Attention: Mr. C. L. Lau

Dear Mr. Lau,

**Re: Contract No. CV/2009/02
Handling of Surplus Public Fill – Tuen Mun Area 38 Fill Bank
Quarterly EM&A Summary Report No. 9 (December 2011 to February 2012)**

Reference is made to your submission of the draft Quarterly EM&A Summary Report for December 2011 to February 2012 for the captioned by E-mail on 15 March 2012.

We are pleased to inform you that we have no comment on the quarterly report.

Thank you very much for your attention and please do not hesitate to contact our Simon Lam or the undersigned should you have any queries.

Yours faithfully,

Tony Cheng
Independent Environmental Checker

EXECUTIVE SUMMARY

This is the ninth Quarterly Environmental Monitoring and Audit (EM&A) Summary Report prepared by ETS-Testconsult Ltd (ET) for the "Contract No. CV/2009/02 Handling of Surplus Public Fill – Tuen Mun Area 38 Fill Bank" (The Project).

This report documents the findings of EM&A Works conducted during the operation phase of Fill Bank at Tuen Mun Area 38 from December 2011 to February 2012.

Site Activities

As informed by the Contractor, the site activities in this reporting quarter were as below:

- *Removal & delivery of public fill stockpiled material to Mainland*
- *Operation of the road water lorries and the road sweeper*
- *Maintenance of haul road within fill bank area*
- *Operation of the Tipping Halls (B1, B2 & B3)*

Environmental Monitoring Works

Air Monitoring

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in this quarter.

Marine Water Quality Monitoring

According to the summary of marine water monitoring results, no exceedance of Action and Limit Level was recorded in this quarter.

Noise Monitoring

No exceedance of Action and Limit levels for noise monitoring was recorded in this quarter.

Environmental Complaints, Notification of summons and successful prosecutions

No complaint, no notification of summons and prosecutions with respect to environmental issues was received in this quarter.

1.0 INTRODUCTION

China Harbour – China State Joint Venture (CHCSJV) appointed Environmental Team (ET) of ETS-Testconsult Limited (ETL) to undertake the Environmental Monitoring and Audit (EM&A) for the "Contract No: CV/2009/02 – Handling of Surplus Public Fill – Tuen Mun Area 38 Fill Bank" (The Project).

In accordance with the Condition 5 of Part C of Environmental Permit (No.: EP-210/2005/A) (the EP), an EM&A programme as set out in the Project Profile should be implemented. The EM&A programme requires environmental monitoring for air quality, water quality and environmental site inspections for air quality, water quality, landscape and visual, and waste management.

Baseline monitoring was completed in May 2003 by Stanger Asia Ltd. Action and Limit Levels were established for air and water quality parameters based on the baseline monitoring results.

This quarterly report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at Tuen Mun Area 38 from December 2011 to February 2012.

2.0 PROJECT INFORMATION

2.1 Project Activities in this Reporting Quarter

Details of project activities are shown in Appendix G.

2.2 Project Organization and Management Structure

The organization chart and lines of communication with respect to the on-site environmental management and monitoring program are shown in Appendix A.

2.3 Contact Details of Key Personnel

The key personnel contact names and telephone numbers are shown in Table 2.1.

Table 2.1 Contact Details of Key Personnel

Organization	Name of Key Staff	Project Role	Tel. No.	Fax No.
CEDD	Mr. Lawrence NG Mr. CHU Tun Hon Mr. Wong Wa Kei Mr. LIU Chi Yuen	Engineer's Representative	2760 5835	2714 0113
IEC (Materialab) *	Mr Joseph POON	IEC	2450 8238	2450 6138
IEC (Environ) *	Mr Tony Cheng	IEC	3743 0722	3548 6988
Contractor (CHCSJV)	Mr. Wah Fung Lok	Contractor's Agent	9772 7055	2243 4089
ET (ETL)	Mr C. L. Lau	ET Leader	2946 7791	2695 3944

Remark (*): Materialab was being as IEC of this Project until 31 January 2010 and was replaced by Environ from 01 February 2010.

