**BY FAX & EMAIL** 

Dear Sirs,

Contract No. DC/2009/13

Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwu Wan Sok Kwu Wan Portion Area

Monthly Environmental Monitoring and Audit (EM&A) Report No. 16 (November 2011)

We refer to the Monthly EM&A Monitoring Report No. 16 for November 2011 received under cover of the email from the Environmental Team, Action-United Environmental Services and Consulting (AUES), dated 13 December 2011. We have no comment and have verified the captioned report.

Yours faithfully

SCOTT WILSON CDM JOINT VENTURE

Rodney Ip

(Attn: Mr T.W. Tam) (Attn: Mr Neil Wong) (Attn: Mr Mark Sin)

## **EXECUTIVE SUMMARY**

ES.01. This is the **16<sup>th</sup>** monthly Environmental Monitoring and Audit (EM&A) Report for Sok Kwu Wan (hereinafter 'this Report') for the designated works under the Environmental Permit [EP-281/2007/A], covering a period from **1 to 30 November 2011** (hereinafter 'the Reporting Period').

#### ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.02. Environmental monitoring activities under the EM&A programme in this Reporting Period are summarized in the following table.

Issues	Environmental Monitoring Parameters / Inspection	Occasions
Air Quality	1-hour TSP	54
All Quality	24-hour TSP	15
Construction Noise	Leq (30min) Daytime	20
Water Quality	Marine Water Sampling	13
Inspection / Audit	ET Regular Environmental Site Inspection	5

ES.03. As informed by the Contractor, the marine work of outfall construction has been commenced on 19 July 2011, therefore, water quality was undertaken in this Reporting Period.

## BREACH OF ACTION AND LIMIT (A/L) LEVELS

- ES.04. No exceedance of construction noise and marine water quality monitoring were recorded in this Reporting Period. However, one (1) limit level exceedance of 24-hour TSP monitoring was recorded at Location AM3 on 25 November 2011. Notification of Exceedance (NOE) has been issued to relevant parties upon confirmation of the monitoring result.
- ES.05. The investigation report for the cause of exceedance has completed and it is concluded that the exceedance was due to large amount of dust emitted from the village vehicles which own by the Contractor. The Contractor was reminded to implement all recommended mitigation measures in the EM&A Manual, also control the speed limit of the village vehicle running along the construction site was suggested which could highly reduce the fugitive dust from the dusty road. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table.

Environmental	Monitoring	Action	I imit	Event & Action		
Issues	Parameters Parameters	O		NOE Issued	Investigation	Corrective Actions
	1-hour TSP	0	0	0		
Air Quality	24-hour TSP	0	1	1	Partially due to village vehicles owned by the Contractor	control the speed limit of the village vehicle
Construction Noise	Leq <sub>30min</sub> Daytime	0	0	0		
	DO	0	0	0		
Water Quality	Turbidity	0	0	0		
	SS	0	0	0		

Note: NOE – Notification of Exceedance

# ENVIRONMENTAL COMPLAINT, NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

- ES.06. No written or verbal environmental summons or successful prosecutions were recorded in this Reporting Period.
- ES.07. In this Reporting Period, one environmental complaint was received from Environmental Protection Department (EPD) on 16 November 2011 regarding cement water running into the sea

in Sok Kwu Wan. A site visit was then carried out by the EPD with the representative of Contactor and RE on 30 November 2011. During the site visit, EPD figured out that the quality of treated wastewater, which being discharge to the marine body, is not sufficient to meet the discharge license requirement. They strongly advised the Contractor to improve the desilting facility with proper remedial measures. As informed by the Contractor, the remedial action is on-going and they will submit the interim report for the rectification to EPD once the works done.

#### REPORTING CHANGE

ES.08. There is no reporting change in this Reporting Period.

#### SITE INSPECTION BY EXTERNAL PARTIES

ES.09. Apart from the site visit carried out by EPD on 30 November 2011, no site inspection by external parties was conducted in the Reporting Period.

#### **FUTURE KEY ISSUES**

- ES.10. During dry season, special attention should be paid to the dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road. Nevertheless, mitigation measures implemented for control the surface runoff including wheel wash facilities, covering of the loose soil surface or stockpile with tarpaulin sheet, etc., should fully implement.
- ES.11. Muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish Culture Zone (FCZ) at Picnic Bay and the secondary recreation contact subzone at Mo Tat Wan is the key issue of the Project. Mitigation measures for water quality should be properly maintained to prevent any muddy or sandy runoff from the loose soil surface overflow on the site boundary.

#### 1 INTRODUCTION

#### PROJECT BACKGROUND

- 1.01 The Leader Civil Engineering Corporation Limited (Leader) has been awarded the *Contract DC/2009/13 Construction of Sewage Treatment Works at Yung Shue Wan and Sok Kwu Wan* (the Project) by the Drainage Services Department (DSD) on 4 May 2010. The Project is part of an overall plan approved under a statutory EIA for Outlying Islands Sewerage Stage 1 Phase 2 Package J Sok Kwu Wan Sewage Collection and Treatment (Register No. AEIAR-075/2003) and Disposal Facilities and Outlying Islands Sewerage Stage 1 Phase 1 Package C Yung Shue Wan Sewage Treatment Works and Outfall (Register No. EIA-124/BC). The Environmental Permit (EP) No. EP-281/2007 and EP-282/2007 for the Project have been obtained by the DSD on 29 June 2007 for the relevant works. After July 2009, EP-281/2007/A stead EP-281/2007 is EP for Sok Kwu Wan relevant works.
- 1.02 The Project involves construction of sewage treatment works at Sok Kwu Wan and Yung She Wan with a capacity of 1,430m³/day and 2,850m³/day respectively to provide secondary treatment, construction of 2 pumping stations at Sok Kwu Wan and 1 pumping station at Yung Shue Wan, construction of submarine outfall from the coastline and lying of underground sewerage pipeline. The site layout plan for the captioned work under the Project is showing in *Appendix A*.
- 1.03 According to the Particular Specification (PS) and *Appendix 25* of the Project, Leader should establish an Environmental Team (ET) to implement the environmental monitoring and auditing works to fulfill the requirements as stipulated in the Environmental Monitoring and Audit (EM&A) Manual. This EM&A Manual is referred to the Appendix B of the Review Report on EIA Study Sok Kwu Wan (Final) in January 2007 (Agreement No. CE 20/2005(DS)).
- 1.04 Action-United Environmental Services and Consulting (AUES) has been commissioned by Leader as the ET to implement the relevant EM&A programme. Organization chart of the Environmental Team for the Project is shown in *Appendix B*. For ease of reporting, the proposed EM&A programme for baseline and impact monitoring is spilt to following two stand-alone parts:
  - (a) Proposed EM&A Programme for Baseline and Impact Monitoring Sok Kwu Wan (under EP No. 281/2007/A varied on 23 September 2009)
  - (b) Proposed EM&A Programme for Baseline and Impact Monitoring Yung Shue Wan (under EP No. 282/2007)
- 1.05 According to the EM&A Manual of Sok Kwu Wan and Yung Shue Wan, baseline water quality monitoring should be carried out for consecutive six months before the marine work commencement. Therefore, the baseline reports of Sok Kwu Wan and Yung Shue Wan are divided to two volumes i.e. the Volume 1 for air quality and noise monitoring; and the Volume II for water quality monitoring for separate submission.
- 1.06 There is a concurrent DSD contract "DC/2007/18 Yung Shue Wan and Sok Kwu Wan Village Sewerage, Stage 1 Works" undertaking at Sok Kwu Wan since April 2008.
- 1.07 Consider that the construction works of DC/2007/18 and DC/2009/13 at Sok Kwu Wan is under the same Environmental Permit and EM&A Manual, the performance criteria of air quality and construction noise at Sok Kwu Wan under the Project is recommended to adopt the Action/Limit Levels established by contract DC/2007/18. The Baseline Monitoring Report Volume 1 under the Project for air quality and noise at Sok Kwu Wan was submitted on 9 July 2010 and verified by IEC and for EPD endorsement before the relevant land works commencement on 27 July 2010.
- 1.08 This is the **16<sup>th</sup>** monthly EM&A Report Sok Kwu Wan Portion Area presenting the monitoring results and inspection findings for the Reporting Period from **1 to 30 November 2011**.

# REPORT STRUCTURE

1.09 The Monthly Environmental Monitoring and Audit (EM&A) Report – Sok Kwu Wan is structured into the following sections:-

SECTION 1	INTRODUCTION
SECTION 2	PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS
SECTION 3	SUMMARY OF MONITORING REQUIREMENTS
<b>SECTION 4</b>	AIR QUALITY MONITORING RESULTS
SECTION 5	CONSTRUCTION NOISE MONITORING RESULTS
SECTION 6	WATER QUALITY MONITORING RESULTS
SECTION 7	WASTE MANAGEMENT
SECTION 8	SITE INSPECTIONS
SECTION 9	ENVIRONMENTAL COMPLAINTS AND NON-COMPLIANCE
SECTION 10	IMPLEMENTATION STATUES OF MITIGATION MEASURES
SECTION 11	IMPACT FORECAST
SECTION 12	CONCLUSIONS AND RECOMMENDATION

#### 2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

#### PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.01 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*.

#### CONSTRUCTION PROGRESS

- 2.02 The master and three month rolling construction programme are enclosed in *Appendix C* and the major construction activities undertaken in this Reporting Period are listed below:-
  - Construction of Pumping Station No. 1& 2
  - Construction of Rising Main
  - Rock Slope Cutting Works
  - Construction of HDD Platform

#### SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.03 Summary of the relevant permits, licences, and/or notifications on environmental protection for this Project in this Reporting Period is presented in *Table 2-1*.

