EXECUTIVE SUMMARY

This is the sixteenth monthly environmental Monitoring and audit (EM&A) report for "Drainage Improvement in Southern Lantau Investigation". The environmental permit number is "EP-237/2005/A". The report concludes the impact monitoring for the activities undertaken during the period of 1 November 2009 to 30 November 2009. The major activities in this reporting month include excavation for pipe trench at Ling Tsui Tau, construction of box culverts, retaining wall and gabion wall at Pak Ngan Heung (PNH), construction of retaining wall at Tai Tei Tong (TTT) River and construction of gabion walls as well as retaining wall at Luk Tei Tong (LTT) River.

Noise, water quality and ecological monitoring were performed. Results obtained were checked against the previously established Action / Limit (A/L) levels. Additionally, the implementation status of environmental mitigation measures, event/ action plan and environmental complaint handling procedures were inspected during weekly site environmental audit.

In general, waste management was satisfactory during the reporting month.

Impact monitoring for construction noise was conducted in the reporting period. No exceedance of A/L level was reported.

Furthermore, impact monitoring for water quality was conducted. Non-compliance events of water quality criteria were recorded on 2, 4, 6, 7, 9, 10, 11, 12, 13, 16, 17, 18, 19, 20, 26, 27, 28 and 30 November 2009. Except the natural fluctuation, among 83 events 20 of them were believed to be related to project works. As such contractor was advised to implement corrective actions and mitigation measures as to minimize further deterioration of water quality.

During ecological monitoring survey, no White-shouldered Starling was recorded breeding in the watch tower. There was no sign of disturbance from the Project to the watch tower. The watch tower may not be suitable for birds as nesting habitat. In addition, no disturbance on the flora and fauna in the river channels were observed during the ecological monitoring.

A formal complaint regarding muddy effluent discharge was recorded in 6 November 2009. As a follow-up action, EPD conducted a site investigation on 9 November 2009 and found that environmental performance at project site was unsatisfactory. A yellow form has been issued and contractor was urged to implement necessary corrective actions and mitigation measures to stop further deterioration of river water quality. For further details please refer to Section 11.2, 11.3 and Appendix L.

Key construction activity in the coming month will include construction of box culvert, gabion wall, retaining wall and sloping seawall. It is expected that noise, air and water quality impacts will be resulted from the works. With reference to the EM&A manual and mitigation measure report, mitigation measures are proposed to be taken, if necessary.

The ET will continue to implement the environmental monitoring & audit programme in accordance with the EM&A Manual and Environmental Permit requirement.

1. Introduction

This is the sixteenth monthly Environmental Monitoring and Audit (EM&A) Report for "Drainage Improvement in Southern Lantau Investigation" project (Environmental Permit No. EP-237/2005/A)

2. Project Information

2.1 Construction program

The "Drainage Improvement in Southern Lantau Investigation" project will be completed by January 2011. The project comprises the following:

- Construction of approximately 80m long gabion with natural bed in Pak Ngan Heung River, approximately 180m of three cells 3m x 2m box culvert and approximately 100m of rectangular channel at Pak Ngan Heung River;
- Construction of approximately 250m of 0.75m wide U-Channel at Ling Tsui Tau Village in Mui Wo;
- Construction of bypass channel of about 350m and 240m long of gabion channels at Luk Tei Tong River respectively; and
- Widening three existing bottlenecks with gabion lined at Tai Tei Tong River

Appendix A shows the construction program and location plan of the project.

2.2 Project organization

The Main Contractor, Yick Hing Construction Company Limited, has commissioned Environmental Pioneers & Solutions Limited and Ecosystems Limited as the Environmental Team, which comprises the environmental team leader, the ecologists and the environmental technicians to undertake the environmental monitoring and audit work for this project.

The environmental management structure and is shown in Fig 2.2.1.

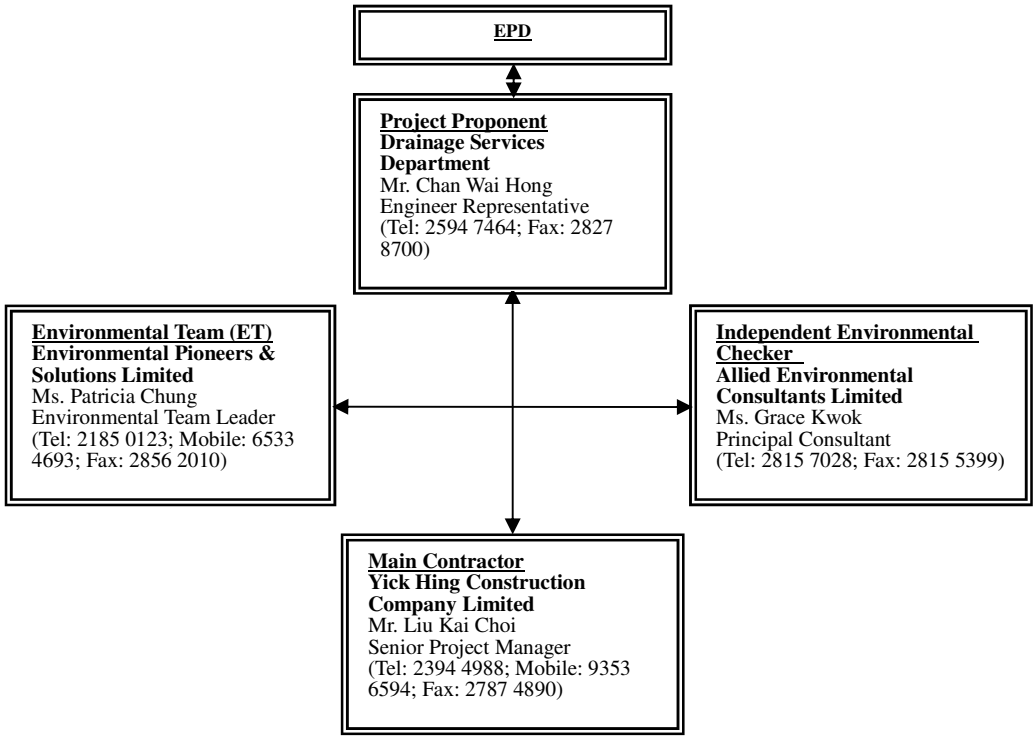

Figure. 2.2.1 Environmental Management structure for the project

2.3 Key personal contact information chart

Detailed contact of key persons involved in environmental aspect of the project is shown in Appendix B.

3. Construction Stage

3.1 Construction activities in the reporting month

Major activities in the reporting month included the followings:

1. Construction of box culverts BC5 to 8 at PNH;
2. Construction of gabion wall along PNH River (near the fish ladder);
3. Construction of retaining wall D at PNH River;
4. Construction of box culvert A at LTT
5. Construction of gabion wall at bottleneck B of TTT River;
6. Construction of retaining wall H at TTT River
7. Construction of pipe trench along Ling Tsui Tau;
8. Construction of gabion wall (near Yuen's Compound) at LTT River; and
9. Construction of retaining wall J (near Yuen's Compound) at LTT River.

3.2 Construction activities for the coming month

Key Construction works in the coming month will include:

1. Construction of box culverts at PNH;
2. Construction of gabion wall along PNH River (near the fish ladder);
3. Construction of retaining wall D at PNH River;
4. Construction of other retaining walls at PNH River;
5. Construction of box culvert A at LTT;
6. Construction of pipe trench along Ling Tsui Tau;
7. Construction of sloping seawall (near Yuen's Compound) at LTT River; and
8. Construction of retaining wall J (near Yuen's Compound) at LTT River.

3.3 Environmental Status

Appendix A shows the drawing of the project area.

Locations of the monitoring and control stations with environmental sensitive receivers are presented in Section 4.3, 5.3 and 6.3 for noise, water and ecological monitoring respectively.

4. Noise Monitoring

4.1 Monitoring Parameters and Methodology

The construction noise level was measured in terms of the A-weighted equivalent continuous sound pressure level (L_{eq}). $L_{eq\ (30minutes)}$ was used as the monitoring parameter for the impact monitoring in the time period between 0700 to 1900 hours on normal weekdays. For all other time period, $L_{eq\ (5minutes)}$ was employed for comparison with the Noise Control Ordinance (NCO) criteria.

Noise measurement results obtained from each monitoring location were recorded in the Construction Noise Monitoring Data Sheet (Appendix E) immediately after the measurement. As supplementary information for data auditing, statistical results L_{10} and L_{90} were also be recorded for reference.

In case of non-compliance with the construction noise criteria, more frequent monitoring, as specified in the Action plan in Table 4.5.2, shall be carried out. This additional monitoring shall be carried out until the recorded noise levels are rectified or proved to be irrelevant to the construction activities.

4.2 Monitoring Equipment

The sound level meters and calibrators comply with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications as referred to in the Technical Memorandum (TM) to the Noise Control Ordinance was deployed as monitoring equipment for noise measurement.

Noise measurement was not be made in the presence of fog, rain, wind with a steady speed exceeding $5ms^{-1}$ or wind with gust exceeding $10ms^{-1}$. Thus wind speed was checked by the portable wind speed indicator capable of measuring the wind speed in m/s. Table 4.2.1 summarizes the equipment list for noise monitoring

Table 4.2.1 Equipment List for Noise Monitoring

Equipment	Manufacturer & Model No.	Precision Grade	Qty
Integrated sound level meter	ACO Japan, model 6224	IEC 651 Type 1 IEC 804 Type 1	1
Windscreen	Microtech gefell model W2	N/A	1
Acoustical calibrator	Castle GA 607	IEC 942 Type 1	1
Wind speed indicator	Kestrel K1000	N/A	1
Remarks: Calibration details for the sound level meter is given in Appendix C for reference			

4.3 Monitoring Locations

According to the Baseline Monitoring Report issued in May 2008 for the captioned project, four locations where are alternative from the locations proposed in EM&A manual, were designated for baseline noise monitoring. For the data validation, impact noise monitoring was undertaken in the same locations during the construction phase of the project. The proposed monitoring locations are summarized in Table 4.3.1. Figure 4.3.1 shows the Noise Monitoring Locations

Noise measurement in each monitoring locations were taken at a point 1m from the exterior of the selected premises and at a height with no disturbance to the dweller and least obstructed view.

Table 4.3.1 Noise Monitoring Locations during Construction Phase

Identification No.	Noise Monitoring Locations
N1	No. 73, Village House, Ling Tsui Tau Tsuen (ground level)
N2	No. 31, Village House, Ling Tsui Tau Tsuen (ground level)
N3	Fence wall outside No. 5 village house adjacent to Luk Tei Tong River Outlet (ground level)
N4	No. 23, Village House, Tai Tei Tong River (ground level)

In accordance with the requirements in the EM&A manual, weekly impact monitoring was conducted. For the time period between 0700 and 1900 hours on normal weekdays, and noise parameter of $L_{eq\ (30minutes)}$ was measured. As if the construction works were carried out during restricted period (ie. 1900-2300, 2300-0700 of next day and Sundays / general holiday), impact monitoring that comprises 3 consecutive $L_{eq\ (5minutes)}$ would be carried out.

