Engineer's Representative Office Black & Veatch Hong Kong Ltd 503 Tai Po Tin, Ta Kwu Ling Fanling, New Territories

Attention: Mr. Gilbert Ying

Dear Mr. Ying,

Re: Contract No. DC/2007/08 (EP No. EP-277/2007/A) Drainage Improvement Works at Tai Po Tin, Ping Che, Man Uk and Lin Ma Hang Monthly EM&A Report for Channels MUP03A&B, MUP04A&B, MUP05 and LMH01 for August 2010 (Rev. 2)

Reference is made to the 18th Monthly EM&A Report (August 2010, Rev. 2) for the Designated Project Channels MUP03A&B, MUP04A&B, MUP05 and LMH01 provided by the Environmental Team by email on 9 September 2010.

We would like to inform that we have no comment on the captioned report.

Please also note that the Monthly EM&A Report had been verified in accordance with the Condition 3.4 of the Environmental Permit No. EP-277/2007/A.

Thank you very much for your kind attention and please do not hesitate to contact the undersigned should you have any queries.

Yours sincerely,

David Yeung Independent Environmental Checker

EXECUTIVE SUMMARY

- ES.01 This is the **18th** monthly EM&A Report for Channels MUP03A&B, MUP04A&B, MUP05 and LMH01 covering a period from **26 July** to **25 August 2010** (the Reporting Period). These works are classified as Designated Projects under the Environmental Impact Assessment Ordinance (Cap. 499) and Environmental Permit No.EP277/2007/A.
- ES.02 As construction works were undertaken only at Channels MUP03A&B, MUP04A&B, MUP05 during the Reporting Period, environmental monitoring for air quality, construction noise, water quality and ecology was therefore performed at those channels only.
- ES.03 In air quality and noise monitoring, there were no Action/ Limit Level exceedances recoded in this reporting period.
- ES.04 In stream water quality monitoring, there were 3 Limit Level exceedance recorded in suspended solids (SS). Based on finding in the investigation reports, all exceedances were considered not related to the works of the Project. No associated corrective actions were therefore required.

Station	D	0	Turb	idity	pH V	alue	S	S	Total Exc	ceedance
Station	Action	Limit	Action	Limit	Action	Limit	Action	Limit	Action	Limit
MUP-W4 ^(a)	0	0	0	0	0	0	0	0	0	0
MUP-W5 (b)	0	0	0	0	0	0	0	1	0	1
MUP-W6 ^(b)	0	0	0	0	0	0	0	2	0	2
Exceedances	0	0	0	0	0	0	0	3	0	3
Remarks: (a) impact station: (be) Temporary or mobile station										

Remarks: ^(a) impact station; ^(be) Temporary or mobile station

- ES.05 **Four** ecological general audits were performed in this reporting month at the nominated construction channel (MUP05). It was noticed that muddy water has been reported repeatedly in previous inspections after rainstorm, the contractor has been reminded to carry out routine inspection/maintenance for all of the de-silting facilities within the site to ensure their effectiveness and prevent muddy water entering lower stream.
- ES.06 No written or verbal complaint, notification of summons or successful prosecution was received (written or verbal) for each media during the Reporting Period. No adverse environmental impacts were observed during the weekly site inspection and environmental audit which indicated that the implemented mitigation measures for air quality, construction noise, water quality and ecology were effective. Minor deficiencies found during the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- ES.07 As wet season has come, the coming excavation works of the channels, ingression of surface runoff into the river within MUP Channels continues to be the key issue in future months. The contractor is reminded that mitigation measures for water quality and ecology should therefore be fully implemented.
- ES.08 In addition, attention should also be paid to dust emission and noise impact during the construction work progress, and with other environmental issues identified in the EM&A Manual. Mitigation measures recommended in the Environmental Study Report (ESR) and summarized in Mitigation Measure Implementation Schedule should continually be applied.

1. INTRODUCTION

The Chiu Hing Construction & Transportation Company Limited (CHCT) was appointed by the Drainage Services Department (DSD) to perform a contract – Contract No. DC/2007/08 *Drainage Improvement Works at Tai Po Tin, Ping Che, Man Uk Pin and Lin Ma Hang* (the Project). Total construction time is approximately 32 months.

The Project involves construction of various river channels: some classified as Designated Project (DP) and some Non-designated Project (Non-DP) under the Environmental Impact Assessment Ordinance (Cap. 499), as summarized in *Table 1-1*.

Table 1-1	Summary of the Channels under the Project
-----------	---

Channel ID	Location	Designated / Non-Designated
TKL02	Tai Po Tin	Non-Designated
TKL07	Ping Che / Ta Kwu Ling	Non-Designated
MUP01		Non-Designated
MUP02		Non-Designated
MUP03A and MUP03B	Man Uk Pin	Designated (EP277/2007/A)
MUP04A and MUP04B		Designated (EP277/2007/A)
MUP05		Designated (EP277/2007/A)
LMH01	Lin Ma Hang	Designated (EP277/2007/A)

This is the **18th** monthly report covering data from **26 July to 25 August 2010** to present the monitoring results of air quality, construction noise, water quality and ecology for the Designated Project of Channels MUP03A&B, MUP04A&B, MUP05 and LMH01 under the Environmental Monitoring & Audit Manual [*382486/73//Issue2*]. A set of location plans showing all DP works covered in this report are illustrated in *Appendix A*. Details of EM&A requirements for the Designated Project are summarized below:

- (a) Channel MUP03A&B NA
- (b) Channel MUP04A&B the scope of environmental monitoring includes construction noise, air quality and water quality
- (c) Channel MUP05 the scope of environmental monitoring includes construction noise, air quality, water quality and ecology
- (d) Channel LMH01 the scope of environmental monitoring includes construction noise, air quality, water quality and ecology

It has been agreed among the Engineer's Representative (ER), the Independent Environmental Checker (IEC), the Contractor (CHCT), the Environmental Team (ET) and the Environmental Protection Department (EPD) that 25th of each month is the cut-off day of each reporting month. Data collected after the 26th of every month will be reported in the next issue.

1.1 **REPORT STRUCTURE**

This report has been written in accordance with the requirements set out in the *Environmental Monitoring and Audit Manual* (the EM&A Manual) with the following structure:

- Section 1 Introduction
- Section 2 Basic Project Information
- Section 3 Environmental status
- Section 4 Summary of Impact EM&A Requirements
- Section 5 Impact Monitoring Results
- Section 6 Report on Non-Compliance (NC), Complaint, Notification of Summons (NOS) and Successful prosecution
- Section 7 Conclusions and Recommendations

BASIC PROJECT INFORMATION 2.

2.1 **PROJECT ORGANIZATION**

The organization chart and lines of communication with respect to the on-site environmental management and the management structure are shown in Appendix B.

2.2 MASTER CONSTRUCTION PROGRAM FOR THE PROJECT

The master construction program of the Project is shown in Appendix C. Environmental mitigation measures implemented are shown in Appendix C.

2.3 WORKS UNDERTAKEN DURING THE REPORTING MONTH

During this reporting month, the construction work undertaken at the designated work areas is listed as follows:

Channel MUP03A&B,

Survey setting out • MUP04A&B; and Construction of site access •

Construction Work Activities

- Site clearance •
 - Construction of retaining wall, access ramps and gabion wall

LMH01

MUP05

Not yet commenced

Future construction works is provided in Appendix C.

3. ENVIRONMENTAL STATUS

3.1 WORK UNDERTAKEN DURING THE MONTH WITH ILLUSTRATIONS

In this reporting month, the construction work was undertaken at Channels MUP03A&B, MUP04A&B and MUP05. All proposed construction channels are located at Man Uk Pin. The environmental mitigation Implement is shown in *Table 3-1*.

Tal	ble	3-	1
- i ai		J-	

Environmental Mitigation Measures Undertake in the Reporting Month

Location	Construction Activities	Environmental Mitigation Measures to be deployed
MUP03A&B, MUP04A&B and MUP05	Survey setting out	 Trees will be properly protected before works commenced.
	Construction of site access	 Excavated area and stockpile of soil material will be dampened/covered before dispose off-site
	Site clearance	 Water spraying will be provided before and during handling of excavated material.
	Construction of access ramp, retaining wall and gabion wall	 Excavated area and stockpile of soil material will be dampened/covered before dispose off-site Water spraying will be provided before and during handling of excavated material. Retained tree will be properly protected before works commenced

3.2 IMPLEMENTATION OF ENVIRONMENTAL PROTECTION AND POLLUTION CONTROL

The implementation of environmental protection and pollution control/mitigation measures as recommended in the EM&A Manual or ES is shown in *Appendix C*.

A summary status of the permits, licences, and/or notifications on environmental protection for this Project in this reporting month is presented in *Table 3-2*.

Table 3-2 Status of Environmental Licenses and Permits

Item	Item Description	Permit Status
1	Environmental Permit No.EP277/2007/A	Issued on 1 Dec 2009
2	Air Pollution Control (Construction Dust)	Notification to EPD on 27/12/2007
3	Chemical Waste Producer Registration	
	• 5213-652-C3251-04	Valid date: 23 July 2008
	• 5213-652-C3251-05	Valid date: 15 August 2008
4	Water Pollution Control (Discharge license)	
	• W5/1G34/1	Expiry date: 31 August 2013
	• W5/1G35/1	Expiry date: 31 August 2013
	• W5/1I324/1	Expiry date: 31 August 2013
	• W5/1I325/1	Expiry date: 31 August 2013
5	Account for Disposal of Construction Waste No. 7006522	Valid date: 9 January 2008
6	Construction Noise Permit	Nil

4. SUMMARY OF IMPACT MONITORING REQUIREMENTS

Environmental monitoring and audit for air quality, noise, water quality and ecology have been recommended in the EM&A Manual. They are summarized below.

4.1 MONITORING PARAMETERS

The monitoring parameters are summarized in Table 4-1.

Table 4-1	

Summary of Monitoring Parameters

Environmental Issue	Parameters		
Air Quality		 1-hour Total Suspended Particulate (1-hour TSP); and 24-hour Total Suspended Particulate (24-hour TSP) 	
Construction Noise	 A-weighted equivalent continuous sound pressure level (30min) (Leq(30min)) during the normal working hours; and A-weighted equivalent continuous sound pressure level (5min) (Leq(5min)) for construction work during the Restricted Hours 		
Water Quality	Ity In-situ Measurement temperature, dissolved oxygen (DO), dissolved oxygen sat pH value, water depth, temperature & turbidity • Laboratory Analysis suspended solids (SS)		
Ecology	MUP05 and LMH01	 The stream conditions monitoring (in-situ measurements of DO, pH and turbidity; laboratory testing of SS); General site audit to reporting the mitigation measures are properly implemented during the construction phase 	

4.2 MONITORING LOCATIONS

4.2.1 Monitoring Locations Proposed in the EM&A manuals

Monitoring locations have been identified in the EM&A Manual. They are shown in *Appendix D* and summarized in *Table 4-2*.

Table 4-2Monitoring Locations Proposed in the EM&A Manuals

Issue	Channel	Sensitive Receiver	Monitoring Location ID	Detailed Address		
MUP04A		MUP04A-2	MUP-A3	Village house near Loi Tung

		Control Station	MUP-W1 (same as MUP01/02-W1)	Upstream of MUP01 works		
	MUP05	Control Station	MUP-W2 (same as MUP01/02-W2)	Upstream of MUP02 works		
Water		Impact Station	MUP-W4	Downstream of MUP05 works immediately at the discharge point to River Indus		
		Temporary / MUP-W5 Mobile Station		MUP-W5	Within MUP05, downstream of the discharge poir of MUP01/02 and upstream of the discharge point of MUP04A	
		Temporary / Mobile Station	MUP-W6	Within MUP05, downstream of the discharge point of MUP01/02 and MUP04A		

Z:\Jobs\2008\TCS00409 (DC-2007-08)\600\Impact\DP\Monthly Report\18th Monthly-Aug2010\R0846v2_Aug.doc Action-United Environmental Services and Consulting

Issue	Channel	Sensitive Receiver	Monitoring Location ID	Detailed Address		
		Control Station	LMH-W1	Upstream of LMH01 works		
		Control Station	LMH-W2	Upstream of LMH01 works		
				Downstream of all LMH01 works immediately at the discharge point to Shenzhen River		
Water		Temporary / Mobile Station	LMH-W4	Upstream and downstream of particular group of LMH01 works		
		Temporary / Mobile Station	LMH-W5	Upstream and downstream of particular group of LMH01 works		
		Temporary / Mobile Station	LMH-W6	Upstream and downstream of particular group of LMH01 works		
	MUP05	Water Quality of Str	eam	Upstream and downstream of Construction site		
Ecology	and LMH01	· · ·		Along stream channel, within 100m upstream and downstream of construction site		
	LMH01	Surveys of fish species		Along stream channel, within 100m upstream and downstream of construction site		

[#] Access to the original air quality monitoring location MUP-A2 has been denied. The nearby air quality sensitive receiver MUP05-4 is recommended to be the replacement of the denied MUP-A2 and named MUP-A2a for ease of reference.

