#### **EXECUTIVE SUMMARY**

This is the eighth monthly environmental Monitoring and audit (EM&A) report for "Drainage Improvement in Southern Lantau Investigation". The environmental permit number is "EP-237/2005/A". The report concludes the impact monitoring for the activities undertaken during the period of 1st March 2009 to 31st March 2009. The major activities in this reporting month include construction works of box culvert at Pak Ngan Heung (PNH) River, construction of bypass channel at Luk Tei Tong (LTT) Marshland, channel widening works at Tai Tei Tong (TTT) River and construction of U-channel at Ling Tsui Tau.

Noise, water quality and ecological monitoring were performed. Results obtained were checked against the previously established Action / Limit (A/L) levels. Additionally, the implementation status of environmental mitigation measures, event/ action plan and environmental complaint handling procedures were inspected during weekly site environmental audit.

In general, waste management was satisfactory during the reporting month.

Impact monitoring for construction noise was conducted in the reporting period. No exceedance of A/L level was reported.

Furthermore, impact monitoring for water quality was conducted. Non-compliance events of water quality criteria were recorded on 2, 3, 4, 6, 16, 17 and 27 March. Exceedances were mainly caused by site water discharge and influx of marine water from silver bay.

During ecological monitoring survey, no White-shouldered Starling was recorded breeding in the watch tower. And there was no sign of disturbance from the Project to the watch tower, though the breeding season of White-shouldered Starling in this year has begun. The watch tower may not be suitable for birds as nesting habitat. In addition, no disturbance on the flora and fauna in the river channels were observed during the ecological monitoring.

Furthermore, there was no complaint, notification of any summons and successful prosecutions against the project received during the reporting period.

Key construction activity in the coming month will be construction of box culvert at PNH and retaining walls at TTT River. It is expected that noise, air and water quality impacts will be resulted from the works. With reference to the EM&A manual and mitigation measure report, mitigation measures are proposed to be taken, if necessary.

The ET will continue to implement the environmental monitoring & audit programme in accordance with the EM&A Manual and Environmental Permit requirement.

#### 1. Introduction

This is the eighth monthly Environmental Monitoring and Audit (EM&A) Report for "Drainage Improvement in Southern Lantau Investigation" project (Environmental Permit No. EP-237/2005/A)

#### 2. Project Information

#### 2.1 Construction program

The "Drainage Improvement in Southern Lantau Investigation" project will be completed by June 2009. The project comprises the following:

- Construction of approximately 80m long gabion with natural bed in Pak Ngan Heung River, approximately 180m of three cells 3m x 2m box culvert and approximately 100m of rectangular channel at Pak Ngan Heung River;
- Construction of approximately 250m of 0.75m wide U-Channel at Ling Tsui Tau Village in Mui Wo;
- Construction of bypass channel of about 350m and 240m long of gabion channels at Luk Tei Tong River respectively; and Widening three existing bottlenecks with gabion lined at Tai Tei Tong River

Appendix A shows the construction program and location plan of the project.

## 2.2 Project Organization

The Main Contractor, Yick Hing Construction Company Limited, has commissioned Environmental Pioneers & Solutions Limited and Ecosystems Limited as the Environmental Team, which comprises the environmental team leader, the ecologists and the environmental technicians to undertake the environmental monitoring and audit work for this project.

The environmental management structure and is shown in Fig 2.2.1.

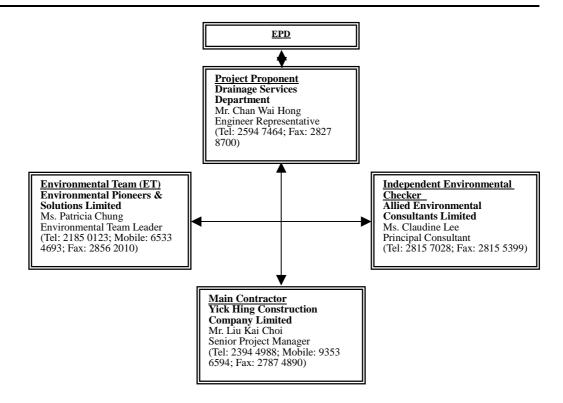

Figure. 2.2.1 Environmental Management structure for the project

## 2.3 Key Personal Contact information chart

Detailed contact of key persons involved in environmental aspect of the project is shown in appendix B.

## 3. Construction Stage

## 3.1 Construction Activities in the reporting month

Major activities in the reporting month included the followings:

- 1. Construction of U-channel and catchpit at Ling Tsui Tau;
- 2. Concreting works for box culvert (coded BC11) at PNHR;
- 3. Shuttering formwork and Steel fixing works of box culvert (coded BC12) at PNHR;
- 4. Rock filling and shuttering to gabion blocks at bottle neck A of TTT River
- 5. Rock filling and shuttering to gabion blocks at LTT bypass channel;
- 6. Concreting works of box culvert, mass concrete wall and tree-ring at Luk Tei Tong; and
- 7. Reinstatement of turf/ topsoil to the bed of LTT bypass channel.

## 3.2 Construction Activities for the coming month

Key Construction works in the coming month will include:

- 1. Construction of box culvert at PNH;
- 2. Construction of gabion wall at Bottleneck B of TTT River; and
- 3. Construction of retaining wall H at TTT River.

#### 3.3 Environmental Status

Appendix A shows the drawing of the project area.

Locations of the monitoring and control stations with environmental sensitive receivers are presented in Section 4.3, 5.3 and 6.3 for noise, water and ecological monitoring respectively.

#### 4. Noise Monitoring

## 4.1 Monitoring Parameters and Methodology

The construction noise level was measured in terms of the A-weighted equivalent continuous sound pressure level ( $L_{eq}$ ).  $L_{eq~(30minutes)}$  was used as the monitoring parameter for the impact monitoring in the time period between 0700 to 1900 hours on normal weekdays. For all other time period,  $L_{eq~(5minutes)}$  was employed for comparison with the Noise Control Ordinance (NCO) criteria.

Noise measurement results obtained from each monitoring location were recorded in the Construction Noise Monitoring Data Sheet (Appendix E) immediately after the measurement. As supplementary information for data auditing, statistical results  $L_{10}$  and  $L_{90}$  were also be recorded for reference.

In case of non-compliance with the construction noise criteria, more frequent monitoring, as specified in the Action plan in table 4.5.2, shall be carried out. This additional monitoring shall be carried out until the recorded noise levels are rectified or proved to be irrelevant to the construction activities.

## **4.2** Monitoring Equipment

The sound level meters and calibrators comply with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications as referred to in the Technical Memorandum (TM) to the Noise Control Ordinance was deployed as monitoring equipment for noise measurement.

Noise measurement was not be made in the presence of fog, rain, wind with a steady speed exceeding 5ms<sup>-1</sup> or wind with gust exceeding 10ms<sup>-1</sup>. Thus wind speed was checked by the portable wind speed indicator capable of measuring the wind speed in m/s. Table 4.2.1 summarizes the equipment list for noise monitoring

Table 4.2.1 Equipment List for Noise Monitoring

#### 4.3 Monitoring Locations

According to the Baseline Monitoring Report issued in May 2008 for the captioned project, four locations where are alternative from the locations proposed in EM&A manual, were designated for baseline noise monitoring. For the data validation, impact noise monitoring was undertaken in the same locations during the construction phase of the project. The proposed monitoring locations are summarized in Table 4.3.1. Figure 4.3.1 shows the Noise Monitoring Locations

Noise measurement in each monitoring locations were taken at a point 1m from the exterior of the selected premises and at a height with no disturbance to the dweller and least obstructed view.

| Identification No. | Noise Monitoring Locations  |
|--------------------|---|
| N1                 | No. 73, Village House, Ling Tsui Tau Tsuen (ground level)                                   |
| N2                 | No. 31, Village House, Ling Tsui Tau Tsuen (ground level)                                   |
| N3                 | Fence wall outside No. 5 village house adjacent to Luk Tei Tong River Outlet (ground level) |
| N4                 | No. 23 Village House Tai Tei Tong River (ground level)                                      |

Table 4.3.1 Noise Monitoring Locations during Construction Phase

In accordance with the requirements in the EM&A manual, weekly impact monitoring was conducted. For the time period between 0700 and 1900 hours on normal weekdays, and noise parameter of  $L_{eq\;(30minutes)}$  was measured. As if the construction works were carried out during restricted period (ie. 1900-2300, 2300-0700 of next day and Sundays / general holiday), impact monitoring that comprises 3 consecutive  $L_{eq\;(5minutes)}$  would be carried out.

