
- Impact on water quality from marine construction works and inland construction works

A21. The key environmental mitigation measures for the Project in the coming reporting period associated with the above construction works will include:

- Dust suppression by regular wetting and water spraying for construction works
- Reduction of noise from equipment and machinery on-site
- Sorting and storage of general refuse and construction waste
- Deployment of temporary silt curtain in the area where marine construction works were conducted and deployment of water sedimentation tanks for treatment of wastewater at inland areas before discharge

### 1. Basic Project Information

#### 1.1. BACKGROUND

The Acciona Agua, S.A. Trading, Jardine Engineering Corporation, Limited and China State Construction Engineering (Hong Kong) Limited As AJC Joint Venture (AJCJV) is contracted to carry out the Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant (DPTKO) under Contract No. 13/WSD/17 (the Project).

Acuity Sustainability Consulting Limited (ASCL) is commissioned by AJCJV to undertake the Environmental Team (ET) services as required and/or implied, both explicitly and implicitly, in the Environmental Permit (EP), Environmental Impact Assessment Report (EIA Report) (Register No. AEIAR-192/2015) and Environmental Monitoring and Audit Manual (EM&A Manual) for the Project; and to carry out the Environmental Monitoring and Audit (EM&A) programme in fulfillment of the EIA Report's EM&A requirements and Contract No. 13/WSD/17 Specification requirements.

Pursuant to the Environmental Impact Assessment Ordinance (EIAO), the Director of Environmental Protection granted the Environmental Permit (No. EP-01/503/2015) and Variation of Environmental Permit (No. EP-01/503/2015/A) to Water Supplies Department (WSD); and granted the Further Environmental Permit (No. FEP-01/503/2015/A) to AJCJV for the Project.

#### 1.2. THE REPORTING SCOPE

This is the 19<sup>th</sup> Monthly EM&A Report for the Project which summarizes the key findings of the EM&A programme during the reporting period from 1 September to 30 September 2021.

#### 1.3. PROJECT ORGANIZATION

The Project Organization structure for Construction Phase is presented in **Figure 1.1**.

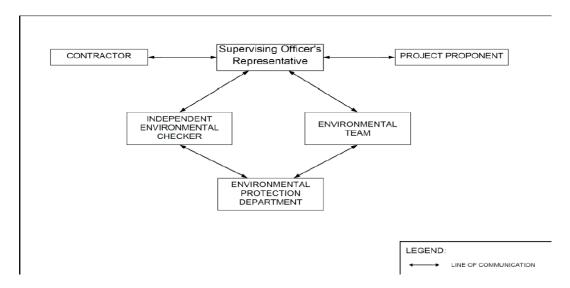

Figure 1.1 Project Organization Chart

6

Contact details of the key personnel are presented in Table 1.1 below:

**Table 1.1** Contact Details of Key Personnel

| Party  | Position                                      | Name             | Telephone no. |
|--|---|------------------|---------------|
| Project Proponent  | SE/CM2  | Benny Lam        | 2634-3573     |
| Supervising Officer  | Project Manager                               | Christina Ko     | 2608-7302     |
| (Binnies Hong Kong Limited)  | Chief Resident<br>Engineer                    | Roger Wu         | 6343-1002     |
| The Jardine Engineering Corporation,   | Project Manager                               | Stephen<br>Yeung | 2807-4665     |
| Limited, China State Construction Engineering (Hong Kong) Limited and Acciona Agua, S.A. Trading | Environmental<br>Monitoring<br>Manager        | Brian Kam        | 9456-9541     |
| Acuity Sustainability Consulting Limited   | Environmental<br>Team Leader                  | Jacky Leung      | 2698-6833     |
| ANewR Consulting Limited   | Independent<br>Environmental<br>Checker (IEC) | Louis Kwan       | 2618-2831     |

#### 1.4. SUMMARY OF CONSTRUCTION WORKS

Details of the major construction activities undertaken in this reporting period are shown as below. The construction programme is presented in **Appendix A**.

Key activities carried out in this reporting period for the Project included the followings:

- Land Survey;
- Construction of ActiDAFF perimeter wall and water tank;
- Construction of Reverse Osmosis (RO) Building column and wall from Basement to Roof, beams and slabs for Roof Floor; water tank; Electrical Building roof floor slab, columns and wall;
- Construction of Product Water Storage Tank (PWST) perimeter wall and Electrical Building's 1/F slab;
- Construction of manhole no. 10 adjacent to PWST;
- Construction of Post Treatment Building footing;
- Construction of ground floor slab of Administration Building;
- Construction of reinforced concrete (R.C) footing of Inspection Corridor;
- Internal finishing work in Central Chiller Plant Building;
- 610mm diameter socketed H-piles installation at Outfall Shaft and rockfill removal;
- Sinking of 610mm diameter casings at Outfall Shaft;
- Commissioned 610mm pipe piling at Outfall Shaft;
- Installation of socket H beam inside sunken pipe piles at Outfall Shaft;
- Material lifting and welding work inside its hopper at Outfall Shaft;
- Excavation & Lateral Support (ELS) erection at Intake Shaft;
- Modification of temporary working platform and welding works at Intake Shaft;
- Demobilization of piling rig and 5.5T lifting crane at Intake Shaft;
- Material lifting and struts and railing installation at Intake shaft;
- Sheet pile welding works at Intake Shaft;
- Preparing H-beams and materials inside the hopper of the derrick barge at Intake Shaft;
- Rock filling in sunk 610mm pipe piles at Intake Shaft;
- Jacking pipe launching equipment setup at Combined Shaft and commencement of pipe jacking;
- Cable drawpit construction;
- Glass Reinforced Plastic (GRP) pipe lamination;
- Construction of structural wall of Chemical Building;
- Wan Po Road Sewage Works Temporary Traffic Arrangement (TTA), excavation and laying High-Density Polyethylene (HDPE) pipe
- Construction of On-Site Chlorine Generation (OSCG) Building footing;
- Excavation and lateral support (ELS) at Pump house

#### 1.5. SUMMARY OF ENVIRONMENTAL STATUS

A summary of the valid permits, licences, and/or notifications on environmental protection for this Project is presented in **Table 1.2**.

Table 1.2 Summary of the Status of Valid Environmental Licence, Notification, Permit and Documentations

| Permit/ Licenses/<br>Notification  | Reference           | Validity Period            | Remarks |
|--|---------------------|----------------------------|---------|
| Environmental Permit   | FEP - 01/503/2015/A | Throughout the Contract    |         |
| Notification of<br>Construction Works<br>under the Air Pollution<br>Control (Construction<br>Dust) Regulation (Form<br>NA) | Ref. No.: 451539    | -                          |         |
| Wastewater Discharge<br>Licence (Land and<br>Marine works)   | WT00035775-2020     | 24/07/2020 –<br>31/07/2025 |         |
| Chemical Waste<br>Producer Registration  | 5213-839-A2987-01   | Throughout the Contract    |         |
| Construction Noise Permit (24 hrs) – CNP for general works, TBM at Combined Shaft and marine works                         | GW-RE0419-21        | 01/05/2021 -<br>30/10/2021 |         |

| Dumping at Sea Ordinance (DASO) Permit to dump materials (Category M) at sea   | 470822              | Application in progress    |         |
| Dumping at Sea Ordinance (DASO) Permit to dump materials (Category L) at sea   | EP/MD/22-028        | 02/08/2021 -<br>01/02/2022 |         |

The status for all environmental aspects is presented in **Table 1.3**.

Table 1.3 Summary of Status for Key Environmental Aspects under the EM&A Manual

| Parameters                               | Status  |
|--|---|
| Water Quality                            |   |
| Baseline Monitoring under EM&A           | The baseline water quality monitoring was conducted       |
| Manual                                   | between 12 May 2020 to 6 Jun 2020                         |
| Impact Monitoring                        | On-going  |
| Noise                                    |   |
| Baseline Monitoring                      | The baseline noise monitoring result has been reported in |
|  | Baseline Monitoring Report and submitted to EPD under     |
|  | EP Condition 3.4  |
| Impact Monitoring                        | On-going  |
| Waste Management                         |   |
| Mitigation Measures in Waste             | On-going  |
| Monitoring Plan                          |   |
| Environmental Audit                      |   |
| Site Inspection covering Measures of Air | On-going  |
| Quality, Noise Impact, Water Quality,    |   |
| Waste, Ecological Quality, Fisheries,    |   |
| Landscape and Visual                     |   |

Other than the EM&A work by ET, environmental briefings, trainings and regular environmental management meetings were conducted, in order to enhance environmental awareness and closely monitor the environmental performance of the contractors.

The EM&A programme has been implemented in accordance with the recommendations presented in the approved EIA Report and the EM&A Manual. A summary of implementation status of the environmental mitigation measures for the construction phase of the Project during the reporting period is provided in **Appendix C**.

#### 2. Noise

#### 2.1. MONITORING REQUIREMENTS

To ensure no adverse noise impact, noise monitoring is recommended to be carried out within 300m radius from the nearby noise sensitive receivers (NSRs), during construction phase. The NSRs selected as monitoring station are (i) NSR4 – Creative Secondary School, (ii) NSR24 – PLK Laws Foundation College, and (iii) NSR31 – School of Continuing and Professional Studies – CUHK respectively.

In accordance with the EM&A Manual, baseline noise level at the noise monitoring stations were established as presented in the Baseline Monitoring Report. Impact noise monitoring will be conducted once per week in the form of 30-minutes measurements Leq, L10 and L90 levels recorded at each monitoring station between 0700 and 1900 on normal weekdays.

Referring to EM&A manual Section 4.1.2, the impact noise monitoring should be carried out at all the designated monitoring stations when there are project-related construction activities undertaken within a radius of 300m from the monitoring stations.

No impact monitoring for noise impact was conducted in the reporting month due to the overly distant monitoring station from the works location, where they were farther than 1 km from the closet monitoring station NSR4 to the works location.

Impact noise monitoring will be conducted weekly in the reporting period between 0700-1900 on normal weekdays. Construction works would follow stipulations of the valid Construction Noise Permits if works had to be conducted during restricted hours or public holidays.

Construction noise level were measured in terms of the A-weighted equivalent continuous sound pressure level (LAeq). Leq  $_{30 min}$  was used as the monitoring parameter for the time period between 0700 and 1900 on normal weekdays. **Table 2.1** summarizes the monitoring parameters, frequency and duration of the impact noise monitoring.

Table 2.1 Noise Monitoring Parameters, Time, Frequency and Duration

| Time               | Duration                                     | Interval   | Parameters  |
|--------------------|--|--|---|
| Daytime: 0700-1900 | Day time: 0700-1900 (during normal weekdays) | $\begin{array}{c} \text{Continuously in} \\ L_{\text{eq 5min}}/L_{\text{eq 30min}} \text{ (average} \\ \text{of 6 consecutive } L_{\text{eq 5min}} \text{)} \end{array}$ | $\begin{array}{c} L_{eq~30min} \\ L_{10~30min} \ \& \ L_{90~30min} \end{array}$ |

#### 2.2. MONITORING LOCATIONS

The monitoring locations should normally be made at a point 1m from the exterior of the NSRs building façade and be at a position 1.2m above the ground. A correction of +3dB(A) should be made to the free-field measurements.

According to the environmental findings detailed in the EIA report and Baseline Monitoring Report, the designated locations for the construction noise monitoring are listed in **Table 2.2** below.

**Table 2.2 Noise Sensitive Receivers** 

| NSR ID | Noise Sensitive Receivers                               | Monitoring Location                | Position        |
|--------|---|------------------------------------|-----------------|
| NSR 4  | Creative Secondary School                               | Roof Floor                         | 1 m from facade |
| NSR 24 | PLK Laws Foundation College                             | Pedestrian Road on<br>Ground Floor | Free-field      |
| NSR 31 | School of Continuing and Professional<br>Studies - CUHK | Roof Floor                         | 1 m from facade |

Three noise monitoring locations for impact monitoring at the nearby sensitive receivers are shown in **Figure 2.1-2.3**.

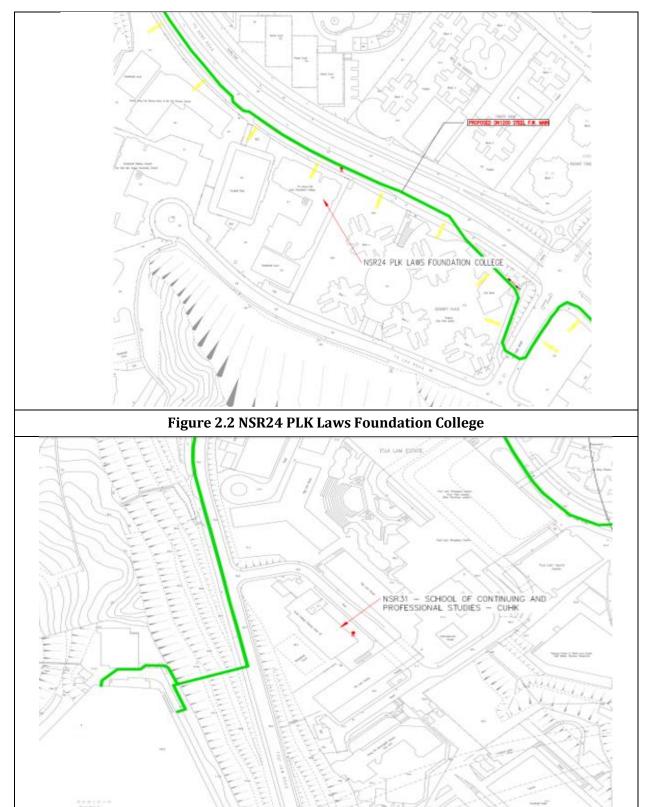

Figure 2.3 NSR31 School of Continuing and Professional Studies - CUHK

#### 2.3. IMPACT MONITORING METHODOLOGY

Integrated sound level meter shall be used for the noise monitoring. The meter shall be in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications. Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels before and after the noise measurements agree to within 1.0 dB(A). Calibration certificates of the instruments used to be shown at **Appendix F** are intentionally left blank since no impact monitoring equipment was used in the reporting month.

Noise measurements shall not be made in the presence of fog, rain, wind with a steady speed exceeding 5 m/s or wind with gusts exceeding 10 m/s. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s.

