Attention: Mr. C K Au

Dear Sir

Contract No. DC/2009/13 Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwu Wan Sok Kwu Wan Portion Area <u>Monthly Environmental Monitoring & Audit (EM&A) Monitoring Report No.1</u>

We refer to the revised Monthly EM&A Monitoring Report No. 1 for August 2010 received under cover of the email from the Environmental Team, Action-United Environmental Services and Consulting (AUES), dated on 13 Sept 2010. We confirm that we have no further comment on report, and confirm that we have verified its content.

Yours faithfully SCOTT WILSON LTD

Rodney ip

## **EXECUTIVE SUMMARY**

- ES.01. The Leader Civil Engineering Corporation Limited (Leader) has been awarded the *Contract DC/2009/13 Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwn Wan* (the Project) by the Drainage Services Department (DSD) on 4 May 2010.
- ES.02. This Project is part of an overall plan approved under a statutory EIA for Outlying Islands Sewerage Stage 1 Phase 2 Package J Sok Kwu Wan Sewage Collection and Treatment (Register No. AEIAR-075/2003) and Disposal Facilities and Outlying Islands Sewerage Stage 1 Phase 1 Package C Yung Shue Wan Sewage Treatment Works and Outfall (Register No. EIA-124/BC). The Environmental Permit (No. EP-281/2007/A and EP-282/2007) for the Project have been obtained by the DSD on 29 June 2007 for the relevant works.
- ES.03. The Project involves construction of sewage treatment works at Sok Kwu Wan and Yung Shue Wan with a capacity of 1,430m<sup>3</sup>/day and 2,850m<sup>3</sup>/day respectively to provide secondary treatment, construction of 2 pumping stations at Sok Kwu Wan and 1 pumping station at Yung Shue Wan, construction of submarine outfall from the coastline and lying of underground sewerage pipes.
- ES.04. Action-United Environmental Services and Consulting (AUES) has been commissioned by Leader as the ET to implement the relevant EM&A program.
- ES.05. For ease of reporting, the EM&A report under the Project is spilt to following two stand-alone parts:
  - (a) Proposed EM&A Programme for Impact Monitoring Sok Kwu Wan (under EP No. 281/2007/A);
  - (b) Proposed EM&A Programme for Impact Monitoring Yung Shue Wan (under EP No. 282/2007)
- ES.06. As notified by Leader, the construction of relevant land works at Sok Kwu Wan was commenced on 27 July 2010. Therefore, the impact EM&A program has been started as compliance with the Particular Specification of the contract, Sok Kwu Wan Environmental Monitoring & Audit Manual (hereinafter 'the EM&A Manual'), and Environmental Permit EP-281/2007/A (hereinafter 'the EP').
- ES.07. The Baseline monitoring report for Sok Kwu Wan Volume 1, which determines the ambient environmental conditions i.e. air quality and construction noise, has been compiled by the ET. A set of Action and Limit Levels (A/L Levels) extracted from the current DSD contract *DC/2007/13 Yung Shue Wan and Sok Kwu Wan Village Sewerage Stage 1 Works*, was proposed to serve as the yardsticks for assessing the acceptability of the environmental impact during the construction phase impart monitoring.
- ES.08. The Baseline Report for Sok Kwu Wan -Volume 1 was submitted on 9 July 2010 which verified by IEC and for EPD endorsement before the relevant land works commencement on 27 July 2010. The A/L levels for air quality and construction noise are given in below:

Monitoring Stations	Action Le	vel (µg/m <sup>3</sup> )	Limit Level (µg/m <sup>3</sup> )	
Womtor ing Stations	1-Hour	24-Hour	1-Hour	24-Hour
AM1	343	173	500	260
AM2	331	175	500	260
AM3	353	191	500	260

## Action and Limit Levels for Air Quality Monitoring

## Action and Limit Levels for Construction Noise Monitoring

Monitoring Stations	Time Period		Action Level	Limit Level in dB(A)		
NM1, NM2 RNM3 NM4		hours	on	normal	When one documented complaint is received	75*

Note: \* Reduces to 70dB(A) for schools and 65dB(A) during the school examination periods.

ES.09. This is the 1<sup>st</sup> monthly EM&A Report for Sok Kwu Wan (hereinafter 'this Report') for the designated works under Environmental Permit No.EP-281/2007/A, covering a period from 27 July 2010 to 31 August 2010 (hereinafter 'the Reporting Period') during the construction of relevant land works commencement on 27 July 2010.

#### **ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES**

ES.10. Environmental monitoring activities under the EM&A program in this Reporting Month are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Air Quality	1-hour TSP	63
An Quanty	24-hour TSP	21
Construction Noise	Leq (30min) Daytime	20
Water Quality	Marine Water Sampling	0
Inspection / Audit	ET Regular Environmental Site Inspection	0

ES.11. According to the EM&A Manual of Sok Kwu Wan, water quality monitoring should be carried out during the marine work commencement. Since the marine work of outfall construction has not yet commenced, no impact water quality monitoring was undertaken in this reporting month.

#### **BREACH OF ACTION AND LIMIT (A/L) LEVELS**

ES.12. No exceedance of air quality and construction noise monitoring were recorded in this Reporting Month. No Notification of Exceedance (NOE) was, therefore, issued. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table.

Environmental	Monitoring	Action	Limit	Event & Action		
Issues Parameters		Level	Level	NOE Issued	Investigation	Corrective Actions
Air Quality	1-hour TSP	0	0	0		
	24-hour TSP	0	0	0		
Construction Noise	Leq <sub>30min</sub> Daytime	0	0	0		
	DO	NA	NA	NA	NA	NA
Water Quality	Turbidity	NA	NA	NA	NA	NA
	SS	NA	NA	NA	NA	NA

*Note: NOE – Notification of Exceedance* 

#### **ENVIRONMENTAL COMPLAINT**

ES.13. No written or verbal complaint was recorded in this Reporting Month. The statistics of environmental complaint are summarized in the following table.

Reporting Period	<b>Environmental Complaint Statistics</b>			
Reporting r er lou	Frequency	Cumulative	<b>Complaint Nature</b>	
27 July – 31 August 2010	0	0	NA	

## NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.14. No environmental summons or successful prosecutions were recorded in this Reporting Month. The statistics of environmental complaint are summarized in the following tables

Reporting Period	Environmental Summons Statistics				
Keporting I eriou	Frequency	Cumulative	<b>Complaint Nature</b>		
27 July – 31 August 2010	0	0	NA		

<b>Reporting Period</b>	<b>Environmental Prosecution Statistics</b>				
Reporting 1 eriou	Frequency	Cumulative	<b>Complaint Nature</b>		
27 July – 31 August 2010	0	0	NA		

#### **REPORTING CHANGE**

ES.15. This is the 1<sup>st</sup> report of the EM&A programme, there are no reporting changes in this reporting month

#### SITE INSPECTION BY EXTERNAL PARTIES

ES.16. No site inspection was undertaken by external parties i.e. EPD or AFCD within the Reporting Period. However, before construction of relevant land works commencement, a site visit was conducted by EPD together with IEC, ET, RE and Leader on 26 July 2010.

#### FUTURE KEY ISSUES

- ES.17. During the rain season between April and November, muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish culture zone at Picnic Bay and the Secondary recreation contact subzone at Mo Tat Wan should be the key issue in the forth-coming month. Mitigation measures for water quality should therefore be fully implemented.
- ES.18. On the other hand, construction dust should be other key environmental issue during dry and windy days. The implemented construction dust mitigation measures should therefore also be maintained and improved as necessary during dry and windy days.
- ES.19. Construction of outfall marine works cannot be carried out until the baseline water quality monitoring completion and the related Action and Limit (A/L) levels have established.