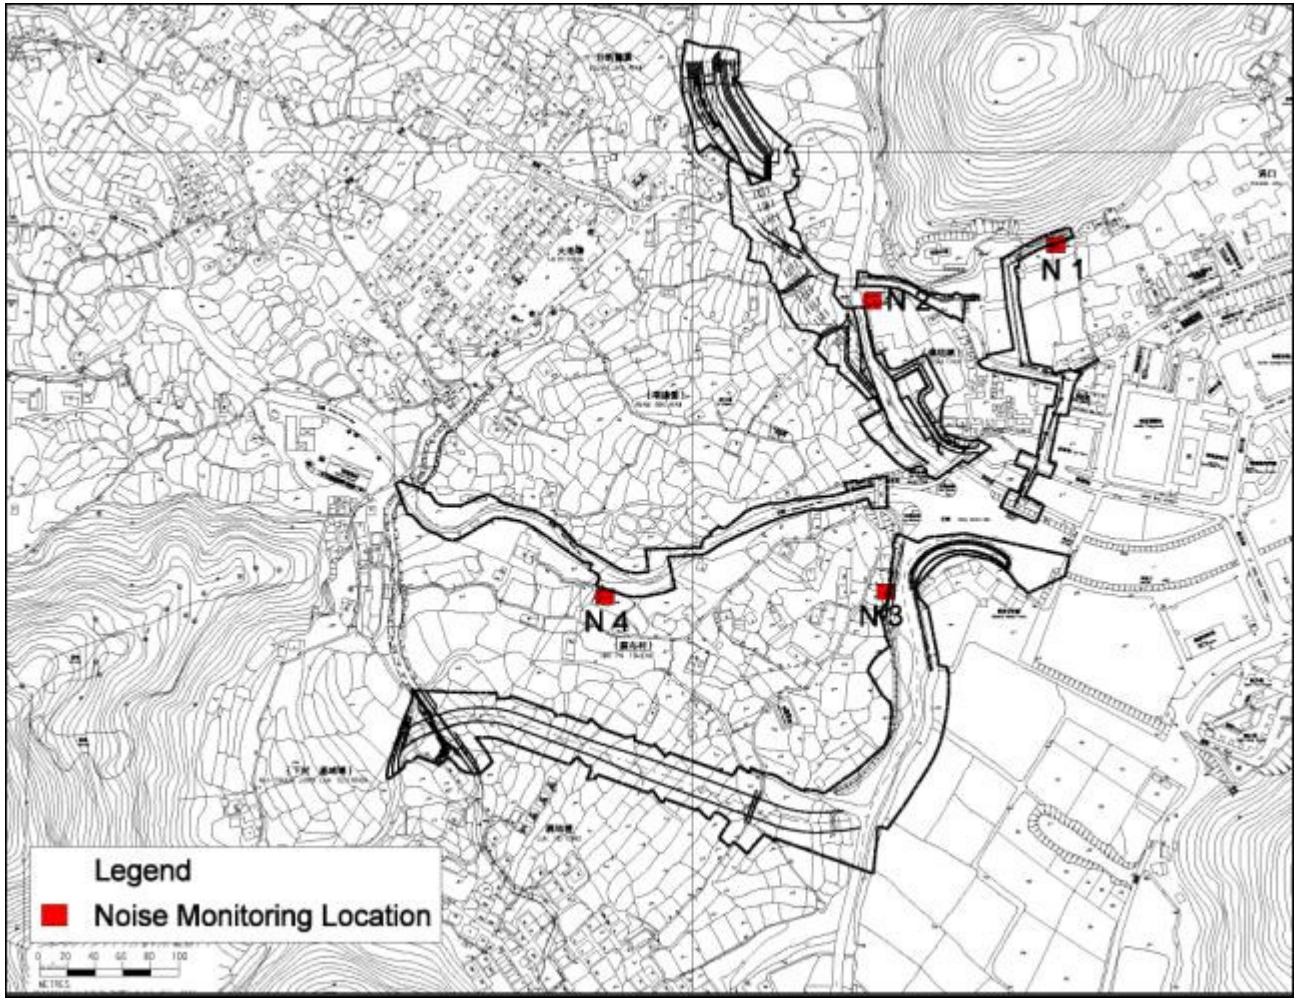

Figure 4.3.1 Impact noise monitoring locations

4.4 Monitoring Results and Interpretation

Relevant details of the noise monitoring results are presented in Table 4.4.1. The results, ranged between 40.4 dB(A) and 62.7 dB(A), were within the limit levels and therefore, no exceedance was found.

Table 4.4.1 Noise monitoring results

Table 4.4.1 Noise Monitoring Results for the reporting month

Location	Parameter	Date	Time	L_{Aeq} dB(A)	Limit dB(A)	Exceedance	Weather
N1	$L_{eq\ 30mins}$	04/11/09	12:15	40.4	75	N	Sunny
N1	$L_{eq\ 30mins}$	11/11/09	13:00	47.5	75	N	Sunny
N1	$L_{eq\ 30mins}$	18/11/09	14:50	54.1	75	N	Cloudy
N1	$L_{eq\ 30mins}$	26/11/09	13:35	50.7	75	N	Sunny
N2	$L_{eq\ 30mins}$	04/11/09	13:00	60.8	75	N	Sunny
N2	$L_{eq\ 30mins}$	11/11/09	13:35	62.0	75	N	Sunny
N2	$L_{eq\ 30mins}$	18/11/09	14:15	57.4	75	N	Cloudy
N2	$L_{eq\ 30mins}$	26/11/09	13:00	60.6	75	N	Sunny
N3*	$L_{eq\ 30mins}$	04/11/09	14:20	62.7	75	N	Sunny
N3*	$L_{eq\ 30mins}$	11/11/09	10:30	62.3	75	N	Sunny
N3*	$L_{eq\ 30mins}$	18/11/09	11:20	62.7	75	N	Cloudy
N3*	$L_{eq\ 30mins}$	26/11/09	10:40	55.4	75	N	Sunny
N4	$L_{eq\ 30mins}$	04/11/09	13:45	53.8	75	N	Sunny
N4	$L_{eq\ 30mins}$	11/11/09	11:03	52.9	75	N	Sunny
N4	$L_{eq\ 30mins}$	18/11/09	10:48	56.8	75	N	Cloudy
N4	$L_{eq\ 30mins}$	26/11/09	11:15	49.8	75	N	Sunny

Remarks: Raw datasheet for noise monitoring are attached in Appendix E for reference.
Remark*: The equivalent noise level of N3 is corrected by +3 dB from the raw data result due to the fact that free field measurement was carried out in the location.

4.5 Action and Limit level for Construction noise

The Action and Limit (A/L) levels for construction noise are defined in Table 4.5.1. Should non-compliance of the criteria occur, action in accordance with the Action Plan in Table 4.5.2 should be carried out.

There was no recorded exceedance in the reporting month.

Table 4.5.1 Action and Limit Levels for Construction noise		
Time Period	**Action Level**	**Limit Level**
0700 – 1900 hours on normal weekdays	When one documented complaint is received	75dB(A)
Remarks: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority have to be followed.		

Table 4.5.2 Event / Action Plan for Construction Noise

EVENT	**ACTION**			
	ET	**IC(E)**	**ER**	**Contractor**
Action Level	1. Notify IC(E) and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IC(E), ER and Contractor; 4. Discuss with the Contractor and formulate remedial measures; 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analysed results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise ER accordingly; 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analysed noise problem; 4. Ensure remedial measures are properly implemented.	1. Submit noise mitigation proposals to IC(E); 2. Implement Noise mitigation proposals.
Limit Level	1. Identify source; 2. Inform IC(E), ER, EPD and Contractor; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Inform IC(E), ER and EPD the causes and actions taken for the exceedances; 7. Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results 8. If exceedance stops, cease additional monitoring	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 2. Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analysed noise problem; 4. Ensure remedial measures properly implemented; 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IC(E) within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated

4.6 Noise Mitigation Measures

The following mitigation measures were observed from the weekly site inspection in the reporting month:

- Use of quiet powered mechanical equipment (PME)
- Implementation of the following good site practices:
  - Only well-maintained and regularly serviced plant should be operated on site;
  - Silencers or mufflers on construction equipment;
  - Mobile plant, if any, should be sited as far from noise sensitive receivers as possible; and
  - Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.

5. Water Monitoring

5.1 Water Quality Monitoring Parameters and methodology

Turbidity in Nephelometric Turbidity Unit (NTU), Dissolved Oxygen (DO) in mg/L and Suspended Solids (SS) in mg/L are required to measure in this project. Turbidity, DO was measured in-situ while water samples were delivered to Accredited HOKLAS Laboratory for analysis of SS.

Other relevant data such as monitoring location, time, water depth, temperature, salinity, weather conditions and any other special phenomena and work underway at the construction site were recorded during sampling.

According to the requirement of the EM&A manual, two consecutive measurements for parameters of DO concentration, DO saturation and Turbidity are required to be taken at each monitoring location. When the difference in value between the first and second reading of DO or Turbidity is more than 25%, the reading would be discarded and further reading would be taken.

5.2 Monitoring Equipment

Turbidity, DO, Salinity, pH and temperature was measured by an instrument complied with the following requirements:

The instrument is a portable as well as weatherproof multimeter complete with cable and uses a DC power source. It is capable of measuring:

- A turbidity between 0-800NTU;
- A dissolved Oxygen level in the range of 0-20mg/L and 0-200% saturation;
- A temperature of 0-50^{o}C;
- Salinity in the range of 0-40ppt;
- pH in the range of 0-14.

Suspended solid was determined by the water samples collected from the monitoring locations for further analysis in accredited HOKLAS laboratory. Water samples were contained by polythene bottles, packed in ice (cooled in 4^{o}C without frozen) and delivered to the laboratory for analysis as soon as possible after collection. Duplicate samples from each independent sampling event were undertaken during impact monitoring.

Detailed calibration records of the multimeter were shown in Appendix C for reference.

5.3 Monitoring Locations

Seven locations included a control station in upstream of each stream/ river, a monitoring station at the end of each stream/ river of the works area and a monitoring station at Silver River were proposed for the impact water quality monitoring. Water samples were collected at mid-depth of each proposed monitoring stations for measurements and sample collection. The Location Plan is shown in Figure 5.3.1 for reference.