**Table 2.3 Impact Noise Monitoring Equipment** 

| Equipment                    | Brand and Model         | Detection Limit |
|------------------------------|-------------------------|-----------------|
| Sound Level Meter            | Nti XL2                 | 30-130 dB(A)    |
| Sound Level Meter Calibrator | Rion NC-74              | Nil             |
| Pocket Wind Meter Anemometer | Kestrel 1000 Wind Meter | Nil             |

#### 2.4. ACTION AND LIMIT LEVELS

The Action/Limit Levels are in line with the criteria of Practice Note for Professional Persons (ProPECC PN 2/93) "Noise from Construction Activities – Non-statutory Controls" and Technical Memorandum on Environmental Impact Assessment Process issued by HKSAR Environmental Protection Department ["EPD"] under the Environmental Impact Assessment Ordinance, Cap 499, S.16 are presented in **Table 2.4**.

Table 2.4 Action and Limit Levels for Noise per EM&A Manual

| Time Period                     | Action  | Limit (dB(A)) |
|---------------------------------|---|---------------|
| 0700-1900 on normal<br>weekdays | When one documented complaint is received from any one of the noise sensitive receivers |               |

Notes: Limits specified in the GW-TM and IND-TM for construction and operation noise, respectively.

If exceedances were found during noise monitoring, the actions in accordance with the Event and Action Plan shall be carried out according to **Appendix E**.

#### 2.5. MONITORING RESULTS AND OBSERVATIONS

Referring to EM&A manual Section 4.1.2, the impact noise monitoring should be carried out when there are project-related construction activities undertaken within a radius of 300m from the monitoring stations. No monitoring station was located within a radius of 300m of the Project site as shown in **Figure 2.4**, no impact monitoring for noise impact was conducted in the reporting period.

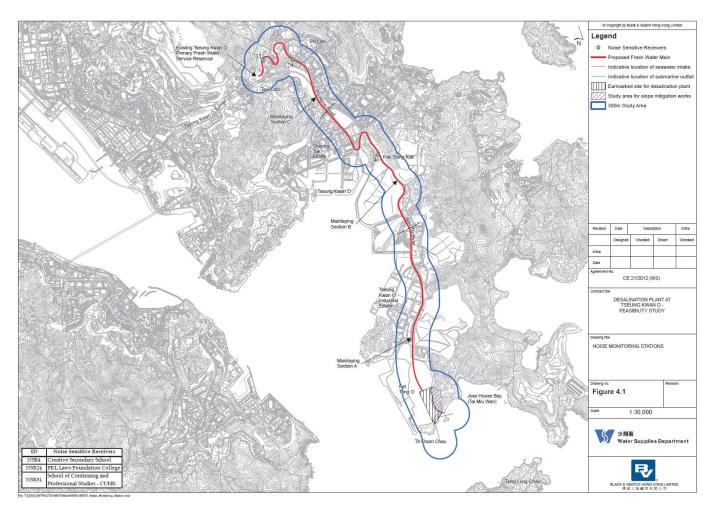

Figure 2.4 Site Layout Plan with Noise Sensitive Receivers and Desalination Plant

## 3. WATER QUALITY

In accordance with the recommendations of the EIA, water quality EM&A is required during dredging for the submarine pipelines and, during operation phase. In addition, baseline water quality monitoring will be required prior to the commencement of marine construction activities. The following Section provides details of the water quality monitoring to be undertaken by the Environmental Team (ET) to verify the distance of sediment and brine plume dispersion and to identify whether the potential exists for any indirect impacts to occur to ecological sensitive receivers. The water quality monitoring programme will be carried out to allow any deteriorating water quality to be readily detected and timely action taken to rectify the situation. The status and locations of water quality sensitive receivers and the marine works location may change after issuing this Document. If required, the ET in consultation with IEC will propose updated monitoring locations and seek approval from EPD.

Water quality monitoring for the Project can be divided into the following stages:

- · Dredging activities during construction phase;
- · Discharge of effluent from main disinfection during construction phase;
- · Operation phase first year upon commissioning; and,
- · Continuous monitoring of effluent quality.

In addition, the marine works contractor is required to complete a silt curtain efficiency test for the combined use of floating silt curtain type and cage type silt curtain for dredging at seawater intake to confirm the silt curtain reduction efficiency assumptions of the assessment. The details of testing plan together with the silt curtain deployment plan shall be submitted by the ET to seek approval from the IEC and EPD.

With the onset of marine dredging activities in late April at Outfall Shaft Area, a silt curtain efficiency test has been conducted at the Outfall Shaft Area on 16<sup>th</sup> April 2021 at 6 monitoring intervals (08:00, 10:00, 12:00, 14:00, 16:00, 18:00). The baseline monitoring event has been conducted on 10<sup>th</sup> April 2021 at 5 monitoring locations. Testing protocols and methodologies had followed the guidelines as presented in the EM&A Manual *Annex C*. Detailed analysis of in-situ and laboratory data was presented in a separate report which has been submitted to EPD after approval by IEC on 31 May 2021. The overall Silt Removal Effectiveness at Outfall Shaft Area for the combined used of cage and floating type silt curtains was 95.28%.

#### 3.1.1. WATER QUALITY PARAMETERS

The parameters that have been selected for measurement in situ and in the laboratory are those that were either determined in the EIA to be those with the most potential to be affected by the construction works or are a standard check on water quality conditions. Parameters to be measured in the baseline monitoring are listed in **Table 3.1**.

Table 3.1 Parameters measured in the baseline marine water quality monitoring

| Parameters                                   | Unit | Abbreviation          |  |
|--|------|-----------------------|--|
| In-situ measurements                         |      |                       |  |
| Dissolved oxygen                             | mg/L | DO                    |  |
| Temperature                                  | οС   | -                     |  |
| рН   | -    | -                     |  |
| Turbidity                                    | NTU  | -                     |  |
| Salinity                                     | 0/00 | -                     |  |
| Total Residual Chlorine NOTE1                | mg/L | TRC                   |  |
| Laboratory measurements                      |      |                       |  |
| Suspended Solids                             | mg/L | SS                    |  |
| Iron-Soluble NOTE2                           | mg/L | Fe                    |  |
| Anti-scalant as Reactive<br>Phosphorus NOTE2 | mg/L | PO <sub>4</sub> as P- |  |

NOTE 1: Monitoring of TRC will be conducted when cleaning and sterilization of the new freshwater main is carried out.

NOTE 2: The testing methods shall be submitted to EPD for approval prior to the commencement of monitoring programme

In addition to the water quality parameters, other relevant data will also be measured and recorded in Water Quality Monitoring Logs, including the location of the sampling stations, water depth, time, weather conditions, sea conditions, tidal stage, current direction and velocity, special phenomena and work activities undertaken around the monitoring and works area that may influence the monitoring results.

#### 3.1.2. MONITORING EQUIPMENT

For water quality monitoring, the following equipment will be used:

**Dissolved Oxygen and Temperature Measuring Equipment** - The instrument will be a portable, weatherproof dissolved oxygen measuring instrument complete with cable, sensor, comprehensive operation manuals, and will be operable from a DC power source. It will be capable of measuring: dissolved oxygen levels in the range of 0 - 20 mg/L and 0 - 200% saturation; and a temperature of 0 - 45 degrees Celsius. It shall have a membrane electrode with automatic temperature compensation complete with a cable of not less than 35 m in length. Sufficient stocks of spare electrodes and cables

#### Contract No. 13/WSD/17

## Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

shall be available for replacement where necessary (e.g. YSI model 59 DO meter, YSI 5739 probe, YSI 5795A submersible stirrer with reel and cable or an approved similar instrument).

**Turbidity Measurement Equipment** - The instrument will be a portable, weatherproof turbidity-measuring unit complete with cable, sensor and comprehensive operation manuals. The equipment will be operated from a DC power source, it will have a photoelectric sensor capable of measuring turbidity between 0 - 1000 NTU and will be complete with a cable with at least 35 m in length (for example Hach 2100P or an approved similar instrument).

**Salinity Measurement Instrument** - A portable salinometer capable of measuring salinity in the range of 0 - 40 ppt will be provided for measuring salinity of the water at each monitoring location.

**Water Depth Gauge** – A portable, battery-operated echo sounder (for example Seafarer 700 or a similar approved instrument) will be used for the determination of water depth at each designated monitoring station. This unit will preferably be affixed to the bottom of the work boat if the same vessel is to be used throughout the monitoring programme. The echo sounder should be suitably calibrated. The ET shall seek approval for their proposed equipment with the client prior to deployment.

**Current Velocity and Direction** – No specific equipment is recommended for measuring the current velocity and direction. The environmental contractor shall seek approval of their proposed equipment with the client prior to deployment.

**Positioning Device** – A Global Positioning System (GPS) shall be used during monitoring to allow accurate recording of the position of the monitoring vessel before taking measurements. The Differential GPS, or equivalent instrument, should be suitably calibrated at appropriate checkpoint (e.g. Quarry Bay Survey Nail) to verify that the monitoring station is at the correct position before the water quality monitoring commence.

**Water Sampling Equipment** - A water sampler, consisting of a PVC or glass cylinder of not less than two litres, which can be effectively sealed with cups at both ends, will be used (e.g. Kahlsico Water Sampler 13SWB203 or an approved similar instrument). The water sampler will have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.

**Total Residual Chlorine for Discharge of Sterilization Water** - Total residual chlorine (TRC) shall be measured in-situ using a handheld colorimeter with its testing toolkits.

#### 3.1.3. SAMPLING / TESTING PROTOCOLS

All in situ monitoring instruments will be checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use, and subsequently recalibrated at monthly intervals throughout the stages of the water quality monitoring. Responses of sensors and electrodes will be checked with certified standard solutions before each use.

On-site calibration of field equipment shall follow the "Guide to On-Site Test Methods for the Analysis of Waters", BS 1427: 2009. Sufficient stocks of spare parts shall be maintained for replacements when necessary. Backup monitoring equipment shall also be made available so that monitoring can proceed uninterrupted even when equipment is under maintenance, calibration etc.

#### 3.1.4. LABORATORY MEASUREMENT AND ANALYSIS

All laboratory work shall be carried out in a HOKLAS accredited laboratory. Sufficient volume of each water sample shall be collected at the monitoring stations for carrying out the laboratory analyses. Using chain of custody forms, collected water samples will be transferred to an HOKLAS accredited laboratory for immediate processing. The determination work shall start within the next working day after collection of the water samples. The laboratory measurements shall be provided to the client within 5 working days of the sampling event. Analytical methodology and sample preservation of other parameters will be based on the latest edition of Standard Methods for the Examination of Waste and Wastewater published by APHA, AWWA and WPCF and methods by USEPA, or suitable method in accordance with requirements of HOKLAS or another internationally accredited scheme. The submitted information should include pre-treatment procedures, instrument use, Quality Assurance/Quality Control (QA/QC) details (such as blank, spike recovery, number of duplicate samples per-batch etc), detection limits and accuracy. The QA/QC details shall be in accordance with requirements of HOKLAS or another internationally accredited scheme.

Parameters for laboratory measurements, their standard methods and their detection limits are presented in **Table 3.2**.

Table 3.2 Laboratory measurements, standard methods and corresponding detection limits of marine water quality monitoring

| Parameters                        | Standard<br>Methods               | <b>Detection Limit</b> | Reporting Limit      | Precision  |

NOTE1: The testing methods, Quality Assurance/Quality Control (QA/QC) details, detection limits and accuracy shall be submitted to EPD for approval prior to the commencement of monitoring programme.

If exceedances were found during water monitoring, the actions in accordance with the Event and Action Plan shall be carried out according to **Appendix G**.

#### 3.1.5. MONITORING LOCATION

The water quality monitoring locations for baseline are in accordance with the EM&A Manual and detailed in **Table 3.3** below. A schedule for water quality monitoring shall be prepared by the ET and approved by IEC and EPD prior to the commencement of the monitoring.

**Table 3.3 Location of Baseline Water Quality Monitoring Station** 

| Station | Easting | Northing | Description  |
|---------|---------|----------|--|
| CE      | 843550  | 815243   | Upstream control station at ebb tide                 |
| CF      | 846843  | 810193   | Upstream control station at flood tide               |
| WSR1    | 846864  | 812014   | Ecological sensitive receiver at Tung Lung Chau      |
| WSR2    | 847645  | 812993   | Fisheries sensitive receiver at Tung Lung Chau       |
| WSR3    | 848023  | 813262   | Ecological sensitive receiver at Tung Lung Chau      |
| WSR4    | 847886  | 814154   | Ecological sensitive receiver at Tai Miu Wan         |
| WSR16   | 845039  | 815287   | Ecological sensitive receiver at Fat Tong Chau       |
| WSR33   | 847159  | 814488   | Ecological sensitive receiver at Tai Miu Wan         |
| WSR36   | 846878  | 814081   | Ecological sensitive receiver at Kwun Tsai           |
| WSR37   | 846655  | 813810   | Ecological sensitive receiver at Tit Cham Chau       |
| NF1     | 846542  | 813614   | Edge of mixing zone, ~ 200m west of outfall diffuser |
| NF2     | 846942  | 813614   | Edge of mixing zone, ~ 200m east of outfall diffuser |

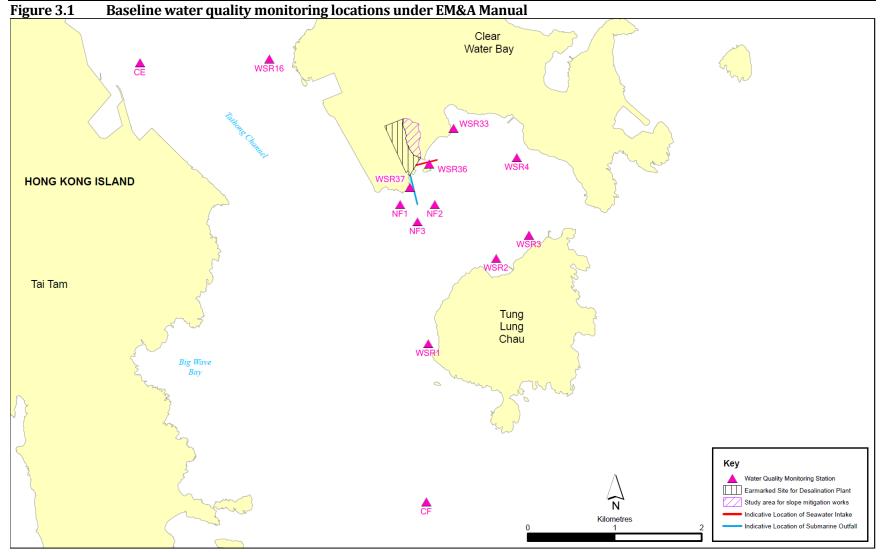

Contract No. 13/WSD/17
Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

| NF3 | 846742 | 813414 | Edge of mixing zone, ~ 200m south of outfall diffuser |
|-----|--------|--------|---|
|-----|--------|--------|---|

WSR1 to WSR37 were identified in accordance with Annex 14 of the EIAO-TM as well as Clause 3.4.4.2 of the Environmental Impact Assessment Study Brief for Desalination Plant at Tseung Kwan O (No. ESB-266/2013). WSR1 to WSR3 are sited near the Tung Lung Chau Fish Culture Zone; WSR16 and WSR36 are sited near the coral assemblages along the coastlines of Fat Tong Chau and Kwun Tsai respectively; WSR 4 and WSR33 are sited near the Coastal Protection Area and coral assemblages in waters of Tai Miu Wan; WSR37 is sited near the fisheries resource including spawning and nursery grounds at the coastal water of Tit Cham Chau.

