New Territories

Attention: Mr. TW Tam

Dear Sir,

Re: Contract No. DC/2011/06
Reprovisioning of Boundary Patrol Road and Associated Security Facilities
between Ping Yuen River and Pak Fu Shan and Drainage Works in North
District
EM&A report for Drainage Works under EP-277/2007/A (July 2012)

Reference is made to the Environmental Team's submission of the captioned report (Version 2) dated 13 August 2012 received through E-mail on 13 August 2012 for our review and comment.

Please be informed that we have no adverse comment on the captioned submission. We write to verify the captioned submission in accordance with Condition 3.4 in the captioned Environmental Permits.

Thank you for your kind attention and please do not hesitate to contact the undersigned should you have any queries.

Yours sincerely,

Roger Leung
Independent Environmental Checker

EXECUTIVE SUMMARY

BREACHES OF ENVIRONMENTAL QUALITY CRITERIA (A/L LEVELS)

- ES04 Monitoring results indicated no exceedances of A/L Levels for air quality and construction noise during the Reporting Period. Neither NOE nor remedial actions were required.

COMPLAINTS LOG

- ES05 No environmental complaint was registered in the Reporting Period. The complaint log is presented as follows:

Reporting Month	Environmental Complaint Statistics		
	Frequency	Cumulative	Complaint Nature
May to June 2012	0	0	NA
July 2012	0	0	NA

NOTIFICATIONS OF SUMMONS AND SUCCESSFUL PROSECUTIONS

- ES06 No notifications of summons and successful prosecutions were registered during the Reporting Period.

REPORTING CHANGES

- ES07 No reporting changes were made during the Reporting Period.

FUTURE KEY ISSUES

- ES08 Construction dust, noise and water quality continue to be the key environmental issues for construction of the Works during the coming Reporting Period.
- ES09 As predicted in the EIA Report (Register No. in the EP: AEIAR-108/2007), with full implementation of the recommended environmental protection measures, adverse environmental impacts generated from future construction activities under the Works can be eliminated to acceptable levels.
- ES10 In wet season, full implementation of the required water quality mitigation measures is reminded to eliminate adverse water quality impacts generated from surfaces runoff of haul roads, stock pile of excavated materials, etc.
- ES11 Special attention is drawn to implementation of air quality mitigation measures, in particular construction dust suppression measures during dusty construction activities under dry and windy conditions.
- ES12 In addition, construction noise mitigation measures should also be implemented during noisy construction activities.

1 ENVIRONMENTAL IMPLEMENTATION STATUS

- 1.01 This is the second monthly (July 2012) EM&A report (herein after “this Report”) for Drainage Works under EP-277/2007/A, covering a construction period from 1 to 31 July 2012 (hereinafter “the Reporting Period”).
- 1.02 Location plan for the works under the Contract is shown in *Annex A*, whereas environmental management organization and communication lines, including contacts of key personnel under the Contract are shown in *Annex B*.
- 1.03 Status of environmental licenses and permit is summarized in the following *Table 1-1*.

Table 1-1 Status of Environmental Licenses and Permit

Permit Type	Licenses / Permit No.	Date of Issuance by EPD	Expiry Date	Concerned Location	Status
Environmental Permit	EP-277/2007	09 July 2007	N.A	Lin Ma Hang and Man Uk Pin, North District	EP-277/2007/A to supersede EP-277/2007
	EP-277/2007/A	01 December 2009			
Notification pursuant to Section 3(1) of the Air Pollution Control Ordinance (APCO) (Construction Dust) Regulation	N.A.	Pending	N.A.	All Locations	The Notification was submitted to EPD on 28 May 2012
Construction Noise Permit Application under Noise Control Ordinance (NCO)	N.A.	N.A.	N.A.	N.A.	N.A.
Account for Disposal of Construction Waste	7015003	07 May 2012	N.A.	All Locations	Valid
Application for Wastewater Discharge License under Water Pollution Control Ordinance (WPCO)	Pending EPD’s Approval			Ma Wat Wai & Man Uk Pin	The application form was submitted to EPD on 7 May 2012
Register as a Chemical Waste Producer under Waste Disposal Ordinance	Pending EPD’s Approval			All Locations	Pending EPD’s Approval

- 1.04 Construction program of the Works with fine tuning of construction activities showing the interrelationship with environmental protection/mitigation measures is presented in Implementation Schedule for the recommended mitigation measures attached in *Annex C* of this Report whereas updated Master Construction Program of the Works is shown in *Annex D*.

MAJOR CONSTRUCTION ACTIVITIES

THE REPORTING PERIOD

- 1.05 Major construction activities of the Works undertaken during the Reporting Period are listed in *Table 1-2* below:

Table 1-2 Major Construction Activities of the Works during the Reporting Period

Portion of the Works	Major Construction Activities
Portion E (Man Uk Pin)	Site boundary line setting; construction of box culvert transition at CH 364.70 and construction of site hoarding & signboard.

