- Part 3 CS-01 EM&A Monthly Report
- Part 4 CW-02 EM&A Monthly Report

Part 1 Project Overview

Executive Summary

This is the combined monthly EM&A Report for Ocean Park Master Redevelopment Project, which includes Contract CI-05 "Site Formation, Funicular Tunnel and Miscellaneous Work", CS-01 "The Vet Hospital" and CW02 "The Astounding Asia". This report presents the results of EM&A works conducted in the reporting month of March 2008 (from 26 February 2008 to 25 March 2008).

A summary of monitoring and audit activities conducted in the reporting period is listed below:

1-hour TSP monitoring	14 sessions for AM1, AM2 & AM3A
24-hour TSP monitoring	5 sessions for AM1, AM2 & AM3A
Daytime noise monitoring	4 sessions for CN1-CN4
Evening or night time noise monitoring	4 sessions
Holiday time noise monitoring	0 sessions
Terrestrial ecology monitoring	1 session
Coral monitoring	0 sessions for Site 1-4 0 sessions for Site 5 and Control Station
Environmental Site Inspection	5 sessions (including IEC audit)

No exceedance was recorded on the 1-hour TSP monitoring, 24-hour TSP monitoring, daytime & evening time noise and terrestrial ecology monitoring. No impact coral monitoring was conducted within the reporting period. It was because no exceedance was recorded at all coral monitoring stations and control site in the past six months, therefore the monitoring frequency was changed to quarterly until the end of construction works as recommended in approved EM&A Manual. The next scheduled monitoring should be in May 2008.

No non-compliance from IEC, summons or prosecution related to environmental issues was made against the Ocean Park Master Redevelopment Project in the reporting period of March 2008.

6 complaints were received within the month of March 2008. 3 Complaints were received from resident at Broadview Court on 12, 13 and 20 March 2008 regarding to the noise nuisance of night works at Nam Long Shan Road. Investigation was conducted and the findings were that movable noise panels and noise shield were using during the night breaking works. The possible cause of the noise nuisance would be that the noise emitted through the gaps between the panels. The Contractor was reminded to ensure placing the panels properly in order to minimize the noise nuisance to the vicinity. Surveillance has been stepped up in order to ensure that timely actions could be taken to avoid any new complaints.

1 complaint was received on 15 March 2008 regarding to the dust nuisance at the crusher, conveyor area at Nam Long Shan Road. With regards to the complaint, action was taken as follows:

- Enhance the water spraying at the dropping outlet of the conveyor, especially the frequency, in order to minimize the dust nuisance to the vicinity.
- Installed modify sprinklers around the stockpile area.
- Surveillance was stepped up in order to ensure that timely actions could be taken to rectify any complaints.

Besides, the length of dust screen was extended to increase the coverage area of stockpile and water spraying at the dust screen was also enhanced to minimize the dust nuisance due to strong wind.

1 complaint was received on 19 March 2008 regarding to the noise from the temporary steel plates over the trenches at Nam Long Shan Road. With regards to the complaint, immediate action was taken and summarized as follows:

• Sufficient sandbags or rubber pad were provided before placing the temporary steel plates back to cover the trench.

The last complaint was received on 25 March 2008 from the Police Training School regarding the dust nuisance from the construction site to the school. With regards to the complaint, immediate action was taken and summarized as follows:

- The frequency of water spraying for the exposed areas was enhanced.
- Stockpiles would be covered by tarpaulin.

1. Introduction

The "Master Redevelopment Project of Ocean Park" (hereinafter known as the "Project") is implemented by the Ocean Park Corporation at its existing site of Ocean Park and Nam Long Shan, Aberdeen. The Project involves both reconstruction/modification of existing facilities and expansion of the Park, and therefore under Environmental Permit, EP-249/2006/A.

The construction works of the project consists of various contracts. Details of the contracts, which are required to perform the EM&A programme, are shown below.

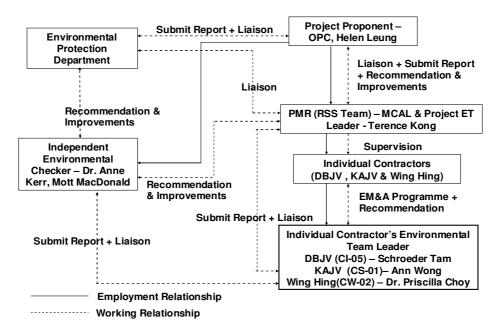

Contract No.	Contract Title	Contractor	Construction Commencement
CI-05	Site Formation, Funicular	Dragages-	12 March 2007
	Tunnel and Miscellaneous	Bouygues JV	
	Works		
CS-01	Back of House for Marine	Kaden – ATAL	26 March 2007
	Mammal Veterinary Hospital	JV	
CW-02	Astounding Asia	W. Hing	1 August 2007
		Construction	
		Co. Ltd	

The Contractors will conduct environmental monitoring and audits during the construction stage and produce contract specific monthly EM&A reports. The RSS will prepare a combined monthly EM&A report for the project. This is the combined monthly EM&A Report including the IEC audit findings, Cl05, CS01 and CW02 Monthly EM&A Report. This report presents the results of EM&A works conducted in the reporting month of March 2008 (from 26 February 2008 to 25 March 2008).

2. Project Organisation

The structure of the environmental management team is shown in below figure.

Management Organization

3. Construction Works Undertaken during the Reporting Month

In the reporting month, the construction activities summarise as follows.

<u>CI-05</u>

Waterfront

- Soft Ground Tunnel Excavation
- Waterfront Terminus Excavation North
- Waterfront Access Road (e.g. Trench Excavation, Temporary Road Diversion)
- Utilities Diversion (e.g. Storm Drainage, Watermain & Sewerage) at Entry Plaza Advance Work
- Permanent Bus Terminus
- Works for Grand Aquarium Advance Works

Tai Shue Wan

Conveyor Belt and Barging Point
 Operation

Summit

- Main Tunnel Excavation
- Tunnel Permanent Lining
- Drill and Blast for Summit Site Formation
- Excavation at Summit
- Summit Terminus & FS Tank Building
- Crusher and Conveyor Belts Operation

Government Entrusted Works

- Excavation, Trail Pit Excavation, Construction of Manhole, Pipe Laying (e.g. sewer & water main), Road Surface Reinstatement and Backfilling at NLS Road Entrusted Work
- Excavation, Construction of Manhole, Pipe Laying, Trial Pit Excavation, Construction of Sheet Piling and Backfilling at Wong Chuk Hang Road

<u>CS-01</u>

- R.C. Structure: Construction of Dolphin Pools.
- Truss Installation: Material Delivery, Installation.
- E&M & LSS Installation: Plumber, Electric Installation, A/C system, etc.
- Lift Installation: Alignment Revised, Installation of Electric Devices and Relevant Accessories, etc.
- Internal Finishing: Plasterer Works, Installation of Wooden Doors, Waterproof in Building and Roof.
- Cable Laying: Excavation, Installation of Cable and Backfill, etc.

<u>CW-02</u>

- Superstructure Works, Builder's and Finishing Work, E&M work, Window and Door Installation and Fitting out Works at the New Bird House,
- Superstructure Works (Structural Steel Works) at the Flight Exercise Aviary,
- Make-good Defect Works at the Birds Central Kitchen,
- Surface Drainage Works at Main Aviary,
- Footing Construction Works and Superstructure Works at Astounding Asia Restaurant,
- Pipe Piling Works for Footing F1, MVAC Culvert (RC Works) and Superstructure Works (RC Works) at the New Panda Habitat,
- External Drainage, Services Pipelines and Ducting Works.

4. Permits and License Status

4.1. Environmental Permit

The Environmental Impact Assessment (EIA) Report of the Project has been approved by the Environmental Protection Department (EPD) (Register No.: AEIAR-101/2006) on 12 July 2006. Subsequently, EPD issued Environmental Permit (EP) for the construction and operation of the project. Table below is a full list of the EPs.

EP No.	Issue Date	Key Variation
EP-249/2006	28 July 2006	First EP
EP-249/2006/A	25 September 2006	 Enhance the roosting habitat for freshwater birds by enlarging Pond 35 and its surrounds with a total area of no less than 120 squares meters and no construction works and discharge from construction sites shall be allowed within Pond 35 after enhancement. Filling of Pond 37 at the Lowland Area. Submission of the as-built drawings showing the enhancement works of Pond 35.

4.2. CNP

5. EP Submissions Status

Environmental submissions to EPD since the commencement of construction works at Ocean Park, i.e. from 12 March 2007 to 25 March 2008 are as below,

Contract	Submissions
CI-05	 Notification of Commencement Date
	 Management Organisation Chart
	Construction Programme
	Drainage Proposal
	Silt Curtain Proposal
	Waste Management Plan
	 Baseline Air Quality and Noise Monitoring Report
	 Transplantation Proposal for Uncommon Species
	 Baseline Coral Survey Report
	 As-built Drawings of Pond 35
	 Detailed Compensatory Planting As-built Drawing
CI-05, CS-01 &	 Combined Monthly EM&A Report (February 2008)
CW-02	
City Bus Limited	 Written Notice on Completion of TPH Contaminated
	Soil Disposal
	 Written Notice on Completion of Solidification
	Treatment of Heavy Metals Contaminated
	 As-built Remediation Plan
Hong Kong	 Confirmation Letter to confirm that Land
School of	Contamination remediation Works within HKSM has
Motoring Ltd.	been completed

6. Materials Management

Section 6.17 in the EIA report specified the disposal of materials to the public fill reception facilities should be considered as last resorts with the preferred approach to reuse the material within the project and/or other projects.

According to EIA recommendations and CI05-WMP, the materials were reused in other projects specified as below:

- TKOGV (Green Valley), the soil materials were reused as the topsoil of landfill. This would be delivered by DBJV subcontractor's trucks. The delivery was started in May 2007 and no excavated materials were delivered to TKOGV in the reporting month.
- NW-SW (Swire Sita), the soil materials were reused as the topsoil of landfill. This would be delivered by DBJV subcontractor's barges. The delivery was started in September 2007 and excavated materials were delivered to the site within the reporting period.
- Central Reclamation Phase III, the excavated materials were reused as forming an access road. This would be delivered by barges from the Contractor's of Central Reclamation Phase III. The delivery was started in November 2007 and excavated materials were delivered to the site within the reporting period.
- Ma On Shan Waterfront Promenade Project, the rock materials were reused as the seawall layer. This would be delivered by DBJV subcontractor's barges. The delivery was started in December 2007 and no rock materials were delivered to the site within the reporting period.
- Shenzhen Airport Extension, the rock materials (size less than 300mm) would be exported as usable materials by DBJV subcontractor's barges to the Shenzhen Airport Extension site for site formation works. The rock materials would be exported as goods in compliance with the Import and Export Ordinance. The delivery was started by the end of September 2007, however, no rock materials were delivered to Shenzhen Airport Extension in the reporting month.
- Hung Wan Quarry at Zhuhai, it was proposed to EPD on 8 November 2007 and no rock materials were delivered to Zhuhai within the reporting month for reuse purpose. This would be delivered by DBJV subcontractor's barges.

The amounts of different types of materials generated by the activities of the Project in the month are shown in following table. The total materials quantities of the project showed that the reuse of materials was maximized and the disposal to the public filling facilities was minimized. Mitigation measures under the Waste Management Plan (WMP) revision D have been implemented during the reporting period.

Materials Type	Disposal	CI-05	CS-01	CW-02	Total
	Locations				
C& D Waste	SENT	479.75 tonnes	38.74 tonnes	36.22 tonnes	554.71 tonnes
	WENT	6.42 tonnes			6.42 tonnes
	TKOSF	128.14 tonnes	38.57 tonnes	25.17 tonnes	191.88 tonnes
	TMSF	12.30 tonnes			12.30 tonnes
Excavated	QBBP	10,094.16	79.93 tonnes	857.78	11,031.87
Material		tonnes		tonnes	tonnes

7. Environmental Monitoring and Results

7.1. Requirements

Under EP-249/2006/A condition 3.2, impact environmental monitoring including sampling, measurements and necessary remedial action should be conducted in accordance with the requirements of the EM&A Manual. The environmental monitoring including air quality, noise and terrestrial ecology were conducted by the Contract of CI-05 within the reporting period.

The items below would not be described in Part 1 report and would be described in CI-05 monthly EM&A report (i.e. Part 2 of the report).

- Methodology and Criteria
- Action and Limit Levels
- Event and Action Plan

7.2. Monitoring Locations

Air Quality (TSP)

The locations of the air monitoring stations are presented in the table below. The figure was shown in the CI-05 Monthly EM&A Report.

Air Quality Monitoring Stations	Identity/Description
AM1	Whisker's Theatre, Ocean Park
AM2	San Wai Village, Wong Chuk Hang
АМЗА	Open Area of PMR & OPC temporary Site Offices (from 14 September 2007)

Construction Noise

The locations of the noise monitoring stations are presented in the table below. The figure was shown in the CI-05 Monthly EM&A Report.

Noise Monitoring Stations	Identity/Description
CN1	Open Area adjacent to Police Training School
CN2	Project Development Office, Ocean Park
CN3	Rinniped House, Ocean Park
CN4	Manly Villa

Terrestrial Ecology

Monitoring of the health and condition of the transplanted plant species of conservation interest should be conducted at least once a month during the first 12 month after transplantation. Proposed monitoring location would be next to the Contract CI-05 site office shown in figure 1.3 of Part 2 of the report.

Coral

The locations of the coral monitoring stations are presented in the table below. The figure was shown in the CI-05 Monthly EM&A Report.

Coral Impact Monitoring Stations	Identity/Description
Site 1	Seaside near the Lowland
Site2 to Site 5	Around Headland
Control Station	Between Near Round Island and Chung Hom Kok

7.3. Monitoring Results

Air Quality (TSP)

The monitoring data reported below was provided by the CI-05 Contractor's Environmental Team Leader.

Monitoring Period	1-hr TSP (μg/m³)		
	AM1	AM2	АМЗА
26 February 08 to 25 March 08	83-229	97-314	148-427

Monitoring Period	24-hr TSP (μg/m³)		
	AM1	AM2	АМЗА
26 February 08 to 25 March 08	47-126	75-162	81-180

Construction Noise

The monitoring data reported below was provided by the CI-05 Contractor's Environmental Team Leader.

Monitoring Period	Daytime Noise Level, Leq (30min), dB(A)						
Period	CN1	CN2	CN3	CN4			
26 February 08 to 25 March 08	66.5-70.2	59.5-67.0	58.4-60.0	64.2-70.1			

Monitoring Period	Evening time Noise Level, Leq (15min), dB(A)						
Period	CN1	CN2	CN3	CN4			
26 February 08 to 25 March 08	52.4-54.0	53.3-58.4	54.3-59.2	52.9-56.0			

Terrestrial Ecology

The monitoring results showed that the survival rate of Sword-leaved Orchid was 100%. Most of the transplanted Balloon Flowers at the receptor site were experience seasonal shrunken and re-generated in the month which is the growing season. The survival rate of Balloon Flower was 80%. The above ground parts of the Chinese Lily were became withered due to natural seasonality in dry season while the underground roots are alive since all the Chinese Lily were geminated in the month which is the growing season. The survival rate of Chinese Lily was 100%. Detailed observations would be describes in CI-05 monthly EM&A report (i.e. in Appendix E of Part 2 of the report).

Coral

No impact coral monitoring was conducted within the reporting period. It was because no exceedance was recorded at all monitoring stations and control site in the past six months, therefore the monitoring frequency was changed to quarterly until the

end of construction works as recommended in approved EM&A Manual. The next scheduled monitoring should be in May 2008.

7.4. Exceedances

No exceedance was recorded on the 1-hour TSP monitoring, 24-hour TSP monitoring, daytime & evening time noise monitoring and terrestrial ecology monitoring for the reporting period. No impact coral monitoring was conducted within the reporting period since the monitoring frequency was changed to quarterly until the end of construction works. The next scheduled monitoring should be in May 2008.

8. Site Audit

8.1. IEC Site Audit

IEC conducted monthly site audit on CI-05, CS-01 and CW-02 on 28 March 2008. Audit checklists are attached in Appendix A of Part I.

CI-05 Observations

Observations for last month:

Item 1, 2, 4-6 from the last audit were closed while item 3 was outstanding. Part of the access road at Summit was still accumulated with mud.

Observations for the month:

Conveyor Crusher Area

- (i) Settled water from sludge removed from the sedimentation tank was observed leaking and running down the slope.
- (ii) Conveyor-crusher connection point was observed dusty.

Summit

(iii) A drip tray with oil tank was full of water.

In Front of Hong Kong Police Training School

- (iv) Stockpiles were not covered.
- (v) Concrete breaking was not provided with water spraying to suppress dust.

CS-01 Observations

- Observation from last audit item 1 was closed. Item 2 was outstanding. The temporary drainage channel was still blocked by rocks and sand. The Contractor should ensure that it was clear of blockage at all times.
- (ii) Stagnant water was observed around the Plant Block after rain. The Contractor should remove them regularly after heavy rain.
- (iii) The Sedimentation tank was full of water after rain. The Contractor should maintain the tank more frequently.
- (iv) Silty water was observed being discharged into existing surface channel. The Contractor should ensure discharge from site should be diverted and treated prior to discharge.

CW-02 Observations

- (i) All observations from the last audit were closed.
- (ii) Oil drums were not provided with drip trays at the Flight Exercise Aviary.
- (iii) Stockpile closed to the tree at New Panda Habitat was uncovered.
- (iv) Debris and leaves were accumulated along the permanent drainage channel at New Panda Habitiat.
- (v) Exposed slope surfaces of stockpiles around New Panda Habitat were only partly covered.

8.2. Non-Compliance

No non-compliances were recorded in March 2008.

9. Implementation status of Environmental Mitigation Measures

Please see Part 2, Part 3 and Part 4 of the individual contractual reports for the details of the implementation of environmental mitigation measures.

10. Summary of Complaint, Summon or Prosecution

6 complaints were received within the month of March 2008. 3 Complaints were received from resident at Broadview Court on 12, 13 and 20 March 2008 regarding to the noise nuisance of night works at Nam Long Shan Road. Investigation was conducted and the findings were that movable noise panels and noise shield were using during the night breaking works. The possible cause of the noise nuisance would be that the noise emitted through the gaps between the panels. The Contractor was reminded to ensure placing the panels properly in order to minimize the noise nuisance to the vicinity. Surveillance has been stepped up in order to ensure that timely actions could be taken to avoid any new complaints.

1 complaint was received on 15 March 2008 regarding to the dust nuisance at the crusher, conveyor area at Nam Long Shan Road. With regards to the complaint, action was taken as follows:

- Enhance the water spraying at the dropping outlet of the conveyor, especially the frequency, in order to minimize the dust nuisance to the vicinity.
- Installed modify sprinklers around the stockpile area.
- Surveillance was stepped up in order to ensure that timely actions could be taken to rectify any complaints.

Besides, the length of dust screen was extended to increase the coverage area of stockpile and water spraying at the dust screen was also enhanced to minimize the dust nuisance due to strong wind.

1 complaint was received on 19 March 2008 regarding to the noise from the temporary steel plates over the trenches at Nam Long Shan Road. With regards to the complaint, immediate action was taken and summarized as follows:

• Sufficient sandbags or rubber pad were provided before placing the temporary steel plates back to cover the trench.

The last complaint was received on 25 March 2008 from the Police Training School regarding the dust nuisance from the construction site to the school. With regards to the complaint, immediate action was taken and summarized as follows:

• The frequency of water spraying for the exposed areas was enhanced.

Stockpiles would be covered by tarpaulin.

No summons or prosecution related to environmental issues was received or made against the Project in March 2008.

11. Future Issues

Key Issues to be considered in the coming month include:

- <u>CI-05</u>
- Noise from operating equipment and machinery on-site
- Maintenance of the silt curtain at

 Tai Shue Wan
- Construction waste management at the site area
- To implement dust suppression measures on dry surfaces especially crusher and conveyor area stockpiles and on dust • generating activities.
- Provision of temporary drainage system, treatment to turbid water from activities, run-off before discharge.
- Avoid accumulation of mud on access road, at permanent and temporary channels, catchpits and sedimentation tanks.
- Avoid oil spillage on site.
- To provide wheel wash to all vehicles leaving the site

<u>CW-02</u>

- Generation of dust from stockpiles, haul road and vehicular movement on-site.
- Noise from operation equipment and machinery on-site.
- Storage of chemicals/fuel and chemical waste/waste oil on site.
- Remove construction waste and general refuse from the site regularly.
- Avoid blockage of temporary channels on access and haul roads.
- To implement dust suppression measures on exposed soil surfaces and stockpiles.

CS-01

•

- Noise from operating equipment and machinery on-site.
 - Avoid accumulation of mud at the sedimentation tank and blockage at the temporary channels.
- To implement dust suppression measures on dry surfaces and dusty works.
- To implement on-site cleanliness.
- To remove general refuse from the site regularly.

12. Conclusion and Recommendation

12.1. Conclusion

Environmental impact monitoring was performed in March 2008. All monitoring results in the reporting month were checked and reviewed.

No exceedance was recorded on the 1-hour TSP monitoring, 24-hour TSP monitoring, daytime & evening time noise monitoring, terrestrial ecology monitoring for the reporting period. No impact coral monitoring was conducted within the reporting period. It was because no exceedance was recorded at all monitoring stations and control site in the past six months, therefore the monitoring frequency was changed to quarterly until the end of construction works as recommended in approved EM&A Manual. The next scheduled monitoring should be in May 2008.

No non-compliance from IEC, summons or prosecution related to environmental issues was made against the Ocean Park Master Redevelopment Project in the reporting period of March 2008.

