### Reference Document/Plan

Document/Plan to be Certified/ Verified:

Monthly EM&A Report for Contaminated Mud Pits to the

East of Sha Chau - July 2020

Date of Report:

10 August 2020

Date prepared by ET:

10 August 2020

Date received by IA:

10 August 2020

### Reference EP Condition

**Environmental Permit Condition:** 

Condition 3.4 of EP-312/2008/A:

4 hard copies and 1 electronic copy of monthly EM&A Report shall be submitted to the Director within 2 weeks after the end of the reporting month. The EM&A Reports shall include a summary of all non-compliance (exceedances) of the environmental quality performance limits (Action and Limit Levels). The submissions shall be certified by the ET Leader and verified by the Independent Auditor. Additional copies of the submission shall be provided to the Director upon request by the Director.

### **ET Certification**

I hereby certify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A

Craig Reid,

Environmental Team Leader:

Date:

10/08/2020

### **IA Verification**

I hereby verify that the above referenced document/plan complies with the above referenced condition of

EP-312/2008/A

Dr Wang Wen Xiong, Independent Auditor: Date:

10/08/2020

### MONTHLY EM&A REPORT FOR JULY 2020

### 1.1 BACKGROUND

- 1.1.1 The Civil Engineering and Development Department (CEDD) is managing a number of marine disposal facilities in Hong Kong waters, including the Contaminated Mud Pits (CMPs) to the South of The Brothers (SB) and to the East of Sha Chau (ESC) for the disposal of contaminated sediment, and opensea disposal grounds located to the South of Cheung Chau (SCC), East of Tung Lung Chau (ETLC) and East of Ninepins (ENP) for the disposal of uncontaminated sediment. Two Environmental Permits (EPs), EP-312/2008/A and EP-427/2011/A, were issued by the Environmental Protection Department (EPD) to the CEDD, the Permit Holder, on 28 November 2008 and 23 December 2011 for the Dredging, Management and Capping of Contaminated Sediment Disposal Facilities at ESC CMP V and SB CMPs, respectively.
- 1.1.2 Under the requirements of the two EPs for ESC CMP V and SB CMPs, EM&A programmes which encompass water and sediment chemistry, fisheries assessment, tissue and whole body analysis, sediment toxicity and benthic recolonisation studies as set out in the EM&A Manuals are required to be implemented. EM&A programmes have been continuously carried out during the operation of the CMPs at ESC and SB. A review of the collection and analysis of such environmental data from the monitoring programme demonstrated that there had not been any adverse environmental impacts resulting from disposal activities (1) (2). The current programme will assess the impacts resulting from dredging, disposal and capping operations of CMP V as well as capping operations of SB CMPs.
- 1.1.3 The present EM&A programme under *Agreement No. CE 63/2016 (EP)* covers the dredging, disposal and capping operations of the ESC CMP V as well as the capping operations of the SB CMPs (see *Annex A* for the EM&A programme). The scheduled EM&A programme for SB CMPs was completed in December 2018. Detailed works schedule for ESC CMP V is shown in *Figure 1.1*. In July 2020, the following works were undertaken:
  - Disposal of contaminated mud at ESC CMP Vb; and
  - Capping operations at ESC CMP Vd.

ERM (2013) Final Report. Submitted under Agreement No. CE 4/2009 (EP) Environmental Monitoring and Audit for Contaminated Mud Pit at East Sha Chau. For CEDD.

<sup>(2)</sup> ERM (2017) Final Report. Submitted under Agreement No. CE 23/2012 (EP) Environmental Monitoring and Audit for Contaminated Mud Pits to the South of The Brothers and at East Sha Chau (2012 - 2017). For CEDD.

