EXECUTIVE SUMMARY

i. This is the Environmental Monitoring and Audit (EM&A) Monthly Report – August 2010 for Contract No. KL/2009/01 – Site Formation for Kai Tak Cruise Terminal Development. The dredging works has been commenced on 28 June 2010. This report presents the environmental monitoring findings and information recorded in August 2010.

Construction Activities for the Reporting Period

- ii. During this reporting period, the principal work activities included:
 - Dredging at toe of existing seawall;
 - Dredging at submarine outfall; and
 - Maintenance of silt curtain and silt screens

Water Quality Monitoring

iii. Water quality monitoring at 6 designated monitoring stations namely WSD9, WSD10, WSD15, WSD17, WSD19 and WSD21 were conducted during the reporting period. As per the EM&A Manual, water quality impact monitoring was conducted during the dredging works, which commenced on 28 June 2010. Suspended solid (SS) exceedances of water quality at various monitoring stations are summarized in *Table I*. However, investigations indicated these exceedances were not related to the Project works.

| Date | Tide | Parameter | Exceedance | Station | Possible Cause of Exceedance |
|-----------|-----------|-----------|------------|---------|--|
| 7-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 9-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD17 | Natural variation near the monitoring station |
| 11-Aug-10 | Mid-flood | SS (mg/L) | LL | WSD10 | Upstream of the Project |
| 13-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 13-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD17 | Upstream of the Project |
| 25-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 27-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD10 | Local Discharge near the monitoring station |
| 30-Aug-10 | Mid-flood | SS (mg/L) | LL | WSD10 | Upstream of the Project |
| 30-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD10 | Natural variation near the monitoring station |

Table I Summary for the Exceedances Recorded in Reporting Month

iv. Owing to the frequent reported exceedances caused by fluctuation in coastal water quality due to localised effect not related to the project. At such, it is recommended that a review of the baseline water quality and the respective action and limit levels may be necessary in the coming quarterly report.

Noise Monitoring

v. Due to the non-existence of planned NSRs during the reporting period, no noise monitoring was required to be conducted at the planned noise monitoring locations NM1 and NM2.

Waste Management

 vi. There were marine sediment (Type 1 – Open Sea Disposal (Dedicated Sites) and Type 2 – Confined Marine Disposal) disposed to East Sha Chau Contaminated Mud Disposal Site – Pit IVc and marine sediment (Type 1 – Open Sea Disposal) disposed to South Cheung Chau Spoil Disposal Area denoted "KTCT-1" and "KTCT -2". No inert C&D material and non-inert C&D material related to dredging works were disposed off site in the reporting month.

Complaints, Notifications of Summons and Successful Prosecutions

vii. No complaint, notification of prosecutions or summons was received in the reporting period.

Site Inspections and Audit

viii. The Environmental Team (ET) conducted 5 site inspections on 3, 10, 17, 24 and 31 August 2010. No observation related to the dredging work was found in the reporting month.

Compliance with Specific EP Conditions

ix. Implementation of contractor's mitigation for dredging work and the associated dredging records were checked. It was concluded that the dredging is conducted orderly in compliance with the EP requirements on site mitigation measures.

Construction Activities for the Coming Reporting Period

- x. In the coming reporting period, the principal work activities included:
 - Dredging at toe of existing seawall;
 - Dredging at submarine outfall;
 - Maintenance of silt curtain and silt screens; and
 - Installation of inert C&D materials sorting facility

1 INTRODUCTION

1.1 SCOPE OF THE REPORT

- 1.1.1. Lam Environmental Services Limited (LES) has been appointed to work as the Environmental Team (ET) for dredging works to implement the Environmental Monitoring and Audit (EM&A) programme for Contract No. KL/2009/01 Site Formation for Kai Tak Cruise Terminal Development. The dredging work was commenced on 28 June 2010.
- 1.1.2. This report presents the environmental monitoring and auditing work carried out in accordance to the Section 10.4 under Environmental Monitoring and Audit (EM&A) Manual.
- 1.1.3. This report documents the finding of EM&A works in August 2010. The cut-off date of reporting is at the end of each reporting month.

1.2 STRUCTURE OF THE REPORT

- **Section 1** *Introduction* details of the scope and structure of the report.
- Section 2 *Project Background* summarizes background and scope of the project, site description, project organization and contact details of key personnel during the reporting period.
- **Section 3** *Implementation Status* summarizes the status of valid Environmental Permits / Licenses during the reporting period.
- Section 4 *Monitoring Requirements* summarizes all monitoring parameters, monitoring methodology and equipment, monitoring locations, monitoring frequency, criteria and respective event and action plan and monitoring programmes.
- Section 5 *Monitoring Results* summarizes the monitoring results obtained in the reporting period.
- Section 6 Compliance Audit summarizes the auditing of monitoring results and all exceedances environmental parameters.
- Section 7 Site Inspection summarizes the findings of weekly site inspections undertaken within the reporting period, with a review of any relevant follow-up actions within the reporting period.
- Section 8 Complaints, Notification of Summons and Prosecution summarizes the complaints, notification of summons and

successful prosecution for breaches of environmental legislation and the actions taken within the reporting period.

Section 9 Conclusion

2 PROJECT BACKGROUND

2.1 BACKGROUND

- 2.1.1. The former Kai Tak Airport located in the south-eastern part of Kowloon Peninsula was the international airport of Hong Kong. The Kai Tak Airport had come into operations since 1920s. The operation of the Kai Tak Airport was ceased and replaced by the new airport at Chek Lap Kok in July 1998. After closure, the disused airport site has been occupied by various temporary uses, including a golf driving range on the runway area.
- 2.1.2. In 2002, the Chief Executive in Council approved the Kai Tak Outline Zoning Plans (No. S/K19/3 and S/K21/3) to provide the statutory framework to proceed with the South East Kowloon Development at the former Kai Tak Airport. However, following the judgment of the Court of Final Appeal in January 2004 regarding the Harbour reclamation, the originally proposed development which involves reclamation has to be reviewed. The Kai Tak Planning Review (KTPR) has resulted with a Preliminary Outline Development Plan (PODP) for Kai Tak in October 2006. Subsequently, the Administration announced in October 2006 a plan to implement a cruise terminal at Kai Tak, as part of the development.
- 2.1.3. Development of the cruise terminal at Kai Tak would require dredging at the existing seawall at the southern tip of the former Kai Tak Airport runway for construction of a quay deck structure for two berths, and dredging the seabed fronting the new quay to provide necessary manoeuvring basin. The general layout of the proposed cruise terminal construction is shown in *Figure 2.1*.
- 2.1.4. The current Project involves a dredging operation exceeding 500,000m³ for construction and operation of the proposed cruise terminal at Kai Tak and is therefore classified as a Designated Project under Item C.12, Part I, Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) Study for the Project has been undertaken in accordance with the EIA Study Brief (No. ESB-159/2006) and the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM).