### Contract No. 13/WSD/17

Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

#### 3.1.6. SAMPLING FREQUENCY

During periods when there are dredging works, impact monitoring should be undertaken at the monitoring stations as shown in **Figure 3.1** and **Table 3.3** three days per week during the construction phase after the commencement of marine construction works and dredging activities. Monitoring at each station would be undertaken at both mid-ebb and mid-flood tides on the same day. The tidal range selected for the baseline monitoring will be at least 0.5 m for both flood and ebb tides as far as practicable. The interval between two sets of monitoring would not be less than 36 hours. The monitoring frequency would be increased in the case of exceedances of Action/Limit Levels if considered necessary by ET. Monitoring frequency would be maintained as far as practicable.

The monitoring location/position, time, water depth, water temperature, salinity, weather conditions, sea conditions, tidal stage, special phenomena and work underway at the marine works site will be recorded.

#### 3.1.7. SAMPLING DEPTHS & REPLICATION

For baseline monitoring, each station will be sampled and measurements/ water samples will be taken at three depths, 1 m below the sea surface, mid-depth and 1 m above the seabed. For stations that are less than 3 m in depth, only the mid depth sample shall be taken. For stations that are less than 6 m in depth, only the surface and seabed sample shall be taken. For in situ measurements, duplicate readings shall be made at each water depth at each station. Duplicate water samples shall be collected at each water depth at each station. All observations and results were recorded in the data record sheets in **Appendix L**.

#### 3.1.8. ACTION AND LIMIT LEVELS

The Action and Limit Levels have been set based on the derivation criteria specified in the EM&A Manual, as shown in **Table 3.4** below. Based on the baseline water quality monitoring data and the derivation criteria specified in **Table 3.4**, the Action/Limit Levels have been derived and are presented in **Table 3.5**.

#### 3.2. Monitoring Programme

The ET of the Project had conducted the baseline water monitoring between 12 May 2020 to 6 Jun 2020 at the thirteen designated monitoring stations and the six designated monitoring at waters near TKO in accordance with the EM&A Manual and Contract Specification respectively. The monitoring results was presented in Baseline Water Quality Monitoring Report separately.

The commencement of marine construction and dredging activities for the Project have been conducted in March and April 2021 respectively.

| (Depth-averaged) |                                  |                                  |  |  |
|                  |                                  |                                  |  |  |

#### Notes:

- i. "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
- ii. For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- iii. For Turbidity, SS, iron and Salinity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.
- iv. For the Action and Limit Levels adopted during First-year Operation Phase Monitoring, further review would be made according to the EM&A Manual during Operation Phase.

#### 3.3. MONITORING RESULTS AND OBSERVATIONS

General water quality monitoring at the ten monitoring stations (CE, CF, WSR1, WSR2, WSR3, WSR4, WSR16, WSR33, WSR36 and WSR37) were conducted on 2, 4, 7, 9, 11, 14, 16, 18, 21, 23, 25, 28 and 30 September 2021.

During the impact monitoring period for September 2021, fifty-three (53) of the general water quality monitoring results of suspended solids (SS) obtained had exceeded the Action Level. Thirty (30) of the general water quality monitoring results of SS obtained during the reporting period had exceeded the Limit Level.

Details of the exceedance are presented in **Appendix 0**.

Investigation on the reason of exceedance has been carried out, where the exceedances of SS on 02/09, 04/09, 07/09, 09/09, 11/09, 14/09, 16/09, 18/09, 21/09 and 25/09 were concluded to be unrelated to the project as detailed in the Incident Reports on Action Level or Limit Level Noncompliance along with supporting materials in **Appendix 0**.

Monitoring results of 6 key parameters: Salinity, DO, turbidity, SS, pH and temperature in this reporting, are summarized in **Table 3.6** and **Table 3.7**, and detailed results are presented in **Appendix L**.

#### Notes:

i. "Avg", "Min" and "Max" is the average, minimum and maximum respectively of the data from measurements conducted under mid-flood and mid-ebb tides at three water depths, except that of DO where the data for "Surface & Middle" and "Bottom" are calculated separately.

ii. Measurement data of Suspending Solids would be rounding to 2.5mg/L if the value was less than 2.5mg/L to facilitate data analysing.

#### Notes:

i. "Avg", "Min" and "Max" is the average, minimum and maximum respectively of the data from measurements conducted under mid-flood and mid-ebb tides at three water depths, except that of DO where the data for "Surface & Middle" and "Bottom" are calculated separately.

 $ii. \qquad \text{Measurement data of Suspending Solids would be rounding to } 2.5 \text{mg/L} \ if the value was less than } 2.5 \text{mg/L} \ to facilitate data analysing.}$ 

#### 4. WASTE

The waste generated from this Project includes inert construction and demolition (C&D) materials, and non-inert C&D materials. Non-inert C&D materials are made up of general refuse, vegetative wastes and recyclable wastes such as plastics and paper/cardboard packaging waste. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in **Table 4.1**. Details of cumulative waste management data are presented as a waste flow table in **Appendix H**.

Table 4.1 Quantities of Waste Generated from the Project during September 2021

|                    | Actual Quantities of Inert C&D Materials Generated Monthly |  |                              |                                |                               |                  | Actual Quantities of C&D Wastes Generated Monthly |                                   |                        |                   |                                      |

Notes:

<sup>(1)</sup> Plastics refer to plastic bottles / containers, plastic sheets / foam from packaging material

<sup>\*</sup> The data may be updated in the next reporting month after final confirmation by the end of the month.

#### 5. LANDFILL GAS MONITORING

#### **5.1. MONITORING REQUIREMENT**

In accordance with Section 11 of the EM&A Manual, monitoring of landfill gas is required for construction works within the 250m Consultation Zone. Part of the desalination plant and the indicative area of natural slope mitigation works fall within the SENT Landfill Extension Consultation Zone; and part of the 1,200 mm diameter fresh water mains along Wan Po Road falls within the SENT Landfill and SENT Landfill Extension Consultation Zones, TKO Stage II/III Restored Landfill and TKO Stage I Restored Landfill Consultation Zones.

#### 5.2. MONITORING LOCATION

Monitoring of oxygen, methane, carbon dioxide and barometric pressure would be performed for excavations at 1m depth or more within the consultation Zone.

During construction of works within the consultation zones, excavations of 1m depth or more was monitored:

- At the ground surface before excavation commences;
- Immediately before any worker enters the excavation;
- At the beginning of each working day for the entire period the excavation remains open; and
- Periodically through the working day whilst workers are in the excavation.

For excavations between 300mm and 1m deep, measurements should be carried out:

- Directly after the excavation has been completed; and
- Periodically whilst the excavation remains open.

#### 5.3. MONITORING PROGRAMME

For the part of the desalination plant and the indicative area of natural slope mitigation works fall within the SENT Landfill Extension Consultation Zone in this contract, since the SENT Landfill Extension is still under construction, the Landfill gas monitoring shall be conducted after the commencement of operation of the SENT Landfill Extension which will be 2021 Quarter 4 according to the latest construction programme shown in the monthly EM&A Report of SENT Landfill Extension. The Contractor's safety officer shall keep review the necessity of landfill gas monitoring during the construction stage. In this reporting period, 50 times of monitoring was recorded.

#### 5.4. Monitoring Location

The area required to be monitored for landfill gas in the reporting period is shown in **Figure 5.1**.

#### **5.5. MONITORING PARAMETERS**

LFG monitoring was carried out to identify any migration between the landfill and the Project and to ensure the safety of the construction, operation and maintenance personnel working on-site, visitors and any other person within the Project area.

The following parameters were monitored:

- Methane.
- Oxygen.
- Carbon Dioxide.
- Barometric Pressure.

Action and Limit Level are provided in Table 5.1.

Table 5.1 Action and Limit Level for Landfill Gas Monitoring Equipment

| Parameters           | Action Level | Limit Level |
|----------------------|--------------|-------------|
| Oxygen (O2)          | <19% O2      | <19% O2     |
| Methane (CH4)        | >10% LEL     | >80% LEL    |
| Carbon Dioxide (CO2) | >0.5% CO2    | >1.5% CO2   |

#### **5.6. MONITORING EQUIPMENT**

Landfill Gas monitoring was carried out using intrinsically-safe, portable multi-gas monitoring instruments. The gas monitoring equipment is:

- Complying with the Landfill Gas Hazard Assessment Guidance Note as intrinsically safe;
- Capable of continuous barometric pressure and gas pressure measurements;
- Normally operated in diffusion mode unless required for spot sampling, when it should be capable of operating by means of an aspirator or pump;
- Having low battery, fault and over range indication incorporated;
- Capable of storing monitoring data, and shall be capable of being down-loaded directly;
- Measure in the following ranges:

| methane             | 0-100% LOWER EXPLOSION LIMIT (LEL) AND 0-100% V/V; |
|---------------------|--|
| oxygen              | 0-25% V/V;   |
| carbon dioxide      | 0-5% v/v; and                                      |
| barometric pressure | mBar (absolute)                                    |

• alarm (both audibly and visually) in the event that the concentrations of the following are exceeded:

| methane             | >10% LEL;       |
|---------------------|-----------------|
| oxygen              | <19%            |
| carbon dioxide      | >0.5% by volume |
| barometric pressure | mBar (absolute) |

Monitoring Equipment used in the reporting period are summarised in Table 5.2. The landfill gas monitoring equipment calibration certificate is presented in **Appendix N**. Landfill gas results are presented in **Appendix L**.

Table 5.2 Landfill Gas Monitoring Equipment

| Equipment             | Brand and Model        | Calibration Expiry Date |
|-----------------------|------------------------|-------------------------|
| Portable Gas Detector | QRAE III               | 01 July 2022            |
| Portable Gas Detector | MultiRAE Lite PGM-6208 | 06 April 2022           |

Figure 5.1 Location Map for Landfill Gas Monitoring at Wan Po Road

#### 5.7. MONITORING RESULTS AND OBSERVATIONS

In this reporting period, 50 times of landfill gas monitoring was recorded. No exceedance of action and limit levels for methane, oxygen and carbon dioxide was observed. Monitoring was conducted when excavations at 1m depth or more within the consultation zone were conducted and workers entered the excavation on the day.

# 6. SUMMARY OF MONITORING EXCEEDANCE, COMPLAINTS, NOTIFICATION OF SUMMONS AND PROSECUTIONS

The Environmental Complaint Handling Procedure is shown in below **Figure 6.1**:

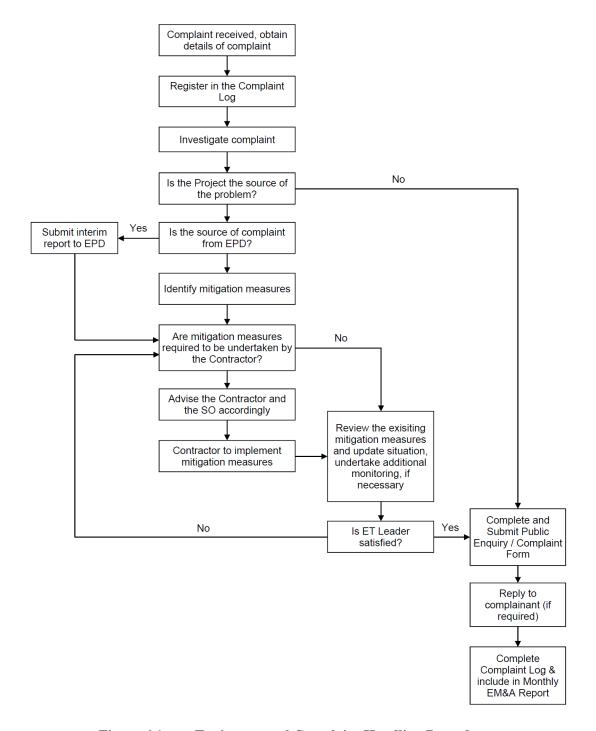

Figure 6.1 Environmental Complaint Handling Procedures

# Contract No. 13/WSD/17 Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

No noise monitoring was conducted during the reporting period since there are no project-related construction activities undertaken within a radius of 300m from the monitoring locations.

General water quality monitoring at the ten monitoring stations (CE, CF, WSR1, WSR2, WSR3, WSR4, WSR16, WSR33, WSR36 and WSR37) were conducted on 2, 4, 7, 9, 11, 14, 16, 18, 21, 23, 25, 28 and 30 September 2021.

During the impact monitoring period for September 2021, fifty-three (53) of the general water quality monitoring results of suspended solids (SS) obtained had exceeded the Action Level. Thirty (30) of the general water quality monitoring results of SS obtained during the reporting period had exceeded the Limit Level.

Details of the exceedance are presented in **Appendix 0**.

Investigation on the reason of exceedance has been carried out, where the exceedances of SS on 02/09, 04/09, 07/09, 09/09, 11/09, 14/09, 16/09, 18/09, 21/09 and 25/09 were concluded to be unrelated to the project as detailed in the Incident Reports on Action Level or Limit Level Noncompliance along with supporting materials in **Appendix 0**.

50 times of landfill gas monitoring was recorded. No exceedance of action and limit levels for methane, oxygen and carbon dioxide was observed.

No notification of summons and prosecution was received in the reporting period.

Statistics on complaints and regulatory compliance are summarized in **Appendix J.** 

### 7. EM&A SITE INSPECTION

Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures under the Contract. In the reporting period, site inspections were carried out on 7, 13, 21 and 28 September 2021 at the site portions list in **Table 7.1** below.

Table 7.1 Summaries of Site Inspection Record

| Date              | Inspected Site Portion  | Time          |
|-------------------|-------------------------|---------------|
| 07 September 2021 | TKO 137                 | 14:30 – 17:30 |
| 13 September 2021 | TKO 137                 | 14:40-17:30   |
| 21 September 2021 | TKO 137 and Wan Po Road | 09:30 – 12:00 |
| 28 September 2021 | TKO 137                 | 09:30 – 12:00 |

Joint site inspection with IEC were carried out on 7, 13, 21 and 28 September 2021.