6 complaints were received within the month of March 2008. 3 Complaints were received from resident at Broadview Court on 12, 13 and 20 March 2008 regarding to the noise nuisance of night works at Nam Long Shan Road. Investigation was conducted and the findings were that movable noise panels and noise shield were using during the night breaking works. The possible cause of the noise nuisance would be that the noise emitted through the gaps between the panels. The Contractor was reminded to ensure placing the panels properly in order to minimize the noise nuisance to the vicinity. Surveillance has been stepped up in order to ensure that timely actions could be taken to avoid any new complaints.

1 complaint was received on 15 March 2008 regarding to the dust nuisance at the crusher, conveyor area at Nam Long Shan Road. With regards to the complaint, action was taken as follows:

- Enhance the water spraying at the dropping outlet of the conveyor, especially the frequency, in order to minimize the dust nuisance to the vicinity.
- Installed modify sprinklers around the stockpile area.
- Surveillance was stepped up in order to ensure that timely actions could be taken to rectify any complaints.

Besides, the length of dust screen was extended to increase the coverage area of stockpile and water spraying at the dust screen was also enhanced to minimize the dust nuisance due to strong wind.

1 complaint was received on 19 March 2008 regarding to the noise from the temporary steel plates over the trenches at Nam Long Shan Road. With regards to the complaint, immediate action was taken and summarized as follows:

• Sufficient sandbags or rubber pad were provided before placing the temporary steel plates back to cover the trench.

The last complaint was received on 25 March 2008 from the Police Training School regarding the dust nuisance from the construction site to the school. With regards to the complaint, immediate action was taken and summarized as follows:

- The frequency of water spraying for the exposed areas was enhanced.
- Stockpiles would be covered by tarpaulin.

12.2. Recommendation

According to the environmental audit performed in the reporting month, the following recommendations are made:

Air Quality Impact

- To prohibit any open burning on site.
- To recommend that the Contractors should regularly maintain the machinery and vehicles on site.
- To follow up any exceedance caused by the construction works.
- To monitor the implementation dust suppression measures on dry surfaces, at the crusher and conveyor belt area by the Contractors.
- To increase the water spraying at the truck loading area of the crusher and along haul road.

Noise Impact

- To inspect the noise sources from inside and outside of the site.
- To follow up any exceedance caused by the construction works.
- To recommend that the Contractors should space out noisy equipment and position as far away as possible from sensitive receivers.
- To recommend the Contractors should have regular maintenance of vehicles and equipment used.

Water Quality Impact

- To recommend that the Contractor of CI-05 should regularly maintain the silt curtains and make sure they are in the right positions and maintain their functionalities.
- To monitor whether open stockpiles of construction materials are covered by Contractors with tarpaulin or similar fabric during rainstorm.
- To remind the Contractor to fully implementation of the temporary drainage system and all sedimentation tank and WetSep should be fully operated.

Waste/Chemical Management

- To check for any accumulation of waste materials or rubbish on site.
- To avoid any discharge of chemical waste or oil directly from the site.
- To regularly and properly collect, store and dispose of all waste types, including floating refuses around the silt curtain.

S2.32 • Are	the NSRs informed of th	ne blasting work in adva	ance?					

P:\Hong Kong\INF\Projects2\231620 Ocean Park IEC\site audit\Chklist template.doc

	 Is sufficient time allowed for alerting all the potential NSRs prior to every blasting work? 	
	 Are proper procedures put in place to alert and minimise any startling effect on the staff working in Ocean Park? 	
	 Is the optimal amount of charge used evaluated for noise reduction? 	
	Landscape and Visual	
S3.10	Consideration on existing surrounding vegetation:Are temporary tree nurseries set up?	
	 Is "no-intrusion zones" implemented? 	
	 Is the existing vegetation protected from damage? 	
	Are hill fire prevention measures taken?	
	 Is dust and erosion controlled for exposed soil? 	
	 Are the irrigation networks set up throughout the Establishment Period? 	
	• Is Quarterly Report on existing trees to be retained or transplanted prepared by the Contractor?	
S3.11	Consideration on appearance and view:Is the appearance of hoardings suitable?	
	 Is the appearance of construction workers, plants/machines suitable? 	
	 Are the screening and alignment of the temporary barging point and conveyor system suitable? 	
	Are the selected security floodlights suitable	
	Ecology	
S4.5	Transplantation:	
	 Is the transplantation work supervised by a qualified botanist/horticulturalist in the ET? 	
	 Are the transplanted plant species of conservation interest monitored during the first 12 months after transplantation? 	
	monitored during the instruction this after transplaination?	
S4.7	Construction:	· · · · · · · · · · · · · · · · · · ·
	 Is the runoff entering watercourses avoided by control measure, especially during heavy rain? 	
	 Is the site runoff directed to regularly cleaned and maintained silt traps (or oil separators)? 	
	 Are sediment traps included in drainage to collect and control construction run-off? 	
	Is suitable size silt traps or oil interceptor used?	
	 Is vegetation survey carried out to determine the feasibility and suitability of individual plants for transplantation? 	
	 Are the trees located within the works area preserved suitably? 	
	 Are individual plants of conservation interest transplanted prior to the construction phase? 	

	 Are the equipments and stockpiles placed in designated works areas and access routes selected on existing disturbed land to minimise disturbance to natural habitats? 	
	 Are construction activities restricted to the work areas demarcated? 	
	 Are waste skips provided to collect general refuse and construction wastes? 	
	Are the wastes disposed of timely and properly off-site?	
	 Is open burning on works sites prohibited? 	
	 Are native plant species made use of as far as possible on newly formed land? 	
	Construction Waste	
S5.4	 Good Site Practices Are arrangements made for collection and effective disposal of all wastes generated? 	
	 Are the waste management and chemical handling procedures followed? 	
	Are sufficient waste disposal points provided?	
	Are the wastes disposed of regularly?	
	 Are appropriate measures taken to minimise windblown litter and dust during transportation of waste by either covering trucks or transporting wastes in enclosed containers? 	
	 Are the drainage systems, sumps and oil interceptors regularly cleaned and maintained? 	cwo20P1050826
S5.5	 Waste Reduction Measures: Is the C&D waste from demolition and decommissioning of existing facilities sorted to recover recyclable materials? 	
	 Are different types of wastes segregated and stored in different containers, skips or stockpiles to enhance reuse or recycling and the proper disposal? 	
	 Are aluminium cans segregated in labelled bins and collected by individual collectors for recycling? 	
	 Are proper storage and site practices maintained to minimise the potential for damage or contamination of construction material? 	
	 Are the construction materials planned and stocked carefully to avoid unnecessary generation of waste? 	
S5.7	 General Refuse Is the general refuse stored in enclosed bins or compaction units separate from C&D material? 	
	• Is the general refuse removed regularly by a waste collector?	
S5.8	C&D Material	
	 Are the excavated materials from site formation of the expansion areas and tunnel construction for the funicular system reused on-site as backfilling material and for landscape works? 	
	 Are the surplus rock and other inert C&D material disposed of at the public fill sites? 	
	 Is a waste management plan prepared? 	

P:\Hong Kong\INF\Projects2\231620 Ocean Park IEC\site audit\Chklist template.doc 3

	 Is a recording system present for the record of amount of wastes generated, recycled and disposed? 	
	 Is the trip-ticket system required in ETWB TCW No.31/2004 followed on site? 	
S5.9	Chemical Wastes Is chemical wastes generated from the works? And if yes,	
	Is the Contractor registered as a Chemical Waste Producer?	
	 Are good quality containers used for separating and storing chemical wastes? 	CW02() P1050 821
	 Are appropriate labels securely attached on each chemical waste container to indicate their corresponding chemical characteristics? 	
	 Is the Contractor licensed to transport and dispose of the chemical wastes? 	
	Land Contamination	
S6.11	 Is the contact of construction workers with contaminated materials minimised by using bulk earth-moving excavator equipment? 	
	 Are appropriate cloth, personal protective equipment, hygiene and washing facilities provided to minimise exposure to any contaminated material? 	
	Is stockpiling of contaminated excavated materials avoided?	
	 Is the use of contaminated soil for landscaping without proper treatment prohibited? 	
	 Are vehicles containing excavated materials covered properly to limit potential dust emissions or contaminated wastewater runoff? 	
	 Is the speed of the trucks carrying contaminated materials controlled? 	
	 Are the necessary waste disposal permits obtained from appropriate authorities in according with Waste Disposal (Chemical Waste) (General) Regulation? 	
	 Are silt removal facilities provided with retention time for silt/sand traps of 5 minutes under maximum flow conditions? 	
	 Are the records maintained for quantity of wastes generated and disposal of? 	
S6.12	Remediation ProcessIs biopile covered by tarpaulin or low permeable sheet to avoid dust emission?	
	 Is vented air from biopile treated by blower and carbon adsorption system before released to the atmosphere? 	
	 Are the materials which may generate airborne dust emissions adequately wetted prior to and during the loading, unloading and handling operations? 	
	• Are silencers installed at biopile blower to minimise noise impact?	
	 Are quiet plants such as generator and blower used for biopile? 	

_

	 Are the mixing process and other associated material handling activities properly scheduled to minimise potential noise impact? 	
	Are impermeable liners placed at the bottom of biopile?	
	 Is leachate collection sump construction along the perimeter of biopile? 	
	 Is the lachate recycled back to the biopile or truck away to Chemical Waste Treatment Centre for disposal? 	
	 Is the mixing of contaminated soils and cement/water/other additive(s) undertaken at a solidification plant to minimise the potential for leaching? 	
	 Is a concrete bund construction along the perimeter of the solidification/stabilisation area to prevent runoff? 	
	 Are the loading, unloading, handling, transfer and storage of cement carried out in an enclose system? 	
	Are the contaminated soils transported by roll-off trucks (contrainerisation)?	
	 Is temporary hoarding provided around the treatment area to minimise the visual impact? 	
	Air Quality	
S7.23	 Good Site Practices Is watering carried out regularly with complete coverage to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather? 	c105 (5) P1050865
	 Is watering frequently carried out for particularly dusty construction areas, temporary stockpiles and areas close to ASRs? 	
	 Are the aggregate or dusty material storage piles covered with their side enclosed to reduce emissions? Or if this is not practicable, is watering applied to aggregate fines? 	c105 @ P <i>1050864</i> cw02 @ <i>Pl05082</i> 4
	 Is open stockpiles avoided or covered and placed far enough from the ASRs? 	<u>cwoz (4) ploso829</u>
	 Is the dropping height of material restricted to minimise the fugitive dust from unloading/loading? 	
	 Is tarpaulin used to cover all dusty vehicle loads transported to, from and within the site? 	
	 Are vehicle wheel and body washing facilities available at the exit points of the site? 	
	 Are wind shield and dust extraction units or similar dust mitigation measures provided at the loading points? If dust generation is likely during the process, particularly in dry seasons, is water sprinklers provided at the loading site? 	·
	 Do the vehicles comply with the recommended speed limit of 10 km/h on unpaved roads? 	
	Are dusty activities rescheduled during high-wind conditions?	
	 Are the routing of vehicles and positioning of construction plants at maximum possible distance from the ASRs? 	
	 Is suitable buffer zone provided and work areas fenced off with hoarding (not less than 2.4m from ground level)? 	

S7.24 Drilling & Blasting

 \mathbf{X}

P:\Hong Kong\INF\Projects2\231620 Ocean Park IEC\site audit\Chklist template.doc 5

	Is watering carried out on the exposed area after blasting?		
	Is vacuum extraction drilling method used?		
	 Is the blasting process carefully sequenced? 		
	 Is the firing of explosive carried out in the morning prior to opening of the Park? 		
S7.25	Crushing Plant		
01.20	 Is water sprayed on the crusher? 		
	Are fabric filters installed for the crushing plant?		
	 Is chute or dust curtain used for controlling dust when transferring materials from crusher to the conveyors? 		<u>CI056) Plo50857</u>
\$7.26	 Barging Point & Conveyor Belt System Are the conveyors placed within enclosed structures? 		
	 Is profiled steel cladding provided at two sides of loading point? 		
	 Are dust suppression sprays installed and operated at the feeding inlet and outlet? 		
	 Is the barging point placed within an enclosed structure incorporating an enclosed chute for material transfer to the barge? 		
	 Is a flexible curtain hanged on the enclosed chute to prevent dust emission when excavated materials/rocks transported into the barge? 		
	Water Quality		
S8.3	 Site Run-off and Drainage Are all sewer and drainage connections sealed to prevent debris, soil, sand etc. from entering public sewer before commencing any site formation work? 	\checkmark	
	 Are temporary ditches provided to facilitate runoff discharge into appropriate watercourses, via appropriate sized silt retention pond? 		CI-53 P1030848& P1050847
	 Are cut-off ditches provided for all major site clearance/excavation works where soils would be exposed to control runoff from the areas? 		
	 Are channels, earth/concrete bunds and sand bags deployed to direct surface runoff? 		CSO1 (3) P1050 812
	 Are catchpits and perimeter channels constructed in advance of relevant site formation works? 	i	
	 Are the boundaries of earthworks marked and surrounded by dykes or embankments for flood protection? 		
	Are sand/silt traps and sediment basins provided to remove sand/silt particles from runoff?		and a distance
	 Are silt removal facilities, channels and manholes maintained and deposited silt/grit removed regularly to ensure that these facilities are functioning properly at all times? 		58-1 (A) P1050807 (50) (2) P1050811
	Are exposed soil surfaces covered?		<u>CI05 € Pl05084</u> <u>CW02 © Pl05082</u> 4 CW02 €Pl050829
	 Is the water pumped out from foundation excavations discharged into silt removal facilities? 		CW02 (HP1030829
	 Are exposed soil areas minimised to reduce potential for increased siltation and contamination of runoff? 	· /	C105 0 P1050840 &
P:\Hong Kor	ng\INF\Projects2\231620 Ocean Park IEC\site audit\Chklist template.doc		

1/

			.
	 Are earthwork final surfaces well compacted and is subsequent permanent work or surface protection performed immediately? 		
			10 a cons
	 Is the rainwater pumped out from trenches or excavation directed to silt removal facilities before discharge? 		CS0 (1) P1050808 CS0 (1) P1050814& <u>P1050</u> 812
	 Are open stockpiles of construction materials or construction wastes of more than 50m³ covered with tarpaulin during rainstorm? 	V .	
	In case of an excavation in rainy seasons: Is temporary exposed slope/soil surfaces covered by tarpaulin as far as practicable? 		cI~5 ⊕ <i>Plo5</i> 0864 Cwoz @ Plo50824 <u>Cwoz⊕Plo5</u> 0829
	 Are intercepting channels provided to prevent storm runoff from washing across exposed soil surfaces? 		
	 Are surface protection measures and arrangements implemented to prepare for arrival of a rainstorm? 		·····
S8.4	 Coral Sites Are enhanced (with the use of flocculants added) sand/silt removal facilities employed for treatment of runoff from the major excavation at the Summit? 		
	 Is a silt curtain system used to enclose the construction phase discharge point at Tai Shue Wan? 		
	 Are debris and refuse collected, handled and disposed of properly to avoid entering any nearby water bodies and public drainage system? 		
	 Are stockpiles of cement and other construction materials kept covered when not being used? 		
	 Are oils and fuels used and stored in designated areas which have pollution prevention facilities (Fuel tanks and storage areas provided with locks and sited on sealed areas, within bunds of a capacity equality to 110% of the storage capacity of the largest tank)? 		
	 Are temporary sanitary facilities, such as portable chemical toilets, employed on-site where necessary to hand sewage from the workforce? Is a licensed contractor employed for disposal of waste matter and maintenance of these facilities? 		
	 Is a reputable waste collector should be employed by the Contractor to remove general refuse from the site, separately from construction and chemical wastes, on a daily basis to minimize odour, pest and litter impacts. Burning of refuse on construction sites is prohibited by law? 		
	 Are aluminium cans recovered from the waste stream and collected separate labelled bins? 		
	Are office wastes reduced through the recycling of paper?		
	 Are training provided to workers on site cleanliness & waste management procedure? 		
	Cultural Heritage		
S10.6	If there is any work planned within one metre of the grave, is a one metre buffer zone provided around the grave and is the grave demarcated by temporary fence?		
S11.3	Hazard to Life Good Site Practices:		
011.0	 Is the area around the magazine free of vegetation? 		

P:\Hong Kong\INF\Projects2\231620 Ocean Park IEC\site audit\Chklist template.doc 7

•	Is the control of (small) fires planned and provided through
	the following?

- Weekly checking of fire fighting equipment and the on-site fire water tank level.
- Daily checking of all critical safety equipment on vehicle, including the fire extinguishers.
- Maintaining back-up means of fighting fire on the explosive vehicles.
- Providing safety training for drivers and other personnel present during explosive delivery with regard to operating fire hydrants and fighting of explosive fires.
- Is the magazine secured against unauthorised entry and theft of explosive through the following?
 - Maintaining a list of persons authorised to enter the magazine and ensuring the list is available to the magazine security guard.
 - Activating an alarm system that limits times at which explosive can be removed from the magazine and connecting the system to central security station.
 - Incorporating "Duress code" function in the alarm system.
 - Maintaining alarm system in good condition.
- Is the magazine security guard located separately from the magazine complex?
- Is the communication maintained in emergency with the following measures?
 - Providing non-hazardous electronic equipment for persons working within 60 m of detonators.
 - Ensuring availability of phone numbers for all key personnel.
- If there is a typhoon signal no. 3 or above, or black rainstorm signal, are all operations at magazine and transport ceased?
- Is the risk of detonators explosion on vehicle reduced during transit through the following?
 - Ensuring that magazine within vehicle is lined.
 - Limiting off-site transport to 5 to 6 a.m. each day.
 - Escorting vehicles with separate security vehicle when using the public road.
 - Ensuring that UN 1.4B packaging of detonators remain intact until handed over at blasting site.
- Is the fuel isolation switch available on vehicle to prevent fire spreading in case a fire breaks out?
- Is an experienced driver with accident-free record employed for explosive vehicle and security escort?
- Are the drivers checked for health before employing?
- Are the vehicles regularly checked to maintain in good condition to reduce chance of accident due to breaking down?
- Is the truck fuel fire escalating to cause explosion avoided through the following means?

 Ensuring that the Contractor is aware of the potentia hazards to site.

	· · · · · · · · · · · · · · · · · · ·	
- Maintaining appropriate fire fighting equipment.		
- Requiring the Contractor to plan and make emergency arrangements.		
 Is spare/redundant fire fighting equipment provided? 		
 Can communications be maintained between two vehicles (drivers and security) during the trip to prevent collision of two explosive vehicles in case of an accident? 		
 Are the processes of checking of condition of drivers to suspend any driver of concern carried out? 		
 Project specific measures: Is the speed of vehicle limited along the Ocean Park portion of Nam Long Shan Road within 100 m of the explosives magazine to 25 km/hr? 	V	
 Is other contractors' use of the Ocean Park Internal service road restricted during delivery of explosives, i.e. 6 to 7 a.m? 		
 Is the Ocean Park guard required to call to the magazine guard on an hourly basis when explosives are stored in magazines? 		
 Is the evacuation of part or all of Ocean Park Headland Area arranged in case of the explosive magazine being engulfed in fire? 		
 Is the risk to the public from accidental initation during charging and blasting limited by the following means? 		
 Closing the Ocean Park from commencement of charging holes until completion of blasting each day. 		
 Arranging for relevant authorities to post notices to mariners warning them of blasting operations and advising them to stay away from a strip 100m wide immediately to the east of Headland from commencement of charge holes until completion of blasting each day (i.e. 9 a.m). 		
 Not operating amusement rides in the event of accidental explosion until confirmed free of critical damage. 		
 If unexploded explosives are found in blasthole(s), is the opening of Ocean Park delayed or is part of the Ocean Park delayed when there are unspent explosives? 		
 Is the opportunity for arson/deliberate initiation of explosive reduced with the following means? 		
- Paying attention to the security alert status from the [
- Developing a security plan to address high alert level.		
 Is an emergency plan developed to address uncontrolled fire in magazine area? 		
 Is the transfer of explosives between 5 to 6 a.m agreed by Mines Division? 		
 Is the road surface along the explosive transportation route maintained? 		
 Are the contractor's driver and security escort tested in respect of safety plan? Is the route driven before the driver undertakes the first delivery of explosives? 		
 Is adequate space provided for the explosive vehicle to manoeuvre without reversing close to the magazine to limit

EXECUTIVE SUMMARY

This is the thirteen monthly Environmental Monitoring and Audit (EM&A) report prepared by Dragages Bouygues JV (DBJV), the Contractor Environmental Team (CET), for the Ocean Park Master Redevelopment Project Contract Cl05 – Site Formation, Funicular Tunnel and Miscellaneous Works. This report presents the results of EM&A works conducted in the reporting month of March 2008 (from 26 February 2008 to 25 March 2008).

In the reporting month, the following construction activities took place:

Waterfront

- Soft Ground Tunnel Excavation;
- Waterfront Terminus Excavation North;
- Waterfront Access Road (e.g. Trench Excavation, Temporary Road Diversion);
- Utilities Diversion (e.g. Storm Drainage, Watermain & Sewerage) at Entry Plaza Advance Work;
- Permanent Bus Terminus; and
- Works for Grand Aquarium Advance Works.

Summit

- Main Tunnel Excavation;
- Tunnel Permanent Lining;
- Drill & Blast for Summit Site Formation;
- Excavation at Summit;
- Summit Terminus and FS Tank Building;
- Crusher and Conveyor Belts Operation.

Tai Shue Wan

• Conveyor Belt and Barging Point Operation.

Government Entrusted Works

- Excavation, Trial Pit Excavation, Construction of Manhole, Pipe Laying (e.g. sewer & water main), Road Surface Reinstatement and Backfilling at Nam Long Shan Road Entrusted Work; and
- Excavation, Construction of Manhole, Pipe Laying, Trial Pit Excavation, Construction of Sheet Piling and Backfilling at Wong Chuk Hang Road.

