### **EXECUTIVE SUMMARY**

### Introduction

- 1. This is the 59<sup>th</sup> Environmental Monitoring and Audit (EM&A) Report prepared by Cinotech Consultants Limited for the "Drainage Improvement in Northern Hong Kong Island Hong Kong West Drainage Tunnel" (the Project). This report documents the findings of EM&A Works conducted in February 2013.
- 2. The site activities undertaken in the reporting month included:
  - E&M works at Eastern Portal:
  - Reinstatement works at Western Portal;
  - Reinstatement works at CR1 and P5;
  - Penstock and metal works at CR1 and P5;
  - Road and drainage works at CR1;
  - Tunnel cleaning:
  - Invert Recess filling; and
  - Environmental impact monitoring.

# **Environmental Monitoring Works**

- 3. Environmental monitoring for the Project was performed in accordance with the updated EM&A Manual and the monitoring results were checked and reviewed. Site Inspections/Audits were conducted once per week. The implementation of the environmental mitigation measures, Event Action Plans and environmental complaint handling procedures were also checked.
- 4. Proposal for Temporary Suspension of Water Quality Monitoring Western Portal was submitted on 15<sup>th</sup> September 2009 and approved by EPD on 30<sup>th</sup> October 2009. Marine water quality monitoring was temporary suspended starting from 31<sup>st</sup> October 2009 until there is marine-based construction activities resumed at the Western Portal. The monitoring has resumed on 5<sup>th</sup> March 2012 and terminated on 24<sup>th</sup> October 2012 with approval of EPD.
- 5. Summary of the non-compliance of the reporting month is tabulated in Table I.

### Eastern Portal

1-hour TSP Monitoring

6. All 1-hour TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

7. All 24-hour TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

Construction Noise

8. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Western Portal

1-hour TSP Monitoring

9. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

10. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

Construction Noise

11. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Intake BR6

Construction Noise

12. Construction noise monitoring at Intake BR6 was completed in mid November 2012.

# Intake DG1

Construction Noise

13. All construction noise monitoring was conducted as scheduled in the reporting month. No

Monthly EM&A Report – February 2013

Action/Limit Level exceedance was recorded.

### Intake E5A

Construction Noise

14. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Intake E7

Construction Noise

15. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Intake MA14

Construction Noise

16. Construction noise monitoring at Intake MA14 was completed in mid November 2012.

### Intake PFLR1

Construction Noise

17. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

# Intake RR1

Construction Noise

18. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Intake THR2

Construction Noise

19. Construction noise monitoring at Intake THR2 was completed by the end of July 2012.

# Intake W0

Construction Noise

20. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

# Intake W5

### Construction Noise

21. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### Intake W8

Construction Noise

22. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

# Intake P5

Construction Noise

23. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

### **Environmental Licenses and Permits**

- 24. Licenses/Permits granted to the Project include the Environmental Permit (EP) for the Project, An Environmental Permit No. EP-272/2007 was issued on 26 April 2007 and Environmental Permit No. EP-272/2007/A was issue on 26 October 2007. Later, the further Environmental Permit (FEP-01/272/2007/A) and (FEP-01/272/2007/B) was issued on 28 January 2008 and 25 June 2009 to Dragages-Nishimatsu Joint Venture.
- 25. Registration of Chemical Waste Producer (License: 5213-148-D2393-02 for Eastern Portal and No. 5213-172-D2393-01 for Western Portal).
- Water Discharge License (License No.: EP860/W10/XY0175 for Area of Mount Butler Office, EP860/W10/XY0177 for Eastern Portal, EP820/W9/XT086 and WT00005864-2010 for Western Portal, EP860/W10/XY0183 for Intake W0, WT00003737-2009 for Intake MB16, WT00004126-2009 for Intake HKU1, WT00003738-2009 for THR2, WT00004270-2009 for PFLR1, WT00004806-2009 for Intake E7, WT00004808-2009 for MBD2, WT00004885-2009 for Intake RR1, WT00005135-2009 for Intake W10, WT00005357-2009 for Intake W5, WT00005374-2009 for Intake P5, WT00005376-2009 for Intake TP4, WT00005588-2009 for Intake TP5, WT00005643-2009 for Intake E5A, WT00005754-2010 for Intake W8, WT00005954-2010 for Intake TP789, WT00005915-2010 for Intake E5B, WT00006102-2010 for Intake M3, WT00006415-2010 for Intake MA15, WT00006420-2010 for Intake MA17, WT00006428-2010 for Intake BR6, WT00006609-2010 for Intake HR1, WT00006559-2010 for Intake CR1, WT00006929-2010 for Intake W1, WT00006418-2010 for Intake MA14, WT00006865-2010 for Intake BR5, WT00007039-2010 for Intake DG1 WT00007042-2010 for Intake W3, WT00007043-2010 for Intake GL1, WT00007130-2010 for Intake BR4, WT00007139-2010 for Intake BR6 SMH17 and WT00007319-2010 for Intake B2).
- 27. Construction Noise Permit (License No.: GW-RS0819-12 for tunnel and adits section under Central-Western District)

Monthly EM&A Report – February 2013

# **Key Information in the Reporting Month**

28. Summary of key information in the reporting month is tabulated in Table II.

Table II Summary Table for Key Information in the Reporting Month

Event	Event Details		ent Event Details Action Taken	Status	Remark
	Number	Nature			
Complaint received	0		N/A	N/A	
Changes to the assumptions and key construction / operation activities recorded	0		N/A	N/A	
Status of submissions under EP	1	Monthly EM&A Report (January 2013)	Submitted to EPD on 25 February 2013 (EP condition 3.3)	Verified by IEC	
Notifications of any summons & prosecutions received	0		N/A	N/A	

# **Future Key Issues:**

Major site activities for the coming month include:

- E&M works at Eastern Portal;
- Reinstatement works at Western Portal;
- Reinstatement works at CR1 and P5;
- Penstock and metal works at CR1 and P5;
- Road and drainage works at CR1;
- Tunnel cleaning;
- Invert Recess filling; and
- Environmental impact monitoring.

### 1. INTRODUCTION

### **Background**

- 1.1 Drainage Improvement in Northern Hong Kong Island Hong Kong West Drainage Tunnel is a Designated Project (hereafter referred to as "the Project") under the Environmental Impact Assessment Ordinance (Cap. 449). A study of environmental impact assessment (EIA) was undertaken to consider the key issues of air quality, noise, water quality, ecological, construction waste, landscape and visual, land use, cultural impacts, and identify possible mitigation measures associated with the works. An EIA Report was approved by the Environmental Protection Department (EPD) on 7 April 2006.
- 1.2 The project comprises the construction of a drainage tunnel deep into the ground in Midlevels of the Northern Hong Kong Island from Tai Hang to Pokfulam to intercept and convey the stormwater from the upper catchment directly to the sea near Cyberport. The Drainage tunnel alignment starts from the Eastern Portal near Haw Par Mansion in Tai Hang and ends at the Western Portal located to the north of Cyberport running underneath the Pok Fu Lam, Tai Tam, Aberdeen and Lung Fu Shan Country Parks. The underground main drainage tunnel is 6.25m-7.25m in diameter and about 11km long. Two portals and a series of connecting adits and drop shafts are also been constructed. The general layout of the Project is shown in **Figure 1.1**.
- 1.3 An Environmental Permit (EP) No. EP-272/2007 was issued on 26 April 2007 for Drainage Improvement in Northern Hong Kong Island Hong Kong West Drainage Tunnel to Drainage Services Department as the Permit Holder. Later, the further Environmental Permit (FEP-01/272/2007/A) and (FEP-01/272/2007/B) was issued on 28 January 2008 and 25 June 2009 to Dragages-Nishimatsu Joint Venture.
- 1.4 Cinotech Consultants Limited was commissioned by the Dragages-Nishimatsu Joint Venture (the Contractor) to undertake the Environmental Monitoring and Audit (EM&A) works for the Project. The Updated EM&A Manual was prepared by Cinotech to fulfil the requirements of the EP. The construction commencement of this Contract at Eastern Portal was on 17<sup>th</sup> April 2008 and 2<sup>nd</sup> May 2008 at Western Portal (land-based). The marine construction works was commenced on 30 May 2008. This is the 59<sup>th</sup> monthly EM&A report summarizing the EM&A works for the Project in February 2013.

# **Project Organizations**

- 1.5 Different parties with different levels of involvement in the project organization include:
  - Project Proponent Drainage Services Department (DSD).
  - The Supervising Officer or Supervising Officer's Representative (SO or SOR) Ove Arup & Partners (ARUP).
  - Environmental Team (ET) Cinotech Consultants Limited (CCL).
  - Independent Environmental Checker (IEC) Allied Environmental Consultants Limited (AEC).
  - Contractor Dragages-Nishimatsu Joint Venture (DNJV).

- 1.6 The responsibilities of respective parties are detailed in Sections 1.14 to 1.28 of the updated EM&A Manual of the Project.
- 1.7 The key contacts of the Project are shown in Table 1.1 and the organization chart of ET is shown in **Figure 2.1**.

**Table 1.1 Key Project Contacts** 

Party	Role	Name	Position	Phone No.	Fax No.
DNJV	Permit Holder	Mr. UETAKE H.	Deputy Project Manager	2671 7333	2671 9300
ARUP	Supervising Officer	Mr. Edward Shum	RE	9668 8350	2436 1012
		Dr. Priscilla Choy	ET Leader	2151 2089	
Cinotech	Environmental Team	Ms. Ivy Tam	Project Coordinator and Audit Team Leader	2151 2090	3107 1388
		Mr. Henry Leung	Monitoring Team Leader	2151 2087	
AEC	Independent Environmental Checker	Ms. Grace Kwok	Independent Environmental Checker	2815 7028	2815 5399
DNJV	Contractor	Mr. Carlson Wong	Environmental Officer	3476 0723	2671 9300

# **Construction Programme**

- 1.8 The site activities undertaken in the reporting month included:
  - E&M works at Eastern Portal;
  - Reinstatement works at Western Portal;
  - Reinstatement works at CR1 and P5;
  - Penstock and metal works at CR1 and P5;
  - Road and drainage works at CR1;
  - Tunnel cleaning;
  - Invert Recess filling; and
  - Environmental impact monitoring.

Table 1.2 Construction Programme Showing the Inter-Relationship with Environmental Protection/Mitigation Measures

1 Tottetion/writigation wieasures				
Construction Works	Major Environmental Impact	Control Measures		
E&M works at Eastern Portal  Reinstatement works at Western Portal  Reinstatement works at CR1 and P5  Penstock and metal works at CR1 and P5  Road and drainage works at CR1  Tunnel cleaning	Major Environmental Impact  Noise, dust impact, water quality and waste generation	<ul> <li>Provided water spraying during dust generation works</li> <li>On-site waste sorting and implementation of trip ticket system</li> <li>Appropriate desilting/sedimentation devices provided on site for treatment before discharge</li> <li>Use of quiet plant and well-maintained</li> </ul>		
Invert recess filling		<ul> <li>construction plant</li> <li>Provide movable noise barrier</li> <li>Provide sufficient mitigation measures as recommended in Approved EIA Report</li> </ul>		
Environmental impact monitoring	NIL	NIL		

# **Summary of EM&A Requirements**

- 1.9 The EM&A programme requires construction phase monitoring construction noise, air quality and water quality and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
  - All monitoring parameters;
  - Action and Limit levels for all environmental parameters;
  - Event Action Plans:
  - Environmental mitigation measures, as recommended in the project EIA study final report; and
  - Environmental requirements in contract documents.
- 1.10 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 5 of this report.
- 1.11 This report presents the monitoring results, observations, locations, equipment, period, methodology and QA/QC procedures of the required monitoring parameters, namely air quality, water quality and noise levels and audit works for the Project in February 2013.