3.0 SUMMARY OF EM&A REQUIREMENTS

3.1 EM&A Programme

The EM&A programme required environmental monitoring for air quality, marine water quality and environmental site inspections for air quality, marine water quality, landscape and visual, and waste management. The EM&A requirements for each parameter described in the following sections include:

- All monitoring parameters;
- Monitoring schedules for the reporting month and forthcoming months;
- Action and Limit levels for all environmental parameters;
- Event/Action Plans;
- Environmental mitigation measures, as recommended in the Project EIA study final report; and
- Environmental requirements in contract documents.

The advice on implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 5 of the Report.

3.2 Monitoring Stations and Parameters

The EM&A Manual designates several locations to monitor environmental impacts in terms of air quality, noise and water quality due to the Project. The description and detailed locations of monitoring stations for air quality, noise and marine water quality are shown in Figures 1, 2 and 3 and relevant sections of this Report.

3.3 Monitoring Methodology and Calibration Details

All monitoring works were conducted and monitoring equipment was calibrated in according with the EM&A Manual.

3.4 Environmental Quality Performance Limits (Action/Limit Levels)

The environmental quality performance limits, i.e. Action/Limit Levels (AL Levels) were derived from the baseline monitoring results. If the measured environmental quality parameters exceed the AL Levels, the respective action plan will be implemented. The AL Levels for each monitoring parameter are given in Appendix E. The event action plan is given in Appendix F.

3.5 Environmental Mitigation Measures

Relevant mitigation measures were recommended in the EM&A Manual for the Contractor to implement. A list of mitigation measures is given in Appendix H.

4.0 MONITORING RESULTS

4.1 Air Quality

In accordance with the EM&A Manual, 1-hr and 24-hr TSP air quality monitoring are to be conducted three times and one time per six days correspondingly. In the reporting quarter, no exceedances of Action and Limit levels were recorded for 1-hr and 24-hr TSP monitoring. The monitoring trend of air quality during the reporting quarter are given in Appendix B.

Major dust sources in the Fill Bank were dump truck traffic and hauling activities.

Table 4.1 presents the number of exceedances recorded in each month of the reporting quarter. The number of monitoring event included regular monitoring events and additional ones.

Table 4.1 Summary of Number of Exceedances for 1-hr and 24-hr TSP Monitoring

Monitoring Parameter	Level of Exceedance	December 2011	January 2012	February 2012
24-hr TSP	No of monitoring events	5	6	4
	Action Level	0	0	0
	Limit Level	0	0	0
1-hr TSP	No of monitoring events	16	16	14
	Action Level	0	0	0
	Limit Level	0	0	0

4.2 Noise

Since Lands Dept did not approve to carry out noise monitoring at their own area where the noise monitoring stations TM-N1 and TM-N2 located due to the security, noise monitoring carried out at two noise monitoring stations TM-RN1 and TM-RN2 (refer to the figure attached) temporarily from 18 December 2007 and before Lands Department's approval.

No exceedance was recorded in this reporting quarter.

4.3 Marine Water Quality

In accordance with the Project Profile, impact marine water quality monitoring was conducted at two control monitoring stations (TM-FC1 and TM-FC2) and two impact monitoring stations (TM-FM1 and TM-FM2) in this quarter.

Impact marine water quality monitoring was conducted three days per week. Measurements were taken at both mid-ebb and mid-flood tides at three depths (i.e. 1m below surface, mid depth and 1m above seabed). The AL Levels are included in Appendix E.

No exceedance of all marine water quality monitoring parameters was recorded in this quarter.

Table 4.2 presents the total number of marine water quality exceedances in the reporting quarter. The trend of marine water quality in the past three months is depicted in Appendix D.

