#### 1. <u>INTRODUCTION</u>

Under the requirements of Section 4 of Environmental Permit No EP-014/1998/A, the measures were undertaken to assure the Sok Kwu Wan Transfer Facility was operated in accordance with the permit.

This report documents the findings of environmental monitoring and audit works for the facility from April 2022 to March 2023.

Environmental monitoring for the odour, noise and water quality was performed in accordance with the EM&A Manual and the monitoring results were checked and reviewed. Full details of the above environmental monitoring tests are described in the **Section 2.** In addition, the environmental complaint handling procedures were also checked and reported in **Section 4** of this report.

#### 2. DESCRIPTION OF ENVIRONMENTAL MONITORING TESTS

**Table 1: Summary of Environmental Monitoring Parameters** 

| <u>Test</u> | <b>Location</b>            | Frequency | <u>Parameter</u> | <u>Limits</u>                              |
|-------------|----------------------------|-----------|------------------|--|
| Odour       | Site Boundary              | Monthly   | Odour            | Odour strength not exceed "Slight"         |
|             | See Map (Appendix A1)      |           |                  | odour intensity                            |
| Noise       | Nearest Sensitive Receiver | Monthly   | LAeq             | 55 dBA (07:00-23:00)                       |
|             | See Map (Appendix B1)      |           | (30min)          | 45 dBA (23:00-07:00)                       |
| Marine      | Four monitoring locations  | Weekly    | Dissolved        | Surface & Middle                           |
| Water       | and two control sites.     |           | Oxygen           | 4 mg/L except 5 mg/L for FCZ               |
|             | See Map (Appendix C1)      |           | (DO)             | or 1%-ile of baseline data for surface and |
|             |                            |           |                  | middle layer                               |
|             |                            |           |                  | Bottom                                     |
|             |                            |           |                  | 2 mg/L and or 1%-ile of baseline data for  |
|             |                            |           |                  | bottom layer                               |
|             |                            |           | Water            | 99%-ile of baseline or 130% of upstream    |
|             |                            |           | Turbidity        | control station's Turbidity at the same    |
|             |                            |           | (Turbidity)      | tide of the same day                       |
|             |                            |           | Suspended        | 99%-ile of baseline or 130% of upstream    |
|             |                            |           | Solids           | control station's SS of the same tide of   |
|             |                            |           | (SS)             | the same day                               |

#### 2.1 Odour

#### 2.1.1 Monitoring Location

The monitoring takes place at the boundary of the facility. The patrol route is shown in **Appendix A1**.

#### 2.1.2 Monitoring Frequency

The odour monitoring is conducted once (1) per month.

#### 2.1.3 <u>Monitoring Methodology</u>

The odour patrol is conducted by a sensory team, which includes a representative (1) from Independent Third-party Accredited Laboratory, one (1) from the Contractor and one (1) from the EPD. The test consists of three (3) person patrolling the site boundary and recording the location and strength of odour identifiable as arising from the facility. The odour intensity is categorized into five (5) classes:

**Table 2: Odour Intensity Classification** 

| Class    | Remarks  |
|----------|--|
| Not      | No odour perceived or an odour so weak that it cannot be readily |
| detected | characterized or described                                       |
| Slight   | Identifiable odour, slight                                       |
| Moderate | Identifiable odour, moderate                                     |
| Strong   | Identifiable odour, strong                                       |
| Extreme  | Severe odour   |

The odour patrol record is set out in Appendix A2.

#### 2.2 Noise

#### 2.2.1 Monitoring Location

Noise monitoring is carried out at the nearest Noise Sensitive Receiver (NSR) in accordance with the EM&A Manual. **Appendix B1** shows the location of this monitoring position.

#### 2.2.2 <u>Monitoring Frequency</u>

The noise monitoring is conducted once (1) per month.