## 1 INTRODUCTION

## **PROJECT BACKGROUND**

- 1.01 The Leader Civil Engineering Corporation Limited (Leader) has been awarded the Contract DC/2009/13 Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwn Wan (the Project) by the Drainage Services Department (DSD) on 4 May 2010. The Project is part of an overall plan approved under a statutory EIA for Outlying Islands Sewerage Stage 1 Phase 2 Package J Sok Kwu Wan Sewage Collection and Treatment (Register No. AEIAR-075/2003) and Disposal Facilities and Outlying Islands Sewerage Stage 1 Phase 1 Package C Yung Shue Wan Sewage Treatment Works and Outfall (Register No. EIA-124/BC). The Environmental Permit No. EP-281/2007 and EP-282/2007 for the Project have been obtained by the DSD on 29 June 2007 for the relevant works. After July 2009, EP-281/2007/A stead EP-281/2007 is EP for Sok Kwu Wan relevant Works.
- 1.02 The Project involves construction of sewage treatment works at Sok Kwn Wan and Yung She Wan with a capacity of 1,430m<sup>3</sup>/day and 2,850m<sup>3</sup>/day respectively to provide secondary treatment, construction of 2 pumping stations at Sok Kwu Wan and 1 pumping station at Yung Shue Wan, construction of submarine outfall from the coastline and lying of underground sewerage pipeline. The site layout plan for the captioned work under the Project is showing in *Appendix A*
- 1.03 According to the Particular Specification (PS) and *Appendix 25* of the Project, Leader should establish an Environmental Team to implement the environmental monitoring and auditing works to fulfill the requirements as stipulated in the Environmental Monitoring and Audit (EM&A) Manuals.
- 1.04 Action-United Environmental Services and Consulting (AUES) has been commissioned by Leader as the ET to implement the relevant EM&A program. Organization chart of the Environmental Team for the Project is shown in *Appendix B*. For ease of reporting, the proposed EM&A programme for baseline and impact monitoring is spilt to following two stand-alone parts:
  - (a) Proposed EM&A Programme for Baseline and Impact Monitoring Sok Kwu Wan (under EP No. 281/2007/A varied on 23 September 2009)
  - (b) Proposed EM&A Programme for Baseline and Impact Monitoring Yung Shue Wan (under EP No. 282/2007)
- 1.05 According to the EM&A Manuals of Sok Kwu Wan and Yung Shue Wan, baseline water quality monitoring should be carried out for consecutive six months before the marine work commencement. Therefore, the baseline reports of Sok Kwu Wan and Yung Shue Wan are divided to two volumes i.e. the Volume 1 for air quality and noise monitoring; and the Volume II for water quality monitoring for separate submission.
- 1.06 There is a concurrent DSD contract "*DC*/2007/18 Yung Shue Wan and Sok Kwu Wan Village Sewerage, Stage 1 Works" undertaking at Sok Kwu Wan since April 2008 and the works are ongoing.
- 1.07 Consider that the construction works of DC/2007/18 and DC/2009/13 at Sok Kwu Wan is under the same Environmental Permit and EM&A Manual, so the performance criteria of air quality and construction noise at Sok Kwu Wan under the Project is recommended to adopt the Action/Limit Levels established by contract DC/2007/18. The Baseline Monitoring Report Volume 1 under the Project for air quality and noise at Sok Kwu Wan was submitted on 9 July 2010 and verified by IEC and for EPD endorsement before the relevant land works commencement on 27 July 2010.
- 1.08 This is the 1<sup>st</sup> monthly EM&A report Sok Kwu Wan Portion Area presenting the monitoring results and inspection findings for the reporting period from 27July 2010 to 31 August 2010.

## **REPORT STRUCTURE**

- 1.09 The Monthly Environmental Monitoring and Audit (EM&A) Report Sok Kwu Wan is structured into the following sections:-
  - SECTION 1 **INTRODUCTION SECTION 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS SECTION 3** SUMMARY OF MONITORING REQUIREMENTS **SECTION 4 AIR QUALITY MONITORING RESULTS SECTION 5 CONSTRUCTION NOISE MONITORING RESULTS SECTION 6** WATER QUALITY MONITORING RESULTS WASTE MANAGEMENT **SECTION 7 SECTION 8** SITE INSPECTIONS **SECTION 9 ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE** SECTION 10 **IMPLEMENTATION STATUES OF MITIGATION MEASURES SECTION 11** IMPACT FORECAST **SECTION 12 CONCLUSIONS AND RECOMMENDATION**

## 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

#### **PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE**

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

#### **CONSTRUCTION PROGRESS**

- 2.02 The master and three month rolling construction programs are enclosed in *Appendix C* and the major construction activities undertaken in this Reporting Month are listed below:-
  - Footpath Diversion adjacent to SKW Sewage Treatment Works
  - Construction for pumping station no.1 & 2

## SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Month is presented in *Table 2-1*.

Table 2-1Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air pollution Control (Construction Dust)	In progress
2	Chemical waste Producer Registration	In progress
3	Water Pollution Control Ordinance	In progress
4	Billing Account for Disposal of Construction Waste	In progress
5	Construction Noise permit	In progress

- 2.04 The "Baseline/Impact Monitoring Methodology (TCS00512/10/600/R0010Ver.4)" was set out in accordance with the Sok Kwu Wan Environmental Monitoring and Audit Manual. It was approved by the ER and agreed with the Independent Environmental Checker (IEC) and submitted to the EPD for endorsement.
- 2.05 Baseline Monitoring Report Volume 1 (TCS00512/10/600/R0020Ver.3) for Sok Kwu Wan for the Project was issued by the ETL and verified by the IEC on 12 July 2010. The report was also submitted to the EPD for endorsement.
- 2.06 Baseline Monitoring Report Volume 2 of water quality for Sok Kwu Wan for the Project will be submitted to IEC verification and EPD endorsement upon the six months baseline marine water monitoring completion.

## **3** SUMMARY OF BASELINE MONITORING REQUIREMENTS

## **ENVIRONMENTAL ASPECT**

- 3.01 The EM&A baseline monitoring program cover the following environmental issues:
  - Air quality;
  - Construction noise; and
  - Marine Water quality;
- 3.02 The ET implements the EM&A programme in accordance with the aforementioned requirements. Detailed air quality, construction noise and water quality of the EM&A program are presented in the following sub-sections.
- 3.03 A summary of the Air, Noise and Marine Water monitoring parameters is presented in *Table 3-1*:

# Table 3-1 Summary of the Air and Noise monitoring parameters of EM&A Requirements Requirements

Environmental Issue	Parameters
Air Quality	• 1-hour TSP Monitoring by Real-Time Portable Dust Meter; and
All Quality	• 24-hour TSP Monitoring by High Volume Air Sampler.
Noise	• Leq (30min) during normal working hours; and
Noise	• Leq (15min) during Restricted Hours.
	In-situ Measurements
	• Dissolved Oxygen Concentration (mg/L);
	• Dissolved Oxygen Saturation (%);
	• Turbidity (NTU);
Marine Water Quality	• pH unit;
Waller Quality	• Salinity (ppt);
	• Water depth (m); and
	• Temperature (°C).
	Laboratory Analysis
	Suspended Solids (mg/L)

## MONITORING LOCATIONS

## **Air Quality**

3.04 Three air monitoring stations: AM1, AM2 and AM3 were designated in the *EM&A Manual Section* 2.5. The detailed air monitoring stations is described in *Table 3-2* and graphical is shown in *Appendix D*.

Table 3-2Location of Air Quality Monitoring Station

Sensitive Receiver	Location
AM1	Squatter house in Chung Mei Village
AM2	Squatter house in Chung Mei Village
AM3	Football court

## **Construction Noise**

3.05 According to *EM&A Manual Section 3.4* stipulations, there were four noise sensitive receivers (NM1-NM4) designated for the construction noise monitoring. NM1, NM2 and NM4 of the three designated monitoring stations were identified and are monitored by the current DSD contract DC/2007/18. However, the premises monitoring station NM3 was rejected by the owner of 1B Sok Kwu Wan and an alternative noise monitoring station RNM3 replacement was proposed by the contract DC/2007/18 ET and accepted by the IEC and EPD before the baseline monitoring commencement in April 2008. The location RNM3 is located at Sok Kwu Wan Sitting-out area which just 3m width footpath away from the original location house 1B. The detailed construction noise monitoring stations to also under the Project is described in *Table 3-3* and graphical is shown in *Appendix D*.

Table 3-3	Location of Construction Noise Monitoring Station	
-----------	---	--

Sensitive Receiver	Location
NM1	1, Chung Mei Village
NM2	20, Sok Kwu Wan
RNM3	Sok Kwu Wan Sitting-out Area
NM4	2-storey village house at Ta Shui Wan

## **Water Quality**

3.06 Three control stations (C1-C3) and three impact stations (W1-W3) were recommended in the *EM&A Manual Section 4.5*. Impact stations W1-W3 identified at the sensitive receivers (FCZ and secondary contact recreation subzone) to monitor the impacts from the construction of the submarine outfall as well as the effluent discharge from the proposed STW on water quality. Three control stations: C1, C2 & C3 were specified at locations representative of the project site in its undisturbed condition and located at upstream and downstream of the works area. Detailed and co-ordnance of marine water quality monitoring stations is described in *Table 3-4* and the graphical is shown in *Appendix D* and would be performed for EM&A programme.

Station	Description	<b>Co-ordnance</b>		
	Description	Easting	Northing	
W1	Secondary recreation contact subzone at Mo Tat Wan	832 968	807 732	
W2	Fish culture zone at Picnic Bay	832 607	807 985	
W3	Fish culture zone at Picnic Bay	832 045	807 893	
C1 (flood)	Control Station	833 703	808 172	
C2	Control Station	831 467	807 747	
C3 (ebb)	Control Station	832 220	808 862	

Table 3-4Location of Marine Water Quality Monitoring Station

## MONITORING FREQUENCY AND PERIOD

3.07 The Impact monitoring carried out in the EM&A programme is basically in accordance with the requirements in *EM&A Manual Sections* 2.7, 3.6, 4.7 and 4.8. The monitoring requirements are listed as follows:

## Air Quality Monitoring

Parameters:	1-hour TSP and 24-hour TSP.
Frequency:	Once in every six days for 24-hour TSP and three times in every six days for 1-hour TSP.
Duration:	Throughout the construction period.

## Noise Monitoring

Parameters:	Leq (30min) & Leq (5min), L10 and L90.
	Leq (15min) & Leq (5min), L10 and L90 during the construction undertaken during Restricted Hours (19:00 to 07:00 hours next of normal working day and full day of public holiday and Sunday)
Frequency:	Once per week during 0700-1900 hours on normal weekdays. Restricted Hour monitoring should depend on conditions stipulated in Construction Noise Permit.
Duration:	Throughout the construction period.