# 2. AIR QUALITY

# **Monitoring Requirements**

2.1 1-hour and 24-hour TSP monitoring were conducted to monitor the air quality at Eastern and Western Portals. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.

# **Monitoring Locations**

2.2 Three designated monitoring stations, AQ1, AQ2 and AQ3 were selected for impact dust monitoring. Table 2.1 describes the air quality monitoring locations, which are also depicted in **Figure 3.1a-b.** 

**Table 2.1** Locations for Air Quality Monitoring

Monitoring Stations	Locations
AQ1	True Light Middle School of Hong Kong
AQ2	Outside Aegean Terrace
AQ3	Outside The Site Office at Western Portal

# **Monitoring Equipment**

2.3 Table 2.2 summarizes the equipment used in the impact air monitoring programme. Copies of calibration certificates are attached in **Appendix B**.

**Table 2.2** Air Quality Monitoring Equipment

Equipment	Model and Make	Quantity
Calibrator	G25A	1
1-hour TSP Dust Meter	Laser Dust Monitor – Model LD3, LD3B	3
HVS Sampler	GMWS 2310 c/w of TSP sampling inlet	2

# Monitoring Parameters, Frequency and Duration

2.4 Table 2.3 summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for the reporting month is shown in **Appendix D**.

 Table 2.3
 Impact Dust Monitoring Parameters, Frequency and Duration

Parameters	Frequency
1-hr TSP	Three times / 6 days
24-hr TSP	Once / 6 days

# Monitoring Methodology and QA/QC Procedure

1-hour TSP Monitoring

# Measuring Procedures

- 2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:
  - Pull up the air sampling inlet cover
  - Change the Mode 0 to BG with once
  - Push Start/Stop switch once
  - Turn the knob to SENSI.ADJ and press it
  - Push Start/Stop switch once
  - Return the knob to the position MEASURE slowly
  - Push the timer set switch to set measuring time
  - Remove the cap and make a measurement

# Maintenance/Calibration

- 2.6 The following maintenance/calibration was required for the direct dust meters:
  - Check the meter regularly and calibrate the meter at bi-monthly interval throughout all stages of the air quality monitoring.

24-hour TSP Monitoring

### Instrumentation

2.7 High volume (HVS) samplers (Model GMWS-2310 Accu-Vol) completed with appropriate sampling inlets were employed for 24-hour TSP monitoring. The sampler was composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complied with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50). Moreover, the HVS also met all the requirements in section 2.5 of the updated EM&A Manual.

# Operating/Analytical Procedures

- 2.8 Operating/analytical procedures for the operation of HVS were as follows:
  - A horizontal platform was provided with appropriate support to secure the samplers against gusty wind.
  - No two samplers were placed less than 2 meters apart.
  - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
  - A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
  - A minimum of 2 meters separation from any supporting structure, measured horizontally was required.
  - No furnaces or incineration flues were nearby.
  - Airflow around the sampler was unrestricted.
  - The sampler was more than 20 meters from the drip line.

- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.
- 2.9 Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 1.1 m³/min. and 1.4 m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
- 2.10 Fiberglass filters were used which have a collection efficiency of larger than 99% for particles of 0.3 µm diameter.
- 2.11 The power supply was checked to ensure the sampler worked properly. On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air monitoring station.
- 2.12 The filter holding frame was then removed by loosening the four nuts and a weighted and conditioned filter was carefully centered with the stamped number upwards, on a supporting screen.
- 2.13 The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- 2.14 The shelter lid was closed and secured with the aluminum strip.
- 2.15 The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
- 2.16 After sampling, the filter was removed and sent to the HOKLAS laboratory (Wellab Ltd.) for weighing. The elapsed time was also recorded.
- 2.17 Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ±3°C; the relative humidity (RH) should be < 50% and not vary by more than ±5%. A convenient working RH is 40%.

# Maintenance/Calibration

- 2.18 The following maintenance/calibration was required for the HVS:
  - The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
  - High volume samplers were calibrated at bi-monthly intervals using G-25A Calibration Kit throughout all stages of the air quality monitoring.

### **Results and Observations**

### Eastern Portal (AQ1)

- 2.19 All 1-hour TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.
- 2.20 All 24-hour TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

# Western Portal (AQ2)

2.21 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

# Western Portal (AQ3)

- 2.22 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.
- 2.23 Wind data was obtained from the Meteorological Observations for King's Park Automatic Weather Station for Eastern Portal and Wong Chuk Hang Automatic Weather Station for Western Portal. These wind data for the reporting period is summarized in **Appendix C.**
- 2.24 The monitoring data and graphical presentations of 1-hour and 24-hour TSP monitoring results are shown in **Appendices E and F** respectively.
- 2.25 The summary of exceedance record in reporting month is shown in **Appendix H**.
- 2.26 In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website <a href="http://www.cinotech.com.hk/projects/WestDrainageTunnel/">http://www.cinotech.com.hk/projects/WestDrainageTunnel/</a>.
- 2.27 According to our field observations, the major dust source identified at the designated air quality monitoring stations are as follows:

	Station	Major Dust Source
Area		
Eastern Portal	AQ1 – True Light Middle School of Hong Kong	Road Traffic Dust
Western Portal	AQ2 – Outside Aegean Terrace	Road Traffic Dust
	AQ3 – Outside The Site Office at Western Portal

### 3. NOISE

# **Airborne Construction Noise Monitoring**

# **Monitoring Requirements**

3.1 Sixteen noise monitoring stations, namely NC1, NC2, NC3, NC5, NC6, NC7, NC8, NC9, NC11, NC12, NC13, NC15a, NC16, NC17, NC18 and NC19 were selected for impact monitoring in the reporting month. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.

### **Monitoring Locations**

- 3.2 Noise monitoring was conducted at 16 designated monitoring stations as listed in Table 3.1. **Figure 3.1a-n** shows the locations of all noise monitoring stations.
- 3.3 The location of Hong Kong Academy, the noise monitoring station (NC15) at nearby the construction site (Intake W0), has been removed. The existing location has become a temporarily vacancy for future purpose. Therefore, the proposed location (NC15a) is shifted to the 12 Tung Shan Terrace from the original location.
- 3.4 Construction noise monitoring at NC14 Hong Kong Japanese School was completed by the end of July 2012.
- 3.5 Construction noise monitoring at NC4 Man Yuen Garden and NC10 The Harbour view was completed in mid-November 2012.

**Table 3.1** Noise Monitoring Stations

Monitoring Stations	Locations
NC1	True Light Middle School of Hong Kong
NC2	The Legend
NC3	Outside Aegean Terrace
NC5	Blk D Villa Monte Rosa
NC6	Rosaryhill School
NC7	Buddist Li Ka Shing Care & Attention Home for the Elderly
NC8	Marymount Secondary School
NC9	117 Blue Pool Road
NC11	Honey Court
NC12	Ying Wa Girl's School
NC13	Peaksville Court
NC15a	12 Tung Shan Terrace
NC16	Raimondi College
NC17	Hong Kong Institute of Technology
NC18	Blk A, 80 Robinson Road
NC19	Villa Veneto

# **Monitoring Equipment**

3.6 Table 3.2 summarizes the noise monitoring equipment. Copies of calibration certificates are provided in **Appendix B**.

**Table 3.2** Noise Monitoring Equipment

Equipment	Model and Make	Qty.
Integrating Sound Level Meter	SVAN 955 and 957	3
Calibrator	B&K 4231 and SVAN 30A	3

Monitoring Parameters, Frequency and Duration

3.7 Table 3.3 summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule is shown in **Appendix D**.

**Table 3.3** Noise Monitoring Parameters, Frequency and Duration

Monitoring Stations	Parameter	Period	Frequency	Measurement
NC1 NC2 NC3 *NC5 NC6 NC7 NC8 NC9 *NC11 NC12 NC13 NC15a NC15a NC16 NC17	$\begin{array}{c} L_{10}(30 \text{ min.}) \\ dB(A) \\ L_{90}(30 \text{ min.}) \\ dB(A) \\ L_{eq}(30 \text{ min.}) \\ dB(A) \end{array}$	0700-1900 hrs on normal weekdays	Once per week	Façade

<sup>\*</sup>Free Field Measurement

# Monitoring Methodology and QA/QC Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels were adjusted with a correction of +3 dB(A).
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

frequency weightingtime weightingFast

time measurement : 30 minutes / 5 minutes

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with the portable wind meter.
- At the end of the monitoring period, the  $L_{eq}$ ,  $L_{90}$  and  $L_{10}$  were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Noise measurement was paused temporarily during periods of high intrusive noise if possible and observation was recorded when intrusive noise was not avoided.
- Noise monitoring was cancelled in the presence of fog, rain, and wind with a steady speed exceeding 5 m/s, or wind with gusts exceeding 10 m/s.

### **Maintenance and Calibration**

- 3.8 The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
- 3.9 The sound level meter and calibrator were checked and calibrated at yearly intervals.
- 3.10 Immediately prior to and following each noise measurement the accuracy of the sound level meter shall be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

### **Results and Observations**

- 3.11 Noise monitoring (0700-1900 hrs on normal weekdays) at the three designated locations (NC1, NC2 and NC3) was conducted as scheduled in the reporting month for Eastern and Western Portal.
- 3.12 Noise monitoring (0700-1900 hrs on normal weekdays) at NC5, NC6, NC7, NC8, NC9, NC11, NC12, NC13, NC15a, NC16, NC17, NC18 and NC19 were conducted as scheduled in the reporting month for Intakes DG1, E5A, E7, PFLR1, RR1, W0, W5, W8 and P5 respectively.