Environmental deficiencies were observed during weekly site inspection. Key observations during the site inspections and during the reporting period are summarized in **Table 7.2**.

**Table 7.2 Site Observations** 

| Date              | Environmental Observations  | Follow-u            | p Status     |

| 28 September 2021 | Observation(s) and Recommendation(s)   | 1. Chemicals were stored in       |
|                   | 1. Chemicals were found not stored in drip   | suitable storage area.            |
|                   | trays at the barge at Intake Shaft Area (observation).                                     |                                   |
|                   | (OUSCI ValiOII).   |                                   |

## Contract No. 13/WSD/17 Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

| Date | Environmental Observations   | Follow-up Status |
|------|--|------------------|
|      | 2. Double silt curtain shall be maintained if any works occur at Intake Shaft Area (reminder).   |                  |
|      | 3. Chemical waste containers (empty) shall be properly disposed, recycled on storage (reminder). |                  |
|      | 4. General housekeeping i.e., beverage containers along the side of the site (reminder).         |                  |

According to the EIA Study Report, Environmental Permit, contract documents and EM&A Manual, the mitigation measures detailed in the documents should be implemented as much as practical during the reporting period. An updated Implementation Status of Environmental Mitigation Measures (EMIS) is provided in **Appendix C**.

Site inspection proforma of the reporting period is provided in **Appendix I.** 

## 8. FUTURE KEY ISSUES

Works to be undertaken in the next reporting month are:

- Land Survey;
- Construction of ActiDAFF perimeter wall and water tank;
- Construction of Reverse Osmosis (RO) Building column and wall from Basement to Roof; beams and slabs for Roof Floor; water tank; Electrical building Roof Floor slab, columns and wall;
- Construction of Product Water Storage Tank (PWST) perimeter wall and Electrical Building's roof slab:
- Construction of manhole no. 8 and no. 9 adjacent to PWST;
- Construction of Post Treatment Building 1/F;
- Construction of ground floor slab and first floor columns and beams of Administration Building;
- Construction of reinforced concrete (RC) footing of Inspection Corridor;
- Internal finishing work in Central Chiller Plant Building;
- Rockfill removal and dewatering at Outfall Shaft;
- Excavation & Lateral Support (ELS) erection and commencement of marine dredging at Intake Shaft:
- Commencement of pipe jacking works at Combined Shaft for Intake & Outfall pipelines;
- Cable drawpit construction;
- Glass Reinforced Plastic (GRP) pipe lamination and laying;
- Construction of structural wall of Chemical Building;
- Wan Po Road Sewage Works Temporary Traffic Arrangement (TTA), excavation and laying of High-Density Polyethylene (HDPE pipes);
- Construction of On-Site Chlorine Generation (OSCG) Building footing;
- Excavation and lateral support (ELS) at Pump house

The major environmental impacts brought by the above construction works will include:

- Construction dust and noise generation from construction and ELS works, pipe piling driving works, breaking of concrete, excavation works and marine construction works
- Waste generation from construction activities
- Impact on water quality from marine construction works and inland construction works

The key environmental mitigation measures for the Project in the coming reporting period associated with the above construction works will include:

- Dust suppression by regular wetting and water spraying for construction works
- Reduction of noise from equipment and machinery on-site by regular checking of on-site plant/vehicle to ensure proper functioning
- Sorting and storage of general refuse and construction waste

# Contract No. 13/WSD/17 Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Monthly EM&A Report No.19

 Deployment of temporary silt curtain in the area where marine construction works were conducted and deployment of water sedimentation tanks for treatment of wastewater at inland areas before discharge

Referring to EM&A Manual Section 4.1.2, the impact noise monitoring should be carried out at all the designated monitoring stations when there are project-related construction activities undertaken within a radius of 300m from the monitoring stations.

The impact noise monitoring schedule for the next reporting month to be shown at **Appendix K** is not included since no impact noise monitoring will be conducted in the next reporting month.

#### 9. CONCLUSIONS AND RECOMMENDATIONS

This is the 19th Monthly EM&A Report for the Project which summarizes the key findings of the EM&A programme during the reporting period from 1 September to 30 September 2021, in accordance with the EM&A Manual and the requirement under FEP-01/503/2015/A.

No noise monitoring was conducted in the reporting period due to the over distant monitoring station from the works location, in which construction activities were not undertaken within a radius of 300m from the monitoring locations.

The EM&A works for water quality were conducted during the reporting period in accordance with the EM&A Manual.

During the impact monitoring period for September 2021, fifty-three (53) of the general water quality monitoring results of suspended solids (SS) obtained had exceeded the Action Level. Thirty (30) of the general water quality monitoring results of SS obtained during the reporting period had exceeded the Limit Level.

Details of the exceedance are presented in **Appendix 0**.

Investigation on the reason of exceedance has been carried out, where the exceedances of SS on 02/09, 04/09, 07/09, 09/09, 11/09, 14/09, 16/09, 18/09, 21/09 and 25/09 were concluded to be unrelated to the project as detailed in the Incident Reports on Action Level or Limit Level Noncompliance along with supporting materials in **Appendix 0**.

It was concluded that all exceedances recorded in September were unrelated to the project.

In this reporting period, 50 times of landfill gas monitoring was recorded. No exceedance of action and limit levels for methane, oxygen and carbon dioxide was observed. Monitoring was conducted when excavations at 1m depth or more within the consultation zone were conducted and workers entered the excavation on the day.

# Contract No. 13/WSD/17 Design Ruild and Operate First Stage

Weekly environmental site inspection was conducted during the reporting period. No major deficiency was observed during site inspection. The environmental performance of the project was therefore considered satisfactory.

According to the environmental site inspections performed in the reporting month, the Contractor is reminded to pay attention on maintaining proper materials storage, site hygiene and temporary wastewater storage capacity.

No environmental complaint was received in the reporting period.