2.2 SCOPE OF THE PROJECT AND SITE DESCRIPTION

- 2.2.1. The scope of the Project comprises:
 - Dredging of marine sediment of about 700,000 m³ from the existing seabed (Stage 1 dredging) in the Harbour area off the southern tip of the former Kai Tak Airport runway to provide the necessary water depth within the manoeuvring area for cruise vessels; and

• Removal of existing seawall of about 322,300m³ by dredging at the southern tip of the former Kai Tak Airport runway for cruise berth construction.

2.3 PROJECT ORGANIZATION AND CONTACT PERSONNEL

- 2.3.1. Kowloon Development Office of Civil Engineering and Development Department is the overall project controller. For the construction phase of KL/2009/01, Project Engineer, Contractor, Environmental Team and Independent Environmental Checker are appointed to manage and control environmental issues.
- 2.3.2. The proposed project organization and lines of communication with respect to environmental protection works are shown in *Figure 2.2*. Key personnel and contact particulars are summarized in *Table 2.2*:

Table 2.2Contact Details of Key Personnel

| Party | Role | Name | Post | Contact No. | Contact Fax |
|--|---|-------------------|---|-------------|-------------|
| Civil Engineering and Development Department (Kowloon Development Office) | Project Proponent | Ir. KY Shin | Senior Engineer | 2301 1461 | 2301 1277 |
| Scott Wilson Limited | Engineer's Representative | Mr. Stephen Cheng | Chief Resident Engineer | 2148 7638 | 2148 7277 |
| Penta-Ocean Construction | Contractor | Mr. PL Yue | Project Director | | 2148 7138 |
| Company Limited | | Mr. Warren Tse | Site Agent | | |
| | | Mr. Perry Yam | Environmental Officer | | |
| Fugro (HK) Limited | Independent Environmental Checker (IEC) | Mr. Joseph Poon | Independent Environmental Checker (IEC) | 2450 8238 | 2450 6138 |
| Lam Environmental Services Limited | Environmental Team Leader | Mr. Raymond Dai | Environmental Team Leader (ETL) | 2882 3939 | 2882 3331 |

2.4 CONSTRUCTION PROGRAMME AND WORKS

- 2.4.1. During this reporting period, the principal work activities included:
 - Dredging at toe of existing seawall;
 - Dredging at submarine outfall; and
 - Maintenance of silt curtain and silt screens

3 IMPLEMENTATION REQUIREMENTS

3.1 STATUS OF REGULATORY COMPLIANCE

3.1.1. A summary of the current status on licences and/or permits on environmental protection pertinent to the Project is shown in *Table 3.1*.

Table 3.1 Cumulative Summary of Valid Licences and Permits

| Permits and/or Licences | Reference No. | Issued Date | Valid Period | Status in Reporting Month |
|---|--|-------------|---|------------------------------|
| Environmental Permit | EP-328/2009/A | 15 Jun 2009 | N/A | Valid |
| Notification of Works Under APCO | KTCT/907/S/3.14/7. 00/L/0060 (POC's REF. number) dated 9 December 2009 | | N/A | Valid |
| Construction Noise Permit (CNP) | GW-RE0166-10 | 23 Apr 2010 | 23 April 2010 (19:00) to 22 September, 2010 (24:00) | Valid |
| Discharge Licence | WT00005933-2010 | 18 Mar 2010 | Until 31 March 2015 | Valid |
| Registration of Waste Producer | 5213-247-P2984- 01 | 14 Jan 2010 | N/A | Valid |
| Dumping Permit (Type 1 – Open Sea Disposal) | EP/MD/10-051 | 2 Mar 2010 | 3 May to 2 Nov 2010 | Valid |
| Dumping Permit (Type 1 – Open Sea Disposal (Dedicated Sites) & Type | EP/MD/11-029 | 2 Jul 2010 | 3 Jul to 2 Aug 2010 | Valid till 2 Aug 2010 |
| 2 – Confined Marine Disposal) | EP/MD/11-042 | 2 Aug 2010 | 3 Aug to 2 Sep 2010 | Valid |

3.1.2. Implementation status of the recommended mitigation measures during this reporting period is presented in *Appendix 3.1*.

4

MONITORING REQUIREMENTS

4.1 NOISE MONITORING

4.1.1. In accordance with the EIA Report and the approved EM&A Manual, it is anticipated that construction activities, if unmitigated, would not cause any adverse noise impact to the nearest NSRs in the vicinity of the work site. The predicted noise levels at the NSRs would comply with construction noise criteria. These nearest NSRs are designated for construction noise monitoring as listed in *Table 4.1*.

Table 4.1 Planned Noise Monitoring Stations

| Station Description | |
|---------------------|---|
| NM1 | Planned Residential Development (R3 site) |
| NM2 | Planned Residential Development (R3 site) |

4.1.2. As per S.3.1.1 of the approved EM&A Manual states that "Noise levels shall be monitored to evaluate the construction noise impact if there is any planned noise sensitive receivers (NSRs) occupied within 300m from the works area of this Project during the proposed dredging works". Therefore, the impact monitoring for construction noise shall only be carried out when the planned residential development at the two identified monitoring stations are occupied at a later stage.

4.2 WATER QUALITY MONITORING

- 4.2.1. The EIA Report has identified that suspended solids (SS) would be the most critical water quality parameter during the dredging operations. Water quality monitoring for SS and turbidity is therefore recommended to be carried out at selected WSD flushing water intakes. The impact monitoring should be carried out during the proposed dredging works for cruise terminal construction to ensure the compliance with the water quality standards.
- 4.2.2. It is proposed to monitor the water quality at six WSD flushing water intakes along the seafront of the Victoria Harbour. The proposed water quality monitoring stations are shown in *Table 4.2* and *Figure 4.1*.

| Station Ref. | WSD Flushing Water Intake | Easting | Northing |
|--------------|---------------------------|----------|----------|
| WSD9 | Tai Wan | 837921.0 | 818330.0 |
| WSD10 | Cha Kwo Ling | 841900.9 | 817700.1 |
| WSD15 | Sai Wan Ho | 841110.4 | 816450.1 |
| WSD17 | Quarry Bay | 839790.3 | 817032.2 |
| WSD21 | Wan Chai | 836220.8 | 815940.1 |
| WSD19 | Sheung Wan | 833415.0 | 816771.0 |

Table 4.2Water Quality Stations for Baseline and Impact Monitoring

4.3 WATER QUALITY PARAMETERS

- 4.3.1. During the period of dredging, monitoring should be undertaken three days per week, at mid-flood and mid-ebb tides, with sampling / measurement at the designated monitoring stations as shown in *Table 4.2*. The interval between two sets of monitoring should not be less than 36 hours except where there are exceedances of Action and/or Limit Levels, in which case the monitoring frequency will be increased. *Table 4.3* shows the proposed monitoring frequency and water quality parameters. Duplicate in-situ measurements and water sampling should be carried out in each sampling event. For selection of tides for in-situ measurement and water sampling, tidal range of individual flood and ebb tides should not be less than 0.5m.
- 4.3.2. Silt screens shall be deployed at these intakes during the dredging period. It is recommended to conduct the monitoring inside the silt screens at the seawater intake culvert at each seawater pumping station to collect information on the mitigated water quality condition.