FORTHCOMING TWO MONTHS

1.06 Major construction activities of the Works for the forthcoming two months are listed in *Table 1-3* below:

Table 1-3 Major Construction Activities of the Works for the Forthcoming Two Months

Portion of the Works	Major Construction Activities
Portion E	Pruning / felling of existing trees at Man Uk Pin
	Construction of box culvert transition and gabion channel at Man Uk Pin CH 364.70

EM&A ACTIVITIES

BASELINE MONITORING AND ENVIRONMENTAL QUALITY CRITERIA

1.07 The baseline monitoring for air quality, construction noise and water quality has been carried out since 17 September 2008, whereas that for ecology has been performed since 16 September 2008 in close accordance with the requirements of the EM&A Manual.

1.08 It is agreed amongst the Engineer, IEC, Contractor and ET that the established environmental quality criteria i.e. Action/Limit Levels (hereinafter “the A/L Levels”) for air quality, construction noise and water quality as shown in *Tables 2-7* and *Tables 2-8* respectively are to be used in the EM&A for air quality, construction noise and water quality under Drainage Works under EP-277/2007/A.

IMPACT MONITORING

1.09 The environmental monitoring schedules for the Works for the Reporting Period and the coming month have been submitted to relevant parties upon agreement with the IEC and ER prior to implementation. They are presented in *Annex E*.

2 SUMMARY OF REQUIREMENTS FOR CONSTRUCTION IMPACT MONITORING

2.01 The requirements for EM&A for Drainage Works under EP-277/2007/A are detailed in *Methodology for Environmental Monitoring and Audit under the Contract* (hereinafter “the Methodology”, which has been verified by the IEC on 27 July 2012 and submitted to EPD for approval subsequently. They are summarized as follows.

MONITORING PARAMETERS

2.02 The monitoring parameters required for the Works are summarized in *Table 2-1*.

Table 2-1 Summary of Monitoring Parameters

Environmental Aspect		Parameters
Air Quality		(a) 1-Hour Total Suspended Particulate (hereinafter ‘1-Hr TSP’); and (b) 24-Hour Total Suspended Particulate (hereinafter ‘24-Hr TSP’).
Construction Noise		(c) A-weighted equivalent continuous sound pressure level (30min) (hereinafter ‘Leq(30min)’ during the normal working hours; and (d) A-weighted equivalent continuous sound pressure level (5min) (hereinafter ‘Leq(5min)’ for construction work during the restricted hours.
Water Quality		(e) In Situ temperature, Dissolved Oxygen, Dissolved Oxygen Saturation, pH Measurement: value, Water Depth, Temperature & Turbidity (f) Laboratory Suspended Solids (hereinafter ‘SS’), Analysis
Ecology	MUP05	(g) The stream conditions monitoring (in-situ measurements of DO, pH and turbidity; laboratory testing of SS); (h) Riparian vegetation along the banks of channel monitoring; (i) General site audit to ensure the existing natural stream channel is protected; and (j) Reported the sediment condition during the construction phase

MONITORING LOCATIONS

DESIGNATED LOCATIONS IN THE EM&A MANUAL

2.03 Monitoring locations for EM&A under EP-277/2007/A have been identified in the EM&A Manual. They are shown in *Annex F*. According to the EM&A Manual and agreement among the Engineer, IEC, Contractor and ET, the environmental monitoring stations closest to the construction site are to be adopted for the EM&A under the Contract. As sensitive receiver MUP05-2 is the closest location to the Works site, it will most likely be impacted by the construction under the Works. The sensitive receiver MUP05-1 is therefore adopted as environmental monitoring locations for air quality namely MUP-A1 and construction noise namely MUP-N1.

2.04 On the other hand, as there was neither riparian vegetation along the banks of channel nor existing natural stream channel within the site of the Works, no ecology monitoring is required during the construction period of the Works.

2.05 *Table 2-2* summarizes all the monitoring locations under the Works.

Table 2-2 Monitoring Locations

Issue	Channel	Sensitive Receiver	Monitoring Location ID	Detailed Address
Air	MUP05	MUP05-2	MUP-A1	Village house at Man Uk Pin
Noise	MUP05	MUP05-2	MUP-N1	same as Village house at Man Uk Pin

ADDITIONAL MONITORING LOCATIONS

2.06 In order to monitor the potential construction impacts more effectively, additional environmental monitoring for construction noise and water quality has been recommended by the Engineer and IEC. They are summarized in **Table 2-3** and shown in **Annex F**.

Table 2-3 Summary of Additional Environmental Monitoring Locations

Issue	Channel	Sensitive Receiver	Monitoring Location ID	Monitoring Time
Construction Noise	MUP05	MUP05-2	MUP-Nx (Village house)	Throughout the whole construction period
Water Quality	MUP05	-	MUP-Wx1 (Up-Stream Control Station)	Throughout the whole construction period
		-	MUP-Wx2 (Impact Monitoring Station)	Prior to connection of stream diversion
		-	MUP-Wx3 (Impact Monitoring Station)	After connection of stream diversion

2.07 The additional monitoring is scheduled to be performed in August 2012 upon verification of the Methodology.

MONITORING FREQUENCY

2.08 The impact monitoring should be conducted during the construction period to ensure the environmental conditions comply with the environmental quality criteria i.e. A/L Levels. The impact monitoring frequency as stipulated in the EM&A Manual is summarized below.

AIR QUALITY

Parameters: 24-Hour TSP and 1-Hour TSP.

Frequency: Once every 6 days for 24-Hour TSP & three times every 6 days for 1-Hour TSP.

Duration: During the course of construction works

CONSTRUCTION NOISE

Parameters: Leq(30 min) in six consecutive Leq(5 min) measurements..