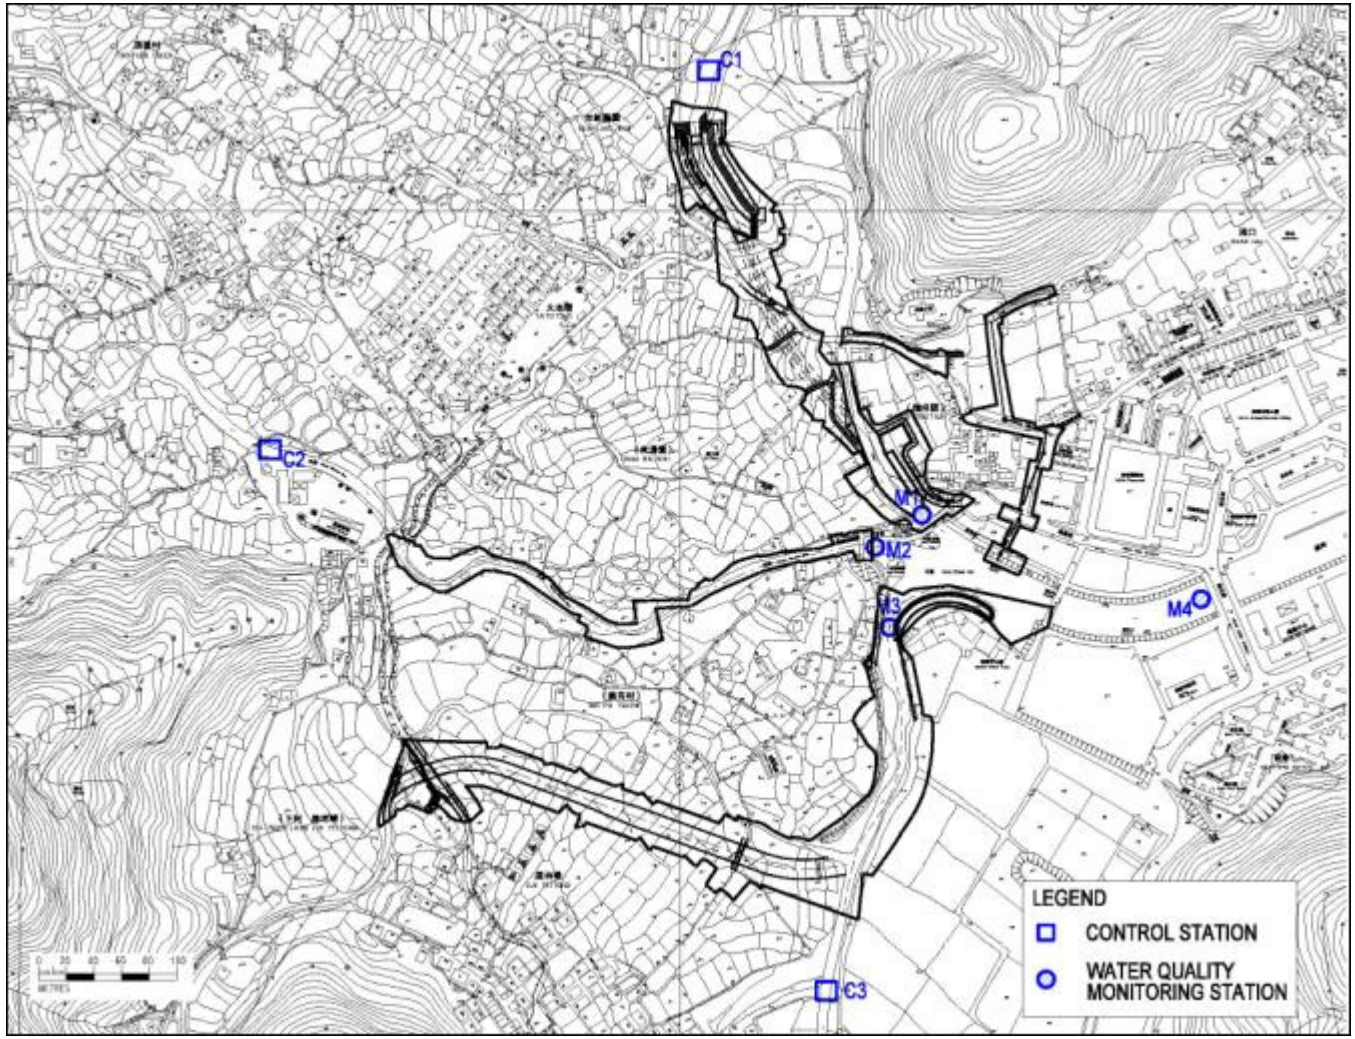

Figure 5.3.1 Water Quality Monitoring Locations

5.4 Monitoring Frequency

Impact water quality monitoring was undertaken three days per week and at ebb tides during the course of the construction river works. Upon the completion of the construction works, the monitoring exercises at the designated monitoring stations will be continued for four weeks in the same manner as the impact monitoring.

5.5 Monitoring Results and Interpretation

Water quality monitoring was carried out eighteen times during November. Detailed on-site measurements and laboratory analysis reports including QA/QC results are shown in Appendix F1 and F2 respectively, while Table 5.5.1 presents consolidated results throughout the reporting month.

Exceedance events on parameters of turbidity and suspended solids were recorded on 2, 4, 6, 7, 9, 10, 11, 12, 13, 16, 17, 18, 19, 20, 26, 27, 28 and 30 November 2009 according to the established level. Findings from the investigations showed that the total 83 exceedance events were mainly caused by natural fluctuation and deficiencies of site practice.

As 19 events were suspected to be related to improper site practices, contractor was seriously reminded to review the site conditions and implement corrective actions as well as mitigation measures as soon as possible to minimize further deterioration of water quality.

Detailed information of the exceedance events and action taken were presented in Section 7.

Table 5.5.1 Water quality monitoring results in November 2009

	M1			M2			M3			M4		
	MIN	MAX	Ave	MIN	MAX	Ave	MIN	MAX	Ave	MIN	MAX	Ave
Turbidity (NTU)	2.3	98.2	21.4	0.0	6.6	1.5	3.8	15.7	9.1	0.0	29.4	12.1
DO (mg/l)	7.5	9.6	8.6	8.0	9.7	8.7	5.9	10.7	7.9	6.7	18.3	9.7
Suspended Solid (mg/l)	2.4	77.6	21.2	1.2	3.1	2.1	3.6	12.3	9.3	3.6	34.6	16.4

	C1			C2			C3		
	MIN	MAX	Ave	MIN	MAX	Ave	MIN	MAX	Ave
Turbidity (NTU)	0.0	1.4	0.1	0.0	0.9	0.1	2.0	23.6	7.9
DO (mg/l)	6.6	9.5	7.8	7.5	9.1	8.2	6.1	8.7	7.3
Suspended Solid (mg/l)	1.0	3.9	1.4	1.0	1.0	1.0	5.4	30.9	9.5

* Remarks: Detection limit for Turbidity, DO and SS are 1 NTU, 0.1 mg/L and 1 mg/L respectively.

5.6 Action and limit level for Water Quality

Based on the criteria stipulated in EM&A manual Section 4.8 and baseline water quality monitoring data obtained, the A/L levels are shown in Table 5.6.1 and Table 5.6.2. If the water quality monitoring results at any impact stations exceeded the criteria, the actions in accordance with the Event and Action Plan in Table 5.6.3 should be taken.

Table 5.6.1 Water quality criteria for monitoring

Parameters	Action	Limit
DO in mg/L (mid-depth)	- 5%-ile of baseline data	- 4mg/L
SS in mg/L (mid-depth)	- 95%-ile of baseline data; or - 120% of control station's SS on the same day of measurement	- 99%-ile of baseline; or - 130% of control station's SS on the same day of measurement
Turbidity in NTU (mid-depth)	- 95%-ile of baseline data; or - 120% of control station's turbidity on the same day of measurement	- 99%-ile of baseline; or - 130% of control station's turbidity on the same day of measurement

Table 5.6.2 Action and Limit Levels established according to baseline data

Parameters	Monitoring locations							
	M1		M2		M3		M4	
	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level
Turbidity (NTU)	15.2	16.9	5.3	6.5	16.8	26.0	16.2	18.0
DO (mg/L)	5.7	4.0	6.2	4.0	5.9	4.0	5.9	4.0
SS (mg/L)	12.2	12.8	3.1	4.2	12.4	17.7	13.9	15.2

Remarks:
For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits
For SS and turbidity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

Table 5.6.3 Event and action Plan for Water Quality

EVENT	ACTION			
	ET	**IC(E)**	**ER**	**Contractor**
Action Level being exceed by one sampling day	1. Repeat in *situ* measurement to confirm findings; 2. Identify reasons for non-compliance and source(s) of impact; 3. Inform IC(E) and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IC(E) and Contractor; 6. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals in mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IC(E) on the proposed mitigation measures; 2. make agreement on the mitigation measures to be implemented; 3. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IC(E) and propose mitigation measures to IC(E) and ER; 6. Implement the agreed mitigation measures.
Action level being exceed by more than two consecutive sampling days	1. Repeat in *situ* measurement to confirm findings; 2. Identify reasons for non-compliance and source(s) of impact; 3. Inform IC(E) and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IC(E) and Contractor; 6. Ensure mitigation measures are implemented; prepare to increase the monitoring frequency to daily 7. Repeat measurement on next day of exceedance	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals in mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IC(E) on the proposed mitigation measures; 2. make agreement on the mitigation measures to be implemented; 3. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IC(E) and propose mitigation measures to IC(E) and ER within three working days; 6. Implement the agreed mitigation measures.
Limit level being exceeded by one sampling day	1. Repeat in *situ* measurement to confirm findings; 2. Identify reasons for non-compliance and source(s) of impact; 3. Inform IC(E) and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IC(E) and Contractor; 6. Ensure mitigation measures are implemented; 7. Increase the monitoring frequency to daily until no exceedance of Limit Level	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals in mitigation measures submitted by Contractor and advise the ER accordingly; 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IC(E) on the proposed mitigation measures; 2. make agreement on the mitigation measures to be implemented; 3. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IC(E) and propose mitigation measures to IC(E) and ER; 6. Implement the agreed mitigation measures.

5.7 Water Quality Mitigation Measures

Construction Run-off and Drainage

The site practices outlined in ProPECC PN 1/94 'Construction Site Drainage" should be followed as far as practicable during both construction and operation phase of the drainage improvement works in order to minimize surface runoff and the chance of erosion, and also to retain and reduce any suspended solids prior to discharge.

As recommended in the final EM&A manual, attention would be paid especially construction run-off and drainage, general construction activities, sewage discharged from construction workforce and river channel excavation works.

Contractor was recommended to provide sufficient water treatment facilities for accumulated site water and excavation activities carried out nearby river channel. Earth bunds should be provided to the construction site in / next to the river channel to form an enclosed, dry environment to minimize water quality impact.

5.8 Water Monitoring Schedule for the Next reporting period

Water monitoring in the next reporting period is scheduled for 2, 4, 7 8, 9, 14, 16, 18, 21, 22, 23, 29, 30 and 31 December 2009.

6. Ecology Monitoring

6.1 Ecological Monitoring Parameters

According to the Final EM&A Manual, a specific ecological monitoring programme of the improved section of PNH and LTT Rivers is recommended. The monitoring parameters required to measure in this project and survey methodology are described below:

(1) Avifauna species and abundance: Birds will be surveyed quantitatively using transect count method. Birds within the river channel and on the riverbank will be identified and their abundance will be recorded.

(2) Aquatic macroinvertebrate community species composition and abundance: Survey on aquatic fauna will focus on determination of the diversity and abundance of stream aquatic communities. Sampling methods, such as active searching, direct observation, netting, and kick sampling, will be determined according to the site conditions during field survey.

(3) Fish community species composition and abundance: Sampling methods, such as active searching, direct observation, and hand netting, will be determined according to the site conditions during field survey.

(4) Adult odonate community species composition and abundance: Adult dragonfly will be surveyed quantitatively using transect count method. Adult dragonflies within the river channel and on the riverbank will be identified and their abundance will be recorded. Species requiring close examination will be netted.

(5) Aquatic, emergent and riparian vegetation community species composition and abundance: The area will be walked through. Plant species composition and their relative abundance will be recorded.

(6) Surveys of White-shouldered Starling Sturnus sinensis will be conducted at the disused watchtowers next to LTT river. Breeding of the White-shouldered Starlings will be determined by checking signs of attempt to breed or sign of breeding which include carrying nesting materials, to-and-fro movement of adults carrying food, presence of recently fledged juveniles, etc. The number of breeding pairs and the site observation will be recorded whenever possible.

Water Quality Monitoring along LTT and PNH River as well as LTT bypass channel was carried out. Water quality monitoring will include Turbidity in Nephelometric Turbidity Unit (NTU), Dissolved Oxygen (DO) in mg/L and Suspended Solids (SS) in mg/L are required to measure in this project. Moreover, additional water monitoring parameters will be taken for the purposes of ecological monitoring of water quality in this project. The added information will include: BOD, Ammonia, Nitrate and Phosphate concentrations. Turbidity, DO, pH and water flow will be measured in-situ while water samples will be delivered to Accredited HOKLAS Laboratory accredited laboratory and the analyses followed the standard methods according to APHA Standard Methods for the Examination of Water and Wastewater, 20th Edition, or equivalent for analysis of SS, BOD, Ammonia, Nitrate and Phosphate concentrations.