## Marine Water Quality Monitoring

<u>Parameters</u>: Duplicate in-situ measurements: water depth, temperature, Dissolved Oxygen, pH, turbidity and salinity;

HOKLAS-accredited laboratory analysis: Suspended Solids

Frequency:	Three days a week, at mid ebb and mid flood tides. The interval between 2 sets of monitoring will be more than 36 hours.
<u>Sampling</u> Depth	(i.) Three depths: 1m below water surface, 1m above sea bottom and at mid-depth when the water depth exceeds 6m.
	(ii.) If the water depth is between 3m and 6m, two depths: 1m below water surface and 1m above sea bottom.
	(iii.) If the water depth is less than 3m, 1 sample at mid-depth is taken
Duration:	During the course of marine works

## **Post-Construction Monitoring – Marine Water**

3.08 Upon the marine works (dredging and HDD pipe installation) completion, 4 weeks of post-construction monitoring would be undertaken in accordance with the *Section 4.8 of EM&A Manual*. The requirements of post-construction monitoring such as the parameter, frequency, location and sampling depth is same as the impact monitoring.

## MONITORING EQUIPMENT

## Air Quality Monitoring

3.09 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B.* If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve. The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.

## Noise Monitoring

3.10 Sound level meter in compliance with the *International Electrotechnical Commission Publications* 651: 1979 (*Type 1*) and 804: 1985 (*Type 1*) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s-1.

## Water Quality Monitoring

- 3.11 **Dissolved Oxygen and Temperature Measuring Equipment** The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring as included a DO level in the range of 0 20mg L-1 and 0 200% saturation; and a temperature of 0 45 degree Celsius.
- 3.12 *pH Meter* The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in arrange of 0 to 14.
- 3.13 *Turbidity (NTU) Measuring Equipment* The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 1000 NTU.
- 3.14 *Water Sampling Equipment* A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.15 *Water Depth Detector* A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. This unit can either be hand held or affixed to the bottom of the work boat.
- 3.16 *Salinity Measuring Equipment* A portable salinometer capable of measuring salinity in the range of 0 40 parts per thousand (ppt) should be provided for measuring salinity of the water at each

monitoring location.

- 3.17 *Sample Containers and Storage* Water samples for SS should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.18 *Monitoring Position Equipment* A hand-held or boat-fixed type digital Differential Global Positioning System (DGPS) with way point bearing indication and Radio Technical Commission for maritime (RTCM) Type 16 error message 'screen pop-up' facilities (for real-time auto-display of error messages and DGPS corrections from the Hong Kong Hydrographic Office), or other equipment instrument of similar accuracy, should be provided and used during marine water monitoring to ensure the monitoring vessel is at the correct location before taking measurements.
- 3.19 **Suspended Solids Analysis** Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

## **EQUIPMENT CALIBRATION**

- 3.20 Calibration of the HVS is performed upon installation in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5025A). The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.21 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment was checked before and after each monitoring event. In-house calibration with the High Volume Sampler (HVS) in same condition was undertaken in yearly basis.
- 3.22 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.23 The Water Quality Monitoring equipments such as Dissolved Oxygen meter, pH Meter, Turbidity Measuring Instrument and Salinometer, are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.24 All updated calibration certificates of the monitoring equipment used for the impact monitoring program in the Reporting Month would be attached in *Appendix E*.

## METEOROLOGICAL INFORMATION

3.25 The meteorological information during the construction phase is obtained from the Wong Chuk Hang Station of the Hong Kong Observatory (HKO) due to it nearly the Project site.

## DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.26 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring program.
- 3.27 The monitoring data recorded in the equipment e.g. 1-hour TSP meter, noise meter and Multi-parameter Water Quality Monitoring System, are downloaded directly from the equipments at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

## DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.28 According to the Sok Kwu Wan Environmental Monitoring and Audit Manual, the air quality, construction noise were set up, namely Action and Limit levels are listed in *Tables 3-5* and *3-6* as below.

Table 3-5	Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action Le	evel (µg/m <sup>3</sup> )	Limit Level (µg/m <sup>3</sup> )	
Womtor ing Station	1-hour	24-hour	1-hour	24-hour
AM1	343	173	500	260
AM2	331	175	500	260
AM3	353	191	500	260

#### Table 3-6

#### Action and Limit Levels for Construction Noise

Monitoring	Action Level	Limit Level	
Location	0700-190	0 hours on normal weekdays	
NM1 NM2 RNM3 NM4	When one or more documented complaints are received	75 dB(A) of Leq(30min) during normal hours from 0700 to 1900 hours on normal weekdays, reduced to 70 dB(A) of Leq(30min) for schools and 65 dB(A) during school examination periods	

3.29 Due to water quality baseline monitoring still not yet completed, the Action/Limit Levels will be provided in due course.

3.30 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*.

## 4 IMPACT MONITORING RESULTS - AIR QUALITY

4.01 As informed by Leader, the construction of relevant land works at Sok Kwu Wan was commenced on 27 July 2010, therefore, the impact EM&A program was started as compliance with the contract Particular Specification, Sok Kwu Wan the EM&A Manual, and the EP. The air quality monitoring results extracted from Contract DC/2007/18 are presented in the following sub-sections.

## **Results of Air Quality Monitoring**

4.02 In this reporting period, 7 air quality monitoring days were performed at the designated locations AM1, AM2 and AM3. The results for 24-hour and 1-hour TSP at AM1, AM2 and AM3 are summarized in *Tables 4-1, 4-2* and *4-3* respectively. The 24-hour TSP data are shown in *Appendix G*. Also, the graphical plots of 24-hour and 1-hour TSP are shown in *Appendix H*.

 Table 4-1
 Summary of 24-hour and 1-hour TSP Monitoring Results – AM1

	24-hour	1-hour TSP (µg/m <sup>3</sup> )				4-hour 1-hour TSP (μg/m <sup>3</sup> )

Average	29	Avera	ge	75		
(Range)	(19 – 37)	(Rang	e)	(43 – 115)		

- 4.03 As shown in *Tables 4-1, 4-2* and *4-3*, 24-hour and 1-hour TSP results fluctuated well below the Action Level during the Reporting Period. No Notification of Exceedance (NOE) of 24-hour and 1-hour TSP air quality criteria or corrective action was therefore required.
- 4.04 The meteorological information during the impact monitoring days are summarized in *Appendix I*.

## 5 IMPACT MONITORING RESULTS – CONSTRUCTION NOISE

5.01 The noise monitoring results extracted from Contract DC/2007/18 are presented in the following sub-sections.

#### **Results of Construction Noise Monitoring**

5.02 In this monthly report period, 5 construction noise monitoring events were undertaken at designated location NM1, NM2, NM3 and NM4. The results for Leq30min, L10 and L90 at NM1, NM2, RNM3 and NM3 are summarized in *Tables 5-1, 5-2, 5-3* and *5-4* respectively. The construction noise monitoring data sheets are shown in *Appendix G*. Also, the graphical plots are shown in *Appendix H*.

 Table 5-1
 Summarized of Construction Noise Monitoring Results at NM1

Date	Time of		Parameter (dB(A)	
Date	Measurement	Leq30min	L10	L90
27-Jul-10	14:10 - 14:40	58.2	60.1	52.1
2-Aug-10	09:55 - 10:25	69.1	70.9	62.2
12-Aug-10	09:30 - 10:00	61.2	63.3	58.4
18-Aug-10	09:30 - 10:00	66.1	69.2	60.0
23-Aug-10	10:15 - 10:45	67.9	70.7	62.3
Lim	it Level	75 dB(A)		

Date	Time of		Parameter (dB(A)	
Date	Measurement	Leq30min	L10	L90
27-Jul-10	10:27 - 10:57	61.0	62.1	54.2
2-Aug-10	09:15 - 09:45	60.5	63.5	54.5
12-Aug-10	10:10 - 10:40	62.5	66.7	56.4
18-Aug-10	10:05 - 10:35	61.6	66.5	55.7
23-Aug-10	11:15 - 11:45	55.2	59.0	51.7
Lim	Limit Level 75 dB(A)			

#### Table 5-3 Summarized of Construction Noise Monitoring Results at RNM3

Date	Time of		Parameter (dB(A)	
Date	Measurement	Leq30min	L10	L90
27-Jul-10	09:38 - 10:08	58.7	60.2	51.2
2-Aug-10	08:35 - 09:05	52.3	54.4	50.6
12-Aug-10	10:45 - 11:15	51.5	54.3	49.0
18-Aug-10	10:40 - 11:10	60.2	61.7	58.4
23-Aug-10	13:00 - 13:30	53.9	55.8	50.2
Lim	it Level	75 dB(A)		

Table 5-4	Summarized of Construction Noise Monitoring Results at NM4
-----------	--

Date	Time of	Parameter (dB(A)		
Date	Measurement	Leq30min	L10	L90
27-Jul-10	09:00 - 09:30	49.2	49.5	38.4
2-Aug-10	08:00 - 08:30	51.0	53.2	48.7
12-Aug-10	11:25 - 11:55	55.8	60.2	49.9
18-Aug-10	11:15 - 11:45	55.6	59.2	51.2
23-Aug-10	13:40 - 14:10	53.8	57.7	49.2
Lim	it Level	75 dB(A)		

5.03 It was noted that no noise complaint (which is an Action Level exceedance) was received. In view of the results shown in *Tables 5-1, 5-2, 5-3 and 5-4* which were all below 75dB(A), no Action or Limit Level exceedance was triggered during this month.