Eastern Portal (NC1 & NC2) – 0700-1900 hrs on normal weekdays

3.13 No Action/Limit Level exceedance was recorded.

Western Portal (NC3) – 0700-1900 hrs on normal weekdays

3.14 No Action/Limit Level exceedance was recorded.

Intake DG1 (NC5) -0700-1900 hrs on normal weekdays

3.15 No Action/Limit Level exceedance was recorded.

Intake DG1 (NC6) – 0700-1900 hrs on normal weekdays

3.16 No Action/Limit Level exceedance was recorded.

### Intake E5A (NC7) - 0700-1900 hrs on normal weekdays

- 3.17 No Action/Limit Level exceedance was recorded.
  - Intake E7 (NC8) 0700-1900 hrs on normal weekdays
- 3.18 No Action/Limit Level exceedance was recorded.
  - Intake E7 (NC9) 0700-1900 hrs on normal weekdays
- 3.19 No Action/Limit Level exceedance was recorded.
  - Intake PFLR1 (NC11) 0700-1900 hrs on normal weekdays
- 3.20 No Action/Limit Level exceedance was recorded.
  - Intake RR1 (NC12) 0700-1900 hrs on normal weekdays
- 3.21 No Action/Limit Level exceedance was recorded.
  - Intake RR1 (NC13) 0700-1900 hrs on normal weekdays
- 3.22 No Action/Limit Level exceedance was recorded.
  - Intake W0 (NC15a) 0700-1900 hrs on normal weekdays
- 3.23 No Action/Limit Level exceedance was recorded.
  - Intake W5 (NC16) 0700-1900 hrs on normal weekdays
- 3.24 No Action/Limit Level exceedance was recorded.
  - Intake W8 (NC17) 0700-1900 hrs on normal weekdays
- 3.25 No Action/Limit Level exceedance was recorded.
  - Intake W8 (NC18) 0700-1900 hrs on normal weekdays
- 3.26 No Action/Limit Level exceedance was recorded.
  - Intake P5 (NC19) 0700-1900 hrs on normal weekdays
- 3.27 No Action/Limit Level exceedance was recorded.
- 3.28 The summary of exceedance record in reporting month is shown in **Appendix H**.
- 3.29 The average Baseline Noise Level and Noise Limit Level at each designated noise monitoring station are summarized in Table 3.4 for reference. When the measured noise levels exceed the noise limit level, the corrected measured noise levels will be adopted. The

- correction would take into account the effect of the background/baseline noise levels. In consideration of the consistency, the baseline noise level corresponding to that particular monitoring time period (as shown in Table 3.5 and **Appendix G**) will be used for such correction.
- 3.30 Noise monitoring results and graphical presentations are shown in **Appendix G**. In accordance with Condition 4.2 of the EP, all environmental monitoring data was made available to the public via internet access at the website <a href="http://www.cinotech.com.hk/projects/WestDrainageTunnel/">http://www.cinotech.com.hk/projects/WestDrainageTunnel/</a>.
- 3.31 The major noise sources identified at the designated noise monitoring stations are as follows:

	Station	Major Noise Source
Area	Station	Major Noise Source
Eastern Portal	NC1 – True Light Middle	Traffic Noise
Lasterii i ortai	School of Hong Kong	E&M works
	School of Hong Kong	LCIVI WOIRS
	NC2 – The Legend	
Western Portal	NC3 – Outside Aegean	Traffic Noise
	Terrace	E&M works
Intake DG1	NC5 - Blk D Villa Monte	Traffic Noise
	Rosa	
	NC6 - Rosaryhill School	
Intake E5A	NC7 - Buddist Li Ka	Traffic Noise
	Shing Care & Attention	
	Home for the Elderly	
Intake E7	NC8 – Marymount	Traffic Noise
	Secondary School	
	NC9 – 117 Blue Pool

<sup>(1)</sup> The corresponding baseline noise levels were derived from the baseline monitoring results at the corresponding stations and time period.

Corrected MNL =  $10 \log (10^{MNL/10} - 10^{BNL/10})$ 

Remarks:

The corrected measured noise levels will be adopted when the measured noise levels exceed the noise limit level. The correction would take into account the effect of the background/baseline noise levels. The baseline noise level corresponding to that particular monitoring time period will be used for such correction. The corrected noise level due to the construction work was calculated by the following formula:

MNL = Measured Noise Level BNL = Baseline Noise Level (Corresponding Time Period)

- (3) N/A Not applicable (Measured Noise Level  $\leq$  Limit Level)
- 3.32 Based on the field record sheets during the impact noise monitoring, the major noise source was identified as road traffic noise. According to the baseline noise monitoring results, the noise levels at the corresponding time period have already exceeded the limit level (i.e 65 dB(A) during school examination periods) contributed by the traffic noise. Therefore, the limit level exceedance of measured noise levels which were below the baseline level, are considered invalid

# **Ground Borne Construction Noise Monitoring**

# **Monitoring Requirements**

3.33 In accordance with the recommendations of the EIA study, ground borne noise monitoring is required to carry out during the TBM operation. Eight designated monitoring stations (GNC1 to GNC8) are designated for construction groundborne noise monitoring to check for compliance.

# **Monitoring Locations**

- 3.34 Construction Ground Borne Noise Monitoring at GNC3 was temporary suspended since 7 May 2009 as the ISS EastPoint Property Management Ltd. received an instruction from the Incorporated Owners of Aegean Terrace that we are not permitted to conduct any noise monitoring inside Aegean Terrace for the Project.
- 3.35 According to the approved EIA report, noise monitoring should be performed at NSR1a (i.e. Crane Court) when TBM is operating through the tunnel section between points A and B). Therefore, Ground borne noise monitoring has been conducted at Crane Court (GNC4) since 3 June 2009 during the TBM operated.
- 3.36 Ground borne noise monitoring at GNC1 True Light Middle School, GNC2 The Legend and GNC4 Crane Court were completed by end of August 2009 accordingly.
- 3.37 Ground borne noise monitoring at GNC5 was completed by end of November 2009.
- 3.38 Ground borne noise monitoring at GNC6 French International School was completed by end of June 2010.
- 3.39 Ground borne noise monitoring at GNC7 Hong Villa was completed by the end of November 2011.
- 3.40 Ground borne noise monitoring was conducted at GNC8 Raimondi College was completed by the end of June 2012.

# **Results and Observations**

3.41 No ground borne noise monitoring was conducted during the reporting month.

# 4. WATER QUALITY

# **Monitoring Requirements**

- 4.1 Dissolved oxygen (DO concentration in mg/L and DO saturation in percentage), Turbidity (Tby in NTU), Suspended Solid (SS in mg/L), pH, salinity and both water and ambient temperature monitoring were conducted to monitor the water quality. **Appendix A** shows the established Action/Limit Levels for the environmental monitoring works.
- 4.2 Proposal for Temporary Suspension of Water Quality Monitoring Western Portal was submitted on 15<sup>th</sup> September 2009 and approved by EPD on 30<sup>th</sup> October 2009. Marine water quality monitoring was temporary suspended starting from 31<sup>st</sup> October 2009. Marine-based construction activity has resumed in this reporting month and marine water quality monitoring has resumed on 5<sup>th</sup> March 2012 accordingly.
- 4.3 The marine water quality impact monitoring was completed on 26<sup>th</sup> September 2012. A post-project monitoring exercise on water quality was carried out for four weeks in the same manner as the impact monitoring according to the EM&A Manual 4.6.5. The post-project monitoring exercise was started on 28<sup>th</sup> September 2012 and terminated on 24<sup>th</sup> October 2012 with approval of EPD.

# **Monitoring Locations**

4.4 Locations of designated Water Quality Monitoring Stations are shown in **Figure 4.1a-b** and described in Table 4.1. Samples shall be taken at all designated Monitoring and Control Stations

**Table 4.1** Locations for Water Quality Monitoring

Manitoning Stations	Coord	inates
Monitoring Stations	Northing	Easting

I2	813582	831105
Intake A	813044	831603
Intake B	814583	830606

### **Results and Observations**

4.5 No marine water quality monitoring was conducted during the reporting month.

# **Underground water level**

4.6 Ground water levels were measured once per month during the construction phase in order to ensure the water levels at those intakes near to the natural stream courses and thus on the surrounding habitats will not be significantly affected.

- 4.7 Locations of designated ground water level (borehole with piezometer) monitoring station UC1 at Eastern Portal has been changed to ADH48 which was verified by IEC on 5<sup>th</sup> June 2008. The updated ground water level monitoring stations, TP789\_DH2, TP5\_DH2, THR2\_DH7 and PFLR1\_DH2 were also verified by IEC on 19<sup>th</sup> June 2010.
- 4.8 Ground water level monitoring location is shown in **Figure 4.2a-e** and the Monitoring data are shown in Table 4.4.

**Table 4.4** Ground Water Level Monitoring Data

Date	Water Level (from ground)/m	
Location: ADH48 (Eastern Portal)

15 February 2013	3.00	
Location: PFLR1_DH2		
15 February 2013	11.60	

### 5. ENVIRONMENTAL AUDIT

### **Site Audits**

- 5.1 Site audits were carried out on a weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audits are attached in **Appendix I.**
- 5.2 Site audits were conducted on 7<sup>th</sup>, 14<sup>th</sup>, 21<sup>st</sup> and 28<sup>th</sup> February 2013. IEC site inspections were conducted on 28<sup>th</sup> February 2013. No non-compliance was observed during the site audits.
- 5.3 In order to assess the effectiveness of the implementation of water quality mitigation measures at Western Portal, additional site inspection was conducted on 6<sup>th</sup>, 15<sup>th</sup>, 20<sup>th</sup> and 27<sup>th</sup> February 2013. No non-compliance was observed during the site audits.

# **Review of Environmental Monitoring Procedures**

5.4 The monitoring works conducted by the monitoring team were inspected regularly. The following observations have been recorded for the monitoring works:

# Air Quality Monitoring

- The monitoring team recorded all observations around the monitoring stations within and outside the construction site.
- The monitoring team recorded the temperature and weather conditions on the monitoring days.

# Noise Monitoring

- The monitoring team recorded all observations around the monitoring stations, which might affect the monitoring result.
- Major noise sources were identified and recorded. Other intrusive noise attributing to the result was trimmed off by pausing the monitoring temporarily.

# Status of Environmental Licensing and Permitting

- 5.5 All permits/licenses obtained for the Project are summarized in Table 5.1.
- During this reporting period, a total of 4 nos. of dump trucks of waste were delivered to SENT landfill. 19 and 0 trip of C&D waste were delivered to Chai Wan Public Fill Barging Point and TKO Fill Bank respectively. Both the trip ticket system and chit accounting system for disposal of waste were operating smoothly to date. No truck overloading cases were recorded during this reporting period. No disposal of inert C&D material to public sorting facilities and no dump truck without cover were reported from CEDD. In respect of the dump truck cover, DNJV keeps on take record photos and inspection to ensure that all dump trucks have fully covered the skip before leaving the site.

- 5.7 The rock materials from the Eastern Portal and Western Portal were received by the alternative disposal sites at ZhongShan. Some of the tunnel spoils from adits were also received by Nishimatsu Construction Co. Ltd. Construction Site of MTR SIL(E) Contract 902 which was started from 30<sup>th</sup> June 2011.
- 5.8 The amount of wastes generated by the activities of the Project during the reporting month is shown in **Appendix N**.

 Table 5.1
 Summary of Environmental Licensing and Permit Status

Namid No. Valid Per		Period	Dotaile	Status
Permit No.	From	To	<b>Details</b>	Status
<b>Environmental Pe</b>	rmit (EP)			
FEP- 01/272/2007/B	25/6/09	N/A	Construction of a 6.25m-7.25m in diameter and about 11 km long underground main drainage tunnel, 2 portals and a series of connecting adits and drop shafts.	Valid

### **Implementation Status of Environmental Mitigation Measures**

5.9 During site inspections in the reporting month, no non-conformance was identified. ET weekly site inspections were carried out during the reporting month and the observations and recommendations are summarized in Table 5.2.

**Table 5.2** Observations and Recommendations of Site Inspections

Parameters	Date	Observations and Recommendations	Follow-up
Reminder	28/02/2013	Avoid surface runoff from exposed surface	Follow-up action is needed to
		by providing sand bag bundings.	be reviewed in next reporting
			month.