4.3 MONITORING FREQUENCY

The impact monitoring should be conducted during the construction activities pass through the contract period to ensure the ambient environmental conditions compliance with the environmental performance criteria i.e. Action and Limit Levels for the Project. The impact monitoring frequency specified in the EM&A Manual is summarized below.

Air Quality

Parameters:	24-hour TSP and 1-hour TSP.
Frequency:	Once every 6 days for 24-hour TSP & three times every 6 days for 1-hour TSP.
Duration:	During the course of construction works

Construction Noise

Parameters:	Leq(30 min) in six consecutive Leq(5 min) measurements.
Frequency:	Once a week during 0700-1900 on normal weekdays:
Duration:	During the course of construction works

Water Quality

Parameters:	Duplicate in-situ measurements of water depth, temperature, DO, pH & turbidity;
	and laboratory testing of SS. Relevant data will also be measured time of
	sampling, DO Saturation, weather conditions and special phenomena.
Depths:	All measurements will be carried out at three water depths, namely, 1 m below
	water surface, mid-water depth, and 1 m above river bed. If the water depth is
	less than 6 m, the mid-depth measurement will be omitted. If the depth is less
	than 3 m, only the mid-depth measurement will be taken.
Frequency:	3 days a week with an interval of at least 36 hours between two consecutive
	sampling days
Duration:	During the construction period of the channel works

Ecology

According to the EM&A Manual [*382486/73/lssue2*], ecology monitoring is only performed at the Channels MUP05 and LMH01 during the construction phase, the monitoring requirements are listed as following:

Parameters:

- (a) General site audit with emphasis on ecology mitigation measure;
- (ii) Water quality of stream (DO, pH, turbidity and SS); and
- (iii) Survey of fish species, which is only requested at Channel LMH01

Frequency:

- (b) Once a week for general site audit throughout the construction period;
- (ii) Three times per week for stream monitoring; and
- (iii) Once per week for survey of fish species.

Duration:

Throughout the whole construction period

4.4 MONITORING EQUIPMENT

The monitoring equipments for air quality, construction noise, stream water quality and ecology are summarized below.

4.4.1 Air Quality

A list of air quality monitoring equipments is shown in *Table 4-3*.

Table 4-3 Air Quality Monitoring Equipment

Equipment	Model		
24-hour TSP			
High Volume Air Sampler (herein after 'HVS')	Grasby Anderson GMWS 2310 HVS		
Calibration Kit	TISCH Model TE-5025A		
1-hour TSP			
Portable Dust Meter	TSI DustTrak Model 8520		

4.4.2 Construction Noise

A list of construction noise monitoring equipments is shown in Table 4-4.

Table 4-4 Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	B&K Type 2236
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer

4.4.3 Water Quality

Monitoring Equipments for water quality are shown in Table 4-5.

Table 4-5

Water Quality Monitoring Equipment

Equipment	Model / Description
In-situ Measurement	
Water Depth Detector	Eagle Sonar or steel ruler
Water Sampler	Teflon bailer / bucket
Thermometer & DO meter	YSI Multimeter
pH meter	Extech pH EC 500
Turbidimeter	Hach 2100p
Sample Container	High density polythene bottles (provided by laboratory)
Storage Container	'Willow' 33-litter plastic cool box
Laboratory Analysis	
Suspended Solids	HOKLAS accredited Laboratory

4.4.4 Equipment Calibration

The calibrations certificate of all monitoring equipments are used during the impact monitoring program are attached in *Appendix E* and the calibration requirement are described in below:

Air Quality

The calibration of the HVS is performed at a two month intervals in accordance with the manufacturer's instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model No.TE-5025A). The calibration data are properly documented and the associated records are maintained by the ET for future reference.

The 1-hour TSP meter is calibrated at a year intervals in accordance with the in-house method. Zero response of the equipment is checked before and after each monitoring event.

<u>Noise</u>

The sound level meters are calibrated using an acoustic calibrator prior to and after spot checking measurements. The meters are regularly calibrated by HOKLAS accredited laboratory. Prior to and following each noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements are considered valid only if the calibration levels before and after the noise measurement agree to within 1.0 dB.

Water Quality

In-situ monitoring instruments are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at 3 monthly intervals.

4.4.5 Ecology

The following equipment will be used for monitoring:-

- General: field note books and survey forms, digital camera; and
- Binoculars (7-10x and 8 x 30 magnification);

4.4.6 Others EM&A Requirement

Landscape & Visual and Cultural Heritage impact monitoring are also required for the Designated Project and stipulated in EM&A manual [382486/73//Issue2] Section 7 and Section 8 accordingly

Landscape & Visual

Landscape and visual mitigation measures should be implemented during construction phase according to the EM&A Manual. The construction phase landscape and visual EM&A shall be carried out as part of the site audit program. Site inspection will be undertaken at least once every two weeks throughout the construction period.

Cultural Heritage

Cultural heritage of the Terrance Wall (AAHB-855) at Lin Ma Hang (LMH01) is required to be carried out during the construction phase in accordance with the EM&A Manual [382486/73//Issue2].

4.5 MONITORING PROCEDURE

The monitoring methodology and procedure during the impact monitoring are presented as below:

4.5.1 Air Quality

<u>1-hour TSP</u>

Operation of the 1-hour TSP meter is follow manufacturer's Operation and Service Manual. The 1-hour TSP monitor, a TSI Dust Track Aerosol Monitor Model 8520, or Sibata LD-3 Laser Dust Meter is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90⁰ light scattering. The 1-hour TSP monitor consists of the following:

- A pump to draw sample aerosol through the optic chamber where TSP is measured;
- A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
- A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

The 1-hour TSP meter using was within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument was checked before and after each monitoring event.

<u> 24 –hour TSP</u>

The equipment used for 24-hour TSP measurement is the HVS brand named Thermo Andersen, Model GS2310 TSP high volume air sampling system, which complied with EPA Code of Federal Regulation, Appendix B to Part 50. The HVS consists of the following:

- An anodized aluminum shelter;
- A 8"x10" stainless steel filter holder;

- A blower motor assembly;
- A continuous flow/pressure recorder;
- A motor speed-voltage control/elapsed time indicator;
- A 6-day mechanical timer, and
- A power supply of 220v/50 Hz

The HVS is calibrated prior the impact monitoring to following the manufacturer's instruction using the NIST-certified standard calibrator brand named Tisch Calibration Kit Model TE-5028A. Regular HVS operation and maintenance as well as filter paper installation and collection was performed by the ET's competent technicians, whereas laboratory analyses were conducted in a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (hereinafter 'ALS'). The analyzed 24-hour TSP filters were kept in ALS for six months prior to disposal.

Meteorological Information

All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper is recorded in detail.

Meteorological information is sourced from the Hong Kong Observatory (Ta Kwu Ling Station). The data included wind direction, wind speed, humidity, rainfall, air pressure and temperature etc that in general is required for evaluating the air quality for air quality monitoring.

4.5.2 Construction Noise

Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum BE issued under the Noise Control Ordinance (NCO).

All noise measurements are performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30min) measurements are used as the monitoring parameter for the time period throughout the construction phase.

The sound level meter is set higher than 1.2m above the existing ground. The microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. The measurement point at impact locations is normally set close to the exterior of the building.

Immediately prior to and following each noise measurement the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency (94dBA). Measurements are accepted as valid due to the calibration levels from before and after the noise measurement agree to within 1.0dB.

4.5.3 Water Quality

Water quality monitoring is conducted at the middle of the water columns (Mid-Depth) due to water columns at all sampling locations are less than 3.0 meters during monitoring.

Water Depth

Water depths are determined prior to measurement and sampling. A steel ruler with a suitable weight was dropped to the bottom of the water column to measure the water depth which is actually well below 1 meter.

Dissolved Oxygen (DO)

A portable Extech Instrument, ExStik^R DO600 DO Meter is used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 - 20 mg/L and 0 - 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring.

Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20[°]C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter is recorded.

<u>рН</u>

A portable Extech Instrument, $ExStik^{TM}$ Models pH EC 500 or a Hanna HI98107 pH Meter is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 – 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement.

Turbidity

A portable Hach 2100p turbidity Meter is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 - 1000 NTU.

Suspended Solids (SS)

SS is determined by ALS using HOKLAS accredited analytical methods namely ALS Method EA-025. The limit of report is 2mg/L

Water Sampler

Water samples are collected by the ET using a plastic sampler to avoid metal contamination. Due to water depth for both sampling locations are lesser than 0.5m, a cleaned plastic beaker is used for sample collection. The sampler is rinsed before collection with the sample to be taken. 1,000mL water sample is collected from depth for laboratory analyses.

Sample Container

Water samples are contained in screw-cap PE (Poly-Ethylene) bottles as provided by ALS. The PE bottles are pretreated by laboratory in accordance with the corresponding analytical requirements of HOKLAS. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water sample is transferred from the sampler to the sample bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

Sample Storage and delivery

A 'Willow' 33-litter plastic cool box packed with ice is used to preserve the collected water samples prior to arrival at the laboratory. The temperature of the cool box is maintained as close to 4° C as possible without being frozen. Samples are delivered to the laboratory end of sampling day or following day within the maximum storage time requirement.

Chemical Analysis

ALS Technichem (HK) Pty Ltd (HOKLAS No. 66) is appointed by ET to provide analytical services for this project. The analysis of suspended solids is carried out to follow the APHA Standard Methods for the Examination of Water and Wastewater 19ed 2540D. The sample preparation and analysis under the QA/QC control is follow the HOKLAS QA/QC requirements and undertaken by the laboratory.

4.5.4 Ecology

Weekly site audit covering the whole assessment area is conducted during the construction work at Channels MUP05 and LMH01, focusing on the status/condition of the study area and its immediate vicinity, especially those sensitive habitats that have been identified in the ESR and/or habitats of conservation importance as stated in the EIAO TM.

Any changes found during the site audit have been marked and reported in the Monthly EM&A Report, and for those changes will be predicted to possibly or probably have had an impact on flora and fauna distribution or numbers should be highlighted in the Monthly EM&A report.

Ecology of water quality monitoring at the stream as requested to undertake in upstream and downstream of construction site Channels MUP05 and LMH01. The location of monitoring stations and requirements are same as the Water Quality Monitoring at the Channels MUP05 and LMH01. The procedure of water monitoring is same as the Water Quality monitoring.

4.6 Environmental Quality Performance Limits

Baseline EM&A monitoring was carried out from17 September to 13 October 2008, and ecological baseline monitoring for the habitat updating was performed on 16 September 2008 in accordance with the EM&A Manuals requirements. A summary of Action/Limit (A/L) Levels for air quality, construction noise, stream water quality, ecology and Landscape & Visual are shown in **Tables 4-6**, **4-7**, **4-8**, **4-9** and **4-10** respectively.

Table 4-6 Action and Limit Levels for Air Quality

Monitoring Station	Action Lev	vel (μg /m³)	Limit Level (µg/m³)		
	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP	
MUP-A1	>307	>156	> 500	> 260	
MUP-A2a	>300	>149	> 500	> 260	
MUP-A3	>299	>150	> 500	> 260	

Table 4-7

Action and Limit Levels for Construction Noise

Time Period	Action Level in dB(A)	Limit Level in dB(A)	
0700-1900 hours on normal weekdays	When one documented complaint is received	> 75* dB(A)	

Note: * Reduces to 70 dB(A) for schools and 65 dB(A) during the school examination periods.