## 6 IMPACT MONITORING RESULTS – WATER QULAITY

6.01 Due to marine water quality baseline monitoring still not yet completed, no marine works was commenced in the Project at Sok Kwu Wan. No impact water quality monitoring was undertaken in this reporting month and no results are presented accordingly in this section.

## 7 WASTE MANAGEMENT

7.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

#### **Records of Waste Quantities**

- 7.02 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;
  - Chemical Waste;
  - General Refuse; and
  - Excavated Soil.
- 7.03 The quantities of waste for disposal in this Reporting Period are summarized in *Table 7-1* and *7-2* and the Monthly Summary Waste Flow Table is shown in *Appendix J*. Whenever possible, materials were reused on-site as far as practicable

#### Table 7-1Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	<b>Disposal Location</b>
C&D Materials (Inert) $(m^3)$	0	-
Reused in this Contract (Inert) (m <sup>3</sup> )	0	-
Reused in other Projects (Inert) (m <sup>3</sup> )	0	-
Disposal as Public Fill (Inert) (m <sup>3</sup> )	0	-

#### Table 7-2Summary of Quantities of C&D Wastes

Type of Waste	Quantity	Disposal Location
Recycled Metal (kg)	0	-
Recycled Paper / Cardboard Packing (kg)	0	-
Recycled Plastic (kg)	0	-
Chemical Wastes (kg)	0	-
General Refuses (tonne)	8.25	Sok Kwu Wan Transfer Facility

7.04 There was no site effluent discharged but the estimated volume of surface runoff was less than  $50m^3$  in this monthly period

## 8 SITE INSPECTION

- 8.01 According to the Environmental Monitoring and Audit Manual, the environmental site inspection should been formulation by ET Leader. Regular environmental site inspections had been carried out by the ET to confirm the environmental performance. In this reporting period, site inspection was carried out on 26 July (before work commencement), 3, 10, 17 and 25 August 2010 after the relevant land work commencement at Sok Kwu Wan Portion Area on 27 July 2010. Besides, EPD, IEC, RE, Leader and ET carried out joint-site visit on 26 July in prior of the relevant land work commencement and routine joint-site visit by IEC, RE, Leader and ET was carried out on 25 August 2010.
- 8.02 The findings/ deficiencies that observed during the weekly site inspection are listed in *Table 8-1* and the relevant checklists are attached in **Appendix K**.

Date	Findings / Deficiencies	Follow-Up Status
26 July 2010	<ul> <li>The existing tree at the site should be fenced off properly or transplant to appropriate area.</li> <li>The construction material should be sorted out from the construction waste and stored at a designated area.</li> <li>It is recommended to lay more gravel at the edge of the site to avoid charge of water to the marine body.</li> </ul>	The observations have been followed during the site inspection on 3 August 2010
3 Aug 2010	• No environmental issue was observed during the site inspection.	N/A
10 Aug 2010	• Stockpiles shall be fully covered by the tarpaulin sheet to avoid generation of runoff during wet season.	The observations have been followed during the site inspection on 17 August 2010
17 Aug 2010	<ul> <li>Stockpiles shall be fully covered by the tarpaulin sheet to avoid generation of runoff during wet season.</li> <li>Dead tree and debris was cumulated in the site area, the contractor was reminded to clean in regular basis.</li> <li>Soil and loose material was cumulated in the u-channel, the contractor was reminded to clean to prevent blockage of the u-channel.</li> </ul>	The observations have been followed during the site inspection on 25 August 2010
25 Aug 2010	<ul> <li>End plug should be provided to the drip tray.</li> <li>Soil and loose material was observed on the footpath, the contractor was reminded to clean in order to maintain the construction site tidiness.</li> </ul>	To be followed.

Table 8-1Site Observations

## 9 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

9.01 No environmental complaint, summons and prosecution was received in this reporting period. The statistical summary table of environmental complaint is presented in *Tables 9-1, 9-2* and *9-3*.

#### Table 9-1 Statistical Summary of Environmental Complaints

<b>Reporting Period</b>	<b>Environmental Complaint Statistics</b>		
Reporting I eriou	Frequency	Cumulative	<b>Complaint Nature</b>
27 Jul 2010 – 31 Aug 2010	0	0	NA

#### Table 9-2 Statistical Summary of Environmental Summons

Reporting Period	Environmental Summons Statistics			
Reporting 1 er lou	Frequency	Cumulative	<b>Complaint Nature</b>	
27 Jul 2010 – 31 Aug 2010	0	0	NA	

## Table 9-3 Statistical Summary of Environmental Prosecution

<b>Reporting Period</b>	Environmental Prosecution Statistics			
Reporting 1 er lou	Frequency	Cumulative	<b>Complaint Nature</b>	
27 Jul 2010 – 31 Aug 2010	0	0	NA	

## 10 IMPLEMENTATION STATUS OF MITIGATION MEASURES

10.01 The environmental mitigation measures that recommended in the Sok Kwu Wan Environmental Monitoring and Audit Manual covered the issues of dust, noise, water and waste and they are summarized as following:

## **Dust Mitigation Measure**

- 10.02 Installation of 2m high solid fences around the construction site of Pumping Station P2 is recommended. Implementation of the requirements stipulated in the Air Pollution Control (Construction Dust) Regulation and the following good site practices are recommended to control dust emission from the site:
  - (a) Stockpiles of imported material kept on site should be contained within hoardings, dampened and / or covered during dry and windy weather;
  - (b) Material stockpiled alongside trenches should be covered with tarpaulins whenever works are close to village houses;
  - (c) Water sprays should be used during the delivery and handling of cement, sands, aggregates and the like.
  - (d) Any vehicle used for moving sands, aggregates and construction waste shall have properly fitting side and tail boards. Materials should not be loaded to a level higher than the side and tail boards, and should be covered by a clean tarpaulin.

#### **Noise Mitigation Measure**

- 10.03 As detailed in the EIA report, concreting work of the Pumping Station P1a and sewer alignment construction activities would likely cause adverse noise impacts on some of the noise sensitive receivers. Appropriate mitigation measures have therefore been recommended. The mitigation measures recommended in the EIA report are summarised below:
  - (a) Use of quiet equipment for the construction activities of the Pumping Stations and sewer alignment;
  - (b) Use of temporary noise barrier around the site boundary of Pumping Station P1a;
  - (c) Use of kick ripper (saw and lift) method to replace the breaker for pavement removal during sewer alignment construction;
  - (d) Restriction on the number of plant during sewer alignment construction;
  - (e) Use of noise screening structures in the form of acoustic shed or movable barrier wherever practicable and feasible in areas with sufficient clearance and headroom during the construction of sewer alignment;
  - (f) Adoption of manual working method wherever practicable and feasible in areas where the worksites of the proposed sewer alignment are located less than 20m from the residential noise sensitive receivers and less than 30m from the temple and the public library; and
  - (g) Implementation of the following good site practices:
    - Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program.
    - Mobile plant, if any, should be sited as far away from NSRs as possible.
    - Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.
    - Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.
    - Material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities.

## Water Quality Mitigation Measure

10.04 No-dig method using Horizontal Directional Drilling (HDD) would be used for the installation of outfall pipe of about 480 m from shore to minimize the potential water quality impacts arising from the dredging works required for the submarine outfall construction. For the remaining outfall pipe of about 240m and the diffuser section, open trench dredging would still be required.

- 10.05 During the dredging works, the Contractor should be responsible for the design and implementation of the following mitigation measures.
  - Dredging should be undertaken using closed grab dredgers with a total production rate of 55m<sup>3</sup>/hr;
  - Deployment of 2-layer silt curtains with first layer enclosing the grab and the second layer at around 50, from the dredging area while dredging works are in progress;
  - all vessels should be sized such that adequate clearance (i.e. minimum clearance of 0.6m) is maintained between vessels and the sea bed at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash;
  - all pipe leakages should be repaired promptly and plant shall not be operated with leaking pipes;
  - excess material should be cleaned from the decks and exposed fittings of barges before the vessel is moved;
  - adequate freeboard (i.e. minimum of 200m) should be maintained on barges to ensure that decks are not washed by wave action;
  - all barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material; and
  - loading of barges and hoppers should be controlled to prevent splashing of dredged material to the surrounding water, and barges and hoppers should not be filled to a level which would cause the overflow of materials or sediment laden water during loading or transportation; and
  - the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.

## Construction Run-off and Drainage

- 10.06 The Contractor should observe and comply with the Water Pollution Control Ordinance and the subsidiary regulations. The Contractor should follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in ProPECC PN 1/94 "Construction Site Drainage". The design of the mitigation measures should be submitted by the Contractor to the Engineer for approval. These mitigation measures should include the following practices to minimise site surface runoff and the chance of erosion, and also to retain and reduce any suspended solids prior to discharge:
  - Provision of perimeter channels to intercept storm-runoff from outside the site. These should be constructed in advance of site formation works and earthworks.
  - Works programmes should be designed to minimize works areas at any one time, thus minimising exposed soil areas and reducing the potential for increased siltation and runoff.
  - Sand/silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand/silt particles from run-off. These facilities should be properly and regularly maintained. These facilities shall be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site.
  - Careful programming of the works to minimise soil excavation works during rainy seasons.
  - Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.
  - Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.
  - Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric.

## General Construction Activities

10.07 Debris and rubbish generated on-site should be collected, handled and disposed of properly to avoid entering the nearby coastal waters and stormwater drains. All fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. Open drainage channels and culverts near the works areas should be covered to block the entrance of large debris and refuse.