- 5.10 The monthly IEC audit were carried out on 28<sup>th</sup> February 2013 in reporting month, the observations were recorded and they are presented as follows:
- 5.11 The last observations were recorded by IEC on 30<sup>th</sup> January 2013.

# 28th February 2013

### New Observations:

• Exposed surface was observed at Intake P5. The Contractor was requested to provide sandbag bunds next to the water-filled barriers to prevent site water from entering public area.

### **Non-compliance Recorded during Site Inspections**

5.12 No non-compliance was recorded in the reporting month.

### **Summary of Mitigation Measures Implemented**

- 5.13 The Contractor has implemented the mitigation measures as recommended in the EIA and the updated EM&A Manual in the reporting period except those mitigation measures not applicable at this stage. Status of the implementation of mitigation measures is presented in Table 1.2 and **Appendix J**.
- 5.14 According to the updated EM&A Manual and EP condition, mitigation measures such as

noise enclosure and use of quiet PME are required to be implemented.

- 5.15 The actual implementation status of major mitigation measures required under the EP is as follows:
  - Installation of silt curtain during the course of marine works.
  - Provide noise enclosure at Eastern Portal.
  - Submitted the Alternative Plant Inventory (EP condition 2.8(c)).
- 5.16 An updated summary of the EMIS is provided in **Appendix J**.

# **Implementation Status of Event Action Plans**

5.17 The Event Action Plans for air quality and noise are presented in **Appendix K**.

Eastern Portal

# 1-hr TSP Monitoring

5.18 No Action/Limit Level exceedance was recorded in the reporting month.

# 24-hr TSP Monitoring

5.19 No Action/Limit Level exceedance was recorded in the reporting month.

# Construction Noise

5.20 No Action/Limit Level exceedance was recorded in the reporting month.

Western Portal

### 1-hr TSP Monitoring

5.21 No Action/Limit Level exceedance was recorded in the reporting month.

# 24-hr TSP Monitoring

5.22 No Action/Limit Level exceedance was recorded in the reporting month.

# Construction Noise

5.23 No Action/Limit Level exceedance was recorded in the reporting month.

Intake BR6

### Construction Noise

5.24 Construction noise monitoring at Intake BR6 was completed in mid-November 2012.

Intake DG1

# Construction Noise

5.25 No Action/Limit Level exceedance was recorded in the reporting month.

Intake E5A

# Construction Noise

5.26 No Action/Limit Level exceedance was recorded in the reporting month.

Intake E7

# Construction Noise

5.27 No Action/Limit Level exceedance was recorded in the reporting month.

Intake MA14

### Construction Noise

5.28 Construction noise monitoring at Intake MA14 was completed in mid-November 2012.

Intake PFLR1

# Construction Noise

5.29 No Action/Limit Level exceedance was recorded in the reporting month.

Intake RR1

# Construction Noise

5.30 No Action/Limit Level exceedance was recorded in the reporting month.

Intake THR2

# Construction Noise

5.31 Construction noise monitoring at Intake THR2 was completed by the end of July 2012.

Intake W0

### Construction Noise

5.32 No Action/Limit Level exceedance was recorded in the reporting month.

Intake W5

### Construction Noise

5.33 No Action/Limit Level exceedance was recorded in the reporting month.

Intake W8

# Construction Noise

5.34 No Action/Limit Level exceedance was recorded in the reporting month.

Intake P5

# Construction Noise

5.35 No Action/Limit Level exceedance was recorded in the reporting month.

# Summary of Complaint, Warning, Notification of any Summons and Successful Prosecution

5.36 No environmental complaint was received in the reporting month. For the details, please refer to the following table:

Complaint No.	Date	Complaint Details
N/A	N/A	N/A

- 5.37 No warning, summon and notification of successful prosecution was received in the reporting month.
- 5.38 From project commencement, there were a total of 134 project-related environmental complaints, no warning, summons and successful prosecution received since the commencement of the Project. The Complaint Log is attached in **Appendix L**.

#### 6. FUTURE KEY ISSUES

#### **Key Issues for the Coming Month**

- 6.1 Key environmental issues at Eastern and Western Portals, Intake MA16, MBD2, E5A, E5B, E7, PFLR1, RR1, THR2, SM1, W0, W5, P5, M3, TP4, TP5, TP789, HKU1, W10, W3, W8, MA15, MA17, GL1, HR1, W1, DG1, CR1, BR4, BR5, GL1, MA14 and BR6 in the coming month include:
  - Noise from operation of the equipment, especially for rock-breaking activities, piling works and machinery on-site;
  - Dust generation from stockpiles of dusty materials, excavation works and rock breaking activities;
  - Runoff from exposed slope;
  - Wastewater and runoff discharge from site;
  - Regular removal of silt, mud and sand along u-channels and sedimentation tanks;
  - Review and implementation of temporary drainage system for the surface runoff;
  - Proper storage of construction materials on site;
  - Storage of chemicals/fuel and chemical waste/waste oil on site;
  - Watering for rock breaking activity, soil nailing and on haul road;
  - Accumulation of general and construction waste on site.
- 6.2 The tentative program of major site activities and the impact prediction and control measures for the coming two months, i.e. March and April 2013 are summarized as follows:

<b>Construction Works</b>	Major Impact Prediction	Control Measures
<ul> <li>E&amp;M works at Eastern Portal;</li> <li>Reinstatement works at Western Portal;</li> <li>Reinstatement works at CR1 and P5;</li> <li>Penstock and metal works at CR1 and P5;</li> <li>Road and drainage works at CR1;</li> <li>Tunnel cleaning;</li> <li>Invert recess filling; and</li> <li>Environmental impact monitoring.</li> </ul>	Air impact (dust)  Water quality impact (surface run-off)  Noise Impact	<ul> <li>a) Frequent watering of haul road and unpaved/exposed areas;</li> <li>b) Frequent watering or covering stockpiles with tarpaulin or similar means; and</li> <li>c) Watering of any earth moving activities.</li> <li>d) Diversion of the collected effluent to de-silting facilities for treatment prior to discharge to public storm water drains;</li> <li>e) Provision of adequate de-silting facilities for treating surface run-off and other collected effluents prior to discharge;</li> <li>f) Provision of perimeter protection such as sealing of hoarding footings to avoid run-off from entering the existing storm water drainage system via public road; and</li> <li>g) Provision of measures to prevent discharge into the stream.</li> <li>h) Scheduling of noisy construction activities if necessary to avoid persistent noisy operation;</li> <li>i) Controlling the number of plants use on site;</li> <li>j) Regular maintenance of machines; and</li> <li>k) Use of acoustic barriers if necessary.</li> </ul>

#### **Monitoring Schedule for the Next Month**

6.3 The tentative environmental monitoring schedules for the next month are shown in **Appendix D**.

#### **Construction Program for the Next Month**

6.4 The tentative construction program for the Project is provided in **Appendix M**.

Monthly EM&A Report – February 2013

#### 7. CONCLUSIONS AND RECOMMENDATIONS

#### **Conclusions**

7.1 Environmental monitoring works were performed in the reporting month and all monitoring results were checked and reviewed.

#### 1-hr TSP Monitoring

7.2 All 1-hr TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

#### 24-hr TSP Monitoring

7.3 All 24-hr TSP monitoring was conducted as scheduled in the reporting month except on 9 February 2013 as the True Light Middle School of Hong Kong was closed. No Action/Limit Level exceedance was recorded.

#### Construction Noise Monitoring

7.4 All noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

#### Complaint and Prosecution

7.5 No environmental complaint and no environmental prosecution were received in the reporting month.

#### Recommendations

7.6 According to the environmental audit performed in the reporting period, the following recommendations were made:

#### Air Quality Impact

- To prohibit any open burning on site.
- To regularly maintain the quality of machinery and vehicles on site.
- To implement dust suppression measures on all haul roads, stockpiles, dry surfaces and excavation works.
- To provide hoarding along the entire length of that portion of the site boundary.

#### Noise Impact

- To inspect the noise sources inside the site.
- To space out noisy equipment and position the equipment as far away as possible from sensitive receivers.
- To provide temporary noise barriers for operations of noisy equipment near the noise sensitive receivers in an appropriate location.