The total disposal volume to the Government facilities, including the barging point, public fill and the sorting facilities in the reporting month of March 2008, was 10,094.16 tonnes, 0.00 tonnes and 140.44 tonnes while the volume to the landfills was 485.57 tonnes. Besides the total disposal volume to the alternative dumpsites - Swire Sita by barge was 6,231.20 tonnes and no internal transfer of excavated materials within the reporting month of March 2008.

Apart from the above, DBJV has been a source to provide the excavated material to the Contractor of Central Reclamation Phase III and the volume was <u>385,813.27</u> tonnes.

Monitoring of 1-hour & 24-hour Total Suspended Particulates (TSP) and noise were performed and the results were checked and reviewed. Site inspections were conducted on weekly basis. The implementation of the environmental mitigation measures, Event and Action Plans and environmental complaint handling procedures were also checked.

Environmental Monitoring Works

Environmental Monitoring and Audit Progress

A summary of monitoring and audit activities conducted in the reporting period is listed below:

1-hour TSP monitoring	14 sessions for all air quality monitoring stations (AM1, AM2 and AM3A)
24-hour TSP monitoring	5 sessions for all air quality monitoring stations (AM1, AM2 and AM3A)
Daytime noise monitoring	4 sessions for all noise monitoring stations
Evening and night time noise monitoring	4 sessions for all noise monitoring stations
Holiday time noise monitoring	0 session for all noise monitoring stations
Terrestrial ecology monitoring	1 session
Subtidal monitoring	0 session
Joint environmental site inspection	5 sessions (include the IEC audit)

Air Quality

The air quality monitoring results obtained in the reporting period of March 2008 were audited for the compliance of the Action and Limit levels proposed in the Project Baseline Air Quality and Noise Monitoring Report (rev. B), which were issued in March 2007 and the audit finding showed no exceedance was recorded.

Noise

The noise monitoring results obtained in the reporting period of March 2008 were audited for the compliance of the Action and Limit levels proposed in the Project Baseline Air Quality and Noise Monitoring Report (rev. B), which were issued in March 2007 and the audit finding showed that no exceedance was recorded.

Terrestrial Ecology

The terrestrial monitoring was conducted in the reporting period of March 2008 and the finding showed that the transplanted plants were in good condition.

Subtidal Monitoring

No impact subtidal ecology monitoring was conducted in the reporting period of March 2008 since there was no exceedance recorded at all monitoring stations and control site and the monitoring frequency has been revised to once in every quarter until the end of construction period. The next scheduled monitoring should be in May 2008.

Environmental Licensing and Permitting

Permits granted to the Project include the Environmental Permit for the Project, Construction Noise Permits, Effluent Discharge License and Chemical Waste Producer. Information of these permits is provided in Table 6.1.

Implementation Status of Environmental Mitigation Measures

Water hoses and water truck were deployed for the haul road watering and spraying at summit areas; water sprinklers were in operation in the necessary working areas. The Contractor was reminded to keep watering the haul road and working area surfaces once the surfaces are dry, especially during the dry seasons.

Anti-mosquito agent has been applied in the required Works Areas and cleaned up stagnant water regularly in order to reduce the possibility of mosquito breeding.

The updated temporary drainage system, including the drainage channels and wheel washing bay for both Summit and Waterfront have been installed and in use. The vehicle drivers were reminded to wash the vehicles before leaving the site.

Movable noise panels have stored on site and will use wherever necessary.

Chemical waste store was set and the disposal of chemical waste would be followed the procedures in WMP.

The disposal of C&D wastes by using both the Chits and trip tickets have been implemented in March 2008. Most of the C&D materials were disposed of to the alternative dumpsite. Disposal to the temporary public filling barging point would be the last resort. The C&D waste was disposed of to the sorting facilities or landfill.

General wastes were collected by a waste skip near the temporary site office in a regular basis. The frontline staff was reminded to keep good housekeeping in order to avoid waste accumulation.

Environmental Non-conformance

Six public complaints, no warning, summons or prosecution related to environmental issues was made against the Ocean Park Master Redevelopment Project Contract Cl05 in the reporting period of March 2008.

Future Key Issues

Key issues to be considered in the coming month include:

- Noise from operating equipment and machinery on-site.
- Construction waste management at temporary construction waste area.
- Avoid accumulation of stagnant / muddy water on-site.
- To implement dust suppression measures on dry surfaces.
- Provision of treatment to turbid water (control the SS level) from activities on-site before discharge.

1. INTRODUCTION

Purpose

1.1 The purpose of this report is to present the EM&A work carried out during March 2008 (from 26 February 2008 to 25 March 2008) with respect to Ocean Park Master Redevelopment Project Contract No. Cl05 – Site Formation, Funicular Tunnel and Miscellaneous Works.

Background

- 1.2 Ocean Park planned to upgrade and expand the existing area to meet the anticipated visitor demands and to position Ocean Park as a premium tourist attraction and a regional leader in the themed recreational and educational park experience.
- 1.3 The redevelopment works of Ocean Park will involve
 - Civil infrastructure works including road works (including modifying sections of Ocean Park Road, which is a local distributor, around the existing bus terminus as shown in Figure 1.1), drain works, tunnelling and geotechnical works, bulk excavation and slope works, retaining structures, site clearance, decommissioning and demolition works, funicular railway, modify to bus terminus, taxi stands and associated facilities.
 - Utilities works including power supply distribution, electrical substations, freshwater and saltwater reservoirs, water supply distribution, gas supply distribution, telecommunications network and distribution, landscape irrigation network, etc.
 - Primary life support system works for animal keeping.
 - Area development works including service roads, EVAs, external escalators, bridges and elevated walkways, external lighting.
 - Parkwide systems works including signage, background music system, toilets facilities, guard sheds, first aid facilities, communications systems, CCTV systems and waste facilities.
 - Landscape or theming works including exterior building facade treatment works, themed concrete pavement/ hardscape, soft landscaping, water and faux rockwork features, visual intrusion screens, area props and artwork, etc.
 - Works for the attractions venues including animal exhibits, marine animal, terrestrial animal, aviaries, bird exhibits, individual life support systems for animal exhibits; and others non-animal related attractions, e.g. shipwreck play area, bamboo maze, etc.
 - Installation of rides including thrill rides, round rides, water rides, kids rides, interactive rides, transportation rides, etc.
 - Works for the venues including event halls, outdoor live show area, cinemas and bandstands.
 - Works for the merchandise / retail facilities including souvenir stores, novelty stores, games arcade, photo shops, etc.
 - Works for the food and beverage facilities including restaurants, bakery, food carts and kiosks.
 - Back of house facilities including offices, break areas, warehouses, centralized facilities, operational facilities, etc.

Project Organisation

- 1.4 Under the requirement of EM&A Manual and Environmental Permit, the environmental management team should be set up and the structure of the team is shown in Figure 1.1.
- 1.5 Meanwhile the contacts of key environmental personnel for this project are shown in Appendix L.

Construction Works undertaken during the Reporting Month

- 1.6 The major construction activities undertaken in March 2008 included Soft Ground Tunnel Excavation; Waterfront Terminus Excavation – North; Waterfront Access Road (e.g. Trench Excavation, Temporary Road Diversion); Utilities Diversion (e.g. Storm Drainage, Watermain & Sewerage) at Entry Plaza Advance Work; Permanent Bus Terminus; and Works for Grand Aquarium Advance Works.
- 1.7 At Summit, Main Tunnel Excavation from Adit to Summit and Waterfront; Tunnel Permanent Lining; Drill & Blast for Summit Site Formation; Excavation at Summit; Site Formation Works for Summit Terminus & FS Tank Building; and Crusher and Conveyor Belts Operation.
- 1.8 At Tai Shue Wan, Conveyor belt and barging point operation.
- 1.9 The entrusted works including Excavation, Trial Pit Excavation, Construction of Manhole, Pipe Laying (e.g. sewer & water main), Road Surface Reinstatement and Backfilling at Nam Long Shan Road Entrusted Work; and Excavation, Construction of Manhole, Pipe Laying and Backfilling at Wong Chuk Hang Road
- 1.10 Layout plan of the Project is provided in Figures 1.2 and 1.3.
- 1.11 The amounts of different types of material generated by the activities of the Project in the reporting month are shown in Table 1.1.

Material Type	Delivery / Disposal Location	Estimated Amount (tonnes unless specified)
	SENT	479.15
C&D waste	WENT	6.42
CaD waste	TKOSF	128.14
	TMSF	12.30
	Swire Sita *	6,231.20
	QBBP	10,094.16
C&D material	Central Reclamation Phase III *	385,813.27
	ТКОГВ	0.00
	INTL **	0.00
Chemical waste	Collected by licensed collector	0.00
General waste Collected by licensed collector		58.00m ³

 Table 1.1
 Amounts of Material Generated in the reporting of March 2008

Notes: * denotes alternative dumpsite as disposal location.

** denotes internal transfer

Compliance with EP conditions

1.12 A summary of the reporting requirement of compliance with EP conditions of Contract Cl05 of the Project as of March 2008 was listed in Table 1.2.

Table 1.2	Environmental Permit Submission
-----------	--

Environmental Permit Submission	EP-249/2006/A Condition No.	Status
Management Organization	2.3	Submitted on 15 December 2006.
Construction Programme	2.4	Submitted on 14 February 2007.
Drainage Proposal	2.13	Deposited in the EIAO Register Office for public inspection on 30 May 2007.
Silt Curtain Proposal	2.14	Deposited in the EIAO Register Office for public inspection on 01 March 2007.
Transplantation Proposal	2.20 (a)	Deposited in the EIAO Register Office for public inspection on 25 September 2007.
As-built drawing of transplantation	2.20 (b)	Deposited in the EIAO Register Office for public inspection on 31 October 2007.
Waste Management Plan	2.21	Deposited in the EIAO Register Office for public inspection on 25 September 2007.
Baseline Air Quality and Noise Monitoring Report	3.2	Submitted on 28 February 2007.
Baseline Coral Survey Report	3.2	Submitted on 16 June 2007.
Monthly EM&A Report for Feb '07	4.2	Submitted on 13 March 2008.

Summary of EM&A Requirements

- 1.13 The EM&A programme requires environmental monitoring for air quality, noise, terrestrial ecology, subtidal and waste management. The EM&A requirements for each parameter are described in subsequent sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event-Action Plans;
 - Environmental mitigation measures and their implementation schedule;
 - Environmental requirements in contract documents.
- 1.14 The environmental licensing and permits are described in Section 6.
- 1.15 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 6 of the Report.

2. AIR QUALITY MONITORING

Monitoring Requirements

2.1 24-hour & 1-hour TSP monitoring was conducted to monitor the air quality. Appendix A shows the established Action/Limit Levels for the air quality monitoring works.

Monitoring Equipment

2.2 High volume samplers (HVS - Model GMWS-2310 Accu-Vol) complete with the appropriate sampling inlets were installed for 24-hour and 1-hour TSP sampling. The HVS composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50 Appendix B). Table 2.1 summarises the equipment that was used in the dust-monitoring programme.

Equipment	Model	
HVS	GMWS 2310 c/w of TSP sampling inlet	
Calibration Kit	Tisch TE-5025 A	
Dust Trak	TSI-8250	

 Table 2.1
 TSP Monitoring Equipment

Monitoring Parameters, Frequency and Duration

2.3 The monitoring parameters and frequency are summarised in Table 2.2. The monitoring schedule for the reporting month is shown in Appendix B.

Location	Parameter	Duration	Frequency
AM1	1-hour TSP	1 hour	3 times every 6 days*
	24-hour TSP	24 hours	Once every six days
AM2	1-hour TSP	1 hour	3 times every 6 days*
	24-hour TSP	24 hours	Once every six days
AM3A	1-hour TSP	1 hour	3 times every 6 days*
	24-hour TSP	24 hours	Once every six days

 Table 2.2
 Air Quality Monitoring Parameters and Frequency

Notes: * denotes three 1-hr TSP monitoring in three days.

Monitoring Locations

2.4 In accordance with the EM&A Manual, three air quality monitoring stations, as shown in Figure 1.4, were selected for 24-hour and 1-hour TSP sampling. Table 2.3 describes the location of the air quality monitoring stations.

Table 2.3Location of Air Quality Monitoring Stations

Air Quality Monitoring Stations	Identity / Description
AM1	Whisker's Theatre, Ocean Park
AM2	San Wai Village, Wong Chuk Hang
АМЗА	Open areas of PMR & OPC temporary site offices

Monitoring Methodology

24-hour / 1-hour TSP Monitoring

Installation

- 2.5 The HVSs were installed in the vicinity of the air sensitive receivers. The following criteria were considered in the installation of the HVS.
 - A horizontal platform with appropriate support to secure the samplers against gusty wind was provided.
 - No two HVSs were placed less than 2 meters apart.
 - The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
 - A minimum of 2 meters separation from walls, parapets and penthouses was required for rooftop samplers.
 - No furnace or incinerator flues were nearby.
 - Airflow around the sampler was unrestricted.
 - Permission was obtained to set up the samplers and to obtain access to the monitoring stations.

Preparation of Filter Papers by ETS-Testconsult Limited.

- Glass fibre filters, G810 were labeled and sufficient filters that were clean and without pinholes were selected.
- All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.

Field Monitoring

- The power supply was checked to ensure the HVS works properly.
- The filter holder and the area surrounding the filter were cleaned.
- The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
- The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
- The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges.
- Then the shelter lid was closed and was secured with the aluminum strip.
- The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
- A new flowrate record sheet was set into the flow recorder.
- The flow rate of the HVS was checked and adjusted at around 1.1 m³/min. The range specified in the EM&A Manual was between 0.6-1.7 m³/min.
- The programmable timer was set for a sampling period of 24 hrs <u>+</u> 1 hr or 1 hr + 0.25 hr, and the starting time, weather condition and the filter number were recorded.
- The initial elapsed time was recorded.
- At the end of sampling, the sampled filter was removed carefully and folded in half-length so that only surfaces with collected particulate matter were in contact.
- It was then placed in a clean plastic envelope and sealed.
- All monitoring information was recorded on a standard data sheet.
- Filters were sent to ETS-Testconsult Ltd. for analysis.

Maintenance & Calibration

- The HVSs and their accessories are maintained in good working condition, such as replacing motor • brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVSs are calibrated at bi-monthly intervals using GMW-25 Calibration Kit throughout all stages of • the air quality monitoring. Calibration details are provided in Appendix G.

Results and Observations

- 2.6 The air quality monitoring results of 1-hr TSP and 24-hr TSP of the reporting month are summarized in Tables 2.4 and 2.5. All monitoring data and graphical presentation of the monitoring results are provided in Appendix C.
- 2.7 All measured 1-hour & 24-hour TSP concentrations were below the Action and Limit (AL) Levels in the reporting month.

3. NOISE MONITORING

Monitoring Requirements

3.1 Noise monitoring was conducted at four monitoring stations as specified in the EM&A Manual. Appendix A shows the established Action and Limit Levels for noise.

Monitoring Equipment

3.2 Integrating Sound Level Meters were employed for noise monitoring. They were Type 1 sound level meters capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (Leq) and percentile sound pressure level (Lx). They comply with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). Portable electronic wind speed indicator capable of measuring the wind speed in m/s was employed to check the wind speed. Table 3.1 details the noise monitoring equipment used.

Calibrator	Rion NC-73
Portable Wind Speed Indicator	TSI Model 8340-M Air Velocity Meter

Monitoring Parameters, Frequency and Duration

3.3 Noise monitoring was conducted per monitoring day during the daytime. Monitoring to be conducted in the evening and/or night-time only when construction works is in progress. The monitoring period, duration, parameters and frequency of noise measurement are presented in Table 3.2. The monitoring schedule for the reporting month is provided in Appendix B.

Table 3.2	Noise Monitoring Parameters, Period and Frequency
-----------	---

Time Period	Duration (min)	Parameters	Frequency
Daytime (0700 to 1900)	30		
*Evening (1900 to 2300)	5	Leg	Once a week
*Night-time (2300 to 0700 of next day)	, L _{eq}		

Notes: * denotes Noise monitoring to be conducted only when construction work is in progress.

Monitoring Locations

3.4 In accordance with the EM&A Manual, noise monitoring was conducted at four designated monitoring stations as shown in Figure 1.4. Table 3.3 describes the locations of these monitoring stations.

Table 3.3 Noise Monitoring Locations

Noise Monitoring Stations	Identity / Description
CN1	Open Area adjacent to Police Training School
CN2	Project Development Office, Ocean Park
CN3	Rinniped House, Ocean Park
CN4	Manly Villa

Monitoring Methodology

Field Monitoring

- The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. For reference, a correction of +3dB(A) was made to the free field measurements.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - frequency weighting : A
 - time weighting : Fast
 - time measurement : 30 minutes / 5 minutes
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with a portable wind meter.
- During the monitoring period, the L_{eq} was recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible. Observations were recorded when intrusive noise was unavoidable.
- Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

Maintenance and Calibration

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The meters and calibrators are sent to Hong Kong Calibration Ltd to check and calibrate at yearly intervals. Calibration details are provided in Appendix G.

Results and Observations

- 3.5 Noise monitoring was conducted at the 4 designated monitoring stations during daytime in the reporting month. The monitoring was carried out as scheduled in the reporting month of March 2008 and the monitoring results are summarized in Table 3.4. All monitoring data and graphical presentation of the monitoring results are provided in Appendix D.
- 3.6 No exceedance of limit level during daytime recorded in the reporting month.

Date of Monitoring	N	loise Level, Lec	ı (30-min), dB(A	.)
	CN1	CN2	CN3	CN4
03-Mar-08	68.1	60.4	59.2	70.1
10-Mar-08	70.2	61.1	58.4	65.1
17-Mar-08	66.5	67.0	60.0	64.2
25-Mar-08	67.7	59.5	58.8	68.0

Exceedance of Action Level

4. TERRESTRIAL ECOLOGY

Monitoring Requirements

4.1. Monitoring of the health and condition of the transplanted plant species of conservation interest should monitored at least once a month during the first 12 months after transplantation.

Monitoring Parameters, Frequency and Duration

4.2. The health condition of the transplanted plant has been investigated within the reporting month of March 2008.

Monitoring Locations

4.3. The proposed monitoring location is shown in Figure 1.3.

Monitoring Methodology

- 4.4. The monitoring methodology would be as follows:
 - Check and control pests;
 - Check and control exotic plants;
 - Adding soil to compensate soil erosion by rain and run off; and
 - Provide fertiliser.

Results and Observations

- 4.5. The monitoring results showed that all transplanted plants were in good condition. All the transplanted Sword-leaved Orchids were healthy. Most of the transplanted Balloon Flowers at the receptor site were experience seasonal shrunken and re-generated in the current growing season.
- 4.6. Due to the natural seasonality in the dry season, the above ground part of the Chinese Lily were became withered while the underground roots are alive. Conclusion was made with all of the Chinese Lily were geminated in the current growing season and were identified during the monitoring in March 2008.

5. SUBTIDAL MONITORING

Monitoring Requirement

- 5.1 Even though the conclusion in the EIA stated that adverse impact on coral communities would not be expected during the construction phase of the Project, coral monitoring shall be conducted as a precautionary measure.
- 5.2 Appendix A shows the established Action/Limit Levels for the subtidal monitoring works.

Monitoring Parameters, Frequency, Schedule

- 5.3 Subtidal monitoring is required to be conducted as follows:
 - once per month in the first two months in Site 1, Site 2, Site 3, Site 4 and Control Site C.
 - twice a month at first three months in Site 5 and Control Site C.
 - once per month for the next three months in Site 5 and Control Site C.
 - If there is no exceedance, the monitoring frequency would be adjusted to once every three months (i.e. quarterly) until the end of the Contract No Cl05 of the Project.

Monitoring Locations

5.4 In accordance with the EM&A Manual, subtidal monitoring would be conducted at Tai Shue Wan and Chung Hom Kok. The monitoring locations are shown in Figure 5.1.

Monitoring Procedures

- 5.5 Monitor the tagged corals (ten nos. at each station) for sedimentation, bleaching and mortality.
- 5.6 In the event that there is no exceedance record, the monitoring frequency shall be revised to once in every quarter until the end of the construction phase of Cl05.
- 5.7 In the event that there is an exceedance of Action Level record, more frequent monitoring to be carried out until the exceedance stops.
- 5.8 In the event that there is an exceedance of Limit Level record, the Contractor shall suspend all works until an effective solution is identified.

Results and Observations

5.9 No impact subtidal ecology monitoring was conducted in the reporting period of March 2008 since there was no exceedance recorded at all monitoring stations and control site and the monitoring frequency has been revised to once in every quarter until the end of construction period. The next scheduled monitoring would be in May 2008.

6. ENVIRONMENTAL AUDIT

Site Environmental Audit

6.1 Site audit would be carried out once per week to monitor environmental issues on the construction sites to ensure that all mitigation measures were implemented timely and properly.

Review of Environmental Monitoring Procedures

6.2 The monitoring works conducted by the monitoring team were inspected regularly. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations within and outside of the construction site.
- The monitoring team recorded the temperature, air pressure and weather conditions on the monitoring day.

Noise Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- Major noise sources were identified and recorded. Other intrusive noise attributing to the result was trimmed off by pausing the monitoring temporarily.

Terrestrial Monitoring

• The seventh monitoring has been conducted in the reporting month of March 2008 to check the health condition of the transplanted plants.

Subtidal Monitoring

• No impact subtidal ecology monitoring was conducted in the reporting period of March 2008 since there was no exceedance recorded at all monitoring stations and control site and the monitoring frequency has been revised to once in every quarter until the end of construction period. The next scheduled monitoring would be in May 2008.