## Wastewater Arising from Workforce

10.08 Portable toilets shall be provided by the Contractors, where necessary, to handle sewage from the workforce. The Contractor shall also be responsible for waste disposal and maintenance practices

## **Sediment Contamination Mitigation Measure**

- 10.09 The basic requirements and procedures for dredged mud disposal are specified under the WBTC No. 34/2002. The management of the dredging, use and disposal of marine mud is monitored by the MFC, while the licensing of marine dumping is the responsibility of the Director of Environmental Protection (DEP).
- 10.10 The uncontaminated dredged sediment will be loaded onto barges and transported to the designated marine disposal site. Appropriate dredging methods have been incorporated into the recommended water quality mitigation measures including the use of closed-grab dredgers and silt curtains. Category L sediment would be suitable for disposal at a gazetted open sea disposal ground.
- 10.11 During transportation and disposal of the dredged marine sediments, the following measures should be taken to minimize potential impacts on water quality:
  - Bottom opening of barges should be fitted with tight fitting seals to prevent leakage of material. Excess material should be cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved.
  - Monitoring of the barge loading should be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels should be equipped with automatic self-monitoring devices as specified by the DEP.

## **Construction Waste Mitigation Measure**

#### Good Site Practices and Waste Reduction Measures

- 10.12 It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are strictly followed. Recommendations for good site practices for the construction waste arising include:
  - Nomination of an approved person, such as a site manager, to be responsible for the implementation of good site practices, arranging for collection and effective disposal to an appropriate facility, of all wastes generated at the site.
  - Training of site personnel in proper waste management and chemical handling procedures.
  - Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers.
  - Provision of sufficient waste disposal points and regular collection for disposal.
  - Separation of chemical wastes for special handling and appropriate treatment at the Chemical Waste Treatment Facility.
  - Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors.
  - Maintain records of the quantities of wastes generated, recycled and disposed.
- 10.13 In order to monitor the disposal of C&D waste at landfills and to control fly tipping, a trip-ticket system should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system.
- 10.14 Good management and control can prevent the generation of significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:
  - segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;

- to encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the work force;
- any unused chemicals or those with remaining functional capacity should be recycled;
- use of reusable non-timber formwork to reduce the amount of C&D material;
- prior to disposal of C&D waste, it is recommended that wood, steel and other metals should be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill;
- proper storage and site practices to minimise the potential for damage or contamination of construction materials; and
- plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.

## General Site Wastes

10.15 A collection area should be provided where waste can be stored prior to removal from site. An enclosed and covered area is preferred for the collection of the waste to reduce 'wind blow' of light material.

## Chemical Wastes

- 10.16 After use, chemical waste (eg. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Any unused chemicals or those with remaining functional capacity should be recycled. Spent chemicals should be properly stored on site within suitably designed containers, and should be collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licenced facility in accordance with the Waste Disposal (Chemical Waste) (General) Regulation under the Waste Disposal Ordinance.
- 10.17 Any service shop and minor maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakages and spillage should only be undertaken with the areas appropriately equipped to control these discharges.

## Construction and Demolition Material

- 10.18 The C&D material should be separated on-site into three categories: (i) public fill, the inert portion of the C&D material (e.g. concrete and rubble), which should be re-used on-site or disposed of at a public filling area; (ii) C&D waste for re-use and/or recycling, the non-inert portion of the C&D material, (e.g. steel and other metals, wood, glass and plastic); (iii) C&D waste which cannot be re-used and/or recycled. The waste producers are responsible for its disposal at strategic landfills.
- 10.19 In order to minimise the impact resulting from collection and transportation of material for off-site disposal, it was recommended that inert material should be re-used on-site where possible. Prior to disposal of C&D material, it was also recommended that steel and other metals should be separated for re-use and/or recycling where practicable to minimise the quantity of waste to be disposed of to landfill.

## **Ecology Mitigation Measure**

Terrestrial Ecology

- 10.20 The uncommon tree species should be labelled and probably fenced to avoid direct or indirect disturbance during construction. Works areas should avoid woodland habitats, in particular where these trees are located.
- 10.21 Construction and maintenance of site runoff control measures would be required at all work sites during construction. These should include barriers to direct runoff to sand/silt removal facilities (sand/silt/traps and/or sediment basins); minimisation of earthworks during rainy season (May to September); and coverage of sand/fill piles and exposed earth during storms.

10.22 Special attention should be paid during the breeding season of Romer's Tree Frog (March to September) to ensure their habitat landward to Pumping Station P2 site is well protected from site runoff. Barriers should be deployed completely along the landward side of the pumping station site boundary to prevent any site runoff from entering the tree frog habitat. Intactness of the barriers should be frequently inspected.

## Intertidal and Subtidal Ecology

- 10.23 Construction and maintenance of site runoff control measures would be required at all work sites during construction. These should include barriers to direct runoff to sand/silt removal facilities (sand/silt/traps and/or sediment basins); use of silt curtains along coastline; minimisation of earthworks during rainy season (May to September); and coverage of sand/fill piles and exposed earth during storms.
- 10.24 To reduce impacts of sediment resuspension upon nearby habitats and organisms during dredging, all dredging should be done using a closed-grab dredger, and silt curtains should be deployed around the dredger during all dredging activity

## **Fisheries Mitigation Measure**

10.25 Closed grab dredger, deployment of silt curtains around the immediate dredging area and low dredging rate have been recommended in Water Quality of the EIA report in order to minimise sediment release into the water column.

## Landscape & Visual Mitigation Measure

- 10.26 Mitigation measures recommended in the EIA Report for landscape and visual impacts during the construction stage are summarised below.
  - Screening of site construction works by use of hoarding that is appropriate to its site context;
  - Retaining existing trees and minimising damage to vegetation where possible by close co-ordination and on site alignment adjusted of rising main and gravity sewer pipelines. Tree protective measures should be implemented to ensure trees identified as to be retained are satisfactorily protected during the construction phase;
  - Careful and efficient transplanting of affected trees (1 no.) to temporary or final transplant location (the proposed tree to be transported is a semi-mature *Macaranga tanarius* and is located at the proposed Pumping Station P2 location);
  - Short excavation and immediate backfilling of sections upon completion of works to reduce active site area;
  - Conservation of top-soil for reuse.
  - Night-time light source from marine fleets should be directed away from the residential units
- 10.27 The implementation schedule of mitigation measures is presented in *Appendix L*.
- 10.28 Leader had been implementing the required environmental mitigation measures according to the Sok Kwu Wan Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by Leader in this Reporting Month are summarized in *Table 10-1*.

Issues	Environmental Mitigation Measures				
Water Quality	<ul> <li>Drainage channels were provided to convey run-off into the treatment facilities; and</li> </ul>				
Quanty	• Drainage systems were regularly and adequately maintained.				
Air Quality	<ul> <li>Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet;</li> </ul>				
	<ul> <li>Public roads around the site entrance/exit had been kept clean and free from dust; and</li> </ul>				
	• Tarpaulin covering of any dusty materials on a vehicle leaving the site.				

 Table 10-1
 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Noise	<ul> <li>Good site practices to limit noise emissions at the sources;</li> </ul>
	<ul> <li>Use of quite plant and working methods;</li> </ul>
	• Use of site hoarding or other mass materials as noise barrier to screen noise at
	ground level of NSRs; and
	• To minimize plant number use at the worksite.
Waste and	• Excavated material should be reused on site as far as possible to minimize off-site
Chemical	disposal. Scrap metals or abandoned equipment should be recycled if possible;
Management	• Waste arising should be kept to a minimum and be handled, transported and
ivianagement	disposed of in a suitable manner,
	• The Contractor should adopt a trip ticket system for the disposal of C&D
	materials to any designed public filling facility and/or landfill; and
	• Chemical waste shall be handled in accordance with the Code of Practice on the
	Packaging, Handling and Storage of Chemical Wastes.
General	<ul> <li>The site was generally kept tidy and clean.</li> </ul>

## 11 IMPACT FORECAST

11.01 Key issues to be considered in the coming month include:

## Water Quality

- Erect of sand bag in proper area to avoid any muddy surface runoff from the loose soil surface or haul road during the rainy days; and
- The accumulated stagnant water should be drained away.

## Air Quality

- Vehicles shall be cleaned of mud and debris before leaving the site;
- Stockpile and loose soil surface shall be covered with tarpaulin sheet or other means to eliminate the fugitive dust;
- Water spaying on the dry haul road and exit/entrance of the site in regular basis is reminded; and
- Public roads around the site entrance/exit had been kept clean and free from dust.

## Noise

- Works and equipment should be located to minimize noise nuisance from the nearest sensitive receiver; and
- Idle equipments should be either turned off or throttled down;

## Waste and Chemical Management

- Housekeeping on site shall be improved;
- The Contractor is advised to fence off the construction waste at a designated area in order to maintain the tidiness of the site;
- Drip tray and proper label should be provided for all chemical containers.
- C&D waste should be disposed in regular basis.