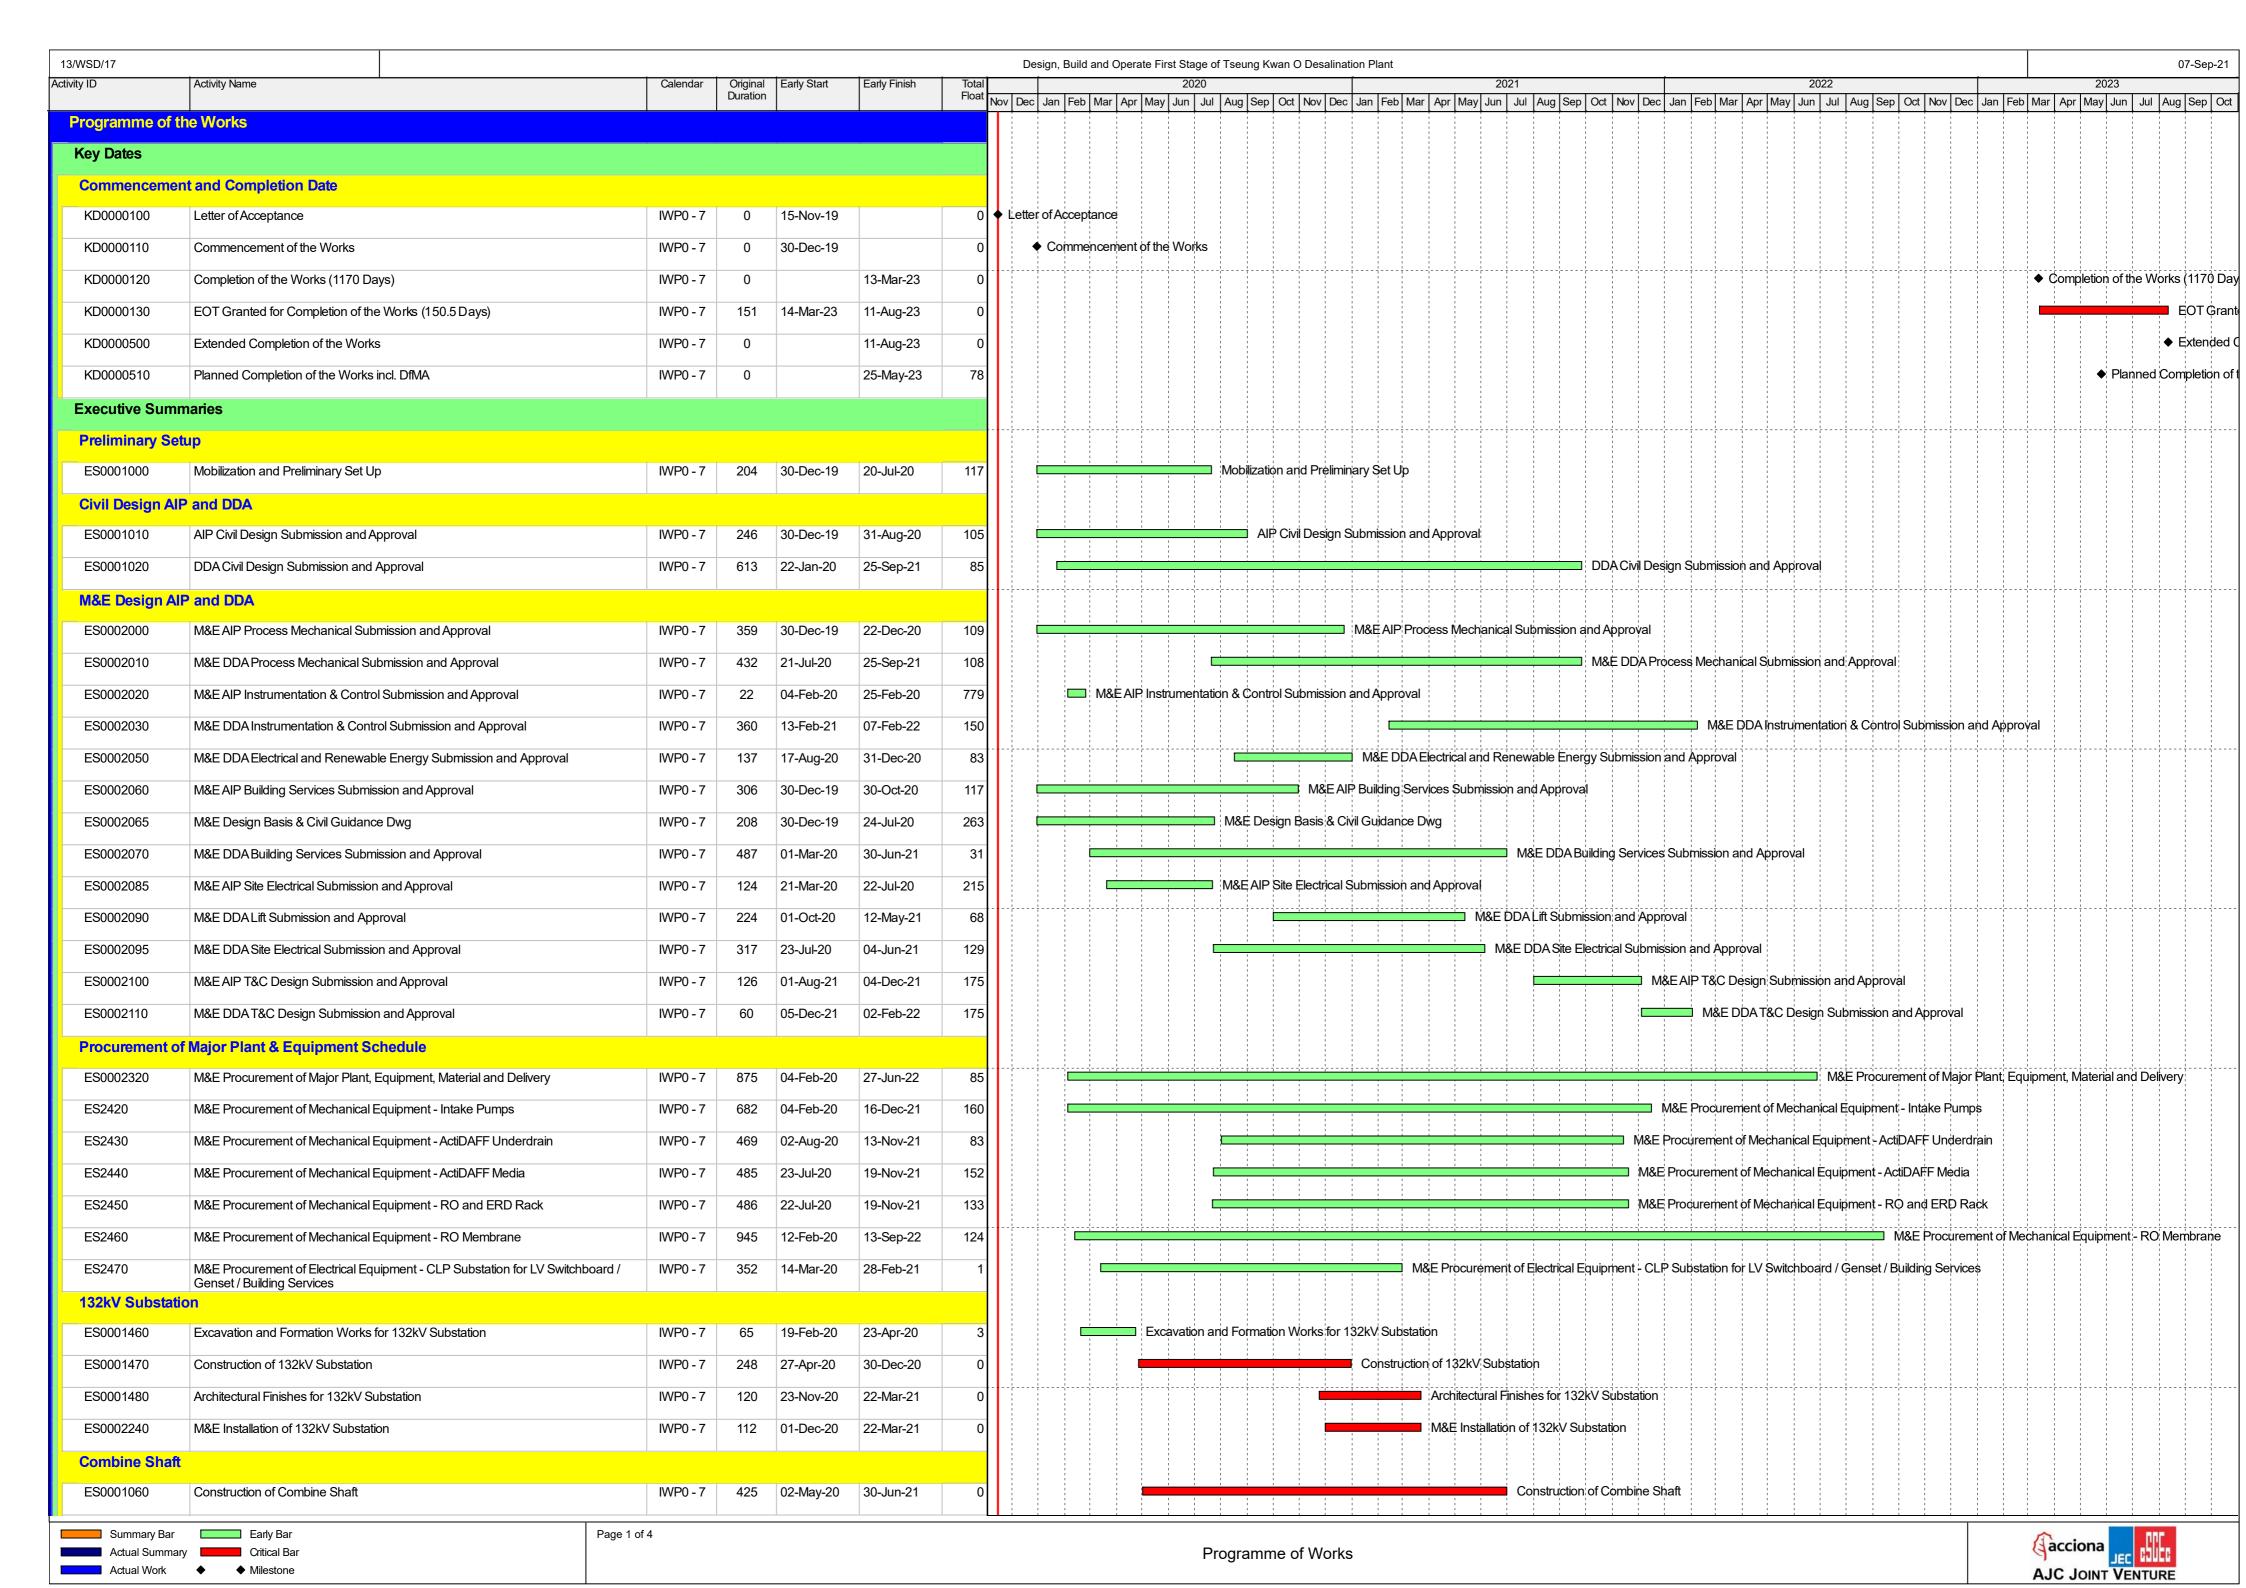

No notification of summons or prosecution was received since commencement of the Contract.

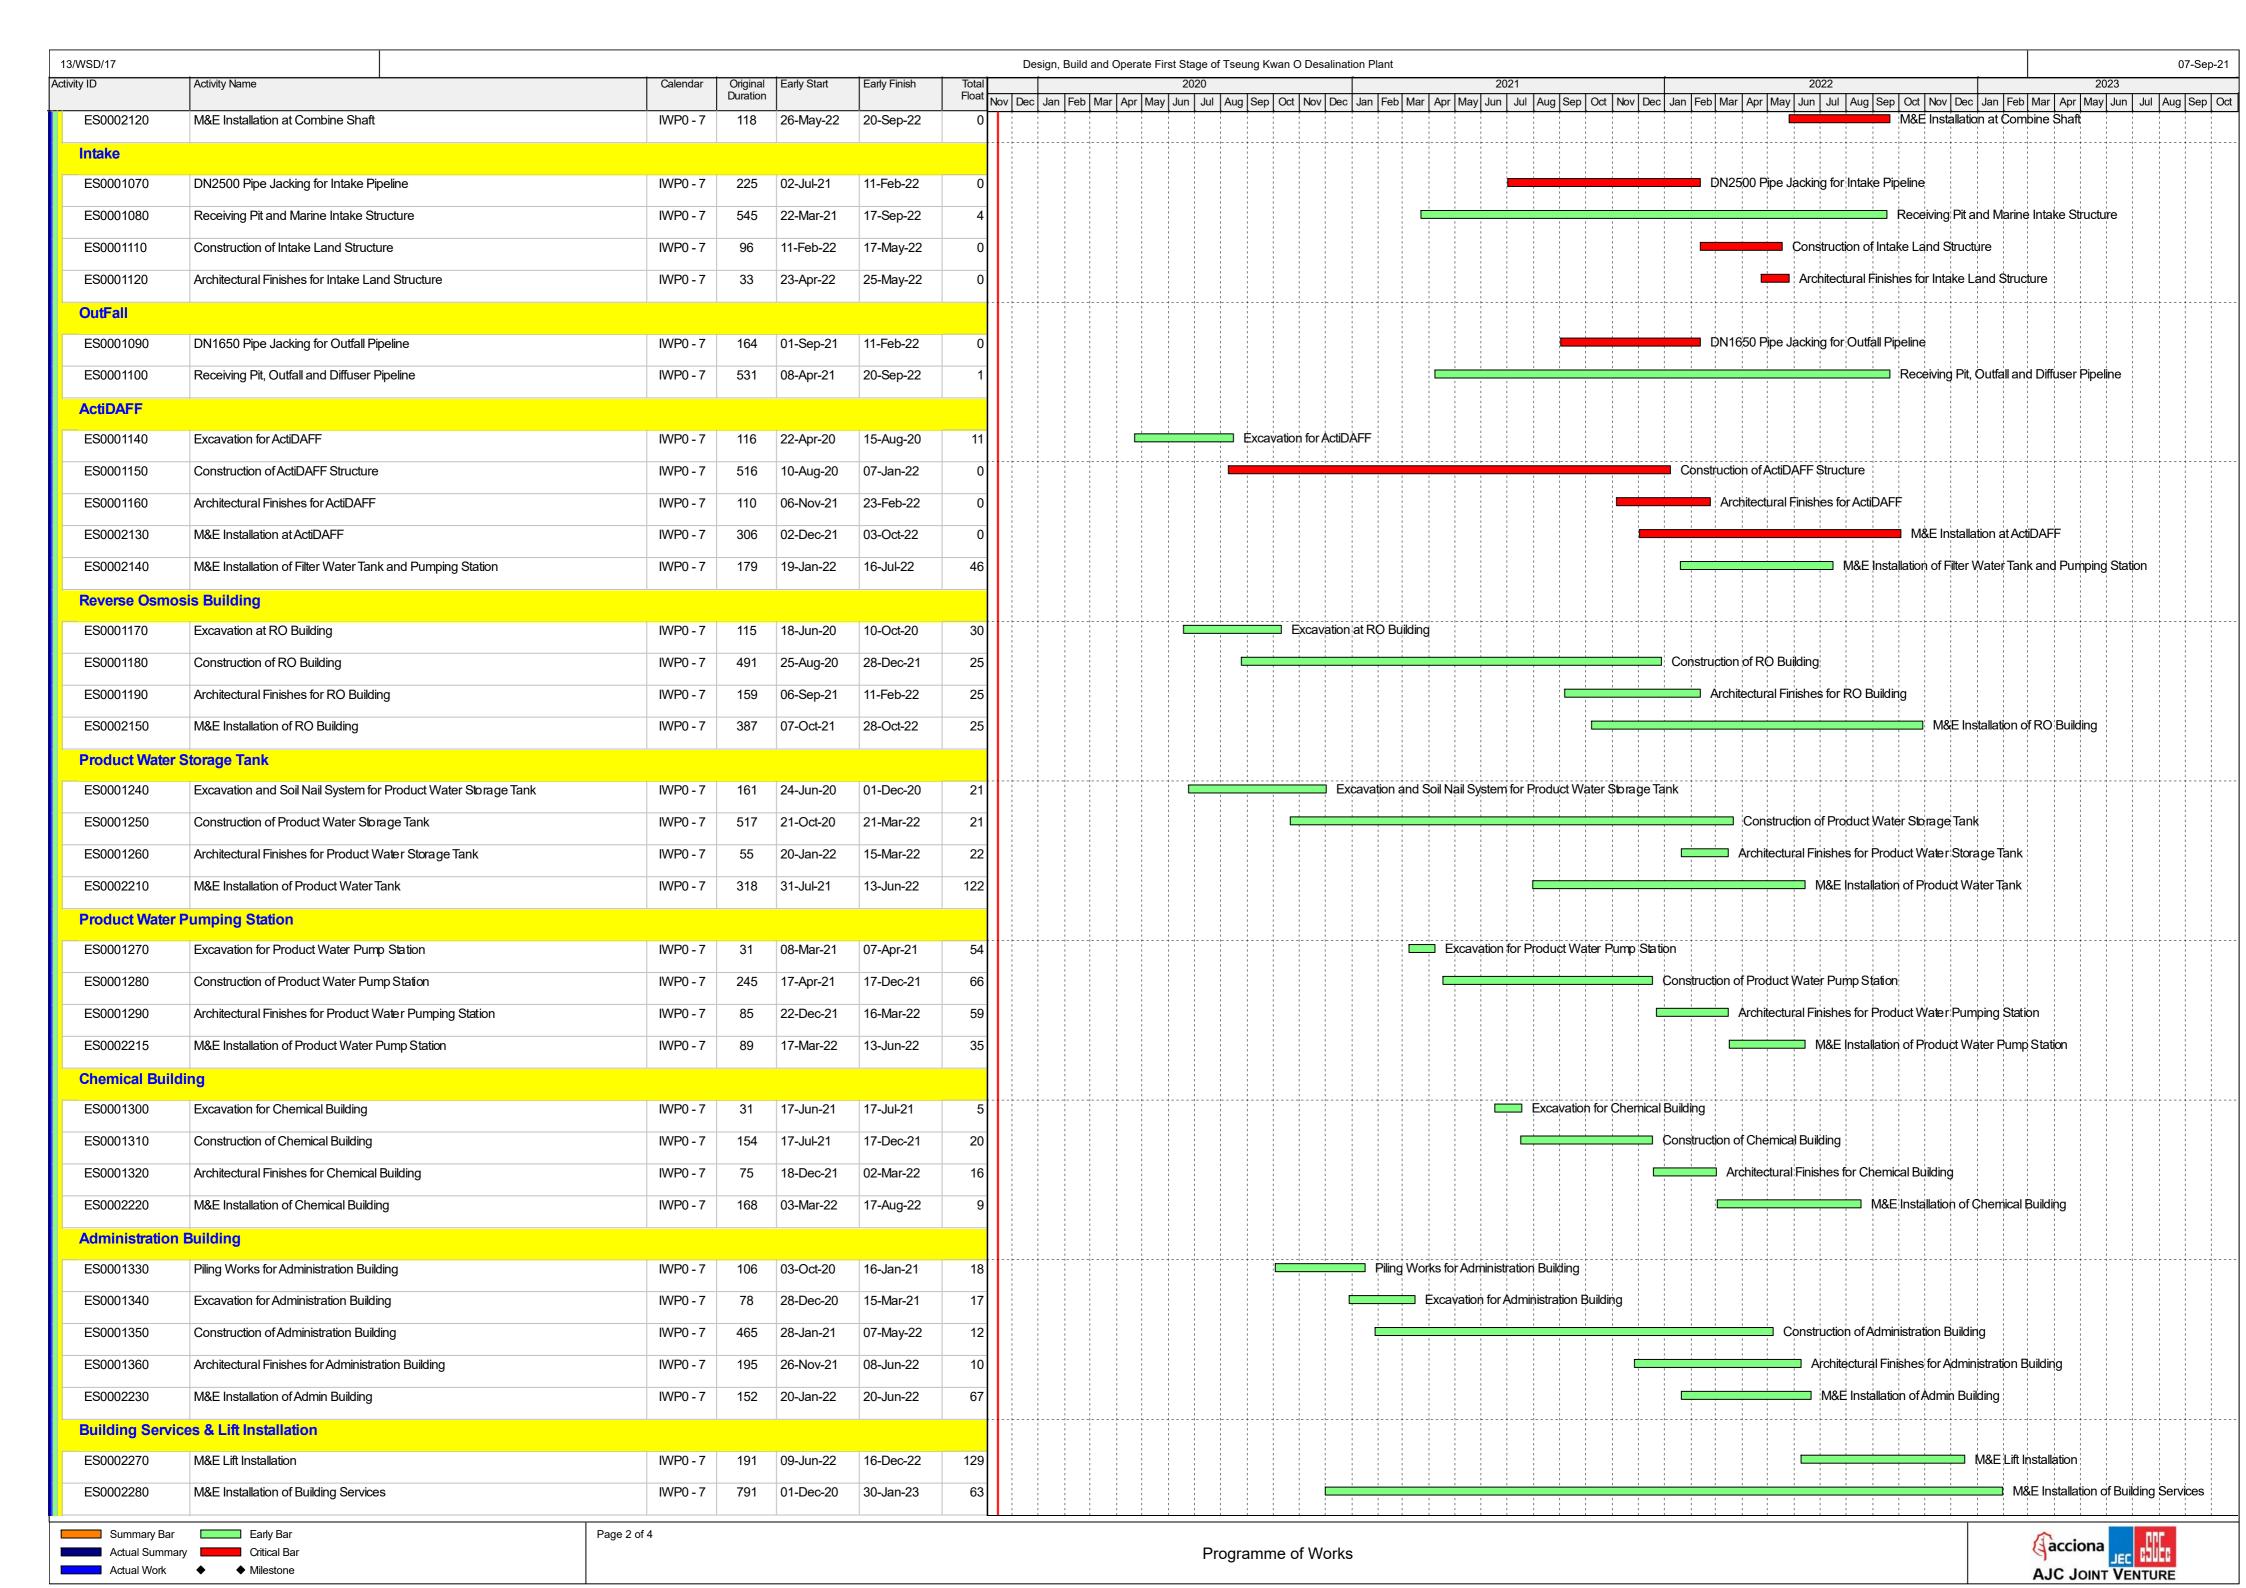

The ET will keep track on the construction works to confirm compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

| S6.9          | Silt removal facilities such as silt traps or sedimentation facilities will be provided to remove silt particles from runoff to meet the requirements of the TM standard under the WPCO. The design of silt removal facilities will be based on the guidelines provided in ProPECC PN 1/94. All drainage facilities and erosion and sediment control structures will be inspected on a regular basis and maintained to confirm proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit will be removed regularly. | Land site & drainage/<br>During construction              | Contractor(s)           |                | <b>*</b> |     | Implemented, rectified after observation and reminder. | ProPECC PN 1/94 TM<br>Standard under the WPCO |
| S6.9          | Earthworks to form the final surfaces will be followed up with surface protection and drainage works to prevent erosion caused by rainstorms.   | Land site & drainage/<br>During construction              | Contractor(s)           |                | <b>*</b> |     | Implemented  | -   |
| S6.9          | Appropriate surface drainage will be designed and provided where necessary.   | Land site & drainage/<br>During construction              | Contractor(s)           |                | <b>√</b> |     | Implemented  | -   |
| S6.9          | The precautions to be taken at any time of year when rainstorms are likely together with the actions to be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC PN 1/94.  | Land site & drainage/<br>During construction              | Contractor(s)           | <b>✓</b>       | <b>✓</b> |     | Implemented  | ProPECC PN 1/94                               |
| S6.9          | Oil interceptors will be provided in the drainage system where necessary and regularly emptied to prevent the release of oil and grease into the storm water drainage system after accidental spillages.  | Land site & drainage/<br>During construction              | Contractor(s)           |                | <b>✓</b> |     | N/A  | -   |

|     |     |  |  |  |

Remarks: Monitoring Parameters: Dissolved oxygen, Temperature, pH, Turbidity, Salinity, Suspended Solids

- Note:

  \* Due to safety concern of vessel transportation earlier than 0700, Water Quality Monitoring would start at 0800.