### 1.2 REPORTING PERIOD

- 1.2.1 This *Monthly EM&A Report for July 2020* covers the EM&A activities for the reporting month of July 2020.
- 1.3 DETAILS OF SAMPLING AND LABORATORY TESTING ACTIVITIES
- 1.3.1 The following monitoring activities were undertaken for ESC CMP V in July 2020:
  - Water Column Profiling of ESC CMP Vb;
  - Routine Water Quality Monitoring of ESC CMPs;
  - Pit Specific Sediment Chemistry of ESC CMP Vb; and
  - Demersal Trawling for ESC CMPs.
- 1.4 DETAILS OF OUTSTANDING SAMPLING AND/OR ANALYSIS
- 1.4.1 No outstanding sampling remained for July 2020.
- 1.4.2 The following analyses are in progress and will be presented in the corresponding quarterly report:
  - Species identification of the biota samples collected from *Demersal Trawling for ESC CMPs* in July 2020.
- 1.5 Brief Discussion of the Monitoring Results for ESC CMP V
- 1.5.1 Brief discussion of the monitoring results of the following activities for ESC CMP V is presented in this *Monthly EM&A Report for July* 2020:
  - Water Column Profiling of ESC CMP Vb;
  - Routine Water Quality Monitoring of ESC CMPs; and
  - *Pit Specific Sediment Chemistry of ESC CMP Vd.*

### 1.5.2 Water Column Profiling of ESC CMP Vb - July 2020

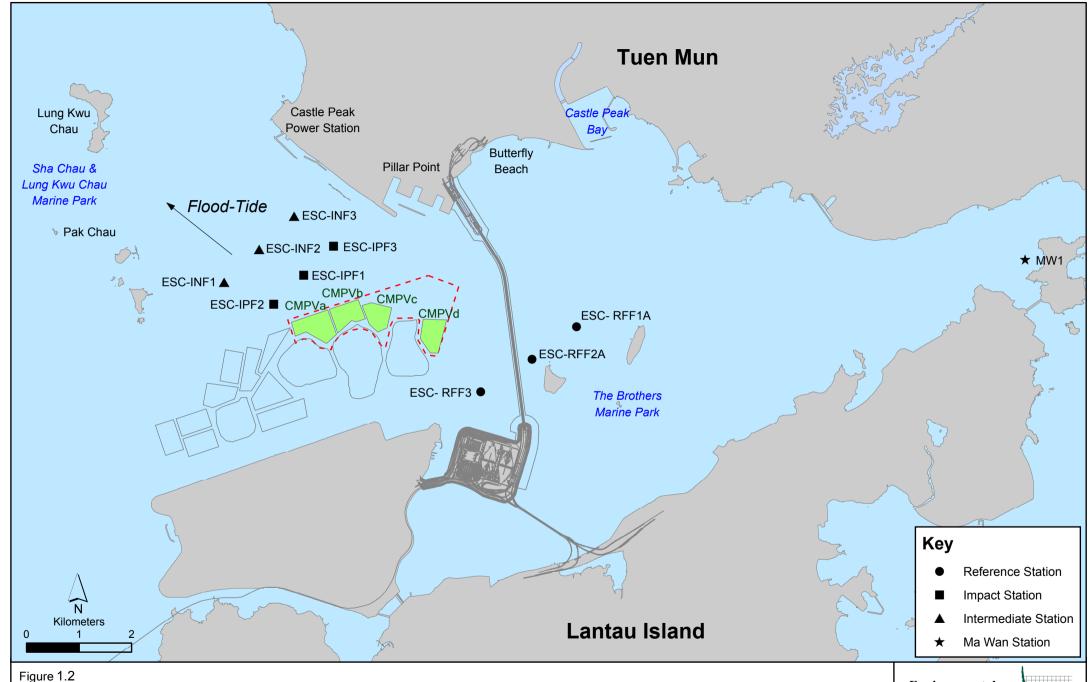

1.5.3 Water Column Profiling was undertaken at a total of two sampling stations (Upstream and Downstream stations) on 8 July 2020. The monitoring results have been assessed for compliance with the Water Quality Objectives (WQOs) set by Environmental Protection Department (EPD). This consists of a review of the EPD routine water quality monitoring data for the wet season period (April to October) of 2009 - 2018 from stations in the Northwestern Water Control Zone (WCZ), where the ESC CMPs are located (1). For Salinity, the averaged value obtained from the Reference (Upstream) station was used for the basis as the WQO. Levels of Dissolved Oxygen (DO) and Turbidity were also assessed for compliance with the Action and Limit Levels (see Table B1 of Annex B for details).