Table 4.2 Total Number of Marine Water Quality Exceedances in this quarter

Parameter	Exceedance Level	December 2011	January 2012	February 2012
<i>Number of monitoring days</i>		13	12	12
<i>Dissolved Oxygen, DO (S&M)</i>	<i>Action</i>	0	0	0
	<i>Limit</i>	0	0	0
<i>Dissolved Oxygen, DO (B)</i>	<i>Action</i>	0	0	0
	<i>Limit</i>	0	0	0
<i>Turbidity</i>	<i>Action</i>	0	0	0
	<i>Limit</i>	0	0	0
<i>Suspended Solids, SS</i>	<i>Action</i>	0	0	0
	<i>Limit</i>	0	0	0

A comparison between the quarterly mean/median of SS and the 1.3 times of the baseline mean was made for each tide at each station. The statistical analysis results are given in Appendix I. Monitoring stations with significant difference ($p < 0.05$) is summarized in Table 4.3.

Table 4.3 Summary of Statistically Significant Results of SS

<i>Monitoring Station</i>		<i>Significant difference?</i>	
		<i>Mid-flood</i>	<i>Mid-ebb</i>
<i>Designated Control Station</i>	<i>FC1</i>	X	X
	<i>FC2</i>	X	X
<i>Designated Monitoring Station</i>	<i>FM1</i>	X	X
	<i>FM2</i>	X	X

5.0 INSPECTION RESULTS

5.1 Implementation Status of Environmental Mitigation Measures

ET conducted weekly site inspections to monitor the Contractor's implementation of environmental mitigation measures.

Air quality was the major environmental issue in the reporting quarter. The Contractor generally implemented most of the environmental mitigation measures in the reporting quarter. Dump truck traffic was the major dust source in the Fill Bank. Generally, the Contractor implemented adequate dust mitigation measures in the reporting quarter including dampening of haul roads, water spraying on the truckloads, during loading and unloading of material and for crushing plant, operation of automatic wheel washing facilities, dampening of fill material prior to handling or stockpiling, etc.

The major noise source was dump truck traffic in the Fill Bank. All site equipment and machinery were well maintained and no noise nuisance was observed during operating.

Drainage channels and wastewater treatment facilities were found maintained in good condition for merit function. The Contractor arranged site workers to clean up the silt and mud regularly.

Although there were a few observations regarding improper handling of oil drums and chemical containers, such as lack of drip tray and accumulated of stagnant water in the drip tray, the Contractor rectified most of these problems. Besides, the Contractor should provide tarpaulin sheets before repairing and maintenance works and also carry out proper cleaning activities immediately after such works.

Overall site area was found tidy and clean. The Contractor was reminded to collect and dispose of the general refuse and other C&D waste in a timely manner.

5.2 Status of Environmental Licensing and Permitting

The status of licences and permits is summarized in Table 5.1.

Table 5.1 Summary of environmental licensing and permit status

Description	Permit No.	Valid Period		Section
		From	To	
Amended Environmental Permit	EP-210/2005/A	15/12/08	---	(Valid)
Chemical Waste Producer	5296-421-C3577-03	18/12/09	---	Spent Lubricating Oil, Spent Flammable Liquid, Spent Battery and Surplus Paint
Effluent Discharge License	WT00005978-2010	10/05/10	31/05/15	Discharge of Industrial Trade Effluent arising from public fill reception facilities, screen and sedimentation tank
Marine Dumping Permit	EP/MD/12-064	01/10/11	31/12/11	Approval for dumping 3,000,000 tons (approximately equal to 1,666,666 cu.m. bulked quantity) of Public Fill (Reclamation Materials) from Tseung Kwan O Area 137 Fill Bank, Tuen Mun Area 38 Fill Bank, Barging Point at Former Kai Tak Airport and MTR XRL Contracts 803A to D to designated dumping area at Guanghaiwan of Taishan
Marine Dumping Permit	EP/MD/12-103	01/01/12	31/03/12	Approval for dumping 3,200,000 tons (approximately equal to 1,777,777 cu.m. bulked quantity) of Public Fill (Reclamation Materials) from Tseung Kwan O Area 137 Fill Bank, Tuen Mun Area 38 Fill Bank, Barging Point at Former Kai Tak Airport and MTR XRL Contracts 803A to D to designated dumping area at Guanghaiwan of Taishan

5.3 Advice on Solids and Liquid Waste Management Status

Table 5.2 summarizes data on offsite waste disposal in the quarter.