Status of Environmental Licensing and Permitting

6.3 All permits/licences obtained as of March 2008 are summarised in Table 6.1.

Table 6.1 Summary of Environmental Licensing and Permit Status

Permit No.	Valid Period		Section/Description	Status	
	From	То	Section/Description	Status	
Environmental Permi	it				
EP-249/2006/A	23-Oct-06	N/A	Add a new condition before Condition 2.18 in Part C stated that "To compensate for the loss of roosting site for freshwater birds due to the filling of Pond 37 at Lowland area; complete the enhancement works for Pond 35 and to avoid disturbing the roosting site for freshwater birds, no construction works and discharge from the construction site(s) shall be allowed with the existing freshwater ponds at Tai Shue Wan area". Renumber Conditions 2.19 to 2.25 in Part C of the EP.	Valid	
Construction Noise F	Permits				
GW-RS0768-07	30 Nov 07	29 May 08	Breaker, min-robot mounted; Excavator, mini-robot mounted; Light goods vehicle, GVW \leq 5.5 tonnes; Air compressor, with noise emission label showing SWL \leq 100dB(A); Breaker, hand-held (electric), mass \leq 10kg; Concrete lorry mixer; Compactor, vibratory; Mini-compacting roller; Welding generator and Lorry with crane.	Surrendered	
GW-RS0786-07	11 Dec 07	10 Jun 08	Concrete lorry mixer; Poker, vibrating, hand-held (electric); Excavator, tracked; Generator, silenced, 75dB(A) at 7m; Crane, mobile (diesel); Excavator, tracked; Roller, vibratory; Breaker, hand-held, mass \leq 10kg; Cutter, circular, steel (electric); Lorry with crane.	Valid	
GW-RS0787-07	11 Dec 07	10 Jun 08	Ventilation fan; Excavator, tracked; Shotcrete machine; Concrete lorry mixer; Hydraulic drill; Cherry picker; Welding set; Air compressor, with noise emission label showing SWL \leq 102dB(A); Loader, wheeled.	Valid	
GW-RS0037-08	04 Feb 08	01 Mar 08	Crushing Plant; Dump trucks; Conveyor belt and Excavator, tracked.	Surrendered	
GW-RS0061-08	13 Feb 08	20 Aug 08	Generator, silenced, 75dB(A) at 7m; Excavator, tracked; Dump truck; Emulsion pump truck; Light tower; and Crawler crane.	Valid	
GW-RS0063-08	15 Feb 08	14 Jul 08	Breaker, min-robot mounted; Excavator, mini-robot mounted; Light goods vehicle, $GVW \le 5.5$ tonnes; Air compressor, with noise emission label showing SWL \le 100dB(A); Breaker, hand-held (electric), mass \le 10kg; Concrete lorry mixer; Compactor, vibratory; Mini-compacting roller; Welding generator and Lorry with crane.	Valid	
GW-RS0092-08	02 Mar 08	01 Sep 08	Crushing Plant; Dump trucks; Conveyor belt and Excavator, tracked.	Surrendered	
GW-RS0151-08	18 Mar 08	17 Apr 08	Crushing Plant; Dump trucks; Conveyor belt and Excavator, tracked.	Valid

Implementation Status of Environmental Mitigation Measures

6.4 The weekly joint site inspections have conducted on 29 February 2008; 07, 14 and 20 March 2008. The IEC has undertaken the monthly audit on 29 March 2008 and the observations and recommendations that were made have still summarized in the following even though the audit was out of the reporting period of March 2008.

Land Based Water Quality Mitigation Measures

- 6.5 Clean the surface channels more frequently, especially at the elbow area of Nam Long Shan Road. The Contractor was also reminded that no untreated water was allowed to discharge offsite in all the times.
- 6.6 The sludge from the wastewater treatment plant should be properly collected and disposed of in order to avoid leaking and ran down to the natural stream.

Air Quality Mitigation Measures

6.7 The dust control at the crusher loading area and the stockpile transfer point was enhanced with the provision of water sprinklers and extension of the dust screen was in place and in use respectively.

- 6.8 Provision of sufficient water sprinklers to suppress dust especially the rock breaking and excavation activities at the Summit Terminus.
- 6.9 Stockpiles of dusty materials should be covered with tarpaulin or other means in order to reduce the dust nuisance to the vicinity.

Noise

6.10 No violation was observed during site inspections in the reporting month of March 2008.

Ecology

6.11 No violation was observed during site inspections in the reporting month of March 2008.

Waste / Chemical Management

- 6.12 Drip tray should be provided for the oil drums and chemical, which stored on site.
- 6.13 Regular cleaning of construction debris along the conveyor belts in order to keep tidiness of the site.

Landscape and Visual

6.14 No violation was observed during site inspections in the reporting month of March 2008.

Environmental Mitigation Implementation Schedule (EMIS)

6.15 According to the Environmental Permit, the mitigation measures detailed in the permits are required to be implemented. An updated summary of the EMIS is presented in Appendix H.

Implementation Status of Event/Action Plans

- 6.16 The Event and Action Plans for air quality, noise and subtidal monitoring are presented in Appendix I.
- 6.17 No exceedance of air quality (i.e. 1 hour & 24-hour TSP) was recorded during the reporting month of March 2008.
- 6.18 No exceedance of noise limit level during daytime and evening was recorded in the reporting month of March 2008.

Implementation Status of Environmental Complaint Handling Procedures

Summary of the Complaints and Prosecutions

- 6.19 Appendix J presents the environmental complaint flow diagram of the Project.
- 6.20 Six complaints, no summons or prosecution related to environmental issues from EPD was received or made against the Project in March 2008.

7. FUTURE KEY ISSUES

Key Issues for the Coming Month

- 7.1 Key issues to be considered in the coming month include:
 - Noise from operating equipment and machinery on-site.
 - Maintenance of silt curtains.
 - Construction waste management at the demolition work areas.
 - Avoid accumulation of stagnant / muddy water on-site.
 - To implement dust suppression measures on dry surfaces.
 - Provision of treatment to turbid water from activities on-site before discharge.

Monitoring Schedules for the Next Month

7.2 The environmental monitoring schedules for the next month are shown in Appendix B.

Construction Program for the Next 3 Months

7.3 The construction programme for the next 3 months is shown in Appendix K.

8. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 8.1 Environmental impact monitoring was performed in March 2008. All monitoring results in the reporting month were checked and reviewed.
- 8.2 No exceedances of Action and Limit Level for daytime noise, evening noise, 24-hour TSP and 1-hour TSP were recorded in the reporting month of March 2008.
- 8.3 No impact subtidal ecology monitoring was conducted in the reporting period of March 2008 since there was no exceedance recorded at all monitoring stations and control site and the monitoring frequency has been revised to once in every quarter until the end of construction period. The next scheduled monitoring would be in May 2008.
- 8.4 The seventh terrestrial ecology monitoring conducted in the reporting month of March 2008 and the condition of transplanted plants was good according to the monitoring results.
- 8.5 Six complaints from public and no summons or prosecution related to environmental issues from EPD were made against the Project in the reporting period.

Recommendations

8.6 According to the environmental audit performed in the reporting month, the following recommendations are made:

Air Quality Impact

- To prohibit any open burning on site.
- To regularly maintain the machinery and vehicles on site.
- To follow up any exceedance caused by the construction works.
- To implement dust suppression measures on dry surfaces.

Noise Impact

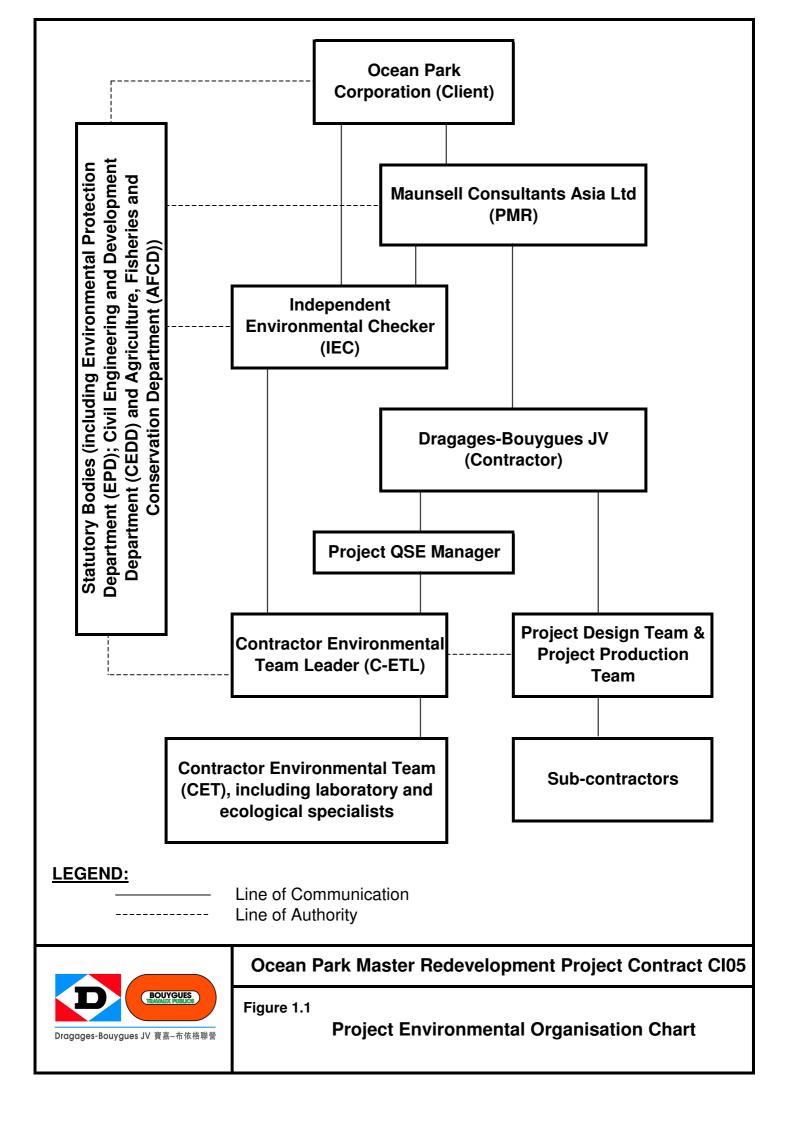

- To inspect the noise sources from inside and outside of the site.
- To follow up any exceedance caused by the construction works.
- To space out noisy equipment and position as far away as possible from sensitive receivers.
- To have regular maintenance of vessels and equipment used.

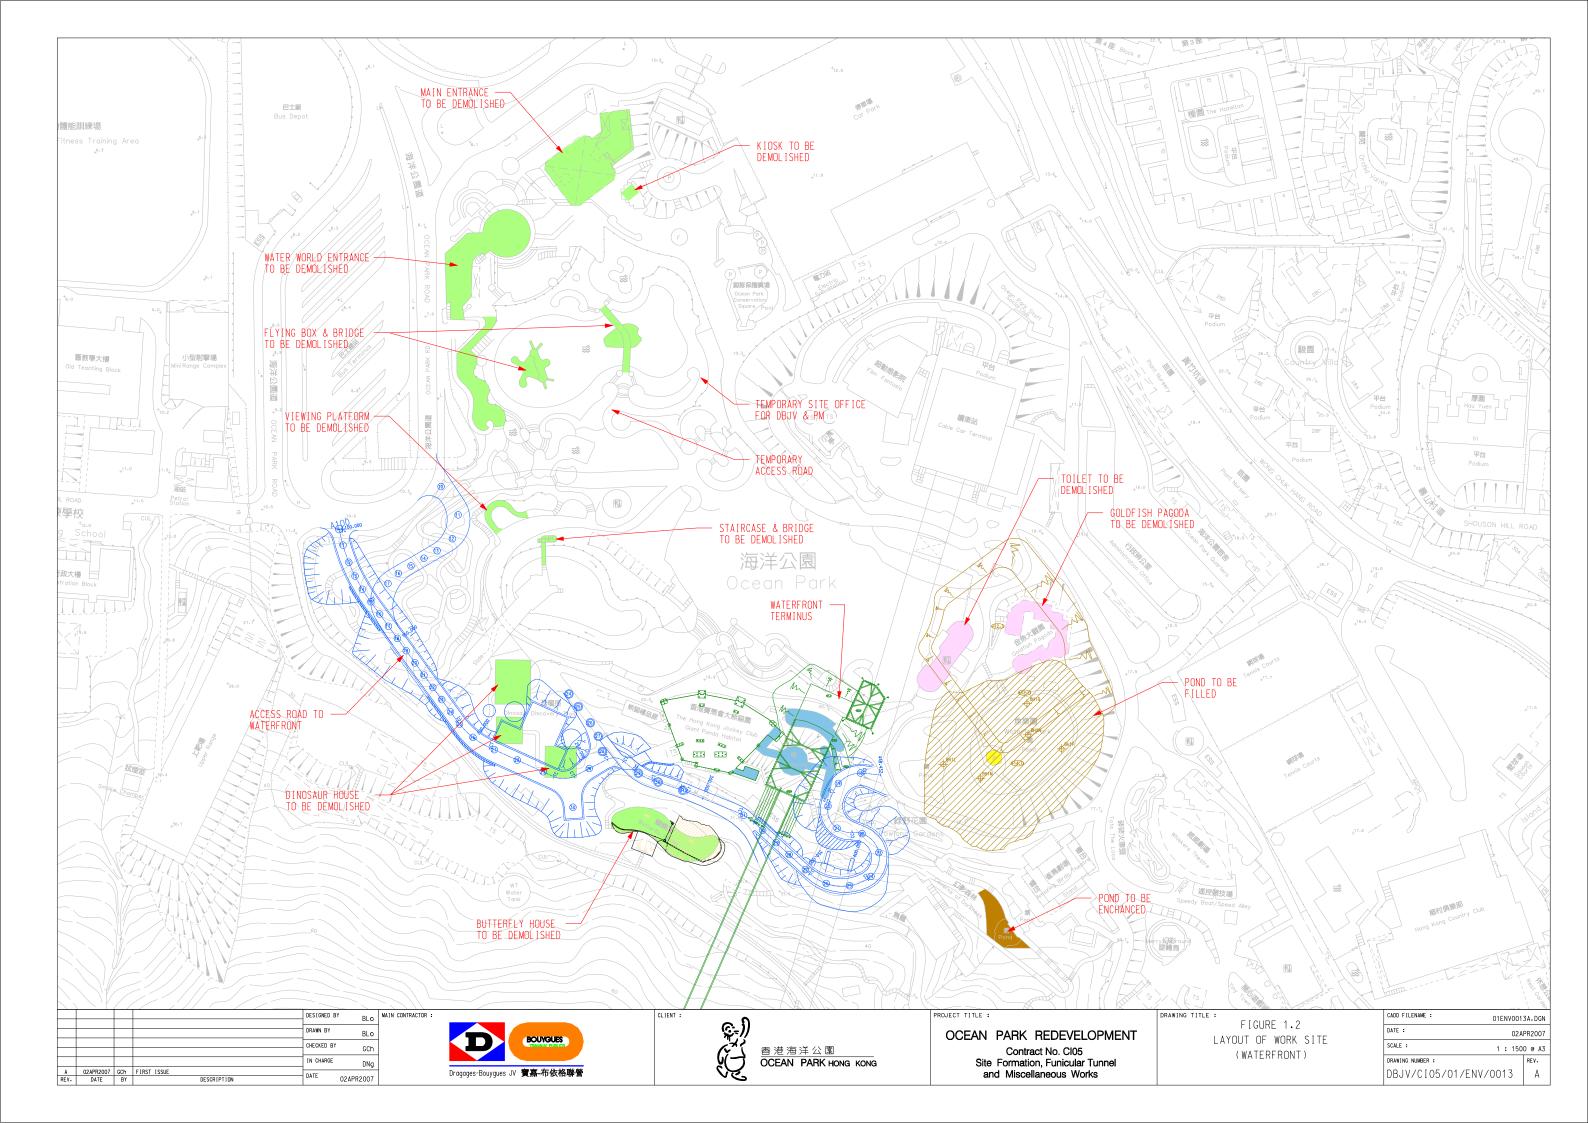

Waste/Chemical Management

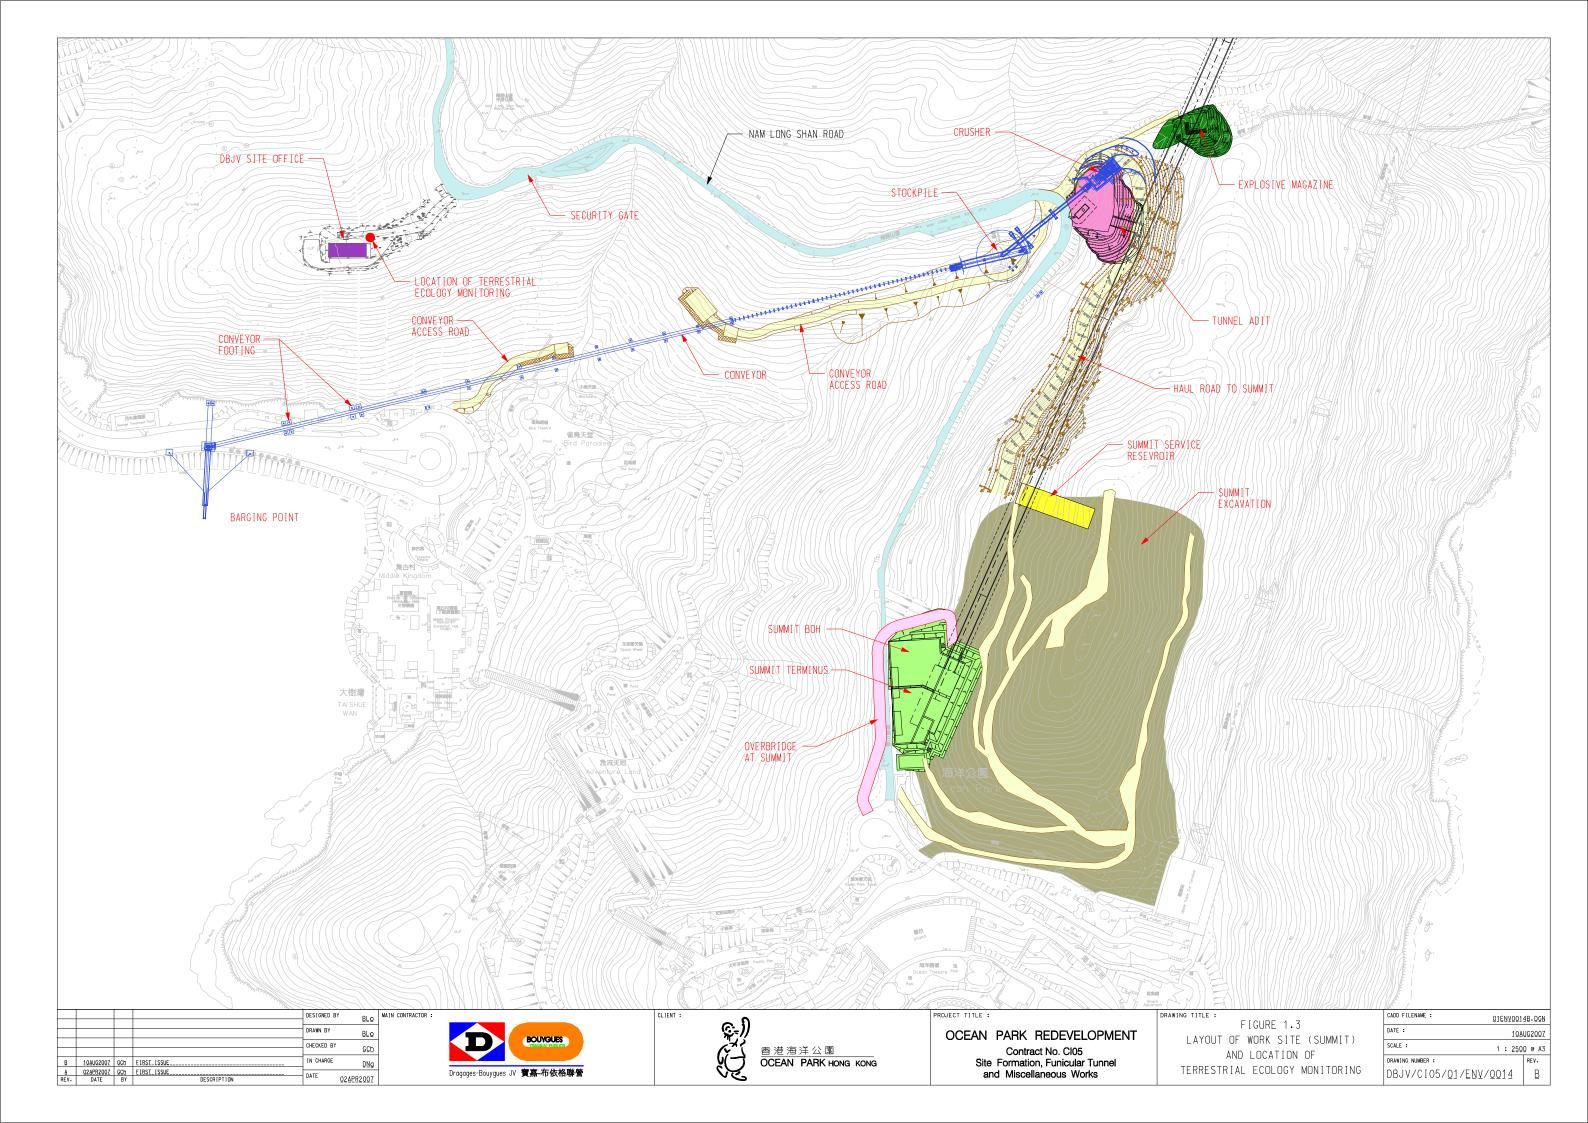

- To check for any accumulation of waste materials or rubbish on site.
- To avoid any discharge of chemical waste or oil directly from the site.
- To regularly and properly collect, store and dispose of all waste types, including floating refuses at the sea.