Table 4.3 Water Quality Monitoring Frequency and Parameters

| Activities | Monitoring Frequency ¹ | Parameters ² |
|---|---|---|
| During the 4-week baseline monitoring period | Three days per week, at mid-flood and mid-ebb tides | Turbidity (in NTU), Suspended Solids (SS in mg/L) |
| During dredging works for proposed cruise terminal at Kai Tak | Three days per week, at mid-flood and mid-ebb tides | Turbidity (in NTU), Suspended Solids (SS in mg/L) |

Notes:

- 1. For selection of tides for in-situ measurement and water sampling, tidal range of individual flood and ebb tides should be not less than 0.5m.
- 2. Turbidity should be measured in situ whereas SS should be determined by laboratory.
- 4.3.3. The established Action and Limit levels according to the approved baseline monitoring report for monitoring works can be referred to *Appendix 4.1*.
- 4.3.4. Current calibration certificates of equipments are presented in *Appendix 4.2*.

4.4 SAMPLING PROCEDURES AND MONITORING EQUIPMENT

4.4.1. In-situ measurements and water sampling shall be conducted at mid-depth. Duplicate *in-situ* measurements and water sampling have been conducted in each sampling event. Water samples for all monitoring parameters shall be collected, stored, preserved and analysed according to the Standard Methods, APHA 17 and/or agreed by IEC and EPD.

Dissolved Oxygen and Temperature Measuring Equipment

- 4.4.2. The instrument should be a portable, weatherproof dissolved oxygen measuring instrument complete with cable, sensor, comprehensive operation manuals, and use a DC power source. It should be capable of measuring:
 - a dissolved oxygen level in the range of 0-20 mg/l and 0-200% saturation
 - a temperature of 0-45 degree Celsius
- 4.4.3. It should have a membrane electrode with automatic temperature compensation complete with a cable. Sufficient stocks of spare electrodes and cables should be available for replacement where necessary. (e.g. YSI model 59 meter, YSI 5739 probe, YSI 5795A submersible stirrer with reel and cable or an approved similar instrument).
- 4.4.4. Should salinity compensation not be build-in in the DO equipment, in-situ salinity shall be measured to calibrate the DO equipment prior to each DO measurement.

Turbidity Measurement Instrument

4.4.5. The instrument should be a portable, weatherproof turbidity-measuring instrument complete with comprehensive operation manual. The equipment should use a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000 NTU and be complete with a cable (e.g. Hach model 2100P or an approved similar instrument).

Suspended Solids

- 4.4.6. A water sampler comprises a transparent PVC cylinder, with a capacity of not less than 2 litres, and can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth (e.g. Kahlsico Water Sampler or an approved similar instrument).
- 4.4.7. Water samples for suspended solids measurement should be collected in highdensity polythene bottles, packed in ice (cooled to 4°C without being frozen), and delivered to ALS Technichem (HK) Pty Ltd. as soon as possible after collection for analysis.

Water Depth Detector

4.4.8. A portable, battery-operated echo sounder shall be used for the determination of water depth at each designated monitoring station. This unit can either be handheld or affixed to the bottom of the workboat, if the same vessel is to be used throughout the monitoring programme.

<u>Salinity</u>

4.4.9. A portable salinometer capable of measuring salinity in the range of 0-40 ppt shall be provided for measuring salinity of the water at each of monitoring location.

Locating the Monitoring Site

4.4.10. A hand-held or boat-fixed type digital Global Positioning System (GPS) with way point bearing indication or other equivalent instrument of similar accuracy shall be provided and used during monitoring to ensure the monitoring vessel is at the correct location before taking measurements.

Calibration and Accuracy of Instrument

4.4.11. All in-situ monitoring instruments shall be checked, calibrated and certified by a laboratory accredited under HOKLAS or equivalent before use, and subsequently re-calibrated at 3 monthly intervals throughout all stages of the water quality

monitoring. Responses of sensors and electrodes should be checked with certified standard solutions before each use. Wet bulb calibration for a DO meter shall be carried out before measurement at each monitoring location.

- 4.4.12. For the on site calibration of field equipment by the ET, the BS 127:1993, "Guide to Field and on-site test methods for the analysis of waters" should be observed.
- 4.4.13. Sufficient stocks of spare parts should be maintained for replacements when necessary. Backup monitoring equipment shall also be made available so that monitoring can proceed uninterrupted even when some equipment is under maintenance, calibration, etc.
- 4.4.14. Current calibration certificates are presented in *Appendix 4.2*.

5

MONITORING RESULTS

5.1 WATER MONITORING RESULTS

- 5.1.1. Due to the Red Rainstorm Warning Signal in force on 5 August 2010, water quality was concerned substantially affected by urban runoff, which cannot represent the normal impact condition of water quality. Thus, the impact water monitoring for mid-flood tide of that day was cancelled. EPD was immediately notified via facsimile. The water monitoring schedule for the reporting month and coming three months are presented in <u>Appendix 5.1</u>.
- 5.1.2. Water monitoring results measured in reporting month are reviewed and presented in *Appendix 5.2*. SS exceedances were recorded on 7, 9, 10, 11, 13, 25, 27 and 30 August 2010. EPD was immediately notified the limit level exceedances via facsimile. Since the natural flow during the flood tides indicates that the source is upstream, the exceedances recorded at WSD10 were concluded not related to the Project works on 7,11, 13, 25 and 30 August 2010 during mid-flood.
- 5.1.3. Suspected reddish-brown local discharge was observed near the station WSD10 during the water monitoring on 27 August 2010 at mid-ebb. Besides, investigation for the SS exceedances recorded on 9, 13, 27 and 30 August 2010 during mid-ebb found that the condition of silt screen and silt curtain are in proper condition and daily dredging rates were less than 350m³, the exceedances were considered as natural variation and not related to the Project.
- 5.1.4. Since the exceedances recorded in the reporting month are concluded not related to the Project, no further steps under Event and Action Plan is needed. The details of Event and Action Plans and Notification of Exceedance summarizing the finding of investigation, possible causes and review of Contractor's mitigation measures can be referred to <u>Appendix 5.3</u> and <u>Appendix 5.4</u>.
- 5.1.5. Owing to the frequent reported exceedances caused by fluctuation in coastal water quality due to localised effect not related to the project. With the overall dredging rate reported (cf. Section *Table 6.3.1*) far below the allowed maximum rate in the EP, it is considered such coastal fluctuation in water quality shall be taken into account as part of baseline condition. At such, it is recommended that a review of the baseline water quality and the respective action and limit levels may be necessary in the coming quarterly report.