## 12 CONCLUSIONS AND RECOMMENDATIONS

#### CONCLUSIONS

- 12.01 This is the 1<sup>st</sup> Monthly EM&A Report covering the construction period from 27 July to 31 August 2010 (the Reporting Period).
- 12.02 No 1-hour TSP or 24-hr TSP monitoring results was found to be triggered the Action or Limit Level in this Reporting Period.
- 12.03 No noise complaint (an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this reporting month.
- 12.04 No impact water quality monitoring was undertaken in this reporting month and baseline monitoring is in progress.
- 12.05 No documented complaint, notification of summons or successful prosecution was received.
- 12.06 In this reporting period, site inspection was carried out on 26 July (before work commencement), 3, 10, 17 and 25 August 2010 after the relevant land work commencement at Sok Kwu Wan Portion Area on 27 July 2010. Besides, EPD, IEC, RE, Leader and ET carried out joint-site visit on 26 July in prior of the relevant land work commencement and routine joint-site visit by IEC, RE, Leader and ET was carried out on 25 August 2010. All the observation has been rectified during the next week site inspection. The environmental performance of the Project was therefore considered as satisfactory.

#### RECOMMENDATIONS

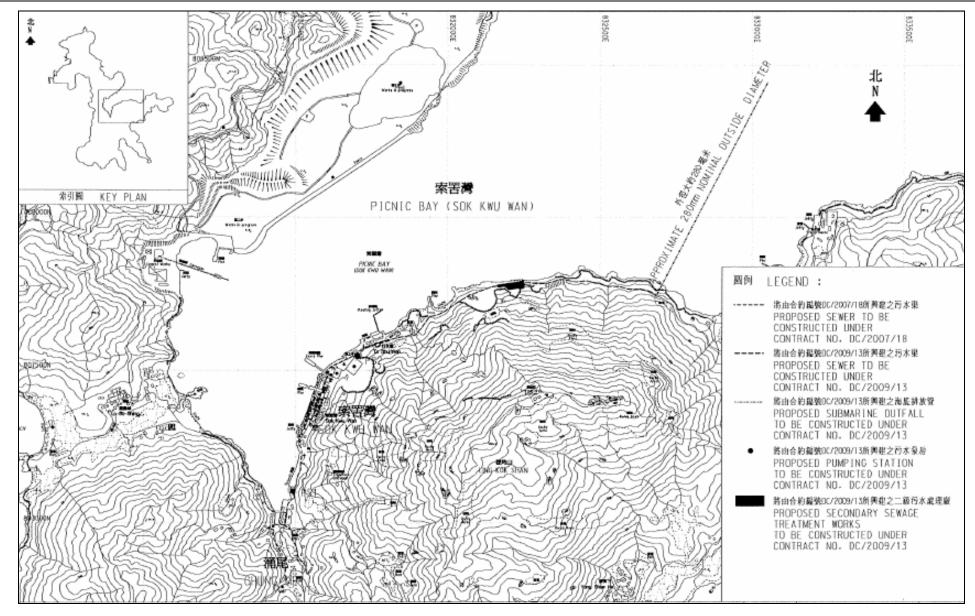

- 12.07 During the rain season between April and November, muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish culture zone at Picnic Bay and the Secondary recreation contact subzone at Mo Tat Wan should be the key issue in the forth-coming month. Mitigation measures for water quality should therefore be fully implemented.
- 12.08 Accumulation of stagnant water would be a key issue during rainy days; the Contractor is reminded to implement the mosquito control, such as stagnant water should be drained away, as appropriated.
- 12.09 On the other hand, construction dust should be other key environmental issue during dry and windy days. The implemented construction dust mitigation measures should therefore also be maintained and improved as necessary during dry and windy days.
- 12.10 Construction of outfall marine works cannot be carried out. The work perform should be until to the baseline water quality monitoring completion and the related Action and Limit (A/L) levels establishment.

Air Quality

EVENT	ACTION			
	ET	IC(E)	ER	CONTRACTOR
ACTION LEVEL				
1. Exceedance for one sample	<ol> <li>Identify source, investigate the causes of exceedance and propose remedial measures;</li> <li>Inform IC(E) and ER;</li> <li>Repeat measurement to confirm finding;</li> <li>Increase monitoring frequency to daily.</li> </ol>	<ol> <li>Check monitoring data submitted by ET;</li> <li>Check Contractor's working method.</li> </ol>	1. Notify Contractor.	<ol> <li>Rectify any unacceptable practice;</li> <li>Amend working methods if appropriate.</li> </ol>
2. Exceedance for two or more consecutive samples	<ol> <li>Identify source;</li> <li>Inform IC(E) and ER;</li> <li>Advise the ER on the effectiveness of the proposed remedial measures;</li> <li>Repeat measurements to confirm findings;</li> <li>Increase monitoring frequency to daily;</li> <li>Discuss with IC(E) and Contractor on remedial actions required;</li> <li>If exceedance continues, arrange meeting with IC(E) and ER;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Check monitoring data submitted by ET;</li> <li>Check Contractor's working method;</li> <li>Discuss with ET and Contractor on possible remedial measures;</li> <li>Advise the ET on the effectiveness of the proposed remedial measures;</li> <li>Supervise Implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Ensure remedial measures properly implemented.</li> </ol>	<ol> <li>Submit proposals for remedial to ER within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Amend proposal if appropriate.</li> </ol>
		LIMIT LEVEL		
1. Exceedance for one sample	<ol> <li>Identify source, investigate the causes of exceedance and propose remedial measures;</li> <li>Inform ER, Contractor and EPD;</li> <li>Repeat measurement to confirm finding;</li> <li>Increase monitoring frequency to daily;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results.</li> </ol>	<ol> <li>Check monitoring data submitted by ET;</li> <li>Check Contractor's working method;</li> <li>Discuss with ET and Contractor on possible remedial measures;</li> <li>Advise the ER on the effectiveness of the proposed remedial measures;</li> <li>Supervise implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Ensure remedial measures properly implemented.</li> </ol>	<ol> <li>Take immediate action to avoid further exceedance;</li> <li>Submit proposals for remedial actions to IC(E) within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Amend proposal if appropriate.</li> </ol>
2. Exceedance for two or more consecutive samples	<ol> <li>Notify IC(E), ER, Contractor and EPD;</li> <li>Identify source;</li> <li>Repeat measurement to confirm findings;</li> <li>Increase monitoring frequency to daily;</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented;</li> <li>Arrange meeting with IC(E) and ER to discuss the remedial actions to be taken;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Discuss amongst ER, ET, and Contractor on the potential remedial actions;</li> <li>Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly;</li> <li>Supervise the implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>In consolidation with the IC(E), agree with the Contractor on the remedial measures to be implemented;</li> <li>Ensure remedial measures properly implemented;</li> <li>If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.</li> </ol>	<ol> <li>Take immediate action to avoid further exceedance;</li> <li>Submit proposals for remedial actions to IC(E) within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Resubmit proposals if problem still not under control;</li> <li>Stop the relevant portion of works as determined by the ER until the exceedance is abated.</li> </ol>

**Construction Noise** 

EVENT	ACTION			
	ET	IC(E)	ER	CONTRACTOR
Action Level	<ol> <li>Notify IC(E) and Contractor;</li> <li>Carry out investigation;</li> <li>Report the results of investigation to the IC(E), ER and Contractor;</li> <li>Discuss with the Contractor and formulate remedial measures;</li> <li>Increase monitoring frequency to check mitigation effectiveness</li> </ol>	<ol> <li>Review the analysed results submitted by the ET;</li> <li>Review the proposed remedial measures by the Contractor and advise the ER accordingly;</li> <li>Supervise the implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Require Contractor to propose remedial measures for the analysed noise problem;</li> <li>Ensure remedial measures are properly implemented.</li> </ol>	<ol> <li>Submit noise mitigation proposals to IC(E);</li> <li>Implement noise mitigation proposals.</li> </ol>
Limit Level	<ol> <li>Identify source;</li> <li>Inform IC(E), ER, EPD and Contractor;</li> <li>Repeat measurements to confirm findings;</li> <li>Increase monitoring frequency;</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented;</li> <li>Inform IC(E), ER and EPD the causes and actions taken for the exceedances;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Discuss amongst ER, ET, and Contractor on the potential remedial actions;</li> <li>Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly;</li> <li>Supervise the implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Require Contractor to propose remedial measures for the analysed noise problem;</li> <li>Ensure remedial measures properly implemented;</li> <li>If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.</li> </ol>	<ol> <li>Take immediate action to avoid further exceedance;</li> <li>Submit proposals for remedial actions to IC(E) within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Resubmit proposals if problem still not under control;</li> <li>Stop the relevant portion of works as determined by the ER until the exceedance is abated.</li> </ol>