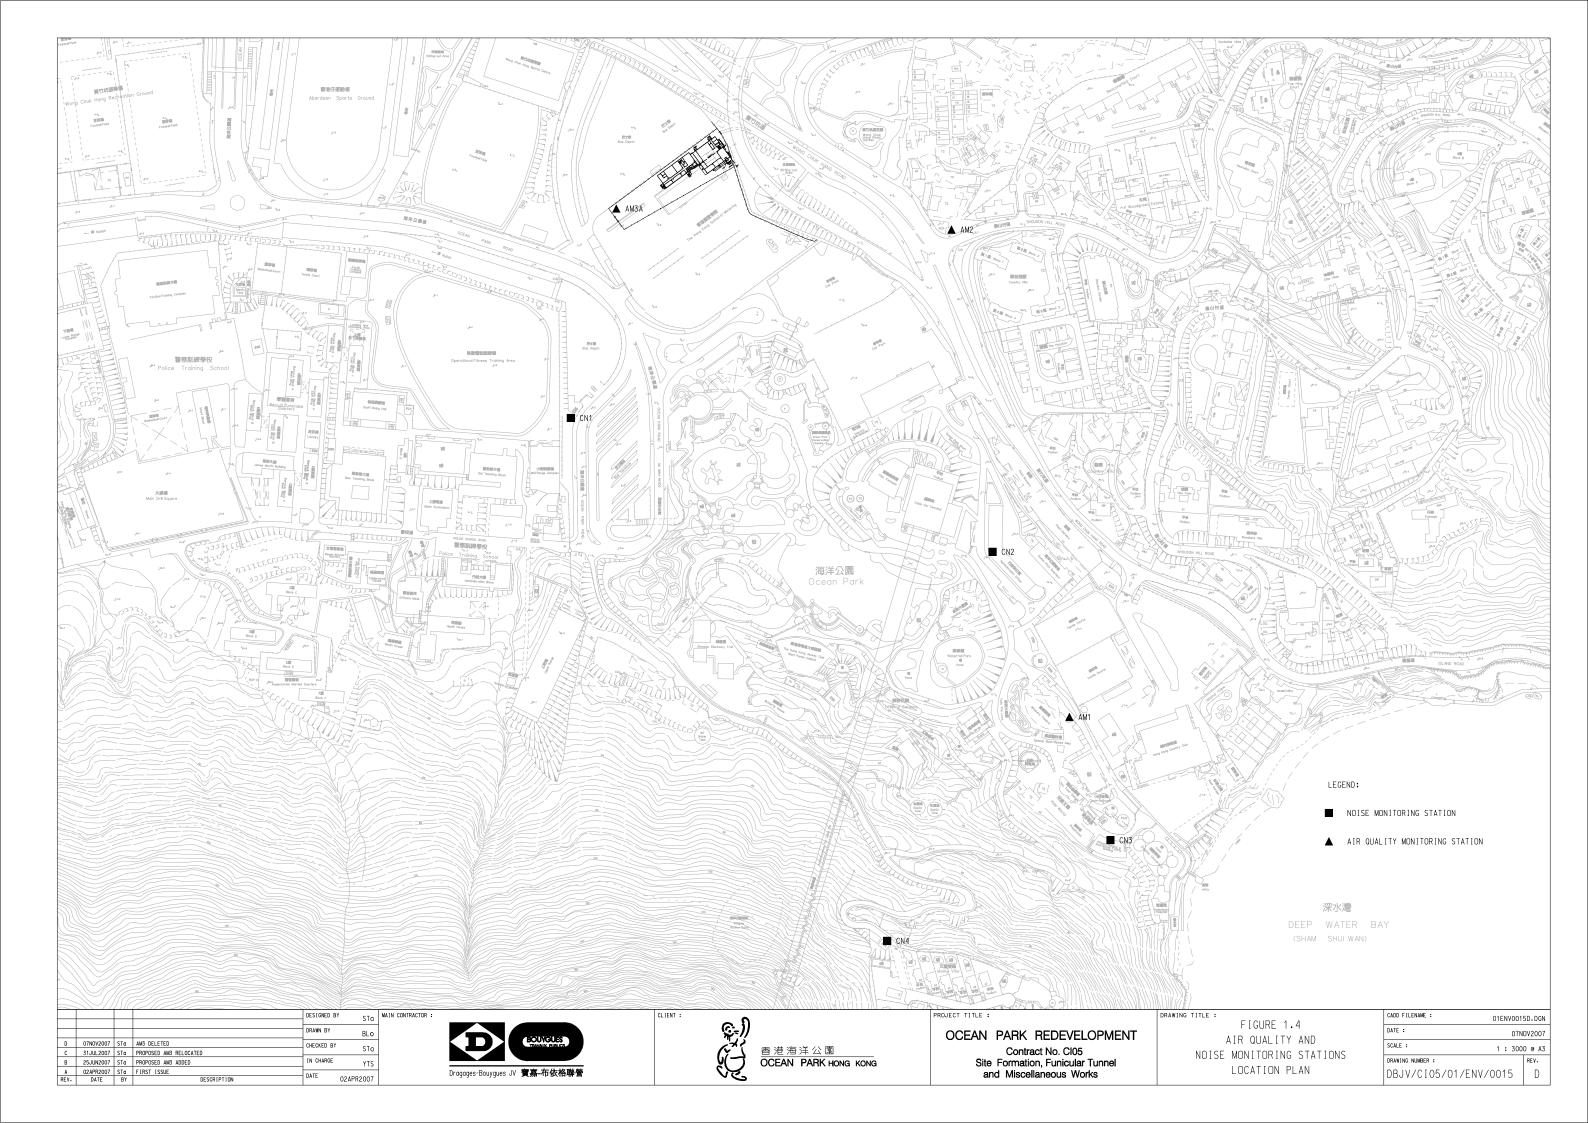

Water Quality Impact

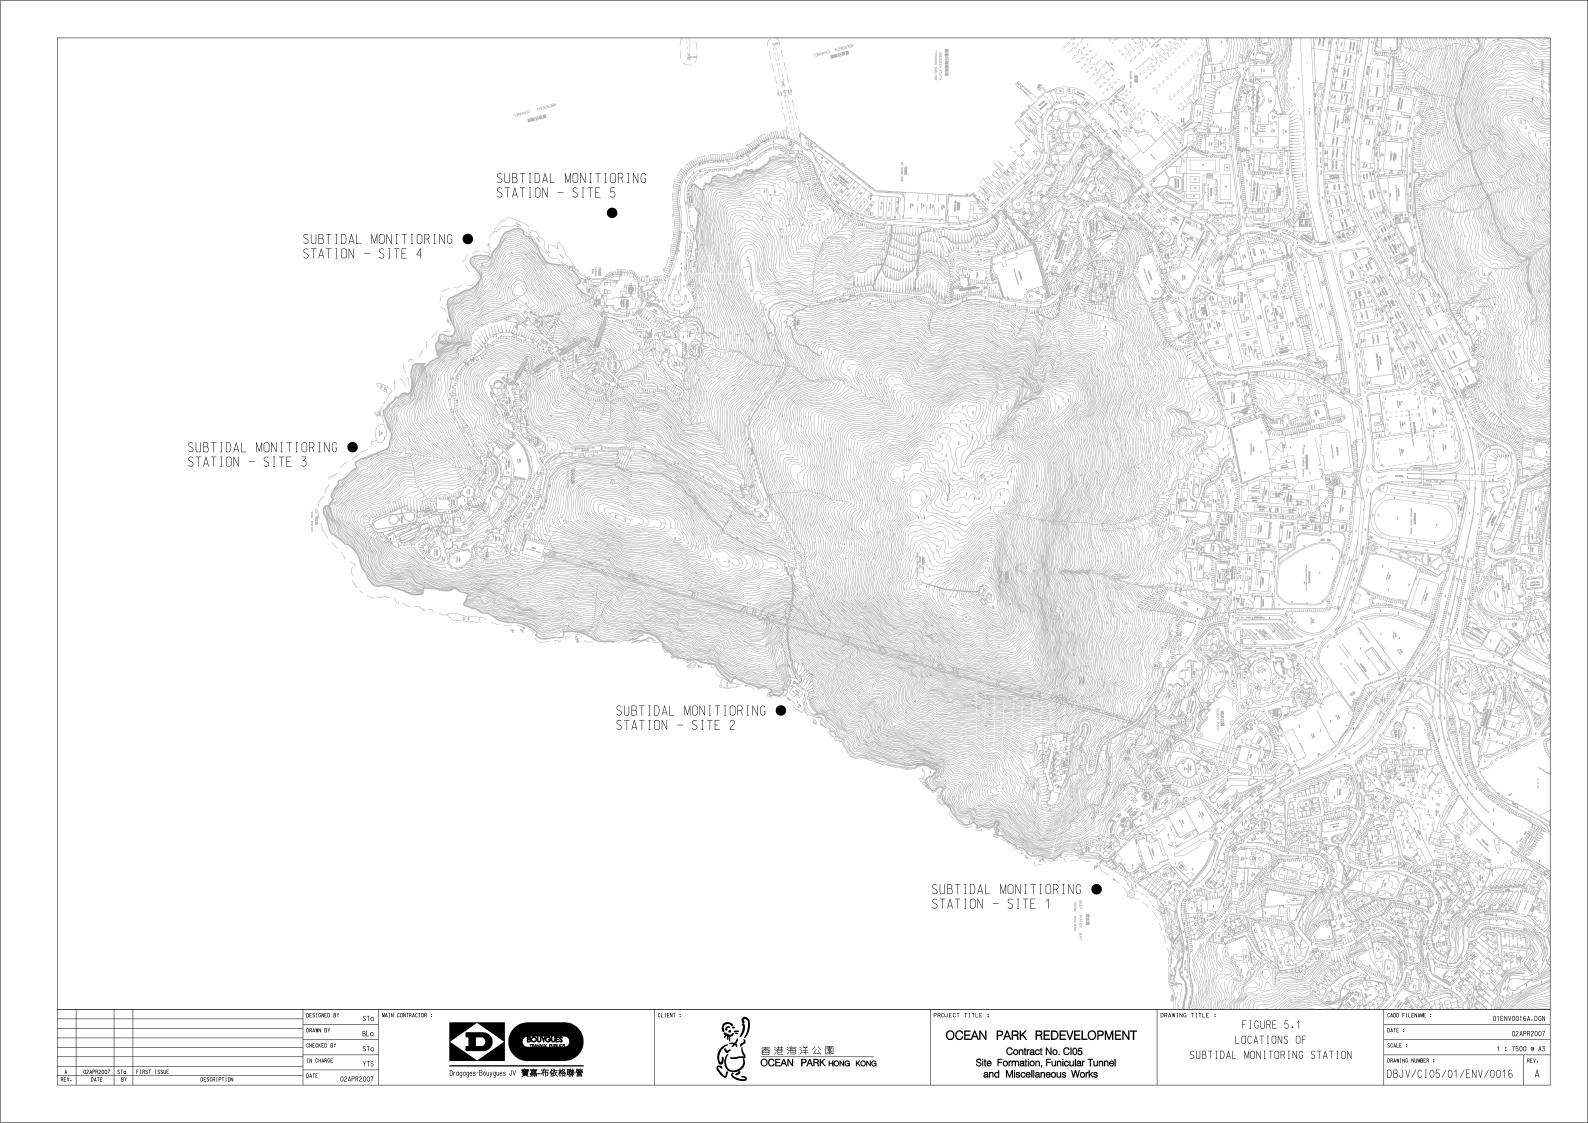

- To minimize water discharge and surface runoff into nearby water body.
- To treat site surface runoffs and wastewater generated from various construction activities with wastewater treatment system (comprised of chemical coagulation, sedimentation and pH control).
- To review and implement temporary site drainage management plan.
- Silt removal facilities, channels, manholes and wastewater treatment system should be frequently cleaned the deposited silt and grit to maintain in proper condition.
- To review the adequacy of the desilting facilities' capacity.

APPENDIX A - ACTION AND LIMIT LEVELS

Table A.1 Action and Limit Levels for 1-hour average TSP and 24-hour average TSP Monitoring

Monitoring	24-hr T	SP (μg/m³)	1-hr TSP (μg/m³)				
Location	Action Level	Limit Level	Action Level	Limit Level			
AM1	183	260	440	500			
AM2	181	260	500	500			
AM3/AM3A	194	260	500	500			

Table A.2 Action and Limit Levels for Daytime, Evening & Night-time Noise Monitoring

Time Period	Action	Limit
0700-1900 hrs on normal weekdays		75 dB(A) *
1900-2300 hrs on normal weekdays; and 0700-1900 hrs on holidays	When one documented complaint is received from any one of the sensitive receivers	60/65/70 dB(A) **
2300-0700 hrs of next day		45/50/55 dB(A) **

* reduce to 70dB(A) for school and 65dB(A) during school examination periods, if applicable

** to be selected based on the Area Sensitivity Rating of A/B/C, and the conditions of the CNP(s) must be followed

Parameter	Action Level Definition	Limit Level Definition
Sedimentation	If during Impact Monitoring a 15% increase in the percentage of sediment cover on hard corals occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Action Level is exceeded.	If during the Impact Monitoring a 25% increase in the percentage of sediment cover occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Limit Level is exceeded.
Bleaching	If during Impact Monitoring a 15% increase in the percentage of bleaching (bleached white) on hard corals occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Action Level is exceeded.	If during the Impact Monitoring a 25% increase in the percentage of bleaching (bleached white) occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Limit Level is exceeded.
Mortality	If during Impact Monitoring a 15% increase in the percentage of partial mortality on hard corals occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Action Level is exceeded.	If during the Impact Monitoring a 25% increase in the percentage of partial mortality occurs at more than 20% of the tagged coral at any one Impact Monitoring Site that is not recorded at the Control Site, then the Limit Level is exceeded.

APPENDIX B - ENVIRONMENTAL MONITORING SCHEDULES

Sun	Mon	Tue	Wed	Thu	Fri	Sat
		25 1-hr TSP 24-hr TSP NM (D)	26 1-hr TSP NM (E)	27	28 1-hr TSP	29
30	31 1-hr TSP 24-hr TSP NM (D)	1 1-hr TSP	2 1-hr TSP NM (E)	3	4	5 1-hr TSP 24-hr TSP
6	7 1-hr TSP NM (D)	8	9 1-hr TSP NM (E)	10	11 1-hr TSP 24-hr TSP	12 TM
13	14 1-hr TSP NM (D)	15	16 1-hr TSP NM (E)	17 1-hr TSP 24-hr TSP	18 1-hr TSP	19
20	21 1-hr TSP NM (D)	22	23 1-hr TSP 24-hr TSP NM (E)	24	25 1-hr TSP	26
27	28 1-hr TSP NM (D)	29 1-hr TSP 24-hr TSP	30 1-hr TSP NM (E)			

From 26 March 2008 to 25 April 2008

Notes: NM (D) denotes Daytime Noise Monitoring.

NM (E) denotes Evening Noise Monitoring if construction work is in progress.

SM denotes Subtidal Monitoring.

TM denotes Terrestrial Ecology Monitoring.

Any update / change in the schedule due to weather or other safety factors will be reported in the monthly EM&A report.

- 3 MONITORING RESULTS
- 4 PHOTOS

LIST OF TABLES

- Table 1 Plant monitoring programme
- Table 2 Summary of field monitoring results of the transplanted plants at the receptor site

1. SUMMARY

- 1.1 This is the seventh routine monitoring report of the transplanted plants for Ocean Park Master Redevelopment Project in March 2008.
- 1.2 Major activities undertaken for the plant receptor during current monitoring period including watering, weeding, apply fertilizer and observation of plant health.
- 1.3 Data collected during filed monitoring was given in Table 2. The transplanted plants were generally health. Few new plant seedlings were appeared due to normal plant re-generation indicating the start of growing season.

2. MONITORING PROGRAMME

2.1 As specified in the project contract, routine monitoring of the trans-located uncommon plants is required and will be monitored for the first 12 months after plant trans-location operation. Scopes of monitoring include: plant health, survival, receptor condition, photo record and reporting of findings of monitoring. The monitoring schedule in March 2008 was presented in Table 1.

Table 1 Plant monitoring programme

No.	Monitoring Date	Action taken
1	19 March 2008	Receptor site monitoring, weeding, apply fertilizer and watering

2.2 Three plant species were transplanted from the affected works area to the plant receptor and are the target species for monitoring (Photo 1). Those three plant species were part of the identified plants during baseline surveys and were transplanted to the receptor site before site formation works: i.e. a) Sword-leaved Orchid; b) Balloon Flower; and c) Chinese Lily.

3 MONITORING RESULTS

3.1 The field monitoring results of the transplanted plants at the receptor site was summarized in Table 2.

Table 2 Summary of field monitoring results of the transplanted plants at the receptor site

Year	Month	Common name of plant	No. of plant transplanted	No. of Survived	Survival rate	Remarks
2008	March	Balloon Flower	30	24	80%	
		Chinese Lily	25	25	100%	
		Sword-leaved Orchid	45	45	100%	

- 3.2 The survival rate of the monitored plant Sword-leaved Orchid was still 100%. (Photo 2)
- 3.3 Most of the transplanted Balloon Flowers at the receptor site were experience seasonal shrunken and re-generated in the growing season. (Photos 3 & 4)
- 3.4 The above ground parts of the Chinese Lily were became withered due to natural seasonality in the dry season while the underground roots are alive since all of the Chinese Lily were geminated in the current growing season and were identified during the monitoring in March 2008.

Regular maintenance including watering, weeding, apply fertilizer and pest checking to be applied continuously at the receptor site in order to achieve higher survival rate. Daily 3.5 watering is recommended during the current growing season.

APPENDIX H – SUMMARY OF ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE

No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Delivery Method				
				Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
Air Qua	lity							
AQ01	Dust emission from construction site in general	Cap 311, sub leg R Schedule III S.13	Hoardings of not less than 2.4m high from ground level should be erected along the entire length of the site boundary except for site entrance or exit.	~			✓	
AQ02	Dust emission from construction site in general	Cap 311, sub leg R Schedule III S.13 & PS 26.10(6)(i)(e)	To minimize dust emissions, the amount of soil exposed and the dust generation potential should be kept as low as possible. This can be accomplished by water sprays, surface compaction; temporary fabric covers, minimizing the extent of exposed soil, and prompt re-vegetation of completed earthworks.	~		✓	√	
AQ03	Dust emission from construction site in general	Cap 311, sub leg R Schedule III S.13 & PS 26.10(6)(i)(j)	Wheel washing facilities should be provided at all vehicle site entrances/exits to prevent dusty material from being carried off-site on vehicles and deposited on public roads. The facilities shall be provided in advance of any major construction activities.	~			~	
AQ04	Dust emission from site clearance	Cap 311, sub leg R Schedule IV S.26 (1), (2) & PS 26.10(6)(i)(l)	The working area for uprooting of trees, shrubs or vegetation or for the removal of boulders, poles, pillars or temporary or permanent structures shall be sprayed with water or a dust suppression agent immediately before, during and immediately after the operation so as to maintain the entire surface wet.		✓	✓	~	
AQ05	Dust emission from excavation or earth moving	Cap 311, sub leg R Schedule III S.24	The heights from which excavated materials are dropped should be minimized to limit fugitive dust generation from loading/unloading.	~		\checkmark	\checkmark	
AQ06	Dust emission from excavation or earth moving	Cap 311, sub leg R Schedule III S.24	Working areas of any excavation or earth moving operation will be sprayed with water.		\checkmark	~	\checkmark	
AQ07	Access Road	PS 26.10(6)(i)(g)	Effective water sprays should be used on the site to dampen potential dust emission sources such as unpaved areas used by site traffic and active construction areas.		~	~	√	

APPENDIX H – SUMMARY OF ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE

No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Delivery Method				
				Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
Air Qua	lity							
AQ08	Access Road	Cap 311, sub leg R Schedule III S.14 (1) & PS 26.10 (6)(i)(a)	Areas of site with regular movement of vehicles shall have an approved hard surface and be kept clean of loose material.	~			\checkmark	
AQ09	Access Road	PS 26.10 (6)(i)(d)	All on-site motorized vehicles speeds shall be restricted to a max. speed of 10km/h and delivery vehicles to designated roadways inside the Site to reduce dust re-suspension and dispersion.			√	~	
AQ10	Access Road	Cap 311, sub leg R Schedule III S.14 (1) & PS 26.10(6)(i)(a)	The roadway between the wheel wash and the public road will be paved.	✓			\checkmark	
AQ11	Dust emission from material transporting and handling	PS 26.10(6)(i)(h) & (i)	Vehicles transporting materials with the potential to generate dust should have properly fitting side and tailboards.	✓		~	\checkmark	
AQ12	Dust emission from material transporting and handling	PS 1.110 (a)	The cover of the bed of dump truck shall be power operated with manual backup, so that the operator would not need to climb on the dump bed to operate the cover (both under power mode and manual mode). Operation from driver cab or with the operator standing on ground is acceptable. After the cover to the dump bed is closed, any gap left on the system of enclosure should be less than 25mm wide measured in a direction across the gap. Any remaining gap is to be sealed up tightly with a layer of nylon bristle of sufficient length to bridge across the gap.	✓		~	✓	
AQ12a	Dust emission from material transporting and handling	Cap 311, sub leg R Schedule IV S.26 (1)	Materials transported by vehicles should be covered, with the cover properly secured and extended over the edges of the side and tail boards.	✓		~	√	
Air Qua	lity	•				·		
AQ13	Dust emission from material	PS 26.10(6)(i)(k)	Spraying all dusty materials with water prior to	√		✓	\checkmark	