Frequency: Once a week during 0700-1900 on normal weekdays:

Duration: During the course of construction works

WATER QUALITY

Parameters: Duplicate in-situ measurements of water depth, temperature, DO, pH & turbidity; and laboratory testing of SS. Relevant data will also be measured time of sampling, DO Saturation, weather conditions and special phenomena.

Depths: All measurements will be carried out at three water depths, namely, 1 m below water surface, mid-water depth, and 1 m above river bed. If the water depth is less than 6 m, the mid-depth measurement will be omitted. If the depth is less than 3 m, only the mid-depth measurement will be taken.

Frequency: 3 times a week with an interval of at least 36 hours between two consecutive sampling days

Duration: During the construction period of the channel works

MONITORING EQUIPMENT

2.09 The monitoring equipment for air quality, construction noise, stream water quality and ecology are summarized below.

AIR QUALITY

2.10 Air quality monitoring equipment is listed in the following *Table 2-4*.

Table 2-4 Air Quality Monitoring Equipment

Equipment	Model
24-Hour TSP	
High Volume Air Sampler (herein after ‘HVS’)	Grasby Anderson GMWS 2310 HVS
Calibration Kit	TISCH Model TE-5025A
1-Hour TSP	
Portable Dust Meter	TSI DustTrak Model 8520

CONSTRUCTION NOISE

2.11 Construction noise monitoring equipment is listed in *Table 2-5*.

Table 2-5 Construction Noise Monitoring Equipment

Equipment	Model
Integrating Sound Level Meter	B&K Type 2238
Calibrator	B&K Type 4231
Portable Wind Speed Indicator	Testo Anemometer

WATER QUALITY

2.12 Monitoring equipment for water quality is listed in *Table 2-6*.

Table 2-6 Water Quality Monitoring Equipment

Equipment	Model / Description
In-situ Measurement	
Water Depth Detector	Eagle Sonar or steel ruler
Water Sampler	Teflon bailer / bucket
Thermometer & DO meter	YSI Multimeter
pH meter	Extech pH EC 500
Turbidimeter	Hach 2100p
Sample Container and Storage	High density polythene bottles (provided by laboratory) and ‘Willow’ 33-liter plastic cool box
Laboratory Analysis	
Suspended Solids	HOKLAS accredited Laboratory

EQUIPMENT CALIBRATION

2.13 The calibrations certificate of all monitoring equipment are used during the impact monitoring program are attached in *Annex G* and the calibration requirement are described in below:

AIR QUALITY

2.14 The calibration of the HVS is performed at a bimonthly interval in accordance with the manufacturer’s instruction using the NIST-certified standard calibrator (Tisch Calibration Kit Model No.TE-5025A). The calibration data are properly documented and the associated records are maintained by the ET for future reference.

2.15 The 1-Hour TSP meter is calibrated at a year intervals in accordance with the in-house method. Zero response of the equipment is checked before and after each monitoring event.

NOISE

- 2.16 The sound level meters are calibrated using an acoustic calibrator prior to and after spot checking measurements. The meters are calibrated annually by HOKLAS accredited laboratory. Prior to and following each noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements are considered valid only if the calibration levels before and after the noise measurement agree to within 1.0 dB.

WATER QUALITY

- 2.17 Once every three months, the in-situ monitoring instruments are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme.

MONITORING PROCEDURE

- 2.18 The monitoring methodology and procedure during the impact monitoring are presented as below:

AIR QUALITY

1-Hour TSP

- 2.19 Operation of the 1-Hour TSP meter is follow manufacturer's Operation and Service Manual. The 1-Hour TSP monitor, a TSI Dust Track Aerosol Monitor Model 8520, or Sibata LD-3 Laser Dust Meter is a portable, battery-operated laser photometer. The 1-Hour TSP meter provides a real time 1-Hour TSP measurement based on 90° light scattering. The 1-Hour TSP monitor consists of the following:

- (a) A pump to draw sample aerosol through the optic chamber where TSP is measured;
- (b) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
- (c) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.

- 2.20 The 1-Hour TSP meter using was within the valid period, calibrated by the manufacturer prior to purchasing. Zero response of the instrument was checked before and after each monitoring event.

24-hour TSP

- 2.21 The equipment used for 24-Hour TSP measurement is the HVS brand named Thermo Andersen, Model GS2310 TSP high volume air sampling system, which complied with EPA Code of Federal Regulation, Annex B to Part 50. The HVS consists of the following:

- (a) An anodized aluminum shelter;
- (b) A 8"x10" stainless steel filter holder;
- (c) A blower motor assembly;
- (d) A continuous flow/pressure recorder;
- (e) A motor speed-voltage control/elapsed time indicator;
- (f) A 6-day mechanical timer, and
- (g) A power supply of 220v/50 Hz

- 2.22 The HVS is calibrated prior the impact monitoring to following the manufacturer's instruction using the NIST-certified standard calibrator brand named Tisch Calibration Kit Model TE-5028A. Regular HVS operation and maintenance as well as filter paper installation and collection was performed by the ET's competent technicians, whereas laboratory analyses were conducted in a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (hereinafter 'ALS'). The analyzed 24-Hour TSP filters were kept in ALS for six months prior to disposal.