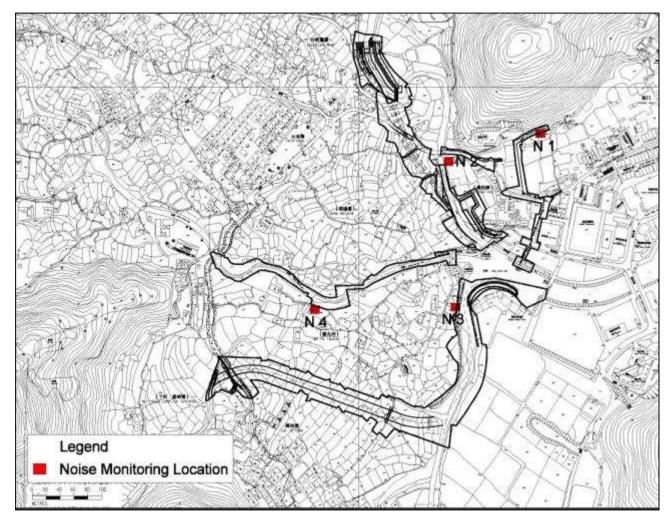

Figure 4.3.1 Impact noise monitoring locations

## 4.4 Monitoring Results and Interpretation

Relevant details of the noise monitoring results are presented in table 4.4.1. The results, ranged between 44.8 dB (A) and 68.4 dB (A), were within the limit levels and therefore, no exceedance was found.

Table 4.4.1 Noise monitoring results

| Table 4.4 | Table 4.4.1 Noise Monitoring Results for the reporting month |          |       |                        |             |            |         |  |  |  |  |

Remarks: Raw datasheet for noise monitoring are attached in appendix E for reference.

Remark\*: The equivalent noise level of N3 is corrected by +3 dB from the raw data result due to the fact that free field measurement was carried out in the location.

#### 4.5 Action and Limit level for Construction noise

The Action and Limit (A/L) levels for construction noise are defined in Table 4.5.1. Should non-compliance of the criteria occur, action in accordance with the Action Plan in Table 4.5.2 should be carried out.

There was no recorded exceedance in the reporting month.

| Table 4.5.1 Action and Limit Levels for Construction noise |   |         |  |  |  |  |  |  |
|--|---|---------|--|--|--|--|--|--|
| Time Period  | Limit Level                               |         |  |  |  |  |  |  |
| 0700 – 1900 hours on<br>normal weekdays                    | When one documented complaint is received | 75dB(A) |  |  |  |  |  |  |

Remarks: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority have to be followed.

Table 4.5.2 Event / Action Plan for Construction Noise

| EVENIT.         | ACTION  |   |  |   |  |  |  |  |  |  |  |  |  |

| Limit<br>Level  | 1. Identify source; 2. Inform IC(E), ER, EPD and Contractor; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Inform IC(E), ER and EPD the causes and actions taken for the exceedances; 7. Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results 8. If exceedance stops, cease additional monitoring | 1. Discuss amongst ER, ET, and Contractor on the potential remedial actions;  2. Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly;  3. Supervise the implementation of remedial measures. | notification of failure in writing;  2. Notify Contractor;  3. Require Contractor to propose remedial measures for the analysed noise problem;  4. Ensure remedial measures properly implemented;  5. If exceedance continues, consider what portion of the work | for remedial actions to IC(E) within 3 working days of notification;  3. Implement the agreed proposals;  4. Resubmit proposals if problem still not under control;  5. Stop the relevant portion of works as determined by the |  |  |  |  |  |  |  |  |  |

## **4.6** Noise Mitigation Measures

The following mitigation measures were observed from the weekly site inspection in the reporting month:

- Use of quiet powered mechanical equipment (PME)
- Implementation of the following good site practices:
  - Only well-maintained and regularly serviced plant should be operated on site;
  - Silencers or mufflers on construction equipment;
  - Mobile plant, if any, should be sited as far from noise sensitive receivers as possible; and
  - Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.

## 5. Water Monitoring

#### 5.1 Water Quality Monitoring Parameters and methodology

Turbidity in Nephelometric Turbidity Unit (NTU), Dissolved Oxygen (DO) in mg/L and Suspended Solids (SS) in mg/L are required to measure in this project. Turbidity, DO was measured in-situ while water samples were delivered to Accredited HOKLAS Laboratory for analysis of SS.

Other relevant data such as monitoring location, time, water depth, temperature, salinity, weather conditions and any other special phenomena and work underway at the construction site were recorded during sampling.

According to the requirement of the EM&A manual, two consecutive measurements for parameters of DO concentration, DO saturation and Turbidity are required to be taken at each monitoring location. When the difference in value between the first and second reading of DO or Turbidity is more than 25%, the reading would be discarded and further reading would be taken.

## **5.2** Monitoring Equipment

Turbidity, DO, Salinity, pH and temperature was measured by an instrument complied with the following requirements:

The instrument is a portable as well as weatherproof multimeter complete with cable and uses a DC power source. It is capable of measuring:

- A turbidity between 0-800NTU;
- A dissolved Oxygen level in the range of 0-20mg/L and 0-200% saturation;
- A temperature of 0-50°C;
- Salinity in the range of 0-40ppt;
- pH in the range of 0-14.

Suspended solid was determined by the water samples collected from the monitoring locations for further analysis in accredited HOKLAS laboratory. Water samples were contained by polythene bottles, packed in ice (cooled in 4°C without frozen) and delivered to the laboratory for analysis as soon as possible after collection. Duplicate samples from each independent sampling event were undertaken during impact monitoring.

Detailed calibration records of the multimeter were shown in Appendix C for reference.

## **5.3** Monitoring Locations

Seven locations included a control station in upstream of each stream/ river, a monitoring station at the end of each stream/ river of the works area and a monitoring station at Silver River were proposed for the impact water quality monitoring. Water samples were collected at mid-depth of each proposed monitoring stations for measurements and sample collection. The Location Plan is shown in Figure 5.3.1 for reference.

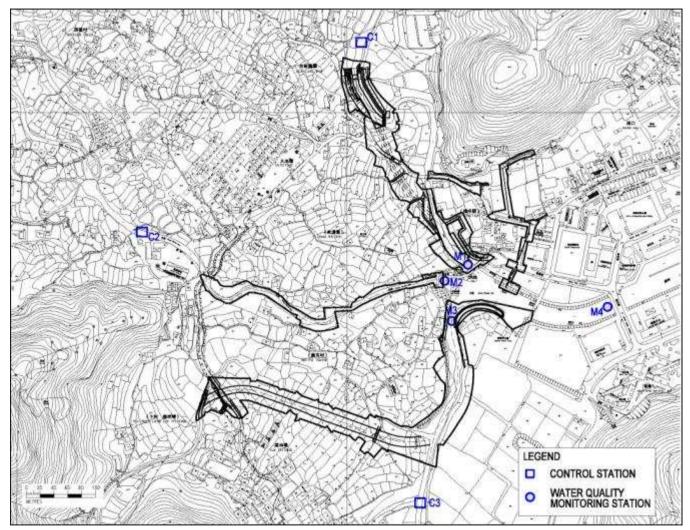

Figure 5.3.1 Water Quality Monitoring Locations

#### **5.4** Monitoring Frequency

Impact water quality monitoring was undertaken three days per week and at ebb tides during the course of the construction river works. Upon the completion of the construction works, the monitoring exercises at the designated monitoring stations will be continued for four weeks in the same manner as the impact monitoring.