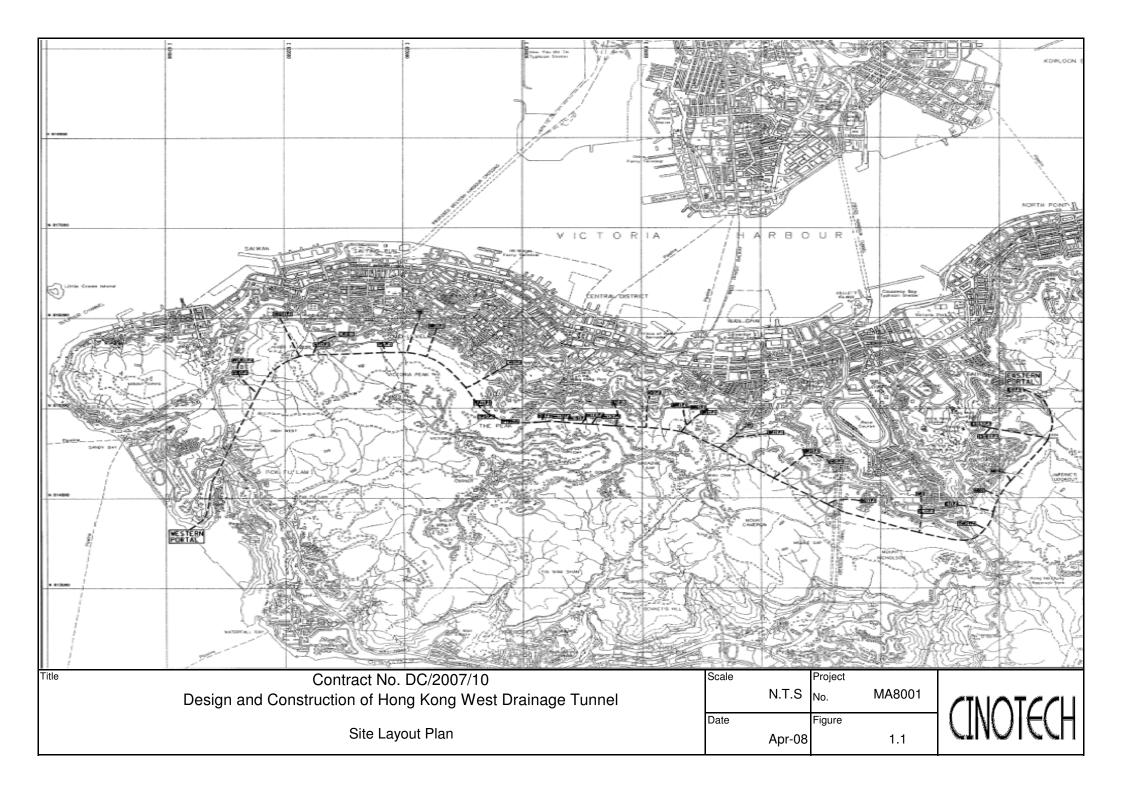

#### Water Impact

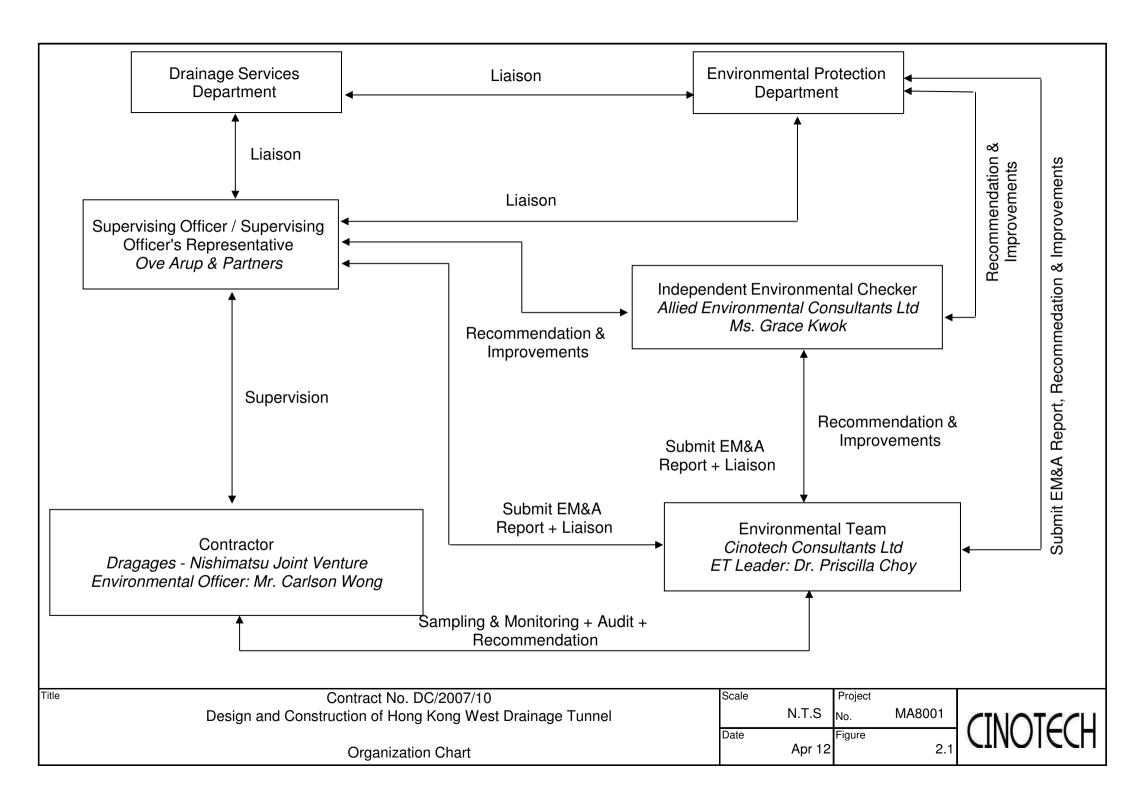

- To prevent any surface runoff discharge into any stream course.
- To review and implement temporary drainage system.
- To identify any wastewater discharges from site.
- To ensure properly maintenance for de-silting facilities.
- To clear the silt and sediment in the sedimentation tanks.
- To review the capacity of de-silting facilities for discharge.
- To divert all the water generated from construction site to de-silting facilities with enough handling capacity before discharge.
- To avoid accumulation of stagnant and ponding water on site.

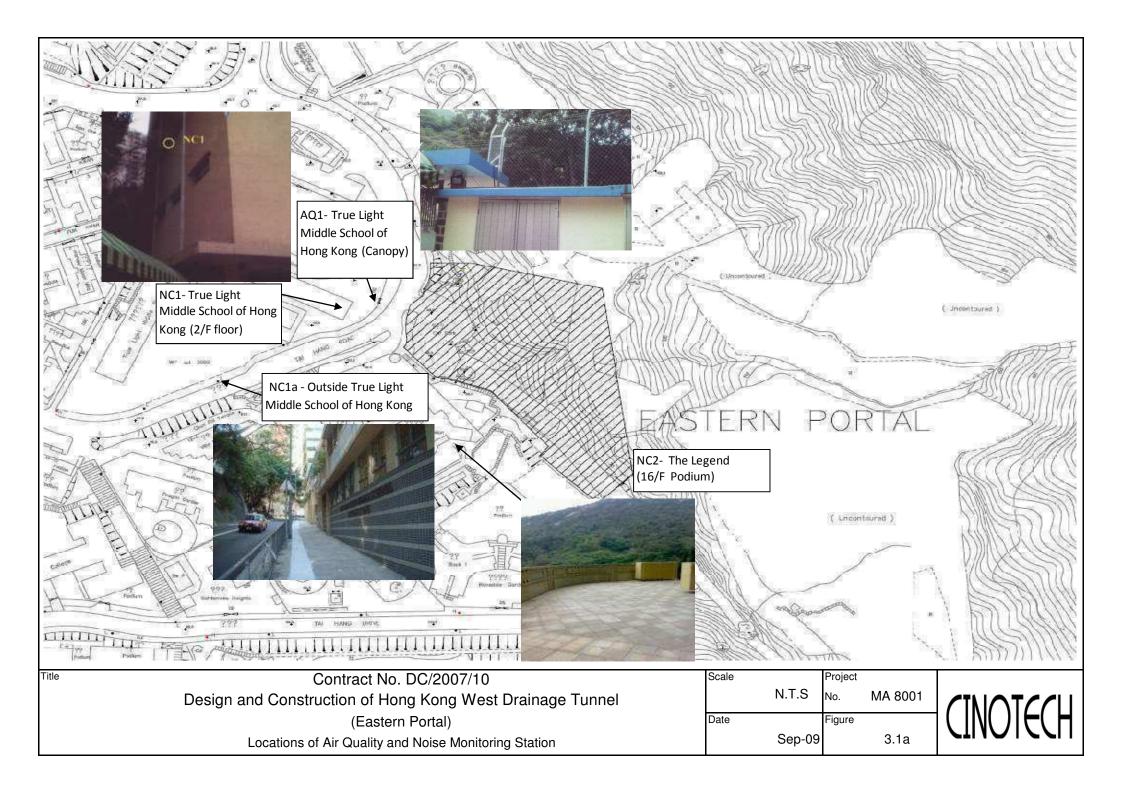

#### Waste/Chemical Management

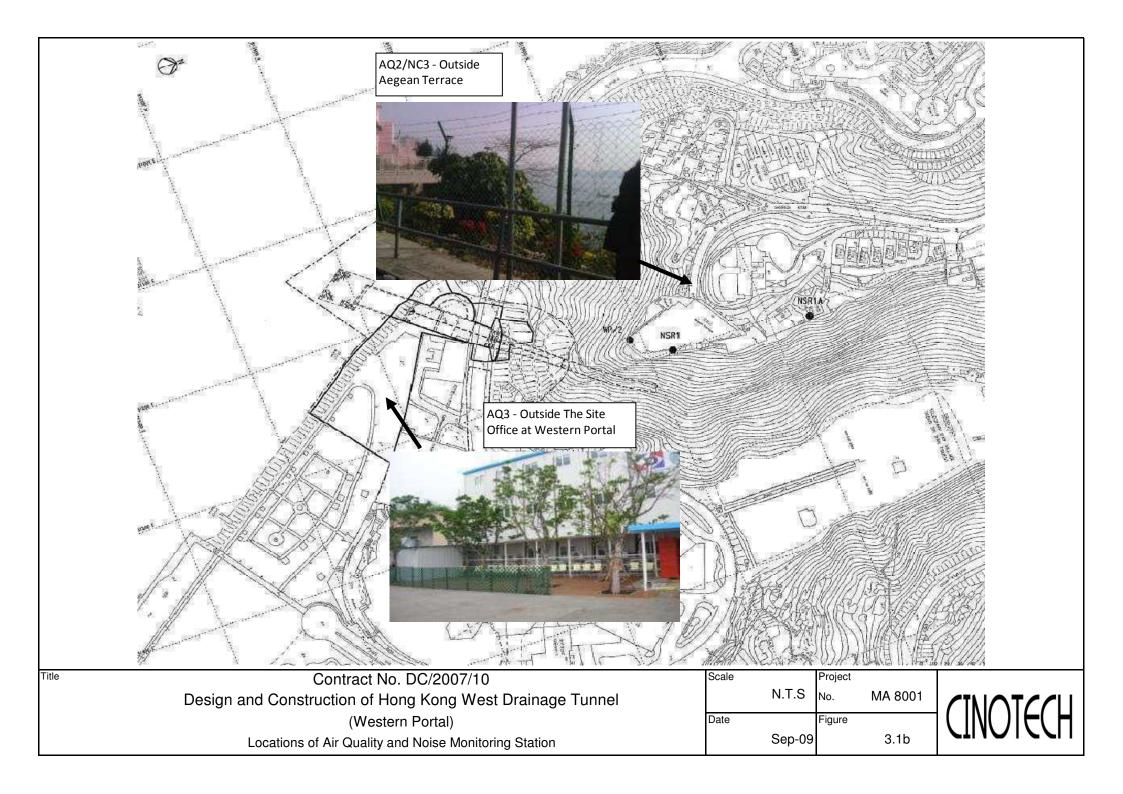

- To check for any accumulation of waste materials or rubbish on site.
- To ensure the performance of sorting of C&D materials at source (during generation);
- To carry out inspection of dump truck at site exit to ensure inert and non-inert C&D materials are properly segregated before removing off site.
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the site
- To avoid improper handling or storage of oil drum on site.

### **Certificate of Calibration**

#### Item for calibration:

Description

: RS232 Integral Vane Digital Anemometer

Manufacturer

: AZ Instrument

Model No.

: AZ8904 : 974835

Serial No. Equipment No.

: A-03-03

### Test conditions:

Room Temperature

: 23 degree Celsius

Relative Humidity

: 67%

Pressure

: 101.2 kPa

### Methodology:

The anemometer has been calibrated in accordance with the documented procedures and using standard(s) and instrument(s) which are recommended by the manufacturer, or equivalent.

#### Results:

	Reference Set Point	Instrument Readings
Measuring Air Velocity, m/s	2.00	2.00
Temperature, °C	21.0	21.0

PREPARED AND CHECKED BY:

For and On Behalf of WELLAB Ltd.