METEOROLOGICAL INFORMATION

- 2.23 All relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper is recorded in detail.

- 2.24 Meteorological information is sourced from the Hong Kong Observatory (Ta Kwu Ling Station). The data included wind direction, wind speed, humidity, rainfall, air pressure and temperature etc that in general is required for evaluating the air quality for air quality monitoring.

CONSTRUCTION NOISE

- 2.25 Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in Technical Memorandum BE issued under the Noise Control Ordinance (NCO).
- 2.26 All noise measurements are performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (Leq). Leq(30min) measurements are used as the monitoring parameter for the time period throughout the construction phase.
- 2.27 The sound level meter is set higher than 1.2m above the existing ground. The microphone is pointed to the site with the microphone facing perpendicular to the line of sight. The windshield is fitted for all measurements. As the measurement point at impact locations is set close to the exterior of the building, i.e. no free field noise measurement is performed, free field correction will not be made for monitoring results.
- 2.28 Immediately prior to and following each noise measurement the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency (94 dBA). Measurements are accepted as valid due to the calibration levels from before and after the noise measurement agree to within 1.0 dB.

WATER QUALITY

- 2.29 Water quality monitoring is conducted at the middle of the water columns (Mid-Depth) due to water columns at all sampling locations are less than 3.0 meters during monitoring.

Water Depth

- 2.30 Water depths are determined prior to measurement and sampling. A steel ruler with a suitable weight was dropped to the bottom of the water column to measure the water depth which is actually well below 1 meter.

Dissolved Oxygen (DO)

- 2.31 A portable Extech Instrument, ExStikR DO600 DO Meter is used for in-situ DO measurement. The DO meter is capable of measuring DO in the range of 0 – 20 mg/L and 0 – 200 % saturation and checked against water saturated ambient air on each monitoring day prior to monitoring.
- 2.32 Although the DO Meter automatically compensates ambient water temperature to a standard temperature of 20⁰C for ease of comparison of the data under the changing reality, the temperature readings of the DO Meter is recorded.

pH

- 2.33 A portable Extech Instrument, ExStikTM Models pH EC 500 or a Hanna HI98107 pH Meter is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 – 14 and readable to 0.1. Standard buffer solutions of pH 7 and pH 10 are used for calibration of the instrument before and after measurement.

Turbidity

- 2.34 A portable Hach 2100p turbidity Meter is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 – 1000 NTU.

Suspended Solids (SS)

- 2.35 SS is determined by ALS using HOKLAS accredited analytical methods namely ALS Method EA-025. The **Limit of Reporting** (hereinafter “LOR”) is 2 mg/L.

Water Sampler

2.36 Water samples are collected by the ET using a plastic sampler to avoid metal contamination. Due to water depth for both sampling locations are lesser than 0.5 m, a cleaned plastic beaker is used for sample collection. The sampler is rinsed before collection with the sample to be taken. 1,000mL water sample is collected from depth for laboratory analyses.

Sample Container

2.37 Water samples are contained in screw-cap PE (Poly-Ethylene) bottles as provided by ALS. The PE bottles are pretreated by laboratory in accordance with the corresponding analytical requirements of HOKLAS. Where appropriate, the sampling bottles are rinsed with the water to be contained. Water sample is transferred from the sampler to the sample bottles to 95% bottle capacity to allow possible volume expansion during delivery and storage.

Sample Storage and delivery

2.38 A ‘Willow’ 33-liter plastic cool box packed with ice is used to preserve the collected water samples prior to arrival at the laboratory. The temperature of the cool box is maintained as close to 4⁰C as possible without being frozen. Samples are delivered to the laboratory end of sampling day or following day within the maximum storage time requirement.

Chemical Analysis

2.39 ALS Technichem (HK) Pty Ltd (HOKLAS No. 66) is appointed by ET to provide analytical services for this project. The analysis of suspended solids is carried out to follow the APHA Standard Methods for the Examination of Water and Wastewater 19ed 2540D. The sample preparation and analysis under the QA/QC control is follow the HOKLAS QA/QC requirements and undertaken by the laboratory.

ENVIRONMENTAL QUALITY PERFORMANCE LIMITS

2.40 Baseline monitoring for air quality and construction noise was carried out during 17 September to 13 October 2008 in close accordance with the requirements stipulated in the EM&A Manual. The A/L Levels of MUP-A1 and MUP-N1 will be adopted for EM&A for air quality and construction noise respectively. They are summarized in **Table 2-7** and **Table 2-8**.

Table 2-7 Action and Limit Levels for Air Quality

Monitoring Station	Action Level (µg /m ³)		Limit Level (µg/m ³)	
	1-Hour TSP	24-Hour TSP	1-Hour TSP	24-Hour TSP
MUP-A1	307	156	500	260

Table 2-8 Action and Limit Levels for Construction Noise (dB(A))

Time Period	Action Level	Limit Level
0700-1900 hours on normal weekdays	When one documented complaint is received	75* dB(A)

* Reduces to 70 dB(A) for schools and 65 dB(A) during the school examination periods.