#### 5.5 Monitoring Results and Interpretation

Water quality monitoring was carried out fifteen times during March. Detailed on-site measurements and laboratory analysis reports including QA/QC results are shown in appendix F1 and F2 respectively, while Table 5.5.1 presents consolidated results throughout the reporting month.

Exceedance events on parameters of turbidity and suspended solids were recorded on 2, 3, 4, 6, 16, 17 and 27 March according to the established level. Findings from the investigations showed that exceedance were mainly caused by:

- Defective mitigation measures and working method of the river based construction work. Site water and surface runoff was found entered the river stream due to insufficient and/or ineffective protective measures in some events.
- 2.) Influx of marine water affected the water quality of Silver River as well as confluence of LTT, TTT and PNH River (i.e. salinity were found extremely high in the monitor locations in some cases).
- 3.) River clearance works carried out at the upper stream area by the other projects in TTT River, as control station C2 was also seriously contaminated by silty water according to the observation and measured results (i.e.: maximum reading obtained in C2 Turbidity: 329.6 NTU, Suspended Solids: 215.4mg/L).
- 4.) Water quality changes due to heavy rainstorm.

Detailed information of the exceedance events and action taken were presented in Section 7.

Table 5.5.1 Water quality monitoring results in March 2009

| Suspended Solid (mg/l) | 1.0  | 6.2 | 2.1 | 1.0 | 215.4 | 16.8 | 7.4 | 13.0 | 10.7 |

<sup>\*</sup> Remarks: Detection limit for Turbidity, DO and SS are 1 NTU, 0.1 mg/L and 1 mg/L respectively.

## 5.6 Action and limit level for Water Quality

Based on the baseline water quality monitoring data obtained, the A/L levels are shown in Table 5.6.1. If the water quality monitoring results at any impact stations exceeded the criteria, the actions in accordance with the Event and Action Plan in Table 5.6.2 should be taken.

Table 5.6.1 Action and Limit Levels for water quality monitoring

|                 | Monitoring locations |                |                 |                |                 |                |                 |                |  |  |  |  |

| Tymbidity       | Level                | Level          | Level           | Level          | Level           | Level          | Level           | Level          |  |  |  |  |
| Turbidity (NTU) | 15.2                 | 16.9           | 5.3             | 6.5            | 16.8            | 26.0           | 16.2            | 18.0           |  |  |  |  |
| DO (mg/L)       | 5.7                  | 4.0            | 6.2             | 4.0            | 5.9             | 4.0            | 5.9             | 4.0            |  |  |  |  |
| SS (mg/L)       | 12.2                 | 12.8           | 3.1             | 4.2            | 12.4            | 17.7           | 13.9            | 15.2           |  |  |  |  |

#### Remarks:

For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits

For SS and turbidity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

## 5.7 Water Quality Mitigation Measures

## **Construction Run-off and Drainage**

The site practices outlined in ProPECC PN 1/94 'Construction Site Drainage' should be followed as far as practicable during both construction and operation phase of the drainage improvement works in order to minimize surface runoff and the chance of erosion, and also to retain and reduce any suspended solids prior to discharge.

As recommended in the final EM&A manual, attention would be paid specially construction run-off and drainage, general construction activities, sewage discharged from construction workforce and river channel excavation works.

## 5.8 Water Monitoring Schedule for the Next reporting period

Water monitoring in the next reporting period is scheduled for 1, 2, 6, 8, 9, 14, 15, 17, 20, 22, 24, 27 and 29 April.

## 6. Ecology Monitoring

### **6.1** Ecological Monitoring Parameters

According to the Final EM&A Manual, a specific ecological monitoring programme of the improved section of PNH and LTT Rivers is recommended. The monitoring parameters required to measure in this project and survey methodology are described below:

- (1) Avifauna species and abundance: Birds will be surveyed quantitatively using transect count method. Birds within the river channel and on the riverbank will be identified and their abundance will be recorded.
- (2) Aquatic macroinvertebrate community species composition and abundance: Survey on aquatic fauna will focus on determination of the diversity and abundance of stream aquatic communities. Sampling methods, such as active searching, direct observation, netting, and kick sampling, will be determined according to the site conditions during field survey.
- (3) Fish community species composition and abundance: Sampling methods, such as active searching, direct observation, and hand netting, will be determined according to the site conditions during field survey.
- (4) Adult odonate community species composition and abundance: Adult dragonfly will be surveyed quantitatively using transect count method. Adult dragonflies within the river channel and on the riverbank will be identified and their abundance will be recorded. Species requiring close examination will be netted.
- (5) Aquatic, emergent and riparian vegetation community species composition and abundance: The area will be walked through. Plant species composition and their relative abundance will be recorded.
- (6) Surveys of White-shouldered Starling Sturnus sinensis will be conducted at the disused watchtowers next to LTT river. Breeding of the White-shouldered Starlings will be determined by checking signs of attempt to breed or sign of breeding which include carrying nesting materials, to-and-fro movement of adults carrying food, presence of recently fledged juveniles, etc. The number of breeding pairs and the site observation will be recorded whenever possible.

Water Quality Monitoring along LTT and PNH River as well as LTT bypass channel was carried out. Water quality monitoring will include Turbidity in Nephelometric Turbidity Unit (NTU), Dissolved Oxygen (DO) in mg/L and Suspended Solids (SS) in mg/L are required to measure in this project. Moreover, additional water monitoring parameters will be taken for the purposes of ecological monitoring of water quality in this project. The added information will include: BOD, Ammonia, Nitrate and Phosphate concentrations. Turbidity, DO, pH and water flow will be measured in-situ while water samples will be delivered to Accredited HOKLAS Laboratory accredited laboratory and the analyses followed the standard methods according to APHA Standard Methods for the Examination of Water and Wastewater, 20<sup>th</sup> Edition, or equivalent for analysis of SS, BOD, Ammonia, Nitrate and Phosphate concentrations.

Other relevant data such as monitoring location, time, water depth, temperature, salinity, weather conditions and any other special phenomena and work underway at the construction site will be recorded during sampling.

According to the requirement of the EM&A manual, two consecutive measurements for parameters of DO concentration, DO saturation and Turbidity are required to be taken at each monitoring. When the difference in value between the first and second reading of DO or Turbidity is more than 25%, the reading will be discarded and further reading will be taken.

#### 6.2 Monitoring Equipment and Methodology

Turbidity, DO, Salinity, pH and Temperature will be measured by a instrument complied with the following requirements:

The instrument is a portable as well as weatherproof multimeter complete with cable and uses a DC power source. It is capable of measuring:

- A turbidity between 0-800NTU;
- A dissolved Oxygen level in the range of 0-20mg/L and 0-200% saturation;
- A temperature of 0-50°C;
- Salinity in the range of 0-40ppt;
- pH in the range of 0-14.

Suspended solid was determined by the water samples collected from the

monitoring locations for further analysis in accredited HOKLAS laboratory. Water samples were contained by polythene bottles, packed in ice (cooled in 4°C without frozen) and delivered to the laboratory for analysis as soon as possible after collection. Duplicate samples from each independent sampling event were undertaken during impact monitoring.