Table 4-8

Action and Limit Levels for Water Quality

Monitoring Location		DO (mg/L)		Turbidity (NTU)		pH (Unit)		SS (mg/L)	
ID	Station Type	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level	Action Level	Limit Level
MUP-W1	Control	NA	NA	NA	NA	NA	NA	NA	NA
MUP-W2	Control	NA	NA	NA	NA	NA	NA	NA	NA

MUP-W4	Impact	5.27	5.18	18.03	24.81	6.5 – 8.5	6.0 – 9.0	15.8	17.6
MUP-W5	Mobile	4.42	4.37	7.88	8.54	6.5 – 8.5	6.0 – 9.0	6.0	6.0
MUP-W6	Mobile	4.54	4.51	11.81	14.84	6.5 – 8.5	6.0 – 9.0	3.9	4.8
LMH-W1	Control	NA	NA	NA	NA	NA	NA	NA	NA
LMH-W2	Control	NA	NA	NA	NA	NA	NA	NA	NA
LMH-W3	Impact	3.96	3.62	11.31	12.10	6.5 – 8.5	6.0 – 9.0	8.8	10.6
LMH-W4	Mobile	4.34	3.98	5.33	5.95	6.5 – 8.5	6.0 – 9.0	3.0	3.0
LMH-W5	Mobile	2.14	2.07	31.46	35.33	6.5 – 8.5	6.0 – 9.0	25.0	29.8
LMH-W6	Mobile	2.67	2.65	12.32	13.02	6.5 – 8.5	6.0 – 9.0	4.8	6.6

Note: - For DO, non-compliance of water quality limits occurs when monitoring result is lower than the limits.

- For SS and turbidity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

- For pH, non-compliance of water quality limits occurs when monitoring result is exceeded the range of limits.

Table 4-9 Action and Limit Levels for Ecology in Construction Phase at Channels MUP05 and LMH01

Parameter	Action Level	Limit Level
 Any construction works do not cause adverse ecological impacts outside the work site of Channels Where natural banks are to be retained are protected from adverse effects of engineering works, including impacts to riparian vegetation along these banks The existing natural stream channel is protected from adverse effect of engineering works, including potential indirect impacts through increased sedimentation Rock/fines used to form the bottom of the widened channel have the appropriate physical characteristics to permit reestablishment of semi-natural stream conditions The recommended mitigation measures are properly implemented by the Contractor 	Non- conformity on one occasion	Repeated Non- conformity

Table 4-10 Action Level for Landscape and Visual Impact in Construction Phase

Parameter	Action Level	Limit Level
Any trespass by the contractor outside the limit of the works,	Non-conformity	Repeated non-
including any damage to existing trees, woodland and vegetation	on one occasion	conformity

4.7 EVENT AND ACTION PLANS

An Event Action Plan for air quality, construction noise, water quality and ecology has been implemented for this designated project. Details of the Event Action Plan are presented in *Appendix F*.

4.8 Environmental Mitigation Measures

The project ESR has recommended environmental mitigation measures to minimize potential environmental impacts arising from the construction of the project. A full list of the mitigation measures is detailed in *Appendix C*.

4.9 DATA MANAGEMENT AND DATA QA/QC CONTROL

The impact monitoring data is handled by the ET's systematic data recording and management, which complies with an in-house certified (ISO 9001:2000) Quality Management System. Standard Field Data Sheets (FDS) are used in the EM&A program.

The monitoring data recorded in the equipment e.g. 1-hour TSP meters and noise meters are downloaded directly at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data.

For monitoring activities which require laboratory analysis, the responsible laboratory, ALS, follows the QA/QC requirements as set out under their HOKLAS scheme for all laboratory testing.

5. IMPACT MONITORING RESULTS

In this reporting month, construction works and environmental monitoring had started at Channels MUP03A&B, MUP04A&B and MUP05 located in Man Uk Pin. No impact monitoring has yet been undertaken at Channel LMH01 due to no construction activities during the month. In the future when the EM&A programme will cover all four channels once works in Channel LMH01 start.

The scheduled impact monitoring in this month is shown in *Appendix G* and the monitoring results are detailed in the following sub-sections. The meteorological data during the Reporting Period are summarized in *Appendix J*.

5.1 AIR QUALITY

According to the EM&A Manual, air monitoring is only required to conduct at Channels MUP04A and MUP05 during the construction phase. In this repoting period, the results of impact air quality monitoring for 24-hour and 1-hour TSP are summarized in **Tables 5-1** and **5-2**. The detailed 24-hour TSP monitoring data are shown in **Appendix H** and the graphic plots are shown in **Appendix I**.

Power failure and no make up of lost samples.

As shown in **Tables 5-1** and **5-2**, there was no exceedance recorded during this reporting period. Besides, there were total 6 power failures incident recorded at Location MUP-A2a and MUP-A3. We have liaised with the Contractor to rectify the power supply as soon as possible.

5.2 CONSTRUCTION NOISE

According to the EM&A Manual, noise monitoring is only required to perform at Channels MUP04A and MUP05 during the construction phase. All noise monitoring results are summarized in **Tables 5-3** to **5-6** and graphic plot are shown in **Appendix I**.

Table 5-3	Results of Construction Noise Monitoring at Channels MUP-N1 / MUP01/02-N1 (MUP05)

Limit Level (Leq30)		75 dB(A)					

As shown in **Tables 5-3** to **5-6**, the construction noise levels fluctuated well below the Limit Level. No documented complaints against the construction noise were registered during the Reporting Period. No NOE or corrective actions were therefore required for the parameter

5.3 WATER QUALITY

In this reporting month, a total of 14 sampling days were performed for stream water quality monitoring according to the EM&A Manual requirements. Detailed in-situ measurements and laboratory results are shown in **Appendix H** and graphic plots given in **Appendix I**.

There was a total of 3 exceedances recorded in SS. Based on finding in the investigation report, all exceedance was considered not related to the works of the Project. No associated corrective actions were therefore required. A summary of exceedances in this reporting month is provided in *Table 5-7* below:

Station	D	0	Turb	idity	pH V	'alue	S	S	Total Exc	ceedance
Station	Action	Limit	Action	Limit	Action	Limit	Action	Limit	Action	Limit
MUP-W4 ^(a)	0	0	0	0	0	0	0	0	0	0
MUP-W5 ^(b)	0	0	0	0	0	0	0	1	0	1
MUP-W6 ^(b)	0	0	0	0	0	0	0	2	0	2
Exceedances	0	0	0	0	0	0	0	3	0	3

Table 5-7 Summary of Stream Water Quality Exceedances

For pH measurements, the results shown that the range of pH unit were within 6.95 - 7.55 and within the lower or upper bounds of Action Limit Level.

5.4 ECOLOGY

According to the EM&A Manual [*382486/73//Issue2*], ecology monitoring is required for Channels MUP05 and LMH01 during the construction phase. In this reporting period, the construction works of Channels MUP05 has already been commenced on 10 March 2009. However construction works in Channel LHM01 has not yet started. So ecology monitoring was only undertaken for Channel MUP05 only. Once construction activities at Channel LMH01 start, ecology monitoring of the stream water will immediately take place.

In this reporting month, four site visits were carried out on 29 July, 6, 12 and 19 August 2010 by an ecological specialist. No non-compliance was observed during the auditing period and all of the mitigation measures were found properly implemented. Moreover, the channel was found turbid after the rainstorm during the site inspection and the contractor has been reminded to review the temporary drainage or desilting measures to ensure that no stockpile or general refuse will enter the water bodies.

The detailed findings are listed in the table below and the checklists are attached in *Appendix L*.

Table 5-8	Summary of Defects and Deficiencies Identified and Follow-up Actions and
	Remedies Taken

Date of Audit	Defects and Deficiencies Identified	Recommendation	Follow-up Actions and Remedies Taken
29 July 2010		The contractor has been reminded to review the temporary drainage design to make sure no soil will be washed down from the bank	Under review
6 August 2010		The contractor was reminded to carry out desilting of sedimentation tank prior to discharging. The contractor has been	Under review Under review
2010		reminded to review the design of temporary diversion works to maintain its functioning.	
19 August 2010		The contractor has been reminded to prevent stockpiles and general refuse near the channel from washing into water body under rainstorm.	Under review

5.5 OTHER FACTORS INFLUENCING THE MONITORING RESULTS

There were no other noticeable external factors generally affecting the monitoring results in this reporting month.

5.6 QA/QC RESULTS AND DETECTION LIMITS

Not applicable.

6. REPORT ON NON-COMPLIANCE, COMPLAINT, NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTION

6.1 RECORD OF NON-COMPLIANCE OF ACTION AND LIMIT LEVELS

No Action or Limit Level exceedance was identified for air quality and construction noise monitoring but there are 3 limit level exceedances for stream water quality in this reporting month. Based on finding in the investigation report, all exceedance was considered not related to the works of the Project. No associated corrective actions were therefore required.

6.2 ENVIRONMENTAL COMPLAINTS No written or verbal complaints were received (written or verbal) for each medium during the Reporting Period.

6.3 RECORD OF NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTION No notification of summons or successful prosecutions was recorded during the Reporting Period.

6.4 REVIEW OF REASONS FOR AND IMPLICATION OF NON-COMPLIANCE, COMPLAINT AND NOTICE OF SUMMONS No non-compliance, complaint or Notice of Summons was received in this reporting month.

6.5 DESCRIPTION OF FOLLOW-UP ACTIONS TAKEN It follows from **Sections 6.1** and **6.4** that no follow-up actions were necessary.

6.6 OTHERS

6.6.1 Solid and Liquid Waste Management Status

The quantity of waste for disposal or reuse is summarized in **Tables 6-1** and **6-2**. The monthly summary of waste flow table is shown in **Appendix M**.

Type of Waste	Quantity	Disposal Location
C&D Materials (Inert) (in '000m ³)	-	Tuen Mun 38 Fill Bank
	0.52	Reused in other Projects
C&D Materials (Non-Inert) (in '000m3)	0	NENT
Chemical Waste (in '000kg)	0	NA
General Refuse (in '000m ³)	0.017	NA

Table 6-1 Summary of Quantities of Waste for Disposal

Table 6-2

Summary of Quantities of Waste for Reuse/Recycling

Type of Waste	Quantity	Disposal Location
Metals for Recycling (in '000kg)	0	NA
Paper for Recycling (in '000kg)	0	NA
Plastics for Recycling (in '000kg)	0	NA

There was no known site effluent discharged but it was assumed that an estimated volume of 50m³ of waste water was discharged in this reporting month.

6.6.2 Site Inspection and Environmental Audit

A total of 4 weekly environmental site inspection and audit were conducted jointly by the ER, EO and ET during the Reporting Period on 29 July, 6, 12 and 19 August 2010 and there was also an IEC audit undertaken on 12 August 2010. No adverse environmental impacts were observed which indicated that the mitigation measures implemented were effective. Minor deficiencies found in the site inspections and audit was promptly rectified within the specified deadlines. Findings of the site inspection and environmental audit are summarized below. Performa of the weekly ET site inspection and audit activities are presented in *Appendix K*.

Table 6-3	Summary of Findings of Site Inspection and Environmental Audi	t
Date	Findings / Deficiencies	Follow-Up Status
29 th July 2010	 Free standing chemical container was observed, the contractor was reminded to provide trip tray or put the chemical to storage area(TKL 02) Floating C&D waste should be removed to keep the channel clean and clear. (TKL02) 	The deficiencies have been improved during site inspection on 6 th August 2010
6 th August 2010	 Free standing chemical container was observed, the contractor was reminded to provide trip tray or put the chemical to storage area(TKL 02) The rock barrier was damaged, the contractor was reminded to repair the barrier regularly especially in rainy season (MUP05) The contractor was reminded to avoid burning on the site. (MUP05) As a general reminder, the contractor would provide more rubbish bins within the site for improving site tidiness and carry out regular maintenance for the plants to prevent dark smoke emission or oil leakage. (TKL02 and MUP) 	The deficiencies have been improved during site inspection on 12 th August 2010
12 th August 2010	 Stagnant water was observed during the site inspection. Larvidical oil or pumping out should be undertaken to prevent mosquitoes breeding (TKL 02) After tree prune or cutting, the debris of tree trunk or branch or leaf was observed to retain within the site, as reminded contractor properly to maintain the site tidiness and removed the waste regular. (MUP05) As a general reminder, the contractor was reminded to re- cover the exposed slope regularly to avoid surface runoff. (MUP05) 	The deficiencies have been improved during site inspection on 19 th August 2010
19 th August 2010	• Free standing chemical containers without drip tray and label was observed at the site area, the contractor was reminded to provide drip tray and proper label for all chemical containers. (TKL 02 & MUP 05)	Will be reported on next month

6.6.3 Works to be Undertaken in the Forth-Coming Month

Works to be undertaken next month are shown in the construction program enclosed in *Appendix* C. In addition, the activities undertaken in the Reporting Period including construction, preparation and site clearance activities will also continue in the future. They are summarized below:

The forthcoming activities in the next two months:

- (a) Survey setting out;
- (b) Tree transplant;
- (c) Construction of access ramp;
- (d) Site clearance;
- (e) Construction of retaining wall and gabion wall;
- (f) Construction of site access

6.6.4 Future Key Issues and Mitigation Measures for the Forth-Coming Month

As wet season comes, the water implemented mitigation measures such as stacking of sand bags at downstream of the excavation site should be maintained and improved as necessary as preventative measures. Mitigation measures for air and water quality should therefore be properly maintained and improved as necessary. Temporary drainage plans should be implemented ahead.