2.41 Environmental quality criteria for additional water quality monitoring are proposed in **Table 2-9** as follows:

Table 2-9 Action and Limit Levels for Additional Water Quality Monitoring

Action Level	Limit Level
120% of the corresponding Levels of Up-Stream Control Station	130% of the corresponding Levels of Up-Stream Control Station

EVENT AND ACTION PLANS

2.42 Event Action Plan for air quality, construction noise and water quality as stipulated in **Annex H** will be triggered in cases of exceedances of A/L Levels.

ENVIRONMENTAL MITIGATION MEASURES

- 2.43 Environmental mitigation measures to minimize potential environmental impacts arising from the construction of the Contract have been recommended and summarized in *Annex C* of the previous *First Monthly EM&A Report for Drainage Works under EP-277/2007/A*. Those related to the construction activities for the up-coming construction period are summarized in *Table 7-2 Environmental Mitigation Measures for the Coming Month* in *Section 7* of this Report.

DATA MANAGEMENT AND DATA QUALITY CONTROL

- 2.44 The impact monitoring data is handled by the ET's systematic data recording and management, which complies with an in-house certified (ISO 9001:2000) Quality Management System. Standard Field Data Sheets (FDS) are used in the EM&A program.
- 2.45 The monitoring data recorded in the equipment e.g. 1-Hour TSP meters and noise meters are downloaded directly at the end of each monitoring day. The downloaded monitoring data are input into a computerized database properly maintained by the ET. The laboratory results are input directly into the computerized database and QA/QC checked by personnel other than those who input the data.
- 2.46 For monitoring activities which require laboratory analysis, the responsible laboratory, ALS, follows the QA/QC requirements as set out under their HOKLAS scheme for all laboratory testing.

3 ENVIRONMENTAL MONITORING RESULTS

AIR QUALITY

3.01 As agreed among the Engineer, IEC, Contractor and ET, the construction noise monitoring is performed at MUP-A1 of Channel MUP05.

MONITORING RESULTS

3.02 The air quality monitoring results of 24-Hour and 1-Hour TSP during the Reporting Period are summarized in **Tables 3-1** and **Table 3-2**. Detailed 24-Hour TSP monitoring data and the graphic plots of both 24-Hour and 1-Hour TSP are shown in **Annex I**.

Table 3-1 Summary of 1-Hour TSP Monitoring Results at MUP-A1 (MUP05), $\mu\text{g}/\text{m}^3$

Date	Start Time	1-Hour TSP Monitoring Results at MUP-A1 (MUP05)			
		1 st	2 nd	3 rd	Mean
7-Jul-12	10:00	67	71	71	70
13-Jul-12	11:25	121	124	122	122
19-Jul-12	13:30	56	54	59	56
25-Jul-12	11:00	28	26	26	27
31-Jul-12	13:00	205	210	201	205
Average (Range)		96 (26 – 210)			
A/L Levels		307 / 500			

Table 3-2 Summary of 24-Hour TSP Monitoring Results at MUP-A1 (MUP05), $\mu\text{g}/\text{m}^3$

Date	24-Hour TSP Monitoring Results at MUP-A1 (MUP05)
6-Jul-12	10
12-Jul-12	20
18-Jul-12	27
24-Jul-12	39
30-Jul-12	8
Average (Range)	21 (8 – 39)
A/L Levels	156 / 260

DISCUSSION

3.03 As shown in **Table 3-1** and **Table 3-2**, no exceedances of A/L Levels were recorded for 1-Hour TSP and 24-Hour TSP during the Reporting Period.

3.04 Neither Notice of Exceedance (hereinafter “NOE”) nor the associated remedial actions were required during the Reporting Period.

RECOMMENDATION

3.05 Nevertheless, the required environmental protection measures is reminded to be fully implemented and maintained as appropriate, in particular construction dust suppression measures during dusty construction activities under dry and windy conditions.

CONSTRUCTION NOISE

3.06 As agreed among the Engineer, IEC, Contractor and ET, the construction noise monitoring is performed at MUP-N1 of Channel MUP05.

3.07 The additional construction noise monitoring is scheduled to be commenced in August 2012 at MUP-Nx upon verification of the Methodology by the IEC on 27 July 1012.

MONITORING RESULTS

3.08 The construction noise monitoring results are summarized in **Tables 3-3** and graphic plots of the monitoring results are shown in **Annex I**.

Table 3-3 Construction Noise Monitoring Results at Channels MUP-N1 (MUP05), dB(A)

Date	Start Time	1 st Leq5	2 nd Leq5	3 rd Leq5	4 th Leq5	5 th Leq5	6 th Leq5	Leq30

Average (Range)		65 (57 – 70)						

DISCUSSION

- 3.09 No environmental complaints against construction noise were registered, indicating no Action Level exceedances were documented during the Reporting Period. In addition, as shown in **Table 4-3**, no exceedances of construction noise Limit Level of 75 dB(A) were recorded.
- 3.10 Neither NOE nor the associated remedial actions were required during the Reporting Period for construction noise.

RECOMMENDATION

- 3.11 However, attention is drawn to construction noise mitigation measures during noisy construction activities.