**Table 2-1** Status of Environmental Licenses and Permits

Item	Description	License/Permit Status
1	Air Pollution Control (Construction Dust) Regulation	Notified EPD on 19 May 2010
		Ref.: 317486
2	Chemical Waste Producer Registration	Issued on 8/6/2010
		WPN 5213-912-L2720-01
3	Water Pollution Control Ordinance	Approved on 29/9/2010
		Valid to: 30/09/2015
		Licence no.: WT00007567-2010
4	Billing Account for Disposal of Construction Waste	Issued on 26 May 2010
		A/C No: 7010815
5	Construction Noise Permit	Permit no. GW-RS0771-11
		Valid from: 2 Sep 2011
		Until: 1 Mar 2012

- 2.04 The "Baseline/Impact Monitoring Methodology (TCS00512/09/600/R0010Ver.4)" was set out in accordance with the Sok Kwu Wan EM&A Manual' requirements. It was approved by the Engineer Representative (ER) and agreed with the Independent Environmental Checker (IEC) and then submitted to the EPD on 8 July 2010.
- 2.05 Baseline Monitoring Report Volume 1 for Sok Kwu Wan (TCS00512/09/600/R0020Ver.3) was verified by the IEC on 12 July 2010 and submitted to EPD on 12 July 2010.
- 2.06 Baseline Water Quality Monitoring Report Volume 2 for Sok Kwu Wan (TCS00512/09/600/R0182v7) was revised against EPD comments and re-submitted on 11 October 2011.

# 3 SUMMARY OF BASELINE MONITORING REQUIREMENTS

#### ENVIRONMENTAL ASPECT

- 3.01 The EM&A baseline monitoring programme cover the following environmental issues:
  - Air quality;
  - · Construction noise; and
  - Marine water quality
- 3.02 The ET implements the EM&A programme in accordance with the aforementioned requirements. Detailed air quality, construction noise and water quality of the EM&A programme are presented in the following sub-sections.
- 3.03 A summary monitoring parameters for the air quality, noise and marine water monitoring is presented in *Table 3-1*:

**Table 3-1 Summary of EM&A Requirements** 

<b>Environmental Issue</b>	Parameters
Air Quality	1-hour TSP Monitoring by Real-Time Portable Dust Meter; and
All Quality	• 24-hour TSP Monitoring by High Volume Air Sampler.
Noise	• Leq (30min) during normal working hours; and
Noise	Leq (15min) during Restricted Hours.
	In-situ Measurements
	<ul> <li>Dissolved Oxygen Concentration (DO) (mg/L);</li> </ul>
	• Dissolved Oxygen Saturation (%);
	• Turbidity (NTU);
Marina Watan Ovality	• pH unit;
Marine Water Quality	• Salinity (ppt);
	• Water depth (m); and
	• Temperature (°C).
	Laboratory Analysis
	• Suspended Solids (SS) (mg/L)

#### MONITORING LOCATIONS

## **Air Quality**

3.04 Three air monitoring stations: AM1, AM2 and AM3 were designated in the *EM&A Manual Section* 2.5. The detailed air monitoring stations is described in *Table 3-2* and graphical is shown in *Appendix D*.

Table 3-2 Location of Air Quality Monitoring Station

Sensitive Receiver	Location
AM1	Squatter house in Chung Mei Village
AM2	Squatter house in Chung Mei Village
AM3	Football court

# **Construction Noise**

3.05 According to *EM&A Manual Section 3.4*, there were four noise sensitive receivers (NM1-NM4) designated for the construction noise monitoring. NM1, NM2 and NM4 of the three designated monitoring stations were identified and are monitored by the current DSD contract DC/2007/18. However, the premises monitoring station NM3 was rejected by the owner of 1B Sok Kwu Wan and an alternative noise monitoring station RNM3 replacement was proposed by the contract DC/2007/18 ET and accepted by the IEC and EPD before the baseline monitoring commencement in April 2008. The location RNM3 is located at Sok Kwu Wan Sitting-out area which just 3m width footpath away from the original location house 1B. The detailed construction noise monitoring stations to also under the Project is described in *Table 3-3* and graphical is shown in *Appendix D*.

Table 3-3 Location of Construction Noise Monitoring Station

Sensitive Receiver	Location
NM1	1, Chung Mei Village
NM2	20, Sok Kwu Wan
RNM3	Sok Kwu Wan Sitting-out Area
NM4	2-storey village house at Ta Shui Wan

# **Water Quality**

3.06 Three control stations (C1-C3) and three impact stations (W1-W3) were recommended in the *EM&A Manual Section 4.5*. Impact stations W1-W3 identified at the sensitive receivers (FCZ and secondary contact recreation subzone) to monitor the impacts from the construction of the submarine outfall as well as the effluent discharge from the proposed STW on water quality. Three control stations: C1, C2 & C3 were specified at locations representative of the project site in its undisturbed condition and located at upstream and downstream of the works area. Detailed and co-ordnance of marine water quality monitoring stations is described in *Table 3-4* and the graphical is shown in *Appendix D* and would be performed for EM&A programme.

**Table 3-4** Location of Marine Water Quality Monitoring Station

Station	Degarintian	Co-ordnance			
Station	Description	Easting	Northing		
W1	Secondary recreation contact subzone at Mo Tat Wan	832 968	807 732		
W2	Fish culture zone at Picnic Bay	832 670	807 985		
W3	Fish culture zone at Picnic Bay	832 045	807 893		
C1 (flood)	Control Station	833 703	808 172		
C2	Control Station	831 467	807 747		
C3 (ebb)	Control Station	832 220	808 862		

#### MONITORING FREQUENCY AND PERIOD

3.07 The impact monitoring carried out in the EM&A programme is basically in accordance with the requirements in *EM&A Manual Sections* 2.7, 3.6, 4.7 and 4.8. The monitoring requirements are listed as follows.

# Air Quality Monitoring

Parameters: 1-hour TSP and 24-hour TSP.

Frequency: Once in every six days for 24-hour TSP and three times in every six days for

1-hour TSP.

<u>Duration</u>: Throughout the construction period.

#### Noise Monitoring

<u>Parameters</u>:  $L_{eq 30min}$  &  $L_{eq(5min)}$ ,  $L_{10}$  and  $L_{90}$ .

 $L_{eq(15min)}$  &  $L_{eq(5min)}$ ,  $L_{10}$  and  $L_{90}$  during the construction undertaken during Restricted hours (19:00 to 07:00 hours next of normal working day and full day of

public holiday and Sunday)

Frequency: Once per week during 0700-1900 hours on normal weekdays. Restricted hour

monitoring should depend on conditions stipulated in Construction Noise Permit.

Duration: Throughout the construction period.

# Marine Water Quality Monitoring

Parameters: Duplicate in-situ measurements: water depth, temperature, dissolved oxygen, pH,

turbidity and salinity;

HOKLAS-accredited laboratory analysis: suspended solids

<u>Frequency</u>: Three days a week, at mid ebb and mid flood tides. The interval between 2 sets of monitoring will be more than 36 hours.

Sampling Depth

- (i.) Three depths: 1m below water surface, 1m above sea bottom and at mid-depth when the water depth exceeds 6m.
- (ii.) If the water depth is between 3m and 6m, two depths: 1m below water surface and 1m above sea bottom.
- (iii.) If the water depth is less than 3m, 1 sample at mid-depth is taken

Duration: During the course of marine works

## **Post-Construction Monitoring – Marine Water**

3.08 Upon the marine works (dredging and HDD pipe installation) completion, 4 weeks of post-construction monitoring would be undertaken in accordance with the *Section 4.8 of EM&A Manual*. The requirements of post-construction monitoring such as the parameter, frequency, location and sampling depth is same as the impact monitoring.

## MONITORING EQUIPMENT

### Air Quality Monitoring

3.09 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the *Title 40 of the Code of Federal Regulations, Chapter 1 (Part 50), Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve. The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.

# Noise Monitoring

3.10 Sound level meter in compliance with the *International Electrotechnical Commission Publications* 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s<sup>-1</sup>.

#### Water Quality Monitoring

- 3.11 **Dissolved Oxygen and Temperature Measuring Equipment** The instrument should be a portable and weatherproof dissolved oxygen (DO) measuring instrument complete with cable and sensor, and use a DC power source. The equipment should be capable of measuring as included a DO level in the range of 0 20 mg L-1 and 0 200% saturation; and a temperature of 0 45 degree Celsius.
- 3.12 *pH Meter* The instrument shall consist of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It shall be readable to 0.1 pH in a range of 0 to 14.
- 3.13 *Turbidity (NTU) Measuring Equipment* The instrument should be a portable and weatherproof turbidity measuring instrument using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0 1000 NTU.
- 3.14 *Water Sampling Equipment* A water sampler should comprise a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler should have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.
- 3.15 *Water Depth Detector* A portable, battery-operated echo sounder should be used for the determination of water depth at each designated monitoring station. This unit can either be hand held or affixed to the bottom of the work boat.
- 3.16 *Salinity Measuring Equipment* A portable salinometer capable of measuring salinity in the range of 0 40 parts per thousand (ppt) should be provided for measuring salinity of the water at each monitoring location.