#### **6.3** Monitoring Locations

According to the Final EM&A Manual, the improved section of the river channels will be divided into 50m long sections, and ecological survey will be carried out in each of the 50m sections. A total of nine sections will be divided for the two rivers which include:

- Two sections for existing upstream of PNH river (i.e. the proposed 80m long trapezoidal channel)
- Two sections for existing downstream of PNH river (i.e. the proposed 100m long rectangular channel)
- Five sections for existing Luk Tei Tong River (i.e. the proposed 240m long trapezoidal channel)

The disused watchtowers are located at the confluence of the three rivers and next to LTT river.

The Location Plan for ecological is shown in Figure 6.1 for reference.

The improved sections of the river channels require to carrying out water quality monitoring for the ecological purpose. The sampling points for impact monitoring was undertaken in the same place as the baseline monitoring proposed, where include:

- Three points for existing of PNH river
- Three points for existing of Luk Tei Tong River

The Location Plan for ecological water monitoring is shown in Figure 6.2 for reference.

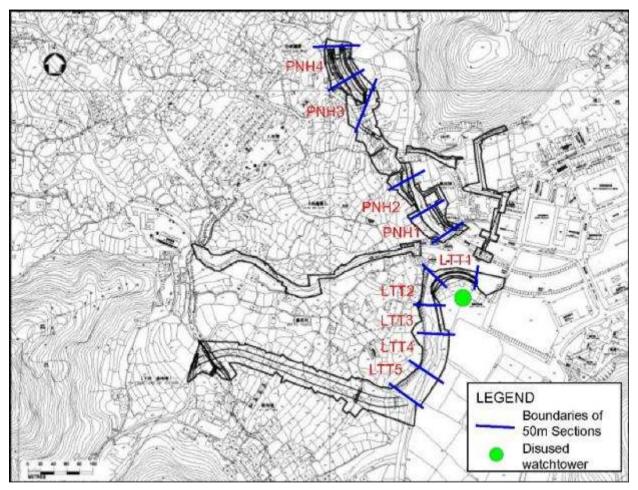

Figure 6.1 Ecological Monitoring Locations

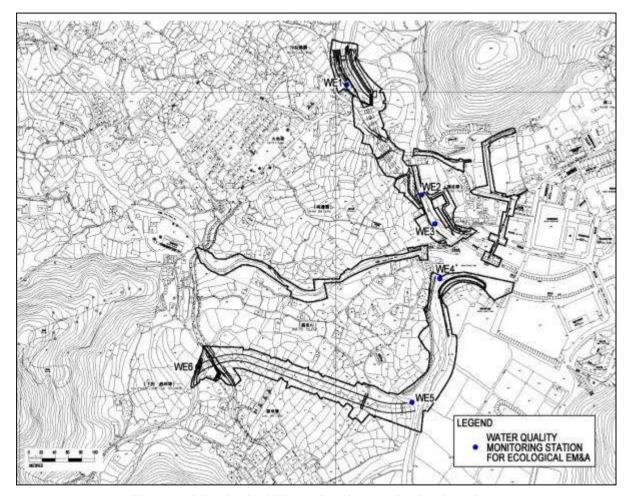

Figure 6.2 Ecological Water Quality monitoring locations

#### **6.4 Monitoring Frequency**

As proposed, ecological impact monitoring was carried out once for each monitoring location in the reporting month.

#### 6.5 Monitoring results

#### Pak Ngan Heung Stream N and S sections

#### Vegetation

Surveys were conducted on 26 March 2009. The north section of Pak Ngan Heung Stream was fairly modified. Part of the west bank was lined with rock gabion bank and occupied by village houses and abandoned agricultural field. The stream channel was wider than the downstream section, but the stream bank was still fairly narrow and steep in gradient. Compared to the south section, the north section was relatively shaded due to presence of more trees with larger canopy.

The walk through survey recorded a total of 69 species, including 24 trees, 10 shrub, 22 herb and 4 grass species (Appendix D1). 53 of the species recorded are natives, while 16 were exotics. The quantitative sampling recorded 23 species at the north section. Large native (e.g. *Celtis sinensis, Cleistocalyx operculata, Ficus hispida*) and exotic trees (*Acacia confusa*) dominated the transects. Other species recorded include common and typical native pioneer forest and streamside tree species and ruderal species. No species of conservation interest was recorded.

Table 6.5.1 Relative percentage cover of vegetation recorded at Pak Ngan Heung (N) Section

|                           | Relative % cover |       |  |  |  |

| Total Transect Length (m) | 13               | 34    |  |  |  |

<sup>\*</sup>Total Cover rounded up to one decimal place to avoid round-off error.

The south section of Pak Ngan Heung Stream was highly modified. Both banks were lined with rock gabions and were occupied by village houses immediately beyond the channel. The stream channel was lack of riparian zone and vegetation. A total of 19 species recorded, 14 of which were native and 5 were exotic. It was composed of isolated individuals of mangrove (*Kandelia obovata*), backshore species (*Clerodendrum inerme*), native (*Celtis sinensis*) and planted trees (*Acacia confusa*) (Appendix D2). No species of conservation interest was recorded.

#### Terrestrial Fauna

Surveys were conducted on 20 March 2009.

A total of five species of birds were recorded in the proposed work area of the Pak Ngan Heung River (Table 6.5.2). All are common in Hong Kong.

Table 6.5.2 Avifauna in Pak Ngan Heung

| Common names   | Latin names         | PNH | PNH | PNH | PNH | Commonness     |
|----------------|---------------------|-----|-----|-----|-----|----------------|

CW = common and widespread

Three species of dragonfly was recorded in the proposed work area of the Pak Ngan Heung River in March 2009 (Table 6.5.3). The Yellow-spotted Shadowdamsel *Sinosticta ogatai* is uncommon in Hong Kong.

Table 6.5.3 Dragonfly in Pak Ngan Heung River

| Common names     | Latin names       | PNH | PNH | PNH | PNH | Commonness     |
|------------------|-------------------|-----|-----|-----|-----|----------------|
|                  |                   | 1   | 2   | 3   | 4   | & distribution |
| Yellow-spotted   | Sinosticta ogatai |     |     |     | 1   | UC             |

| Indigo Dropwing  | Trithemis festiva |     | 3   |     |     | A              |

A = abundant, UC = uncommon

#### Aquatic fauna and fish

8 species of fish and 4 crustacean were recorded in the 4 sections at PNH. All are common and widespread in Hong Kong. Both the species number of aquatic fauna and their abundance recorded in the present monitoring survey were lower than those recorded in previous wet season months, probably due to the lower temperature. As observed on site, the stream flow was very small and the water level was low, and there were algae on the stream bed. This is typical in local streams during dry season. Though Predaceous Chub was observed, the another one fish species of conservation concern reported in the EIA report, i.e. Flagtail *Kuhlia marginata*, was not recorded in PNH during the present monthly monitoring survey.

Table 6.5.4 Aquatic Invertebrates and fish in Pak Ngan Heung

| Common names         | Scientific names      | PNH 1 | PNH 2 | PNH3 | PNH4 |

| Hillstream Loach     | disparis              |       |       |      |      |

<sup>+ =</sup> Occasional, less than 5 individuals were found; ++ = Common, 5-20 individuals were found; +++ = Abundant, more than 20 individuals were found.