- \$ Since predicted tide is shorter than 3.5 hours, method of 90% tidal period as monitoring time is adopted.

  & Due to safety concern for sampling event in night-time, method of 90% tidal period as monitoring time is approached and end at 1900.

  # Prioritized routing: Mid-Ebb: CE->WSR16->WSR37->WSR36->WSR33->Remaining stations and Mid-Flood: CF->WSR1->WSR2->WSR3->W

 Total C&D waste generated
 15256.925 Tomes
 (ie: al = b+c+d+e+f+g+h+i+j+k+l)

 Total C&D waste generated (excluded excavated materials)
 15256.925 Tome
 (ie: a2 = c+d+e+f+g+h+i+j+k+l)

 Total Recycled C&D Waste
 12911.455 Tome
 (ie: a3 = c+d+g+h+i+j)

 % of recycled C&D Waste for BEAM Plus MA 11
 84.63% (ie: a3/a2 x 100%)

Notes:

- (1) metal, paper & plastic were collected by recycler
- (2) The performance target of waste recycling are specified in the Contract.
- (3) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
- (4) Plastics refer to plastic bottles/ containers, plastic/ foam from packaging material.
- (5) Broken concrete for recycling into aggregates
- (6) Excavated materials/waste will NOT be considered as part of construction waste. It should be excluded in the calculation
- (7) Disposal of inert waste to public fill or sorting facilities will NOT be considered as recycled waste.

Contract No. 13/WSD/17
Environmental Management Plan for Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant

Appendix H – MA11 Construction Waste Reduction

Name of Department: WSD Contract No.: 13/WSD/17

|-------------|----------|--|-----|-----|----|-----------------|
| 3.26        | S6.9     | Is closed grab dredger of 3 to 6 m <sup>3</sup> used for dredging at seawater intake?  |     |     |    | ·               |
| 3.27        | S6.9     | Is specific work staff assigned the responsibility for monitoring the number of grab dredged per hour? Is number of cycle limited to 20-21 grab per hour for 3m³ closed grab, 10-11 grab per hour for 6m³ closed grab?   | Q   |     |    | y               |
| 3.28        | S6.9     | Is the grab operated in slow and controlled manner such that the impact to seabed by the grab when being lowered could be minimized? Is the operator ensured the grab be properly closed before lifting the grab?  |     |     |    | u               |
| 3.29        | S6.9     | Is the maximum allowed dredging rate at the seawater intake limited to 750 m <sup>3</sup> /day while the maximum allowed dredging rate at the submarine outfall is 3,500 m <sup>3</sup> /day?  | Q   |     |    | V               |
| 3.30        | S6.9     | Is dredged marine sediment disposed of in a gazetted marine disposal area in accordance with marine dumping permit conditions of the Dumping at Sea Ordinance (DASO)?  |     |     |    | homanie dumpny  |
| 3.31        | S6.9     | Are disposal vessels fitted with tight bottom seals in order to prevent leakage of material during transport?  |     |     |    | e/              |
| 3.32        | \$6.9    | Are barges filled to a level which ensures that material does not spill over during transport to the disposal site and that adequate freeboard is maintained to ensure that the decks are not washed by wave action?   |     |     |    | Andred grif was |
| 3.33        | S6.9     | Are excess materials cleaned from decks and exposed fittings before the vessel is moved from the dredging area after dredging?   |     |     |    | 1/              |
| 3.34        | S6.9     | Are the contractor(s) confirmed that the works cause no visible foam, oil, grease, litter or other objectionable matter to be present in the water within and adjacent to the dredging site?   |     | /   |    |                 |
| 3.35        | \$6.9    | When the dredged material has been unloaded at the disposal areas, is any material accumulated on the deck or other exposed parts of the vessel removed and placed in the hold or a hopper?  |     |     |    | Nordredgny      |
| 3.36        | S6.9     | Is dredger maintained adequate clearance between vessels and the seabed at all states of the tide and reduce operations speed to ensure that excessive turbidity is not generated by turbulence from vessel movement or propeller wash?  |     |     |    |                 |
| 3.37        | S6.9     | Is the contractor shall regularly inspect the silt curtains and check that they are moored and marked to avoid danger to marine traffic? Is regular inspection on the integrity of the silt curtain carried out by the contractor and any damage to the silt curtain shall be repaired by the contractor promptly? |     |     |    |                 |
| 3.38        | S6.9     | Are all vessels have a clean ballast system?   |     |     |    |                 |
| 3.39        | S6.9     | Are all vessels well maintained and inspected before use to limit any potential discharges to the marine environment?  |     |     |    |                 |
| 3.40        | S6.9     | Is any discharge of sewage/grey wastewater? Is wastewater from potentially contaminated area on working vessels should be minimized and collected?   |     |     |    |                 |
| 3.41        | S6.9     | Is any soil waste disposed overboard?  |     |     |    |                 |

## **Acuity Sustainability Consulting Limited**

Unit C, 11/F., Ford Glory Plaza, No. 37-39 Wing Hong Street, Cheung Sha Wan, Kowloon T: 2333-6823 | F: 2333-1316 | E: genera@acuityhk.com | www.acuityhk.com

Contract no. 13/WSD/17 Design, Build and Operate First Stage of Tseung Kwan O Desalination Plant Photo/Remarks EIA ref. Item is closed grab dredger of 3 to 6 m<sup>3</sup> used for dredging at seawater intake? 3.26 S6.9 Is specific work staff assigned the responsibility for monitoring the number of grab 3.27 S6.9 dredged per hour? Is number of cycle limited to 20-21 grab per hour for 3m3 closed grab, 10-11 grab per hour for 6m3 closed grab? Is the grab operated in slow and controlled manner such that the impact to seabed by 3.28 S6.9 the grab when being lowered could be minimized? Is the operator ensured the grab be properly closed before lifting the grab? Is the maximum allowed dredging rate at the seawater intake limited to 750 m<sup>3</sup>/day 3.29 S6.9 while the maximum allowed dredging rate at the submarine outfall is 3,500 m<sup>3</sup>/day? No mank Is dredged marine sediment disposed of in a gazetted marine disposal area in 3.30 S6.9 accordance with marine dumping permit conditions of the Dumping at Sea Ordinance Lamping years observed Are disposal vessels fitted with tight bottom seals in order to prevent leakage of 3.31 S6.9 material during transport? Are barges filled to a level which ensures that material does not spill over during 3.32 \$6.9 transport to the disposal site and that adequate freeboard is maintained to ensure that 20 the decks are not washed by wave action? Are excess materials cleaned from decks and exposed fittings before the vessel is 3.33 S6.9 moved from the dredging area after dredging? Are the contractor(s) confirmed that the works cause no visible foam, oil, grease, 3.34 S6.9 litter or other objectionable matter to be present in the water within and adjacent o the dredging site? When the dredged material has been unloaded at the disposal areas, is any material 3.35 S6.9 accumulated on the deck or other exposed parts of the vessel removed and placed in the hold or a hopper? Is dredger maintained adequate clearance between vessels and the seabed at all states 3.36 S6.9 of the tide and reduce operations speed to ensure that excessive turbidity is not generated by turbulence from vessel movement or propeller wash? is the contractor shall regularly inspect the silt curtains and check that they are 3.37 S6.9 moored and marked to avoid danger to marine traffic? Is regular inspection on the integrity of the silt curtain carried out by the contractor and any damage to the silt curtain shall be repaired by the contractor promptly? Are all vessels have a clean ballast system? 3.38 \$6.9 Are all vessels well maintained and inspected before use to limit any potential 3.39 S6.9 discharges to the marine environment? Is any discharge of sewage/grey wastewater? Is wastewater from potentially

contaminated area on working vessels should be minimized and collected?

Is any soil waste disposed overboard?

3.40 S6.9

3.41 S6.9

Monitoring Parameters: Dissolved oxygen, Temperature, pH, Turbidity, Salinity, Suspended Solids

- Note:

  \* Due to safety concern of vessel transportation earlier than 0700, Water Quality Monitoring would start at 0800.

  \$ Since predicted tide is shorter than 3.5 hours, method of 90% tidal period as monitoring time is adopted.

  & Due to safety concern for sampling event in night-time, method of 90% tidal period as monitoring time is approached and end at 1900.

  # Prioritized routing: Mid-Ebb: CE→WSR16→WSR37→WSR36→WSR33→Remaining stations and Mid-Flood: CF→WSR1→WSR3→WSR3→WSR4→Remaining stations

|----------|--------------------|---------|------------------|-------|----------------|-----------|----------------|-----------|----|-----------|-----------|-----------------------------|-----------------------|

# Remark:

Note 1: Measurements of turbidity would be rounding to 0.1 NTU for proven accuracy as per the equipment specs during utilization of data.

Note 2: Measurement data of Suspending Solids would be rounding to 2.5mg/L if the value was less than 2.5mg/L to facilitate data analysing

# **HOKLAS Laboratory Certificate**

Hong Kong Accreditation Service 香港認可處

### Certificate of Accreditation

認可證書

This is to certify that 特此證明

#### **ACUMEN LABORATORY AND TESTING LIMITED**

浩科檢測中心有限公司

Lot 12, Tam Kon Shan Road, North Tsing Yi, New Territories, Hong Kong

香港新界青衣北担杆山路12路段

has been accepted by the HKAS Executive, on the recommendation of the Accreditation Advisory Board, as a 在窓可踏線委員會的建議下櫃香港認可處執行機關接受為

**HOKLAS Accredited Laboratory** 「香港實驗所認可計劃」認可實驗所

This laboratory meets the requirements of ISO/IEC 17025:2005 and it has been accredited for performing specific tests or calibrations as listed in the scope of accreditation within the test category of

#### **Environmental Testing**

此實驗所符合ISO/IEC 17025:2005所訂的要求 並獲認可進行載於認可範圍內下透測試類別中的指定測試或校正工作

#### 環境測試

This accreditation to ISO/IEC 17025:2005 demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (see joint IAF-IAC-ISO Communique). 此樣 ISO/IEC 17025:2005 的簡可資格證明此實驗所證明表實驗所證明表例的技能能力益 實稿一套實驗所質重發理體系(是國際認可論確。國際實驗所證明表作相關及國際經歷化相關的關係公廳)。

The common seal of the Hong Kong Accreditation Service is affixed hereto by the authority of the HKAS Executive 現經香港認可處執行機關授權在此蓋上香港認可處的印意

WONG Wang-wan, Executive Administrator 執行幹事 黃宏華 Issue Date: 16 July 2014

Attn: Mr. Nelson TSUI

### PART B - DESCRIPTION

Name of Equipment

Multi Water Quality Checker U-53

Manufacturer Serial Number Horiba UHB5F2BB

Date of Received Date of Calibration Jul 28, 2021 Aug 04, 2021

Date of Next Calibration<sup>(a)</sup>

Nov 03, 2021

### PART C - REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

**Parameter** 

Reference Method

pH at 25°C

APHA 21e 4500-H<sup>+</sup> B APHA 21e 4500-O G

Dissolved Oxygen Salinity

APHA 21e 2520 B

Turbidity Temperature APHA 21e 2130 B Section 6 of international Accreditation New Zealand Technical

Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure.

Oxidation-Reduction Potential

APHA 22e 2580 B

### PART D - CALIBRATION RESULTS(b,c)

#### (1) pH at 25°C

| Target (pH unit) | Displayed Reading(d) (pH Unit) | Tolerance <sup>(e)</sup> (pH Unit) | Results      |
|------------------|--------------------------------|------------------------------------|--------------|
| 4.00             | 4.04                           | 0.04                               | Satisfactory |
| 7.42             | 7.46                           | 0.04                               | Satisfactory |
| 10.01            | 10.06                          | 0.05                               | Satisfactory |

Tolerance of pH should be less than  $\pm 0.20$  (pH unit)

#### (2) Temperature

| Reading of Ref. thermometer (°C) | Displayed Reading (°C) | Tolerance (°C) | Results      |
|----------------------------------|------------------------|----------------|--------------|
| 16                               | 15.53                  | -0.47          | Satisfactory |
| 25                               | 24.69                  | -0.31          | Satisfactory |
| 30.5                             | 30.29                  | -0.21          | Satisfactory |

Tolerance limit of temperature should be less than ±2.0 (°C)

#### Romark(s) -

(a) The "Date of Next Calibration" is recommended according to best practice principals as practiced by QPT or quoted form relevant international standards.

(b) The results relate only to the calibrated equipment as received

(c) The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

(d) "Displayed Reading" denotes the figure shown on item under calibration/checking regardless of equipment precision or significant figures.

(e) The "Tolerance Limit" mentioned is the acceptance criteria applicable for similar equipment used by Quality Pro Test-Consult Ltd. or quoted form relevant international standards.