- 3.17 **Sample Containers and Storage** Water samples for suspended solids should be stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4°C without being frozen).
- 3.18 *Monitoring Position Equipment* A hand-held or boat-fixed type digital Differential Global Positioning System (DGPS) with way point bearing indication and Radio Technical Commission for maritime (RTCM) Type 16 error message 'screen pop-up' facilities (for real-time auto-display of error messages and DGPS corrections from the Hong Kong Hydrographic Office), or other equipment instrument of similar accuracy, should be provided and used during marine water monitoring to ensure the monitoring vessel is at the correct location before taking measurements.
- 3.19 **Suspended Solids Analysis** Analysis of suspended solids shall be carried out in a HOKLAS or other international accredited laboratory.

## **EQUIPMENT CALIBRATION**

- 3.20 Calibration of the HVS is performed upon installation in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model TE-5025A). The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.21 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment was checked before and after each monitoring event. In-house calibration with the High Volume Sampler (HVS) in same condition was undertaken in yearly basis.
- 3.22 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.23 The Water Quality Monitoring equipments such as DO meter, pH meter, turbidity measuring instrument and salinometer, are calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.24 All updated calibration certificates of the monitoring equipment used for the impact monitoring programme in the Reporting Period would be attached in *Appendix E*.

#### METEOROLOGICAL INFORMATION

3.25 The meteorological information during the construction phase is obtained from the Wong Chuk Hang Station of the Hong Kong Observatory (HKO) due to it nearly the Project site.

#### DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.26 The impact monitoring data are handled by the ET's systematic data recording and management, which complies with in-house Quality Management System. Standard Field Data Sheets (FDS) are used in the impact monitoring programme.
- 3.27 The monitoring data recorded in the equipment e.g. 1-hour TSP meter, sound level meter and Multi-parameter Water Quality Monitoring System, are downloaded directly from the equipments at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data. For monitoring activities require laboratory analysis, the local laboratory follows the QA/QC requirements as set out under the HOKLAS scheme for all laboratory testing.

#### DETERMINATION OF ACTION/LIMIT (A/L) LEVELS

3.28 According to the Sok Kwu Wan Environmental Monitoring and Audit Manual, the air quality, construction noise and marine water quality were set up, namely Action and Limit levels are listed in *Tables 3-5*, *3-6 and 3-7* as below.

Table 3-5 Action and Limit Levels for Air Quality

Monitoring Station	Action Le	vel (μg/m³)	Limit Level (µg/m³)			
Withintoning Station	1-hour	24-hour	1-hour	24-hour		
AM1	343	173	500	260		
AM2	331	175	500	260		
AM3	353	191	500	260		

Table 3-6 Action and Limit Levels for Construction Noise

Monitoring	Action Level	Limit Level					
Location	0700-1900 hours on normal weekdays						
NM1 NM2 RNM3 NM4	When one or more documented complaints are received	75 dB(A) of $L_{eq(30min)}$ during normal hours from 0700 to 1900 hours on normal weekdays, reduced to 70 dB(A) of $L_{eq(30min)}$ for schools and 65 dB(A) during school examination periods					

Table 3-7 Action and Limit Levels for Marine Water Quality

Parameter	Performance	In	npact Stati	on
Parameter	Criteria	W1	W2	W3
DO Concentration (Surface and Middle)	Action Level	5.39	4.64	4.71
(mg/L)	Limit Level	5.29	4.56	4.54
DO Concentration (Bottom)	Action Level	N/A	3.60	3.37
(mg/L)	Limit Level	N/A	3.06	3.18
Turbidity (Depth-Average)	Action Level	4.39	4.84	6.48
(NTU)	Limit Level	6.06	5.99	6.71
Suspended Solids (Depth-Average)	Action Level	12.41	9.24	10.79
(mg/L)	Limit Level	12.68	11.28	12.25

3.29 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan enclosed in *Appendix F*.

# 4 IMPACT MONITORING RESULTS - AIR QUALITY

4.01 As informed by Leader, the construction of relevant land works at Sok Kwu Wan was commenced on 27 July 2010, therefore, the impact EM&A programme was started as compliance with the contract Particular Specification, Sok Kwu Wan EM&A Manual and the EP.

# **Results of Air Quality Monitoring**

4.02 In this Reporting Period, **54** and **15** monitoring events were performed for 1-hour TSP and 24-hour TSP monitoring respectively at the designated locations AM1, AM2 and AM3. The monitoring results for 24-hour and 1-hour TSP at AM1, AM2 and AM3 are summarized in **Tables 4-1**, **4-2** and **4-3** respectively. The detail 24-hour TSP data are shown in **Appendix G** and the graphical plots of are shown in **Appendix H**.

Table 4-1 Summary of 24-hour and 1-hour TSP Monitoring Results – AM1

	24-hour			1-hour TSP				
Date	TSP (µg/m³)	Date	Start Time	1 <sup>st</sup> hour measured	2 <sup>nd</sup> hour measured	3 <sup>rd</sup> hour measured

4.03 As shown in *Tables 4-1*, 4-2 and 4-3, 1-hour TSP results fluctuated well below the Action Level during the Reporting Period. However, one (1) limit level exceedance of 24-hour TSP monitoring was recorded at Location AM3 on 25 November 2011. Notification of Exceedance (NOE) has

been issued to relevant parties upon confirmation of the monitoring result. The investigation report for the cause of exceedance has been conducted.

- 4.04 The exceedance monitoring location AM3 is adjacent to the proposed Pumping Station 2 (PS2) and a pubic road. As informed by the Contractor, the major construction activities undertaken at PS2 during the captioned exceedance were construction of formwork and concreting. As an environmental point of view, those work nature would not create excessive dust impact. However, large amount of dust emitted from the village vehicles, which partially owned by the Contractor, during high wind speed and dry weather condition were noted on the public road nearby. As an air mitigation measure, the Contractor has provided watering to the road path and wheel washing facilities on site.
- 4.05 It appears that the implemented mitigation measures are not sufficient to cope with dust impact due to construction work during dry season. It is concluded that the exceedance was partially related to the work under the Project. The Contractor should fully implement the dust mitigation measures recommended in the EM&A manual. In addition, the Contractor was recommended to control the speed limit of the village vehicle running along the construction site which could highly reduce the fugitive dust from the dusty road.
- 4.06 According to the Event/ Action Plan in the EM&A Manual, the ET will oversee the subsequent monitoring results and addition monitoring may be required if repeated exceedance occur.
- 4.07 The meteorological information during the impact monitoring days are summarized in *Appendix I*.

# 5 IMPACT MONITORING RESULTS - CONSTRUCTION NOISE

5.01 The noise monitoring results are presented in the following sub-sections.

## **Results of Construction Noise Monitoring**

5.02 In this Reporting Period, 5 construction noise monitoring events were undertaken at designated location NM1, NM2, RNM3 and NM4. The results for L<sub>eq30min</sub> at NM1, NM2, RNM3 and NM3 are summarized in *Tables 5-1*, 5-2, 5-3 and 5-4 and graphical plots are shown in *Appendix H*.

Limit Le	vel in dI	B(A)	-						75

5.03 It was noted that no noise complaint (which is an Action Level exceedance) was received. In view of the results shown in *Tables 5-1*, *5-2*, *5-3* and *5-4* which were all below 75dB(A), no Action or Limit Level exceedance was triggered during this month.

# 6 IMPACT MONITORING RESULTS – WATER QULAITY

- 6.01 The construction of marine outfall works was commenced on 19 July 2011 and therefore marine water quality monitoring is required in this Reporting Period. In this Reporting Period, 13 events of water quality monitoring were carried out at the designated locations. The monitoring results including in-situ measurements and laboratory testing results are presented in *Appendix G*. The graphical plots are shown in *Appendix H*.
- 6.02 During the Reporting Period, field measurements of both control and impact stations showed that marine water of the depth average of the salinity concentration was within 29.66 to 32.99 ppt, and pH value was within 7.85 to 8.27.
- 6.03 Monitoring results of 3 key parameters: dissolved oxygen (DO), turbidity and suspended solids (SS) in this Reporting Period, are summarized in *Tables 6-1*, 6-2, 6-3 and 6-4. A summary of exceedances for the 3 parameters are shown in *Table 6-5*.

6.04 For marine water monitoring, no exceedance of Action/Limit levels was recorded in this Reporting Period. Therefore, no associated corrective actions were then required.

#### 7 ECOLOGY

- 7.01 According to Clause 3.7 and Figure 4 in the Environmental Permit No. EP-281/2007/A, a total of 12 numbers *Celtis Timorensis* (uncommon species) in Chung Mei at Sok Kwu Wan, are identified to require labeling, fencing and protection. Out of these, four numbers located in the Pumping Station No.1 area are required to be transplanted in advance of pumping station construction and the transplantation proposal has been submitted to EPD previously.
- 7.02 Regular inspection of the transplanted tree was carried out by the landscaping sub-Contractor (Melofield Nursery and Landscape Contractor Limited) on **8 November 2011**. As a contingency measure in case that CT7 to CT10 can no longer be recovered, additional 7 no. of *Celtis Timorensis* were planted adjacent to the under-monitoring *Celtis Timorensis* CT7 to CT10 on 30 April 2011. As the conditions of the transplanted and compensated *Celtis Timorensis* are still not satisfactory, a full review of the plants is required. As informed by the Contractor, a full review report is under preparation and the expected submission time would be December 2011.
- 7.03 The tree inspection report is presented in *Appendix M*.

#### 8 WASTE MANAGEMENT

8.01 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

# **Records of Waste Quantities**

- 8.02 All types of waste arising from the construction work are classified into the following:
  - Construction & Demolition (C&D) Material;
  - Chemical Waste;
  - General Refuse; and
  - Excavated Soil
- 8.03 The quantities of waste for disposal in this Reporting Period are summarized in *Table 8-1* and *8-2* and the Monthly Summary Waste Flow Table is shown in *Appendix J*. Whenever possible, materials were reused on-site as far as practicable.