Other relevant data such as monitoring location, time, water depth, temperature, salinity, weather conditions and any other special phenomena and work underway at the construction site will be recorded during sampling.

According to the requirement of the EM&A manual, two consecutive measurements for parameters of DO concentration, DO saturation and Turbidity are required to be taken at each monitoring. When the difference in value between the first and second reading of DO or Turbidity is more than 25%, the reading will be discarded and further reading will be taken.

6.2 Monitoring Equipment and Methodology

Turbidity, DO, Salinity, pH and Temperature will be measured by a instrument complied with the following requirements:

The instrument is a portable as well as weatherproof multimeter complete with cable and uses a DC power source. It is capable of measuring:

- A turbidity between 0-800NTU;
- A dissolved Oxygen level in the range of 0-20mg/L and 0-200% saturation;
- A temperature of 0-50^{o}C;
- Salinity in the range of 0-40ppt;
- pH in the range of 0-14.

Suspended solid was determined by the water samples collected from the

monitoring locations for further analysis in accredited HOKLAS laboratory. Water samples were contained by polythene bottles, packed in ice (cooled in 4^{o}C without frozen) and delivered to the laboratory for analysis as soon as possible after collection. Duplicate samples from each independent sampling event were undertaken during impact monitoring.

6.3 Monitoring Locations

According to the Final EM&A Manual, the improved section of the river channels will be divided into 50m long sections, and ecological survey will be carried out in each of the 50m sections. A total of nine sections will be divided for the two rivers which include:

- Two sections for existing upstream of PNH river (i.e. the proposed 80m long trapezoidal channel)
- Two sections for existing downstream of PNH river (i.e. the proposed 100m long rectangular channel)
- Five sections for existing Luk Tei Tong River (i.e. the proposed 240m long trapezoidal channel)

The disused watchtowers are located at the confluence of the three rivers and next to LTT river.

The Location Plan for ecological is shown in Figure 6.1 for reference.

The improved sections of the river channels require to carrying out water quality monitoring for the ecological purpose. The sampling points for impact monitoring was undertaken in the same place as the baseline monitoring proposed, where include:

- Three points for existing of PNH river
- Three points for existing of Luk Tei Tong River

The Location Plan for ecological water monitoring is shown in Figure 6.2 for reference.

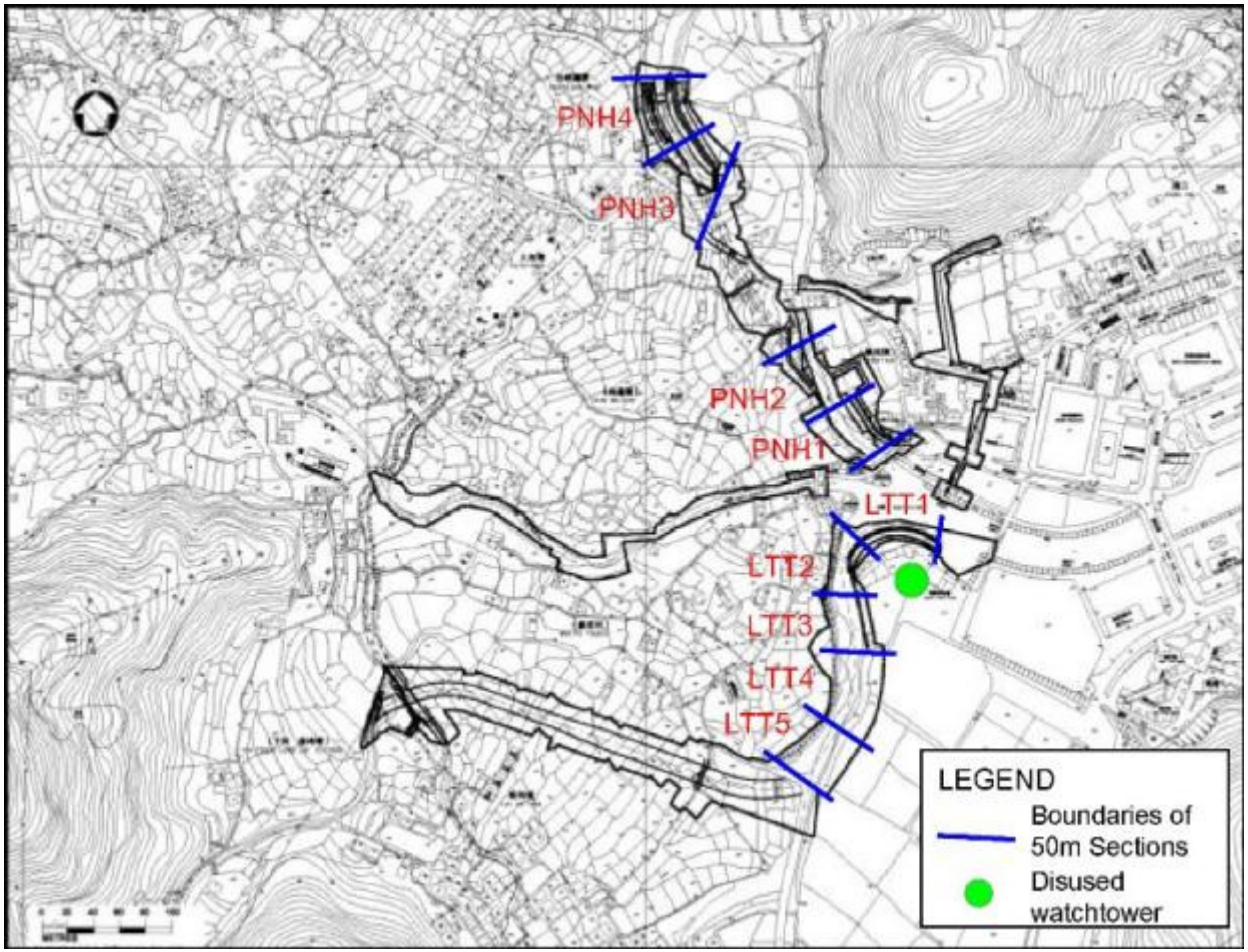

Figure 6.1 Ecological Monitoring Locations

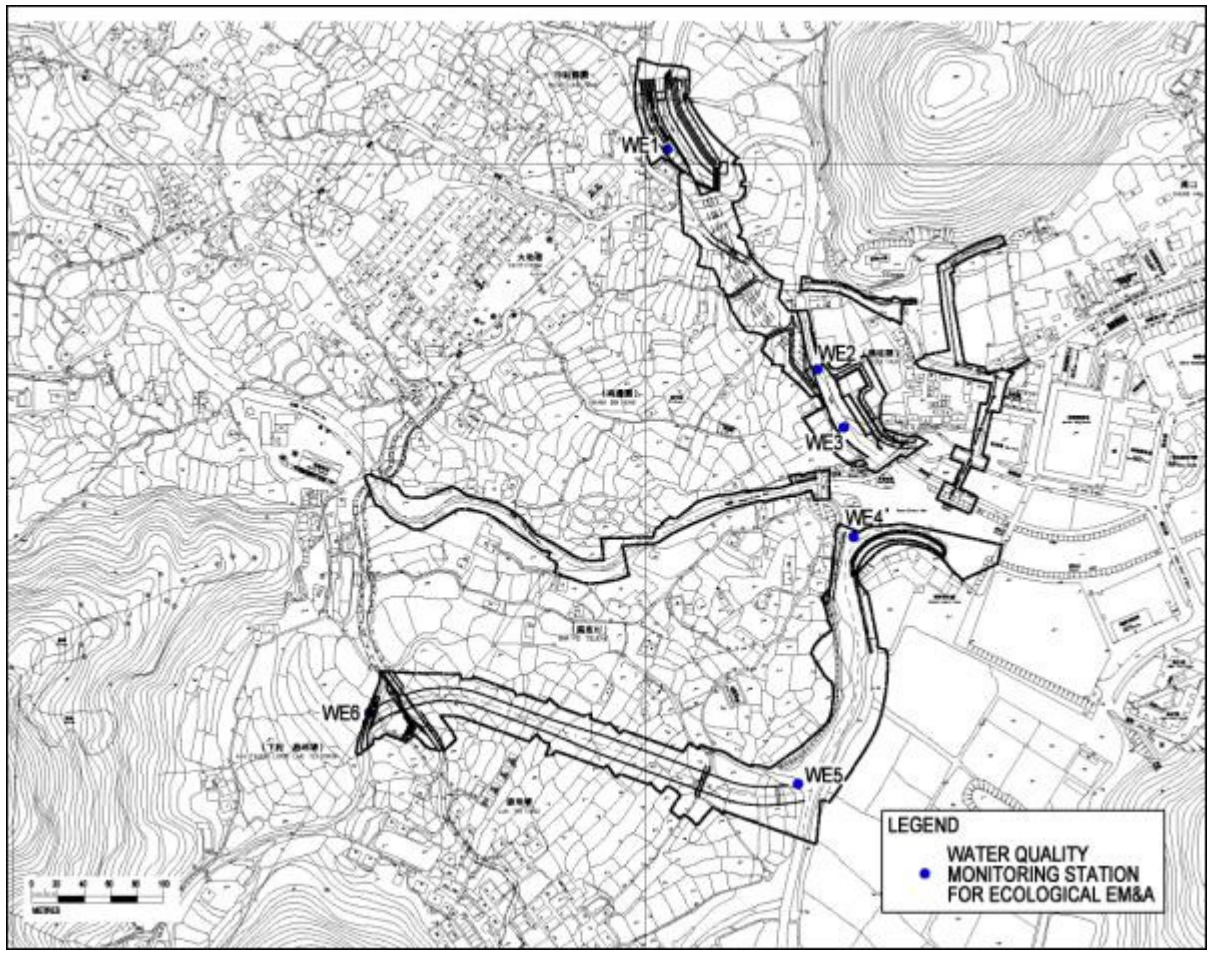

Figure 6.2 Ecological Water Quality monitoring locations

6.4 Monitoring Frequency

As proposed, ecological impact monitoring was carried out once for each monitoring location in the reporting month.

6.5 Monitoring results

Pak Ngan Heung Stream N and S sections

Vegetation

Surveys were conducted on 10 November 2009. The north section of Pak Ngan Heung Stream was fairly modified. Part of the west bank was lined with rock gabion bank and occupied by village houses and abandoned agricultural field. The stream channel was wider than the downstream section, but the stream bank was still fairly narrow and steep in gradient. Compared to the south section, the north section was relatively shaded due to presence of more trees with larger canopy. During the current monitoring session, new rock gabion wall on the east bank was under construction. Stream bank of PNH4 was still intact, while stream bank of PNH3 was subject to site clearance.

The walk through survey recorded a total of 60 species, including 19 trees, 7 shrub, 21 herb and 5 grass species (Appendix D1). 47 of the species recorded are natives, while 13 were exotics. The quantitative sampling on PNH4 recorded 18 species at the north section. Large native (e.g. *Celtis sinensis, Ficus hispida, Macaranga tanarius*) dominated the transects. Other species recorded include common and typical native pioneer forest and streamside tree species and ruderal species. No species of conservation interest was recorded. No quantitative survey was carried out along PNH3 due to on-going vegetation clearance on stream banks as part of the site clearance works under the project.