# **Graphical Plots of Monitoring Results**

# Appendix I

# **Meteorological Information**

#### Meteorological Data Extracted from HKO during the Reporting Period

Date		Weather
27-Jul-10	Tue	Cloudy with showers. Moderate to fresh southwesterly winds.
28-Jul-10	Wed	Moderate southwesterly winds, occasionally fresh over offshore waters.
29-Jul-10	Thu	Mainly cloudy with a few showers.
30-Jul-10	Fri	Sunny periods and a few showers.
31-Jul-10	Sat	A few showers. Hot with sunny periods in the afternoon.
1-Aug-10	Sun	Fine and very hot. Moderate westerly winds.
2-Aug-10	Mon	Showers, heavy with squally thunderstorms tonight.
3-Aug-10	Tue	Occasionally fresh over offshore waters.
4-Aug-10	Wed	Sunny periods and a few showers.
5-Aug-10	Thu	Moderate east to northeasterly winds.
6-Aug-10	Fri	Sunny periods and a few showers.
7-Aug-10	Sat	Isolated squally thunderstorms later.
8-Aug-10	Sun	Very hot with sunny periods in the afternoon.
9-Aug-10	Mon	Sunny periods and a few showers.
10-Aug-10	Tue	It will be hot. Light to moderate southeasterly winds.
11-Aug-10	Wed	Showers and a few isolated squally thunderstorms.
12-Aug-10	Thu	Mainly fine and very hot during the day.
13-Aug-10	Fri	Mainly fine apart from isolated showers.
14-Aug-10	Sat	Mainly cloudy with showers and a few squally thunderstorms.
15-Aug-10	Sun	Light to moderate southwesterly winds.
16-Aug-10	Mon	Mainly cloudy with a few showers and isolated squally thunderstorms.
17-Aug-10	Tue	Mainly cloudy with a few showers.
18-Aug-10	Wed	Light to moderate easterly winds.
19-Aug-10	Thu	A few squally thunderstorms at first.
20-Aug-10	Fri	Mainly cloudy with showers and squally thunderstorms.
21-Aug-10	Sat	Moderate to fresh east to southeasterly winds
22-Aug-10	Sun	Mainly fine and hot apart from isolated showers.
23-Aug-10	Mon	Mainly fine and hot apart from isolated showers.
24-Aug-10	Tue	Very hot in the afternoon.
25-Aug-10	Wed	A few squally showers later.
26-Aug-10	Thu	Very hot with sunny periods in the afternoon.
27-Aug-10	Fri	Light winds.
28-Aug-10	Sat	A few showers and isolated squally thunderstorms later.
29-Aug-10	Sun	Moderate northerly winds.
30-Aug-10	Mon	There will also be swells over the sea.
31-Aug-10	Tue	Hazy with sunny periods.

Sectio	n 1: W	ater Quality									
1.01	ls an	effluent discharge license obtained for the Project?	$\checkmark$								
1.02	Is the	effluent discharged in accordance with the discharge licence?	$\checkmark$								
1.03	Is the	discharge of turbid water avoided?		$\checkmark$							
1.04		here proper desilting facilities in the drainage systems to e SS levels in effluent?	$\checkmark$								
1.05		Are there channels, sandbags or bunds to direct surface run-off to sedimentation tanks?									
1.06	Are th interc	nere any perimeter channels provided at site boundaries to ept storm runoff from crossing the site?		$\checkmark$							
1.07	ls dra	inage system well maintained?		$\checkmark$							
1.08		cavation proceeds, are temporary access roads protected by ed stone or gravel?		$\checkmark$							
1.09	Are te	mporary exposed slopes properly covered?				$\checkmark$		Photo 3			
1.10	Are e	arthworks final surfaces well compacted or protected?		$\checkmark$							
1.11	Are m	anholes adequately covered or temporarily sealed?		$\checkmark$							
1.12	Are th	ere any procedures and equipment for rainstorm protection?		$\checkmark$							
1.13	Are w	heel washing facilities well maintained?	$\checkmark$								
1.14	ls run	off from wheel washing facilities avoided?	$\checkmark$								
1.15	Are th	ere toilets provided on site?		$\checkmark$							
1.16	Are to	ilets properly maintained?		$\checkmark$							
1.17		e the vehicle and plant servicing areas paved and located within ofed areas?									
1.18	Is the	oil leakage or spillage avoided?	$\checkmark$								
1.19		nere any measures to prevent leaked oil from entering the age system?	$\checkmark$								
1.20		here any measures to collect spilt cement and concrete ngs during concreting works?					$\checkmark$				
1.21		ere any oil interceptors/grease traps in the drainage systems hicle and plant servicing areas, canteen kitchen, etc?	$\checkmark$								
1.22	Are th	e oil interceptors/grease traps maintained properly?	$\checkmark$								

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
1.23	Is used bentonite recycled where appropriate?	$\checkmark$					
1.24	Designated settlement area for runoff/wheel wash waste is provide and located at the streambed with 1-2m deep, 12m long and around 50m3 capacities for sedimentation.	$\checkmark$					
1.25	No excavation is undertaken in the settlement area.	$\checkmark$					
1.26	Concreting wastes water should be neutralized below the pH Action Levels before discharge.	$\checkmark$					
1.27	Mobile toilets should provide on site and located away the stream course.	$\checkmark$					
1.25	License collector should be employed for handling the sewage of mobile toilet.	$\checkmark$					
Sectio	n 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?	$\checkmark$					
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?	$\checkmark$					
2.03	Are the excavated materials sprayed with water during handling?	$\checkmark$					
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?	$\checkmark$					
2.05	Is the exposed earth properly treated within six months after the last construction activities?	$\checkmark$					
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved?	$\checkmark$					
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		$\checkmark$				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?	$\checkmark$					
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?	$\checkmark$					
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?	$\checkmark$					
2.11	Is dark smoke emission from plant/equipment avoided?		$\checkmark$				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement?	$\checkmark$					
2.13	Are site vehicles travelling within the speed limit not more than 15km/hour?	$\checkmark$					
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?		$\checkmark$				
2.15	Is open burning avoided?	$\checkmark$					
2.16	Excavated materials from the stream must remove form site on the same day. The materials shall be stored in covered impermeable skips awaiting removal from site.	$\checkmark$					
Sectio	n 3: Noise						
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?	$\checkmark$					
3.02	Is silenced equipment adopted?	$\checkmark$					
3.03	Is idle equipment turned off or throttled down?	$\checkmark$					
3.04	Are all plant and equipment well maintained and in good condition?	$\checkmark$					
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?	$\checkmark$					
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	$\checkmark$					
3.07	Are air compressors fitted with valid noise emission labels during operation?	$\checkmark$					
3.08	Are flaps and panels of mechanical equipment closed during operation?	$\checkmark$					
3.09	Are Construction Noise Permit(s) applied for percussive piling works?	$\checkmark$					

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?	$\checkmark$					
3.11	Are valid Construction Noise Permit(s) posted at site entrances?	$\checkmark$					
3.12	Use of quiet plant had been used on site to minimise the construction noise impact to the surrounding residences/dwellings (Level 1 mitigation measures).	$\checkmark$					
3.13	Temporary/Moveable noise barrier or site hoarding are provide or erect at the site boundary to minimise the noise impact of the closest NSRs or stationary equipments shield by the noise barrier which cannot visible from NSRs (Level 2 mitigation measure)	$\checkmark$					
3.14	Temporary/Moveable noise barrier equal to or more than 3m height with 10kg/m2 are provide for noise mitigation measures (Level 2 mitigation measures).						
Sectio	n 4: Waste/Chemical Management						
4.01	Waste Management Plan had been submit to Engineer for approval.	$\checkmark$					
4.02	Are receptacles available for general refuse collection?	$\checkmark$					
4.03	Is general refuse sorting or recycling implemented?		$\checkmark$				
4.04	Is general refuse disposed of properly and regularly?		$\checkmark$				
4.05	Is the Contractor registered as a chemical waste producer?	$\checkmark$					
4.06	Are the chemical waste containers properly labelled?	$\checkmark$					
4.07	Are the chemical wastes stored in proper storage areas?	$\checkmark$					
4.08	Is the chemical waste storage area properly labelled?	$\checkmark$					
4.09	Is the chemical waste storage area used for storage of chemical waste only?	$\checkmark$					
4.10	Are incompatible chemical wastes stored in different areas?	$\checkmark$					
4.11	Are the chemical wastes disposed of by licensed collectors?	$\checkmark$					
4.12	Are trip tickets for chemical wastes disposal available for inspection?	$\checkmark$					
4.13	Are chemical/fuel storage areas bounded?		$\checkmark$				
4.14	Are designated areas identified for storage and sorting of construction wastes?				$\checkmark$		Photo 2
4.15	Are construction wastes sorted (inert and non-inert) on site?		$\checkmark$				
4.16	Are construction wastes reused?		$\checkmark$				
4.17	Are construction wastes disposed of properly?		$\checkmark$				
4.18	Are site hoardings and signboards made of durable materials instead of timber?		$\checkmark$				
4.19	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?	$\checkmark$					
4.20	Are appropriate procedures followed if contaminated material exists?	$\checkmark$					
4.21	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?	$\checkmark$					
4.22	Site cleanliness and appropriate waste management training had provided for the site workers.		$\checkmark$				
4.23	Contaminated sediments will managed according to WBTC No.12/2000 and EWTB TC(W) No. 34/2002.	$\checkmark$					
Sectio	on 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?	$\checkmark$					
5.02	Are retained and transplanted trees properly protected?				$\checkmark$		Photo 1

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
5.03	Are surgery works carried out for the damaged trees?	$\checkmark$					
5.04	Is damage to trees outside site boundary due to construction activities avoided?	$\checkmark$					
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?	$\checkmark$					
Section 7: Others							
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?	$\checkmark$					

#### Remarks

Follow up of last site inspection: Nil

Findings of Site Inspection (Sok Kwn Wan):