WATER QUALITY

- 3.12 No water quality monitoring was conducted during the Reporting Period.
- 3.13 Additional water quality monitoring recommended by the Engineer and IEC is scheduled to be commenced in August 2012 **at MUP-Wx1 and MUP-Wx2 upon verification of the Methodology by the IEC on 27 July 2012.**
- 3.14 **Nevertheless, no adverse water quality impacts were identified during weekly site inspection and audit as a result of the implementation of the effective water quality mitigation measures including covering of the cut slope or excavated area with tarpaulin sheeting or bunding the area by sandbags, etc. Particular attention is drawn to maintenance, and improvement as appropriate, of the existing water quality mitigation measures and full implementation of the required water quality protection measures.**

METEOROLOGICAL DATA

- 3.15 Meteorological information downloaded from the Hong Kong Observatory Ta Kwu Ling Weather Station was summarized in **Annex J** and used in the EM&A of the Works.

CONCLUSION

- 3.16 As agreed among the Engineer, IEC, Contractor and ET, the air quality and construction noise monitoring is performed at the sensitive receiver closest to the Works site, i.e. MUP-A1 and MUP-N1 of Channels MUP05 respectively.
- 3.17 Additional water quality monitoring recommended by the Engineer and IEC is scheduled to be commenced in August 2012 **at MUP-Wx1 and MUP-Wx2 upon verification of the Methodology by the IEC on 27 July 2012.**
- 3.18 Neither exceedances of A/L Levels for air quality nor those for construction noise were recorded during the Reporting Period.
- 3.19 Neither NOE nor the associated remedial actions were required during the Reporting Period.
- 3.20 Nevertheless, the required environmental protection measures are reminded to be fully implemented and maintained as appropriate, in particular construction dust suppression measures during dusty construction activities under dry and windy conditions and water quality protection measures during wet season.

4 WASTE MANAGEMENT

- 4.01 Waste management is routinely carried out by the on-site Environmental Officer or Environmental Supervisor.
- 4.02 The quantity of waste for disposal or reuse is summarized in *Monthly Summary of Waste Flow Table and Disposal Records of Construction Waste* in **Annex K**.
- 4.03 To ensure satisfactory performance of the waste management, the Contractor is reminded to comply with all relevant regulatory requirements, including those stipulated in the effluent discharge licenses and chemical waste producer registration, as well as the EM&A Manual, etc.
- 4.04 Where possible, construction materials should be reused on-site as far as practicable to reduce the construction waste, which should then be sorted or classified on site for proper recycling and disposal as recommended in the Environmental Management Plan and the associated Waste Management Plan.

5 ENVIRONMENTAL SITE INSPECTION

- 5.01 According to the EM&A Manual, the environmental site inspection should be formulated by the ET Leader and regularly conducted jointly by the representatives of the ET, Contractor and ER. During the Reporting Period, a total of four (4) occasions of the site inspection were conducted on 5, 12, 19 & 26 July 2012.
- 5.02 No non-compliance with the relevant regulatory requirements was identified. Observations of the regular site inspection and environmental audit during the Reporting Period are summarized in **Table 5-1**.

Table 5-1 Observations of Site Inspection during the Reporting Period

Date	Findings / Deficiencies	Follow-Up Status
5 July 2012	Excavated soil was observed stock piled within the site at MUP05. Water quality mitigation measures are reminded during heavy rain. Concreting of channel bottom was observed within the site at MUP05. Water quality mitigation measures for pH neutralization is reminded during rain to prevent ingress of excessive alkalinity into the receiving water body.	Not required for general reminders
12 July 2012	Neither construction activities nor adverse environmental impacts were observed during the site inspection. However, full implementation of the required environmental protection measures is reminded.	
19 July 2012		
26 July 2012	Turbid water was observed ponding within the site at MUP05. Water quality mitigation measures is reminded to prevent ingress of the excessive turbidity into the receiving water body.	

- 5.03 Site inspection checklists completed and endorsed by all related parties on the date of site inspection have been kept by the ET and are available for inspection upon request.

6 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

6.01 No environmental complaint was received during the Reporting Period. Summary of environmental complaint is presented in **Table 6-1** below.

Table 6-1 Summary of Environmental Complaints

Reporting Month	Environmental Complaint Statistics		
	Frequency	Cumulative	Complaint Nature
May 2012	0	0	NA
June 2012	0	0	NA
July 2012	0	0	NA

6.02 No summons and prosecution was received during the Reporting Period. Summary of summon and prosecution is presented in **Table 6-2** and **Table 6-3** below.

Table 6-2 Summary of Environmental Summons

7 IMPACT FORECAST

KEY ENVIRONMENTAL ISSUES

7.01 Key environmental issues to be considered in the up-coming month are summarized in **Table 7-1** below:

Table 7-1 Key Environmental Issues for the Up-Coming Month

Item	Environmental Issue	Description
(a)	Air Quality	Despite approaching of Hong Kong wet season, construction activities under the Contract may have the potential of generating adverse construction dust impacts during dusty construction activities under dry and windy conditions.
(b)	Water Quality	As the Hong Kong wet season has approached, surface runoff during heavy storm/rain may pollute the surrounding water bodies with suspended solids or turbidity, and concrete washing may change the alkalinity or acidity or pH value of the water bodies;
(c)	Chemical Waste	There exists potential of adverse water quality and soil contamination impacts via chemicals used or chemical waste generated during construction of the Contract, e.g., organic solvents, cleaning solutions, waste batteries, oil & grease spillage or leakage from construction equipment and the associated oil containers within site areas;
(d)	Construction Noise	Construction noise impacts may be caused from noisy construction activities;