Attention should also be paid to construction noise and other environmental issues identified in the EM&A Manual. Mitigation measures recommended in the ESR and summarized in Mitigation Measure Implementation Schedule should be fully implemented.

7 CONCLUSIONS AND RECOMMENDATIONS

This is the **18th** monthly EM&A Report for Channels MUP03A&B, MUP04A&B, MUP05 and LMH01 - Designated Project, covering a period from **26 July** to **25 August 2010**.

There was a total of 3 Limit Level exceedances of stream water quality which is recorded in Suspended solids(SS). Based on the investigation reports, all exceedances were considered not related to the works of the Project. No associated corrective actions were therefore required.

No written or verbal complaints, notifications of summons or successful prosecutions were received during the Reporting Period. No adverse environmental impacts were observed during the weekly site inspection and environmental audit, which indicated that the implemented mitigation measures for air quality, construction noise and water quality were effective. A few minor deficiencies found in the weekly site inspection and they were rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

As wet season has come, the water implemented mitigation measures such as stacking of sand bags at downstream of the excavation site should be maintained and improved as necessary as preventative measures.

Attention should also be paid to construction noise and other environmental issues identified in the EM&A Manual. Other mitigation measures recommended in the ESR and summarized in Mitigation Measure Implementation Schedule should be fully implemented.

Impact monitoring should be immediately undertaken upon the construction works commencement at Channel LMH01 and will be reported in the coming month.

Environmental Mitigation Implementation Schedule

t

APPENDIX A IMPLEMENTATION SCHEDULE OF THE PROPOSED MITIGATION MEASURES

.

Table A1 Implementation Schedule of Air Quality Mitigation Measures

EIA Ref	EM&A Ref	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plementa Stages*	tion	Relevant
			Measures and Main Concerns to addressed	Timing	Agent	D	C	0	Legislation & Guidelines
Air Q	uality - Co	nstruction Phase				<u> </u>		L	<u> </u>
		Construction Dust					T		I
3.6.1	2.9.2	In order to comply with Air Pollution Control Ordinance (APCO), the Contractor should undertake at all times measures to prevent dust nuisance as a results of his activities. The Contractors are required	To prevent dust nuisance on ASRs during construction	All works site / during construction	Construction Contractor		4		Air Pollution Control Ordinanc Air Pollution
		to follow all the requirements for dust control stipulated in the Air Pollution Control (Construction Dust) Regulation. Dust suppression measures should be installed as part of good construction practice, and							Control (Construction Dust) Regulation
1	l.	they should be incorporated in the Contract Specification and implemented to minimize dust nuisance to within acceptable levels arising from the				i			
		works. The followings are examples of the dust suppression measures.							
		 The area in which excavation takes place shall be sprayed with water immediately prior to, during and immediately after the excavation to minimise dust generation. 				-			
		(ii) The Contractor shall frequently clean and water the site to minimize fugitive dust emissions.							

EIA	EM&A	Dee	ommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Imį	olementa Stages*	tion	Relevant
Ref	Ref	Ket		Measures and Main Concerns to addressed	Timing	Agent	D	Ĉ	0	Legislation & Guidelines
		delive simila create	ive water sprays shall be used during the ry and handling of aggregate, and other r materials, when dust is likely to be d and to dampen all stored materials g dry and windy weather.							
		condu	ing of exposed surfaces shall be incred at least 2 times per day especially g dry and windy weather.							
		mover as oft	within the site where there is a regular ment of vehicles must be regularly watered en as necessary for effective suppression st or as often as directed by the Engineer.							
		vehicl transf with a provid this e	e dusty material are being discharged to le from a conveying system at a fixed er point, a three-sided roofed enclosure a flexible curtain across the entry shall be ded. Exhaust fans shall be provided for enclosure and vented to a suitable fabric system.							
		vehic public hour	Contractor shall restrict all motorised les within the site, excluding those on c roads, to a maximum speed of 15 km per and confine haulage and delivery vehicles signated roadways inside the site.							
ĩ		used mud,	el washing facilities shall be installed and by all vehicles leaving the site. No earth, debris, dust and the like shall be deposited ublic roads. Water in the wheel cleaning							

EIA Ref	EM&A Ref	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plement Stages		Relevant
		·	Measures and Main Concerns to addressed	Timing	Agent	D	.C	0	- Legislation & Guidelines
		facility shall be changed at frequent intervals and sediments shall be removed regularly. The Contractor shall submit details of proposals for the wheel cleaning facility. Such wheel washing facilities shall be usable prior to any earthworks excavating activity on the site. The Contractor shall also provide a hard-surfaced road between any washing facility and the public road.							
		(ix) All vehicle exhausts should be directly vertically upwards or directed away from the ground.							
		(x) Any materials dropped on paved roads will need to be cleaned up immediately to prevent dust nuisance.							
		Odow [.]					-		
3.6.2	2.9.3	In the event that excavated materials are found to be odourous, the following measures should be implemented by the Contractor.	To prevent odour nuisance on ASRs during construction	All works site / during construction	Construction Contractor		4		Air Pollution Control Ordinanc Environmental
		 Place odorous excavated material as far away (say, at least 20m) from air sensitive receivers as possible. 							Impact Assessmen Ordinance
		(ii) Temporary stockpiles of odorous excavated material should be properly covered with tarpaulin and should be removed off-site as soon as practically possible within 24 hours to

Noise - (Constructio	on Phase							
		Level 1 Mitigation – Use of Quiet Plant							
4.6.2 – 4.6.5	Table 3.4	effective ways of alleviating construction noise impact. The Contractor should use quiet plant with sound power level lower than that stipulated in the	To protect NSRs from noise during construction	All works site / during construction	Construction Contractor			:	Environmental Impact Assessmen Ordinance
		TM-GW as the Level 1 mitigation for construction noise. The quiet plant used in the construction noise calculation is shown in Appendix B. The							ETWB TCW No. 19/2005
		Contractor can propose other suitable alternative equipment with similar or lower sound power level.							
		The use of mini or lower power rating equipment (e.g. mini excavator) should also be considered where practical. This technique would be feasible							
		and practical at some locations given the limited space available for using large size construction equipment and the small scale works involved (e.g. localised bank improvement at LMH01, U-channel							
:		and drainage pipes at MUP03 & 04B).		·					
		The contractor should take note of ETWB TCW No. 19/2005 on the use of QPME.							

EIA EM8	A Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plementa Stages*		Relevant
Ref Ref	8	Measures and Main Concerns to addressed	Timing	Agent	D	C	0	Legislation & Guidelines
	Level 2 Mitigation - Use of Temporary Noise Barriers							
4.6.7 – 4.6.8	3.4 Since most of the NSRs within the Project area are typically low-rise village houses of not more than 3 storeys tall, it would be effective to have noise screening structures or temporary noise barriers purposely-built along the site boundary to provide additional protection to NSRs close to the construction site boundary. This could be in the form of purposely-built site hoarding constructed from appropriate materials with a minimum superficial density of 7 kg/m ² . Noise barrier should be provided for noisy construction activities that would be undertaken close (about 25m or less) to NSRs. With the exception of NSRs MUP04A-2 and MUP05-6, the noise barrier should have a vertical height of at least 2.5 m or (depending on the height of the NSRs to be protected) a height ensuring that the operating equipment can be shielded from the view of the NSRs. For NSR MUP04A-2, the temporary noise barrier should have a minimum height of 3.5m with a small cantilevered upper portion. For MUP05-6, the temporary noise barrier should have a minimum height of 3m with a small cantilevered upper portion. The temporary noise barrier should have no gaps or opening at joints. The Contractor should regularly inspect and maintain the noise	noise during construction	All works site located at 25m or less from NSRs as shown in Figures 4.4 – 4.6 / during construction	Construction Contractor				Environmental Impact Assessment Ordinance

EIA Ref	EM&A Ref	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plement Stages ³		Relevant
			Measures and Main Concerns to addressed	Timing	Agent	D	С	0	Legislation & Guidelines
		barrier to ensure its effectiveness.						1	
		For the construction works which have the potential to exceed the noise standards on nearby NSR and whose line of sight cannot be effectively blocked by the temporary noise barrier, movable (mobile) barriers should be provided. Movable barriers of at least 2.5 m height with a small cantilevered upper portion and skid footing can be located within a few meters of stationary plant (e.g. generator, compressor) and within about 5 m or more of a mobile equipment (e.g. excavator, mobile crane), such that the line of sight to the NSR is blocked by the barriers.							
		Good Site Practices							
4.6.11	Table 3.4	In general, potential construction noise impact can be minimised or avoided by imposing a combination of the following good site practices as mitigation measures:	To protect NSRs from noise during construction	All works site / during construction	Construction Contractor	·	4		Environmental Impact Assessmer Ordinance
		(a) Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction period.		· ,· ·	, .		•	:	
		(b) Construction plant should be sited away from NSRs.							

.

ELA	EM&A		Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plementa Stages*		Relevant
Ref	Ref		Recommended winigation measures	Measures and Main Concerns to addressed	Timing	Agent	D	Ĉ	0	Legislation & Guidelines
ì		(c)	Machines and plant that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum.							
		(d)	Equipment known to emit sound strongly in one direction should be orientated such that the noise is directed away from nearby NSRs.							
		(e)	Material stockpiles and other structures (such as site offices) should be effectively utilised to shield on-site construction activities.							
		(f)	Stationary equipment should be located within the channel when weather conditions permit (e.g. dry season).	× .						
		(g)	The Contractor shall devise, arrange methods of working and carrying out the works in such manner as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these measures are implemented properly.	÷						
		(h)	In the event that new schools are built near the works area, the Contractor should minimize construction noise exposure to the schools (especially during examination periods). The Contractor should liaise with the school and the Examination Authority to							

EIA Ref	EM&A Ref	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	plementa Stages*	tion .	Relevant
			Measures and Main Concerns to addressed	Timing	Agent	D	C	0	Legislation & Guidelines
		ascertain the exact dates and times of all examination periods during the course of the contract and to avoid noisy activities during these periods.							
4.6.13 - 4.6.14	Table 3.4	To adopt good public relation with the local communities and maintain effective communication channel with the public such as setting up a 24-hour hotline system for enquiry and complaint.	To promote good public relation and maintain effective communication during construction	All works site / during construction	Project Office (Engineer) & Construction Contractor		1		Environmental Impact Assessmer Ordinance
4.6.17 & 4.6.18	Table 3.4	Further mitigation by restricting concurrent usage of several equipment at the same time.	To further mitigate construction noise at NSRs MUP04A-2 & MUP04B-2	For works within 20m of NSRs MUP04A-2 & MUP04B-2 / during construction	Construction Contractor		1		Environmental Impact Assessmer Ordinance
4.6.19	Table 3.4	The use of purpose built temporary noise barriers would not be practicable for works at LMH01 as the works are small scale, short duration and within village environs with very limited working space. It may also hamper access causing inconvenience to the villagers. The process of installing and dismantling the noise barriers itself would create additional noise nuisance. The use of light-weight mobile barrier is considered more preferable.	To protect NSRs at LMH01 from noise during construction	All works site located at 25m or less from NSRs as shown in Figure 4.6 / during construction	Construction Contractor		1		Environmental Impact Assessmen Ordinance