5.2 WASTE MONITORING RESULTS

5.2.1. No inert C&D material and non-inert C&D material related to dredging works were disposed off site in the reporting month.

6 COMPLIANCE AUDIT

6.1 NOISE MONITORING

6.1.1. Noise monitoring was not necessary in the reporting period.

6.2 WATER QUALITY MONITORING

6.2.1. SS exceedances were recorded on 7, 9, 10, 11, 13, 25, 27 and 30 August 2010 in the reporting month. *Table 6.2* summarize the details of SS exceedances recorded. Investigation indicated the exceedances were not related to Project works.

Table 6.2 Summary of Exceedances recorded in the Reporting Month

| - | | | | | |
|-----------|-----------|-----------|------------|---------|--|
| Date | Tide | Parameter | Exceedance | Station | Possible Cause of Exceedance |
| 7-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 9-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD17 | Natural variation near the monitoring station |
| 11-Aug-10 | Mid-flood | SS (mg/L) | LL | WSD10 | Upstream of the Project |
| 13-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 13-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD17 | Upstream of the Project |
| 25-Aug-10 | Mid-flood | SS (mg/L) | AL | WSD10 | Upstream of the Project |
| 27-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD10 | Local Discharge near the monitoring station |
| 30-Aug-10 | Mid-flood | SS (mg/L) | LL | WSD10 | Upstream of the Project |
| 30-Aug-10 | Mid-ebb | SS (mg/L) | AL | WSD10 | Natural variation near the monitoring station |

6.3 DREDGING AND DISPOSAL

6.3.1. Implementation of mitigation measures for dredging work and the associated dredging records were checked and the findings are summarized in *Table 6.3.1*.

Table 6.3.1 Compliance with EP Conditions in the Reporting Month

| EP Condition | Compliance Status and/or Recommendation |
|---|--|
| 2.6 | In accordance with the EP requirement and |
| Silt Curtain Deployment | Implementation Schedule for Water Quality Measure |
| 2.7 | Complied with the EP requirement in reporting month: |
| Daily Dredging Rate \leq 4,000m ³ /d | Daily Dredging Rate maintained at 20-350 m ³ /day and |
| Hourly Dredging Rate \leq 334m ³ /hr | Hourly Dredging Rate maintained at 7-41 m ³ /hr. |
| 2.8 Silt Screen Deployment | In accordance with the Silt Screen Deployment Plan for all 6 intakes |

- 6.3.2. The daily and hourly dredging rates were checked and reviewed that were below the EP requirements. It was concluded that the dredging was conducted in compliance with the specific EP requirements.
- 6.3.3. There were marine sediment (Type 1 Open Sea Disposal (Dedicated Sites) and Type 2 Confined Marine Disposal) disposed to East Sha Chau Contaminated Mud Disposal Site Pit IVc and marine sediment (Type 1 Open Sea Disposal) disposed to South Cheung Chau Spoil Disposal Area denoted "KTCT-1" and "KTCT -2". No inert C&D material and non-inert C&D material related to dredging works were disposed off site in the reporting month. The details can be referred to the *Table 6.3.2*.

Table 6.3.2 Waste Quantities Related To Dredging Works

| Waste Type* | Quantity this month, m ³ | Cumulative-to- Date. m ³ | Disposal / Dumping Ground |
|--|-------------------------------------|--|---|
| Marine Sediment (Type 1 – Open Sea Disposal) | 1,695 | 1,695 | South Cheung Chau Spoil Disposal Area denoted "KTCT-1" and "KTCT -2" |
| Marine Sediment (Type 1 – Open Sea Disposal (Dedicated Sites) and Type 2 – Confined Marine Disposal) | 3,951 | 7,849 | East Sha Chau Contaminated Mud Disposal Site – Pit IVc |

7 ENVIRONMENTAL SITE AUDIT

- 7.0.1. Site audits were carried out by ET on weekly basis to monitor the implementation of proper environmental management practices and mitigation measures in the Project site.
- 7.0.2. The joint site audits were conducted on 3, 10, 17, 24 and 31 August 2010 by the representatives of IEC, ER, the Contractor and the ET. No observation related to the dredging work was found in the reporting month.

8

COMPLAINTS, NOTIFICATION OF SUMMONS AND PROSECUTION

8.0.1. In this reporting period, no complaint, inspection notice, notification of summons or prosecution was received. Cumulative complaint log, summaries of complaints, notification of summons and successful prosecutions are presented in *Tables 8.1*, *8.2* and *8.3* respectively.

Table 8.1 Environmental Complaints Log

| Complaint Log No. | | Received From and Received By | Nature of Complaint | Date Investigated | Outcome | Date of Reply |
|----------------------|---|----------------------------------|------------------------|----------------------|---------|------------------|

9 CONCLUSION

- 9.0.1. The dredging works was commenced on 28 June 2010. The EM&A programme was carried out in accordance with the EM&A Manual requirements. As per the EM&A Manual, water quality impact monitoring was conducted during the dredging work, which was commenced on 28 June 2010.
- 9.0.2. SS exceedances were recorded on 7, 9, 10, 11, 13, 25, 27 and 30 August 2010. Investigation indicated the exceedances were not related to the Project.
- 9.0.3. Owing to the frequent reported exceedances caused by fluctuation in coastal water quality due to localised effect not related to the project. With the overall dredging rate reported (cf. Section *Table 6.3.1*) far below the allowed maximum rate in the EP, it is considered such coastal fluctuation in water quality shall be taken into account as part of baseline condition. At such, it is recommended that a review of the baseline water quality and the respective action and limit levels may be necessary in the coming quarterly report.
- 9.0.4. The scheduled construction activities and the recommended mitigation measures for the coming month are listed in *Table 9.0*. The construction programme of the Project is provided in *Appendix 9.0*.