Table 6.5.1 Relative percentage cover of vegetation recorded at Pak Ngan Heung (N) Section

	Relative % cover
Species	**PNH4**
Acorus graminifolia	0.75
Alocasia macrorrhiza	2.87
Aporosa dioica	1.96
Celtis sinensis	12.67
Christella parasitca	2.90
Dimocarpus longan	0.12
Ficus hispida	35.37
Hedyotis auricularia	0.09
Hibiscus rosa-sinensis	1.45
Litsea glutinosa	15.69
Macaranga tanarius	10.26
Microstegium ciliatum	8.90
Mikania micrantha	4.68
Neyraudia reynaudiana	1.18
Pilea microphylla	0.09
Pogonatherum crinitum	0.12
Sageretia thea	0.03
Sporobolus fertilis	0.88
Total Relative % Cover	100.0*
Total Transect Length (m)	34

*Total Cover rounded up to one decimal place to avoid round-off error.

The south section of Pak Ngan Heung Stream was highly modified. Both banks were lined with rock gabions and were occupied by village houses immediately beyond the channel. The stream channel was lack of riparian zone and vegetation. A total of 11 species recorded, 8 of which were native and 3 were exotic. It was composed of isolated individuals of mangrove (*Acrostichum aureum*), backshore species (*Clerodendrum inerme*) and native trees (*Celtis sinensis*, *Ficus microcarpa*) (Appendix D2). No species of conservation interest was recorded. During the current monitoring session, site clearance for construction work at Section PNH1 has started. Vegetation was only found on remnants of the old rocky bank.

Terrestrial Fauna

Surveys were conducted on 13 November 2009.

A total of two species of birds were recorded in the proposed work area of the Pak Ngan Heung River (Table 6.5.2). Both are common in Hong Kong.

Table 6.5.2 Avifauna in Pak Ngan Heung

Common names	**Latin names**	**PNH 1**	**PNH 2**	**PNH 3**	**PNH 4**	**Commonness & distribution**
Grey Wagtail	*Motacilla cinerea*				1	CW
Blue Whistling Thrush	*Myiophoneus caeruleus*				1	CW

CW = common and widespread, CL = common/uncommon and localized

Only one species of dragonfly was recorded in the proposed work area of the Pak Ngan Heung River (Table 6.5.3). This species is common and widespread in Hong Kong.

Table 6.5.3 Dragonfly in Pak Ngan Heung River

Common names	***Latin names***	**PNH 1**	**PNH 2**	**PNH 3**	**PNH 4**	**Commonness & distribution**
Wandering Glider	*Pantala flavescens*		1		3	A

A = abundant

Aquatic fauna and fish

6 species of fish and 2 crustacean were recorded in the 4 sections at PNH. All are common and widespread in Hong Kong. Though Predaceous Chub was observed, the another one fish species of conservation concern reported in the EIA report, i.e. Flagtail *Kuhlia marginata*, was not recorded in PNH during the present monthly monitoring survey. One side of the stream channel within PH2 was enclosed and drained for channel modification works. This method followed the requirements in the EP, and a fish capture survey had been conducted prior to the modification works (the results of the fish capture survey will be reported in a separated fish capture survey report).

Table 6.5.4 Aquatic Invertebrates and fish in Pak Ngan Heung

Common names	Scientific names	PNH 1	PNH 2	PNH3	PNH4
Invertebrates					
Atyid shrimp	*Caridina elongata*				+
Palaemond shrimp	*Macrobrachium hainanensis*			+	
Crab	*Varuna litterata*				
Mitten Crab	*Eriocheir japonica*				
Fish					
Mosquito fish	*Gamusia affinis*				+
Goby	*Rhinogobius duospilus*				+
Barcheek Goby	*Rhinogobius giurinus*				
Swordtail	*Xiphophorus hellerii*				
Six-banded Barb	*Puntius semifasciolatus*				
Unidentified Cichlid fish					
Tilapia		+		+	
Predaceous Chub	*Parazacco spilurus*			++	
Jarbua Terapon	*Terapon jarbua*	++			
Common Silver-biddy	*Gerres oyena*				
Mullet	*Mugil cephalus*	+			
Broken-band Hillstream Loach	*Liniparhomaloptera disparis*				

+ = Occasional, less than 5 individuals were found; ++ = Common, 5 – 20 individuals were found; +++ = Abundant, more than 20 individuals were found.

Luk Tei Tong Stream Section

Vegetation

Surveys were conducted on 10 November 2009. The Luk Tei Tong Stream Section was highly modified. Vegetation only established on isolated muddy patches at the estuary and remaining semi-natural banks of LLT1, LLT2, and LLT4. Vegetation clearance was underway along LLT2 and was completed , along LLT3 while LLT5 was still lined with old rock gabions. The whole section appeared to be subject to tidal influence, as mangrove associated or backshore species were recorded along the whole channel.

The walk through survey recorded a total of 23 species, including 7 tree, 5 shrub, 4 grass species (Appendix D3). 20 of the species recorded are natives, while 3 were exotics. No quantitative survey was carried out due to vegetation clearance on stream banks as part of the site clearance works under the project.

Terrestrial Fauna

The proposed work area of Luk Tei Tong River was divided into 5 sections. All recorded avifauna and dragonfly species are common in Hong Kong

Surveys were conducted on 13 November 2009.

A total of four species of birds were recorded in these sections (Table 6.5.6). All these species are common and widely distributed in Hong Kong.

Table 6.5.6 Avifauna in Luk Tei Tong River

Common names	**Latin names**	**LTT 1**	**LTT 2**	**LTT 3**	**LTT 4**	**LTT 5**	**Commonness & distribution**
Little Egret	*Egretta garzetta*	1					CW
Great Egret	*Casmerodius albus*	1					CW
Common Sandpiper	*Actitis hypoleucos*	1					CW
White Wagtail	*Motacilla alba*			1			CW

CW = common and widespread

Three species of dragonfly were recorded in the Luk Tei Tong River (Table 6.5.7). All are common and widespread in Hong Kong.

Table 6.5.7 Dragonfly in Luk Tei Tong River

Common names	Latin names	LTT 1	LTT 2	LTT 3	LTT 4	LTT 5	Commonness & distribution
Green Skimmer	*Orthetrum sabina*					1	C
Wandering Glider	*Pantala flaviventris*	2					A
Crimson Dropwing	*Trithemis aurora*					1	A

A = abundant, C = common

Aquatic invertebrates and fish

5 species of fish, 1 species of crustacean and 4 species of mollusks were recorded in the 5 sections at LTT. All are common and widespread in Hong Kong. The two fish species of conservation concern reported in the EIA report, i.e. Flagtail *Kuhlia marginata* and Predaceous Chub *Parazacco spilurus* were not recorded in LTT during the present monitoring as well as the baseline monitoring survey.

Table 6.5.8 Aquatic invertebrates and fish in Luk Tei Tong River

Common names	Scientific names	LTT1	LTT2	LTT3	LTT4	LTT5
Invertebrates						
Mangrove clam	*Geloina erosa*

Snail	*Melanoides tuberculata*				+	+
Snail	*Terebralia* sp.					
Snail	*Nerita* sp.	+	+			
Snail	*Littoraria articulata*		+			
Crab	*Varuna litterata*					
Fiddler crab	*Uca lactea*					
Fiddler crab	*Uca arcuata*					
Fiddler crab	*Uca crassipes*					
Crab	*Perisesarma bidens*		+	+		

Mangrove mud crab	*Scylla paramamosain*					
Mitten crab	*Eriocheir japonica*					
Fish						
Common mudskipper	*Periophthalmus cantonensis*		+	+		
Tilapia		+	+	+		
Jarbua terapon	*Terapon jarbua*		+			
Mullet	*Mugil cephalus*	++	++	++		
Common Silver-biddy	*Gerres oyena*					
Barcheek Goby	*Rhinogobius giurinus*				+	+

+ = Occasional, less than 5 individuals were found; ++ = Common, 5 – 20 individuals were found; +++ = Abundant, more than 20 individuals were found.

Disused Watchtowers

Surveys were conducted on 13 November 2009.

There was no sign (e.g., adults carrying food or nesting materials) of use of the watchtower as nesting habitat by White-shouldered Starling.

White-shouldered Starling was not observed during the November2009 monitoring. No bird of other species was observed entering the watchtower.

Most birds in Hong Kong breed between March and July. No sign of nesting of White-shouldered Starling in the disused watchtower was observed during this period. The prime time of breeding season of 2009 was already over.

Since the monitoring surveys commenced in August 2008, no bird was observed entering the watchtower. It seems the birds do not prefer the watchtower as roosting or nesting habitat.

Ecological Water Quality Monitoring (EWQM)

EWQM was conducted on 2 November 2009. Monitoring results are summarized in Table 6.9. Detailed on-site measurements and laboratory report

are presented in Appendix D4 and D5.

Table 6.10 shows the baseline results of Ecological Water Quality Monitoring, from the information given in Baseline Monitoring Report.

To review the results in Table 6.9 in general, the measured results of Suspended Solids and Turbidity measured in WE3 (PNH River) and WE4 (LTT River) was found higher than the previous months. Such facts were believed to be caused by disturbance of sediments, and site effluent discharge due to construction activities.

Table 6.9 Summarized Ecological water quality monitoring results (2 Nov 2009)

Parameters	Limit of detection	WE1	WE2	WE3	WE4	WE5	WE6
Suspended Solid (mg/l)	1	2.35	6.45	11.20	7.60	10.90	1.00
Nitrogen (Ammonia) (mg/l)	0.01	0.02	0.03	0.06	0.14	0.61	0.05

6.6 Action and Limit level for Monitoring of White-shouldered Starlings

A simple Event and Action Plan is shown in Table 6.6.1. Should the Event occur, action in accordance with the Action Plan should be carried out.

There was no recorded event in the reporting month.

Table 6.6.1 Event / Action Plan for Monitoring of White-shouldered Starlings

EVENT	ACTION	
	ET Leader	**Contractor**
Identification of disturbance to breeding White-shouldered Starlings	1. Increase frequency of monitoring to twice weekly	1. Check all construction actions and working methods
	2. Notify Site Engineer	2. Submit proposals for remedial action to prevent abandonment of the breeding site.
	3. Review construction activities of previous week.	3. Implement remedial action.
	4. Identify any changes in construction activities in previous week	4. Liaise with ET regarding effectiveness of remedial actions.
	5. Discuss remedial actions with Site Engineer	

6.7 Ecological monitoring Schedule

The next ecological surveys are scheduled on 04 and 10 December 2009, while ecological water quality monitoring is scheduled on 14 December 2009.

7. Action taken in Event of Exceedence

If the measurements (Noise, Water, Ecology) exceed the action / limit level, exceedance details will be reported and follow-up actions will be taken by relevant parties involved.

During the reporting period there was no exceedance for noise, ecological measurements recorded; therefore no actions were taken.

Total 83 non-compliance events of water quality limits (Dissolved Oxygen, Turbidity and Suspended Solids) were recorded on 2, 4, 6, 7, 9, 10, 11, 12, 13, 16, 17, 18, 19, 20, 26, 27, 28 and 30 November 2009 according to the established level. ET has arranged site investigations for the exceedance events. Findings from the inspection showed except natural fluctuation 20 events were believed to be caused by project works. As such, contractor was advised to review their site conditions and implement necessary corrective actions as well as mitigation measures as far as practicable.

The summary of non-compliance is listed in Table 7.1 for reference.

Table 7.1 Summary of Non-compliance for Water Quality

8. Construction waste disposal

It is the contractor's responsibility to ensure that all wastes produced during the construction phase for the drainage improvement works are handled, stored and disposed of in accordance with good waste management practices and EPD's regulation and requirement. Waste materials generated during construction activities, such as construction and demolition (C&D) material, chemical wastes and general refuse, are recommended to be audited at regular intervals to ensure that proper storage, transportation and disposal practices are being implemented.