Table 8-1 Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity	Disposal Location
C&D Materials (Inert) ('000m <sup>3</sup> )	0.017	Sok Kwu Wan Transfer Facility
Reused in the Contract (Inert) ('000m <sup>3</sup> )	0	-
Reused in other Projects (Inert) ('000m <sup>3</sup> )	5.176	-
Disposal as Public Fill (Inert) ('000m <sup>3</sup> )	0	Sok Kwu Wan Transfer Facility

Table 8-2 Summary of Quantities of C&D Wastes

Type of Waste	Quantity	Disposal Location
Metal (kg)	0	-
Paper / Cardboard Packing (kg)	0	-
Plastic (kg)	0	-
Chemical Wastes (kg)	0	-
General Refuses (tonne)	4.59	Sok Kwu Wan Transfer Facility

8.04 There was no site effluent discharged but the estimated volume of surface runoff was less than 50m<sup>3</sup> in this monthly period.

## 9 SITE INSPECTION

- 9.01 According to the Environmental Monitoring and Audit Manual, the environmental site inspection should been formulated by ET Leader. Regular environmental site inspections had been carried out by the ET to confirm the environmental performance. In this Reporting Period, weekly site inspection by ET was carried out on 1, 8, 15, 22 and 29 November 2011 and a joint-site visit by IEC Representative, RE, the Contractor and ET was carried out on 8 November 2011.
- 9.02 The findings/ deficiencies that observed during the weekly site inspection are listed in *Table 9-1* and the relevant checklists are attached in *Appendix K*.

**Table 9-1 Site Observations** 

Date	Findings / Deficiencies	Follow-Up Status
1 November 2011	<ul> <li>Dry haul road was observed at PS1, the Contractor should apply water spraying as the air mitigation measure.</li> <li>Electric wire was hang on the tree branch at Portion F, the Contractor should remove it a.s.a.p.</li> <li>The de-silting concrete tank facility at L2 should be improved.</li> </ul>	The deficiencies have been followed during site inspection on 8 November 2011
8 November 2011	<ul> <li>The Contractor is reminded to keep the construction site clean and maintain the site tidiness and good housekeeping.</li> <li>The Contractor is advised to switch off any powered plant / equipment when long-term idling.</li> <li>The Contractor is reminded to treat the chemical waste, such as wastes glue, paint, oil, etc. properly in accordance with EPD guidelines.</li> <li>The Contractor is reminded to replace the old and dilapidated sandbags along the seashore.</li> <li>The Contractor is reminded to check the condition of the silt curtain, and take remedial action to prevent the re-occurrence of "folding" of silt curtain.</li> </ul>	The deficiencies have been followed during site inspection on 15 November 2011
15 November 2011	Water spraying should be maintained on the site access road to minimize dust nuisance.  (PS1)	The deficiencies have been followed during site inspection on 22 November 2011
22 November 2011  29 November	<ul> <li>Oil leakage was observed from the plant under maintenance. The Contractor should provide drip tray and avoid spillage to sea coast nearby. (Portion G)</li> <li>As reminded that more sedimentation tanks could be provided for the concrete sedimentation to increase its effectiveness and blocked outlet outlets pipe should re-positioned. (Portion G)</li> <li>Sedimentation tank under concrete plant at</li> </ul>	To be followed.  To be followed.
2011	Portion L2 has to be cleaned up to restore its de-silting function.	22 30 2323 331

# 10 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

10.01 No environmental complaint, summons and prosecution was received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 10-1*, *10-2* and *10-3*.

**Table 10-1** Statistical Summary of Environmental Complaints

Donauting Davied	Envir	<b>Environmental Complaint Statistics</b>						
Reporting Period	Frequency	Cumulative	Complaint Nature					
27 July 2010 – 31 October 2011	0	0	NA					
1 – 30 November 2011	1	1	Marine water quality					

 Table 10-2
 Statistical Summary of Environmental Summons

Danauting Davied	Envir	<b>Environmental Summons Statistics</b>						
Reporting Period	Frequency	Cumulative	<b>Complaint Nature</b>					
27 July 2010 – 31 October 2011	0	0	NA					
1 – 30 November 2011	0	0	NA					

**Table 10-3** Statistical Summary of Environmental Prosecution

Donouting Donied	Enviro	<b>Environmental Prosecution Statistics</b>						
Reporting Period	Frequency	Cumulative	Complaint Nature					
27 July 2010 – 31 October 2011	0	0	NA					
1 – 30 November 2011	0	0	NA					

10.02 In this Reporting Period, one environmental complaint was received from Environmental Protection Department (EPD) on 16 November 2011 regarding cement water running into the sea in Sok Kwu Wan. A site visit was then carried out by the EPD with the representative of Contactor and RE on 30 November 2011. During the site visit, EPD figured out that the quality of treated wastewater, which being discharge to the marine body, is not sufficient to meet the discharge license requirement. They strongly advised the Contractor to improve the desilting facility with proper remedial measures. As informed by the Contractor, the remedial action is on-going and they will submit the interim report for the rectification to EPD once the works done.

#### 11 IMPLEMENTATION STATUS OF MITIGATION MEASURES

11.01 The environmental mitigation measures that recommended in the Sok Kwu Wan Environmental Monitoring and Audit covered the issues of dust, noise, water and waste and they are summarized as following:

# **Dust Mitigation Measure**

- 11.02 Installation of 2m high solid fences around the construction site of Pumping Station P2 is recommended. Implementation of the requirements stipulated in the Air Pollution Control (Construction Dust) Regulation and the following good site practices are recommended to control dust emission from the site:
  - (a) Stockpiles of imported material kept on site should be contained within hoardings, dampened and / or covered during dry and windy weather;
  - (b) Material stockpiled alongside trenches should be covered with tarpaulins whenever works are close to village houses;
  - (c) Water sprays should be used during the delivery and handling of cement, sands, aggregates and the like.
  - (d) Any vehicle used for moving sands, aggregates and construction waste shall have properly fitting side and tail boards. Materials should not be loaded to a level higher than the side and tail boards, and should be covered by a clean tarpaulin.

## **Noise Mitigation Measure**

- 11.03 As detailed in the EIA report, concreting work of the Pumping Station P1a and sewer alignment construction activities would likely cause adverse noise impacts on some of the noise sensitive receivers. Appropriate mitigation measures have therefore been recommended. The mitigation measures recommended in the EIA report are summarised below:
  - (a) Use of quiet equipment for the construction activities of the Pumping Stations and sewer alignment;
  - (b) Use of temporary noise barrier around the site boundary of Pumping Station P1a;
  - (c) Use of kick ripper (saw and lift) method to replace the breaker for pavement removal during sewer alignment construction;
  - (d) Restriction on the number of plant during sewer alignment construction;
  - (e) Use of noise screening structures in the form of acoustic shed or movable barrier wherever practicable and feasible in areas with sufficient clearance and headroom during the construction of sewer alignment;
  - (f) Adoption of manual working method wherever practicable and feasible in areas where the worksites of the proposed sewer alignment are located less than 20m from the residential noise sensitive receivers and less than 30m from the temple and the public library; and
  - (g) Implementation of the following good site practices:
    - Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme.
    - Mobile plant, if any, should be sited as far away from NSRs as possible.
    - Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.
    - Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.
    - Material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities.

# **Water Quality Mitigation Measure**

No-dig method using Horizontal Directional Drilling (HDD) would be used for the installation of outfall pipe of about 480 m from shore to minimize the potential water quality impacts arising from the dredging works required for the submarine outfall construction. For the remaining outfall pipe of about 240m and the diffuser section, open trench dredging would still be required.

- 11.05 During the dredging works, the Contractor should be responsible for the design and implementation of the following mitigation measures.
  - Dredging should be undertaken using closed grab dredgers with a total production rate of 55m<sup>3</sup>/hr;
  - Deployment of 2-layer silt curtains with first layer enclosing the grab and the second layer at around 50, from the dredging area while dredging works are in progress;
  - all vessels should be sized such that adequate clearance (i.e. minimum clearance of 0.6m) is maintained between vessels and the sea bed at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash;
  - all pipe leakages should be repaired promptly and plant shall not be operated with leaking pipes;
  - excess material should be cleaned from the decks and exposed fittings of barges before the vessel is moved;
  - adequate freeboard (i.e. minimum of 200m) should be maintained on barges to ensure that decks are not washed by wave action;
  - all barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material; and
  - loading of barges and hoppers should be controlled to prevent splashing of dredged material to the surrounding water, and barges and hoppers should not be filled to a level which would cause the overflow of materials or sediment laden water during loading or transportation; and
  - the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.

#### Construction Run-off and Drainage

- 11.06 The Contractor should observe and comply with the Water Pollution Control Ordinance and the subsidiary regulations. The Contractor should follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in ProPECC PN 1/94 "Construction Site Drainage". The design of the mitigation measures should be submitted by the Contractor to the Engineer for approval. These mitigation measures should include the following practices to minimise site surface runoff and the chance of erosion, and also to retain and reduce any suspended solids prior to discharge:
  - Provision of perimeter channels to intercept storm-runoff from outside the site. These should be constructed in advance of site formation works and earthworks.
  - Works programmes should be designed to minimize works areas at any one time, thus minimising exposed soil areas and reducing the potential for increased siltation and runoff.
  - Sand/silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand/silt particles from run-off. These facilities should be properly and regularly maintained. These facilities shall be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site.
  - Careful programming of the works to minimise soil excavation works during rainy seasons.
  - Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.
  - Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.
  - Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric.