					Delivery Method			
No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
	transporting and handling		any loading, unloading or transfer operation so as to maintain the dusty material wet.					
AQ14	Dust emission from material transporting and handling	PS 26.10(6)(i)(a)	Material storage and handling areas shall be located on hard core or paved.	✓		✓	\checkmark	
AQ15	Dust emission from material transporting and handling	Cap 311, sub leg R Schedule IV S.26	All stockpiled aggregate or spoil of more than 50 m^3 should be enclosed or covered and water applied twice per day during dry or windy conditions.	~		~	√	
AQ16	Dust emission from materials transporting and handling	Cap 311, sub leg R Schedule III S.15 (1) & PS 26.10(6)(i)(f)	Stockpiles of dusty materials shall be covered and minimized the extent of spoil exposed at any given time.	✓		✓	\checkmark	
AQ17	Dust emission from materials transporting and handling	Cap 311, sub leg R Schedule III S.15 (1)	Every stock of more than 20 bags of cement shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides.	~		~	√	
AQ18	Dust emission from materials transporting and handling	Cap 311, sub leg R Schedule III S.15 (1) & PS 26.10 (6)(i)(b)	Material conveyors for the transfer of dusty materials shall be fitted with windboards and enclosed conveyor transfer points and hopper discharge areas to minimize dust emission.	~	~		√	
AQ19	Dust emission from materials transporting and handling	PS 26.10 (6)(i)(c)	Totally enclosing all conveyors carrying materials which have the potential to create dust and fitting them with belt cleaners.	✓	\checkmark		√	
AQ20	Dust emission from materials transporting and handling	PS26.16 (2)(ii)	Profiled steel cladding should be provided at two sides of loading point at barge.	✓	\checkmark		1	
AQ21	Dust emission from materials transporting and handling	PS 26.16 (2)(iii)	Dust suppression sprays should be installed and operated in strategic locations at the feeding inlet and outlet.	~	√		\checkmark	
AQ22	Dust emission from materials transporting and handling	PS 26.16 (2)(iv)	The barging point should be placed within a totally enclosed structure incorporating an enclosed chute for material transfer to barge.	√	\checkmark		√	

					Delivery Method			
No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
Air Qua	lity		·					
AQ23	Dust emission from materials transporting and handling	PS 26.16 (2)(iv)	Flexible curtain should be hanged on the enclosed chute to prevent dust emission when excavated material/rocks are transported into the barge.	~	\checkmark		~	
AQ24	Dust emission from materials transporting and handling	Cap 311, sub leg R Schedule III S.15	Debagging of cement and similar materials to be done in a ventilated enclosure with a filtered extraction system.	✓		\checkmark	\checkmark	
AQ25	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2)	Wet the area within 30m from the blasting area with water prior to blasting.	~	\checkmark	√	\checkmark	
AQ26	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2)	Wire mesh, gunnysack and sandbag should be used on top of the blast area on each shot to prevent flying rock and reduce fugitive dust generation.	~			\checkmark	
AQ27	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2)	Do not carry out blasting when the strong wind signal or tropical cyclone warning no. 3 is hoisted unless prior permission of the Commissioner of Mines is obtained.		~	~	~	
AQ28	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2)	Blasting shall not be carried out when a Hong Kong Observatory Thunderstorm Warning is in force.		\checkmark	\checkmark	\checkmark	
AQ29	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2)	Use of vacuum extraction drilling methods and sequenced the blasting works carefully.		\checkmark		√	
AQ30	Dust Emission from Blasting	Cap 311. sub leg R Schedule IV S.27 (1), (2); PS 26.13(4)(iv)	Firing of explosive shall be carried out in the morning prior to opening of the Park.	✓	~	~	\checkmark	
AQ31	Dust Emission from Tunnel		Exhausts from tunnel ventilation should face away from sensitive receivers.	\checkmark	\checkmark	✓	\checkmark	

					Delivery Method

Water Q	Quality (Refer to Drainage Manage	ement Plan as stated in	PS 26.17(7))					
WQ01	Flooding and wastewater including surface runoff discharges from the construction site/work to inland coastal waters, communal sewers and drains	PS 26.12 (2)	Before commencing any site formation work, all sewer and drainage connection should be sealed to prevent debris, soil, sand and etc from entering public sewers/drains	~		✓	The existing drainage system is in use and the temporary drainage system is under preparation	
WQ02		PS 26.12 (2)	The boundaries of critical areas of earthworks should be marked and surrounded by dykes or embankments for flood protection.	√			N/A	
WQ03		PS 26.12 (2)	Wheel wash water shall be changed frequently and sediment removed regularly	~		\checkmark	~	
WQ04		PS 26.12 (2)	Construction runoff related impacts associated with tunneling and above ground construction activities can be readily controlled through the use of appropriate mitigations measures which include:					
			• Use of sediment traps, oil interceptors; and	\checkmark		\checkmark	✓	
			• Adequate maintenance of drainage systems to prevent flooding and overflow.		\checkmark	~	~	
WQ05	Flooding and wastewater including surface runoff discharges from the construction	PS 26.12 (2)	Exposed areas should be minimised to reduce the potential for increased siltation, runoff contamination, and erosion.	~	\checkmark	\checkmark	√	
WQ06	site/work to inland coastal waters, communal sewers and drains	EIA Ref. S9.44 EM&A Ref. S8.3	Temporary ditches should be provided to facilitate runoff discharge into the appropriate watercourses via silt retention points.	~	✓	\checkmark	\checkmark	
WQ07		EPD ProPECC Note No. PN1/94; PS 26.17(6)(ii)	The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94.	✓	\checkmark		\checkmark	

					Delivery Method			
No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
Water Q	Quality (Refer to Drainage Manage	ement Plan as stated in	PS 26.17(7))					
WQ08	including surface runoff discharges from the construction site/work to inland coastal waters, communal sewers and	EP Clause2.13	To improve the coagulation and sedimentation process for construction phase discharges from excavation works at Headland, sand/silt removal facilities, including sand/silt traps and sediment basins should be provided.	✓		~	0	Updated Drainage Proposal is being implemented
WQ09	drains	PS 26.12(4)	All exposed earth areas should be completed as soon as possible after earthworks have been completed, or alternatively, within 14 days of the cessation of earthworks where practicable.		~	√	0	
WQ10	*	PS 26.12	If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means.	✓	~	~	0	
WQ11	*	PS 26.12(6)(iv)	Sediment tanks of sufficient capacity are recommended as a general mitigation measure that can be used for settling surface runoff prior to disposal. The system capacity should be flexible and able to handle multiple inputs from a variety of sources and particularly suited to applications where the influent is pumped.	✓		~	√	
WQ12	*	PS 26.12(6)(ii)	All silt removal facilities will be inspected daily and cleaned whenever necessary.			~	\checkmark	
WQ13		PS 26.12(6)(iv)	Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being directed in to foul sewers.		~	~	✓	

					Delivery Method			
No.	Environmental Aspect	Requirement (Classification)	Aspect Mitigation	Site Installation	Method Statement	Toolbox Talk	Status	Other / Remarks
Water Q	Quality (Refer to Drainage Manage	ement Plan as stated in	PS 26.17(7))				_	
WQ14	Flooding and wastewater including surface runoff discharges from the construction site/work to inland coastal waters, communal sewers and drains	EP Clause2.12 & 2.14; PS 26.17(6)(iii)	Design and install a silt curtain system to enclose the existing 1000mm diameter storm water pipe outlet at Tai Shue Wan to minimize the water quality impacts on the marine environment during rainy seasons.	✓	√		1	Silt curtain proposal was deposited in the EIAO Register Office for public inspection.
WQ15		EPD ProPECC Note No. PN1/94; PS 26.17(8)(e)	Precautions should be taken at any time of year when rainstorms are likely. Actions to be taken when a rainstorm is imminent or forecast, and actions to be taken during or after rainstorms, are summarized in Appendix A2 or ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.			~	*	Heavy rain procedures
WQ16		PS 26.12(6)(i)	Oil interceptors should be provided in the drainage system and these should be regularly cleaned to prevent the release of oils and grease into the storm water drainage system after accidental spillages. The interceptor should have a bypass to prevent flushing during periods of heavy rain.	\checkmark			√	
WQ17		PS 26.12(2)	All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited on roads.			\checkmark	\checkmark	
WQ18		PS 26.12	Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.	\checkmark			\checkmark	
WQ19		PS 26.12(6)(iii)	An adequately designed and located wheel washing bay should be provided at every site exit and wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process.	✓			~

PS denotes the Particular Specification of the Project.

✓ denotes implemented.

o denotes to be implemented.

APPENDIX I – EVENT AND ACTION PLANS

Event/Action Plan for Air Quality Monitoring

Event		Action		
Action Level	CET	Contractor	PMR	IEC
Exceedance for one sample	 Identify source. Notify IEC, PMR and Contractor. Conduct additional monitoring to investigate the causes. Report the investigation results and if exceedance is due to contractor's construction works to the IEC, PMR and Contractor. Increase monitoring frequency to once per 2 days for 24-hour TSP and daily for 1-hour TSP until exceedance stops if exceedances are considered related to contractor's construction works and report the results to IEC, PMR and Contractor. 	indicated that exceedance is related	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to submit air mitigation proposal. Ensure remedial measures are properly implemented. 	 Review monitoring data and investigation report submitted by CET. Review Contractor's air mitigation proposal and advise the PMR accordingly. Supervise and confirm in writing the implementation of remedial measures.
Exceedance for two or more consecutive samples	 Identify source. Notify EPD, IEC, PMR and Contractor. Conduct additional monitoring to investigate the causes. Report the investigation results and if exceedances are due to contractor's construction works to EPD, IEC, PMR and Contractor within 3 working days after additional monitoring. Increase monitoring frequency to daily for 24-hour TSP and 1-hour TSP if exceedances are considered related to contractor's construction works until exceedance stops, and report the results to EPD, IEC, PMR and Contractor. If exceedances continue after 1- week monitoring events, request PMR to arrange meeting with PMR, IEC and contractor to discuss remedial actions. 	 days of notification if ET indicated that exceedances are related to construction works. Implement agreed proposal within a time scale agreed with PMR and IEC. Amend working methods if 	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to submit air mitigation proposal. Ensure remedial measures are properly implemented. 	investigation report submitted by CET.

APPENDIX I – EVENT AND ACTION PLANS (CONT'D)

Event/Action Plan for Air Quality Monitoring

Event		Action		
Limit Level	CET	Contractor	PMR	IEC
Exceedance for one sample	 Identify source. Notify EPD, IEC, PMR and Contractor. Conduct additional monitoring to investigate the causes. Report the investigation results and if exceedances are due to contractor's construction works to EPD, IEC, PMR and Contractor within 3 working days after additional monitoring. Increase monitoring frequency to daily if exceedances are considered related to contractor's construction works until exceedance stops, and report the results to EPD, IEC, PMR and Contractor. 	 Take immediate action to avoid further exceedance and rectify any unacceptable practice In consultation with the IEC, submit air mitigation proposal to IEC and PMR for agreement within 3 working days of notification if CET indicated that exceedances are related to construction works Implement agreed proposal within a time scale agreed with PMR and IEC. Amend working methods if appropriate. 	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to submit air mitigation proposal. Ensure remedial measures are properly implemented. 	 Review monitoring data and investigation report submitted by CET. Discuss amongst PMR, CET and Contractor in order to formulate air mitigation proposal. Review Contractor's air mitigation proposal and advise the PMR accordingly. Supervise and confirm in writing the implementation of remedial measures.
Exceedance for two or more consecutive samples	 Identify source. Notify EPD, IEC, PMR and Contractor. Conduct additional monitoring to investigate the causes. Report the investigation results and if exceedances are due to contractor's construction works to EPD, IEC, PMR and Contractor within 3 working days after additional monitoring. Increase monitoring frequency to daily if exceedances are considered related to contractor's construction works until exceedance stops, and report the results to EPD, IEC, PMR and Contractor. If exceedances continue after 2 consecutive monitoring events, request PMR to arrange meeting with IEC and contractor to discuss remedial actions. 	 Take immediate action to avoid further exceedance and rectify any unacceptable practice. In consultation with the IEC, submit air mitigation proposal to IEC and PMR for agreement within 3 working days of notification if CET indicated that exceedances are related to construction works. Implement agreed proposal within a time scale agreed with PMR and IEC. Amend working methods and proposal if appropriate. Stop relevant portion(s) of works as required by PMR, CET and IEC. 	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to submit air mitigation proposal. Ensure remedial measures are properly implemented. If exceedances continue arrange meeting with Contractor, IEC and CET and to consider what portion(s) of works should be further mitigated or have to stop. 	investigation report submitted by CET.

APPENDIX I – EVENT AND ACTION PLANS (CONT'D)

Event		Act	ion	
	CET	Contractor	PMR	IEC
Action Level Exceedance	 Identify source. Notify IEC, PMR and Contractor. Conduct additional noise monitoring to investigate the causes. Report the investigation results to the IEC, PMR and Contractor. Discuss with Contractor for their formulation of remedial measures if the exceedance is related to construction works. Conduct additional monitoring to check mitigation effectiveness. 	 Take immediate action to avoid further exceedance. Submit noise mitigation proposals to ET, PMR and IEC. Implement noise mitigation proposals. 	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to propose remedial measures for the analysed noise problem. Ensure remedial measures are properly implemented. 	 Review the analysed results submitted by the CET. Review the proposed remedial measures by the Contractor and advise the PMR accordingly. Supervise and confirm in writing the implementation of remedial measures
Limit Level Exceedance	 Identify source. Notify EPD, IEC, PMR and Contractor. Conduct additional noise monitoring and analyse Contractor's working procedures to determine possible cause of exceedance. Provide interim report to EPD, IEC and PMR on the causes and proposed actions to be taken for the exceedances if exceedance is related to construction works. Assess effectiveness by additional monitoring and report to EPD, IEC, PMR and Contractor the results. If exceedance stops, cease additional monitoring. 	 Take immediate action to avoid further exceedance. Submit proposals for remedial actions to CET, PMR and IEC within 3 working days of notification. Implement the agreed proposals. Resubmit proposals if problem still not under control. Stop the relevant portion of works as determined by the PMR until the exceedance is abated. 	 Confirm receipt of notification of failure in writing. Notify Contractor. Require Contractor to propose remedial measures for the analysed noise problem. Ensure remedial measures are properly implemented. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated. 	 Discuss amongst PMR, CET and Contractor on the potential remedial actions. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the PMR accordingly. Supervise and confirm in writing the implementation of remedial measures.

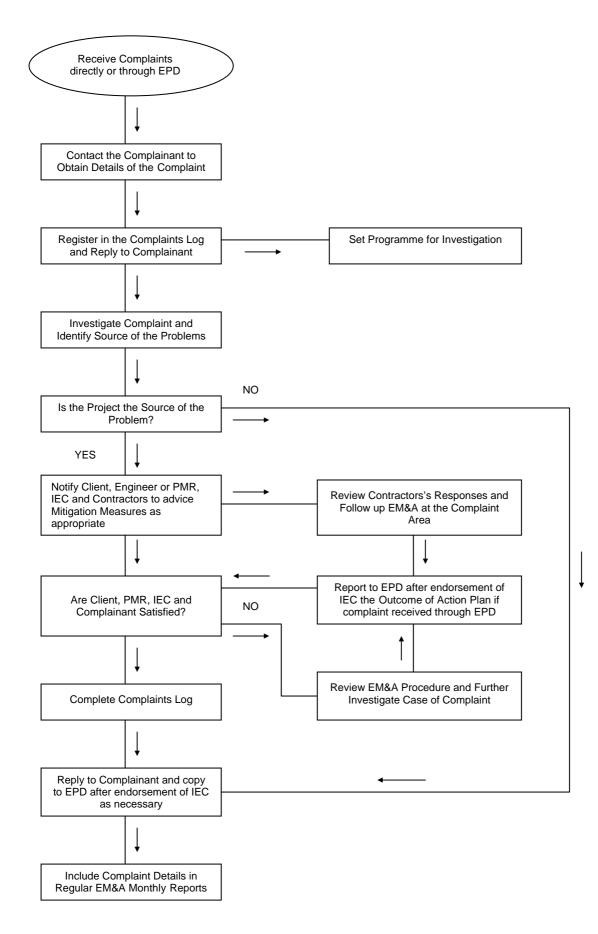

Event/Action Plan for Regular Construction Noise Monitoring

APPENDIX I – EVENT AND ACTION PLANS (CONT'D)

Event/Action Plan for Subtidal Monitoring

Event	CET							
Action Level Exceedance	Step 1 -	Inform the IEC, ER, Contractor, Project Proponent, EPD, and AFCD and discuss the most appropriate method of reducing sediment in the discharge (e.g. check and increase effectiveness of construction site drainage and sediment and other site run- off removal facilities)						
	Step 2 -	Audit the implementation of mitigation measures on site.						
	Step 3 -	If non-compliance continues, check and confirm the effectiveness of mitigation measures and repeat monitoring survey measurements.						
Limit Level	Undertake Steps 1-3.							
Exceedance	If further exceedance of Limit Level, suspend construction works until an effective solution is identified.							
	Once the	Once the solutions have been identified and agreed with all parties, construction works may commence.						

APPENDIX J - COMPLAINT FLOW DIAGRAM AND COMPLAINT LOG

COMPLAINT RECORD REGISTER

Record ID	Date Received	Type (PMR / EPD / Public / Others, please specify)	Description	Responsible Project	Justified complaint?	Status (Open / Closed)
OPE/DBJV/PROJ/QSE/ECR/001	05-Nov-07	Public thro' EPD	The complainant claimed that dust nuisance was observed at Tai Shue Wan on 03-Nov-07.	C105	N/A	The inspector of EPD came to the scene on 05-Nov-07 and no significant observation was made, hence the complaint was closed.
OPE/DBJV/PROJ/QSE/ECR/002						Under investigation, the noise nuisance was concluded from the soft ground tunnel support work adjacent to GPH. Rock breaking had to be carried out within the tunnel works areas due to safety and emergency in order to prevent the collapse of the ground support structure.
	09-Jan-08	Public thro' OPC	The complainant claimed that noise nuisance was heard from the Ocean Park construction sites during the restricted hours	C105	Justified	With regards to the complaints, immediate action was taken and summarized as follows:
OPE/DBJV/PROJ/QSE/ECR/003						• The enclosure and the acoustic doors have been built and completed on 21-Jan-08; and
						• Surveillance was stepped up in order to ensure that timely actions could be taken to rectify any complaints.
			The complainant claimed that noise nuisance was heard from			With regards to the complaints, immediate action was taken and summarized as follows:
OPE/DBJV/PROJ/QSE/ECR/004	13-Feb-08	3-Feb-08 Public thro' EPD	the Ocean Park construction sites during the restricted hours at Tai Shue Wan	C105	Justified	Additional noise control measures, including noise enclosure at the junction of the conveyors at Tai Shue Wan; and
						Well manage the working sequence in order to minimize the impacts to the vicinity.
						With regards to the complaint, investigation has conducted and the findings and action to be taken were summarized as follows:
OPE/DBJV/PROJ/QSE/ECR/005	12-Mar-08	Public thro' EPD	The resident from Broadview Court claimed that noise nuisance from the night works at Nam Long Shan Road	C105	Justified	 Movable noise panels and the noise shield have been used during the breaking works. The potential cause of the noise nuisance might be the panels were not placed properly and the noise emitted from the gap. The in-charge foreman has been reminded to place the panels properly in order to minimize the noise nuisance to the vicinity.
OPE/DBJV/PROJ/QSE/ECR/006	13-Mar-08	Public thro' EPD	The complainant claimed that noise nuisance from the night works at Nam Long Shan Road	C105	Justified	Please refer to the findings of Record ID No. OPE/DBJV/PROJ/QSE/ECR/005
OPE/DBJV/PROJ/QSE/ECR/007	20-Mar-08	Public thro' EPD	The complainant claimed that noise nuisance from the night works at Nam Long Shan Road	C105	Justified	With regards to the complaint, investigation has conducted and the findings could not made any conclusions. In this context, the in- charge engineer/foreman of each CNP has notified and reminded that all requirements under the CNP should be complied with all the times.
OPE/DBJV/PROJ/QSE/ECR/008	15-Mar-08	Public thro' EPD	The complainant claimed that dust nuisance from the crusher,	C105	Justified	 With regards to the complaint, action was taken as follows: Enhance the water spraying, especially the frequency, in order to minimize the dust nuisance to the vicinity.
OF L/DBJV/FROJ/Q3L/LCR/008	13-1011-00		Nam Long Shan Road	0103	Justineu	Besides, the length of dust screen was extended to increase the coverage area of stockpile to minimize the dust nuisance due to strong wind.
			The complement claimed that paics from the temperany steel			With regards to the complaint, immediate action was taken and summarized as follows:
OPE/DBJV/PROJ/QSE/ECR/009	19-Mar-08	Public thro' EPD	The complainant claimed that noise from the temporary steel plates over trenches at Nam Long Shan Road	C105	Justified	• Inform the in-charge foreman to provide sufficient sandbags or rubber pad before placing the temporary steel plates back to cover the trench.
OPE/DBJV/PROJ/QSE/ECR/010	25-Mar-08	Public thro' EPD	Police Training School claimed that dust nuisance from CI12C	C105	Justified	With regards to the complaint, immediate action was taken and summarized as follows:
			to the school	0100	Gasaneu	• Inform the in-charge foreman to increase the frequency of water spraying of the exposed areas.