## **Noise Monitoring Station**

Intake DG 1 - Blk D Villa Monte Rosa (NC5) and Rosaryhill School (NC6)

Intake E5A - Buddist Li Ka Shing Care & Attention Home for the Elderly (NC7)

Intake E7 - Marymount Secondary School (NC8) and 117 Blue Pool Road (NC9)

Intake PFLR1 - Honey Court (NC11)

Intake RR1 - Ying Wa Girl's School (NC12) and Peaksville Court (NC13)

Intake W0 - 12 Tung Shan Terrace (NC15a)

Intake W5 - Raimondi College (NC16)

Intake W8 - Hong Kong Institute of Technology (NC17) and Blk A, 80 Robinson Road (NC18)

Intake P5 - Villa Veneto (NC19)

APPENDIX J ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

Appendix J - Summary of Environmental Mitigation Implementation Schedule

Types of Impacts	Mitigation Measures	Status
Construction Dust	Dust Mitigation Measures	
	<ul> <li>The Contractor shall undertake at all times to prevent dust nuisance as a result of his activities. Effective dust suppression measures should be installed to minimize air quality impacts, at the boundary of the site and at any sensitive receivers.</li> <li>No blocking shall be corried out when the strong wind sized or tropical evaluate warning sized No. 3 or bishor is heisted.</li> </ul>	^
	<ul> <li>No blasting shall be carried out when the strong wind signal or tropical cyclone warning signal No. 3 or higher is hoisted (unless prior permission of the Commissioner of Mines is obtained).</li> <li>Effective water sprays shall be used during the delivery and handling of all raw sand, aggregate and other similar materials,</li> </ul>	
	when dust is likely to be created, to dampen all stored materials during dry and windy weather. Watering of exposed surfaces shall be conducted as often as possible depending on the circumstances.	^
	<ul> <li>A watering programme of once every 2 hours in normal weather conditions, and hourly in dry/windy conditions.</li> <li>Any stockpile of dusty material cannot be immediately transported out of the Site shall be either: a) covered entirely by</li> </ul>	*
	impervious sheeting; b) placed in an area sheltered on the top and the three sides; or c) sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.	*
	• Should a conveyor system be used, the Contractor shall implement the following precautionary measures. Conveyor belts shall be fitted within windboards. Conveyor transfer points and hopper discharge areas shall be enclosed to minimize dust emission. All conveyors under control of the Contractor, and carrying materials which have the potential to create dust, shall be totally enclosed and fitted with belt cleaners.	۸
	• Any dusty materials being discharged to vehicle from a conveying system at fixed transfer point, three-sided roofed enclosed with a flexible curtain across the entry shall be provided. Exhaust fans shall be provided for this enclosure and vented via a suitable fabric filter system.	۸
	<ul> <li>The heights from excavated spoils are dropped should be minimise to reduce the fugitive dust arising from unloading/loading.</li> <li>The Contractor shall confine haulage and delivery vehicles to designated roadways inside the site. If in the opinion of the</li> </ul>	^
	Engineer, any motorising vehicle is causing dust nuisance, the Engineer may require that the vehicle be restricted to a maximum speed of 15km per hour while within the site area.	^
	• Areas within the site where there is a regular movement of vehicles shall have an approved hard surface, be kept clear of loose surface materials and / or be regularly watered.	^
	• Wheel cleaning facilities shall be installed for both portals and used by all vehicles leaving the site. No earth, mud, debris, dust and the like shall be deposited on public roads. Water in the wheel cleaning facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit details of proposals for the wheel cleaning facilities to the Engineer prior to construction of the facility. Such wheel cleaning facilities shall be usable prior to any earthwork excavation activity on site. The Contractor shall provide a hard-surfaced road between any cleaning facility and the public road.	۸
	<ul> <li>Chemical wetting agents shall only be used on completed cuts and fills to reduce wind erosion.</li> </ul>	N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage;

\* Non-compliance but rectified by the contractor;

Recommendation was made during site audit but improved/rectified by the contractor;

<sup>#</sup> Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	<ul> <li>No vehicle exhausts shall be directed towards the ground or downwards to minimize dust nuisance.</li> </ul>	٨
	<ul> <li>Ventilation system, equipped with proprietary filters, should be provided to ensure the safe working environment inside the tunnel. Particular attention should be paid to the location and direction of the ventilation exhausts. The exhausts should not be allowed to face any sensitive receivers directly. Consideration should also be given to the location of windows, doors and direction of prevailing winds in relation to the nearby sensitive receivers.</li> </ul>	۸
	• In the event of any spoil or debris from construction works being deposited on adjacent land, or stream, or any silt being washed down to any area, then all such spoil, debris or material and silt shall be immediately removed and the affected land and areas restored to their natural state by the Contractor to the satisfaction of the Engineers.	۸
	In addition, based on the <i>Air Pollution Control (Construction Dust) Regulation</i> , any works involved regulatory and notifiable works, such as stockpiling, loading and unloading of dusty materials, shall take precautions to suppress dust nuisance.	
	• The working area of any excavation or earthmoving operation shall spray with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;	۸
	• Exposed earth shall be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies; and	۸
	• Any stockpile of dusty materials (greater than 20m³) shall be either covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides; and sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.	۸
	• Other suitable dust control measures as stipulated in Air Pollution Control (Construction Dust). Regulation, where appropriate, should be adopted.	^

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

Recommendation was made during site audit but improved/rectified by the contractor;

Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
•	can also be reduced by construction of temporary noise barriers which screen the lower floors from viewing the sites. Temporary noise barriers should be installed at active parts of construction areas where construction equipment is being operated in close proximity to NSRs.	
	• It is noted that under the WBTC No. 19/2001, all construction sites are required to use metallic site hoarding can be slightly modified (with the addition of steel backings) into temporary noise barriers. These barriers should be gap free and have a surface mass density of at least 7kg/m <sup>2</sup> .	٨
	<ul> <li>All hand-held percussive breakers and air compressors should comply the Noise Control (Hand-held Percussive Breakers) Regulations respectively under the NCO (Ordinance No. 75/88, NCO Amendment 1992 No.6).</li> </ul>	^
	The Contractor shall devise, arrange methods of working and carry out the works in such manner as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these measures are implemented properly.	^
	Level 2 Use of Barriers	
	Level 2 mitigation measures include providing movable barriers for sites which have sufficient space for installation, full enclosures during the drilling activities at Eastern Portal and at muck pit areas for Eastern portals and cantilever-typed high rise noise barrier for intake W5 (P) and W8.	^
	Before construction of the full enclosure at muck pit area, the use of full enclosure noise barrier (Stage A) for the drilling activities at the Eastern Portal area is required. A full enclosure for the muck pit area will then be constructed at this later stage (Stage B). The full enclosure shall be gap free apart from necessary entrance/exits, which shall face towards the entrance of eastern portal to minimize the amount of noise generated from affecting the nearest RNSRs especially school (True Light Middle School of Hong Kong).	^
	5m high cantilever-typed hoarding barrier to be built at W5 (P) and W8. These enclosures/barriers should have no gaps and have a superficial surface density of at least $10 \text{kg/m}^2$ . Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period. To schedule the noise barrier erection and dismantling to the non sensitive periods of school to avoid adverse impact to W8/3.	^
	Movable barriers of 3 to 5m height with a small cantilevered upper portion and skid footing to be located within about 5 m or more for mobile equipment such that the line of sight is blocked. To provide purposes-built noise barriers or screens constructed of appropriate materials (minimum superficial density of $10 \text{kg/m}^2$ ) located close to the operating PME.	۸
	Pre-drilling following by chemical splitting instead of using large excavator mounted breaker should be used as mitigation measure for rock breaking and rock drilling.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	No construction activity is recommended during the examination period.	^
	Ground borne noise	
	The noise level should be measured on the ground floor inside the nearest building during the TBM construction work in the daytime. If the daytime monitored ground borne noise exceeds the relevant evening/night ground borne noise criteria, evening/night construction work would not be carried out for the concerned tunnel section. Evening/night time construction work is subject to CNP application under the control of NCO.	۸
	Public relationship strategy with 24-hour hotline system.	

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
Water Quality	Precautionary measures for construction work near natural streams  The government provides guidelines (ETWB TCW NO. 5/2005 and DSD TC 2/2004) are providing guidelines to minimize impacts when there is construction work carried out at near natural streams course. Relevant mitigation measures for the intakes are summarised as follows:  • Temporary site access to the work sites should be carefully planned and located to minimize disturbance caused to the substrates of streams/rivers and riparian vegetation by construction plant.  • Locations well away from the rivers/streams for temporary storage of materials (e.g equipment, filling materials, chemicals and fuel) and temporary stockpile of construction debris and spoil should be identified before commencement of works.  • Proposed works site areas inside, or in the proximity of, natural rivers and streams should be temporarily isolated to prevent adverse impacts on the stream water qualities.  • Stockpiling of construction materials, if necessary, should be completely properly covered and located away from any natural stream/river.  • Construction debris and spoil should be covered up and/or properly disposed of as soon as possible to avoid being washed into nearby rivers/streams by rain and local runoff.  Construction of temporary berthing point at the Western Portal  A refuse collection vessel shall be provided to collect refuse or materials lost into the sea.  The respective areas of the marine works will be completely enclosed by the silt curtain. The curtain shall be extended from water surface down to the seabed where it is anchored using sinker blocks. The Contractor shall inspect the silt curtain on regular basis to ensure its integrity and it is serviceable for all times.	^ ^ * N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	Transfer of armour rock onto the seabed from barge at the temporary pier location should be conducted by careful grabbing and unloading to the seabed (to minimize sediment migration).	^
	The conveyor belt should be completely covered and muddy effluent from the temporary barge should be contained, treated and disposed. Where there is transfer of excavated wastes, the Contractor should provide appropriate measures to ensure that the waste is free from floatables, putrescibes, organic wastes and toxic materials and when required a refuse collection vessel be provided to collect float refuse.	٨
	Construction of stilling basin at Western Portal outfall	
	All construction for the basin should be carried out inside the temporary cofferdam which is a temporary watertight enclosure built in the water and pumped dry to expose the bottom so that construction of stilling basin can be undertaken.	۸
	During the dewatering process, appropriate desilting/sedimentation devices should be provided on site for treatment before discharge. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.	۸
	The cofferdam will remain on site until after the construction of stilling basin has been completed. The coffer dam shall be regularly inspected and maintained to ensure no spillage of waste or wastewater into the sea. Conveyance of dredged materials from the coffer dam shall be carried out cautiously to avoid spillage into the sea.	۸
	The filled material for the stilling basin should be contained inside the temporary cofferdam. The top level of the cofferdam shall be constructed higher than the final backfilled level.	۸
	The Contractor shall be responsible for the design, installation and maintenance of the silt curtains to minimize the impacts on the water quality and the protection of water quality. The design and specification of the silt curtains shall be submitted by the Contractor to the Engineer for approval.	N/A
	Silt curtains shall be formed from tough, abrasion resistant, permeable membranes, suitable for the purpose, supported on floating booms in such a way as to ensure that the sediment plume shall be restricted to within the limit of the works area. The silt curtain shall be formed and installed in such a way that tidal rise and fall are accommodated, with the silt curtains always extending from the surface to the bottom of the water column and held with anchor blocks. The removal and reinstallation of such curtains during typhoon conditions shall be as agreed with the Director of Marine Department. The contractor shall regularly inspect the silt curtains and check that they are moored and marked to avoid danger to marine traffic. Any damage to the silt curtain shall be repaired by the Contractor promptly and the works shall be stopped until the repair is fixed to the satisfaction of the Engineer.	N/A