## General Construction Activities

11.07 Debris and rubbish generated on-site should be collected, handled and disposed of properly to avoid entering the nearby coastal waters and stormwater drains. All fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. Open drainage channels and culverts near the works areas should be covered to block the entrance of large debris and refuse.

# Wastewater Arising from Workforce

11.08 Portable toilets shall be provided by the Contractors, where necessary, to handle sewage from the workforce. The Contractor shall also be responsible for waste disposal and maintenance practices

# **Sediment Contamination Mitigation Measure**

- 11.09 The basic requirements and procedures for dredged mud disposal are specified under the WBTC No. 34/2002. The management of the dredging, use and disposal of marine mud is monitored by the MFC, while the licensing of marine dumping is the responsibility of the Director of Environmental Protection (DEP).
- 11.10 The uncontaminated dredged sediment will be loaded onto barges and transported to the designated marine disposal site. Appropriate dredging methods have been incorporated into the recommended water quality mitigation measures including the use of closed-grab dredgers and silt curtains. Category L sediment would be suitable for disposal at a gazetted open sea disposal ground.
- During transportation and disposal of the dredged marine sediments, the following measures should be taken to minimize potential impacts on water quality:
  - Bottom opening of barges should be fitted with tight fitting seals to prevent leakage of material. Excess material should be cleaned from the decks and exposed fittings of barges and hopper dredgers before the vessel is moved.
  - Monitoring of the barge loading should be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels should be equipped with automatic self-monitoring devices as specified by the DEP.

# **Construction Waste Mitigation Measure**

## **Good Site Practices and Waste Reduction Measures**

- 11.12 It is not anticipated that adverse waste management related impacts would arise, provided that good site practices are strictly followed. Recommendations for good site practices for the construction waste arising include:
  - Nomination of an approved person, such as a site manager, to be responsible for the implementation of good site practices, arranging for collection and effective disposal to an appropriate facility, of all wastes generated at the site.
  - Training of site personnel in proper waste management and chemical handling procedures.
  - Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers.
  - Provision of sufficient waste disposal points and regular collection for disposal.
  - Separation of chemical wastes for special handling and appropriate treatment at the Chemical Waste Treatment Facility.
  - Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors.
  - Maintain records of the quantities of wastes generated, recycled and disposed.
- 11.13 In order to monitor the disposal of C&D waste at landfills and to control fly tipping, a trip-ticket system should be included as one of the contractual requirements and implemented by an Environmental Team undertaking the Environmental Monitoring and Audit work. An Independent Environmental Checker should be responsible for auditing the results of the system.
- 11.14 Good management and control can prevent the generation of significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:
  - segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;

- to encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the work force;
- any unused chemicals or those with remaining functional capacity should be recycled;
- use of reusable non-timber formwork to reduce the amount of C&D material;
- prior to disposal of C&D waste, it is recommended that wood, steel and other metals should be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill:
- proper storage and site practices to minimise the potential for damage or contamination of construction materials; and
- plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.

## General Site Wastes

11.15 A collection area should be provided where waste can be stored prior to removal from site. An enclosed and covered area is preferred for the collection of the waste to reduce 'wind blow' of light material.

# Chemical Wastes

- 11.16 After use, chemical waste (eg. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Any unused chemicals or those with remaining functional capacity should be recycled. Spent chemicals should be properly stored on site within suitably designed containers, and should be collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licenced facility in accordance with the Waste Disposal (Chemical Waste) (General) Regulation under the Waste Disposal Ordinance.
- 11.17 Any service shop and minor maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakages and spillage should only be undertaken with the areas appropriately equipped to control these discharges.

## Construction and Demolition Material

- 11.18 The C&D material should be separated on-site into three categories: (i) public fill, the inert portion of the C&D material (e.g. concrete and rubble), which should be re-used on-site or disposed of at a public filling area; (ii) C&D waste for re-use and/or recycling, the non-inert portion of the C&D material, (e.g. steel and other metals, wood, glass and plastic); (iii) C&D waste which cannot be re-used and/or recycled. The waste producers are responsible for its disposal at strategic landfills.
- 11.19 In order to minimise the impact resulting from collection and transportation of material for off-site disposal, it was recommended that inert material should be re-used on-site where possible. Prior to disposal of C&D material, it was also recommended that steel and other metals should be separated for re-use and/or recycling where practicable to minimise the quantity of waste to be disposed of to landfill.

# **Ecology Mitigation Measure**

## Terrestrial Ecology

- 11.20 The uncommon tree species should be labelled and probably fenced to avoid direct or indirect disturbance during construction. Works areas should avoid woodland habitats, in particular where these trees are located.
- 11.21 Construction and maintenance of site runoff control measures would be required at all work sites during construction. These should include barriers to direct runoff to sand/silt removal facilities (sand/silt/traps and/or sediment basins); minimisation of earthworks during rainy season (May to September); and coverage of sand/fill piles and exposed earth during storms.

11.22 Special attention should be paid during the breeding season of Romer's Tree Frog (March to September) to ensure their habitat landward to Pumping Station P2 site is well protected from site runoff. Barriers should be deployed completely along the landward side of the pumping station site boundary to prevent any site runoff from entering the tree frog habitat. Intactness of the barriers should be frequently inspected.

# Intertidal and Subtidal Ecology

- 11.23 Construction and maintenance of site runoff control measures would be required at all work sites during construction. These should include barriers to direct runoff to sand/silt removal facilities (sand/silt/traps and/or sediment basins); use of silt curtains along coastline; minimisation of earthworks during rainy season (May to September); and coverage of sand/fill piles and exposed earth during storms.
- 11.24 To reduce impacts of sediment resuspension upon nearby habitats and organisms during dredging, all dredging should be done using a closed-grab dredger, and silt curtains should be deployed around the dredger during all dredging activity

## **Fisheries Mitigation Measure**

11.25 Closed grab dredger, deployment of silt curtains around the immediate dredging area and low dredging rate have been recommended in Water Quality of the EIA report in order to minimise sediment release into the water column.

## **Landscape & Visual Mitigation Measure**

- 11.26 Mitigation measures recommended in the EIA Report for landscape and visual impacts during the construction stage are summarised below.
  - Screening of site construction works by use of hoarding that is appropriate to its site context;
  - Retaining existing trees and minimising damage to vegetation where possible by close co-ordination and on site alignment adjusted of rising main and gravity sewer pipelines. Tree protective measures should be implemented to ensure trees identified as to be retained are satisfactorily protected during the construction phase;
  - Careful and efficient transplanting of affected trees (1 no.) to temporary or final transplant location (the proposed tree to be transported is a semi-mature *Macaranga tanarius* and is located at the proposed Pumping Station P2 location);
  - Short excavation and immediate backfilling of sections upon completion of works to reduce active site area;
  - Conservation of top-soil for reuse.
  - Night-time light source from marine fleets should be directed away from the residential units
- 11.27 The implementation schedule of mitigation measures is presented in *Appendix L*.
- 11.28 Leader had been implementing the required environmental mitigation measures according to the Sok Kwu Wan Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by Leader in this Reporting Period are summarized in *Table 11-1*.

**Table 11-1 Environmental Mitigation Measures** 

Issues	Environmental Mitigation Measures
Ouality	<ul> <li>Drainage channels were provided to convey run-off into the treatment facilities; and</li> <li>Drainage systems were regularly and adequately maintained.</li> </ul>
	<ul> <li>Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet;</li> <li>Public roads around the site entrance/exit had been kept clean and free from dust; and</li> <li>Tarpaulin covering of any dusty materials on a vehicle leaving the site.</li> </ul>

Issues	Environmental Mitigation Measures
Noise	Good site practices to limit noise emissions at the sources;
	• Use of quite plant and working methods;
	• Use of site hoarding or other mass materials as noise barrier to screen noise at
	ground level of NSRs; and
	To minimize plant number use at the worksite.
Waste and	• Excavated material should be reused on site as far as possible to minimize off-site
Chemical	disposal. Scrap metals or abandoned equipment should be recycled if possible;
Management	• Waste arising should be kept to a minimum and be handled, transported and
ivianagement	disposed of in a suitable manner;
	• The Contractor should adopt a trip ticket system for the disposal of C&D
	materials to any designed public filling facility and/or landfill; and
	• Chemical waste shall be handled in accordance with the Code of Practice on the
	Packaging, Handling and Storage of Chemical Wastes.
General	The site was generally kept tidy and clean.

#### 12 IMPACT FORECAST

12.01 Key issues to be considered in the coming month include:

#### Water Quality

- Erect of sand bag in proper area to avoid any muddy surface runoff from the loose soil surface or haul road during the rainy days; and
- The accumulated stagnant water should be drained away.

#### Air Quality

- Vehicles shall be cleaned of mud and debris before leaving the site;
- Stockpile and loose soil surface shall be covered with tarpaulin sheet or other means to eliminate the fugitive dust;
- Water spaying on the dry haul road and exit/entrance of the site in regular basis is reminded;
   and
- Public roads around the site entrance/exit had been kept clean and free from dust.

#### Noise

- Works and equipment should be located to minimize noise nuisance from the nearest sensitive receiver; and
- Idle equipments should be either turned off or throttled down;

# Waste and Chemical Management

- Housekeeping on site shall be improved;
- The Contractor is advised to fence off the construction waste at a designated area in order to maintain the tidiness of the site;
- Drip tray and proper label should be provided for all chemical containers.
- C&D waste should be disposed in regular basis.