EXECUTIVE SUMMARY

This is the 12th EM&A Monthly report prepared by Kaden – ATAL Joint Venture for the Project "Vet Hospital". This report presents the results of the construction activities conducted in the month.

In the reporting month, the following construction activities took place:

- R.C. structure: construction of dolphin pools.
- Truss installation: material delivery, installation.
- E&M & LSS installation: plumber, electric installation, A/C system, etc.
- Lift installation: alignment revised, installation of electric devices and relevant accessories, etc.
- Internal finishing: plasterer works, installation of wooden doors, waterproof in building and roof.
- Cable laying: excavation, installation of cable and backfill, etc.

Environmental Licensing and Permitting

Permits granted to the Project include the Environmental Permit (EP) for the Project and Construction Noise Permit (CNP). Information of these permits is provided in Table 2.1.

Implementation Status of Environmental Mitigation Measures

Site inspections in the month made following observations and recommendations.

Water Quality Mitigation Measures

- Debris and gravels were observed stacking at part of u-channel in front of Plant block. The Contractor was reminded to maintain no blockage at the u-channel.
- Catch-pit of temporary drainage was observed blocked by material. The Contractor was reminded to clean up the catch-pit at regular basis.
- Water pipe at temporary drainage is observed broken. The Contractor was reminded to replace the water pipe for the temporary drainage.
- Water hose of fresh water at site haul road was observed broken. The Contractor was reminded to replace the water hose of fresh water.

Air Quality Mitigation Measures

• No violation was observed nor recorded.

Noise

No violation was observed nor recorded.

Ecology

• No violation was observed nor recorded.

Waste / Chemical Management

• Rubbish was observed stacking at slope. The Contractor was reminded to clean up the area.

Others

• No violation was observed nor recorded.

Environmental Non-conformance

No complaint, summons or prosecution related to environmental issues was made against the Vet Hospital Project in the reporting month.

Future Key Issues

Key issues to be considered in the month include:

- General material management to prevent spillage or dust spreading.
- To maintain the temporary drainage system in good condition of flow.
- To prevent stagnant water after rain to prevent mosquito breeding.
- To promote the awareness of protecting the slope. Workers should dispose rubbish to designated area or tubs. Regular remove construction waste that is stacked at designated construction waste area.

1. INTRODUCTION

Background

- 1.1 Under the requirements of Environmental Permit EP-249/2006/A, EM&A programme as set out in the EM&A Manual is required to be implemented.
- 1.2 This report summarises the environmental monitoring and audit works for the Project in the month of March 2008.

Project Organisation

1.3 The structure of the Project Organisation is shown in Appendix A.

Construction Works undertaken during the Reporting Month

- 1.4 The major construction activities undertaken in the month included:
 - R.C. structure: construction of dolphin pools.
 - Truss installation: material delivery, installation.
 - E&M & LSS installation: plumber, electric installation, A/C system, etc.
 - Lift installation: alignment revised, installation of electric devices and relevant accessories, etc.
 - Internal finishing: plasterer works, installation of wooden doors, waterproof in building and roof.
 - Cable laying: excavation, installation of cable and backfill, etc.
- 1.5 A layout plan of the Project is provided in Appendix B.
- 1.6 The actual amounts of different types of waste generated by the activities of the Project in the month are shown in Table 1.1.

Waste Type	Examples	Actual quantity disposed (Tonnes)	Disposal Locations
C&D Waste	Construction waste	38.74	SENT Landfill
	(Plastic, wood and bamboo)	8.74	TKO Area 137
		38.57	TKO Sorting Facilities
Chemical waste	Used oil, spent solvent		Collected by licensed collector
General waste	Mixed rock & soil	79.93	Quarry Bay

 Table 1.1
 Actual Quantity of Waste Generated in March 2008

Summary of EM&A Requirements

- 1.7 The environmental licensing and permits are described in Section 2.
- 1.8 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 2 of the Report.
- 1.9 The implementation status of the environmental mitigation is attached in Appendix D.

2. ENVIRONMENTAL AUDIT

Site Inspection

- 2.1 The contract commencement date is 26 March 07.
- 2.2 The weekly site inspection was only carried out on 06th, 13th, 19th, 26th (IEC audit) March 2008 in the month.
- 2.3 The purpose is to monitor environmental issues on the construction sites to ensure that all mitigation measures were implemented timely and properly.

Status of Environmental Licensing and Permitting

2.4 All permits/licences obtained as in the reporting month are summarised in Table 2.1.

Table 2.1 Summary of Environmental Licensing and Permit Status

Permit No.	Valid	Period	Section	Status		
Fernint No.	From	То	Section	Status		
Environmental Permit						
EP-249/2006/A	28/07/06	N/A	Expansion of existing Ocean Park and reconstruction / modification of its existing facilities.	Valid

EP820/W2/XC041	31/05/07	30/06/12	Vet Hospital	Valid		
Billing Account for Dispo	sal of Cons	truction Was	te and Application for Issuance of Chits			
7005185	12/4/07	N/A	-	Valid		

Implementation Status of Environmental Mitigation Measures

2.5 During site inspections in the month, the following observations and recommendations were made.

Water Quality Mitigation Measures

- Debris and gravels were observed stacking at part of u-channel in front of Plant block. The Contractor was reminded to maintain no blockage at the u-channel.
- Catch-pit of temporary drainage was observed blocked by material. The Contractor was reminded to clean up the catch-pit at regular basis.
- Water pipe at temporary drainage is observed broken. The Contractor was reminded to replace the water pipe for the temporary drainage.
- Water hose of fresh water at site haul road was observed broken. The Contractor was reminded to replace the water hose of fresh water.

Air Quality Mitigation Measures

• No violation was observed nor recorded.

Noise

• No violation was observed nor recorded.

Ecology

• No violation was observed nor recorded.

Waste / Chemical Management

• Rubbish was observed stacking at slope. The Contractor was reminded to clean up the area.

Others

• No other violation was observed nor recorded.

Implementation Status of Environmental Complaint Handling Procedures

Summary of the Complaints and Prosecutions

2.6 No complaint, summons or prosecution related to environmental issues was received or made against the Project in the reporting month.

3. FUTURE KEY ISSUES

- 3.1 Key issues to be considered in the month include:
 - General material management to prevent spillage or dust spreading.
 - To maintain the temporary drainage system in good condition of flow.
 - To prevent stagnant water after rain to prevent mosquito breeding.
 - To promote the awareness of protecting the slope. Workers should dispose rubbish to designated area or tubs. Regular remove construction waste that is stacked at designated construction waste area.

Construction Program for the Next Months

3.2 The construction programme for the next months is shown in Appendix C.

4. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 4.1 No complaint, summons or prosecution related to environmental issues were made against this project in the reporting month.
- 4.2 IEC audit was carried out on 28 March 2008. 4 observations and no non-compliances were raised.
- 4.3 4 nos. of site inspections were carried out. Parts of identified issues are rectified within the reporting month. Others are under on-going improvement.

Recommendations

4.4 According to the environmental audit performed in the month, the following recommendations are made:

Air Quality Impact

• To implement dust suppression measures on dry surfaces and dusty works.

Noise Impact

- To inspect the noise sources from inside and outside of the site.
- To space out noisy equipment and position as far away as possible from sensitive receivers.
- To have regular maintenance of vehicles and equipment used.

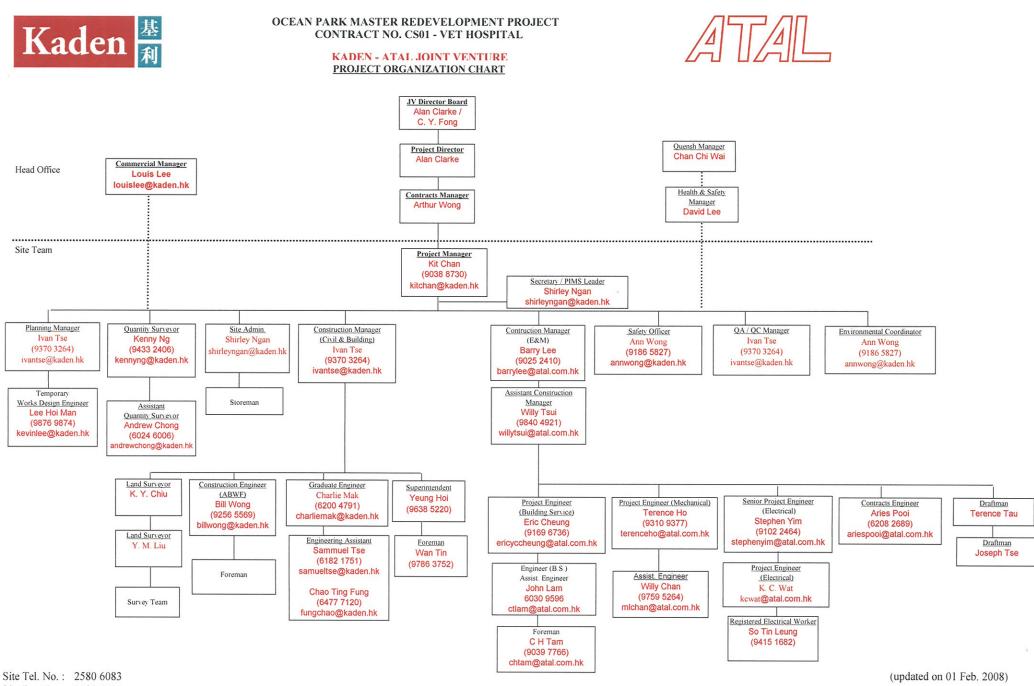

Water Quality Impact

- To ensure open stockpiles of construction materials are covered with tarpaulin or similar fabric during rainstorm.
- To fully operate the temporary on-site drainage system and all sedimentation tank.
- To clean up the mud accumulated in the temporary drainage system and sedimentation tank in frequent basis.

Waste/Chemical Management

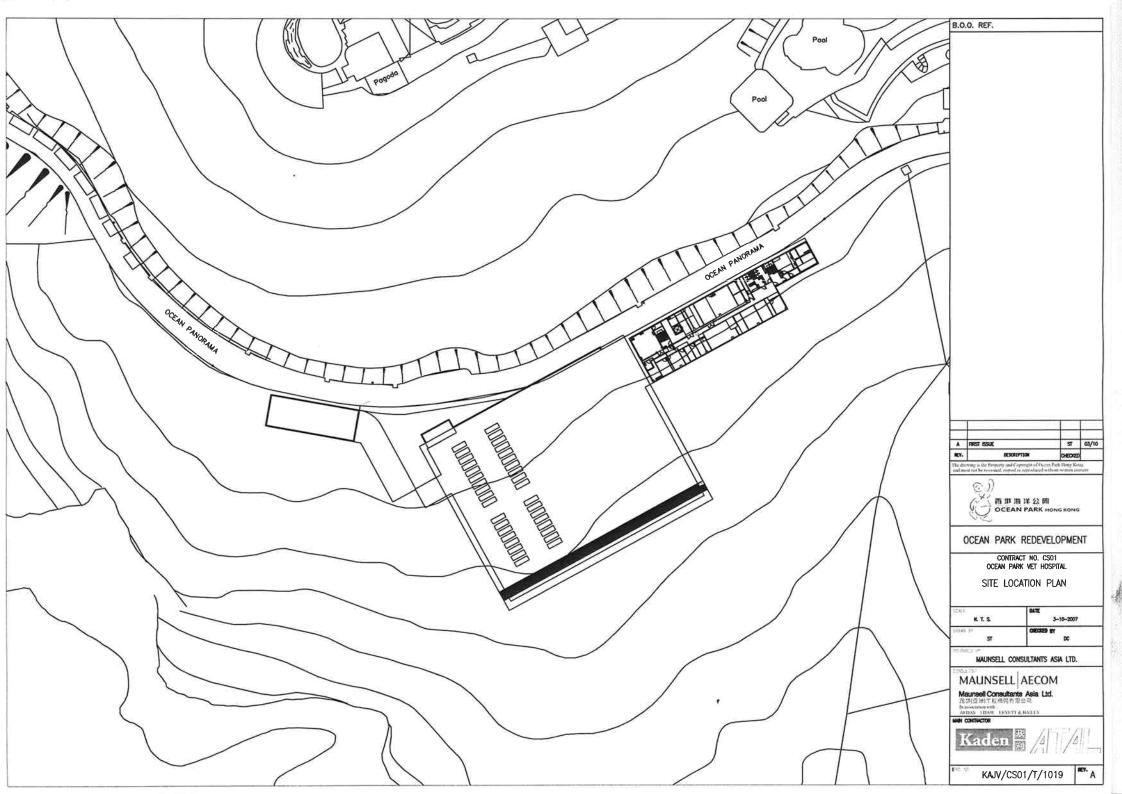

- To regular waste removal to prevent over accumulation of waste materials or rubbish on site.
- To avoid any discharge of chemical waste or oil directly from the site.
- To regularly and properly collect, store and dispose of all waste types.

Site Fax No. : 2580 6115

EXECUTIVE SUMMARY

Introduction

This is the 8th monthly Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Limited (Cinotech) for the Contract No. CW02 "Ocean Park Redevelopment Project – Astounding Asia" (hereinafter called "the Project"). The Project was commenced on 1st August 2007. This document reports the findings of the environmental auditing works conducted in March 2008.

The major site activities undertaken in the reporting month included:

- Superstructure works, builder's and finishing work ,E&M work, window and door installation and fitting out works at the New Bird House:
- Superstructure Works (Structural steel works) at the Flight Exercise Aviary;
- Make-good defect works at the Birds Central Kitchen;
- Surface Drainage works at Main Aviary;
- Footing construction works and superstructure works (RC Works) at Astounding Asia Restaurant;
- Pipe piling works for footing F1 ,MVAC Culvert (RC Works) and superstructure works (RC works) at the New Panda Habitat:
- External drainage, services pipelines and ducting works.

Environmental Monitoring and Audit Works

Environmental monitoring and audit works for the Project was performed as stipulated in the updated EM&A Manual. Site audits were conducted once per week. Environmental site audits were conducted on 4th, 11th, 18th and 28th March 2008. No non-compliance was observed during the site audits.

The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.

No notification of exceedance was received from the Project Environmental Team Leader (ETL) in the reporting month. Summary of the events and action taken in the reporting month is tabulated in **Table I**.

Parameter	No. of 1	Events	No. of Events	Action Taken		
1 al alletel	Action Level	Limit Level	Due to the Project	ACTION TAKEN		
1-hr TSP	0	0	0	N/A		
24-hr TSP	0	0	0	N/A		
Noise	0	0	0	N/A		

Table I Summary Table for Events Recorded in the Reporting Month

Environmental Licenses and Permits

Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Redevelopment Project, Registration of Waste Producer, Water Discharge License and one Construction Noise Permit (CNP). One new CNP was issued to the Project by EPD in the reporting month.

A notification pursuant to Section 3(1) of the Air Pollution Control (Construction Dust) Regulation was received prior the commencement of the Project.

Complaints and Prosecutions

No environmental complaint and prosecution was received in the reporting month.

Future Key Issues

Key issues to be considered in the coming month include:

- Builder's & finishing works, E&M works, windows and doors installation and fitting out works at New Bird House;
- E&M and fitting out works and paving works at the Flight Exercise Aviary;
- Underground drainage works at Main Aviary;
- Superstructure work (RC Works), underground drainage works, Builder's finishing works, E&M Works and fitting out works at Astounding Asia Restaurant;
- Pile Piling ,ELS works for footing F1 & R.C works for footing, RC works on MVAC culvert, RC works on superstructure works and underground drainage works at New Panda Habitat;
- Tree transplantation at New Bird Theatre;
- External services pipeline and ducting works; and
- External drainage works.

1. INTRODUCTION

Background

- 1.1 The "Repositioning and Long Term Operation Plan of Ocean Park" has been implementing by the Ocean Park Corporation at its existing site of Ocean Park and Nam Long Shan, Aberdeen. The purpose of this project is to upgrade and expand the existing Ocean Park to meet anticipated visitor demands and to position Ocean Park as a premium tourist attraction and a regional leader in themed recreational and educational park experience. The site layout plan is illustrated in Figure 1.1.
- 1.2 An environmental impact assessment (EIA) report for "Repositioning and Long Term Operation Plan of Ocean Park" (Report No. 121/2006 and Register No. AEIAR-101/2006) has been prepared in 2006 and the Environmental Monitoring and Audit Manual (Project's EM&A Manual) was also included as part of the EIA report in the register. An Environmental Permit (EP) No. EP-249/2006 was issued on 28 July 2006 for the above project to Ocean Park Corporation as Permit Holder and a varied EP No. EP-249/2006/A was subsequently issued on 23 October 2006 for the above project to Ocean Park Corporation as Permit Holder.
- 1.3 W. Hing Construction Co., Ltd. (the Contractor) was commissioned by the Employer to undertake the design and construction of the Contract No. CW02 "Ocean Park Redevelopment Project Astounding Asia" (hereinafter call "the Project").
- 1.4 The Project includes design and construction of:
 - (a) ETFE roof membrane system including the membrane, mullion, supporting frame, fixing to main structure, openings and all associated elements
 - (b) Aviary netting including mesh and supporting wire and fixing to main structures
 - (c) Artificial Rockwork including concrete foundations, internal structural supporting systems and fixing details
 - (d) All GRC works
 - (e) Skylight at back of house of Panda Habitat
 - (f) Nest box of Red Panda
 - (g) E&M supporting structures
 - (h) Balustrade
 - (i) Mural
 - (j) Exhibit glazing at the alligator, panda mountain viewing shelter, otter viewing, and goldfish exhibit
 - (k) Bamboo Rail including foundation
 - (1) Bamboo and Reed Barriers including foundation
 - (m) Planter Wall
 - (n) Fog system within Panda Habitat
 - (o) Glass Guard Rails
 - (p) Snow Production System
 - (q) Chilled rock system
 - (r) Fire Services
 - (s) "Rock Delta" Stone Wool Intensive Medium for the rice paddy wall
 - (t) Woven willow cladding for fence wall/gate
 - (u) Foundation for shelter support pole for panda mountain viewing shelter

- (v) Kid's climbing tree & giant panda climbing structure
- 1.5 Cinotech Consultants Ltd. (Cinotech) was commissioned by the Contractor to undertake the Environmental Team (ET) services for the Project. This is the 8th monthly EM&A Report summarizing the EM&A works for the Project in March 2008.

Project Organizations

- 1.6 Different parties with different levels of involvement in the project organization include:
 - The Engineer and Project Environmental Team Leader (ETL) Maunsell Consultants Asia Ltd.
 - Contractor W. Hing Construction Co. Ltd.
 - Contractor Environmental Team (CET) Cinotech Consultants Ltd.
 - Independent Environmental Checker (IEC) Mott MacDonald HK Ltd.
- 1.7 The responsibilities of respective parties are provided in Section the Contractor's EM&A Manual of the Project.
- 1.8 The key contacts of the Project are shown in **Table 1.1**.

Table 1.1	Key Project Contacts
-----------	-----------------------------

Party	Name	Role	Phone No.	Fax No.	
Project ET	Mr. Terence Kong	Project ET Leader (ETL)	2871 5893	2552 1256	
	Mr. Billy Lee	Project Manager	6193 4096		
Contractor	Mr. Eddie Chiu	Environmental & Safety Manager	6105 4075	8343 9188	
Contractor's ET	Dr. Priscilla Choy	Contractor's Environmental Team Leader (CETL)	2151 2089		
	Mr. Ian Ip	ET Coordinator & Audit Team Leader	2151 2095	3107 1388	
	Mr. Henry Leung	Monitoring Team Leader	9779 7340		
IEC	Miss Florence Yuen	Independent Environmental Checker (IEC) Representative	2828 5757	28271823

Construction Programme

- 1.9 The site activities undertaken in the reporting month were:
 - Superstructure works, builder's and finishing work ,E&M work, window and door installation and fitting out works at the New Bird House:
 - Superstructure Works (Structural steel works) at the Flight Exercise Aviary;
 - Make-good defect works at the Birds Central Kitchen;
 - Surface Drainage works at Main Aviary;
 - Footing construction works and superstructure works (RC Works) at Astounding Asia Restaurant;
 - Pipe piling works for footing F1 ,MVAC Culvert (RC Works) and superstructure works (RC works) at the New Panda Habitat:
 - External drainage, services pipelines and ducting works.

Summary of EM&A Requirements

- 1.10 The EM&A programme requires construction phase environmental site audit. The duties and responsibilities comprise the following:
 - monitor various environmental parameters, if necessary, as specified in the Contractor's EM&A Manual;
 - > analyze the environmental monitoring and audit data;
 - review the EM&A programme to confirm the adequacy of mitigation measures implemented and the validity of the EIA predictions and to identify and adverse environmental impacts arising;
 - carry out site inspection to investigate and audit the Contractor's site practice, equipment and work methodologies with respect to pollution control and environmental mitigation, and effect proactive action to pre-empt problems;
 - > audit and prepare EM&A reports on the site environmental conditions;
 - > report the environmental audit results to the Contractor;
 - recommend appropriate mitigation measures to the Contractor in case of exceedance of Action and Limit Levels in accordance with the Event and Action Plans; and
 - adhere to the procedures for carrying out complaint investigation in accordance with Sections 7.11 to 7.14 of the Contractor's EM&A Manual.
- 1.11 This report presents the environmental monitoring and audit works for the Project in March 2008.

2. ENVIRONMENTAL AUDIT

Environmental Site Audits

- 2.1 Environmental site audits were carried out on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site.
- 2.2 Site audits for the Project in the reporting month were conducted on 4th, 11th, 18th and 28th March 2008. No non-compliance was observed during the site audits. The summaries of site audits are attached in **Appendix A**.
- 2.3 During site inspections in the reporting month, no non-conformance was identified. The observations and recommendations are summarized in **Table 2.1**.