#### 2.2.3 Monitoring Methodology

The noise monitoring during the Operations phase for the SKWTF was performed in accordance with the "Technical Memorandum for the Assessment of Noise from places other than Domestic, Public or Construction Sites". The monitoring requirements are summarized as follow:

- The Sound Level Meters in compliance with the IEC61672: 2002 Class 1 and 2 for carrying out the noise monitoring.
- The Sound Level Meter will be set on a tripod at a height of 1.2 m above the ground, subject to local monitoring condition.
- The battery condition will be checked to ensure the correct functioning of the meter.
- Noise monitoring  $Leq_{(30 \text{ min})}$  to be taken on a monthly basis for daytime measurements.
- Prior to and after each noise measurement, the meter will be calibrated using a Calibrator for 94.0 dB at 1000 Hz. The measurement may be accepted as valid only if the calibration level agrees to within 1.0 dB.
- The wind speed will be frequently checked with the portable wind meter.
- Site conditions and interference noise sources will be recorded.
- Noise monitoring will be cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

The Noise monitoring record is set out in **Appendix B2**.

#### 2.3 Water quality

#### 2.3.1 Monitoring Location

The number of marine water monitoring stations for Sok Kwu Wan Transfer Facility is shown in **Table 3** and **Appendix C1** shows the locations of the marine water quality monitoring stations.

Table 3: Locations of the marine water quality monitoring stations

| Facility      | Station ID                       | No. of Stations |
|---------------|----------------------------------|-----------------|
| Calr Vyyn Wan | Control Stations: SC1 & SC2      | 6               |
| Sok Kwu Wan   | Impact Stations: S1, S2, S3 & S4 | U               |

#### 2.3.2 Monitoring Methodology

The marine water quality monitoring during the Operations phase for the SKWTF was performed in accordance with the EM&A Manual. The following set out the methods of measurement to be used during the environmental monitoring.

#### Dissolved Oxygen and Turbidity

The in-situ measurements of dissolved oxygen and turbidity are carried out using an In-situ Aqua Troll 600 Multi-parameter Sonde.

Where the depth of water is less than 3m, duplicate measurements of D.O. are to be taken at one depth to obtain an average reading.

With depths between 3m and 6m, measurements will be taken at 1m below the surface and 1m above the sea bed. In each depth, duplicate readings will be taken and an average value will be calculated.

With a water depth greater than 6m, measurements will be taken at 1m below surface, the mid-depth and 1m above the sea bed. In each depth, duplicate readings will be taken and an average value will be calculated.

#### Suspended solids

The suspended solids monitoring is carried out in according to the in-house method (E-T-053) with reference to the standard method APHA 17ed 2540 D. The testing method is summarized as below:

A well-mixed sea water sample is filtered through a weighed standard glass-fiber filter and wash thoroughly with water to remove dissolved solids on the filter. The non-filterable residue retained on the filter is dried at 103 to 105°C. The increase in weight of the filter represents the suspended solids content.

#### 3 **RESULTS**

#### 3.1 **Odour**

#### 3.1.1 Summary of Number of Monitoring Events and Exceedances for Odour monitoring

**Table 4: Summary of Number of Monitoring Events and Exceedances for Odour monitoring** 

| Monitoring | Location | No. of monitoring events | No. of Exceedance |  |
|------------|----------|--------------------------|-------------------|--|
| Parameter  |          | April 2022 – March 2023  |                   |  |
|            | Point 1  | 12                       | 0                 |  |
|            | Point 2  | 12                       | 0                 |  |
| 0.1        | Point 3  | 12                       | 0                 |  |
| Odour      | Point 4  | 12                       | 0                 |  |
|            | Point 5  | 12                       | 0                 |  |
|            | Point 6  | 12                       | 0                 |  |
| Total      |          | 72                       | 0                 |  |

#### 3.1.2 Conclusion

No odour could be detected during the odour patrols. The results show compliance with the odour objectives.

Please refer to the **Appendix A2** for the odour monitoring record.

#### 3.2 Noise

3.2.1 Summary of Number of Monitoring Events and Exceedances for Noise monitoring

Table 5: Summary of Number of Monitoring Events and Exceedances for Noise monitoring

| Monitoring | Location | No. of monitoring events | No. of Exceedance |  |
|------------|----------|--------------------------|-------------------|--|
| Parameter  |          | April 2022 – March 2023  |                   |  |
| Noise      | NSR      | 13                       | 8                 |  |
| Total      |          | 13                       | 8                 |  |

#### 3.2.2 Conclusion

During the reporting period, some of noise monitoring results have exceeded the compliance objectives. According to the notes recorded by the field operator of the Independent Third-party Accredited Laboratory, the major noise source was identified from the pedestrian, the natural noise of birds and insects and the village vehicles. Noise emanated from the SKWTF was considered insignificant.