#### 13 CONCLUSIONS AND RECOMMENDATIONS

#### **CONCLUSIONS**

- 13.01 This is the 16<sup>th</sup> monthly EM&A Report covering the construction period from 1 to 30 November 2011.
- 13.02 No 1-hour TSP results were found to be triggered the Action or Limit Level in this Reporting Period. However, one (1) limit level exceedance of 24-hour TSP monitoring was recorded at Location AM3 on 25 November 2011. Notification of Exceedance (NOE) has been issued to relevant parties upon confirmation of the monitoring result.
- 13.03 The investigation report for the cause of exceedance has completed and it is concluded that the exceedance was due to large amount of dust emitted from the village vehicles which own by the Contractor. The Contractor was reminded to implement all recommended mitigation measures in the EM&A Manual, also control the speed limit of the village vehicle running along the construction site was suggested which could highly reduce the fugitive dust from the dusty road.
- 13.04 No noise complaint (an Action Level exceedance) was received and no construction noise measurement results that exceeded the Limit Level were recorded in this Reporting Period.
- 13.05 The monitoring result demonstrated no exceedance of Action or Limit Level of marine water quality monitoring in this Reporting Period.
- 13.06 No documented complaint, notification of summons or successful prosecution was received.
- 13.07 In this Reporting Period, weekly site inspection by ET was carried out on 1, 8, 15, 22 and 29

  November 2011 and a joint-site visit by IEC Representative, RE, the Contractor and ET was carried out on 8 November 2011. All the observation has been rectified during the next week site inspection. The environmental performance of the Project was therefore considered as satisfactory.
- 13.08 In this Reporting Period, one environmental complaint was received from Environmental Protection Department (EPD) on 16 November 2011 regarding cement water running into the sea in Sok Kwu Wan. A site visit was then carried out by the EPD with the representative of Contactor and RE on 30 November 2011. During the site visit, EPD figured out that the quality of treated wastewater, which being discharge to the marine body, is not sufficient to meet the discharge license requirement. They strongly advised the Contractor to improve the desilting facility with proper remedial measures. As informed by the Contractor, the remedial action is on-going and they will submit the interim report for the rectification to EPD once the works done.

#### RECOMMENDATIONS

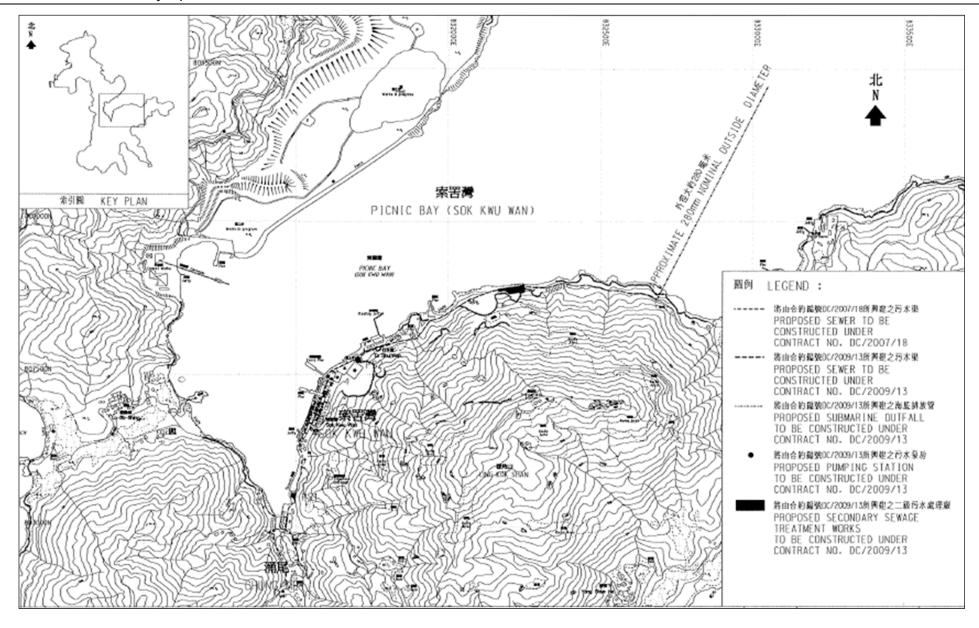

- 13.09 During dry season, special attention should be paid to the dust mitigation measures to avoid fugitive dust emissions from loose soil surface or haul road. Nevertheless, mitigation measures implemented for control the surface runoff including wheel wash facilities, covering of the loose soil surface or stockpile with tarpaulin sheet, etc., should fully implement.
- 13.10 Muddy water and other water quality pollutants via site surface water runoff into the sea body within Fish culture zone at Picnic Bay and the Secondary recreation contact subzone at Mo Tat Wan is the key issue of the Project. Mitigation measures for water quality should be properly maintained to prevent any muddy or sandy runoff from the loose soil surface overflow on the site boundary.

Qstd slop intercept coefficie	t (b) =	2.11693 -0.02568 0.99993		Qa slope intercept coefficie	t (b) =	1.32558 -0.01598 0.99993
v axis =	SORT [H20 (	Pa/760)(298/	<sub>]</sub>   Га) ]	y axis =	SQRT [H2O (7	[a/Pa)]

### CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta)Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa] Qa = Va/Time

For subsequent flow rate calculations:

Qstd =  $1/m\{[SQRT(H2O(Pa/760)(298/Ta))] - b\}$  $Qa = 1/m\{[SQRT H2O(Ta/Pa)] - b\}$ 

### TSP SAMPLER CALIBRATION CALCULATION SPREADSHEET

Location: Squatter house in Chung Mei Village

Date of Calibration: 31-Oct-11 Location ID: AM1 Next Calibration Date: 31-Dec-11

Technician: Mr. Ben Tam

### **CONDITIONS**

m = calibrator Qstd slope

b = calibrator Qstd intercept

Ta = actual temperature during calibration ( deg K Pstd = actual pressure during calibration ( mm Hg

### For subsequent calculation of sampler flow:

1/m(( I )[Sqrt(298/Tav)(Pav/760)]-b)

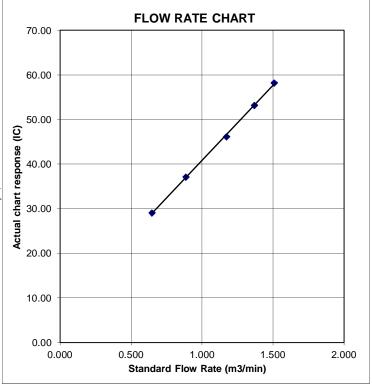

m = sampler slope

b = sampler intercept

I = chart response

Tay = daily average temperature

Pav = daily average pressure

# Calibration Report

ITEM TESTED

DESCRIPTION : Integrating Sound Level Meter (EQ010)

MANUFACTURER:

Bruel & Kjaer

MODEL NO.

2238

SERIAL NO.

2285721

**TEST CONDITIONS** 

AMBIENT TEMPERATURE :  $(23 \pm 2)^{\circ}$ C

RELATIVE HUMIDITY :  $(55 \pm 20)\%$ 

LINE VOLTAGE

TEST SPECIFICATIONS

Calibration check

DATE OF TEST: 18 April 2011

*JOB NO.* : IC11-0947

### TEST RESULTS

The results apply to the particular unit-under-test only.

All results are within manufacturer's specification.

The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via:

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- The Bruel & Kjaer Calibration Laboratory, Denmark
- Rohde & Schwarz Laboratory, Germany
- Fluke Everett Service Center, USA
- Agilent Technologies, USA

Tested by:

Date: 19 April 2011

Sun Creation Engineering Limited Calibration and Testing Laboratory

Report No.: C112202

# Calibration Report

- 1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- 2. Self-calibration using the B & K Acoustic Calibrator 4231, S/N: 2713428 was performed before the test.
- 3. The results presented are the mean of 3 measurements at each calibration point.
- 4. Test equipment:

Equipment ID CL280

**Description** 

Certificate No.

CL280 CL281 40 MHz Arbitrary Waveform Generator

C110018

Multifunction Acoustic Calibrator

C1006860

- 5. Test procedure: MA101N.
- 6. Results:
- 6.1 Sound Pressure Level

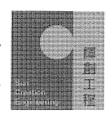

6.1.1 Reference Sound Pressure Level

UUT Setting			Applied	l Value	UUT	IEC 60651	
Range	Parameter	Frequency	Time	Level	Freq.	Reading	Type 1 Spec.
(dB)		Weighting	Weighting	(dB)	(kHz)	(dB)	(dB)

					8 kHz	90.9	-3.0 (+1.5 ; -3.0)
					12.5 kHz	87.8	-6.2 (+3.0 ; -6.0)

6.4 Time Averaging

	UUT	Setting			plied Value			UUT	IEC 60804	
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Frequency (kHz)	Burst Duration (ms)	Burst Duty Factor	Burst Level (dB)	Equivalent Level (dB)	Reading (dB)	Type 1 Spec. (dB)
30 - 110	L <sub>Acq</sub>	A	10 sec.	4	1	1/10 1/10 <sup>2</sup>	110.0	100	99.9	± 0.5
			60 sec.		_	1/10		90 80	89.6 79.3	± 0.5 ± 1.0
			5 min.			1/104		70	69.9	± 1.0

Remarks: - Mfr's Spec.: IEC 60651 Type 1 & IEC 60804 Type 1

- Uncertainties of Applied Value : 94 dB :  $31.5 \, \text{Hz} - 125 \, \text{Hz}$  :  $\pm 0.40 \, \text{dB}$ 

250 Hz - 500 Hz : ± 0.30 dB 1 kHz : ± 0.20 dB 2 kHz : ± 0.40 dB 4 kHz : ± 0.50 dB 8 kHz : ± 0.70 dB

12.5 kHz :  $\pm$  1.20 dB

104 dB: 1 kHz :  $\pm$  0.10 dB (Ref. 94 dB) 114 dB: 1 kHz :  $\pm$  0.10 dB (Ref. 94 dB)

Burst equivalent level : ± 0.2 dB (Ref. 110 dB continuous sound level)

- The uncertainties are for a confidence probability of not less than 95 %.