EIA	EM&A	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Imj	plementa Stages*		Relevant
Ref	Ref		Measures and Main Concerns to addressed	Timing	Agent	D	C	0	Legislation & Guidelines
4.6.20	Table 3.4	Employ quiet working method (e.g. mini-concrete crusher, saw & lift) during demolition works of crossings, restrict concurrent usage of several equipment at the same time such as parking dump truck, concrete lorry mixer outside main village area. The use of dump truck or concrete lorry mixer will be limited to only about 1 trip every few days.	To further mitigate construction noise at NSRs for LMH01	Construction works at LMH01 / during construction	Construction Contractor		~		Environmental Impact Assessment Ordinance
4.8.4	Table 3.4	It is recommended that works programme should be scheduled such that only one crossing is constructed at any one time. Bank improvement work can be conducted concurrently.	To mitigate cumulative noise impact at LMH01	Crossing construction at LMH01 / during construction	Construction Contractor		4		Environmental Impact Assessment Ordinance
4.9.1	3.8.1	The Contractor should design, construct, operate and maintain the mitigation measures throughout the construction stage and as required by the Engineer. Before commencement of the works, the Contractor should submit to the Engineer for approval (as part of their method statement) details of the mitigation measures to be employed under the works. The Contractor's proposed mitigation measures should also be certified by the ET Leader and verified by the IEC to ensure the intended noise reduction effectiveness can be achieved.	To protect NSRs from noise during construction and to ensure the Contractor will properly implement the mitigation measures	All works site / during construction	Construction Contractor		1		Environmental Impact Assessment Ordinance

EIA	EM&A		Objectives of the Recommended	Location /	Implementation	Imj	plementa Stages*		Relevant
Ref	Ref	Recommended Mitigation Measures	Measures and Main Concerns to addressed	Timing	Agent	D	Ċ	0	Legislation & Guidelines
5.6.7	4.9.7	Silt removal facilities, channels should be maintained and the deposited silt and grit should be removed regularly, at the onset of and after each rainstorm to ensure proper functioning of these facilities at all times.	To minimize adverse water quality impact during construction	All works site / during construction	Construction Contractor				ProPECC PN 1/94
5.6.8	4.9.8	Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into the nearby waterbodies. Open stockpiles susceptible to erosion should be covered with tarpaulin or similar fabric and provided with containment such as bunds, sand bag barriers or equivalent measures, especially during the wet season (April – September) or when heavy rainstorm is predicted. Runoff to watercourses should be reduced by minimising flat exposed areas of permeable soil, and by forming pits or diversion channels into which runoff can flow to suitable treatment facilities before discharge.	To minimize adverse water quality impact during construction	All works site / during construction	Construction Contractor		1		ProPECC PN 1/94
i		De-watering / Excavation of Streams and Removal of Sediment	-						
5.6.9	4.9.9	The use of containment structures such as earth bund or sand bag barriers wrapped with geotextile fabric or similar material or diversion channels is recommended to facilitate a dry or at least confined excavation within watercourses.	To minimize adverse water quality impact during construction	All works site / during construction	Construction Contractor		~		Water Pollution Control Ordinance

			Measures and Main Concerns to addressed	Timing	Agent	D	C	0	- Legislation & Guidelines
5.6.10	4.9.10	Excavation works at the existing stream section of MUP05 should be programmed to be carried out during periods of low flow (dry season from 1 st October to 31 st March) to minimise impacts on downstream water quality and sensitive receivers. For the ecologically sensitive stream of LMH01, the restriction period should be further extended for an additional month (i.e. excavation works allowed from 1 st November to 31 st March) to protect the aquatic fauna from silty runoff due to possible heavy rain during the transitional period of the wet / dry seasons.	To minimize adverse water quality impact from excavation works during wet season	MUP05 & LMH01 / during construction	Construction Contractor		1		Water Pollution Control Ordinance
5.6.11	4.9.11	In addition, the excavation works should be carried out in sections to reduce the area of exposed surfaces as described below. For MUP05, the first 300m upstream section will have no restriction. For the remaining sections of MUP05 (within existing stream course), the length would be restricted to 300m at any one time. For MUP04A, a 100m restriction should be imposed for the entire stream works area to cater for potential cumulative impact on MUP05.	Restrict length of excavation work to minimise impacts on downstream water quality and sensitive receivers	MUP05 & MUP04A / during construction	Construction Contractor		1		Water Pollution Control Ordinance
5.6.12	4.9.12	As for LMH01, given its relatively small scale works but sensitive nature of the stream, it is recommended that only either one portion of bank	To minimize adverse water quality impact on LMH01 during	LMH01 / during construction	Construction Contractor		1		Water Pollution Control Ordinance

		improvement works or one vehicular crossing reconstruction should be carried out at any one time.	construction						
5.6.14	4.9.14	After dewatering of the streams, the sediments should be allowed to dry before excavation (yet still maintain a moist state to avoid dust nuisance). This will facilitate excavation of the sediments and also minimise the risk of drained water flowing back into watercourses as the sediment is handled. Where time or weather constraints require handling of wet sediment, care should be taken in the removal of sediment and the storage area should be bunded to prevent silty runoff entering watercourses. Given its small quantity, all excavated sediment should be reused on-site as backfilling material.	To minimize adverse water quality impact during construction (in particular when excavating and handling sediments)	All works site where sediment removal is required / during construction	Construction Contractor		7		Water Pollution Control Ordinance
5.6.15	4.9.15	Excavated sediment will likely be temporarily stored on-site for reuse as backfilling material. This should be stored in a bunded area and covered during wet season or when rainstorm is forecasted to avoid inadvertent release of silts and suspended solids to nearby water bodies.	To minimize adverse water quality impact during construction (in particular when excavating and handling sediments)	All works site where sediment removal is required / during construction	Construction Contractor		1		Water Pollution Control Ordinance
5.6.16	4.9.16	Regular monitoring of suspended solids and turbidity should be conducted during excavation works. Any exceedance of water quality in the	To minimize adverse water quality impact during construction	All works site / during construction	Construction Contractor		1		Water Pollution Control Ordinance

			Concerns to addressed	Timing	Agent	D	C	0	Guidelines
Waste	- Construc	tion Phase					J	I	
		General					<u> </u>		l
6.5.2 - 5.5.3	5.1.2 - 5.1.3	Upon appointment, the main contractor of each construction contract should prepare and implement an Environmental Management Plan (EMP) in accordance with ETWB TCW No. 19/2005 – Environmental Management on Construction Sites which should describe the arrangements for avoidance, reuse, recovery, recycling, storage, collection, treatment and disposal of different categories of waste to be generated from the construction activities. Such a management plan should incorporate site specific factors, such as the designation of areas for segregation and temporary storage of reusable and recyclable materials. The EMP should be submitted to the Engineer for approval. The contractor shall implement the waste management practices in the EMP throughout the construction stage of the Project. The EMP should be reviewed regularly and updated (preferably monthly) by the contractor. The EMP should take into account the recommended mitigation measures in the EIA Report. The contractor also should refer to the Construction and Demolition Material Management Plan (C&DMMP) in Appendix D1 (of the EIA) to facilitate him in the preparation of the EMP of the	Waste reduction, reuse, recycling and proper disposal of waste	All works site / during construction	Construction Contractor		4		Waste Disposal Ordinance ETWB TCW No 19/2005
		Contract.							

EIA	EM&A	Recommended Mitigation Measures	Objectives of the Recommended	Location /	Implementation	Im	olementa Stages*	tion	Relevant Legislation &
Ref	Ref		Measures and Main Concerns to addressed	Timing	Agent	Ø	C	0	Guidelines
	5.1.4	Training of construction staff should be undertaken by the contractor about the concept of site cleanliness and appropriate waste management procedures. The contractor should develop and provide toolbox talk for on-site sorting of C&D materials to enhance worker's awareness in handling, sorting, reuse and recycling of C&D materials. Requirements for staff training should be included in the EMP.	Waste reduction, reuse, recycling and proper disposal of waste	All work sites / during construction	Construction Contractor		V		Waste Disposal Ordinance ETWB TCW No. 19/2005
6.5.5	5.1.5	Good planning and site management practice should be employed to eliminate over ordering or mixing of construction materials to reduce wastage. Proper storage and site practices will minimise the damage or contamination of construction materials.	Waste reduction, reuse, recycling and proper disposal of waste	All work sites / during construction	Construction Contractor		~		Waste Disposal Ordinance ETWB TCW No. 19/2005
6.5.6	5.1.6	Where waste generation is unavoidable, the potential for recycling or reuse should be rigorously explored. If wastes cannot be recycled, disposal routes described in the EMP should be followed. A recoding system for the amount of waste generated, recycled and disposed (including the disposal sites) should be implemented. In order to monitor the disposal of C&D material and solid wastes at public filling facilities and landfills and to control fly-tipping, a trip-ticket system should be included.	Waste reduction, reuse, recycling and proper disposal of waste	All work sites / during construction	Construction Contractor		٨		Waste Disposal Ordinance ETWB TCW No 19/2005 31/2004

ĩ		equipped with silt traps should be installed at the stockpiling area.							
6.5.19	5.1.19	The identification of final disposal sites for C&D materials generated by the construction works will be considered during the detailed design stage of the Project when the volume and types of C&D materials can be more accurately estimated. The Public Fill Committee of CEDD should be consulted on designated outlets (e.g. public filling area) for public fill, whilst EPD should be consulted on landfills for C&D waste. Disposal of C&D waste to landfill must not have more than 50% (by weight) inert material. The C&D waste delivered for landfill disposal should contain no free water and the liquid content should not exceed 70% by weight.	Waste reduction, reuse, recycling and proper disposal of waste	All work sites / during construction	Construction Contractor		1		Waste Disposal Ordinance ETWB TCW No. 19/2005
6.5.20	5.1.20	In order to avoid dust or odour impacts, any vehicle leaving a works area carrying C&D waste or public fill should have their load covered before leaving the construction site.	Waste reduction, reuse, recycling and proper disposal of waste	All work sites / during construction	Construction Contractor		7		Waste Disposal Ordinance ETWB TCW No. 19/2005 WBTC No. 19/2001
6.5.21	.5.1.21	C&D materials should be disposed of at designated public filling facilities or landfills. Disposal of		All work sites / during	Construction Contractor		1		Waste Disposal Ordinance

7.9.3	6.5.2	<i>LMH01</i> Given the ecological importance of Lin Ma Hang stream, it is proposed that construction works at LMH01 should be restricted to the dry season period from 1 st November -31^{st} March. The small scale of works should allow all construction to be completed within dry season to ensure that the risk of erosion and sedimentation due to heavy rain on the works areas, as well as disturbance impacts to surrounding areas, will be minimised.	impacts during construction at LMH01	All works sites at LMH01 / during construction	Construction Contractor		~		Environmental Impact Assessment Ordinance
7.9.4	6.5.3	In addition, the breaking of existing shotcrete banks at LMH01 should be restricted to hand-held equipment. Concrete should not be used for construction of the gabion banks.	impacts during	All works sites at LMH01 / during construction	Construction Contractor		7		Environmental Impact Assessment Ordinance
7.9.5	6.5.4	Potential disturbance impacts to surrounding habitats and pollution risks (water quality impacts) to the stream should be minimised by adoption of appropriate site managemen procedures, as detailed in ETWB TCW No 5/2005; including among others the location o access to the site and storage of materials, and treatment of construction site waste to preven	construction at LMH01 t f f	All works sites at LMH01 / during construction	Construction Contractor		1		Environmental Impact Assessment Ordinance