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
•	Transfer of rock fill material (armour rock) from the barge onto the site location should be conducted by grabbing and placement on the seabed to minimize sediment migration. No free dropping of the material will be allowed.	٨
	Prior to the construction of armor rock based panel, a silt curtain shall also be installed prior to carry out any marine works as a preventive mitigation measure.	N/A
	Construction of TBM tunnel at both portals and intakes	
	Recycled water will be used at the cutter face for cooling purposes. Used water will be collected and discharged to a settling tank for settlement. Excess water from the settling tank will be transferred to the water treatment plant on site where the addition of floculants will assist in settlement of solids. The Contractor should ensure discharge water from the sedimentation tank meet the WPCO/TM requirements before discharge.	۸
	During the drilling process, all flushing water will be recycled for use. Discharge of the treated water to nearby drainage system shall be allowed provided that it has been treated to a level meeting with statutory requirements.	^
	Water flow at streams should be maintained by a temporary diversion system during the construction phase of intakes and manhole drop shafts.	^
	General Construction Activities and Workforce	
	A. Surface runoff	
	Effluent produced from construction activities are subjected to WPCO control. Effluent produced from sites should be diverted away from stream courses. Construction works near stream course should be scheduled in the dry season as far as practical to avoid excessive site runoff discharge.	*
	Under the <i>Water Pollution Control Ordinance</i> (WPCO), turbid water from construction sites must be treated to minimize the solids content before being discharged into storm drains. The suspended solids load can be reduced by directing the runoff into temporary sand traps or other silt-removal facilities, and other good and appropriate site management practices. Advice on the handling and disposal of construction site discharge is provided in the ProPECC Paper (PN 1/94) on Construction Site Drainage.	*
	A drainage system layout should be prepared by the Contractor for each of the works areas (portals and intakes), detailing the facilities and measures to manage pollution arising from surface runoff from those works areas. The drainage layout and an associated drainage management plan to reduce surface runoff sediments and pollutants entering watercourses, should be submitted to the Engineer for approval and to EPD for agreement.	*

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	The system should be capable of handling stormwater from the site and directing it to sediment removal facilities before discharge. If oil and grease is used on the site or brought to the site, the stormwater should pass through oil interceptors before discharge. The interceptors should have a bypass to prevent washout in heavy storms.	۸
	A temporary channel system or earth bunds or sand barriers should be provided in works areas on site to direct stormwater to silt-removal facilities. Stockpiled materials, if susceptible to erosion of rain or wind, should be covered with tarpaulins (or/similar fabric0 or hydroseedings as far as practicable especially during the wet season.	*
	Silt removal facilities should be checked and the deposited silt and grit should be removed regularly to ensure these facilities are in good working condition and to prevent blockages.	*
	Vehicle washing areas should be drained into a settlement into a settlement basin to settle out the suspended solid before discharge to storm water drains. The water should be recycled on site whenever possible. It is suggested that the wash water from the wheel wash basin is either reused for road watering or pumped to the on-site settling tanks for treatment. Water used for dust depression purposes should be minimized and an alternative soil holding agent should be considered.	۸
	B. Spillage, Oil and Solvents Any contractor generating waste oil or other chemicals as a result of his activities should register as a chemical waste producer and provide a safe storage area for chemicals on site. Oil interceptors need to be regularly inspected and cleaned to avoid wash-out of oil during storm conditions. A bypass should be provided to avoid overload of the interceptor's capacity.	٨
	Any spillage should be cleaned up immediately and the resulting contaminated absorbent material should be properly managed according to Waste Disposal Regulations. Spills should be contained to avoid spreading and contaminating the water resources.	۸
	Oil and fuels should be used and stored properly in designated area. All fuel tanks and storage areas should be provided with locks and be sited on within sealed areas within surrounded by bunds of with a capacity equal to 110% of the storage capacity of the largest tank.	*
	Good housekeeping practices are required to minimize careless spillage and keep the work space in a tidy and clean condition. Appropriate training, including safety codes and relevant manuals, should be given to the personnel who regularly handle the chemicals on site.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	C. On-Site Effluent Generation  Sewage arising from the additional population of workers on site should be collected in a suitable storage facility (chemical mobile toilets). Most of the work site locations are close to the public sewerage system, and therefore the use of septic tanks is are, therefore, not encouraged. Portable toilets should be used coupled with tickering away services provided by a licensed collector. They should be positioned at appropriate locations across the site to ensure no direct discharge of foul water off-site.	٨
	D. Protection of Existing Flora and Fauna	
	The Contractor should provide details of the plant and operation plans at each site for approval by the Engineer before commencing construction. The plans should include how the existing flora and fauna will be protected. Locations required for groundwater levels monitoring are Eastern Portal, PFLR1(P), THR2(P), TP5, TP789 and W12.	^
	The construction and demolition of the temporary pier may create short term impacts on the local marine water quality. The situation will be restored once the work is finished by proper phasing of the works programme and implementation of the adequate mitigation measures (e.g. silt curtain) the impacts will be minimized.	^
	Maintaining Baseflow in Downstream Watercourses	
	The final design will be developed during the detailed design stage. The exact base flow rates to be maintained at each of the intakes will be subject to detailed site investigation at design stage.	
	<ul> <li>Purpose of the by-pass device is to maintain the base-flow of the affected stream course.</li> <li>The by-pass system comprises an approach link and a trapezoidal channel.</li> <li>The approach link is section with inclined profiled surface at a gradient of 1 in 100. It is used to direct the base flow to the bypass trapezoidal channel at its down stream end during the normal days.</li> <li>The trapezoidal channel is sized such that it could handle the base flow in the affected stream course which is estimated to be no more than 20 l/s.</li> <li>Whenever the flow in the stream course exceeding the base flow rate, the excessive flow will overflow into the intake structure via the bottom rack structure. The bottom rack structure has bar screen on the top and inclined channel at the bottom. The top level of the bar screen is level with the by-pass channel with an aim to receive the overflow from the by-pass channel.</li> <li>The by-pass channel is designed requiring minimum maintenance. However, it is recommended that the maintenance authority carry out regular maintenance inspection prior to onset of seasons and after significant rainstorm event to prevent blockage of the by-pass and bottom rack structure.</li> </ul>	N/A N/A N/A N/A N/A

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	<u>General</u>	
	A proper waste management plan should be implemented to promote waste minimisation at source. Where waste generation is unavoidable then the potential for recycling or reuse should be explored and opportunities taken. If wastes cannot be recycled then the recommended disposal routes should be followed.	^
	All waste materials shall be segregated into categories covering:	
	Excavated material or construction waste suitable for reuse on-site	٨
	Excavated material or construction waste suitable for public filling areas	٨
	Remaining C&D waste for landfill	^
	Chemical waste, and	^
	General refuse	^
Waste/Chemical	Proper segregation and disposal of construction waste should be implemented. Separate containers for inert and non-inert waste should be provided. The inert waste should be taken to public filling area and the non-inert waste should be transported to strategic landfills.	^
	A trip-ticket system on the solid waste transfer/disposal operations should be included as one of the contractual requirements (ETWB TCW No. 31/2004). The Independent Environmental Checker (IEC) should responsible for auditing this system.	^
	IEC should also responsible for auditing the well-documented record system which includes: (i) quantity of waste generation, (ii) quantity of recycled material, (iii) quantity of disposed material, (iv) disposal methods and (v) sites should be implemented during construction phase.	۸
	Regular cleaning and maintenance of the waste storage area should be conducted throughout the construction stage.	^
	Excavated spoil	
	Control measures for soil temporarily stockpiled on-site should be taken in order to minimize the noise, generation of dust, pollution of water and visual impact. Key impacts include:	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	Surface of stockpiled soil should be wetted with water when necessary especially during dry season     Disturbance of stockpiled soil should be winimized.	٨
	<ul> <li>Disturbance of stockpiled soil should be minimized</li> <li>Stockpiled soil should be properly covered with tarpaulins especially heavy rain storms</li> </ul>	^
	<ul> <li>Stockpiled soil should be properly covered with tarpatims especially heavy rain storms</li> <li>Stockpiling areas should be enclosed if possible</li> </ul>	^
	<ul> <li>Stockpiling location should be away from the shoreline</li> </ul>	٨
	An independent surface water drainage system equipped with silt traps should be installed at the stockpiling area	^
	<u>Chemical wastes</u>	
	For those processes that generate chemical waste, it may be possible to find alternatives which generate reduced quantities or even no chemical waste, or less dangerous types of chemical waste.	۸
	Construction processes produce chemical waste, the contractor must register with EPD as a Chemical Waste Producer. Wastes classified as chemical wastes are listed in the Waste Disposal (Chemical Waste) (General) Regulation (CWR). It should be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Waste published by the EPD. A producer of chemical wastes should be registered as chemical waste producer and registered with EPD.	^
	The chemical waste generated shall be properly labelled, stored and disposed of according to the CWR. Proper storage area shall be allocated on site for storage of chemical waste. The chemical waste should only be collected by a licensed collector. An updated list of licensed chemical waste collector can be obtained from EPD.	۸
	In case of spillage, spill absorbent material and emulsifiers should be available on site. This material should be replaced on a regular basis and the contaminated material stored in a designated, secure place.	*
	General refuse A reputable waste collector should be employed by the contractor to remove general refuse from the site, separate from C&DM and chemical wastes, and on regular basis in order to minimize odour, pest and litter impacts. The burning of refuse at site is not permitted under the Air Pollution Control Ordinance (Cap 311).	۸
	Office waste can be reduced through recycling of paper if volumes are large enough to warrant collection.	٨
	Good management practices should be implemented to ensure that refuse is properly stored and is transported for disposal of at licensed landfills.	^

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

\* Recommendation was made during site audit but improved/rectified by the contractor;

<sup>#</sup> Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status
	<ul> <li>During the detailed design stage, the following issues should also be considered as possible to further minimise the impacts:</li> <li>Adjustment of site boundary to minimise temporary loss of natural stream habitat during construction.</li> <li>Adjustment of site boundary to minimise use of mixed woodland as temporary works area. In particular, the woodland habitat in temporary works area of the Eastern Portal will be avoided, thereby greatly reducing the area of temporary loss of woodland habitat.</li> <li>Minimizing felling of large trees.</li> <li>About 20% of trees within the works area will be transplanted. The individual of Artocarpus hypargyreus recorded within the temporary works area of HKU1, if to be encroached, would also be transplanted.</li> </ul>	^ ^
	Standard site practices including the following, should be enforced to minimise the disturbance to the surroundings:	
Terrestrial Ecology	<ul> <li>Treat any damage that may occur to large individual trees in the adjacent area using materials and methods appropriate for tree surgery.</li> <li>Reinstate work sites/disturbed areas immediately after completion of the construction works, in particular, through on-site tree/shrub planting along the woodland and shrubland section within the temporary works area. Tree/shrub species used should make reference from those in the surrounding area.</li> <li>Regularly check the work site boundaries to ensure that they are not exceeded and that no damage occurs to surrounding areas.</li> <li>A total of 1.02 ha would be replanted with woodland species, reaching almost a 1.5:1 ratio for compensatory planting. Tree/shrub species used should be based on those in the surrounding areas, including those which are commonly recorded during the baseline surveys.</li> <li>A low-flow channel would be provided within the channelised section to maintain a deeper water depth in the expanded channel, in</li> </ul>	^ ^
	particular during dry season as well as a basin at the end of the channelised section to provide living space for aquatic life. Step chute in the form of a series of descending water pools would be constructed between the low flow channel and the undisturbed stream course. There would also be openings for aquatic fauna between each chute step (pool). These could work like a "ladder" to help avoid isolating the aquatic fauna in the channelised section from natural habitats.	^
	Measures are also needed to maintain the flow of all affected streams/nullahs during the construction stages. Temporary bypass should be provided if the stream/nullah flows will be cut off by the construction works. After the construction works are finished, sections of temporary loss should be reinstated. Construction materials, wastes, and equipment should be cleared from the sites.	۸