#### Note

The values given in this Calibration Report only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

# **Air Quality**

THE Quality					
EVENT	ACTION	FC(E)	ED	CONTED A CITIOD	
A CONTRACT OF THE STATE OF THE	ET	IC(E)	ER	CONTRACTOR	
ACTION LEVEL					
1. Exceedance for one sample	<ol> <li>Identify source, investigate the causes of exceedance and propose remedial measures;</li> <li>Inform IC(E) and ER;</li> <li>Repeat measurement to confirm finding;</li> <li>Increase monitoring frequency to daily.</li> </ol>	Check monitoring data submitted by ET;     Check Contractor's working method.	Notify Contractor.	Rectify any unacceptable practice;     Amend working methods if appropriate.	
Exceedance for two or more consecutive samples	<ol> <li>Identify source;</li> <li>Inform IC(E) and ER;</li> <li>Advise the ER on the effectiveness of the proposed remedial measures;</li> <li>Repeat measurements to confirm findings;</li> <li>Increase monitoring frequency to daily;</li> <li>Discuss with IC(E) and Contractor on remedial actions required;</li> <li>If exceedance continues, arrange meeting with IC(E) and ER;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Check monitoring data submitted by ET;</li> <li>Check Contractor's working method;</li> <li>Discuss with ET and Contractor on possible remedial measures;</li> <li>Advise the ET on the effectiveness of the proposed remedial measures;</li> <li>Supervise Implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Ensure remedial measures properly implemented.</li> </ol>	<ol> <li>Submit proposals for remedial to ER within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Amend proposal if appropriate.</li> </ol>	
		LIMIT LEVEL			
Exceedance for one sample	<ol> <li>Identify source, investigate the causes of exceedance and propose remedial measures;</li> <li>Inform ER, Contractor and EPD;</li> <li>Repeat measurement to confirm finding;</li> <li>Increase monitoring frequency to daily;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results.</li> </ol>	<ol> <li>Check monitoring data submitted by ET;</li> <li>Check Contractor's working method;</li> <li>Discuss with ET and Contractor on possible remedial measures;</li> <li>Advise the ER on the effectiveness of the proposed remedial measures;</li> <li>Supervise implementation of remedial measures.</li> </ol>	Confirm receipt of notification of failure in writing;     Notify Contractor;     Ensure remedial measures properly implemented.	Take immediate action to avoid further exceedance;     Submit proposals for remedial actions to IC(E) within 3 working days of notification;     Implement the agreed proposals;     Amend proposal if appropriate.	
Exceedance for two or more consecutive samples	<ol> <li>Notify IC(E), ER, Contractor and EPD;</li> <li>Identify source;</li> <li>Repeat measurement to confirm findings;</li> <li>Increase monitoring frequency to daily;</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented;</li> <li>Arrange meeting with IC(E) and ER to discuss the remedial actions to be taken;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Discuss amongst ER, ET, and         Contractor on the potential remedial         actions;</li> <li>Review Contractor's remedial actions         whenever necessary to assure their         effectiveness and advise the ER         accordingly;</li> <li>Supervise the implementation of         remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>In consolidation with the IC(E), agree with the Contractor on the remedial measures to be implemented;</li> <li>Ensure remedial measures properly implemented;</li> <li>If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.</li> </ol>	<ol> <li>Take immediate action to avoid further exceedance;</li> <li>Submit proposals for remedial actions to IC(E) within 3 working days of notification;</li> <li>Implement the agreed proposals;</li> <li>Resubmit proposals if problem still not under control;</li> <li>Stop the relevant portion of works as determined by the ER until the exceedance is abated.</li> </ol>	

## **Construction Noise**

EVENT	ACTION			
	ET	IC(E)	ER	CONTRACTOR
Action Level	<ol> <li>Notify IC(E) and Contractor;</li> <li>Carry out investigation;</li> <li>Report the results of investigation to the IC(E), ER and Contractor;</li> <li>Discuss with the Contractor and formulate remedial measures;</li> <li>Increase monitoring frequency to check mitigation effectiveness</li> </ol>	<ol> <li>Review the analysed results submitted by the ET;</li> <li>Review the proposed remedial measures by the Contractor and advise the ER accordingly;</li> <li>Supervise the implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Require Contractor to propose remedial measures for the analysed noise problem;</li> <li>Ensure remedial measures are properly implemented.</li> </ol>	<ol> <li>Submit noise mitigation proposals to IC(E);</li> <li>Implement noise mitigation proposals.</li> </ol>
Limit Level	<ol> <li>Identify source;</li> <li>Inform IC(E), ER, EPD and Contractor;</li> <li>Repeat measurements to confirm findings;</li> <li>Increase monitoring frequency;</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented;</li> <li>Inform IC(E), ER and EPD the causes and actions taken for the exceedances;</li> <li>Assess effectiveness of Contractor's remedial actions and keep IC(E), EPD and ER informed of the results;</li> <li>If exceedance stops, cease additional monitoring.</li> </ol>	<ol> <li>Discuss amongst ER, ET, and Contractor on the potential remedial actions;</li> <li>Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly;</li> <li>Supervise the implementation of remedial measures.</li> </ol>	<ol> <li>Confirm receipt of notification of failure in writing;</li> <li>Notify Contractor;</li> <li>Require Contractor to propose remedial measures for the analysed noise problem;</li> <li>Ensure remedial measures properly implemented;</li> <li>If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.</li> </ol>	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IC(E) within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

**Water Quality** 

TOT ITEM		water Quanty	237	
EVENT	TOTAL CONTRACTOR OF THE PARTY O	ACTIO		CONTED A CITION
A COMPANY PROPERTY	ET	IC(E)	ER	CONTRACTOR
1. Exceedance for one sampling day	<ol> <li>Repeat in-situ measurement on the next day of exceedance to confirm findings;</li> <li>Identify source(s) of impact;</li> <li>Inform ICE, Contractor, ER, EPD and AFCD; and</li> <li>Check monitoring data, all plant, equipment and Contractor's working methods.</li> </ol>	Check monitoring data submitted by ET and Contractor's working methods	Confirm receipt of notification of non-compliance in writing; and     Notify Contractor	Information the ER and confirm notification of the non-compliance in writing;     Rectify unacceptable practice; and 3. Amend working methods if appropriate
Exceedance for two or more consecutive sampling days	<ol> <li>Same as the above;</li> <li>Inform ICE, Contractor, ER, EPD and AFCD;</li> <li>Discuss mitigation measures with IC(E), RE and Contractor;</li> <li>Ensure well implementation of mitigation measures; and</li> <li>Increase the monitoring frequency to daily until no exceedance of Action Level</li> </ol>	Same as the above;     Discuss with ET and Contractor on possible remedial actions;     Review the proposed mitigation measures submitted by Contractor and advise the ER accordingly; and     Supervise the implementation of mitigation measures.	Discuss with IC(E) on the proposed mitigation measures;     Ensure well implementation of mitigation measures; and     Assess the effectiveness of the implemented mitigation measures	Same as the above;     Check all plant and equipment and consider changes of working methods;     Submit proposal of additional mitigation measures to ER within 3 working days of notification and discuss with ET, IC(E), and ER; and Implement the agreed mitigation measures
		LIMIT LEVEL		
Exceedance for one sampling day	<ol> <li>Repeat in-situ measurement on the next day of exceedance to confirm findings;</li> <li>Identify source(s) of impact;</li> <li>Inform ICE, Contractor, ER, EPD and AFCD;</li> <li>Check monitoring data, all plant, equipment and Contractor's working methods; and</li> <li>Discuss mitigation measures with IC(E), RE and Contractor</li> </ol>	Check monitoring data submitted by ET and Contractor's working method     Discuss with ER and Contractor on possible remedial actions; and     Review the proposed mitigation measures submitted by Contractor and advise the ER accordingly	Confirm receipt of notification failure in writing; and     Discuss with IC(E), ET and     Contractor on the proposed mitigation measures; and     Request Contractor to review the working methods	notification of the failure in writing;  2. Rectify unacceptable practice;  3. Check all plant and equipment and consider changes of working methods; and  4. Submit proposal of mitigation measures to ER within 3 working days of notification and discuss with ET and ER
Exceedance for two or more consecutive sampling days	<ol> <li>Same as the above;</li> <li>Ensure mitigation measures are implemented; and</li> <li>Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days</li> </ol>	Same as the above; and     Supervise the Implementation of mitigation measures	Same as the above;     Ensure well implementation of mitigation measures     Make agreement on the mitigation measures to be implemented; and     Consider and instruct, if necessary, the Contractor to stow down or to stop all or part of the construction activities until no exceedance of limit level	measures; 4. Resubmit proposals of mitigation measures if problem still not under control; and