		pollution of the stream. These site management measures are listed in the subsequent section.			Agent	D	C	0	Legislation & Guidelines
7.9.9 i		MUP05 (natural stream section) <u>Streambed</u> One of the main benefits of the proposed stream widening measures is that the existing natural stream bed is left undisturbed. Accordingly, works should be carried out in such a way that as much as possible of the natural stream bed should be left undisturbed and that where disturbance is essential this should be minimised in terms of area, magnitude and duration to minimise potential impacts to stream fauna and to ensure refuges for these species during the period of the works. Avoidance of the stream bed can be achieved by conducting the earthworks to widen the stream from the landward side, by not lowering the widened channel to the same level as, or below, the existing channel, and by leaving the existing stream untouched except during the inal stage, when the newly formed widened tream bed is joined to the existing stream. 		deposited naturally.							
9.11	6.5.10	In order to minimise potential impacts to stream fauna during excavation of the widened "two- stage" channel, this work should be limited to the dry season as far as possible, between 1 st October and 31 st March. As rainfall is low at this time, erosion is less likely and deposition of sediment downstream of the works should be minimised. This also avoids the time when stream fauna are at the most vulnerable stage in their life cycle (eggs and young larvae). Any essential works outside the dry season should be temporarily isolated from the stream to prevent the risk of pollution or sedimentation affecting the ecological integrity of the stream.	Minimize ecological impacts during construction at MUP05	All works sites at MUP05 / during construction	Construction Contractor		1		Environmental Impact Assessment Ordinance
7.9.12	6.5.11	As required to minmize potential water quality impacts (Section 5.6), excavation works at the stream section of MUP05 should be restricted to 300m length at any one time. No restriction is considered necessary for the first 300m upstream concrete drains section. Excavation works at MUP04A should be restricted to 100m to cater for potential cumulative impact on MUP05.	construction at MUP05	All works sites at MUP05 / during construction	Construction Contractor		N . - H - H - H - H - H - H - H - H	Excavation works should be carried out during the dry season where stream flow is low. Where adequate space is available, works should be carefully phased such that only one side of the channel is constructed. Temporary diversion should be provided to ensure continuous water flow to the downstream section. The proposed works site inside or in the proximity of natural streams should be temporarily isolated, such as using bunds or sandbag barriers (wrapped with geotextile fabric) or other similar techniques, to prevent adverse impacts on the stream water quality. For the stream section where the existing natural stream bed and bank will be left untouched, no disturbance to the stream bed and bank should be allowed from construction works, equipment or workers. If temporary access track on streambed is unavoidable, this should be kept to the minimum width and length. Temporary stream crossings should be supported on stilts above the stream bed. Adequate temporary drainage measures ncluding sediment and oil/grease traps hould be provided to prevent contaminated ite run-off entering the water bodies. Limit Level being exceeded by one sampling day	<ol> <li>Repeat in-situ measurement to confirm findings</li> <li>Identify source(s) of impact</li> <li>Inform IEC, Contractor and EPD</li> <li>Check monitoring data, all plant, equipment and Contractor's working methods</li> <li>Discuss mitigation measures with IEC, ER and Contractor</li> <li>Ensure mitigation measures are implemented</li> <li>Increase the monitoring frequency to daily until no exceedance of Limit Level</li> </ol>	<ol> <li>Discuss with ET and Contractor on the mitigation measures</li> <li>Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly</li> <li>Assess the effectiveness of the implemented mitigation measures</li> </ol>	<ol> <li>Discuss with IEC on the proposed mitigation measures</li> <li>Request Contractor to critically review the working methods</li> <li>Make agreement on the mitigation measures to be implemented</li> <li>Assess effectiveness of the implemented mitigation measures</li> </ol>	<ol> <li>Inform the ER and confirm notification of the non-compliance in writing</li> <li>Rectify unacceptable practice</li> <li>Check all plant and equipment</li> <li>Consider changes of working methods</li> <li>Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days</li> <li>Implement the agreed mitigation measures</li> </ol>
Limit Level being exceeded by more than one consecutive sampling day	<ol> <li>Repeat in-situ measurement to confirm findings</li> <li>Identify source(s) of impact</li> <li>Inform IEC, Contractor and EPD</li> <li>Check monitoring data, all plant, equipment and Contractor's working methods</li> <li>Discuss mitigation measures with IEC, ER and Contractor</li> <li>Ensure mitigation measures are implemented</li> <li>Increase the monitoring frequency to daily until no exceedance of Limit Level for two consecutive days</li> </ol>	<ol> <li>Discuss with ET and Contractor on the mitigation measures</li> <li>Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly</li> <li>Assess the effectiveness of the implemented mitigation measures</li> </ol>	<ol> <li>Discuss with IEC on the proposed mitigation measures</li> <li>Request Contractor to critically review the working methods</li> <li>Make agreement on the mitigation measures to be implemented</li> <li>Assess effectiveness of the implemented mitigation measures</li> <li>Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the work until no exceedance of Limit Level</li> </ol>	<ol> <li>Inform the ER and confirm notification of the non-compliance in writing</li> <li>Rectify unacceptable practice</li> <li>Check all plant and equipment</li> <li>Consider changes of working methods</li> <li>Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days</li> <li>Implement the agreed mitigation measures</li> <li>As directed by the ER, to slow down or to stop all or part of the work or construction activities</li> </ol>

#### **Event/Action Plan for Ecology**

EVENT	ACTION						
	ET Leader	IEC	ER	Contractor			
Non-conformity on one occasion	<ol> <li>Identify source</li> <li>Inform the IEC and ER</li> <li>Discuss remedial actions with IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> </ol>	<ol> <li>Check monitoring results</li> <li>Check the Contractor's working method</li> <li>Discuss with the ET and Contractor on possible remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures</li> <li>Check the implementation of remedial measures</li> </ol>	<ol> <li>Notify Contractor</li> <li>Ensure remedial measures are properly implemented</li> <li>Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the works in the case of serous non-conformity until situation is rectified</li> </ol>	<ol> <li>Take immediate action to avoid further problem</li> <li>Amend working methods if needed</li> <li>Submit proposals for remedial actions to ET, ER and IEC</li> <li>Rectify damage and implement the agreed remedial actions</li> </ol>			
Repeated Non-confirmity	<ol> <li>Identify source</li> <li>Inform the IEC, ER, EPD and AFCD</li> <li>Increase monitoring frequency</li> <li>Discuss remedial actions with IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> <li>If exceedance stops, cease additional monitoring</li> </ol>	<ol> <li>Check monitoring results</li> <li>Check the Contractor's working method</li> <li>Discuss with the ET and Contractor on possible remedial measures</li> <li>Supervise the implementation of remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures and keep EPD and AFCD informed</li> </ol>	<ol> <li>Notify Contractor</li> <li>Ensure remedial measures are properly implemented</li> <li>Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the works in the case of serous non-conformity until situation is rectified</li> </ol>	<ol> <li>Take immediate action to avoid further problem</li> <li>Amend working methods if needed</li> <li>Submit proposals for remedial actions to ET, ER and IEC</li> <li>Rectify damage and implement the agreed remedial actions</li> </ol>			

#### **Event/Action Plan for Landscape and Visual Impact**

EVENT	ACTION						
EVENI	ET Leader	IEC	ER	Contractor			
Non-conformity on one occasion	<ol> <li>Identify source</li> <li>Inform the IEC and the ER</li> <li>Discuss remedial actions with IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> </ol>	<ol> <li>Check report</li> <li>Check the Contractor's working method</li> <li>Discuss with the ET and Contractor on possible remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures</li> </ol>	<ol> <li>Notify the Contractor</li> <li>Ensure remedial measures are properly implemented.</li> </ol>	<ol> <li>Amend working methods if needed</li> <li>Rectify damage and undertake remedial measures or any necessary replacement</li> </ol>			
Repeated Non-conformity	<ol> <li>Identify source</li> <li>Inform the IEC, ER, EPD and AFCD</li> <li>Increase monitoring (site audit) frequency</li> <li>Discuss remedial actions with IEC, the ER and the Contractor</li> <li>Monitor remedial actions until rectification has been completed</li> <li>If exceedance stops, cease additional monitoring (site audit)</li> </ol>	<ol> <li>Check report</li> <li>Check the Contractor's working method</li> <li>Discuss with the ET and Contractor on possible remedial measures</li> <li>Advise the ER on effectiveness of proposed remedial measures.</li> <li>Supervise the implementation of remedial measures</li> </ol>	<ol> <li>Notify Contractor</li> <li>Ensure remedial measures are properly implemented</li> </ol>	<ol> <li>Amend working methods if needed</li> <li>Rectify damage and undertake remedial measures or any necessary replacement</li> </ol>			

<b>Event/Action</b>	Plan	for	Construction	Noise
---------------------	------	-----	--------------	-------

	Action							
EVENT Action Level	ET Leader 1. Notify IEC, Contractor and ER 2. Carry out investigation and identify source 3. Report the results of investigation to IEC, Contractor and ER 4. Discuss with the Contractor and formulate remedial measures 5. Increase monitoring frequency 6. Check compliance to Action/limit Levels after application of mitigation measures	IEC           IEC           1.         Review the analysed results submitted by the ET Leader           2.         Review the proposed remedial measures by the Contractor and advise the ER & ER accordingly           3.         Review the implementation of remedial measures	ER 1. Confirm receipt of notification of complaint in writing 2. Notify Contractor 3. Check monitoring data submitted by the ET 4. Require Contractor to propose remedial measures for the analysed noise problem 5. Ensure remedial measures are properly implemented	Contractor1.Submit noise mitigation proposals to ER and IEC within three working days2.Liaise with the ER to ensure the effectiveness of the agreed mitigation3.Amend proposal if required4.Implement noise mitigation proposals				
Limit Level	<ol> <li>Notify IEC, Contractor and ER</li> <li>Identify source</li> <li>Repeat measurement to confirm findings</li> <li>Increase monitoring frequency</li> <li>Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented</li> <li>Inform IEC, ER and EPD the causes &amp; actions taken form the exceedances</li> <li>Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results</li> <li>If exceedance stops, cease additional monitoring</li> </ol>	<ol> <li>Check monitoring data submitted by ET</li> <li>Discuss amongst ER, ET Leader and Contractor on the potential remedial actions</li> <li>Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER &amp; ET accordingly</li> <li>Audit the implementation of remedial measures</li> </ol>	<ol> <li>Confirm receipt of notification of exceedance</li> <li>Notify Contractor</li> <li>Check monitoring data submitted by the ET</li> <li>Require Contractor to propose remedial measures for the analysed noise problem</li> <li>Discuss with ET, IEC and Contractor on proposed remedial actions to be implemented</li> <li>Ensure remedial measures are properly implemented</li> <li>Assess the effectiveness of the remedial actions and keep the Contractor informed</li> <li>If exceedance continues, consider what protion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated</li> </ol>	<ol> <li>Take immediate action to avoid further exceedance</li> <li>Submit proposals for remedial actions to ER within three working days of notification</li> <li>Liaise with the ER to ensure the effectiveness of the agreed mitigation</li> <li>Amend proposal if required</li> <li>Implement the agreed proposals</li> <li>Resubmit proposals if problem still not under control</li> <li>Stop the relevant portion of works as determined by the ER until the exceedance is abated</li> </ol>

## **Proforma of the Weekly ET Site Inspection Checklist**

Project:	DSD Contract No. DC/2007/08		Inspected by	Checklist No. DC200708-290710
	Drainage Improvement Works at Tai Man Uk Pin and Lin Ma Hang	Po Tin, Ping Che,	IEC/IEC's Representative: RE/ RE's Representative:	 William Tang
Inspection	*		ETL/ ET's Representative:	Ray Cheung
Date:	29 July 2010		EO/ EO's Representative:	C.P. Chan
Time:	10:00am		Contractor's Representative:	Y. M. Mo
PART A:	GENER	AL INFORMATION	Enviro	onmental Permit No. EP-277/2007/A
Weather:	Sunny Fine	✓ Cloudy Ra	ainy Calm	
Temperature	31.8 °C			
Humidity:	High Moderate	Low		N/A
Wind:	Strong Breeze	Light Ca	alm	
Channel		Ar	rea Inspected	
TKL02 TKL07 MUP01/02 MUP05				
PART B:		SITE AUDIT		
Net O	he Met Observed: Vest Compliance: Net Met	Ormalianaa	Not Ec	Now Photo/

Note:	Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Obs.	Yes	No	Up	N/A	Remarks
Sectio	n 1: Water Quality						
1.01	Is an effluent discharge license obtained for the Project?	$\checkmark$					
1.02	Is the effluent discharged in accordance with the discharge licence?	$\checkmark$					
1.03	Is the discharge of turbid water avoided?		$\checkmark$				
1.04	Are there proper desilting facilities in the drainage systems to reduce SS levels in effluent?		$\checkmark$				
1.05	Are there channels, sandbags or bunds to direct surface run-off to sedimentation tanks?		$\checkmark$				
1.06	Are there any perimeter channels provided at site boundaries to intercept storm runoff from crossing the site?		$\checkmark$				
1.07	Is drainage system well maintained?		$\checkmark$				
1.08	As excavation proceeds, are temporary access roads protected by crushed stone or gravel?		$\checkmark$				
1.09	Are temporary exposed slopes properly covered?		$\checkmark$				
1.10	Are earthworks final surfaces well compacted or protected?		$\checkmark$				
1.11	Are manholes adequately covered or temporarily sealed?	$\checkmark$					
1.12	Are there any procedures and equipment for rainstorm protection?		$\checkmark$				
1.13	Are wheel washing facilities well maintained?		$\checkmark$				
1.14	Is runoff from wheel washing facilities avoided?		$\checkmark$				
1.15	Are there toilets provided on site?		$\checkmark$				
1.16	Are toilets properly maintained?		$\checkmark$				
1.17	Are the vehicle and plant servicing areas paved and located within roofed areas?		$\checkmark$				
1.18	Is the oil leakage or spillage avoided?		$\checkmark$				
1.19	Are there any measures to prevent leaked oil from entering the drainage system?		$\checkmark$				
1.20	Are there any measures to collect spilt cement and concrete washings during concreting works?	$\checkmark$					