Table 5.2 Estimated Offsite Waste Disposal in the Reporting Quarter

Waste Type	Examples	December 2011	January 2012	February 2012
C&D Waste	Domestic waste (site) collected in garbage bins and general refuse (m ³)	0	0	0
Chemical Waste	Waste oil (L) / Chemical Waste (kg)	640kg	0	0

6.0 NON-COMPLIANCE OF THE ENVIRONMENTAL QUALITY PERFORMANCE LIMITS

6.1 Summary of Non-compliance

In this reporting quarter, no exceedance of Action and Limit Level of marine water quality, noise, 1-hr and 24-hr TSP monitoring results was recorded.

6.2 Review of the Reasons for and the Implications of Non-compliance

Since there were no exceedance recorded in this monitoring quarter, the review of the reasons for the non-compliance was not required.

6.3 Summary of Actions Taken

Since there were no exceedance recorded in this monitoring quarter, no further action was required.

6.4 Summary of Environmental Complaint, Notifications of Summons and Successful Prosecutions Handling

No complaint, notification of summons and successful prosecutions was received in this quarter.

A summary of environmental complaints and prosecutions was given in Table 6.1.

Table 6.1 Summary of Environmental Complaints and Prosecutions

<i>Period</i>	<i>Complaints logged</i>	<i>Summon served</i>	<i>Successful Prosecution</i>
<i>December 2011</i>	<i>0</i>	<i>0</i>	<i>0</i>
<i>January 2012</i>	<i>0</i>	<i>0</i>	<i>0</i>
<i>February 2012</i>	<i>0</i>	<i>0</i>	<i>0</i>
<i>Cumulative</i>	<i>0</i>	<i>0</i>	<i>0</i>

7.0 COMMENTS, CONCLUSIONS AND RECOMMENDATION

Major activity in the Fill Bank was the import and dumping of fill materials in this quarter. Air quality was the major environmental issue in the Fill Bank. Generally, the Contractor implemented most of the mitigation measures to minimize the dust impact.

No exceedance of Action and Limit Level of 1-hr and 24-hr TSP, noise and marine water quality monitoring was recorded in this reporting quarter.

The noise level measured at the monitoring station complied with the Limit Level. No complaint was received regarding noise issue in this quarter.

No complaint, notification of summons and prosecutions with respect to environmental issues was received in this quarter.

According to the ET weekly site inspection and IEC site audits carried out in this quarter, it was indicated that site practices of the Contractor were generally undertaken in an environmentally acceptable manner and the overall site environmental performance was up to standard.

According to the environmental site inspections performed in the reporting quarter, the following recommendations were provided:

Air Quality

- Ensure the frequency of water spraying on haul roads, unloading areas and stockpiles to be sufficient to suppress the dust sources;
- Conduct road sweeping on the public road and the main haul roads outside and near the site egress by the road sweeper;
- Undertake water spraying on stockpiling area;
- Provide proper maintenance for the powered mechanical equipment and barges to avoid emission of dark smoke;
- Provide water spraying onto the truckloads during inspection of fill material;
- Erect adequate speed limit signs to advise the truck drivers of the speed limit;
- Implement the dust mitigation measures for the site activities; and
- Ensure all vehicles to be washed before leaving the site egress through the provision, operation and maintenance of automatic wheel washing facilities.

Noise

- Conduct noisy activities at a farther location from the NSRs.