## Appendix I

**Meteorological Information** 

### Meteorological Data Extracted from HKO during the Reporting Period

Date		Weather
1-Nov-11	Tue	Moderate east to northeasterly winds.
2-Nov-11	Wed	cloudy
3-Nov-11	Thu	Mainly cloudy with a few rain patches.
4-Nov-11	Fri	Moderate east to northeasterly winds,
5-Nov-11	Sat	Mainly cloudy with a few rain patches.
6-Nov-11	Sun	Occasionally strong offshore and on high ground.
7-Nov-11	Mon	Fresh easterly winds
8-Nov-11	Tue	Cloudy to overcast with rain.
9-Nov-11	Wed	Fresh northerly winds
10-Nov-11	Thu	Fresh easterly winds
11-Nov-11	Fri	Fresh easterly winds
12-Nov-11	Sat	Moderate east to northeasterly winds,
13-Nov-11	Sun	Mainly cloudy with a few light rain patches.
14-Nov-11	Mon	Sunny periods
15-Nov-11	Tue	Mainly cloudy with a few rain patches.
16-Nov-11	Wed	Moderate to fresh easterly winds.
17-Nov-11	Thu	Moderate east to northeasterly winds,
18-Nov-11	Fri	Fresh northerly winds
19-Nov-11	Sat	Fresh easterly winds
20-Nov-11	Sun	Sunny periods
21-Nov-11	Mon	Moderate northeasterly winds.
22-Nov-11	Tue	Mainly cloudy.
23-Nov-11	Wed	Cloudy with one or two rain patches.
24-Nov-11	Thu	Moderate to fresh easterly winds.
25-Nov-11	Fri	Moderate east to northeasterly winds,
26-Nov-11	Sat	Mainly fine and dry
27-Nov-11	Sun	Fresh northerly winds
28-Nov-11	Mon	Mainly fine and dry
29-Nov-11	Tue	strong offshore and on high ground
30-Nov-11	Wed	Cloudy and rather cool

tobe followed up also, on 22 hor. 2011.

The transplanted and retained uncommon free species trees were found to be labeled, fenced and protected.

		• the decks of all vessels should be kept tidy and free of oil or other substances that might be accidentally or otherwise washed overboard.						
5.79	4.37	Construction Run-off and Drainage	Construction works	Contractor				ProPECC
		Implementation of the following site practices outlined in ProPECC PN 1/94 for "Construction Site Drainage"	sites					PN 1/94
		• Provision of perimeter channels to intercept storm-runoff from outside the site. These should be constructed in advance of site formation works and earthworks.						
		• Works programmes should be designed to minimize works areas at any one time, thus minimizing exposed soil areas and reducing the potential for increased siltation and runoff.						
		• Sand / silt removal facilities such as sand traps, silt traps and sediment basins should be provided to remove the sand / silt particles from run-off. These facilities should be properly and regularly maintained. These facilities should be carefully planned to ensure that they would be installed at appropriate locations to capture all surface water generated on site.						
		• Careful programming of the works to minimise soil excavation works during rainy seasons.						
		• Exposed soil surface should be protected by paving or hydroseeding as soon as possible to reduce the potential of soil erosion.						
		• Trench excavation should be avoided in the wet season, and if necessary, these should be excavated and backfilled in short sections.						
		Open stockpiles of construction materials on site should be covered with tarpaulin or similar fabric						
5.80	4.38	General Construction Activities	Construction works	Contractor		V		
		Debris and rubbish generated on-site should be collected, handled and disposed of properly to avoid entering the nearby coastal waters and stormwater drains. All fuel tanks and storage areas should be provided	sites

Tree Inspection Report for Celtis timorensis

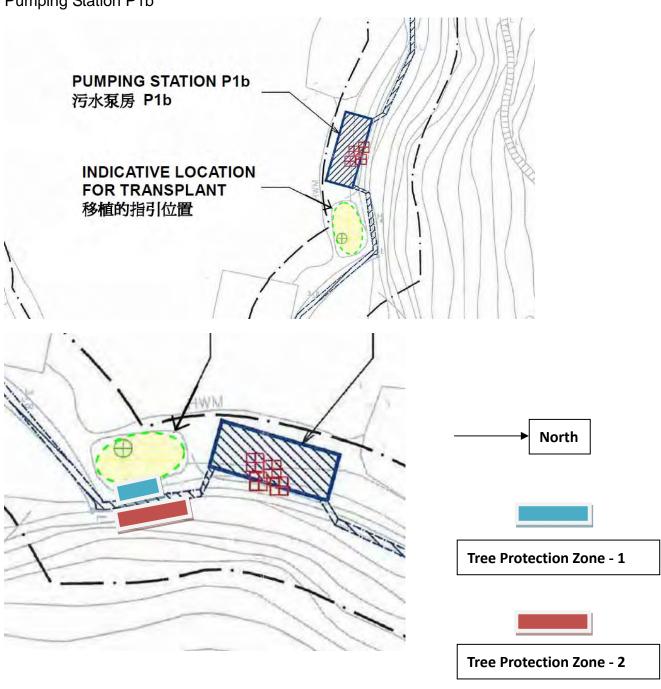

CT7, CT8, CT9, CT10 & CT\_1A,CT\_2A,CT\_3A,CT\_4A,CT\_5A,CT\_6A,CT\_7A

<u>Inspection Date: 08-11-2011</u>

## 1. Introduction

According to the requirement in the Environmental Permit EP-281/2007/A, the uncommon tree species, *Celtis timorensis*, found in the pumping station P1b area as shown in figure below shall be properly transplanted to the area immediately south of the Pumping Station P1b before commencement of construction of the Pumping Station P1b

This Tree Inspection Report describes the bi weekly monitoring result of the *Celtis timorensis*, (Label CT7, CT8, CT9, CT10(Original planted) & CT\_1A to CT\_7A (which were additionally planted as a contingency proposal in case CT7, CT8, CT9 & CT10 could not recovered).

## 2. Summary of Inspection

Date of Inspection	8 November 2011, around 13:30		
Location	A soil ground adjacent to the Pumping		
	Station P1b Chung Mei, at Sok Kwu Wan,		
	Lamma Island.		
Weather	Cloudy, the vegetation are located under		
	the shade of existing trees.		
The labeled Celtis timorensis	CT7, CT8, CT9 & CT10		
under Tree Protection Zone 1			
The labeled Celtis timorensis	CT_1A, CT_2A, CT_3A, CT_4A, CT_5A,		
under Tree Protection Zone 2	CT_6A & CT_7A,		

## 3. Proposed Inspection Schedule

Month	Actual / proposed Inspection Date		
July, 2011	14 and 25 July 2011		
August, 2011	9 and 26 August 2011		
September, 2011	5 and 23 September 2011		
October, 2011	10 and 24 October 2011		
November, 2011	8 November 2011		

Remark: Consider the condition of the *Celtis timorensis* is not satisfactory, a full review will be carried out between Nov to Dec, 2011.

## 4. Summary of Inspection Result

Tree No	Speciation	Health Status
СТ7	Celtis timorensis	Very Poor
СТ8	Celtis timorensis	Very Poor
СТ9	Celtis timorensis	Very Poor
CT10	Celtis timorensis	Very Poor
CT_1A	Celtis timorensis	Poor
CT_2A	Celtis timorensis	Poor
CT_3A	Celtis timorensis	Poor
CT_4A	Celtis timorensis	Poor
CT_5A	Celtis timorensis	Not Applicable
CT_6A	Celtis timorensis	Poor
CT_7A	Celtis timorensis	Poor

## Inspection parameters or criteria

Good Leaves and stem grown very lush, additional or larger in size of leaves can be observed in each inspection

Fair Green leaves can be found. No major unhealthy condition of the plant is observed. The condition is stable.

Poor Fewer green leaves than usual are observed. No new leaf is grown and the condition keep stable. The bark is dry. The plant is weak.

Very Poor No new green leaf or bud can be observed. The bark is dry. The plant is weak.

## 5. Description of Inspection Results:

## CT7 to CT10

## CT7

The condition of this tree is poor. No bud was found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT8

The condition of this tree is poor. No bud was found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT9

The condition of this tree is poor. Few buds were found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT10

The condition of this tree is poor. No bud was found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT 1A to CT 7A

## CT 1A

The condition of this tree is poor. Less leaves were growth on the branches. The bark is dry. The plant is weak.

## CT 2A

The condition of this tree is poor. No bud was found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT\_3A

The condition of this tree is poor. Some leaves were found wilting. The bark is dry. No significant improvement in health. The plant is weak.

## CT 4A

The condition of this tree is poor. Some new leaves were found in the top of the twig. The bark is dry. No significant improvement in health. The plant is weak.

## CT 5A

The tree disappeared on the date of inspection. Properly due to damage by inserts or wind.

## CT 6A

The condition of this tree is poor. Less leaves were growth on the branches. The bark is dry. The plant is weak.

## CT 7A

The condition of this tree is poor. Found some leaves wilt. The bark is dry. No Signification improvement in health. The plant is weak.

## **Overall Condition**

The overall health conditions of CT7-10 in Tree protection Zone 1 were not satisfactory. They may better recover under this warm and rainy weather. Remove any insect found on the plant physically to prevent the bud attacked by leaf-feeding insect. No pesticide should be used when the plants are weak.

In the Tree Protection Zone 2, the condition of CT\_1A-7A (except CT\_5A) is Poor. Regular watering and weeding will be carried out during dry weather.

On the date of inspection, CT\_5A disappeared. The tree will be compensated as soon as possible. Furthermore, the fencing of the planting area will be reformed to prevent similar incident to occur.