### In-situ Measurements

1.5.4 Analyses of results for July 2020 indicated that levels of Salinity, pH and DO complied with the WQOs at both Downstream and Upstream stations (*Table B2* of *Annex B*). Levels of DO and Turbidity at all stations complied with the Action and Limit Levels (*Tables B1* and *B2* of *Annex B*).

Laboratory Measurements for Suspended Solids (SS)

- 1.5.5 Analyses of results July 2020 indicated that the SS levels at both Downstream and Upstream stations complied with the WQO and the Action and Limit Levels (*Tables B1* and *B2* of *Annex B*).
- 1.5.6 Overall, the monitoring results indicated that the mud disposal operation at ESC CMP Vb did not appear to cause any deterioration in water quality during this reporting period.
- 1.5.7 Routine Water Quality Monitoring of ESC CMPs July 2020
- 1.5.8 Routine Water Quality Monitoring of ESC CMPs was undertaken on 10 July 2020. The monitoring results have been assessed for compliance with the WQOs (see Section 1.5.3 for details). The monitoring results are shown in Tables B3 and B4 of Annex B and Figures 1 10 of Annex C. A total of ten (10) monitoring stations were sampled in July 2020 as shown in Figure 1.2.

Routine & Capping Water Quality Sampling Stations (Flood-Tide) for ESC CMPs

### In-situ Measurements

- 1.5.9 Graphical presentation of the monitoring results (Temperature, DO, pH, Salinity and Turbidity) is shown in *Figures 1 6* of *Annex C*. Analyses of results for July 2020 indicated that the levels of pH, Salinity and DO complied with the WQOs at most stations in July 2020, except higher levels of salinity were recorded in Ma Wan station. The higher Salinities recorded at Ma Wan station are likely to be caused by the larger separation distance to Pearl River mouth, which release a large amount of freshwater runoff in the area during flooding, when compared to the Reference stations.
- 1.5.10 The levels of DO and Turbidity complied with the Action and Limit Levels at all stations (*Table B3* of *Annex B*; *Figures 3* and 6 of *Annex C*).
- 1.5.11 Overall, *in-situ* measurement results of the *Routine Water Quality Monitoring* indicated that the disposal operation at ESC CMP Vb did not appear to cause any unacceptable impacts in water quality in July 2020.

### Laboratory Measurements

- 1.5.12 Laboratory analysis of July 2020 results indicated that concentrations of Arsenic, Chromium, Copper, Lead, Nickel and Zinc were detected in July 2020 samples at most stations and the concentrations of most metals and metalloids were similar amongst the stations, except the concentrations of Copper were higher at Impact and Intermediate stations, and the concentrations of Lead and Zinc were higher at Ma Wan Station when compared to other stations (*Table B4* of *Annex B*; *Figure 7* of *Annex C*).
- 1.5.13 For nutrients, concentrations of Total Inorganic Nitrogen (TIN) at all stations were higher than the WQO (0.5 mg/L) (*Table B4* of *Annex B*; *Figure 8* of *Annex C*). It should be noted that due to the effect of the Pearl River, the North Western WCZ has historically experienced higher levels of TIN (1). Therefore, the exceedances of TIN WQO at these stations are unlikely to be caused by the disposal operation at ESC CMPs. The concentrations of Ammonia Nitrogen (NH<sub>3</sub>-N) and 5-day Biochemical Oxygen Demand (BOD<sub>5</sub>) were higher at Ma Wan station in July 2020 (*Table B4* of *Annex B*; *Figure 8 and 9* of *Annex C*).
- 1.5.14 Analyses of results for July 2020 indicated that the SS levels at all stations complied with the WQO, and the SS levels at all stations complied with the Action and Limit Levels (*Tables B1 and B4* of *Annex B*; *Figure 10* of *Annex C*). There is no evidence indicating any unacceptable environmental impacts to nearby water sensitive receivers as a result of the mud disposal operations at ESC CMPs in July 2020.

1.5.15 Overall, results of the Routine Water Quality Monitoring indicated that the disposal operation at ESC CMPs did not appear to cause any unacceptable deterioration in water quality in July 2020. Detailed statistical analysis will be presented in the Quarterly Report to investigate any spatial and temporal trends of potential concern.