Water Quality

- Maintain the drainage system regularly;
- Operate the cleaning vessel regularly; and
- Remove the stagnant water or provide pesticide for the stagnant water in the permanent desilting chambers, if any.

Chemical and Waste Management

- Remove waste materials from the site to avoid accumulation regularly;
- Handle and store chemical wastes properly;
- Remove unwanted material in the existing stockpiles and avoid further dumping of such material;
- Provide and maintain sufficient drip trays for diesel drums, chemical containers, chemical waste storage drums and diesel operated generator set;
- Maintain good housekeeping at the workshop area;
- Ensure sufficient tarpaulin sheets are provided to cover drip trays; and
- Avoid soil being polluted during oil filling and equipment maintenance; hence, properly remove and store the contaminated soil, if any.

Landscape and Visual

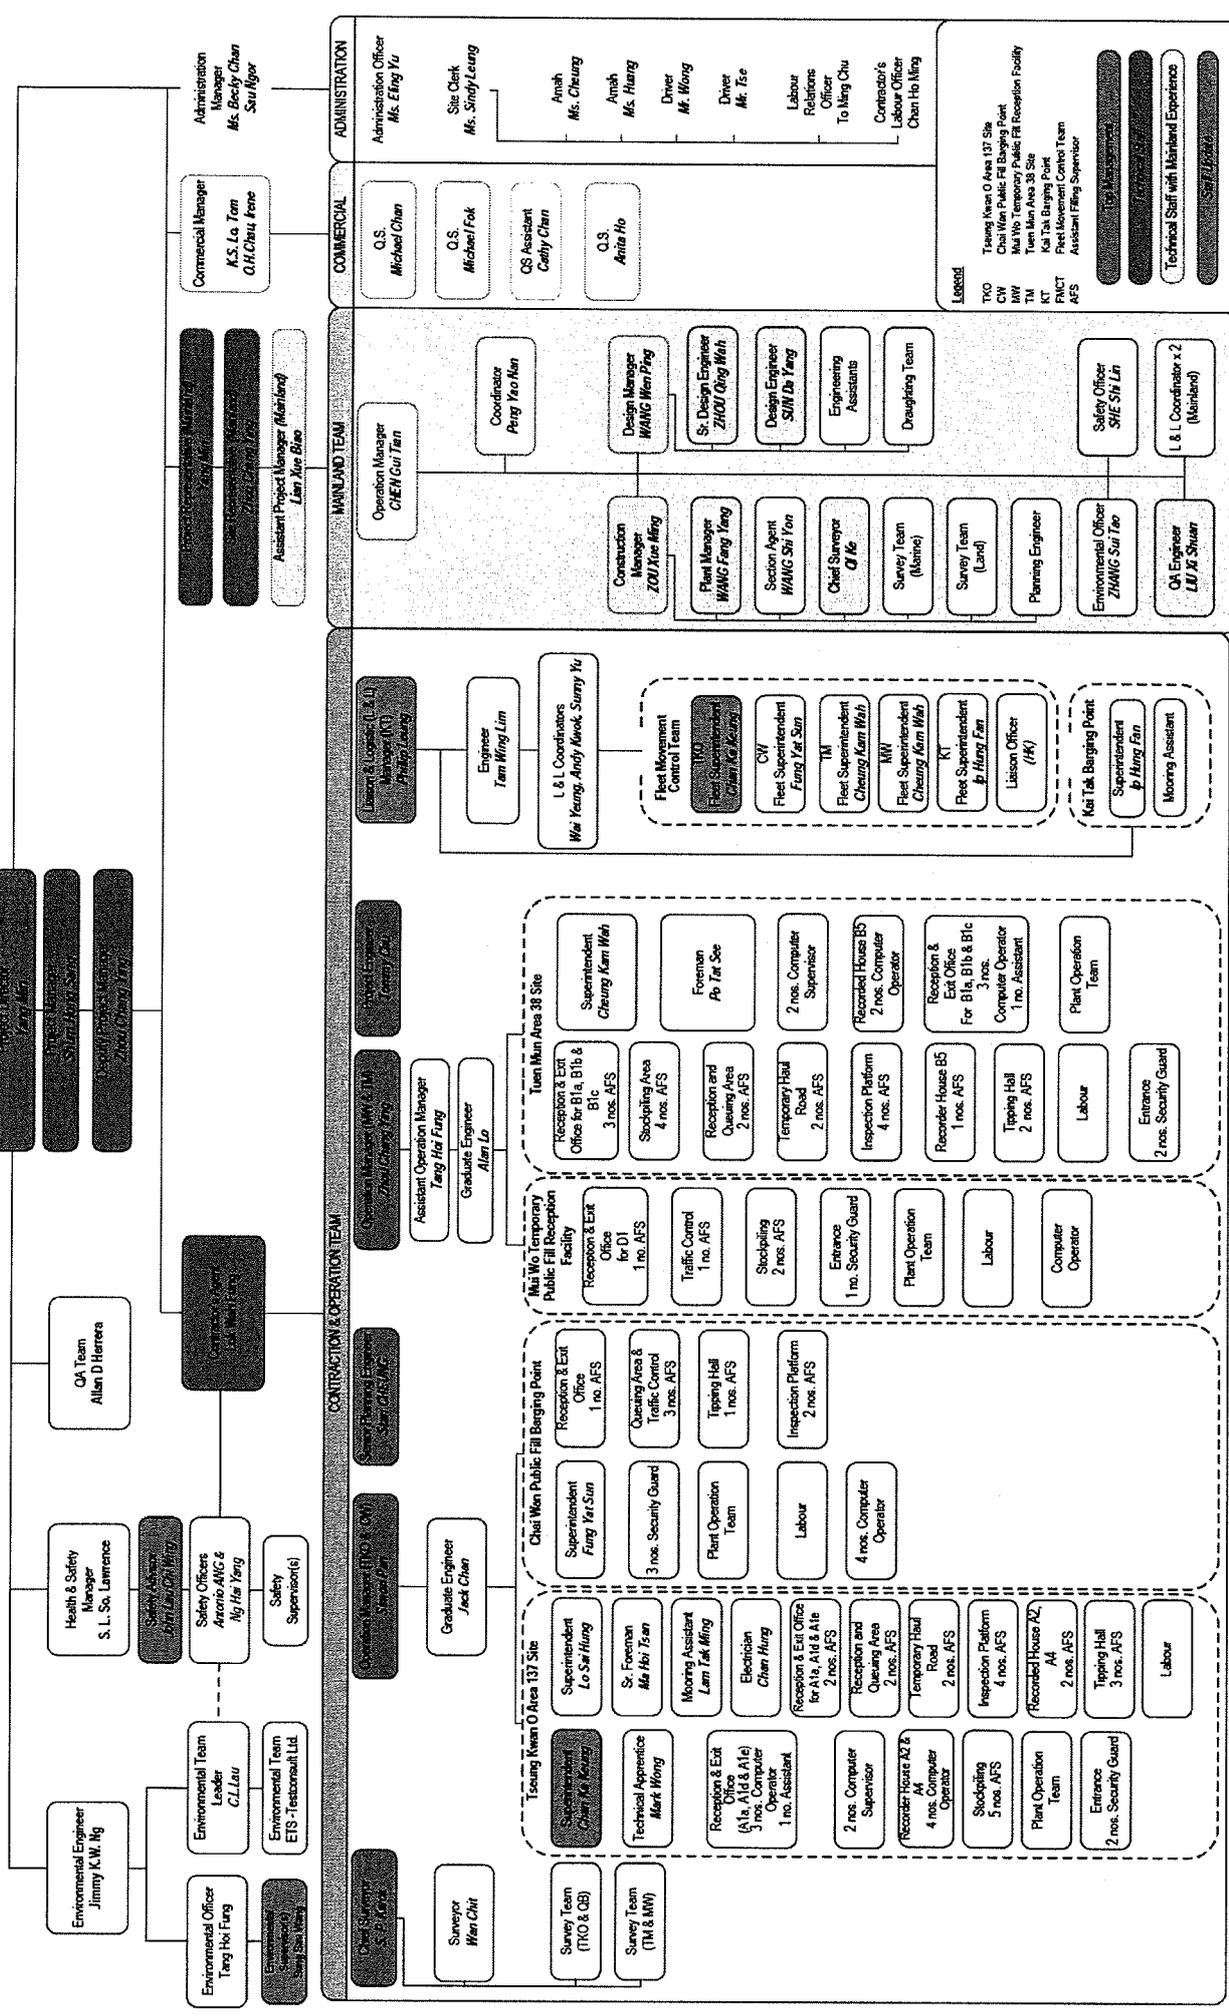

- Provide hydroseeding on the exposed slopes, on which the final profile has been formed;
- Erect all the site hoarding/chaining fences in accordance with agreed design at proper location; and
- Maintain the hydroseeding slopes in accordance with the Landscape Plan.

Appendix H

Implementation Schedule of Environmental Mitigation Measures (EMIS)

Environmental Mitigation Implementation Schedule