1. The existing tree at the site should be fenced off properly or transplant to appropriate area.

2. The construction material should be sorted out from the construction waste and stored at a designated area.

3. It is recommended to lay more gravel at the edge of the site to avoid charge of water to the marine body.

Sectio	on 1: V	/ater Quality									
1.01	ls an	effluent discharge license obtained for the Project?	$\checkmark$								
1.02	Is the	effluent discharged in accordance with the discharge licence?	$\checkmark$								
1.03	Is the	discharge of turbid water avoided?		$\checkmark$							
1.04		are there proper desilting facilities in the drainage systems to educe SS levels in effluent?									
1.05		nere channels, sandbags or bunds to direct surface run-off to nentation tanks?	$\checkmark$								
1.06		here any perimeter channels provided at site boundaries to ept storm runoff from crossing the site?		$\checkmark$							
1.07	ls dra	inage system well maintained?		$\checkmark$							
1.08		cavation proceeds, are temporary access roads protected by ed stone or gravel?		$\checkmark$							
1.09	Are te	emporary exposed slopes properly covered?		$\checkmark$							
1.10	Are e	arthworks final surfaces well compacted or protected?		$\checkmark$							
1.11	Are m	nanholes adequately covered or temporarily sealed?		$\checkmark$							
1.12	Are th	here any procedures and equipment for rainstorm protection?		$\checkmark$							
1.13	Are w	heel washing facilities well maintained?	$\checkmark$								
1.14	ls run	off from wheel washing facilities avoided?	$\checkmark$								
1.15	Are th	nere toilets provided on site?		$\checkmark$							
1.16	Are to	bilets properly maintained?		$\checkmark$							
1.17		ne vehicle and plant servicing areas paved and located within d areas?	$\checkmark$								
1.18	Is the	oil leakage or spillage avoided?	$\checkmark$								
1.19	Are ti draina	here any measures to prevent leaked oil from entering the age system?	$\checkmark$								
1.20		here any measures to collect spilt cement and concrete ings during concreting works?					$\checkmark$				
1.21		here any oil interceptors/grease traps in the drainage systems hicle and plant servicing areas, canteen kitchen, etc?	$\checkmark$								
1.22	Are th	ne oil interceptors/grease traps maintained properly?	$\checkmark$								

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
1.23	Is used bentonite recycled where appropriate?	$\checkmark$					
1.24	Designated settlement area for runoff/wheel wash waste is provide and located at the streambed with 1-2m deep, 12m long and around 50m3 capacities for sedimentation.	$\checkmark$					
1.25	No excavation is undertaken in the settlement area.	$\checkmark$					
1.26	Concreting wastes water should be neutralized below the pH Action Levels before discharge.	$\checkmark$					
1.27	Mobile toilets should provide on site and located away the stream course.	$\checkmark$					
1.28	License collector should be employed for handling the sewage of mobile toilet.	$\checkmark$					
1.29	Is ponding /stand water avoided?		$\checkmark$				
Sectio	n 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?	$\checkmark$					
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?	$\checkmark$					
2.03	Are the excavated materials sprayed with water during handling?	$\checkmark$					
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?	$\checkmark$					
2.05	Is the exposed earth properly treated within six months after the last construction activities?	$\checkmark$					
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved?	$\checkmark$					
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		$\checkmark$				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?	$\checkmark$					
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?	$\checkmark$					
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?	$\checkmark$					
2.11	Is dark smoke emission from plant/equipment avoided?		$\checkmark$				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement?	$\checkmark$					
2.13	Are site vehicles travelling within the speed limit not more than 15km/hour?	$\checkmark$					
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?		$\checkmark$				
2.15	Is open burning avoided?	$\checkmark$					
2.16	Excavated materials from the stream must remove form site on the same day. The materials shall be stored in covered impermeable skips awaiting removal from site.	$\checkmark$					
Sectio	n 3: Noise						
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?	$\checkmark$					
3.02	Is silenced equipment adopted?	$\checkmark$					
3.03	Is idle equipment turned off or throttled down?	$\checkmark$					
3.04	Are all plant and equipment well maintained and in good condition?	$\checkmark$					
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?	$\checkmark$					
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	$\checkmark$					
3.07	Are air compressors fitted with valid noise emission labels during operation?	$\checkmark$					
3.08	Are flaps and panels of mechanical equipment closed during operation?	$\checkmark$					

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
3.09	Are Construction Noise Permit(s) applied for percussive piling works?	$\checkmark$					
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?	$\checkmark$					
3.11	Are valid Construction Noise Permit(s) posted at site entrances?	$\checkmark$					
3.12	Use of quiet plant had been used on site to minimise the construction noise impact to the surrounding residences/dwellings (Level 1 mitigation measures).	$\checkmark$					
3.13	Temporary/Moveable noise barrier or site hoarding are provide or erect at the site boundary to minimise the noise impact of the closest NSRs or stationary equipments shield by the noise barrier which cannot visible from NSRs (Level 2 mitigation measure)	$\checkmark$					
3.14	Temporary/Moveable noise barrier equal to or more than 3m height with 10kg/m2 are provide for noise mitigation measures (Level 2 mitigation measures).	$\checkmark$					
Sectio	n 4: Waste/Chemical Management						
4.01	Waste Management Plan had been submit to Engineer for approval.	$\checkmark$					
4.02	Are receptacles available for general refuse collection?	$\checkmark$					
4.03	Is general refuse sorting or recycling implemented?		$\checkmark$				
4.04	Is general refuse disposed of properly and regularly?		$\checkmark$				
4.05	Is the Contractor registered as a chemical waste producer?	$\checkmark$					
4.06	Are the chemical waste containers properly labelled?	$\checkmark$					
4.07	Are the chemical wastes stored in proper storage areas?	$\checkmark$					
4.08	Is the chemical waste storage area properly labelled?	$\checkmark$					
4.09	Is the chemical waste storage area used for storage of chemical waste only?	$\checkmark$					
4.10	Are incompatible chemical wastes stored in different areas?	$\checkmark$					
4.11	Are the chemical wastes disposed of by licensed collectors?	$\checkmark$					
4.12	Are trip tickets for chemical wastes disposal available for inspection?	$\checkmark$					
4.13	Are chemical/fuel storage areas bounded?		$\checkmark$				
4.14	Are designated areas identified for storage and sorting of construction wastes?		$\checkmark$				
4.15	Are construction wastes sorted (inert and non-inert) on site?		$\checkmark$				
4.16	Are construction wastes reused?		$\checkmark$				
4.17	Are construction wastes disposed of properly?		$\checkmark$				
4.18	Are site hoardings and signboards made of durable materials instead of timber?		$\checkmark$				
4.19	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?	$\checkmark$					
4.20	Are appropriate procedures followed if contaminated material exists?	$\checkmark$					
4.21	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?	$\checkmark$					
4.22	Site cleanliness and appropriate waste management training had provided for the site workers.		$\checkmark$				
4.23	Contaminated sediments will managed according to WBTC No.12/2000 and EWTB TC(W) No. 34/2002.	$\checkmark$					
Sectio	n 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?	$\checkmark$					

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
5.02	Are retained and transplanted trees properly protected?				$\checkmark$		Photo 1
5.03	Are surgery works carried out for the damaged trees?	$\checkmark$					
5.04	Is damage to trees outside site boundary due to construction activities avoided?	$\checkmark$					
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?	$\checkmark$					
Section 7: Others							
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?	$\checkmark$					

#### Remarks

#### Follow up of last site inspection:

- The existing tree was transplanted.
   The construction waste was sorted and waiting to disposal.
- 3.

#### Findings of Site Inspection (Sok Kwn Wan):

No environmental issue was observed during the site inspection.

5.02	Are retained and transplanted trees properly protected?		$\checkmark$				
5.03	Are surgery works carried out for the damaged trees?	$\checkmark$					
5.04	Is damage to trees outside site boundary due to construction activities avoided?	$\checkmark$					
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?	$\checkmark$					
Section 7: Others							
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?	$\checkmark$					

#### Remarks

Follow up of last site inspection: Nil.

Findings of Site Inspection (Sok Kwn Wan):

1. Stockpiles shall be fully covered by the tarpaulin sheet to avoid generation of runoff during wet season.

2. Dead tree and debris was cumulated in the site area, the contractor was reminded to clean in regular basis.

3. Soil and loose material was cumulated in the u-channel, the contractor was reminded to clean to prevent blockage of the u-channel.

#### Remarks

#### Follow up of last site inspection (17 August 2010) :

- 1. No stockpile was observed on site.
- 2. The dead tree and debris was found to be removed.
- 3. Soil and loose material cumulated in the U-Channel was found to be removed.

#### Findings of Site Inspection (Sok Kwn Wan) (25 August 2010):

1. End plug should be provided to the drip tray.

2. Soil and loose material was observed on the footpath, the contractor was reminded to clean in order to maintain the construction site tidiness.

		be filled to a level which will cause the overflow of materials or polluted water during loading or transportation; and						
		• the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.						
5.79	<ul> <li>PN 1/94 for "Construction Site Drainage"</li> <li>Provision of perimeter channels to intercept storm-runoff outside the site. These should be constructed in advance of formation works and earthworks.</li> </ul>	Construction Run-off and Drainage	Construction works	Contractor				ProPECC
		Implementation of the following site practices outlined in ProPECC PN 1/94 for "Construction Site Drainage"	sites					PN 1/94
		• Works programmes should be designed to minimize works areas at any one time, thus minimizing exposed soil areas and reducing the potential for increased siltation and runoff.						
		• Sand / silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand / silt particles from run-off. These facilities should be properly and regularly maintained. These facilities should be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site.						
		• Careful programming of the works to minimise soil excavation works during rainy seasons.						
		• Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.						
		• Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.						
		• Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric						
5.80	4.38	General Construction Activities	Construction works	Contractor				
		Debris and rubbish generated on-site should be collected, handled and	sites