Table 9.0 Construction Activities and Recommended Mitigation Measures in Coming Report Month Report Month

| Location | Construction Works | Recommended Mitigation Measures |
|----------------|---|--|
| Marine work | Dredging at toe of existing seawall; Dredging at submarine outfall; Maintenance of silt curtain and silt screens; and Installation of inert C&D materials sorting facility | Collection and removal of floating refuse at regular intervals on a daily basis such that water within the site boundary and the neighbouring water Regular inspection and maintenance of the silt screens and silt curtain Silt curtain shall be deployed around the closed grab dredgers used for dredging Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. |

Appendix 3.1

Implementation Schedule of Environmental Mitigation Measures

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|--|---------------------------------|-----------------------|--|
| S3.6 | Requirements of the Air Pollution Control (Construction Dust) Regulation shall be adhered to during the construction period. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | Air Pollution Control (Construction Dust) Regulation |
| S3.6 | In order to minimize the potential odour emissions, if any, the dredged sediment placed on barge should be properly covered as far as practicable to minimise the exposed area and hence the potential odour emissions during the transportation of the dredged sediment. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM |
| S4.8 | Good Site Practices: Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program. Mobile plant, if any, should be sited as far away from NSRs as possible. Machines and plant (such as trucks) that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum. Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs. Material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | NCO EIAO-TM |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|--|---------------------------------|-----------------------|-------------------------------------|
| S4.9 | If there is any planned NSRs within 300m from the work area occupied during the dredging period, an EM&A programme is recommended to be established according to the predicted occurrence of noisy activities. All the recommended mitigation measures for daytime normal working activities should be incorporated into the EM&A programme for implementation during dredging. | Representative NSRs at the former Kai Tak Airport runway / Upon formal occupation | N/A | Not applicable | NCO EIAO-TM |
| S5.9 | Dredging will be carried out by closed grab dredger to minimize release of sediment and other contaminants during both capital and maintenance dredging. The maximum production rate for dredging from the seabed to provide necessary manoeuvring area would not be more than 4,000m³ per day (and no more than 2 closed grab dredgers) during capital dredging and 2,000m³ per day (and no more than 1 closed grab dredger) during maintenance dredging. The maximum production rate for dredging at or near the seawall area would not be more than 4,000m³ per day for berth construction. No more than two closed grab dredger would be operated at the same time at or near the seawall for berth construction. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM WPCO |
| S5.9 | Silt curtains should be deployed around the closed grab dredgers used for dredging at and near the existing seawall of the former Kai Tak Airport runway for construction of the cruise berth structures. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM, WPCO |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|---|---------------------------------|-----------------------|-------------------------------------|
| S5.9 | Silt screens should be installed at the WSD flushing water intakes at Cha Kwo Ling, Sai Wan Ho, Quarry Bay, Sheung Wan, Wan Chai and Tai Wan for dredging in the manoeuvring basin of the first berth during the capital dredging. | Seawater intakes in Victoria Harbour/ During the construction of cruise terminal | Contractor for capital dredging | Implemented | EIAO-TM, WPCO |
| S5.9 | Silt screens should be installed at the WSD flushing water intakes at Cha Kwo Ling, Quarry Bay and Tai Wan for dredging in the manoeuvring basin of the second berth during the capital dredging. | Seawater intakes in Victoria Harbour / During the construction of cruise terminal | Contractor for capital dredging | Implemented | EIAO-TM, WPCO |
| S5.9 | If the opening has been introduced at the northern runway, silt screens should also be installed at the WSD flushing water intake at Sai Wan Ho, Sheung Wan and Wan Chai for dredging in the manoeuvring basin of the second berth during the capital dredging. | Seawater intake at Sai Wan Ho, Sheung Wan and Wan Chai / During the construction of cruise terminal | Contractor for capital dredging | Implemented | EIAO-TM, WPCO |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|---|---|---------------------------------|-----------------------|-------------------------------------|
| S5.9 | Other good site practices that should be undertaken during dredging include: all vessels should be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash; all barges / dredgers should be fitted with tight fitting seals to their bottom openings to prevent leakage of material; construction activities should not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site or dumping grounds; barges or hoppers should not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation. | Work site and adjacent waters / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO, EIAO-TM, WPCO, WDO |
| S5.9 | Appropriate numbers of portable chemical toilets shall be provided by a licensed contractor to serve the construction workers over the construction site. The Contractor shall also be responsible for waste disposal and maintenance practices. | Work site and adjacent waters / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM, WPCO, WDO |

Contract No. KL/2009/01 Site Formation for Kai Tak Cruise Terminal Development

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|---|--|--|-----------------------|-------------------------------------|
| S5.9 | Collection and removal of floating refuse should be performed at regular intervals on a daily basis. The contractor should be responsible for keeping the water within the site boundary and the neighbouring water free from rubbish during the dredging works. | Work site and adjacent waters / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM, WPCO, WDO |
| S5.9 | An environmental monitoring and audit programme should be implemented to verify whether or not impact predictions are representative, and to ensure that all the recommended mitigation measures are implemented properly. If the water quality monitoring data indicate that the proposed dredging works result in unacceptable water quality impacts in the receiving water, appropriate actions should be taken to review the dredging operation and additional measures such as use of frame-type silt curtain, deployment of double silt curtains, slowing down, or rescheduling of works should be implemented as necessary. | 6 selected WSD flushing water intakes in Victoria Harbour/ During dredging in construction stage | Environmental Team and verified by Independent Environmental Checker | Implemented | EIAO-TM, WPCO |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|--|---------------------------------|-----------------------|-------------------------------------|
| S5.9 | Silt screens are recommended to be deployed at 6 selected WSD flushing water intakes during the capital dredging. The contractor for capital dredging shall demonstrate and ensure that the design of the silt screen will not affect the normal operation of flushing water intake. The contractor shall obtain consensus from all relevant parties, including WSD and Marine Department on the design of the silt screen at each of the six selected flushing water intake points before installation of the silt screen and commencement of the proposed dredging works. As a mitigation measure to avoid the pollutant and refuse entrapment problems and to ensure that the impact monitoring results are representative, regular maintenance of the silt screens and refuse collection should be performed at the monitoring stations at regular intervals on a daily basis. The Contractor should be responsible for keeping the water behind the silt screen free from floating rubbish and debris during the impact monitoring period. | 6 selected WSD flushing water intakes in Victoria Harbour/ During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM, WPCO |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|---|--|---------------------------------|-----------------------|-------------------------------------|
| S6.7 | Good Site Practices It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are adhered to. Recommendations for good site practices during the dredging activities include: | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM |
| | • Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. | | | | |
| | • Training of site personnel in proper waste management and chemical waste handling procedures. | | | | |
| | • Provision of sufficient waste disposal points and regular collection for disposal. | | | | |
| | • Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. | | | | |
| | • A recording system for the amount of wastes generated, recycled and disposed of (including the disposal sites). | | | | |
| | • Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. | | | | |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|-----------------|---|--|---------------------------------|-----------------------|-------------------------------------|
| S6.7 (cont.) | Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from other general refuse generated by the workforce. Any unused chemicals or those with remaining functional capacity shall be recycled. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | EIAO-TM |
| S6.7 | Marine Sediments The dredged marine sediments would be loaded onto barges and transported to the designated disposal sites allocated by the MFC depending on their level of contamination. Sediment classified as Category L would be suitable for Type 1 – Open Sea Disposal. Contaminated sediment would require either Type 1 – Open Sea Disposal (Dedicated Sites) or Type 2 - Confined Marine Disposal and must be dredged and transported with great care in accordance with ETWB TCW No. 34/2002. Subject to the final allocation of the disposal sites by MFC, the dredged contaminated sediment must be effectively isolated from the environment upon final disposal and shall be disposed of at the East Sha Chau Contaminated Mud Pits that are designated for the disposal of contaminated mud in Hong Kong. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | ETWB TCW No. 34/2002 |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|--|---------------------------------|---------------------------------------|-------------------------------------|
| S6.7 | It will be the responsibility of the Contractor to satisfy the appropriate authorities that the contamination levels of the marine sediment to be dredged have been analysed and recorded. According to the ETWB TCW No. 34/2002, this will involve the submission of a formal Sediment Quality Report to the DEP, prior to the dredging contract being tendered. The contractor for the dredging works shall apply for the allocation of marine sediment disposal sites from all relevant authorities. | Work site / During dredging in construction stage | Contractor for capital dredging | Dumping Permits were issued by EPD | ETWB TCW No. 34/2002 |
| S6.7 | During transportation and disposal of the dredged marine sediments requiring Type 1 and Type 2 disposal, the following measures shall be taken to minimise potential impacts on water quality: Bottom opening of barges shall be fitted with tight fitting seals to prevent leakage of material. Excess material shall be cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved. Monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP. Barges or hopper barges shall not be filled to a level that would cause the overflow of materials or sediment laden water during loading or transportation. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | WDO; WPCO |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|---|--|---------------------------------|-----------------------|---|
| S6.7 | Chemical Wastes After use, chemical wastes (for example, cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be collected by a licensed collector for disposal at the CWTF or other licensed facility in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | Waste Disposal (Chemical Waste) (General) Regulation; Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes |
| S6.7 | General Refuse General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D material. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. | Work site / During dredging in construction stage | Contractor for capital dredging | Implemented | WDO, WPCO |