	Location	Implementation Status		
		Implemented	Partially implemented	Not implemented
				Not Applicable
Air Quality				
▪ Dust control / mitigation measures shall be provided to prevent dust nuisance.	All areas	√		
▪ Water sprays shall be provided and used to dampen materials.	All areas	√		
▪ All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition.	All areas	√		
▪ Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin.	All areas	√		
▪ Unpaved areas should be watered regularly to avoid dust generation.	Site Egress	√		
▪ The designated site main haul road shall be paved or regular watering.	All haul roads	√		
▪ The public road around the site entrance should be kept clean and free from dust.	All areas	√		
▪ Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site.	Site Egress	√		
▪ Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.	Site Egress	√		
▪ The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water.	All areas	√		
▪ Vehicle and equipment should be switched off while not in use.	All areas	√		
▪ All plant and equipment should be well maintained e.g. without black smoke emission.	All areas	√		
▪ Open burning should be prohibited.	All areas	√		
Noise Impact				
▪ The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted.	All areas	√		
▪ Only well maintained plant should be operated on-site and plant should be serviced regularly during the site works.	All areas	√		
▪ Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.	All areas	√		
▪ Air compressors and hand held breakers should have noise labels.	All areas	√		
▪ Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.	All areas	√		
▪ Noisy equipment and mobile plant shall always be site away from NSRs.	All areas	√

Water Quality				
<ul style="list-style-type: none"> The existing / realigned intercepting channels and the sand / silt removal facilities shall be used and maintained. Temporary intercepting drains should be used at the stockpiling area to divert polluted stormwater to the intercepting channels. Earth bunds and sand bay barriers shall be used to assist the diversion of polluted stormwater to the intercepting channels. The stormwater intercepting system shall be effective to collect of runoff and remove suspended solids before discharge. The material shall be properly covered to prevent washed away especially before rainstorm. Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcore to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities. Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. A waste collection vessel shall be deployed to remove floating debris. 	All areas	√	√	
	All areas	√

Remark: √ = Implemented, ▽ = Partially Implemented X = Not Implemented N/A = Not Applicable