Contractor has completed the registration of Waste Producer under the Waste Disposal (Chemical Waste)(General) Regulation. The Waste Producer Number, WPN 5213-950-Y2443-03 was assigned by EPD on 12 Aug 2008. The Contractor would be responsible for the implementation of any mitigation measure to minimize waste or redress problems arising from the waste materials.

Table 8.1 is a summary of figures of the construction wastes disposal provided by Contractor.

Table 8.1 Summary of Construction Waste Disposal

	Amount of Construction Waste disposed		
Month	**Inert Waste (to Public Fill)**	**Non-inert Waste (to Landfill)**	**Chemical Waste (to treatment plant)**
1st to 30th Nov 09	1569.60 (ton)	29.50 (ton)	Nil
Total	21842.26 (ton)	112.23 (ton)	0

9. Status of Permits and Licenses obtained

Table 9.1 is the updated status of environmental related permits/ license obtained for the construction activities

Table 9 .1 Status of Permits and Licenses Obtained

Description	License / Permit No.#	Date of Issue	Date of Expiry	Remarks
Environmental Permit	EP-237/2005/A	05 Mar 2007	--	Issued

The contractor implemented various environmental mitigation measures as recommended in the Environmental Permit and Final Mitigation Measures Report. The implemented schedule is presented in Appendix H.

10. Complaint Log

A formal complaint regarding muddy effluent discharge from site at PNH was referred by EPD in this reporting month. Site investigation was conducted and Contractor was advised to implement necessary. For details of the complaint report and log sheet please refer to Appendix L.

Table 10.1 Summary of Formal Complaints received

	Noise	Water	Ecology	Cultural	Others
November 2009	0	1	0	0	0
Total	0	1	0	0	0

11. Site Environmental Audits

11.1 Site Inspection

With an intention to ensure that appropriate environmental protection and pollution control mitigation measures are properly implemented, regular environmental site inspections have been scheduled.

Within the reporting month, site inspections were conducted on 5, 12, 19, 24 and 30 November 2009.

A detailed checklist of each site inspection together with comments, relevant photos and maps have been filed and kept. A summary of observation and follow-up action is shown in Table 11.1

Table 11.1 Summary of site inspection

Date	Observations	Advice from ET	Action taken	Closing Date
5 & 8 Oct 09	Site water generated from box culvert A of LTT was found diverted to the bushes outside of site boundary	Contractor was advised to divert site water to a proper treatment facilities and then discharge to a designated discharge point in accordance with the applied wastewater discharge license	Such practice was stop as reported by Contractor during inspection on 19 Nov	19 Nov 09
8 Oct 09, 5 & 12 Nov 09	Exposed earth surface and site ground were found dry and dusty	Contractor was reminded to provide sufficient water spraying to dusty static area for dust suppression.	Ongoing implementation of water spraying was required	Ongoing
23 Oct 09	Influent was overflowing from the de-silting tank installed at site retaining wall D of PNH, and seeping to the nearby bushes	Contractor was recommended to review if the capacity of the de-silting tank is capable for site water treatment in the concerned area; additional de-silting tank should be provided and/or flow rate of influent should be controlled.	Issue of improvement works for the de-silting tank was still outstanding	Ongoing
23 Oct 09	Existing concrete wall, which used as bunds to protect site retaining wall D of PNH, was collapsed and causing site water leakage to the river channel	Contractor was recommended to implement immediate remedial actions include reformation of proper earth bunds as to stop further deterioration of water quality	Although actions have been taken, site water seepage was still observed and further improvement was required	Ongoing
5 Nov 09	River water of PNHR at section outside retaining wall D and BC13 was observed to be muddy during inspection	Contractor was urged to trace the cause of contamination and implement necessary corrective actions and mitigation measures as soon as possible to stop further deterioration of water quality.	To be followed in the next reporting month	Ongoing
12 & 19 Nov 09	There was no protection measure implemented for the temporary sheet pile crossing at fish ladder / gabion wall site	Contractor was advised to provide bunds and/or barriers to prevent grit and soil from dropping into the river channel.	Follow up action has been taken as advised prior to the inspection on 24 Nov 09	24 Nov 09

Table 11.1 Summary of site inspection

Date	Observations	Advice from ET	Action taken	Closing Date
12 & 19 Nov 09	Some of the geo-textile coverings provided to the soil slopes and earth bunds at PNH River site BC15, was found drifted by wind blow	Contractor was advised to rectify such discrepancy to prevent potential risk of soil erosion from the exposed soil slopes.	Follow up actions has been taken as advised prior to the inspection on 24 Nov	24 Nov 09
19 Nov 09	Silt clay accumulated in the wheel washing bay at PNH fish ladder site.	Contractor was recommended to regularly clean up the silt clay accumulated in the wheel washing bay at PNH fish ladder site	Follow up action has been taken as advised prior to the inspection on 24 Nov	24 Nov 09
19 and 24 Nov 09	Site water leakage was observed from soak-away pond to the marshland area next to Yuen's compound	Contractor was advised to implement corrective actions to stop further site water leakage as soon as possible.	To be followed in the next reporting month	Ongoing
24 Nov 09	River water in downstream of TTTR was observed to be muddy during inspection. Such condition was believed to be caused by construction activities	Contractor was urged to trace the cause of contamination and implement necessary corrective actions and mitigation measures as soon as possible to stop further deterioration of water quality.	To be followed in the next reporting month	Ongoing
24 Nov 09	Public U-channel connected with PNH box culverts was not properly covered	Contractor was reminded to rectify the outstanding discrepancy to avoid earth materials and construction wastes dropping into public drainage and causing water quality impact.	Follow up action has been taken by providing wooden board coverings prior to inspection on 30 Nov	30 Nov 09
30 Nov 09	No wheel washing facility was observed in construction site exit at bottleneck A and site connected to Ngan Shu Street	Contractor was requested to clean up mud deposited on public areas and provide adequate properly maintained wheel washing facilities at all site exit as soon as possible.	To be followed in the next reporting month	Ongoing
30 Nov 09	Site water was overflowed to PNH River from construction site near retaining wall D	Contractor was required to provide and properly utilize site water treatment facilities such as properly maintained earth bunds and sedimentation tank on site	To be followed in the next reporting month	Ongoing

Table 11.1 Summary of site inspection

Date	Observations	Advice from ET	Action taken	Closing Date
30 Nov 09	Site water accumulated at PNH box culvert was pumped to nearby grassland and diverted into a soak-away pond at lower stream of PNH river. The soak-away pond was poorly maintained.	Contractor was requested to clear mud and silt materials accumulated at the soak-away pond and replace dirty geo-textile materials as soon as possible	To be followed in the next reporting month	Ongoing
30 Nov 09	Gaps were observed between sheet piles crossing located at LTT River site	Contractor was advised to provide improvement works to prevent grit, soil and site run-off entering the river course	To be followed in the next reporting month	Ongoing

11.2 Compliance with legal and Contractual requirement

ET leader has reviewed the progress and programme of the works to check any relevant environmental laws has not violated.

Further to the complaint referred by EPD on 6 November 2009. A site investigation was conducted by the inspector of EPD on 9 November 2009. Site condition was in unsatisfactory condition and therefore a warning has been issued to the Contractor. As such, Contractor was seriously reminded again to be cautious on the change of the river water quality due to project works; no muddy site water and/or run-off is allowed to be discharged into the river courses before proper treatment by any reasons. Sufficient as well as effective mitigation measures have to be implemented to minimize water quality impact due to construction activities from sites.

Totally, 2 formal warnings have been issued to the Contractor since the commencement of the project.

11.3 Environmental Complaint and follow up actions

Further to the environmental concerns raised by green group during May 2009, Ecologist of ET has conducted a monthly survey to mangrove area at the east of Luk Tei Tong River. Details of findings please refer to Appendix K.

A formal complaint referred by EPD, regarding muddy effluent discharge from site retaining wall D at PNH, was received by ET on 6 November 2009. EPD site inspection was carried out on 9 November. Site investigation was carried out with representatives from ER and Contractor on 10 November 2009. Recommendations were then given to the Contractor and as a follow up, further investigation was carried out on 12 November 2009. Corrective actions and improvement to the mitigation measures were partially implemented during the follow up investigation. As such, Contractor was urged to implement sufficient and effective mitigation measures to stop further deterioration of water quality.

For details of findings and outcomes, please refer to the complaint investigation report and log sheet shown in Appendix L.

12. Future key issues

As informed by contractor major site activities will include construction of box culverts, retaining walls and gabion walls on project sites. It is expected that several impacts on environmental aspects will be generated on-site. With reference to the EM&A manual, mitigation measure report as well as the environmental permit, proper mitigation measures are proposed to be taken, if necessary.

Contractor was seriously recommended to provide proper measures to mitigate water quality impacts to the river channels due to construction works. River based construction sites should be well enclosed by bunds in dry condition, as to prevent surface run-off and site water seepage to the stream. Surface of earth bunds directly exposed to the river channel should be completely covered with geo-textile to prevent soil erosion. Contractor should implement proper protection measures such as barriers and/or silt curtain, to protect surface run-off from earth bund formation.

Underground water and site water may be accumulated on site. Contractor is recommended to treat the accumulated site water by proper silt removal facilities before discharging to the designated discharge point; also reuse of site water should be considered. Channel, trench and manholes connected with project sites should be sealed to prevent site water and any construction materials entering public drainage and causing water quality impact.

Construction activities such as backfilling, earth movement may generate dust impact to the vicinity of sensitive receivers. Contractor is advised to provide regular water spraying for the dusty static area. Stockpiling may be found on site and those should be covered by tarpaulin to prevent erosion and run-off.

Heavy plants and vehicles may be deployed for the construction and those would generate certain noise impacts to the sensitive receivers. Noisy activities should be well planned and scheduled to avoid parallel operation of multiple plants, so as to minimize noise impacts to the nearby sensitive receivers.

13. Conclusions

In this reporting month, construction of retaining walls at PNH River and LTT River, box culvert at PNH and LTT, as well as gabion wall at TTT River were being carried out.

Regular site meetings and inspection audits led by the seniors for discussing site environmental matters were held among Project Proponent, Contractor and the ET on weekly basis. Also monthly site meeting and inspection audits with the above parties and IEC were carried out at the mid of the reporting month.

For noise level monitoring, all results were within the established A/L limits.

For water quality monitoring, total 83 non-compliance events of water quality criteria were recorded on 2, 4, 6, 7, 9, 10, 11, 12, 13, 16, 17, 18, 19, 20, 26, 27, 28 and 30 November 2009. Except the natural fluctuation, improper site practice was the major cause of exceedance. Hence, the contractor was urged to review the site condition and implement necessary mitigation measures and corrective actions as soon as possible to minimize water quality impact due to site works.

During ecological monitoring survey, no White-shouldered Starling was recorded breeding in the watch tower. There was no sign of disturbance from the Project to the watch tower. The absence of nesting of White-shouldered Starling in the watch tower did not seem to be related to construction works in Luk Tei Tong River. A bird species nests in village house should be to certain extent disturbance tolerant.

No bird was observed entering the watchtower since the monitoring surveys commenced in August 2008. Also, no breeding was recorded in the baseline survey in September 2007. It appears that the birds do not prefer to roost or nest in the watch tower.

There was one formal complaint, regarding muddy effluent discharge from site, received in this reporting month. A warning for improper site practice was issued to the Contractor by EPD. Hence, contractor was urged to rectify the discrepancies as soon as possible and implement necessary corrective actions to stop further deterioration of water quality.