AUES

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
1.21	Are there any oil interceptors/grease traps in the drainage systems for vehicle and plant servicing areas, canteen kitchen, etc?	$\checkmark$					
1.22	Are the oil interceptors/grease traps maintained properly?	$\checkmark$					
1.23	Is used bentonite recycled where appropriate?	$\checkmark$					
1.24	Designated settlement area for runoff/wheel wash waste is provide and located at the streambed with 1-2m deep, 12m long and around 50m3 capacities for sedimentation.		$\checkmark$				
1.25	No excavation is undertaken in the settlement area.		$\checkmark$				
1.26	Concreting wastes water should be neutralized below the pH Action Levels before discharge.	$\checkmark$					
1.27	Mobile toilets should provide on site and located away the stream course.		$\checkmark$				
1.25	License collector should be employed for handling the sewage of mobile toilet.		$\checkmark$				
Sectio	n 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?		$\checkmark$				
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?		$\checkmark$				
2.03	Are the excavated materials sprayed with water during handling?		$\checkmark$				
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?		$\checkmark$				
2.05	Is the exposed earth properly treated within six months after the last construction activities?		$\checkmark$				
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved?		$\checkmark$				
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		$\checkmark$				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?		$\checkmark$				
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?		$\checkmark$				
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?		$\checkmark$				
2.11	Is dark smoke emission from plant/equipment avoided?		$\checkmark$				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement?	$\checkmark$					
2.13	Are site vehicles travelling within the speed limit not more than 15km/hour?		$\checkmark$				
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?	$\checkmark$					
2.15	Is open burning avoided?		$\checkmark$				
2.16	Excavated materials from the stream must remove form site on the same day. The materials shall be stored in covered impermeable skips awaiting removal from site.		$\checkmark$				
Sectio	n 3: Noise						
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?		$\checkmark$				
3.02	Is silenced equipment adopted?		$\checkmark$				
3.03	Is idle equipment turned off or throttled down?		$\checkmark$				
3.04	Are all plant and equipment well maintained and in good condition?		$\checkmark$				
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?	$\checkmark$					
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	$\checkmark$					
3.07	Are air compressors fitted with valid noise emission labels during operation?	$\checkmark$					

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
3.08	Are flaps and panels of mechanical equipment closed during operation?		$\checkmark$				
3.09	Are Construction Noise Permit(s) applied for percussive piling works?	$\checkmark$					
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?		$\checkmark$				
3.11	Are valid Construction Noise Permit(s) posted at site entrances?		$\checkmark$				
3.12	Use of quiet plant had been used on site to minimise the construction noise impact to the surrounding residences/dwellings (Level 1 mitigation measures).	$\checkmark$					
3.13	Temporary/Moveable noise barrier or site hoarding are provide or erect at the site boundary to minimise the noise impact of the closest NSRs or stationary equipments shield by the noise barrier which cannot visible from NSRs (Level 2 mitigation measure)	$\checkmark$					
3.14	Temporary/Moveable noise barrier equal to or more than 3m height with 10kg/m2 are provide for noise mitigation measures (Level 2 mitigation measures).	$\checkmark$					
Sectio	n 4: Waste/Chemical Management						
4.01	Waste Management Plan had been submit to Engineer for approval.		$\checkmark$				
4.02	Are receptacles available for general refuse collection?		$\checkmark$				
4.03	Is general refuse sorting or recycling implemented?		$\checkmark$				
4.04	Is general refuse disposed of properly and regularly?		$\checkmark$				
4.05	Is the Contractor registered as a chemical waste producer?	$\checkmark$					
4.06	Are the chemical waste containers properly labelled?	$\checkmark$					
4.07	Are the chemical wastes stored in proper storage areas?				$\checkmark$		1
4.08	Is the chemical waste storage area properly labelled?	$\checkmark$					
4.09	Is the chemical waste storage area used for storage of chemical waste only?		$\checkmark$				
4.10	Are incompatible chemical wastes stored in different areas?	$\checkmark$					
4.11	Are the chemical wastes disposed of by licensed collectors?	$\checkmark$					
4.12	Are trip tickets for chemical wastes disposal available for inspection?	$\checkmark$					
4.13	Are chemical/fuel storage areas bunded?		$\checkmark$				
4.14	Are designated areas identified for storage and sorting of construction wastes?	$\checkmark$					
4.15	Are construction wastes sorted (inert and non-inert) on site?	$\checkmark$					
4.16	Are construction wastes reused?	$\checkmark$					
4.17	Are construction wastes disposed of properly?				$\checkmark$		2
4.18	Are site hoardings and signboards made of durable materials instead of timber?		$\checkmark$				
4.19	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?		$\checkmark$				
4.20	Are appropriate procedures followed if contaminated material exists?		$\checkmark$				
4.21	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?		$\checkmark$				
4.22	Site cleanliness and appropriate waste management training had provided for the site workers.		$\checkmark$				
4.23	Contaminated sediments will managed according to WBTC No.12/2000 and EWTB TC(W) No. 34/2002.		$\checkmark$				

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
Sectio	on 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?		$\checkmark$				
5.02	Are retained and transplanted trees properly protected?		$\checkmark$				
5.03	Are surgery works carried out for the damaged trees?					$\checkmark$	
5.04	Is damage to trees outside site boundary due to construction activities avoided?		$\checkmark$				
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?		$\checkmark$				
Sectio	on 6: Ecology						
6.01	Gabion banks and base had been provide for channel linings and banks for typical sections?	$\checkmark$					
6.02	Prevent site effluent/runoff discharge to the seasonal wetlands?	$\checkmark$					
6.03	Stockpiling or disposal of materials, and any dredging or construction activities at the seasonal wetlands are prohibited?	$\checkmark$					
Sectio	on 7: Others						
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?		$\checkmark$

Sectio	on 1: Water Quality						
1.01	Is an effluent discharge license obtained for the Project?	$\checkmark$					
1.02	Is the effluent discharged in accordance with the discharge licence?	$\checkmark$					
1.03	Is the discharge of turbid water avoided?		$\checkmark$				
1.04	Are there proper desilting facilities in the drainage systems to reduce SS levels in effluent?		$\checkmark$				
1.05	Are there channels, sandbags or bunds to direct surface run-off to sedimentation tanks?		$\checkmark$				
1.06	Are there any perimeter channels provided at site boundaries to intercept storm runoff from crossing the site?		$\checkmark$				
1.07	Is drainage system well maintained?				$\checkmark$		2
1.08	As excavation proceeds, are temporary access roads protected by crushed stone or gravel?		$\checkmark$				
1.09	Are temporary exposed slopes properly covered?		$\checkmark$				
1.10	Are earthworks final surfaces well compacted or protected?		$\checkmark$				
1.11	Are manholes adequately covered or temporarily sealed?	$\checkmark$					
1.12	Are there any procedures and equipment for rainstorm protection?		$\checkmark$				
1.13	Are wheel washing facilities well maintained?		$\checkmark$				
1.14	Is runoff from wheel washing facilities avoided?		$\checkmark$				
1.15	Are there toilets provided on site?		$\checkmark$				
1.16	Are toilets properly maintained?		$\checkmark$				
1.17	Are the vehicle and plant servicing areas paved and located within roofed areas?		$\checkmark$				
1.18	Is the oil leakage or spillage avoided?		$\checkmark$				
1.19	Are there any measures to prevent leaked oil from entering the drainage system?		$\checkmark$				
1.20	Are there any measures to collect spilt cement and concrete washings during concreting works?	$\checkmark$					

AIIES

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
1.21	Are there any oil interceptors/grease traps in the drainage systems for vehicle and plant servicing areas, canteen kitchen, etc?	$\checkmark$					
1.22	Are the oil interceptors/grease traps maintained properly?	$\checkmark$					
1.23	Is used bentonite recycled where appropriate?	$\checkmark$					
1.24	Designated settlement area for runoff/wheel wash waste is provide and located at the streambed with 1-2m deep, 12m long and around 50m3 capacities for sedimentation.		$\checkmark$				
1.25	No excavation is undertaken in the settlement area.		$\checkmark$				
1.26	Concreting wastes water should be neutralized below the pH Action Levels before discharge.	$\checkmark$					
1.27	Mobile toilets should provide on site and located away the stream course.		$\checkmark$				
1.25	License collector should be employed for handling the sewage of mobile toilet.		$\checkmark$				
Sectio	n 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?		$\checkmark$				
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?		$\checkmark$				
2.03	Are the excavated materials sprayed with water during handling?		$\checkmark$				
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?		$\checkmark$				
2.05	Is the exposed earth properly treated within six months after the last construction activities?		$\checkmark$				
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved?		$\checkmark$				
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		$\checkmark$				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?		$\checkmark$				
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?		$\checkmark$				
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?		$\checkmark$				
2.11	Is dark smoke emission from plant/equipment avoided?		$\checkmark$				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement?	$\checkmark$					
2.13	Are site vehicles travelling within the speed limit not more than 15km/hour?		$\checkmark$				
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?	$\checkmark$					
2.15	Is open burning avoided?				$\checkmark$		3
2.16	Excavated materials from the stream must remove form site on the same day. The materials shall be stored in covered impermeable skips awaiting removal from site.		$\checkmark$				
Sectio	n 3: Noise						
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?		$\checkmark$				
3.02	Is silenced equipment adopted?		$\checkmark$				
3.03	Is idle equipment turned off or throttled down?		$\checkmark$				
3.04	Are all plant and equipment well maintained and in good condition?		$\checkmark$				
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?	$\checkmark$					
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	$\checkmark$					
3.07	Are air compressors fitted with valid noise emission labels during operation?	$\checkmark$					

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
3.08	Are flaps and panels of mechanical equipment closed during operation?		$\checkmark$				
3.09	Are Construction Noise Permit(s) applied for percussive piling works?	$\checkmark$					
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?		$\checkmark$				
3.11	Are valid Construction Noise Permit(s) posted at site entrances?		$\checkmark$				
3.12	Use of quiet plant had been used on site to minimise the construction noise impact to the surrounding residences/dwellings (Level 1 mitigation measures).	$\checkmark$					
3.13	Temporary/Moveable noise barrier or site hoarding are provide or erect at the site boundary to minimise the noise impact of the closest NSRs or stationary equipments shield by the noise barrier which cannot visible from NSRs (Level 2 mitigation measure)	$\checkmark$					
3.14	Temporary/Moveable noise barrier equal to or more than 3m height with 10kg/m2 are provide for noise mitigation measures (Level 2 mitigation measures).	$\checkmark$					
Sectio	n 4: Waste/Chemical Management						
4.01	Waste Management Plan had been submit to Engineer for approval.		$\checkmark$				
4.02	Are receptacles available for general refuse collection?		$\checkmark$				
4.03	Is general refuse sorting or recycling implemented?		$\checkmark$				
4.04	Is general refuse disposed of properly and regularly?		$\checkmark$				
4.05	Is the Contractor registered as a chemical waste producer?	$\checkmark$					
4.06	Are the chemical waste containers properly labelled?	$\checkmark$					
4.07	Are the chemical wastes stored in proper storage areas?				$\checkmark$		1
4.08	Is the chemical waste storage area properly labelled?	$\checkmark$					
4.09	Is the chemical waste storage area used for storage of chemical waste only?		$\checkmark$				
4.10	Are incompatible chemical wastes stored in different areas?	$\checkmark$					
4.11	Are the chemical wastes disposed of by licensed collectors?	$\checkmark$					
4.12	Are trip tickets for chemical wastes disposal available for inspection?	$\checkmark$					
4.13	Are chemical/fuel storage areas bunded?		$\checkmark$				
4.14	Are designated areas identified for storage and sorting of construction wastes?	$\checkmark$					
4.15	Are construction wastes sorted (inert and non-inert) on site?	$\checkmark$					
4.16	Are construction wastes reused?	$\checkmark$					
4.17	Are construction wastes disposed of properly?		$\checkmark$				
4.18	Are site hoardings and signboards made of durable materials instead of timber?		$\checkmark$				
4.19	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?		$\checkmark$				
4.20	Are appropriate procedures followed if contaminated material exists?		$\checkmark$				
4.21	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?		$\checkmark$				
4.22	Site cleanliness and appropriate waste management training had provided for the site workers.		$\checkmark$				
4.23	Contaminated sediments will managed according to WBTC No.12/2000 and EWTB TC(W) No. 34/2002.		$\checkmark$				