ENVIRONMENTAL MITIGATION MEASURES FOR THE COMING MONTH

7.02 Environmental mitigation measures for construction of the Contract have been compiled in **Annex C**. Attention is drawn to implementation of the environmental mitigation measures for construction activities in the up-coming month as summarized in **Table 7-2** below:

Table 7-2 Environmental Mitigation Measures for the Coming Month

Item	Environmental Issue	Description
(a)	Air Quality	Dust suppression measures, in particular proper watering during dusty construction activities under dry and dusty conditions, should be fully implemented;
(b)	Water Quality	Sedimentation or silt removal facilities of adequate capacity should be used, for proper treatment of any site effluent generated from stockpiles of construction materials/waste or dusty haul roads or excavated surfaces within the site during storm rain, prior to discharge to nearby water bodies in order to remove suspended solids or turbidity;
(c)	Chemical Waste	Proper handling and storage of chemical wastes should be maintained;
(d)	Construction Noise	Implementation of the construction noise mitigation measures during noisy construction works
(e)	Other	Follow-up actions for any defects identified during regular site inspection should be promptly taken to rectify the situation.

8 CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

- 8.01 The environmental monitoring during the Reporting Period was conducted at MUP-A1 for air quality and at MUP- N1 for construction noise.
- 8.02 Additional water quality monitoring recommended by the Engineer and IEC is scheduled to be commenced in August 2012 at MUP-Wx1 and MUP-Wx2 upon verification of the Methodology by the IEC on 27 July 2012.
- 8.03 Monitoring results indicated that no exceedances of A/L Levels for air quality and construction noise during the Reporting Period. Neither NOE nor remedial actions were required during the Reporting Period.
- 8.04 No environmental complaint, notification of summons or successful prosecution was registered during the Reporting Period.
- 8.05 No non-compliance with regulatory requirements was identified in the site inspection during the Reporting Period, including the regular joint site inspection by the ER, IEC, ET and Contractor. However, defects of minor environmental significance were sometimes observed during the site inspection. The identified defects were normally rectified on site or within the specified time prior to the next site inspection.

RECOMMENDATIONS

- 8.06 The Contractor is reminded to fully comply with all relevant regulatory environmental requirements, including environmental mitigation measures stipulated in the EM&A Manual.
- 8.07 Despite the approach of wet season, attention is drawn to full implementation of air quality mitigation measures, in particular the construction dust suppression measures, during dusty construction activities under dry and windy conditions.
- 8.08 On the other hand, during rainy conditions, full implementation of the required water quality mitigation measures is reminded to eliminate adverse water quality impacts generated from surfaces of haul roads, stock pile of excavated materials, etc.
- 8.09 In addition, attention is drawn to implementation of the construction noise mitigation measures during noisy construction works.

Certificate of Calibration

校正證書

Certificate No. : C122427
證書編號

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- Self-calibration using the B & K Acoustic Calibrator 4231, S/N : 2713428 was performed before the test.
- The results presented are the mean of 3 measurements at each calibration point.
- Test equipment :

Equipment ID	Description	Certificate No.
CL280	40 MHz Arbitrary Waveform Generator	C120016
CL281	Multifunction Acoustic Calibrator	DC110233

- Test procedure : MA101N.

- Results :

6.1 Sound Pressure Level

6.1.1 Reference Sound Pressure Level

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)		
50 - 130	L _{AFP}	A	F	94.00	1	94.0	± 0.7

6.1.2 Linearity

UUT Setting				Applied Value		UUT Reading (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)	
50 - 130	L _{AFP}	A	F	94.00	1	94.0 (Ref.)
				104.00		104.0
				114.00		114.0

IEC 60651 Type 1 Spec. : ± 0.4 dB per 10 dB step and ± 0.7 dB for overall different.

6.2 Time Weighting

6.2.1 Continuous Signal

UUT Setting				Applied Value		UUT Reading (dB)	IEC 60651 Type 1 Spec. (dB)
Range (dB)	Parameter	Frequency Weighting	Time Weighting	Level (dB)	Freq. (kHz)		
50 - 130	L _{AFP}	A	F	94.00	1	94.0	Ref.
	L _{ASP}		S			94.0	± 0.1
	L _{AIP}		I			94.1	± 0.1

The test equipment used for calibration are traceable to the Nation Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

6.4 Time Averaging

UUT Setting				Applied Value					UUT	IEC 60804
Range (dB)	Parameter	Frequency Weighting	Integrating Time	Frequency (kHz)	Burst Duration (ms)	Burst Duty Factor	Burst Level (dB)	Equivalent Level (dB)	Reading (dB)	Type 1 Spec. (dB)
30 - 110	L _{Aeq}	A	10 sec.	4	1	1/10	110.0	100	99.9	± 0.5
			60 sec.			1/10 ²		90	89.6	± 0.5
			5 min.			1/10 ³		80	79.8	± 1.0
						1/10 ⁴		70	69.8	± 1.0

Remarks : - Mfr's Spec. : IEC 60651 Type 1 & IEC 60804 Type 1

- Uncertainties of Applied Value :

94 dB : 31.5 Hz - 125 Hz	: ± 0.40 dB
250 Hz - 500 Hz	: ± 0.30 dB
1 kHz	: ± 0.20 dB
2 kHz	: ± 0.40 dB
4 kHz	: ± 0.50 dB
8 kHz	: ± 0.70 dB
12.5 kHz	: ± 1.20 dB
104 dB : 1 kHz	: ± 0.10 dB (Ref. 94 dB)
114 dB : 1 kHz	: ± 0.10 dB (Ref. 94 dB)
Burst equivalent level	: ± 0.2 dB (Ref. 110 dB continuous sound level)

- The uncertainties are for a confidence probability of not less than 95 %.