Remarks: ^ Compliance of mitigation measure; X Non-compliance of mitigation measure;

N/A Not Applicable at this stage; • Non-compliance but rectified by the contractor;

\* Recommendation was made during site audit but improved/rectified by the contractor;

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

Types of Impacts	Mitigation Measures	Status		
	Surveys of amphibians at E4(P), PFLR1(P), W12(P), MB16, E5(B)(P), TP789(P) and P5(P) prior to commencement of construction is recommended. Frogs, including Hong Kong Cascade Frog and Lesser Spiny Frog, and tadpoles found at work areas of these proposed intake points will be collected and translocated to nearby streams that will not be affected by the project. These procedures should be performed by experienced herpetologists. A detailed translocation proposal will be submitted during the detailed design stage.	۸		
	Measures should also be taken to avoid runoff to streams and marine habitats. Stream/channel which could potentially be affected during construction should be prevented from sedimentation by erection of sediment barriers. Site runoff should be desilted by siltation traps in streams/channels or diverted, to reduce the potential for suspended sediments, organics and other contaminants to enter the local stream environment.			
Marine Ecology	Silt curtains will be deployed during the construction and demolition of the temporary berthing point. Deployment of silt curtains around the berthing point area would effectively avoid adverse water quality impacts due to barge filling. No significant ecological impact is anticipated.	N/A		
	The invert of the stilling basin would be at -5.4 mPD. A cofferdam in the form of pipe-pile wall is to be constructed outside the stilling basin prior to the construction of basin. The cofferdam will be dewatered to provide a working area for construction of the stilling basin. The boulders from the seawall will then be removed by landbased grabs.	۸		
	Although the speed of the working vessels to be used in the Project (mainly barges) would not be high, a speed limit for marine traffic is proposed as a precautionary measure. A speed limit of 10 knots should be strictly enforced in the works area, in particular in the waters between the outfall location and the navigation channel in East Lamma Channel.	٨

\* Non-compliance but rectified/improved by the contractor and awaiting IEC's further comment.

	Status
The proposed landscape and visual mitigation measures during the construction phase include:  CM1 - Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical.  CM2 - Existing trees to be retained on site should be carefully protected during construction. The detailed proposal for any trees felling and transplantation is subject to Lands Department's approval on tree felling application at the detailed design stage.  CM3 - Trees unavoidably affected by the works should be transplanted where practical.  CM4 - Compensatory tree planting should be provided to compensate for felled trees.  CM5 - The extent of disturbance on the existing stream course should be minimized. Any temporary works areas within the stream course shall be reinstated after construction.  CM7 - Control of night-time lighting  CM8 - Erection of decorative screen hoarding	^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^ ^

Types of Impacts	Mitigation Measures	Status
	The Cultural Heritage Impact Assessment has identified the following resources which will require mitigation measures during the construction stage;  Haw Par Mansion (including boundary wall and gate) A condition survey must be undertaken by a qualified professional prior to the commencement of construction works for the tunnel portal in order to assess the structural integrity of the mansion, wall and gate (with special attention paid to any fragile architectural features). A report containing description of the types of construction, identification of fragile elements, an appraisal of the condition and a photographic record must be prepared. The report must also provide an assessment indicating whether further precautionary	^
	measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, including monitoring for vibration control to ensure that no damage to the structure and fabric of the house, wall and gate results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place.	٨
Cultural Heritage	A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the boundary wall/gate and the temporary works area (during construction works associated for both the tunnel portal and the permanent vehicle access ramp). This is to enable access for routine maintenance works on the wall and to ensure that the wall is not damaged by machinery operation or related construction activities. The temporary works area will be enclosed by standard DSD site hoarding.	^
	Former Explosive Magazine of Victoria Barracks	
	A condition survey must be undertaken by a qualified professional prior to the commencement of construction works in order to assess the structural integrity of the retaining wall and the extent of damage from cracks and vegetation growth. A report containing a description of the wall's construction materials, identification of fragile and/or endangered elements, an appraisal of the condition and a photographic record of the retaining wall must be prepared. The report must also provide an assessment indicating whether further precautionary measures will be necessary during the construction phase, and if so provide details for sufficient protective measures, such as monitoring for vibration control, to ensure that no damage to the retaining wall results from the construction works. The report must be submitted to AMO for approval before construction activities commence. Upon approval the appropriate monitoring and precautionary measures shall be put into place.	^
	A buffer zone with a minimum width of 3 metres and an obstruction free access point must be maintained between the retaining wall and the temporary works area (for the duration of the construction phase). The works area will be enclosed by standard DSD site hoarding.	٨

Report the results of investigation to the IEC, Supervising Officer's Representative and Contractor 4. Discuss with the Contractor and formulate remedial measures 5. increase monitoring frequency to check mitigation effectiveness	1.Review the analysed results submitted by the ET 2. Review the proposed remedial measures by the Contractor and advise the Supervising Officer's Representative & ET accordingly 3.Supervise the implementation of remedial measures	Confirm receipt of notification of complaint in writing     Notify Contractor     require Contractor to proposed remedial measures for analyzed noise problem     Ensure remedial measures are properly implemented	I. Identify practicable measures to minimize the noise impact. Submit noise mitigation proposals to ET, IEC and ET.     Implement noise mitigation proposals
Limit Level	<ol> <li>Notify IEC, Supervising Officer's Representative, EPD and Contractor</li> <li>Identify the source(s) of impact by reviewing all the relevant monitoring data and the corresponding construction activities.         Exceedances should also be confirmed by immediate verification in the field as far as practical.     </li> <li>Repeat measurement to confirm findings</li> <li>Increase monitoring frequency</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented.</li> <li>inform IEC, Supervising Officer's Representative and EPD the cause &amp; actions taken for the exceedances</li> <li>Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and Supervising Officer's Representative informed of the results</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	Discuss amongst Supervising Officer's Representative, ET, and Contractor on the potential remedial actions     Review Contractor's remedial actions to assure their effectiveness and advise the Supervising Officer's Representative &ET accordingly     Supervise the implementation of the remedial measures	1. Confirm receipt of notification of exceedance in writing 2. Notify Contractor 3. Require Contractor to propose remedial measures for the analyzed noise problem 4. Ensure remedial measures are properly implemented 5. If exceedance continuous, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is aborted	Take immediate action to avoid further exceedance     Identify practicable measures to minimize the noise impact. Submit proposals for remedial actions to Supervising Officer's Representative within three working days of notification     Implement the agreed proposals     Resubmit proposal if problem still not under control     Stop the relevant portion of works as determined by the Supervising Officer's Representative until the exceedance is abated

## Event/Action Plan for Water Quality

		AC	TION			
EVENT	ET	IEC	SUPERVISING OFFICER'S REPRESENTATIVE	CONTRACTOR		
ACTION LEVEL				<u> </u>		
Action level being exceeded by one sampling day	Repeat in situ measurement to confirm findings;     Identify source(s) of impact;     Inform IEC, contractor and Supervising Officer's Representative;     Check monitoring data, all plant, equipment and Contractor's working methods.     Discuss mitigation measures with IEC and Contractor     Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures.     Review proposals on mitigation measures submitted by Contractor and advise the Supervising Officer's Representative accordingly; and     Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; and     Make agreement on the mitigation measures to be implemented.	1. Inform the Supervising Officer's Representative and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and Supervising Officer's Representative; 6. Implement the agreed mitigation measures.		
Action level being exceeded by more than one consecutive sampling days	1. Repeat in-situ measurement to confirm findings;  2. Identify source(s) of impact;  3. Inform IEC, contractor;  4. Check monitoring data, all plant, equipment and Contractor's working methods;  5. Discuss mitigation measures with IEC, Supervising Officer's Representative and Contractor;  6. Ensure mitigation measures are implemented;  7. Prepare to increase the monitoring frequency to daily;  8. Repeat measurement on next day of exceedance.	Discuss with ET and Contractor on the mitigation measures.     Review proposals on mitigation measures submitted by Contractor and advise the Supervising Officer's Representative accordingly; and     Assess the effectiveness of the implemented mitigation measures.	Discuss with IEC on the proposed mitigation measures; and     Make agreement on the mitigation measures to be implemented.     Assess the effectiveness of the implemented mitigation measures.	Inform the Supervising Officer and confirm notification of the non-compliance in writing;     Rectify unacceptable practice;     Check all plant and equipment and     Consider changes of working methods;     Discuss with ET and IEC and propose mitigation measures to IEC and Supervising Officer's Representative within 3 working days;     Implement the agreed mitigation measures.		
LIMIT LEVEL						
Limit level being exceeded by one sampling day	1. Repeat measurement on next of exceedance to confirm findings;     2. Identify source(s) of impact;     3. Inform IEC, contractor, Supervising Officer's Representative and EPD;     4. Check monitoring data, all plant, equipment and Contractor's working methods;     5. Com-2008-05-003	Construction site at Eastern Portal	22 May 2008	The complaint was lodged by a complainant on 22 May 2008 regarding noise nuisance generated from the construction activities at the construction site of Eastern Portal	According to the Contractor, only one excavator and one generator were operated for the excavation works around 8 am on 22 May 2008 at the Eastern portal. No other construction activities were conducted.  In response to the complaint, The Contractor agreed to reschedule their current works activities, with immediate effect from 23 May 2008, that only site preparation works without noise nuisance to the nearby residents will be carried out from 7:00 am to 8:00 am at the Eastern Portal area.  Base on the information collected and the monitoring results, the complaint was considered not justifiable since (1) no exceedance of the noise monitoring results was recorded in May and (2) no noncompliance or observation on noise was recorded. 			writing regarding the sands and mud left by the dump trucks on Cyberport road	26 July 2010 stating the following:- The stain is not mud or debris. It is liquid of granite powder. Stain on the road was caused by heavy rainstorm which brings moisture to granite powder in trucks.	
				The trucks have been equipped with tailor-made tanks to receive the liquid of granite powder. To prevent reoccurrence, DNJV will reinforce checking of these tanks and other truck conditions at work site to ensure no dripping before departure.	
				In this regard, the Contractor was reminded that all vehicles and plant should be cleaned before leaving the construction site to ensure no earth, mud and debris or other wastes is deposited on roads. Proper maintenance of the tailor-made tanks equipped at the trucks is also needed to avoid any leakage.

Dec-13	50	0	0	0	50	0	0	0	0	0	10
Total (6) (7)	244	14	0	0	230	0	89080	4380	0	1200	229

Notes:

- (1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
- (2) Plastics refer to plastic bottles/containers, plastic/foam from packaging material.
- (3) Quantities in Feb 01, 2013 are upto Feb 28, 2013
- (4) Assuming the conversion factor from m<sup>3</sup> to ton for rock is 2.5.
- (5) The materials reused in other Project shall not be treated as waste under the Waste Disposal Ordinance (Cap 354).
- (6) The figures are included for the sake of completeness of record.
- (7) The figures in blue font are the prediction quantities, which are not included in the "Total" quantities.
- (8) Unless states otherwises, the broken concrete is disposed as public fill in PFRFs.