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
Sectio	n 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?		$\checkmark$				
5.02	Are retained and transplanted trees properly protected?		$\checkmark$				
5.03	Are surgery works carried out for the damaged trees?					$\checkmark$	
5.04	Is damage to trees outside site boundary due to construction activities avoided?		$\checkmark$				
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?		$\checkmark$				
Sectio	n 6: Ecology						
6.01	Gabion banks and base had been provide for channel linings and banks for typical sections?	$\checkmark$					
6.02	Prevent site effluent/runoff discharge to the seasonal wetlands?	$\checkmark$					
6.03	Stockpiling or disposal of materials, and any dredging or construction activities at the seasonal wetlands are prohibited?	$\checkmark$					
Sectio	n 7: Others						
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?		$\checkmark$				

Remarks				
Follow-Up of Last Site Inspection:				

1

Findings of Site Inspection on 6th August 2010:

1. Free standing chemical container was observ contractor was reminded to provide trip tray or p chemical to storage area(TKL 02)			to repair the barrier	ged, the contractor was regularly especially in rainy
3. The contractor was reminded to avoid burning site. (MUP)	rubbish b carry out	ins within the site for regular maintenance	ntractor would provide more improving site tidiness and of for the plants to prevent dark e. (TKL02 and MUP)

6.01	Gabion banks and base had been provide for channel linings and banks for typical sections?	$\checkmark$					
6.02	Prevent site effluent/runoff discharge to the seasonal wetlands?	$\checkmark$					
6.03	Stockpiling or disposal of materials, and any dredging or construction activities at the seasonal wetlands are prohibited?	$\checkmark$					
Sectio	on 7: Others						
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?		$\checkmark$				

# Findings of Site Inspection on 12th August 2010:

1. Stagnant water was observed during the site	2. After tree prune or cutting, t	he debris of tree trunk or
inspection. Larvidical oil or pumping out should be undertaken to prevent mosquitoes breeding (TKL 02)	branch or leaf was observed to reminded contractor properly t and removed the waste regula	o retain within the site, as to maintain the site tidiness
3. As a general reminder, the contractor was reminded re-cover the exposed slope regularly to avoid surface runoff. (MUP05)

Section 1: Water Quality								
1.01	Is an effluent discharge license obtained for the Project?	$\checkmark$						
1.02	Is the effluent discharged in accordance with the discharge licence?	$\checkmark$						
1.03	Is the discharge of turbid water avoided?		$\checkmark$					
1.04	Are there proper desilting facilities in the drainage systems to reduce SS levels in effluent?		$\checkmark$					
1.05	Are there channels, sandbags or bunds to direct surface run-off to sedimentation tanks?		$\checkmark$					
1.06	Are there any perimeter channels provided at site boundaries to intercept storm runoff from crossing the site?		$\checkmark$					
1.07	Is drainage system well maintained?		$\checkmark$					
1.08	As excavation proceeds, are temporary access roads protected by crushed stone or gravel?		$\checkmark$					
1.09	Are temporary exposed slopes properly covered?		$\checkmark$					
1.10	Are earthworks final surfaces well compacted or protected?		$\checkmark$					
1.11	Are manholes adequately covered or temporarily sealed?	$\checkmark$						
1.12	Are there any procedures and equipment for rainstorm protection?		$\checkmark$					
1.13	Are wheel washing facilities well maintained?		$\checkmark$					
1.14	Is runoff from wheel washing facilities avoided?		$\checkmark$					
1.15	Are there toilets provided on site?		$\checkmark$					
1.16	Are toilets properly maintained?		$\checkmark$					
1.17	Are the vehicle and plant servicing areas paved and located within roofed areas?		$\checkmark$					
1.18	Is the oil leakage or spillage avoided?		$\checkmark$					
1.19	Are there any measures to prevent leaked oil from entering the drainage system?		$\checkmark$					
1.20	Are there any measures to collect spilt cement and concrete washings during concreting works?	$\checkmark$						

AUES

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
1.21	Are there any oil interceptors/grease traps in the drainage systems for vehicle and plant servicing areas, canteen kitchen, etc?	$\checkmark$					
1.22	Are the oil interceptors/grease traps maintained properly?	$\checkmark$					
1.23	Is used bentonite recycled where appropriate?	$\checkmark$					
1.24	Designated settlement area for runoff/wheel wash waste is provide and located at the streambed with 1-2m deep, 12m long and around 50m3 capacities for sedimentation.		$\checkmark$				
1.25	No excavation is undertaken in the settlement area.		$\checkmark$				
1.26	Concreting wastes water should be neutralized below the pH Action Levels before discharge.	$\checkmark$					
1.27	Mobile toilets should provide on site and located away the stream course.		$\checkmark$				
1.25	License collector should be employed for handling the sewage of mobile toilet.		$\checkmark$				
Sectio	n 2: Air Quality						
2.01	Are there wheel washing facilities with high pressure jets provided at every vehicle exit point?		$\checkmark$				
2.02	Are vehicles washed to remove any dusty materials from their bodies and wheels before leaving construction sites?		$\checkmark$				
2.03	Are the excavated materials sprayed with water during handling?		$\checkmark$				
2.04	Are stockpiles of dusty materials sprayed with water, covered or placed in sheltered areas?		$\checkmark$				
2.05	Is the exposed earth properly treated within six months after the last construction activities?		$\checkmark$				
2.06	Are the access roads sprayed with water to maintain the entire road surface wet or paved?		$\checkmark$				
2.07	Is the surface where any drilling, cutting, polishing or breaking operation continuously sprayed with water?		$\checkmark$				
2.08	Is the load on vehicles covered entirely by clean impervious sheeting?		$\checkmark$				
2.09	Is the loading of materials to a level higher than the side and tail boards during transportation by vehicles avoided?		$\checkmark$				
2.10	Is the road leading to the construction site within 30m of the vehicle entrance kept clear of dusty materials?		$\checkmark$				
2.11	Is dark smoke emission from plant/equipment avoided?		$\checkmark$				
2.12	Are de-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement?	$\checkmark$					
2.13	Are site vehicles travelling within the speed limit not more than 15km/hour?		$\checkmark$				
2.14	Are hoardings of not less than 2.4m high provided along the site boundary, which adjoins areas accessible to the public?	$\checkmark$					
2.15	Is open burning avoided?		$\checkmark$				
2.16	Excavated materials from the stream must remove form site on the same day. The materials shall be stored in covered impermeable skips awaiting removal from site.		$\checkmark$				
Sectio	n 3: Noise						
3.01	Are noisy equipment and activities positioned as far as practicable from the sensitive receivers?		$\checkmark$				
3.02	Is silenced equipment adopted?		$\checkmark$				
3.03	Is idle equipment turned off or throttled down?		$\checkmark$				
3.04	Are all plant and equipment well maintained and in good condition?		$\checkmark$				
3.05	Are noise barriers or enclosures provided at areas where construction activities cause noise impact on sensitive receivers?	$\checkmark$					
3.06	Are hand held breakers fitted with valid noise emission labels during operation?	$\checkmark$					
3.07	Are air compressors fitted with valid noise emission labels during operation?	$\checkmark$					

Noto	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance;	Not	Yes	No	Follow	N/A	Photo/
Note:	Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Obs.			Up		Remarks
3.08	Are flaps and panels of mechanical equipment closed during operation?		$\checkmark$	$\square$			
3.09	Are Construction Noise Permit(s) applied for percussive piling works?	$\checkmark$					
3.10	Are Construction Noise Permit(s) applied for general construction works during restricted hours?		$\checkmark$				
3.11	Are valid Construction Noise Permit(s) posted at site entrances?		$\checkmark$				
3.12	Use of quiet plant had been used on site to minimise the construction noise impact to the surrounding residences/dwellings (Level 1 mitigation measures).	$\checkmark$					
3.13	Temporary/Moveable noise barrier or site hoarding are provide or erect at the site boundary to minimise the noise impact of the closest NSRs or stationary equipments shield by the noise barrier which cannot visible from NSRs (Level 2 mitigation measure)	$\checkmark$					
3.14	Temporary/Moveable noise barrier equal to or more than 3m height with 10kg/m2 are provide for noise mitigation measures (Level 2 mitigation measures).	$\checkmark$					
Sectio	n 4: Waste/Chemical Management						
4.01	Waste Management Plan had been submit to Engineer for approval.		$\checkmark$				
4.02	Are receptacles available for general refuse collection?		$\checkmark$				
4.03	Is general refuse sorting or recycling implemented?		$\checkmark$				
4.04	Is general refuse disposed of properly and regularly?		$\checkmark$				
4.05	Is the Contractor registered as a chemical waste producer?	$\checkmark$					
4.06	Are the chemical waste containers properly labelled?	$\checkmark$					
4.07	Are the chemical wastes stored in proper storage areas?				$\checkmark$		1
4.08	Is the chemical waste storage area properly labelled?	$\checkmark$					
4.09	Is the chemical waste storage area used for storage of chemical waste only?		$\checkmark$				
4.10	Are incompatible chemical wastes stored in different areas?	$\checkmark$					
4.11	Are the chemical wastes disposed of by licensed collectors?	$\checkmark$					
4.12	Are trip tickets for chemical wastes disposal available for inspection?	$\checkmark$					
4.13	Are chemical/fuel storage areas bunded?		$\checkmark$				
4.14	Are designated areas identified for storage and sorting of construction wastes?	$\checkmark$					
4.15	Are construction wastes sorted (inert and non-inert) on site?	$\checkmark$					
4.16	Are construction wastes reused?	$\checkmark$					
4.17	Are construction wastes disposed of properly?		$\checkmark$				
4.18	Are site hoardings and signboards made of durable materials instead of timber?		$\checkmark$				
4.19	Is trip ticket system implemented for the disposal of construction wastes and records available for inspection?		$\checkmark$				
4.20	Are appropriate procedures followed if contaminated material exists?		$\checkmark$				
4.21	Is relevant license/ permit for disposal of construction waste or excavated materials available for inspection?		$\checkmark$				
4.22	Site cleanliness and appropriate waste management training had provided for the site workers.		$\checkmark$				
4.23	Contaminated sediments will managed according to WBTC No.12/2000 and EWTB TC(W) No. 34/2002.		$\checkmark$				

Note:	Not Obs.: Not Observed; Yes: Compliance; No: Non-Compliance; Follow Up: Observations requiring follow-Up actions N/A: Not Applicable	Not Obs.	Yes	No	Follow Up	N/A	Photo/ Remarks
Sectio	n 5: Landscape & Visual						
5.01	Are retained and transplanted trees in health condition?		$\checkmark$				
5.02	Are retained and transplanted trees properly protected?		$\checkmark$				
5.03	Are surgery works carried out for the damaged trees?					$\checkmark$	
5.04	Is damage to trees outside site boundary due to construction activities avoided?		$\checkmark$				
5.05	Is the night-time lighting controlled to minimize glare to sensitive receivers?		$\checkmark$				
Sectio	n 6: Ecology						
6.01	Gabion banks and base had been provide for channel linings and banks for typical sections?	$\checkmark$					
6.02	Prevent site effluent/runoff discharge to the seasonal wetlands?	$\checkmark$					
6.03	Stockpiling or disposal of materials, and any dredging or construction activities at the seasonal wetlands are prohibited?	$\checkmark$					
Sectio	n 7: Others						
7.01	Are relevant Environmental Permits posted at all vehicle site entrances/exits?		$\checkmark$

	Forecast of Total Quantities of C&D Materials to be Generated from the Contract*										
IVI	Total Quantity	Hard Rock and Large Broken Concrete	Reused in the Contract	Reused in other Projects	Disposed as Public Fill	Imported Fill	Metals	Paper/ cardboard packaging	Plastics (see Note 3)	Chemical Waste	Others, e.g. general refuse
	(in '000m ³ )	(in '000m ³ )	(in '000m ³ )	(in '000m ³ )	(in '000m ³ )	(in '000m ³ )	(in '000 kg)	(in '000 kg)	(in '000 kg)	(in '000 kg)	(in '000m ³ )
	283.5	35.1	47.5	107	32	24	60	1	1	1	10

Notes: (1) The performance targets are given in PS Clause 25.01F(14).

(2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

(3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material

* (4) The Contractor shall also submit the latest forecast of the total amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature where the total amount of C&D materials expected to be generated from the Works is equal to or exceeding 50,000 m3. (PS Clause 25.01E(4)(b) refers). [Delete Note (4) and the table above on the forecast, where inapplicable].