### PART D - CALIBRATION RESULTS (Cont'd)

### (3) Dissolved Oxygen

| Expected Reading (mg/L) | Displayed Reading (mg/L) | Tolerance (mg/L) | Results      |
|-------------------------|--------------------------|------------------|--------------|
| 1.49                    | 1.24                     | -0.25            | Satisfactory |
| 4.31                    | 4.14                     | -0.17            | Satisfactory |
| 6.02                    | 5.81                     | -0.21            | Satisfactory |
| 8.32                    | 8.17                     | -0.15            | Satisfactory |

Tolerance limit of dissolved oxygen should be less than ±0.50 (mg/L)

### (4) Salinity

| Expected Reading (g/L) | Displayed Reading (g/L) | Tolerance (%) | Results      |
|------------------------|-------------------------|---------------|--------------|
| 10                     | 10.31                   | 3.10          | Satisfactory |
| 20                     | 20.55                   | 2.75          | Satisfactory |
| 30                     | 31.14                   | 3.80          | Satisfactory |

Tolerance limit of salinity should be less than  $\pm 10.0$  (%)

### (5) Turbidity

| Expected Reading (NTU) | Displayed Reading <sup>(f)</sup> (NTU) | Tolerance <sup>(g)</sup> (%) | Results      |
|------------------------|--|------------------------------|--------------|
| 0                      | 0.09                                   |                              | Satisfactory |
| 10                     | 9.68                                   | -3.2                         | Satisfactory |
| 20                     | 19.5                                   | -2.5                         | Satisfactory |
| 100                    | 97.4                                   | -2.6                         | Satisfactory |
| 800                    | 792                                    | -1.0                         | Satisfactory |

Tolerance limit of turbidity should be less than  $\pm 10.0$  (%)

## (6) Oxidation-Reduction Potential

| Expected Reading (mV) | Displayed Reading (mV) | Tolerance (mV) <sup>(g)</sup> | Results      |
|-----------------------|------------------------|-------------------------------|--------------|
| 229                   | 230                    | +1                            | Satisfactory |

Tolerance limit of Oxidation-Reduction Potential should be less than  $\pm 10$  (mV)

~ END OF REPORT ~

### **PART B - DESCRIPTION**

Name of Equipment

YSI ProDSS Multi Parameters

Manufacturer

YSI

Serial Number

15M101091

Date of Received

Sep 03, 2021

Date of Calibration

Sep 06, 2021

Date of Next Calibration(a)

Dec 06, 2021

#### PART C – REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

**Parameter** 

Reference Method

pH at 25°C

APHA 21e 4500-H+ B

Dissolved Oxygen

APHA 21e 4500-O G APHA 21e 2520 B

Salinity Turbidity

APHA 21e 2130 B

Temperature

Section 6 of international Accreditation New Zealand Technical

Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure.

### PART D - CALIBRATION RESULTS(b,c)

#### (1) pH at 25°C

| Target (pH unit) | Displayed Reading <sup>(d)</sup> (pH Unit) | Tolerance <sup>(e)</sup> (pH Unit) | Results      |
|------------------|--|------------------------------------|--------------|
| 4.00             | 4.12                                       | 0.12                               | Satisfactory |
| 7.42             | 7.51                                       | 0.09                               | Satisfactory |
| 10.01            | 10.06                                      | 0.05                               | Satisfactory |

Tolerance of pH should be less than  $\pm 0.20$  (pH unit)

### (2) Temperature

| Reading of Ref. thermometer (°C) | Displayed Reading (°C) | Tolerance (°C) | Results      |
|----------------------------------|------------------------|----------------|--------------|
| 15                               | 14.9                   | -0.1           | Satisfactory |
| 28                               | 27.5                   | -0.5           | Satisfactory |
| 34.5                             | 34.2                   | -0.3           | Satisfactory |

Tolerance limit of temperature should be less than ±2.0 (°C)

#### ~ CONTINUED ON NEXT PAGE ~

#### Remark(s): -

- The "Date of Next Calibration" is recommended according to best practice principals as practiced by QPT or quoted form relevant international standards.
- The results relate only to the calibrated equipment as received
- The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.
- "Displayed Reading" denotes the figure shown on item under calibration/ checking regardless of equipment precision or significant figures.

  The "Tolerance Limit" mentioned is the acceptance criteria applicable for similar equipment used by Quality Pro Test-Consult Ltd. or quoted form relevant international standards.

### PART D - CALIBRATION RESULTS (Cont'd)

## (3) Dissolved Oxygen

| Expected Reading (mg/L) | Displayed Reading (mg/L) | Tolerance (mg/L) | Results      |
|-------------------------|--------------------------|------------------|--------------|
| 0.14                    | 0.23                     | 0.09             | Satisfactory |
| 2.60                    | 2.53                     | -0.07            | Satisfactory |
| 4.57                    | 4.56                     | -0.01            | Satisfactory |
| 7.55                    | 7.32                     | -0.23            | Satisfactory |

Tolerance limit of dissolved oxygen should be less than  $\pm 0.50$  (mg/L)

### (4) Salinity

| Expected Reading (g/L) | Displayed Reading (g/L) | Tolerance (%) | Results      |
|------------------------|-------------------------|---------------|--------------|
| 10                     | 9.96                    | -0.40         | Satisfactory |
| 20                     | 20.37                   | 1.85          | Satisfactory |
| 30                     | 31.17                   | 3.90          | Satisfactory |

Tolerance limit of salinity should be less than  $\pm 10.0$  (%)

### (5) Turbidity

| Expected Reading (NTU) | Displayed Reading <sup>(f)</sup> (NTU) | Tolerance <sup>(g)</sup> (%) | Results      |
|------------------------|--|------------------------------|--------------|
| 0                      | -0.34                                  |                              | Satisfactory |
| 10                     | 10.23                                  | 2.3                          | Satisfactory |
| 20                     | 19.25                                  | -3.8                         | Satisfactory |
| 100                    | 106.49                                 | 6.5                          | Satisfactory |
| 800                    | 849.67                                 | 6.2                          | Satisfactory |

Tolerance limit of turbidity should be less than  $\pm 10.0$  (%)

| Possible reason for Action or<br>Limit Level Non-compliance | Outfall Shaft Area: 1) Sinking of 610mm diameter casings (0800 – 1800 hrs)  Intake Shaft Area: marine construction activities, namely 1) Two derrick barges for material lifting and struts & railing installation in the shaft (0800 – 1800 hrs); 2) Preparing H-beams and materials inside the hopper of the derrick barge (0800 – 1800 hrs)  Marine construction activities with contact with water: Sinking of 610mm diameter casings (0800 – 1800 hrs)  Marine vessels on 02 September 2021:  • Derrick barge x 3; tug boat x 1 (Intake Shaft)  • Derrick barge x 1, pile rig x 1 (Outfall Shaft)  Dominating sea current direction was found to be from Southeast to Northwest at waters to the west side of Tit Cham Chau; and from Northeast to Southwest at waters to the |   |   |                                      |   |
|   | east side of Tit Cham Chau.  |   |   |                                      |   |

WSR1, WSR2, WSR3, WSR4 and WSR16 were located distant from the construction site and the possibility of being affected by marine construction activities was low. The SS levels at WSR1 (8.0 mg/L), WSR2 (8.5 mg/L), WSR3 (8.0 mg/L), WSR4 (7.0 mg/L) and WSR16 (7.2 mg/L) were however similar or higher than WSR36 (7.0 mg/L) and WSR37 (6.8 mg/L). No marine construction activities with contact of water was conducted at WSR36 on 02 September 2021. The SS level of a downstream station, WSR37, was however lower than WSR36 during mid-flood tide. WSR33 was located upstream, but the SS level of WSR33 (7.5 mg/L) was higher than WSR36. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 02 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 02 September 2021.

Marine construction activities with contact with water: Sinking of 610mm diameter casings (0800 - 1800 hrs)

Marine vessels on 02 September 2021:

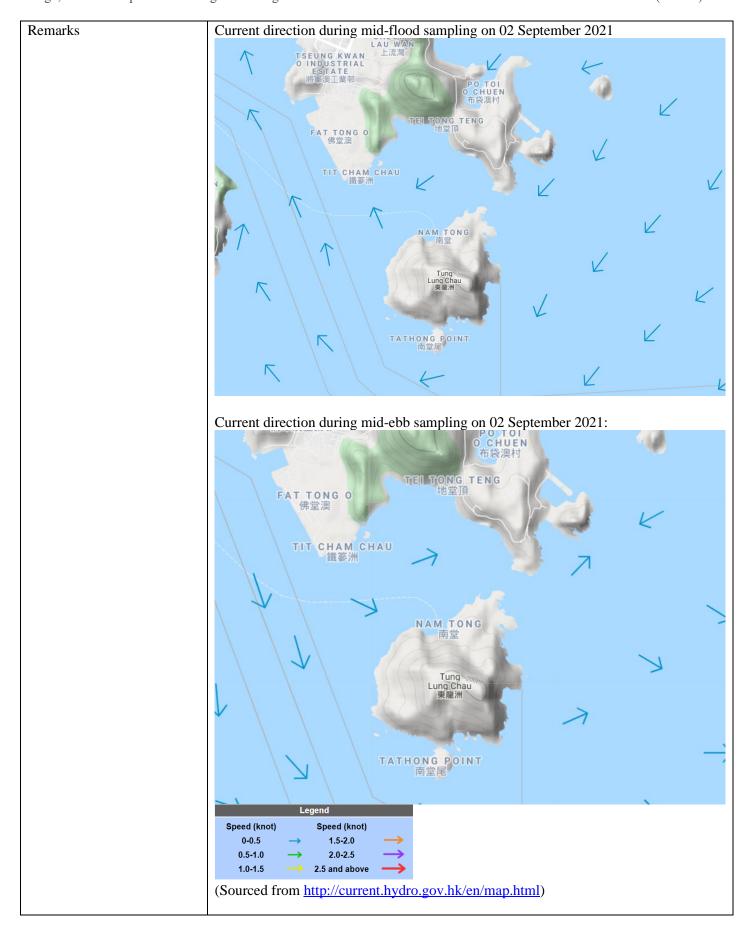

- Derrick barge x 3; tug boat x 1 (Intake Shaft)
- Derrick barge x 1, pile rig x 1 (Outfall Shaft)

Dominating sea current direction was found to be from Northwest to Southeast at waters to the west side of Tit Cham Chau; and from West to East at waters to the east side of Tit Cham Chau.

No marine construction activities with contact with water was conducted on 02 September 2021 at WSR36. The SS level at WSR36 (8.5 mg/L) was however at the same level compared with WSR4 (8.5 mg/L), which located distant from the construction site. No SS exceedance was observed at WSR37 (6.5 mg/L), of which marine construction activities were conducted. The SS level at WSR33 (8.3 mg/L) was comparable to WSR3 (8.0 mg/L) which located distant from the construction site. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 02 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 02 September 2021.

|   |  |   |   |                     | 300 hrs) 510mm diameter Outfall Shaft) rthwest at waters |

WSR1, WSR2, WSR3 were located distant from the construction site and the possibility of being affected by marine construction activities was low. SS exceedances were nonetheless noticed at WSR1 (7.7 mg/L), WSR2 (6.7 mg/L), WSR3 (7.5 mg/L). An upstream station, WSR33 (8.7 mg/L), has a higher SS level than WSR36 (6.5 mg/L) and WSR37 (8.3 mg/L). No marine construction activities with contact with water was conducted at WSR36. SS exceedance was nonetheless noted on 04 September 2021 at WSR36. As been advised by the water sampling team, water sampling at WSR37 during mid-flood tide was conducted between 16:39 – 16:41. With referenced to the scheduled construction activities provided by the Main Contractor, no marine construction activities with contact with water (i.e. sinking of 610mm diameter casing) during the water sampling at WSR37 during mid-flood tide. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

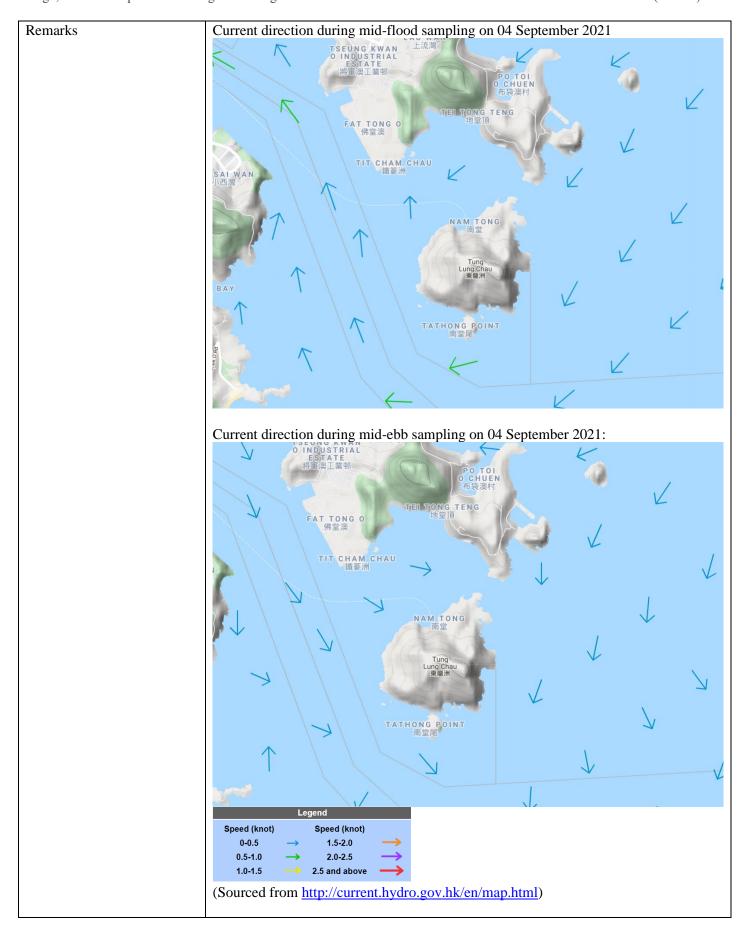

Accumulative rainfall of 20mm was recorded near to WSR36 and WSR37 on 04 September 2021. The rainfall may lead to release of SS content from the soil of the nearby lands (e.g. country park, fill bank).

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 04 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 04 September 2021.

|   | to the west side of Tit Cham Chau; and from Northeast to Southwest at waters to the east side of Tit Cham Chau.   |   |  |  |

No marine construction activities with contact of water was conducted at WSR36 on 09 September 2021. SS exceedance was however observed at WSR36 (7.1 mg/L). No SS exceedance was observed at WSR37 where marine construction activities were conducted (4.2 mg/L) of which the SS level was comparable with stations further away from the construction site (WSR3, 4.4 mg/L; WSR4, 4.3 mg/L). In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant. According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 09 September 2021. Conditions of the protective silt curtain at the inland water outfall was satisfactory on 09 September 2021. Dominating sea current direction was found to be from Northwest to Southeast at waters to the west side of Tit Cham Chau; and from West to East at waters to the east side of Tit Cham Chau.