Parameters	Date	Observations / Recommendations	Remediation/ Follow up
	04/03/08	Stagnant water was observed at the New Panda Habitat. Contractor was advised to keep the drainage system operating and maintain the operation of the sedimentation tank.	This item was rectified at 18/03/08
	04/03/08	Stockpile at the New Panda Habitat under the tree was still not covered. Contractor was reminded to cover them.	This item was rectified at 11/03/08
	04/03/08	Stockpile next to generator room was accumulated, contractor was advised to bund the stockpiles to avoid slit water go out to the site boundary.	This item was rectified at 11/03/08
	11/03/08	Stockpiles were still accumulated near the main aviary. Contractor was reminded to remove them as soon as possible.	This item is still outstanding so follow up is needed at the next audit session
Water Quality	11/03/08	Contractor had kept the drainage system operation, but contractor was reminded to keep a good maintenance of the sedimentation tank and maintain good operation of the tank and the duct.	This item was rectified at 18/03/08
	18/03/08	Stockpile accumulated at the side of AA restaurant. Contractor was reminded to cover them with tarpaulin or other measure and it was also reminded to water the stockpile to reduce dust generation.	This item is still outstanding so follow up is needed at the next audit session
	28/03/08	Stockpile accumulated at the side of AA restaurant was still not clear. Contractor was reminded to cover them well.	This item is still outstanding so follow up is needed at the next audit session
	28/03/08	Leaves were accumulated at the U- channel at the New Panda habitat. Contractor was reminded to clean them up.	This item is still outstanding so follow up is needed at the next audit session

 Table 2.1
 Observations and Recommendations of Site Audits

	04/03/08	Stockpiles were accumulated near Main Aviary. Contractor was reminded to compact them and cover them to suppress dust generation	This item was rectified at 11/03/08
	04/03/08	The access road was observed to be dry. The Contractor was reminded to water the road frequently to reduce the dust generation.	This item was rectified at 11/03/08
Air Quality	18/03/08	Main access is dry. Contractor was reminded to water the main road.	This item was rectified at 28/03/08
	18/03/08	Contractor was reminded to cover the drilling rig with tarpaulin during the operation.	This item was rectified at 28/03/08
	28/03/08	Stockpile was accumulated next to New Panda Habitat. Contractor was reminded to cover them.	This item is still outstanding so follow up is needed at the next audit session
Waste/	04/03/08	General refuses were accumulated at the road near New Panda Habitat and the road of the Flight Exercise Aviary. Contractor was reminded to clean them regularly.	This item was rectified at 11/03/08
Chemical Management	28/03/08	Oil drums were found at the Flight Exercise Aviary. Contractor was reminded to remove them and provide with drip trays.	This item is still outstanding so follow up is needed at the next audit session

Status of Environmental Licensing and Permitting

2.4 All valid permits/licenses obtained for the Project are summarized in **Table 2.2**. Total of One new CNP was issued to the Project in the reporting month.

Table 2.2 Summary of Environmental Licensing and Permit S	tatus
---	-------

Permit No.	Valid Period		Details	Status
	From To Details		Details	Status
Environmental Perm	it			
EP-249/2006/A	23/10/2006	N/A	Expansion of the existing Ocean Park and reconstruction / modification of its existing facilities.	Valid

Water Discharge Lic	ense	•		
EP820/W9/XW240	12/10/2007	31/10/2012	Discharge of industrial trade effluent arising from the Sedimentation tank at the construction site (CW02 Astounding Asia, Ocean Park Redevelopment Project) to communal storm water drain.	Valid
Others				
001022180	N/A	N/A	Notification Pursuant to Section 3(1) of the Air Pollution Control (Construction Dust) Regulation	Valid
7005864	N/A	N/A	Construction Waste Disposal Billing Account with EPD	Valid

Status of Waste Management

2.5 The amount of waste generated by the construction activities of the Project in the reporting month is attached in **Appendix B**.

Implementation Status of Environmental Mitigation Measures

2.6 According to the Environmental Permit and the Contractor's EM&A Manual, the mitigation measures detailed in the documents are required to be implemented. An updated summary of the EMIS is provided in **Appendix C**.

Summary of Exceedances

2.7 No Action/Limit Level exceedance was reported in the reporting month.

Implementation Status of Event Action Plans

2.8 The Event Action Plans for air quality and construction noise are presented in **Appendix D**.

Summary of Complaints and Prosecutions

2.9 No environmental complaint and prosecution related to the Project works was received during the reporting month.

3. FUTURE KEY ISSUES

Key Issues for the Coming Month

- 3.1 Key issues to be considered in the coming month include:
 - Dust generation from excavation, slopes, stockpiles and underground drainage works;
 - Noise generated from operation equipment and machinery on-site;
 - Storage of chemicals/fuel and chemical waste/waste oil on site;
 - Sorting of C&D materials at source;
 - Ensure proper collection and disposal of rubbish generated on site; and
 - Larviciding against mosquito breeding in stagnant water should be carried out at least on a weekly basis;
 - Ensure the operation of sedimentation tank in collecting the rainstorm.

Construction Program for the Next Month

3.2 The tentative construction program for the Project is provided in **Appendix E**.

4. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- 4.1 Four environmental site audits were performed in March 2008. No non-compliance was observed during the site audits.
- 4.2 No execeedance of environmental monitoring was reported in the reporting month.
- 4.3 No environmental complaint and prosecution related to the project was received in the reporting month.

Recommendations

4.4 According to the environmental audits performed in the reporting month, the following recommendations are recommended:

Dust Impact

- To ensure water spray is applied for the dust emissive works, such as breaking, loading and unloading of soil materials
- To implement dust suppression measures on haul road, stockpiles and dry surfaces.

Noise Impact

- To space out noisy equipment and position as far away as possible from sensitive receivers.
- To review the works sequence of site activities so as to reduce the number of noisy equipment in concurrent operation.
- To provide temporary noise barriers for noisy activities, such as breaking works and drilling works.
- To employ quiet powered mechanical equipment if possible.
- To ensure compliance of CNP conditions during restricted-hour works.

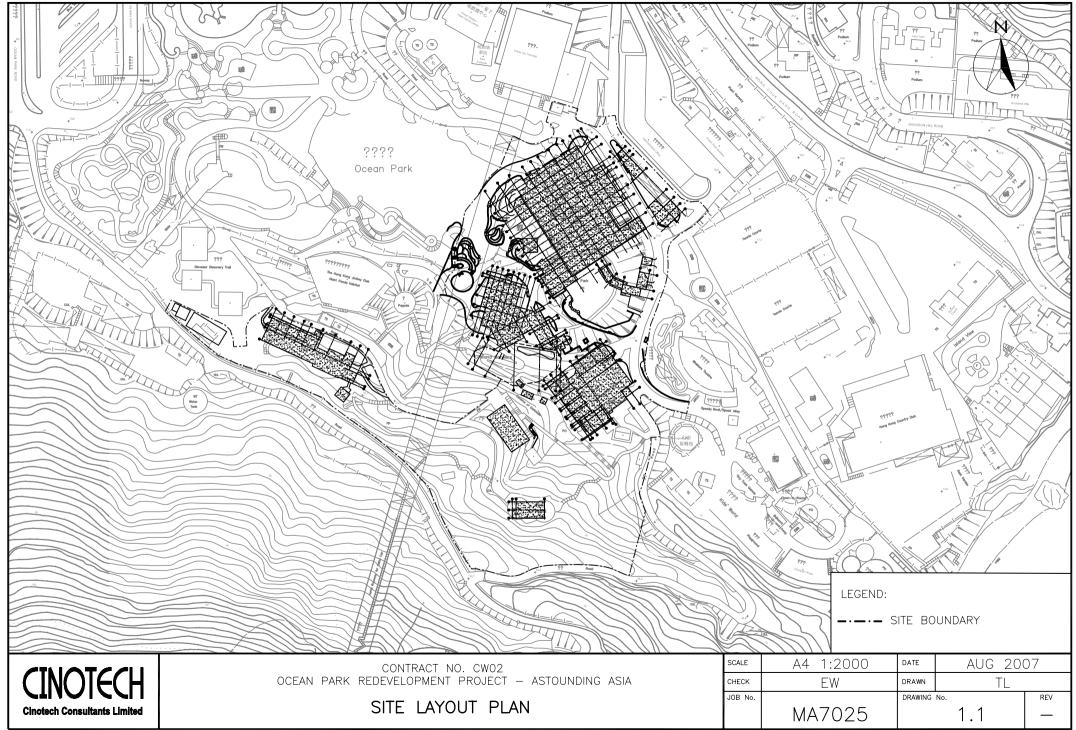

Water Quality Impact

- To identify any wastewater discharges from site.
- To regularly maintain the condition of u-channel, catch pits and wheel washing facilities on site.
- To regularly maintain the sediment control measures after rainstorms.
- To avoid water from accumulation on site and carry out larviciding against mosquito breeding for stagnant water when mosquito larvae are observed.

Waste/Chemical Management

- To check for any accumulation of waste materials or refuse on site.
- To avoid any discharge of oil directly from the site.
- To avoid improper handling or storage of oil drum on site.

FIGURE

APPENDIX A SITE AUDIT SUMMARY

Weekly Site Inspection Record Summary

Inspection Information

Checklist Reference Number	80304
Date	4 March 2008 (Tuesday)
Time	9:30 - 10:30

Ref. No.	Non-Compliance	Related Item No.
-	None identified	-

Ref. No	Remarks/Observations	Related Item No.
80304 - 02	 A. Water Quality Stagnant water was observed at the New Panda Habitat. Contractor was advised to keep the drainage system operating and maintain the operation of the sedimentation tank. 	2.18
80304 - 03	 Stockpile at the New Panda Habitat under the tree was still not covered. Contractor was reminded to cover them. 	2.8
80304 - 04	 Stockpile next to generator room was accumulated, contractor was advised to bund the stockpiles to avoid slit water go out to the site boundary. 	2.8
80304 - 05	B. Air QualityStockpiles were accumulated near Main Aviary. Contractor was	3.3
80304 - 06	reminded to compact them and cover them to suppress dust generation.The access road was observed to be dry. The Contractor was reminded to water the road frequently to reduce the dust generation.	3.5
	<i>C. Noise</i>No environmental deficiency was identified during the site inspection.	
80304 – 01	 D. Waste / Chemical Management General refuses were accumulated at he road near New Panda Habitat and the road of the Flight Exercise Aviary. Contractor was reminded to clean them regularly. E. Permit / Licenses No environmental deficiency was identified during the site inspection. 	5.1.3
	 F. Others Follow-up on previous audit (Ref. No.:80226). Follow up action is needed for item 80226-01.

APPENDIX C ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE

Types of Impacts	Mitigation Measures	Status
Construction Dust	• Use of regular watering, with complete coverage, to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather.	*
	• Use of frequent watering for particularly dusty construction areas, temporary stockpiles and areas close to ASRs.	*
	• Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines.	N/A
	• Open stockpiles shall be avoided or covered. Where possible, prevent placing dusty material storage piles near ASRs.	*
	• Restricting heights from which materials are dropped, as far as practicable to minimise the fugitive dust arising from unloading/ loading.	۸
	• Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations.	٨
	• Use of vehicle wheel and body washing facilities at the exit points of the site.	٨
	• Provision of wind shield and dust extraction units or similar dust mitigation measures at the loading points, and use of water sprinklers at the loading area where dust generation is likely during the loading process of loose material, particularly in dry seasons/ periods.	N/A
	• Imposition of speed controls for vehicles on unpaved site roads. Ten kilometers per hour is the recommended limit.	٨
	Dusty activities should be re-scheduled if high-wind conditions are encountered.	N/A
	• Where possible, routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs.	N/A
	• Suitable buffer zone should be provided and the works areas should be fenced off with hoarding. The height of hoarding should not be less than 2.4m from ground level.	N/A
	Crushing Plant	
	• Water sprays on the crusher.	N/A
	Fabric filters installed for the crushing plant.	N/A
	• When transferring materials from crusher to the conveyors, chutes or dust curtains would be used for controlling dust.	N/A

Appendix C - Summary of Environmental Mitigation Implementation Schedule

Types of Impacts	Mitigation Measures	Status
•	Barging Point & Conveyor Belt System	
	 The conveyors would be placed within a totally enclosed structure Profiled steel cladding would be provided at two sides of loading point. 	N/A N/A
	 Dust suppression sprays would be installed and operated in strategic locations at the feeding inlet and outlet. The barging point would be placed within a totally enclosed structure incorporating an enclosed chute for material transfer to the barge. Flexible curtain would be hanged on the enclosed chute prevent dust emission when 	N/A N/A
	excavated materials/rocks transported into the barge.	1.171
	• Some areas of the Park would remain open for visitors during the construction period. Therefore, suitable buffer zones from major construction activities should be provided where practical and the works areas should be fenced off with hoarding during the construction phase. It is recommended to erect hoarding of a height not less than 2.4m from ground level.	۸
Construction	on Construction Phase	
Noise	• Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme	٨
	• Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction programme	N/A
	• Mobile plant, if any, should be sited as far from NSRs as possible.	N/A
	• Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum	٨
	• Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs	٨
	• Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities	N/A
	Adoption of Quieter Plant	
	• In order to reduce the excessive noise impacts at the affected NSRs at the Waterfront during normal daytime working hours, quieter plants are recommended. The Contractors do not have to use specific items of quiet plant adopted in this assessment. The Contractors may use other type of quiet plant, which have the same total SWL, to meet their needs	۸

Types of Impacts	Mitigation Measures	Status
-	Use of Movable Noise Barrier	
	• The use of movable barrier for certain PME could further alleviate the construction noise impacts. In general, 5dB (A) reduction for movable PME and 10dB (A) for stationary PME can be achieved depending on the actual design of movable noise barrier.	N/A
	• The Contractor should be responsible for designing of the movable noise barrier with due consideration given to the size of the PME and the requirement of intercepting the line of sight between the NSRs and PME. Barrier material of surface mass in excess of 7kg/m2 is recommended to achieve the predicted screening effect.	N/A
	• Exceedance of up to 5dB (A) would be predicted at the Police Training School (NSR PTS) during the examination periods. Early liaison with the principal of this impacted school is recommended to plan for the construction programme. Noisy construction activities should be avoided during the examination period as far as practicable so as to reduce the potential noise impact at the school to comply with the noise criterion of 65dB(A).	N/A
	Construction Phase	
	• All excavation works carried out close to water bodies shall be carefully controlled to avoid runoff entering watercourses, especially during periods of heavy rain.	^
	• Site runoff shall be directed towards regularly cleaned and maintained silt traps and where appropriate, oil/grease separators to minimize risk of sedimentation and pollution.	N/A
	• Suitable size / capacity silt traps and oil/grease interceptors shall be used.	N/A
	 Noise mitigation measures including the use of quiet construction plant and movable noise barriers shall be implemented to minimize disturbance to habitats adjacent to the work areas. Trees located within the works areas shall be preserved as far as practicable. 	N/A
Ecology	• Placement of equipment or stockpile in designated works areas and access routes selected on existing disturbed land to minimise disturbance to natural habitats	^
	 Construction activities shall be restricted to the work areas that would be clearly demarcated 	^
	• The work areas shall be reinstated immediately after completion of the works	^
	• Waste skips shall be provided to collect general refuse and construction wastes. The wastes would be disposed of timely and properly off-site.	N/A
	• Drainage arrangements shall include sediment traps to collect and control construction run-off	
	• Open burning on works sites is illegal, and shall be strictly enforced	^
	• Landscaping works on newly formed land shall as far as possible make use of native plant species	^

Types of Impacts	Mitigation Measures	Status
Water Quality	 Construction Runoff and Drainage Before commencing any site formation work, all sewer and drainage connections should be sealed to prevent 	
	debris, soil, sand etc. from entering public sewers/drains.Temporary ditches should be provided to facilitate run-off discharge into appropriate watercourses, via	^
	• Temporary ditches should be provided to facilitate full-off discharge into appropriate watercourses, via appropriately sized/ designed silt retention pond or similar structure. No site run-off should enter artificial ponds. Cut-off ditches should be provided for all major site clearance/ excavation works where soils would be exposed so that instances of uncontrolled run-off from exposed areas would be minimized. As well as channels, earth/ concrete bunds and/ or sand bags, as appropriate, should be deployed to direct surface run-off towards channels. Catchpits and perimeter channels should be constructed in advance of relevant site formation works.	۸
	 Boundaries of earthworks should be marked and surrounded by dykes or embankments for flood protection, as necessary. 	^
	• Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance. The design of silt removal facilities should be based on the guidelines provided in ProPECC PN 1/94. All drainage facilities and erosion and sediment control structures should be inspected monthly and maintained to ensure proper and efficient operation at all times and particularly during rainstorms.	٨
	• Silt removal facilities, channels and manholes should be maintained and the deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.	٨
	• Exposed soil surfaces should be covered.	*
	• Water pumped out from foundation excavations should be discharged into silt removal facilities.	Λ
	• If excavation cannot be avoided during rainy seasons, temporarily exposed slope/soil surfaces should be covered by a tarpaulin or other means, as far as practicable, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Interceptiong channels should be provided (e.g. along the crest/ edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC PN 1/94.	۸
	 Exposed soil areas should be minimized to reduce potential for increased siltation and contamination of runoff. 	Λ
	 Earthwork final surfaces should be well compacted and subsequent permanent work or surface protection should 	
	be immediately performed. Appropriate intercepting channels should be provided where necessary. Rainwater pumped out from trenches or excavations should be directed to silt removal facilities before discharge.	۸

Types of Impacts	Mitigation Measures	Status
1	• Open stockpiles of construction materials or construction wastes on-site of more than 50m ³ should be covered with tarpaulin or similar fabric during rainstorms	N/A
	 General Construction Activities Debris and refuse generated on-site should be collected 	^
	• Oils and fuels should only be used and stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to nearby water bodies and public drains	^
	 Sewage from Construction Workforce Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor would be responsible for appropriate disposal of waste matter and maintenance of these facilities 	^
Waste / Chemical	 Good Site Practice nomination of an approved personnel, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors 	^
	 training of site personnel in proper waste management and chemical handling procedures 	N/A
	• provision of sufficient waste disposal points and regular collection for disposal	*
	• appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers	٨
	 Waste Reduction Measures sort C&D waste from demolition and decommissioning of the existing facilities to recover recyclable portions such as metals 	^
	• segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal.	^
	• proper storage and site practices to minimise the potential for damage or contamination of construction materials	^
	• to encourage collection of aluminium cans by individual collectors, separate labelled bins shall be provided to segregate this waste from other general refuse generated by the work force.	۸
	• plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	^

Mitigation Measures	Status
 General Refuse General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' light material. 	۸
 Construction and Demolition Material A Waste Management Plan should be prepared. 	^
 In order to monitor the disposal of C&D and solid wastes at public filling facilities and landfills and to control fly-tipping, a trip-ticket system should be included. One may make reference to ETWB TCW No.31/2004 for details. 	^
 A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be proposed. 	^
 Chemical Waste If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPI as a Chemical Waste Producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such a stored separately. 	
^ Compliance of mitigation measure; X Non-compliance of mitigation measure; N/A Not Applicable; • Non-compliance but rectified by the contractor; * Recommendation was made during site audit •	
	General Refuse • General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' light material. Construction and Demolition Material • A Waste Management Plan should be prepared. • In order to monitor the disposal of C&D and solid wastes at public filling facilities and landfills and to control fly-tipping, a trip-ticket system should be included. One may make reference to ETWB TCW No.31/2004 for details. • A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be proposed. Chemical Waste • If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a Chemical Waste Producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the Chemical Waste (General) Regulation ^ Compliance of mitigation measure: X Non-compliance of mitigation measure: NA Not Applicable:

APPENDIX D EVENT ACTION PLANS

Event				Action		
		Contractor's ET		Contractor		PM
Action	1.	Identify source	1.	Take immediate action to avoid	1.	Confirm receipt of notification of failure in
Level	2.	Notify Contractor and PM		further exceedance		writing
	3.	Conduct additional noise monitoring to investigate the	2.	Submit noise mitigation	2.	Notify Contractor
		causes, if necessary		proposals to Contractor's ET and	3.	Require Contractor to propose remedial
	4.	Report the investigation results to Contractor and PM		PM		measures for the analysed noise problem
	5.	Discuss with Contractor for their formulation of	3.	Implement noise mitigation	4.	Ensure remedial measures are properly
		remedial measures if the exceedance is related to		proposals		implemented
		construction works				
	6.	Conduct additional monitoring to check mitigation				
		effectiveness, if necessary				
Limit	1.	Identify source	1.	Take immediate action to avoid	1.	Confirm receipt of notification of failure in
Level	2.	Notify Contractor and PM		further exceedance		writing
	3.	Conduct additional noise monitoring and analyse	2.	Submit proposals for remedial	2.	Notify Contractor
		Contractor's working procedures to determine possible		actions to Contractr's ET, and Pm	3.	Require Contractor to propose remedial
		cause of exceedance, if necessary		within 3 working days of		measures for the analysed noise problem
	4.	Provide interim report to Contractor and PM on the		notification	4.	Ensure remedial measures are properly
		causes and proposed action to be taken for the	3.	Implement the agreed proposals		implemented
		exceedances if exceedance is related to construction	4.	Resubmit proposals if problem	5.	If exceedance continues, consider what
		works		still not under control		protion of the work is responsible and instruc
	5.	Assess effectiveness by additional monitoring and	5.	Stop the relevant portion of		the Contractor to stop that portion of work
		report Contractor and PM, if necessary		works as determined by the PM		until the exceedance is abated
	6.	If exceedance stops, cease additional monitoring, if		until the exceedance is abated		
		any