### 1.5.16 Pit Specific Sediment Chemistry of ESC CMP Vb - July 2020

- 1.5.17 Monitoring locations for *Pit Specific Sediment Chemistry for ESC CMP Vb* are shown in *Figure 1.3*. A total of six (6) monitoring stations were sampled on 7 July 2020.
- 1.5.18 The concentrations of most inorganic contaminants were lower than the Lower Chemical Exceedance Levels (LCELs) at most stations, except for Arsenic (*Figures 11 and 12* of *Annex C*). The concentrations of Arsenic were higher than the LCEL at Pit-Edge station ESC-NECA and Active-Pit station ESC-NPCB.
- 1.5.19 Whilst the average concentration of Arsenic in the Earth's crust is generally ~2mg/kg, significantly higher Arsenic concentrations (median = 14 mg/kg) have been recorded in Hong Kong's onshore sediments (1). It is presumed that the natural concentrations of Arsenic are similar in onshore and offshore sediments (2), and relatively high Arsenic levels may thus occur throughout Hong Kong. Therefore, the LECL exceedances of Arsenic are unlikely to be caused by the disposal operations at ESC CMP Vb but rather as a result of naturally occurring deposits.
- 1.5.20 For organic contaminants, the concentrations of Total Organic Carbon (TOC) were higher at Active-Pit stations ESC-NPCA and ESC-NPCB in July 2020 (*Figure 13 of Annex C*). The concentrations of Low Molecular Weight and High Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs) were lower than the LCELs at all stations (*Figure 14 of Annex C*). The concentrations of Tributyltin (TBT), Total Polychlorinated Biphenyls (PCBs), Total dichloro-diphenyl-trichloroethane (DDT) and 4,4'-dichlorodiphenyldichloroethylene (DDE) were below the limit of reporting at all stations in July 2020.
- 1.5.21 Overall, there is no evidence indicating any unacceptable environmental impacts to sediment quality as a result of the contaminated mud disposal operations at ESC CMP Vb in July 2020. Statistical analysis will be undertaken and presented in the corresponding quarterly report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.

Pit Specific Sediment Quality Monitoring Stations for CMPV

### 1.6 ACTIVITIES SCHEDULED FOR THE NEXT MONTH

- 1.6.1 The following monitoring activities will be conducted in the next monthly period of August 2020 for ESC CMP V (see *Annex A* for the sampling schedule <sup>(1)</sup>):
  - Water Column Profiling of ESC CMP Vb;
  - Routine Water Quality Monitoring of ESC CMPs;
  - Pit Specific Sediment Chemistry of ESC CMP Vb;
  - *Cumulative Impact Sediment Chemistry of ESC CMP V;*
  - *Sediment Toxicity Tests of ESC CMP V;*
  - Demersal Trawling for ESC CMPs; and
  - Water Quality Monitoring During Capping of ESC CMPs.

### 1.7 STUDY PROGRAMME

1.7.1 A summary of the Study Programme is presented in *Annex D*.

<sup>(1)</sup> The scheduled EM&A Programme for SB CMPs was completed in December 2018.

# Water Quality Monitoring Results

Table B1 Action and Limit Levels of Water Quality for Dredging, Disposal and Capping Activities at ESC CMP V

| Parameter                                 | Action Level   | Limit Level  |
|---|--|--|
| Dissolved Oxygen (DO) (1)                 | Surface and Mid-depth (2)                                      | Surface and Mid-depth (2)                                      |
|   | 5%-ile of baseline data for surface and                        | 1%-ile of baseline data for surface and                        |
|   | middle layer = $3.76 \text{ mg L}^{-1}$                        | middle layer = 3.11 mg $L^{-1}$ (3)                            |
|   | and  | and  |
|   | Significantly less than the reference                          | Significantly less than the reference                          |
|   | stations mean DO (at the same tide of                          | stations mean DO (at the same tide of                          |
|   | the same day)  | the same day)  |
|   | Bottom   | Bottom   |
|   | 5%-ile of baseline data for bottom                             | The average of the impact station                              |
|   | layers = <b>2.96 mg L</b> -1                                   | readings are <2 mg/L-1   |
|   | and  | and  |
|   | Significantly less than the reference                          | Significantly less than the reference                          |
|   | stations mean DO (at the same tide of                          | stations mean DO (at the same tide of                          |
|   | the same day)  | the same day)  |
| Depth-averaged Suspended                  | 95%-ile of baseline data for depth                             | 99%-ile of baseline data for depth                             |
| Solids (SS) (4) (5)                       | average = 37.88 mg L-1   | average = <b>61.92 mg L</b> -1                                 |
|   | and  | 1  |
|   | 120% of control station's SS at the same                       | and 130% of control station's SS at the same                   |
|   | tide of the same day   | tide of the same day   |
|   | tide of the same day   | tide of the same day   |
| Depth-averaged Turbidity<br>(Tby) (4) (5) | 95%-ile of baseline data = <b>28.14 NTU</b>                    | 99%-ile of baseline data = <b>38.32 NTU</b>                    |
|   | and  | and  |
|   | 120% of control station's Tby at the same tide of the same day | 130% of control station's Tby at the same tide of the same day |