#### **Luk Tei Tong Stream Section**

## **Vegetation**

Surveys were conducted on 26 March 2009. The Luk Tei Tong Stream Section was highly modified. Vegetation only established on isolated muddy patches at the estuary and remaining semi-natural banks of Section 1 and Section 2. Vegetation on the eastern stream bank from the second half of Section 3 to Section 5 were largely cleared while the western bank was still lined with rock gabions or concrete. The whole section appeared to be subject to tidal influence, as mangrove associated or backshore species were recorded along the whole channel.

The walk through survey recorded a total of 26 species, including 11 tree, 6 shrub, 4 grass species (Appendix D3). 21 of the species recorded are natives, while 5 were exotics. The quantitative sampling recorded 10 species at Sections 2 and 3. Section 2 was dominated by *Terminalia catappa* and *Wollastonia biflora*, while Section 3 was dominated by *Hibiscus tiliaceus*. No quantitative survey was carried out on Section 4 due to vegetation clearance on stream banks as part of the site clearance works under the project.

Due to the patchiness of streamside vegetation, the quantitative data should be interpreted with cautions and used as a reference only.

Table 6.5.5 Relative percentage cover of vegetation recorded at Luk Tei Tong Stream Section

|                           | Relative % cover |       |  |  |  |

| Total Transect Length (m) | 11               | 10    |  |  |  |

<sup>\*</sup>Total Cover rounded up to one decimal place to avoid round-off error.

#### Terrestrial Fauna

The proposed work area of Luk Tei Tong River was divided into 5 sections. All recorded avifauna and dragonfly species are common in Hong Kong

Surveys were conducted on 20 March 2009.

A total of ten species of birds were recorded in these sections (Table 6.5.6). All these species are common and widely distributed in Hong Kong.

Table 6.5.6 Avifauna in Luk Tei Tong River

| Common names     | Latin names        | LTT | LTT | LTT | LTT | LTT | Commonness     |

| Crimson Dropwing | Trithemis aurora  | 1   |     |     |     |     | A              |

A = abundant, C = common

#### Aquatic invertebrates and fish

4 species of fish, 3 species of crustacean and 4 species of mollusks were recorded in the 5 sections at LTT. All are common and widespread in Hong Kong. The species number of the aquatic fauna, in particular crustacean, and their abundance recorded in the present monitoring survey were lower than those recorded in previous wet season months, probably due to the lower temperature. As observed on site, the stream flow was very small and the water level was low. This is typical in local streams during dry season. The two fish species of conservation concern reported in the EIA report, i.e. Flagtail *Kuhlia marginata* and Predaceous Chub *Parazacco spilurus* were not recorded in LTT during the present monitoring as well as the baseline monitoring survey.

Table 6.5.8 Aquatic invertebrates and fish in Luk Tei Tong River

| Common names        | Scientific names      | LTT1 | LTT2 | LTT3 | LTT4 | LTT5 |

| Barcheek Goby       | Rhinogobius giurinus  |      |      |      |      |      |

<sup>+ =</sup> Occasional, less than 5 individuals were found; ++ = Common, 5 - 20 individuals were found; +++ = Abundant, more than 20 individuals were found.

#### **Disused Watchtowers**

Surveys were conducted on 20 March 2009.

There was no sign (e.g., adults carrying food or nesting materials) of use of the watchtower as nesting habitat by White-shouldered Starling. This species was not observed during the March 2009 monitoring.

Since the monitoring surveys commenced in August 2008, no bird was observed entering the watchtower. It seems the birds do not prefer the watchtower as roosting or nesting habitat.

#### **Ecological Water Quality Monitoring (EWQM)**

EWQM was conducted on 9 March 2009. Monitoring results are summarized in table 6.9. Detailed on-site measurements and laboratory report are presented in appendix D4 and D5.

Table 6.10 shows the baseline results of Ecological Water Quality Monitoring, from the information given in Baseline Monitoring Report.

To review the results in table 6.9 in general, the measured results were found similar with past months. As land based construction activities were being carried out in the project sites and sites were in enclosed condition, water quality impacts to the rivers should be minimal.

Table 6.9 Summarized Ecological water quality monitoring results (9 March 2009)

| Parameters                | Limit of detection | WE1   | WE2   | WE3   | WE4    | WE5    | WE6    |

## 6.6 Action and Limit level for Monitoring of White-shouldered Starlings

A simple Event and Action Plan is shown in Table 6.6.1. Should the Event occur, action in accordance with the Action Plan should be carried out.

There was no recorded event in the reporting month.

Table 6.6.1 Event / Action Plan for Monitoring of White-shouldered Starlings

| EVENT                   | ACTION                     |                            |

### 6.7 Ecological monitoring Schedule

The next ecological surveys are scheduled on 9<sup>th</sup> and 17<sup>th</sup> April, while ecological water quality monitoring is scheduled on 9<sup>th</sup> April.

#### 7. Action taken in Event of Exceedence

If the measurements (Noise, Water, Ecology) exceed the action / limit level, exceedance details will be reported and follow-up actions will be taken by relevant parties involved.

During the reporting period there was no exceedance for noise, ecological measurements recorded; therefore no actions were taken.

Non-compliance of water quality limits (turbidity and/or suspended solids) were recorded on 2, 3, 4, 6, 16, 17 and 27 March according to the established level. ET has arranged site investigations for the exceedance events and causes were substantially attributable to:

- Site water discharged into the down stream area from project site (construction of gabion walls at bottleneck A of TTT River);
- Influx of marine water at the confluence of LTT, TTT, PNH River, and Silver River;
- Clearance works to the river channel carried out at the upper stream area of TTT River by the other project; and
- Water quality changes due to rainstorm.

The summary of non-compliance is listed in Table 7.1 for reference.

ET increased the monitoring frequency to daily basis until no exceedance of Limit level; at the mean time contractor was also urged to conduct necessary mitigation measures so as to keep the disturbance on water quality to minimal levels.

Table 7.1 Summary of Non-compliance for Water Quality

| Date       | Location | Parameter | Level of exceedance | Main cause of exceedance                     |
|------------|----------|-----------|---------------------|--|
| 02/03/2009 | M2       | Turbidity | Limit Level         | Silty water discharged from project site     |
| 03/03/2009 | M2       | Turbidity | Limit Level         | Silty water discharged from project site     |

| 27/03/2009 | M2       | Turbidity | Action Level        | Silty water discharged from project site     |

#### 8. Construction waste disposal

It is the contractor's responsibility to ensure that all wastes produced during the construction phase for the drainage improvement works are handled, stored and disposed of in accordance with good waste management practices and EPD's regulation and requirement. Waste materials generated during construction activities, such as construction and demolition (C&D) material, chemical wastes and general refuse, are recommended to be audited at regular intervals to ensure that proper storage, transportation and disposal practices are being implemented.

Contractor has completed the registration of Waste Producer under the Waste Disposal (Chemical Waste)(General) Regulation. The Waste Producer Number, WPN 5213-950-Y2443-03 was assigned by EPD on 12 Aug 2008. The Contractor would be responsible for the implementation of any mitigation measure to minimize waste or redress problems arising from the waste materials.

Table 8.1 is a summary of updated figures of the construction wastes disposal provided by the Contractor.

**Table 8.1 Summary of Construction Waste Disposal** 

|                              | <b>Amount of Construction Waste disposed</b> |                |                      |  |  |  |  |  |  |  |  |  |  |

The contractor implemented various environmental mitigation measures as recommended in the Environmental Permit and Final Mitigation Measures Report. The implemented schedule is presented in appendix H.

### 10. Complaint Log

There was no formal complaint received during the reporting month.

| Table 10.1 Summary of Formal Complaints received |                                     |   |   |   |   |  |  |  |  |  |  |  |  |  |

#### 11. Site Environmental Audits

#### 11.1 Site Inspection

With an intention to ensure that appropriate environmental protection and pollution control mitigation measures are properly implemented, regular environmental site inspections have been scheduled.