Site water control was the major concern in this reporting month. Contractor was recommended to provide proper de-silting facilities for site water treatment; conditions of the earth bunds provided should be rectified to prevent surface run-off and soil erosion due to site works. Corrective actions to the identified defects should be implemented as soon as possible to minimize deterioration of water quality.

ET has reminded the contractor to provide environmental pollution control measures wherever necessary; and to keep a good environmental management at site practice.

The ET will continue to implement the environmental monitoring & audit programme in accordance with the EM&A Manual and Environmental Permit requirement.

Report for Calibration of Hand-held Water Quality Meter WQC-24

Calibration Reference No. : GCE/CAL/2009/MW/WQM/C3

Client : ENVIRONMENTAL PIONEER AND SOLUTION LIMITED

Equipment No. : WQC-24 Location : Mui Wo Site

Manufacturer : DKK-TOA Serial No.: 640274

Calibration Date : 24-09-2009 Due Date : 23-12-2009

Criterion: (Repeatabilty, Linearity)

pH	:	Both within ±0.05pH
Dissolved oxygen	:	Both within ±0.1mg/L
Electric conductivity	:	Both within ±1%FS
Turbidity	:	Repeatability : within ±3%FS
Temperature	:	Repeatability ±0.25°C; Linearity ±0.5°C; (Ambient 5~45°C)

Electric Conductivity (Salinity converted from EC):

(Reference : APHA 20ed 2510 B, ISO 7888 - 1985 (E) and DKK-TOA Hand-held Water Quality Meter WQC-24 Instruction Manual)

Concentration of KCl Standard Solution (M)	Reference conductivity value at 25.0 °C	Indicated value by meter	Linearity (R^2)

CERTIFICATE OF CALIBRATION

D094

Certificate No.: 09CA0102 01-01 Page 1 of 2

Item tested

Description:	Sound Level Meter (Type I)	,	Microphone
Manufacturer:	ACO, Japan	,	ACO, Japan
Type/Model No.:	6224	,	7146
Serial/Equipment No.:	060166	,	34733
Adaptors used:	-	,	-

Item submitted by

Customer Name:	Geotechnics & Concrete Engineering (H.K.) Ltd.
Address of Customer:	G/F., 6 Ko Shan Road, Hung Hom, Kowloon, Hong Kong
Request No.:	-
Date of request:	30-12-2008

Date of test: 02-01-2009

Reference equipment used in the calibration

Description:	Model:	Serial No.	Expiry Date:	Traceable to:
Multi function sound calibrator	B&K 4226	2288444	11-01-2009	CIGISMEC
Signal generator	DS 360	33873	12-06-2009	CEPREI
Signal generator	DS 360	61227	18-07-2009	CEPREI

Ambient conditions

Temperature:	23 ± 2 °C
Relative humidity:	55 ± 15 %
Air pressure:	1010 ± 15 hPa

Test specifications

1, The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.
2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.
3, The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Actual Measurement data are documented on worksheets.

Approved Signatory: Huang Jian Min/Feng Jun Qi **Date:** 02-01-2009 **Company Chop:** 綜合試驗有限公司 SOILS & MATERIALS ENGINEERING COMPANY LTD.

Comments: The results reported in this certificate refer to the condition of the instrument on the date of calibration and carry no implication regarding the long-term stability of the instrument.

(Continuation Page)

1, Electrical Tests

The electrical tests were perfomed using an equivalent capacitance substituted for the microphone. The results are given in below with test status and the estimated uncertainties. The "Pass" means the result of the test is inside the tolerances stated in the test specifications. The "-" means the result of test is outside these tolerances.

Test:	Subtest:	Status:	Uncertainty (dB) / Coverage Factor	
Self-generated noise	A	Pass	0.3	
	C	Pass	1.0	2.1
	Lin	Pass	1.5	2.2
Linearity range for Leq	At reference range , Step 5 dB at 4 kHz	Pass	0.3	
	Reference SPL on all other ranges	Pass	0.3	
	2 dB below upper limit of each range	Pass	0.3	
	2 dB above lower limit of each range	Pass	0.3	
Linearity range for SPL	At reference range , Step 5 dB at 4 kHz	Pass	0.3	
Frequency weightings	A	Pass	0.3	
	C	Pass	0.3	
	Lin	Pass	0.3	
Time weightings	Single Burst Fast	Pass	0.3	
	Single Burst Slow	Pass	0.3	
Peak response	Single 100μs rectangular pulse	N/A	N/A	
R.M.S. accuracy	Crest factor of 3	Pass	0.3	
Time weighting I	Single burst 5 ms at 2000 Hz	Pass	0.3	
	Repeated at frequency of 100 Hz	Pass	0.3	
Time averaging	1 ms burst duty factor $1/10^3$ at 4kHz	Pass	0.3	
	1 ms burst duty factor $1/10^4$ at 4kHz	Pass	0.3	
Pulse range	Single burst 10 ms at 4 kHz	Pass	0.4	
Sound exposure level	Single burst 10 ms at 4 kHz	Pass	0.4	
Overload indication	SPL	Pass	0.3	
	Leq	Pass	0.4	

2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

Test:	Subtest	Status	Uncertainty (dB) / Coverage Factor
Acoustic response	Weighting A at 125 Hz	Pass	0.3
	Weighting A at 8000 Hz	Pass	0.5

3, Response to associated sound calibrator

N/A

The uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95 %. A coverage factor of 2 is assumed unless explicitly stated.

Ambient conditions

Temperature:	22 ± 1 °C
Relative humidity:	55 ± 10 %
Air pressure:	1010 ± 15 hPa

Test specifications

1, The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B and the lab calibration procedure SMTP004-CA-156.

2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.

3, The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure changes.

Test results

Details of the performed measurements are presented on page 2 of this certificate.

HOKLAS 028

CERTIFICATE OF CALIBRATION

D095

(Continuation Page)

Certificate No.: 09CA0102 01-02 **Page:** 2 of 2

1, Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties.

(Output level in dB re 20 μPa)

Frequency Shown Hz	Output Sound Pressure Level Setting dB	Measured Output Sound Pressure Level dB	Estimated Uncertainty dB
1000	94.00	94.30	0.1

2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

At 1000 Hz **STF = 0.002 dB**

Estimated uncertainty 0.005 dB

3, Actual Output Frequency

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

At 1000 Hz **Actual Frequency = 1000.0 Hz**

Estimated uncertainty 0.1 Hz Coverage factor k = 2.2

4, Total Noise and Distortion

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

At 1000 Hz **TND = 2.1%**

Estimated uncertainty 0.7%

The uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95 %. A coverage factor of 2 is assumed unless explicitly stated.

TEST SUMMARY ON ENVIRONMENTAL ANALYSIS OF WATER AND WASTEWATER

Report No. : GCC091100021 Date of Issue : 13-11-2009

Client* : Environmental Pioneers & Solutions Limited Date Received : 08-09-2008

Client Address* : 8/F, Chaiwan Industrial Centre Building, 20 Lee Chung Street, Chaiwan, HK.

Project* : DSD Contract No. DC/2006/11 - Drainage Improvement in Southern Lantau & Construction of Mui Wo Village Sewerage Phase 1

Test Location : G/F, 20 Pak Kung Street, Hung Hom, Kowloon. Date Started : 02-11-2009

W.O. No.* : -- Sample Type* : River Water Date Completed : 03-11-2009

GCE Serial No. : WQM112009 GCE Reg. No. : GCE 081096 Test Unit No. : CH 08258

Analysis Description	Test Method	Units	Quality Control Results				
			Method Blank	QC 500 mg/L	QC Duplicate	RPD%	Spike 25 mg/L
Suspended Solids (SS)	APHA 20ed 2540 D	mg/L	< 1.0	499	493	1.2	24.1
		Acceptance Criteria	<2.5 mg/L	475 ≤ Control Limit ≤ 514		≤ ±5%	21 ≤ R ≤ 29

TEST RESULTS	Sample ID		WE1	WE1 Duplicate	WE2	WE2 Duplicate	WE3	WE3 Duplicate		
	Sampling Date/Time		02 Nov 2009 / 11:20		02 Nov 2009 / 11:10		02 Nov 2009 / 10:50			
	LOD	Units								
Suspended Solids (SS)	1	mg/L	2.3	2.4	6.3	6.6	11.3	11.1		

TEST RESULTS	Sample ID		WE4	WE4 Duplicate	WE5	WE5 Duplicate	WE6	WE6 Duplicate		
	Sampling Date/Time		02 Nov 2009 / 12:10		02 Nov 2009 / 12:00		02 Nov 2009 / 11:40			
	LOD	Units								
Suspended Solids (SS)	1	mg/L	7.7	7.5	11.0	10.8	< 1.0	< 1.0		

* : Information provided by client

Note : This laboratory has no responsibility on sampling and all the test results relate only to the sample tested as received.

Remarks : Location M1 & WE3 and Location M3 & WE4 are the same location.

TEST SUMMARY ON ENVIRONMENTAL ANALYSIS OF WATER AND WASTEWATER

Report No. : GCC091100013 Date of Issue : 13-11-2009

Client* : Environmental Pioneers & Solutions Limited P.O. Received : 08-09-2008

Client Address* : 8/F, Chaiwan Industrial Centre Building, 20 Lee Chung Street, Chaiwan, HK.

Project* : DSD Contract No. DC/2006/11 - Drainage Improvement in Southern Lantau & Construction of Mui Wo Village Sewerage Phase 1

Test Location : G/F, 20 Pak Kung Street, Hung Hom, Kowloon. Date Started : 02-11-2009

W.O. No.* : -- Sample Type* : River Water Date Completed : 03-11-2009

GCE Serial No. : WQM112009 GCE Reg. No. : GCE 081096 Test Unit No. : CH 08258

Analysis Description	Test Method	Units	Quality Control Results				
			Method Blank	QC 500 mg/L	QC Duplicate	RPD%	Spike 25 mg/L
Suspended Solids (SS)	APHA 20ed 2540 D	mg/L	< 1.0	499	493	1.2	24.1
		Acceptance Criteria	<2.5 mg/L	475 ≤ Control Limit ≤ 514		≤ ±5%	21 ≤ R ≤ 29

TEST RESULTS	Sample ID		C1	C1 Duplicate	C2	C2 Duplicate	C3	C3 Duplicate		
	Sampling Date/Time		02 Nov 2009 / 11:20		02 Nov 2009 / 11:30		02 Nov 2009 / 11:50			
	LOD	Units								
Suspended Solids (SS)	1	mg/L	1.9	1.8	< 1.0	< 1.0	7.3	7.5		

TEST RESULTS	Sample ID		M1	M1 Duplicate	M2	M2 Duplicate	M3	M3 Duplicate	M4	M4 Duplicate
	Sampling Date/Time		02 Nov 2009 / 10:50		02 Nov 2009 / 10:55		02 Nov 2009 / 12:10		02 Nov 2009 / 10:40	
	LOD	Units								
Suspended Solids (SS)	1	mg/L	11.3	11.1	2.7	2.5	7.7	7.5	3.5	3.7

* : Information provided by client

Note : This laboratory has no responsibility on sampling and all the test results relate only to the sample tested as received.

Remarks : Location M1 & WE3 and Location M3 & WE4 are the same location.