| EIA Ref [#] | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------------------|---|---|---------------------------------|-----------------------|--|
| S6.7 | Construction and Demolition Material It is recommended that the extent of dredging of the existing seawall should be kept to a minimum in the detailed design of the new cruise terminal to minimize generation of C&D material. Mitigation measures and good site practices should be incorporated in the contract document to control potential environmental impact from handling and transportation of C&D material. The mitigation measures include: • Where it is unavoidable to have transient stockpiles of C&D material within the Project work site pending collection for disposal, the transient stockpiles shall be located away from waterfront or storm drains as far as possible. • Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric. • Skip hoist for material transport should be totally enclosed by impervious sheeting. • Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site. | Work site / During the construction period | Contractor for capital dredging | Implemented | ETWB TCW No. 33/2002, 31/2004, 19/2005 |
| | • The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores. | | | | |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|-----------------|--|---|--|-----------------------|--|
| S6.7 (cont.) | The load of dusty materials carried by vehicle leaving a construction site should be covered entirely by clean impervious sheeting to ensure dust materials do not leak from the vehicle. All dusty materials should be sprayed with water prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet. The height from which excavated materials are dropped should be controlled to a minimum practical height to limit fugitive dust generation from unloading. | Work site / During the construction period | Contractor for capital dredging | Implemented | ETWB TCW No. 33/2002, 31/2004, 19/2005 |
| S6.7 | When delivering inert C&D material to public fill reception facilities, the material shall consist entirely of inert construction waste and of size less than 250mm or other sizes as agreed with the Secretary of the Public Fill Committee. In order to monitor the disposal of the surplus C&D material at the designed public fill reception facility and to control fly tipping, a trip-ticket system should be included as one of the contractual requirements and implemented by the Contractor under the Waste Management Plan certified by the Environmental Team and verified by the Independent Environmental Checker who should be responsible for auditing the results of the system. | Work site / During the construction period | Contractor for capital dredging, Engineer, Environmental Team and Independent Environmental Checker | Not applicable | ETWB TCW No. 31/2004 |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|--------------------|---|--|--|-----------------------|---|
| S7.8 | The dredging activities of the proposed cruise terminal should ensure that disturbance to the existing seawall masonry outside the Project boundary should be avoided as far as practicable. | Work site/ During construction of cruise terminal | Contractor for capital dredging as per CEDD's advice | Implemented | Antiquities and Monuments Ordinance EIAO, EIAO-TM Guidance Notes on Assessment of Impact on Sites of Cultural Heritage in Environmental Impact Assessment Studies (GN-CH) Hong Kong Planning Standards and Guidelines (HKPSG) |
| S7.10, App. 7.1 | It is recommended that the dredged spoil should be monitored for the presence of archaeological material. Guidelines for the monitoring brief have been prepared in consultation with the AMO. A qualified marine archaeologist needs to be on standby to provide specialist advice, if required, but the monitoring can be carried out by a member of staff on the dredging barge. | Work site / during dredging in construction stage | Contractor for capital dredging, Environmental Team | Implemented | Antiquities and Monuments Ordinance EIAO, EIAO-TM GN-CH HKPSG Marine Archaeological Investigation Guidelines |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|---|--|--|--|-------------------------------------|
| 8.7 | Translocate those existing coral colonies attached on boulders that are manually movable by a diver underwater (possibly longest dimension of less than 50cm) located within the hard substrata sea area within the dredging site as far as practicable prior to the commencement of the capital dredging activities. The entire translocation exercise include the preparation of a detailed translocation plan, the pre- translocation coral survey, the coral translocation, and the quarterly post-translocation monitoring for one year. Pre-translocation survey would be focused on identifying and mapping of coral colonies that would be directly impacted by the proposed dredging and investigating the translocation feasibility of these coral colonies. A detailed translocation plan (including pre- translocation coral survey, translocation methodology and monitoring of transplanted corals) should be prepared during the detailed design stage of the Project which, together with the ecologist involved in coral translocation, should be approved by AFCD prior to commencement of the translocation exercises. The proposed relocation of the coral colonies should not affect any private/public marine rights at the recipient site. | Along the section of the former Kai Tak Airport runway that will be directed affected by the cruise terminal construction / During detailed design stage | Other ET specifically employed for coral translocation works | Final Detailed Coral Translocation Plan was approved by EPD in letter ref. (18) in EP2/K19/C/19 Pt.5 dated 5 June 2009. Form 5 was submitted under CEDD's memo ref. (6) in KD 2/31/4 Pt.3 dated 10 June 2009 regarding minor alteration of the position of the coral recipient site. Coral Translocation Report was submitted in Scott Wilson letter ref. 08290/325723 dated 2 July 2009. Post-translocation report shall be referred to the submissions by another ET specifically employed for coral translocation works. | EIAO-TM |