In addition, EPD site staff conducted random checking of on-site CCTV record and confirmed no operational activities were being carried out at the facility during night time. Hence, it is reasonable to believe that the night-time noise level at SKWTF was insignificant.

The noise level monitoring record taken at the NSR of SKWTF is set out in **Appendix B2.** 

#### 3.3 Water Quality

3.3.1 Summary of Number of Monitoring Events and Exceedances for Water quality monitoring

A total of 136 sets of water samples were collected in 4 sampling days during the reporting period. A summary of exceedance of dissolved oxygen, turbidity and suspended solids at SKWTF is shown in the following **Table 6**.

Table 6: Summary of exceedance of Marine Water Quality at SKWTF

| Sampling Point | Type of Exceedance |           |    |
|----------------|--------------------|-----------|----|
|                | DO                 | Turbidity | SS |
| S1             | 0                  | 0         | 0  |
| S2             | 4                  | 0         | 0  |

| S3    | 0 | 0 | 0 |
|-------|---|---|---|
| S4    | 4 | 0 | 0 |
| Total | 8 | 0 | 0 |

The laboratory analysis shows that 8 water samples exceed the limit level of dissolved oxygen.

#### 3.3.2 Conclusion

Since there is no wastewater discharged from the SKWTF and no construction activities during the reporting period, the exceedance of compliance objective for dissolved oxygen was not caused by the operation activities at SKWTF.

The water quality monitoring record is set out in **Appendix C2** 

#### 4 STATUS OF ENVIRONMENTAL COMPLAINT HANDLING

No verbal or written complaints were received during the reporting period.

#### 5 <u>CONCLUSION</u>

Based on the monitoring results during the audit period as well as a review of our observations the following can be concluded.

The environmental protection systems that are currently in use, when combined with the existing level of environmental awareness at the facility, are sufficient to meet current regulatory constraints relating to the environment.

The methods and frequency of environmental monitoring produce a data base that is adequate to assist station management in making accurate and timely decisions relating to the modification of environmental systems or operational practices if needed.

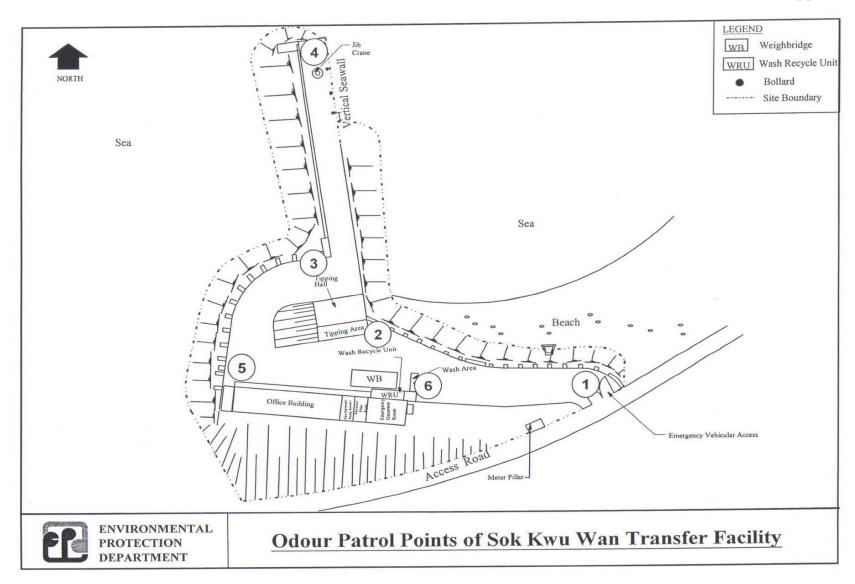

The current environmental management systems and performance provide a good foundation to develop a positive relationship with the community.