Within the reporting month, site inspections were conducted on 5, 12, 20 and 26 of March.

A detailed checklist of each site inspection together with comments, relevant photos and maps have been filed and kept. A summary of observation and follow-up action is shown in table 11.1

|           | Table                             | e 11.1 Summary of site ins         | spection                           |              |
|-----------|-----------------------------------|------------------------------------|------------------------------------|--------------|

|           | Table  | e 11.1 Summary of site in  | spection   |              |
|-----------|--|--|--|--------------|
| Date      | Observations   | Advice from ET   | Action taken   | Closing Date |
|           | stream area from site  | remedial actions to avoid deterioration of water quality   | surfaces exposed to the river stream. Enclosed dry section has been formed for further construction works in the channel |              |
| 5 Mar 09  | Falling leaves and stagnant water were found accumulated in the wheel washing bay, located at the site entrance of PNH BC9 | Contractor was advised to clean up the wheel washing bay regularly (daily cleaning is preferable)                                | To be follow up  | Ongoing      |
| 12 Mar 09 | General wastes were poorly dumped at the site area of PNH BC9~12   | Contractor was reminded to store<br>the waste in the assigned storage<br>area in proper manner                                   | Wastes has been removed by regular cleaning  | 20 Mar 09    |
| 12 Mar 09 | Site water was found diverted to<br>the upper ground at TTT<br>bottleneck A for soak-away                                  | Contractor was reminded diverted site water might affect the nearby premises. Soak-away pond should be prevented in that area    | stopped as advised   | 20 Mar 09    |
| 12 Mar 09 | Pile of vegetative wastes were found dumped on top of the retained topsoil stored at LTT                                   | Contractor was advised to removed the vegetative wastes from the turf as soon as possible to avoid mixing up                     |  | 20 Mar 09    |
| 20 Mar 09 | Underground water was found accumulated at the excavated site area PNH BC2, 3, 11 and 12                                   | Contractor was advised to remove the stagnant water on site as far as practicable, or provide larvicide for mosquito control     | pumped to site surface regularly as dust suppression measures  | Ongoing      |
| 20 Mar 09 | Wood board coverings to the public drainage at the site entrance of PNH were found damaged                                 | Contractor was advised to replace the damaged coverings with durable material (such as steel plates)                             | Still outstanding. To be follow up   | Ongoing      |
| 26 Mar 09 | Open stockpile and exposed earth surfaces were observed at the bottleneck A of TTT River                                   | Contractor was advised to removed the open stockpile and provided proper coverings to the earth surfaces exposed to river stream |  | Ongoing      |

#### 11.2 Compliance with legal and Contractual requirement

ET leader has reviewed the progress and programme of the works to check any relevant environmental laws has not violated.

A non-compliance of working programme that caused discharge of muddy water to the down stream area of TTT River was recorded in this reporting month. River diversion and construction activities carried out at bottleneck A of TTT River might not fully comply with the conditions of "Measures to Mitigate Water Quality Impact" stated in EP.

Following the several exceedance events of water quality criteria recorded at the early of March and the issue of a warning letter to the contractor by EPD regarding their concern on improper containment measures for river-based construction works in TTT River after their inspection on 7<sup>th</sup> March, an ad-hoc site investigation and meeting were held among representatives of DSD, IEC, Contractor and ET on 9<sup>th</sup> March to resolve the incident.

As the investigation showed exposed earth surfaces caused surface runoff and soil erosion thus affected the down stream area, contractor was urged to take remedial actions and provide necessary mitigation measures to prevent further deterioration of water quality.

Contractor implemented remedial actions and mitigation measures progressively that include provision of geo-textile materials as coverings to the exposed earth surfaces and temporary river channel, and completion of earth bunds to form an enclosed site area for further works. In addition, silty water on site was pumped to silt retention pond at the upper ground for soak-away.

ET seriously reminded the Contractor to be cautious on the requirements stated in relevant environmental law and documents and manage good site practices so as to minimize impacts to the environment as well as sensitive receivers.

#### 11.3 Environmental Complaint and follow up actions

During this reporting period, there was no documented complaint received. Therefore, follow up actions for the Environmental Complaint is not required

#### 12. Future key issues

Key construction activity in the coming month will include construction of box culvert at PNH River and retaining walls at the bottleneck B of TTT River. It is expected that several impacts on environmental aspects will be generated on-site. With reference to the EM&A manual, mitigation measure report as well as the environmental permit, proper mitigation measures are proposed to be taken, if necessary.

Contractor was reminded to provide proper measures to mitigate water quality impacts to the river channels due to construction works. River based construction activities should be carried out in enclosed as well as dry condition to prevent discharge of site water to the stream; containment measures such as bunds and barriers should be provided as to restrict the carrying out of construction works within enclosed dry area of the river.

Underground water and site water may be accumulated on site. Contractor is recommended to treat the accumulated site water by proper silt removal facilities before discharging to the designated stormwater drainage; also reuse of site water should be considerable.

Contractor was reminded to be cautious on erosion and surface run-off from the stockpiles of earth materials and exposed earth surfaces. Coverings with tarpaulin and/or geo-textile materials should be provided to minimize the concerned impacts.

Dust impact may be resulted by boulder movement, breaking and installation works of gabion blocks, contractor is reminded to provide regular watering to the dusty static site area and stockpile. Meanwhile, size and height of stockpiles should be controlled as such erosion issue could be minimized.

#### 13. Conclusions

In this reporting month, Construction work of box culvert at PNH, excavation and installation works for gabion blocks for LTT bypass channel were carried out.

Regular site meetings and inspection audits led by the seniors for discussing site environmental matters were held among Project Proponent, Contractor and the ET on weekly basis. Also monthly site meeting and inspection audits with the above parties and IEC were carried out at the mid of the reporting month.

For noise level monitoring, all results were within the established A/L limits.

For water quality monitoring, non-compliance events of water quality criteria were recorded on 2, 3, 4, 6, 16, 17 and 27 March. Exceedance were mainly caused by site water discharge and influx of marine water from silver bay. According to the monthly ecological water monitoring results performed on 09 March 2009, measurements recorded in the monitoring locations were found similar with past months.

During ecological monitoring survey, no White-shouldered Starling was recorded breeding in the watch tower. There was no sign of disturbance from the Project to the watch tower. The breeding season of White-shouldered Starling in this year has begun. However, the absence of nesting of White-shouldered Starling in the watch tower did not seem to be related to construction works in Luk Tei Tong River. A bird species nests in village house should be to certain extent disturbance tolerant.

No bird was observed entering the watchtower since the monitoring surveys commenced in August 2008. Also, no breeding was recorded in the baseline survey in September 2007. It appears that the birds do not prefer to roost or nest in the watch tower.

Also, there were not any notifications of summons recorded during the reporting period. Furthermore, there were not any formal prosecution and complaints recorded.

Containment measures for river based construction activities and mitigation measures to control surface runoff and soil erosion were the major concerns in this reporting month. Contractor was urged to enhance their measures provided and improve their site practices in order to minimize impacts to the river streams.

ET has reminded the contractor to provide environmental pollution control measures wherever necessary; and to keep a good environmental management at site practice.

The ET will continue to implement the environmental monitoring & audit programme in accordance with the EM&A Manual and Environmental Permit requirement.

### **Test specifications**

- 1, The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.
- The electrical tests were performed using an electrical signal substituted for the microphone which was removed and 2, replaced by an equivalent capacitance within a tolerance of ±20%.
- 3, The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

#### **Test results**

This is to certify that the Sound Level Meter conforms to BS 7580; Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Actual Measurement data are documented on worksheets.