| EIA Ref# | Environmental Protection Measures / Mitigation Measures | Location / Timing | Implementation Agent | Implementation Status | Relevant Legislation and Guidelines |
|----------|--|---|--------------------------------|--------------------------------|-------------------------------------|
| S8.7 | New seawalls at the berth structure of the cruise terminal shall be constructed in order to provide large area of hard substrata for settlement and recruitment of intertidal and subtidal assemblages similar to those previously recorded from existing habitats. | The section of the former Kai Tak Airport runway that will be directed affected by the cruise terminal construction / During detailed design stage | To be confirmed at later stage | To be confirmed at later stage | EIAO-TM |
| 9.6 | No fisheries-specific mitigation measures would be required. | - | Not applicable | Not applicable | - |

| Impact WQM Mid-flood: 10:08 Mid-ebb: 16:11 | | | | Impact WQM Mid-ebb: 8:1 Mid-flood: 20: | - | | | Impact WC Mid-ebb: Mid-flood: | 9:50 | | |
| 22-Aug | 2 | 23-Aug | 24-Aug | 2 | 5-Aug | | 26-Aug | | 27-Aug | | 28-Aug |
| | Impact WQM Mid-ebb: 1 ⁻ Mid-flood: 18 | 1:42 | | Impact WQM Mid-ebb: 12: Mid-flood: 19: | - | | | Impact W0 Mid-flood: Mid-ebb: | | | |
| 29-Aug | 3 | 30-Aug | 31-Aug | | | | | | | | |
| | Impact WQM Mid-flood: 9: Mid-ebb: 1{ | | | | | | | | | | |

Notes:

1. Water Quality Monitoring for 6 water quality monitoring stations: WSD9, WSD10, WSD15, WSD17, WSD21, WSD19

2. Actual monitoring will be subjected to change due to any safety concern or adverse weather condition.

3. Cut-off day is the end of day of each month.

4. Due to the Red Rainstorm Warning Signal in force on 5 August 2010, water monitoring for mid-flood tide of that day was cancelled.

Appendix 5.3

Event and Action Plan

Event and Action Plan for Construction Noise

| EVENT | | ACTION | | |
|--------------|--|---|---|---|
| | ET | IC(E) | ER | CONTRACTOR |
| Action Level | Notify IEC and Contractor; Carry out investigation; Report the results of investigation to the IEC, ER and Contractor; Discuss with the Contractor and formulate remedial measures; Increase monitoring frequency to check mitigation effectiveness. | Review the analysed results submitted by the ET; Review the proposed remedial measures by the Contractor and advise the ER accordingly; Supervise the implementation of remedial measures. | Confirm receipt of notification of failure in writing; Notify Contractor; Require Contractor to propose remedial measures for the analysed noise problem; Ensure remedial measures are properly implemented. | Submit noise mitigation proposals to IEC; Implement noise mitigation proposals. |
| Limit Level | Identify source; Inform IEC, ER, EPD and Contractor; Repeat measurements to confirm findings; Increase monitoring frequency; Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; Inform IEC, ER and EPD the causes and actions taken for the exceedances; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; If exceedance stops, cease additional monitoring. | Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; Supervise the implementation of remedial measures. | Confirm receipt of notification of failure in writing; Notify Contractor; Require Contractor to propose remedial measures for the analysed noise problem; Ensure remedial measures properly implemented; If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated. | Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Submit further proposal if problem still not under control; Stop the relevant portion of works as instructed by the ER until the exceedance is abated. |

Event and Action Plan for Marine Water Quality

| EVENT | | ACTION | | |
|--|---|---|--|--|
| | ET | IEC | ER | CONTRACTOR |
| Action level being exceeded by one sampling day | Repeat in-situ measurement to confirm findings; Identify source(s) of impact; Inform IEC and Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; (The above actions should be taken within 1 working day after the exceedance is identified) Repeat measurement on next day of exceedance. | Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) | Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented. (The above actions should be taken within 1 working day after the exceedance is identified) | Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Review the working methods and consider additional measures such as use of frame- type silt curtain, deployment of double silt curtains, slowing down, or rescheduling of works; Discuss with ET and IEC and propose mitigation measures to IEC and ER; Implement the agreed mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) |
| Action level being exceeded by more than one consecutive sampling days | Identify source(s) of impact; Inform IEC and Contractor; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC and Contractor; | Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER | Discuss with IEC on the proposed mitigation measures; Make agreement on the mitigation measures to be implemented; Assess the effectiveness | Inform the Engineer and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and |

| EVENT | | ACTION | | |
|-------|---|--|---|--|
| | ET | IEC | ER | CONTRACTOR |
| | Ensure mitigation measures are implemented; Prepare to increase the monitoring frequency to daily; (The above actions should be taken within 1 working day after the exceedance is identified) Repeat measurement on next working day of exceedance. | accordingly; 3. Assess the effectiveness of the implemented mitigation measures. 4. (The above actions should be taken within 1 working day after the exceedance is identified) | of the implemented mitigation measures. 4. (The above actions should be taken within 1 working day after the exceedance is identified) | equipment; 4. Review the working methods and consider additional measures such as use of frame- type silt curtain, deployment of double silt curtains, slowing down, or rescheduling of works; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures. 7. (The above actions should be taken within 1 working day after the exceedance is identified) |

| EVENT | | ACTION | | |
|---|--|---|---|--|
| | ET | IEC | ER | CONTRACTOR |
| Limit level being exceeded by one sampling day | Repeat in-situ measurement to confirm findings; Identify source(s) of impact; Inform IEC, Contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit Level. (The above actions should be taken within 1 working day after the exceedance is identified) | Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) | Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) | Inform the Engineer and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Review the working methods and consider additional measures such as use of frame- type silt curtain, deployment of double silt curtains, slowing down, or rescheduling of works; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) |

| EVENT | | ACTION | | |
|---|--|---|---|---|
| | ET | IEC | ER | CONTRACTOR |
| Limit level being exceeded by more than one consecutive sampling days | Identify source(s) of impact; Inform IEC, Contractor and EPD; Check monitoring data, all plant, equipment and Contractor's working methods; Discuss mitigation measures with IEC, ER and Contractor; Ensure mitigation measures are implemented; Increase the monitoring frequency to daily until no exceedance of Limit level for two consecutive days. (The above actions should be taken within 1 working day after the exceedance is identified) | Discuss with ET and Contractor on the mitigation measures; Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; Assess the effectiveness of the implemented mitigation measures. (The above actions should be taken within 1 working day after the exceedance is identified) | Discuss with IEC, ET and Contractor on the proposed mitigation measures; Request Contractor to critically review the working methods; Make agreement on the mitigation measures to be implemented; Assess the effectiveness of the implemented mitigation measures; Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit level. (The above actions should be taken within 1 working day after the exceedance is identified) | Inform the ER and confirm notification of the non-compliance in writing; Rectify unacceptable practice; Check all plant and equipment; Review the working methods and consider additional measures such as use of frame- type silt curtain, deployment of double silt curtains, slowing down, or rescheduling of works; Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 3 working days; Implement the agreed mitigation measures; As directed by the Engineer, to slow down or to stop all or part of the marine work or construction activities. (The above actions should be taken within 1 working day after the exceedance is identified) |