WSR2, WSR3 and WSR16 were located distant from the construction site and the possibility of being affected by marine construction activities were considered limited. SS exceedances were however observed at WSR2 (5.3 mg/L), WSR3 (6.7 mg/L) and WSR16 (5.5 mg/L). WSR36 and WSR33 were located immediately downstream to WSR37 during mid-ebb tide, where marine construction works with contact with water were conducted at WSR37. No SS exceedance was observed at WSR36 whilst the SS level at WSR33 (5.3 mg/L) was comparable or at same level with stations that located further from the construction site (WSR2, WSR16). The SS level at WSR37 (6.0 mg/L) was also lower than WSR3, which WSR3 located distant from the construction site. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant and may result from other natural factors.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 09 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 09 September 2021.

| Action & Limit Levels                                       | Action Level  | Limit Level   |   |  |
| Measurement Level   | > 6.1 mg/L Impact Station(s) of Exceedance 6.3 mg/L (WSR 37)  | > 6.6 mg/L   Control Stations   5.1 mg/L (CF)   4.8 mg/L (CE) | Impact Station(s) without Exceedance  3.7 mg/L (WSR 1)  4.5 mg/L (WSR 2)  5.3 mg/L (WSR 3)  3.8 mg/L (WSR 4)  4.2 mg/L (WSR 16)  4.8 mg/L (WSR33)  3.7 mg/L (WSR36) |  |
| Possible reason for Action or<br>Limit Level Non-compliance | Outfall Shaft Area: 1) Pile rig under repair (0800 – 1800 hrs); 2) derrick barge for material lifting (0800 – 1800 hrs)  Intake Shaft Area: marine construction activities, namely 1) One derrick barge for rock filling in sunk 610mm pipe piles (0800 – 1800 hrs); 2) One derrick barge for sheet pile welding works (0800 – 1800 hrs); 3) One derrick barge moored around Intake with welding works inside its hopper (0800 – 1800 hrs)  Marine construction activities with contact with water: 1) One derrick barge for rock filling in sunk 610mm pipe piles (0800 – 1800 hrs)  Marine vessels on 16 September 2021:  • Derrick barge x 3 (Intake Shaft)  • Derrick barge x 1, pile rig on caisson platform x 1 (Outfall Shaft) |   |   |  |

Dominating sea current direction was found to be from Southeast to Northwest at waters to the west side of Tit Cham Chau; and from Northeast to Southwest at waters to the east side of Tit Cham Chau.

No marine construction activities with contact with water were conducted at WSR37 on 16 September 2021. SS exceedance was however observed at WSR37 (6.3 mg/L). No SS exceedances were observed at WSR36 (3.7 mg/L), where marine construction activities with contact with water was conducted. The SS level at WSR36 was lower or at same level with stations further away from the construction site (WSR1, 3.7 mg/L; WSR2, 4.5 mg/L; WSR3, 5.3 mg/L; WSR4, 3.8 mg/L; WSR16, 4.2 mg/L). In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 16 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 16 September 2021.

Intake Shaft Area: marine construction activities, namely 1) One derrick barge for rock filling in sunk 610mm pipe piles (0800 - 1800 hrs); 2) One derrick barge for sheet pile welding works (0800 - 1800 hrs); 3) One derrick barge moored around Intake with welding works inside its hopper (0800 - 1800 hrs)

Marine construction activities with contact with water: 1) One derrick barge for rock filling in sunk 610mm pipe piles (0800 - 1800 hrs)

Marine vessels on 16 September 2021:

- Derrick barge x 3 (Intake Shaft)
- Derrick barge x 1, pile rig on caisson platform x 1 (Outfall Shaft)

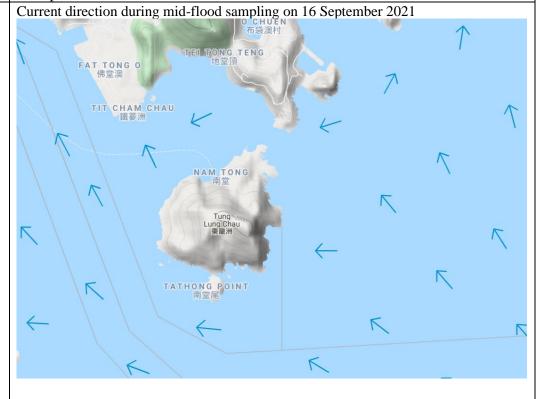

Dominating sea current direction was found to be from Northwest to Southeast at waters to the west side of Tit Cham Chau; and from West to East at waters to the east side of Tit Cham Chau.

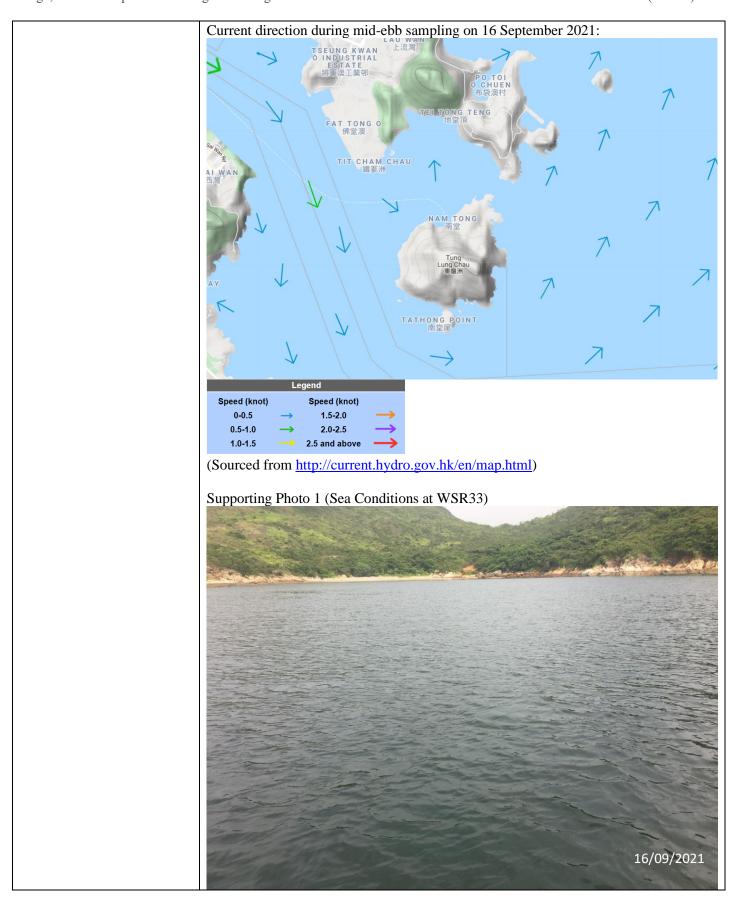

No SS exceedance was observed at WSR36 (4.3 mg/L), where marine construction activities were conducted. Station WSR37 which located upstream to WSR36 has higher SS value (5.0 mg/L) when comparing with that of WSR36. As been advised by the Main Contractor, all water from pilling process would be contained in the pile casing and piped to wastewater treatment facilities at the barge moored aside. A floating-type silt curtain was also added around the caisson platform embracing all active piles/casings during work. Hence limited SS generation would be expected from rock-filling on 16 September 2021. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 16 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 16 September 2021.

|                                  | •   |   |   |   |  |

Dominating sea current direction was found to be from Southeast to Northwest at waters to the west side of Tit Cham Chau; and from Northeast to Southwest at waters to the east side of Tit Cham Chau.

As been advised by the Main Contractor, piling work activities were conducted within the designated silt curtain area and no conspicuous sediment plume was observed during the water sampling by the sampling team on 18 September 2021. The silt curtain was in good condition that encloses the piling work area. The scale of piling work was limited, where less than 2 piles with each pile driven 1.5m into hard substrate was conducted on 18 September 2021. Since the working surface was hard substrate and the scale of work was small, it would be expected that limited SS will be generated during the piling activity. No SS exceedance was observed at WSR16 (3.8 mg/L), which located directly downstream to WSR37. This may suggest other possible factors may have caused the observed SS exceedance at WSR37 (5.3 mg/L) on 18 September 2021.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 18 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 18 September 2021.

Mid-Ebb

work with material lifting (1200 - 1800 hrs); 4) One derrick barge for material lifting and welding work inside its hopper (0800 - 1800 hrs)

Intake Shaft Area: marine construction activities, namely 1) One derrick barge for material lifting and welding work in the intake shaft (0800 - 1800 hrs); 2) One derrick barge supporting sheet piling work (0800 - 1800 hrs)

Marine construction activities with contact with water: 1) 610mm pipe piling (0800 - 1800 hrs)

Marine vessels on 18 September 2021:

- Derrick barge x 2 (Intake Shaft)
- Derrick barge x 2, pile rig on caisson platform x 1 (Outfall Shaft)

Dominating sea current direction was found to be from Northwest to Southeast at waters to the west side of Tit Cham Chau; and from West to East at waters to the east side of Tit Cham Chau.

Stations WSR3 and WSR4 were located distant from the construction site and the possibility of being affected by marine construction activities were considered limited. However, SS exceedances were observed at WSR3 (6.8 mg/L) and WSR4 (5.5 mg/L). No marine construction activities with contact with water was conducted at WSR36 on 18 September 2021. SS exceedance was however noted at WSR36 (6.2 mg/L) and was at same level with WSR33 (6.2 mg/L), which located immediately downstream to WSR36 during mid-ebb tide. No SS exceedance was observed at WSR37 (4.3 mg/L), where marine construction activities with contact with water was recorded during mid-ebb tide. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

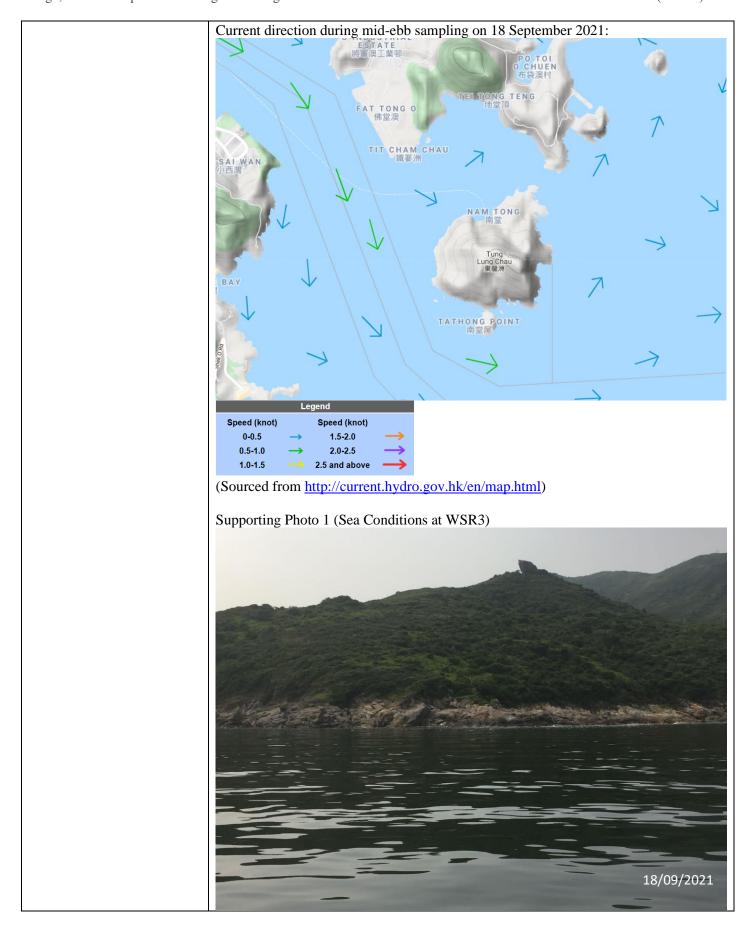

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 18 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 18 September 2021.

Dominating sea current direction was found to be from Southeast to Northwest at waters to the west side of Tit Cham Chau; and from Northeast to Southwest at waters to the east side of Tit Cham Chau.

Stations WSR1, WSR2, WSR3, WSR4 and WSR16 were located distant from the construction site and the possibility of being affected by marine construction activities was limited. SS exceedances were however observed at WSR1 (7.0 mg/L), WSR2 (6.7 mg/L), WSR3 (8.8 mg/L), WSR4 (8.2 mg/L) and WSR16 (7.4 mg/L). No marine construction works with contact with water was conducted at WSR36 on 25 September 2021. The SS level of WSR36 (6.7 mg/L) was lower than WSR33 (7.8 mg/L), which located farther from the construction site. The SS level of WSR33 was lower than stations located farther from the construction site (WSR3, 8.8 mg/L; WSR4, 8.2 mg/L). No SS exceedance was observed at WSR37 (5.8 mg/L), where marine construction activities were observed. In view of the inverse relation between distance to marine works and SS level, the SS exceedance is concluded not project relevant.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 25 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 25 September 2021.

# Possible reason for Action or Limit Level Non-compliance

Outfall Shaft Area: 1) One derrick barge for material transfer/lifting (0800 - 1800 hrs); 2) Two derrick barges assisted site tidying and installation of socket H beam inside sunken pipe piles (0800 - 1800 hrs).

Intake Shaft Area: marine construction activities, namely 1) One derrick barge supporting sheet piling work (0800 - 1800 hrs)

Marine construction activities with contact with water: 1) Two derrick barges assisted site tidying and installation of socket H beam inside sunken pipe piles (0800 - 1800 hrs).

Marine vessels on 25 September 2021:

- Derrick barge x 1 (Intake Shaft)
- Derrick barge x 3 (Outfall Shaft)

Dominating sea current direction was found to be from Northwest to Southeast at waters to the west side of Tit Cham Chau; and from West to East at waters to the east side of Tit Cham Chau.

As been advised by the Main Contractor, piling work activities were conducted within the designated silt curtain area and no conspicuous sediment plume was observed during the water sampling by the sampling team on 25 September 2021 at WSR37. The silt curtain enclosing the casing at WSR37 was in good condition. The overall SS background level was high on 25 September 2021, and the SS level at CF (8.5 mg/L) was comparable to WSR37. This may suggest other possible factors may have caused the observed SS exceedance at WSR37.

According to the field observation by sampling team during sampling event, no silt plume was observed in the Project site on 25 September 2021.

Conditions of the protective silt curtain at the inland water outfall was satisfactory on 25 September 2021.

Remarks