Appendix H Implementation Status of environmental protection / mitigation measures

Environmental Aspect	Protection / Mitigation Measures	Implementation status	Follow-up action
Air Quality	Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved road, with complete coverage.	Implemented	-
	Use of frequent watering for particular dusty static construction areas and areas close to ASRs.	Deficiencies identified	Ongoing
	Tarpaulin covering of all dusty vehicle loads transported to and from and between site location;	Implemented	-
	Establishment and use of vehicle wheel and body washing facilities at the exit points of the site.	Implemented	-
	Routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs.	Implemented	-
Noise	Use of quiet powered mechanical equipment (PME)	Implemented	-
	Adoption of movable noise barriers and temporary noise barriers	Implemented	
	Application of good site practices mentioned in EM&A manual Clause 3.8.1	Implemented	-
Water Quality	Before commencing any site formation works, all sewer and drainage connections should be sealed to prevent debris, soil, sand etc. from entering public sewers/drains.	Deficiencies identified	Ongoing
	Temporary ditches should be provided to facilitate run-off discharge into appropriate watercourses, via a silt retention pond. No site run-off should enter the freshwater marshes at Luk Tei Tong.	Implemented	-
	Sand/ silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove sand/ silt particles from runoff to meet the requirements of the Technical Memorandum standard under the Water Pollution Control Ordinance.	Deficiencies identified	Ongoing
	Water pumped out from foundation excavations should be discharged into silt removal facilities.	Implemented	-
	During rainstorms, exposed slope surface should be covered by a tarpaulin or the means.	Implemented	-
	Exposed soil areas should be minimized to reduce potential for increased siltation and contamination of runoff.	Implemented	-
	Exposed soil surfaces should be protected by paving or fill material as soon as possible to reduce potential of soil erosion.	Deficiencies	To be follow up
	Open stockpiles of construction materials or construction wastes on-site of more than $50m^3$ should be covered with tarpaulin or similar fabric during rainstorms.	Implemented	-
	Oils and fuels should only be used and stored on designated areas which have pollution prevention facilities.	Implemented	-
	Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site.	Not applicable	-
	The excavation and widening works for the drainage improvements to the Pak Ngan Heung River, Tai Tei Tong River, Luk Tei Tong River and Luk Tei Tong By-pass Channel should be carried out in sections (approximately 300 –400 m in length) and in dry condition.	Deficiencies	To be follow up

Environmental Aspect	Protection / Mitigation Measures	Implementation status	Follow-up action
	Maintenance desilitng of the re-profiled river channels of the Pak Ngan Heung River, Tai Tei Tong River, Luk Tei tong River and Luk Tei Tong By-pass Channel, temporary barrier walls should be used to provide a dry zone for desilitng work.	Not applicable at this stage	-
Ecology	Existing natural habitats should be retained as far as practicable	Implemented	-
	Boundary of working areas should be identified to prevent loss of vegetation	Implemented	-
	All existing trees / plant should be well protected within the site or transplanted properly	Deficiencies identified	To be follow up
	Turf removal from the Luk Tei Tong marsh due to the construction of Luk Tei Tong Bypass Channel shall be minimized	Implemented	-
	Turf from the Luk Tei Tong marsh shall be properly removed, stored, maintained and reused for lining the riverbed of the Luk Tei Tong Bypass Channel	Implemented	-
Chemical and Solid Waste	Chemical wastes should be properly stored in a proper store as per statutory requirements (i.e. on a hard standing, within an enclosed and locked area)	Implemented	-
	Chemical waste stores should be provided with fire precaution facilities (i.e. fire extinguisher, no smoking warning etc).	Implemented	-
	Chemical wastes should be properly stored in corrosion resistant containers placed inside the store and labelled with warning signs in English and Chinese.	Implemented	-
	Chemical wastes should be disposed of by licensed chemical waste collector with supporting delivery records.	Implemented	-
	All containers for fuel, diesel and fluid chemical (in use) and oil filled stationery plants located with proper drip pans.	Implemented	
	Construction wastes should be managed and disposed to the designated public fill and landfill areas in acceptable manner.	Implemented	-
	All waste disposals managed in a proper manner i.e. trip ticket system implementation.	Implemented	-

Ecological Survey Report

for the mangrove area at Luk Tei Tong

Ecological Survey Report for the mangrove area at Luk Tei Tong

Background

In response to the concerns from green groups on the mangrove area to the east of Luk Tei Tong River, contractor took action to install pipes between Luk Tei Tong River and the mangrove area on 25 May 2009 as agreed on a meeting in mid May.

The inlet pipes from Luk Tei Tong River to the mangrove area consisted of two sections. The first section was between the mangrove area wetland and the excavation area. The second section was between the excavation area and Luk Tei Tong River. The inlet pipes was constructed at a level of 1.7mPD so as to allow water to flow naturally from Luk Tei Tong River during high tide into the wetland. The tidal effects on the mangroves were maintained at all times throughout the remaining part of the river works.

A monitoring for the mangrove area was conducted, weekly for one month starting form 27 May 2009 after installation of the twin pipes. Thereafter, the monitoring would be monthly till the completion of gabion wall construction and the original water inlet is reinstated (the end of September 2009), and three months after the completion.

The objectives of the ecological monitoring are to:

- to document the completion installation and proper operation of the temporary twin 400mm pipes
- to document the general health condition of the mangrove community at Luk Tei Tong
- to evaluate reinstatement of the natural tidal flow

Method

Field survey was conducted on 10 November 2009.

The survey was conducted during low tide period (around 10 am). Photos of the construction site and the mangrove communities were taken for documentation. The installed inlet pipes were removed and the inlet at the rock gabions was constructed in September 2009 to allow natural tidal exchange. The condition of tidal exchange was checked, and the health condition of the mangroves were observed and recorded.

Results

The tidal inlet was of its original level before construction. During the survey stream water was below the inlet level and therefore no water flow was observed (**Photo 1**).

The mangrove communities were exposed during the current survey. The dominant mangrove or mangrove associated species in Area 1 were in good conditions. *Phragmites australis* (**Photos 2**) were blooming, while *Aegiceras corniculatum* (**Photos 3**) was in good health condition with little yellowing leaves compared with before.

Recovery of mangrove community in Area 2 was slow to poor. Mortality of a dominant mangrove associate species, *Acanthus ilicifolius*, was stabilized, and some individuals were resprouted from the withered stands (**Photo 4).** P*hragmites australis* and *Hibiscus tiliaceus* were in good condition. However, mortality of many individuals of Mangrove Fern *Acrostichum aureum* (**Photo 5**) was observed, and some young individuals of *Aegiceras corniculatum* also started to have yellowing leaves (**Photo 6**),.

Mortality of Mangrove Fern at Area 2 was not observed in previous months. Impedance in tidal water exchange could be the reason of poor conditions of the mangroves in this area as standing water, although shallow, was always observed in this area even in low tide condition. The water also appears to be more turbid than those in Area 1, indicating anoxic condition.

Abundant fishes were observed in the standing water of both mangrove areas, but no mangrove crabs were observed during the current survey.

Conclusions and Recommendations

The reinstatement of inlet has been completed at the end of September. Removal of pipes and rock gabions to the original level of the tidal inlet has significant improved the tidal exchange. Recovery of mangrove communities is satisfactory in Area 1, while more mangrove and mangrove associates were in poor condition in Area 2. It is recommended that water samples be taken at both areas for water quality checking. Should water quality and exchange be identified as the factor, connection between Area 1 and Area 2 could be made by breaking the old bund in between to improve the

tidal water circulation.

The next monthly mangrove monitoring would be conducted in December 2009.

Complaint Investigation Report and Log Sheet

DSD Project – DC/2006/11 Drainage Improvement in Southern Lantau

Report for Complaint/ Concern
Our Ref: DC0611-WQ-010911(EPD)
EPD Ref: (24) in EP771/E1/072 Pt.8
Sheet: Total 4 Pages

RECIPIENT

Name: Yick Hing Construction Company Limited (the Contractor)
Details: EPD formally informed Environmental Team (ET), Independent Environmental Checker (IEC) and the Contractor on 06th November 2009, regarding a complaint about muddy effluent discharge from the construction site at Pak Ngan Heung (PNH) River next to the roundabout of Ngan Shu Street.
Received Date: 06 November 2009 Received Time: _____

COMPLAINANT / Concern

Name: N/A Tel: N/A
Address: N/A

COMPLAINT

☐Noise ☐Air quality/Dust ☑Water ☐Odour ☐Environment ☐Traffic/Pedestrian ☐Safety ☐Others

Event Date and Time: 06 November 2009
Location: Section of PNH River next to the roundabout of Ngan Shu Street (site retaining wall D)

INVESTIGATION RESULTS & MITIGATION MEASURES

1. A complaint on 06 November 2009 was recorded that muddy effluent discharge was found in the section of PNH River next to the roundabout of Ngan Shu Street. ET was informed by EPD on 06 November 2009.

2. As reported by Contractor on 07 November 2009, existing earth bund structure at the concerned site was broken on 04 November 2009 and causing site water seepage to the river channel. Immediate corrective actions of general backfill to the earth bund were taken and completed on 06 November 2009.

3. As per the EM&A Manual section 8.3, ET arranged a site investigation with the representatives from Engineer Representatives (ER) and Contractor, on 10 November 2009 to resolve the above complaint.

4. During the investigation, formation of earth bunds and river diversion activities were conducted. The section of PNH River nearby the concerned work site was still muddy. Findings showed the muddy water could be caused by:
   - There was no mitigation measures or protection measures implemented for the formation works of earth bunds (Fig.1).
   - Some site area was not properly enclosed with earth bunds. Site water was found seeping into the river course during investigation (Fig.2).
   - Insufficient protection measures were implemented to protect bare soil surfaces (including earth bunds) directly exposed to the river water. Muddy water was observed during investigation.
   - Defective geo-textile coverings to the earth bunds were observed during investigation. The footing of the earth bunds was not properly covered with the geo-textile sheets, which was one of the sources of muddy water (Fig.3).
   - The de-silting tank installed at the concerned site was observed being under-designed and, as a result, turbid water was discharged from the de-silting tank during investigation (Fig.4).

5. Based on the findings shown in item 4., contractor was urged to implement corrective actions immediately as to stop further deterioration of water quality.

6. As a follow-up, ET conducted second investigation with representatives of ER and Contractor on 12 November 2009. Further follow up actions were taken by contractor which included:
   - Some earth bunds were formed to prevent surface run-off and site water seepage (Fig.5).
   - Geo-textile coverings were properly applied to protect the footing of the newly formed earth bunds (Fig.6).
   - Geo-textile coverings were provided to the bare soil surfaces directly exposed to the river water (Fig.7).

7. Although river water was observed to be clear, new sediments were formed which believed to be caused by the muddy effluent previously. Turbid water was still discharged from the defective de-silting tank at the concerned site.

8. A follow up meeting was held at site with participation of the ET, representatives from ER and Contractor after the investigation of the same day. As there were still outstanding deficiencies required for further improvement, Contractor was advised to rectify the discrepancies as soon as possible.

9. Once again, ET has reminded the Contractor to be cautious on not arising muddy water in the future construction works along the rivers.

RECOMMENDATIONS

1. Contractor was reminded again that no muddy site water/ runoff was allowed to be discharged into the river channel before proper treatment by any reasons.
2. Mitigation measures such as bunds, barriers and silt traps should be well provided before commencement of any river-based construction activities.
3. Contractor should regularly provide training/ toolbox talk on environmental topics, especially on protection of the river water quality, to their site staffs and sub-contractors.
4. Contractor should keep good practice on regularly checking the environmental performance on sites, and paying serious attention on any sudden changes of river water quality.
5. The contractor shall always check the performance of bunds, barriers and de-silting facilities in order to ensure no muddy water was discharged to the river by site works.
6. The contractor shall provide sufficient and effective de-silting facilities before effluent discharge into storm water drains.
7. Contractor is reminded again to take serious notice on the complaint and always keep good environmental management at site.