Appendix 5.4

Summary of Notification of Exceedances

Summary for Notification of Exceedance

| Ref no. | Date | Tidal | | | Average | Action Level | | Follow-up action | |
|---------|-----------|-------------|-------|-----------|-------------|--------------|------|-----------------------------|---|
| X026 | 7-Aug-10 | Mid-flood | | SS (mg/L) | <u>12.0</u> | | | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD 10 |
| | | | | | | | | Remarks / Other Obs: | The dredging works on 7 Aug 2010 was started from 10:20 to 16:20. |
| | | | | | | | | | The dredging rate was 250m ³ per day and around 41m ³ per hour which are relatively low rate and complied with the maximum |
| | | | | | | | | | dredging rate(4,000m ³) in EP condition. Since the natural flow during the flood tides indicates that the source is upstream, it is concluded |
| | | | | | | | | | not related to the Project works. |
| X027 | 9-Aug-10 | Mid-ebb | WSD17 | SS (mg/L) | <u>14.5</u> | 11.2 | 16.2 | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD 17 |
| | | | | | | | | Remarks / Other Obs: | The dredging works on 9 Aug 2010 was started from 09:00 to 20:00. |
| | | | | | | | | | The dredging rate was 350m ³ per day and around 35m ³ per hour which are relatively low rate and complied with the maximum |
| | | | | | | | | | dredging rate(4,000m ³) in EP condition. Considered the silt screen |
| | | | | | | | | | and silt curtain were in proper condition, it is concluded not related to the Project works. |
| X028 | 11-Aug-10 | Mid-flood | WSD10 | SS (mg/L) | <u>13.0</u> | 9.1 | 12.2 | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen |
| | | | | | | | | _ | condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD10 |
| | | | | | | | | Remarks / Other Obs: | The dredging rate on 11 Aug 2010 was 300m ³ per day and around |
| | | | | | | | | | 38m ³ per hour which are relatively low rate and complied with the |
| | | | | | | | | | maximum dredging rate(4,000m ³) in EP condition. Since the natural |
| | | | | | | | | | flow during the flood tides indicates that the source is upstream, it is |
| X029 | 13-Aug-10 | Mid-flood | | SS (mg/L) | 40.5 | 9.1 | 10.0 | Action taken / to be taken: | concluded not related to the Project works. Check monitoring data, contractor's dredging works and silt screen |
| 7029 | 13-Aug-10 | iviid-1100d | W3D10 | 55 (mg/L) | <u>10.5</u> | 9.1 | 12.2 | Action taken / to be taken. | condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD10 |
| | | | | | | | | Remarks / Other Obs: | The dredging rate on 13 Aug 2010 was 50m ³ per day and around |
| | | | | | | | | | $25m^3$ per hour which are relatively low rate and complied with the |
| | | | | | | | | | maximum dredging rate(4,000m ³) in EP condition. Since the natural |
| | | | | | | | | | flow during the flood tides indicates that the source is upstream, it is |
| | | | | | | | | | concluded not related to the Project works. |
| X030 | 13-Aug-10 | Mid-flood | WSD17 | SS (mg/L) | <u>14.0</u> | 11.2 | 16.2 | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD17 |
| | | | | | | | | Remarks / Other Obs: | The dredging rate on 13 Aug 2010 was 50m ³ per day and around |
| | | | | | | | | | 25m ³ per hour which are relatively low rate and complied with the |
| | | | | | | | | | maximum dredging rate(4,000m ³) in EP condition. Considered the silt |
| | | | | | | | | | screen and silt curtain were in proper condition and no exceedance |
| | | | | | | | | | was recorded in the next consecutive monitoring, it is concluded not |
| | | | | | | | | | related to the Project works. |

Summary for Notification of Exceedance

| Ref no. | Date | Tidal | Location | Parameters (Unit) | Average | Action Level | Limit Level | Follow-up action | |
|---------|-----------|-----------|----------|-------------------|-------------|--------------|-------------|-----------------------------|--|
| X031 | 25-Aug-10 | Mid-flood | WSD10 | SS (mg/L) | <u>9.5</u> | 9.1 | 12.2 | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD10 |
| | | | | | | | | Remarks / Other Obs: | Silt screen was inspected in a proper condition during the water |
| | | | | | | | | | monitoring. Since the natural flow during the flood tides indicates that |
| | | | | | | | | | the source is upstream, it is concluded not related to the Project |
| | | | | | | | | | works. |
| X032 | 27-Aug-10 | Mid-ebb | WSD10 | SS (mg/L) | <u>10.0</u> | 9.1 | 12.2 | Action taken / to be taken: | Check monitoring data and silt screen condition. |
| | | | | | | | | Possible reason: | Suspected local discharge near the station WSD10 observed during |
| | | | | | | | | Remarks / Other Obs: | the water monitoring. |
| | | | | | | | | Remarks / Other Obs. | Silt screen was inspected in a proper condition during the water monitoring. The exceedance seems to be caused by the reddish- |
| | | | | | | | | | brown local discharge near station WSD10, it is concluded not |
| | | | | | | | | | related to the Project works. |
| X033 | 30-Aug-10 | Mid-flood | WSD10 | SS (mg/L) | 16.5 | 9.1 | 12.2 | Action taken / to be taken: | Check monitoring data and silt screen condition. |
| | _ | | | | | | | Possible reason: | Natural variation or change around the Station WSD10 |
| | | | | | | | | Remarks / Other Obs: | Silt screen was inspected in a proper condition during the water |
| | | | | | | | | | monitoring. Since the natural flow during the flood tides indicates that |
| | | | | | | | | | the source is upstream, it is concluded not related to the Project |
| | | | | | | | | | works. |
| X034 | 30-Aug-10 | Mid-ebb | WSD10 | SS (mg/L) | <u>11.5</u> | 9.1 | 12.2 | Action taken / to be taken: | Check monitoring data, contractor's dredging works and silt screen condition |
| | | | | | | | | Possible reason: | Natural variation or change around the Station WSD10 |
| | | | | | | | | Remarks / Other Obs: | The dredging rate on 30 Aug 2010 was 100m ³ per day and around |
| | | | | | | | | | $20m^3$ per hour which are relatively low rate and complied with the |
| | | | | | | | | | maximum dredging rate(4,000m ³) in EP condition. Considered the silt |
| | | | | | | | | | screen and silt curtain were in proper condition, it is concluded not |
| | | | | | | | | | related to the Project works. |

Remarks:

Single underline denotes exceedance over Action Level. Double underline denotes exceedance over Limit Level.