Environmental Protection Measures	Location	Implementation Status			
		Implemented	Partially implemented	Not implemented	Not Applicable
• Chemical waste should be transported by a registered chemical waste collector to a facility licensed to receive chemical waste.	All areas	√			
• All generators, fuel and oil storage should be within bundle areas.	All areas	√			
• Oil leakage from machinery, vehicle and plant should be prevented.	All areas		√		
• In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed.	All areas	√			
• The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place.	All areas	√			
Good Site Practices					
2.2 Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.	All areas	√			
2.3 Training of site personnel in proper waste management and chemical handling procedures should be provided.	All areas	√			
2.4 Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment.	All areas	√			
2.5 Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	All areas	√			
2.6 The Environmental Permit should be displayed conspicuously on site.	Site Entrance	√			
2.7 Construction noise permits should be posted at site entrance or available for site inspection.	Site Entrance				√
2.8 Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	All areas	√			
2.9 Chemical storage area provided with lock and located on sealed areas.	Chemical Storage Area	√			
2.10 All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank).	Chemical Storage Area		√		
2.11 Any unused chemicals or those with remaining functional capacity should be recycled.	All areas	√			
2.12 Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors.	All areas	√			
• To encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce.	All areas	√			
• A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods.	All areas	√			
• A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be banded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system.	All areas	√			
• Remove wastes in a timely manner.	All areas		√

Difference between means = 1.4445 (Std Dev = 1.9322 and SE = 0.5565)
(95% CI : 0.3537 < Diff < 2.5353)

t-value of difference = 2.596 (12 degrees of freedom)
P = 0.98817 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.

Station: TM-FC2

t-test

Group Name	N	Missing	Mean	Std Dev	SE
130% Baseline Mean	12	0	6.3067	1.8674	0.5391
Quarterly Mean	37	0	7.9162	0.5148	0.0846

Result:

Probability that two variances are equal (f-test) = 1

Difference between means = 1.6095 (Std Dev = 1.8542 and SE = 0.5457)
(95% CI : 1.8542 < Diff < 2.679)

t-value of difference = 2.95 (11 degrees of freedom)
P = 0.99454 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.

Statistical Analysis of the Trend of Suspended Solids

For Mid-Ebb Tide

Station: TM-FM1

t-test

Group Name	N	Missing	Mean	Std Dev	SE
130% Baseline Mean	12	0	7.0008	1.6394	0.4733
Quarterly Mean	37	0	8.1054	0.6534	0.1074

Result:

Probability that two variances are equal (f-test) = 1

Difference between means = 1.1046 (Std Dev = 1.6918 and SE = 0.4853)
(95% CI : 0.1534 < Diff < 2.0558)

t-value of difference = 2.276 (12 degrees of freedom)
P = 0.97846 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.

Station: TM-FM2

t-test

Group Name	N	Missing	Mean	Std Dev	SE
130% Baseline Mean	12	0	7.2758	1.5293	0.4415
Quarterly Mean	37	0	8.0703	0.6180	0.1016

Result:

Probability that two variances are equal (f-test) = 1

Difference between means = 0.7945 (Std Dev = 1.5814 and SE = 0.453)
(95% CI : 1.5814 < Diff < 2.453)

t-value of difference = 1.754 (12 degrees of freedom)
P = 0.94633 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.

Statistical Analysis of the Trend of Suspended Solids

For Mid-Ebb Tide

Station: TM-FC1

t-test

Group Name	N	Missing	Mean	Std Dev	SE
130% Baseline Mean	12	0	7.6392	1.5074	0.4351
Quarterly Mean	37	0	8.2437	0.7328	0.1205

Result:

Probability that two variances are equal (f-test) = 0.99953

Difference between means = 0.6045 (Std Dev = 1.6108 and SE = 0.4515)
(95% CI : -0.2805 < Diff < 1.4895)

t-value of difference = 1.339 (12 degrees of freedom)
P = 0.89099 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.

Station: TM-FC2

t-test

Group Name	N	Missing	Mean	Std Dev	SE
130% Baseline Mean	12	0	6.6950	1.9561	0.5647
Quarterly Mean	37	0	7.9959	0.5150	0.0847

Result:

Probability that two variances are equal (f-test) = 1

Difference between means = 1.3009 (Std Dev = 1.9362 and SE = 0.571)
(95% CI : 0.1818 < Diff < 2.42)

t-value of difference = 2.278 (11 degrees of freedom)
P = 0.98088 (>0.05)

Conclusion:

There is no statistically significant difference between the groups.