#### 2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

| Test:             | Subtest                | Status | Uncertanity (dB) / Coverage Factor |
|-------------------|------------------------|--------|------------------------------------|
| Acoustic response | Weighting A at 125 Hz  | Pass   | 0.3                                |
|                   | Weighting A at 8000 Hz | Pass   | 0.5                                |
|                   |                        |        |                                    |

3, Response to associated sound calibrator

N/A

The uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95 %. A coverage factor of 2 is assumed unless explicitly stated.

#### Test specifications

- The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B and the lab calibration procedure SMTP004-CA-156.
- 2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.
- 3, The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure changes.

Test results

Details of the performed measurements are presented on page 2 of this certificate.

D095

#### 1, Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties.

|                          |  |   | (Output level in dB re 20 µPa) |
|--------------------------|--|---|--------------------------------|
| Frequency<br>Shown<br>Hz | Output Sound Pressure<br>Level Setting<br>dB | Measured Output<br>Sound Pressure Level<br>dB | Estimated<br>Uncertainty<br>d8 |
| 1000                     | 94.00  | 94.30   | 0.1                            |

#### 2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

At 1000 Hz

STF = 0.002 dB

Estimated uncertainty

 $0.005 \, dB$ 

#### 3, **Actual Output Frequency**

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

At 1000 Hz

Actual Frequency = 1000.0 Hz

Estimated uncertainty

0.1 Hz

Coverage factor k = 2.2

#### 4, **Total Noise and Distortion**

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

At 1000 Hz

TND = 2.1%

Estimated uncertainty

0.7%

The uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95 %. A coverage factor of 2 is assumed unless explicitly stated.

Noise Monitoring Locations: Total 4 Locations as N1, N2, N3 and N4

Water Quality Monitoring (WQM) Locations: Total 7 Locations as M1, M2, M3, M4, C1, C2 and C3

Ecological Water Quality Monitoring (EWQM) Locations: Total 6 Locations as WE1, WE2, WE3, WE4, WE5 and WE6

## Appendix H Implementation Status of environmental protection / mitigation measures

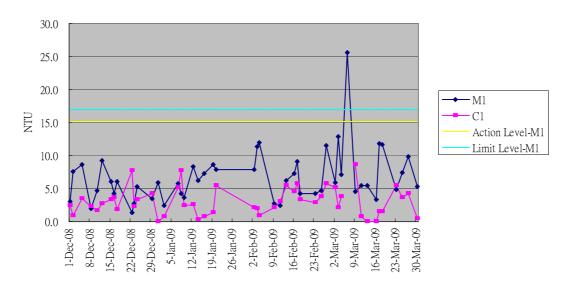

| Environmental | Protection / Mitigation Measures  | Implementation  | Follow-up  |
|---------------|---|---|--|
| Aspect        |   | status  | action   |
| Air Quality   | Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved road, with complete coverage.   | Implemented   | -  |
|               | Use of frequent watering for particular dusty static construction areas and areas close to ASRs.  | Implemented   | -  |
|               | Tarpaulin covering of all dusty vehicle loads transported to and from and between site location;  | Implemented   | -  |
|               | Establishment and use of vehicle wheel and body washing facilities at the exit points of the site.  | Implemented   | -  |
|               | Routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs.   | Implemented   | -  |
| Noise         | Use of quiet powered mechanical equipment (PME)   | Implemented   | -  |
| Noise         | Adoption of movable noise barriers and temporary noise barriers   | Not applicable at this stage                          | -  |
|               | Application of good site practices mentioned in EM&A manual Clause 3.8.1  | Implemented   | -  |
| Water Quality | Before commencing any site formation works, all sewer<br>and drainage connections should be sealed to prevent<br>debris, soil, sand etc. from entering public<br>sewers/drains.                     | Implemented   | -  |
|               | Temporary ditches should be provided to facilitate run-off discharge into appropriate watercourses, via a silt retention pond. No site run-off should enter the freshwater marshes at Luk Tei Tong. | Not applicable  | -  |
|               | and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance.         | Implemented by<br>natural soak-away at<br>site ground | -  |
|               | Water pumped out from foundation excavations should be discharged into silt removal facilities.   | Implemented by<br>natural soak-away at<br>site ground | -  |
|               | During rainstorms, exposed slope surface should be covered by a tarpaulin or the means.   | Deficiencies were<br>found on 7 <sup>th</sup> March   | Geo-textile<br>materials were then<br>provided to the<br>exposed slope<br>surface and earth<br>bunds |
|               | Exposed soil areas should be minimized to reduce potential for increased siltation and contamination of runoff.   | Implemented   | -  |
|               | fill material as soon as possible to reduce potential of soil erosion.  | Implemented   | -  |
|               | Open stockpiles of construction materials or construction wastes on-site of more than 50m <sup>3</sup> should be covered with tarpaulin or similar fabric during rainstorms.                        | Implemented   | -  |
|               | Oils and fuels should only be used and stored on designated areas which have pollution prevention facilities.   | Implemented   | -  |
|               | Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site.   | Not applicable  | -  |

| Environmental | Protection / Mitigation Measures  | Implementation                                      | Follow-up  |
|---------------|---|---|--|
| Aspect        |   | status  | action   |
|               | The excavation and widening works for the drainage improvements to the Pak Ngan Heung River, Tai Tei Tong River, Luk Tei Tong River and Luk Tei Tong By-pass Channel should be carried out in sections (approximately 300 –400 m in length) and in dry condition. | Deficiencies were<br>found on 7 <sup>th</sup> March | Earth bunds were<br>then formed to be<br>an enclosed section<br>for site works |
|               | Maintenance desiliting of the re-profiled river channels of the Pak Ngan Heung River, Tai Tei Tong River, Luk Tei tong River and Luk Tei Tong By-pass Channel, temporary barrier walls should be used to provide a dry zone for desiliting work.                  | Not applicable at this stage                        | -  |
| Ecology       | Existing natural habitats should be retained as far as practicable  | Implemented   | -  |
|               | Boundary of working areas should be identified to prevent loss of vegetation  | Implemented   | -  |
|               | All existing trees / plant should be well protected within the site or transplanted properly  | Implemented   | -  |
|               | Turf removal from the Luk Tei Tong marsh due to the construction of Luk Tei Tong Bypass Channel shall be minimized  | Implemented   | -  |
|               | Turf from the Luk Tei Tong marsh shall be properly<br>removed, stored, maintained and reused for lining the<br>riverbed of the Luk Tei Tong Bypass Channel  | Implemented   |  |
| Chemical and  | Chemical wastes should be properly stored in a proper<br>store as per statutory requirements (i.e. on a hard<br>standing, within an enclosed and locked area)   | Implemented   | -  |
| Solid Waste   | Chemical waste stores should be provided with fire precaution facilities (i.e. fire extinguisher, no smoking warning etc).  | Implemented   | -  |
|               | Chemical wastes should be properly stored in corrosion resistant containers placed inside the store and labelled with warning signs in English and Chinese.   | Implemented   | -  |
|               | Chemical wastes should be disposed of by licensed chemical waste collector with supporting delivery records.  | Implemented   | -  |
|               | All containers for fuel, diesel and fluid chemical (in use) and oil filled stationery plants located with proper drip pans.   | Implemented   | -  |
|               | Construction wastes should be managed and disposed to the designated public fill and landfill areas in acceptable manner.   |   | -  |
|               | All waste disposals managed in a proper manner i.e. trip ticket system implementation.  | Implemented   | -  |