### Notes:

- (1) For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- (2) The Action and Limit Levels for DO for Surface & Middle layers were calculated from the combined pool of baseline surface layer data and baseline middle layer data.
- (3) Given the Action Level for DO for Surface & Middle layers has already been lower than 4 mg L<sup>-1</sup>, it is proposed to set the Limit Level at 3.11 mg L<sup>-1</sup> which is the first percentile of the baseline data.
- (4) "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
- (5) For turbidity and SS, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

Table B2 Water Column Profiling Results for ESC CMP Vb in July 2020

| Stations              | Temp  | Salinity     | Turbidity | Dissolved | l Oxygen | pН      | Suspended<br>Solids |
|-----------------------|-------|--------------|-----------|-----------|----------|---------|---------------------|
|                       | (°C)  | (ppt)        | (NTU)     | (%)       | (mg L-1) |         | (mg L-1)            |
| WCP 1<br>(Downstream) | 28.76 | 17.21        | 5.07      | 90.43     | 6.35     | 7.91    | 5.73                |
| WCP 2<br>(Upstream)   | 28.20 | 19.08        | 9.71      | 82.83     | 5.81     | 7.90    | 8.95                |
| WQO (Wet<br>Season)   | N/A   | 17.17-20.98# | N/A       | N/A       | >4       | 6.5-8.5 | 10.8                |

### Note:

Cell shaded yellow / red indicate value exceeding the Action/Limit levels.

Cell shaded grey indicate value exceeding the WQO.

Table B3 In-situ Monitoring Results for Routine Water Quality Monitoring of ESC CMPs in July 2020

| Sampling | Stations           | Temp  | Salinity      | Turbidity | Dissolve | d Oxygen | pН       |
|----------|--------------------|-------|---------------|-----------|----------|----------|----------|
| Period   | Stations           | (°C)  | (ppt)         | (NTU)     | (%)      | (mg L-1) | (mg L-1) |
| July     | RFE (Reference)    | 28.19 | 19.08         | 4.73      | 85.80    | 6.02     | 7.90     |
| 2020     | IPE (Impact)       | 27.88 | 20.16         | 4.66      | 82.18    | 5.76     | 7.87     |
|          | INE (Intermediate) | 28.12 | 19.13         | 3.96      | 82.60    | 5.80     | 7.88     |
|          | Ma Wan             | 26.28 | 25.82         | 2.67      | 72.05    | 5.03     | 7.69     |
|          | WQO                | N/A   | 17.18- 20.99# | N/A       | N/A      | >4       | 6.5-8.5  |

### Notes:

Cell shaded yellow / red indicate value exceeding the  $\mbox{\sc Action/Limit}$  levels.

Cell shaded grey indicate value higher than the WQO.

WQO of TIN: 0.5 mg/L

Wet Season WQO of SS: 10.8 mg/L

### Notes:

Cell shaded yellow / red indicate value exceeding the Action/Limit levels.

Cell shaded grey indicate value higher than the WQO.

<sup>#</sup>Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.

<sup>\*</sup>Not exceeding 10% of natural ambient level which is the result obtained from the Reference Station.

<sup>&</sup>lt;LOR indicates the concentrations of metals and metalloids are below the limit of reporting