Note :

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

REPORT OF EQUIPMENT PERFORMANCE CHECK/CALIBRATION

CONTACT: MR BEN TAM
CLIENT: ACTION UNITED ENVIRO SERVICES
ADDRESS: RM A 20/F., GOLDEN KING IND BLDG,
NO. 35-41 TAI LIN PAI ROAD,
KWAI CHUNG,
N.T., HONG KONG.

WORK ORDER: HK1210811
LABORATORY: HONG KONG
DATE RECEIVED: 25/04/2012
DATE OF ISSUE: 02/05/2012

PROJECT: --

COMMENTS

It is certified that the item under calibration/checking has been calibrated/checked by corresponding calibrated equipment in the laboratory.
Maximum Tolerance and calibration frequency stated in the report, unless otherwise stated, the internal acceptance criteria of ALS will be followed.

Scope of Test: Dissolved Oxygen, pH, Salinity, Temperature and Turbidity
Description: YSI Sonde
Brand Name: YSI
Model No.: YSI 6820 / 650MDS
Serial No.: 02J0912 / 02K0788 AA
Equipment No.: --
Date of Calibration: 27 April, 2012

NOTES

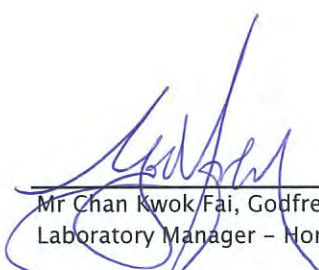

This is the Final Report and supersedes any preliminary report with this batch number.
Results apply to sample(s) as submitted. All pages of this report have been checked and approved for release.

ANNEX L

RESPONSE TO COMMENTS

Contract no. DC/2011/06

Reprovisional of Boundary Patrol Road and Associated Security Facilities between Ping Yuen River and Pak Fu Shan and Drainage Works in North District
IEC Comments on the Monthly EM&A Report (July 2012) For Drainage Works under EP-277/2007/A

Item	Section / Paragraph	IEC Further Comments	ET RtC	IEC Further Comment	ET's Response
1.	Table 1-1	Please check any updated status. Notification pursuant to APCO is not a license and permit. Please put "N/A" in the column of Licences/Permit No.	Amended.	--	
2.	Table 1-2	Please confirm that construction of site office is one of major construction activities in July 2012	Construction of site office has been deleted.	--	
3.	3.14	Please advise the compliance of the water mitigation measures implemented by Contractor.	Sec 3.14 has been expanded to incorporate your comment.	As Contractor is not yet granted the discharge license and no wastewater discharge was performed in the site, please remove "pretreatment of surface water runoff during wet season, i.e. sedimentation of the site wastewater prior to discharge to the receiving water body via desilting facilities".	Deleted.
4.	3.13, 3.17 and 8.02	Verification of the methodology had been performed during the reporting month. So, please re-sentence it. The verification date is incorrect. Please amend.	Text amended. The verification date is 27 July 2012 according to the date in your verification letter.	In version 0, the verification date was dated <u>27 July 1012</u> . It is recommended to revise to "at MUP-Wx1 and MUP-Wx2 upon verification of the Methodology by the IEC on 27 July 2012."	Revised.
5.	3.20	Please revise "during wet season.." to "during wet season."	Text amended.	--	
6.	Table 5-1	To avoid any confusion, please use appropriate wording instead of "Channel" for the observation on 19 & 26 Jul.	Text amended.	--	
7.	5.03	Site inspection checklists have NOT endorsed by all related parties. Please sign the checklist on date of each site inspection as mentioned for confirmation.	Noted. The site inspection checklists have been sent to the Contractor for follow-up action as appropriate. Will urge	Apart from Contractor, it shall be endorsed by DSD and IEC. It is recommended you to give it to all parties sign on-site.	Agreed. The site inspection checklists are enclosed for your signature and return.

Item	Section / Paragraph	IEC Further Comments	ET RtC	IEC Further Comment	ET's Response
			the Contractor to return the endorsed copies for your inspection upon request.		
8.	Annex D	Please show 3 months rolling programme.	Pending provision of the program from the Contractor.	Please show it in coming reporting months.	Shown.
9.	Annex E	Please add a remark to describe the noise monitoring on 6-Aug is for addition noise monitoring if appropriate.	Remarks added.	--	
10.	Annex G	As per the Note in Annex G, please also include the expired certificate.	Included.	--	
11.	Annex H, Event/Action plan for Air	Some letters are missing in the first word of each row, please update.	Amended.	--	
12.	Annex I	Please include 1hr TSP and noise data in this Annex.	Included.	--	
13.	Annex K	Disposal records of construction waste have not recorded in the Monthly summary waste flow table. Please update.	Updated	--	
14.	Table 3-2	--	--	Please advise the range of 24hr TSP is 8-39 or 8-40.	8-39.

Date: 13 August 2012