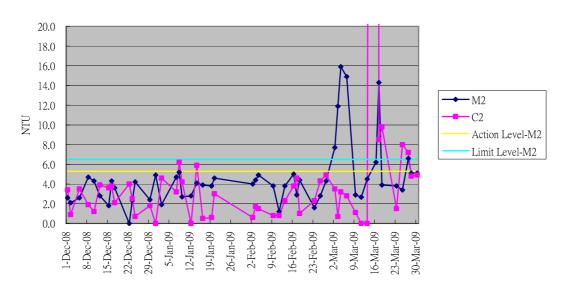

## Appendix I

Graphical plot of water quality monitoring results (SS, DO, turbidity)

#### Graphical Plot of Turbidity Trend M1&C1 (Dec 08-Mar 09)

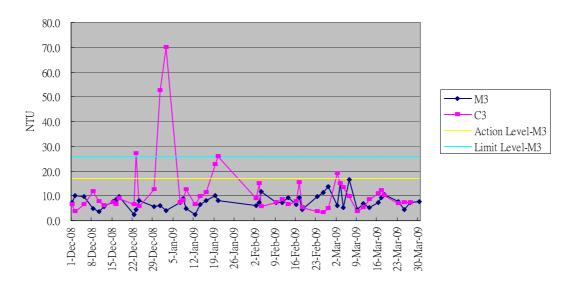

#### Graphical Plot of Turbidity Trend M2&C2 (Dec 08-Mar 09)

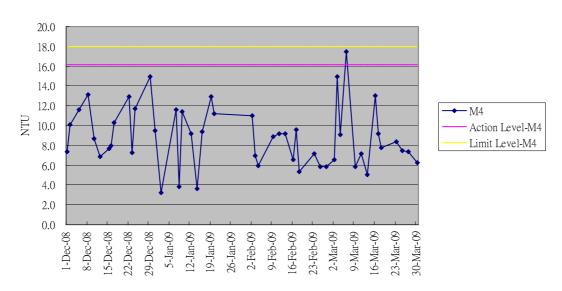

Remarks: The reading of C2 on Mar 16<sup>th</sup> 2009 is 329.6, which was over the range of the plot.

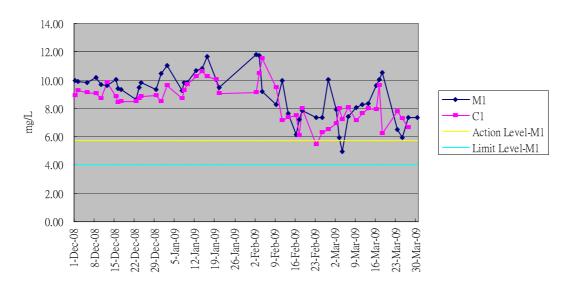

#### Graphical Plot of Turbidity Trend M3&C3 (Dec 08-Mar 09)

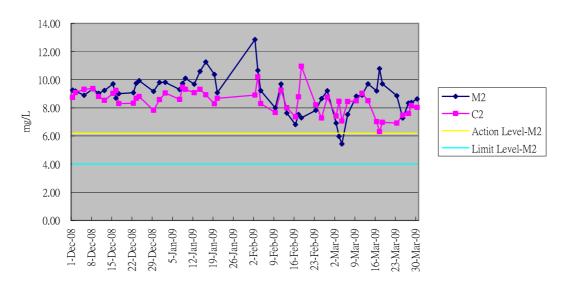

#### Graphical Plot of Turbidity Trend M4 (Dec 08-Mar 09)

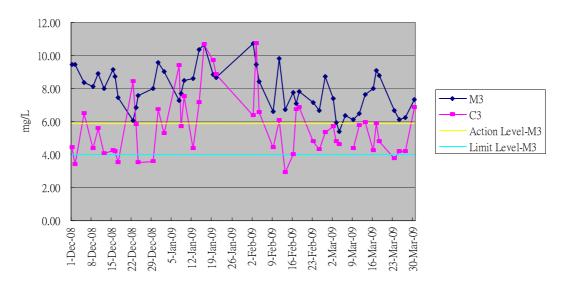

#### Graphical Plot of Dissolved Oxygen Trend M1&C1 (Dec 08-Mar 09)

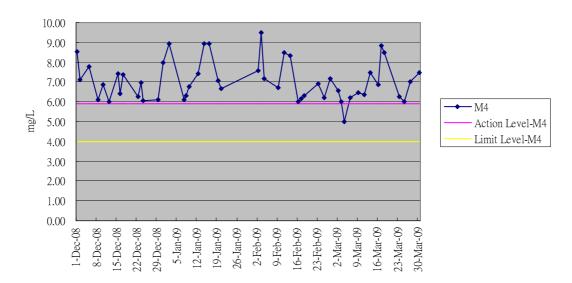

#### Graphical Plot of Dissolved Oxygen Trend M2&C2 (Dec 08-Mar 09)

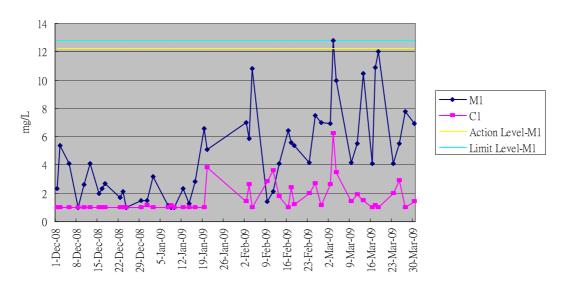

#### Graphical Plot of Dissolved Oxygen Trend M3&C3 (Dec 08-Mar 09)

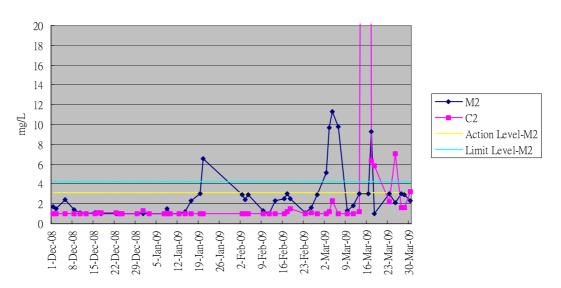

#### Graphical Plot of Dissolved Oxygen Trend M4 (Dec 08-Mar 09)

#### Graphical Plot of Suspended Soild M1&C1 (Dec 08 - Mar 09)

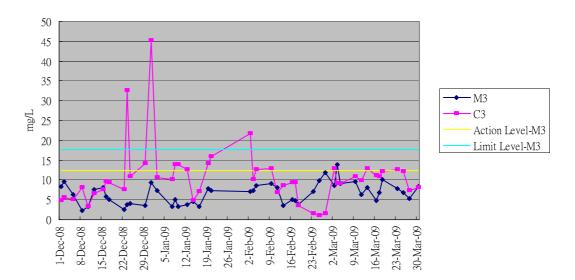

#### Graphical Plot of Suspended Soild M2&C2 (Dec 08 - Mar 09)

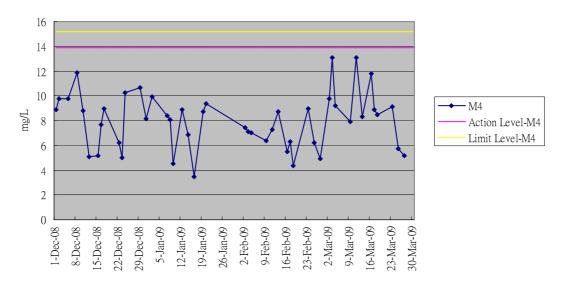

Remarks: The reading of C2 on Mar 16<sup>th</sup> 2009 is 215.4, which was over the range of the plot.

#### Graphical Plot of Suspended Soild M3&C3 (Dec 08 - Mar 09)

### Graphical Plot of Suspended Soild M4 (Dec 08 - Mar 09)

Appendix J

Graphical plot of noise monitoring results
