Attn: Mr. Danny Tang

Dear Sir,

Agreement No. CE 8/2009(EP) Harbour Area Treatment Scheme (HATS) Stage 2A Independent Environmental Checker for Construction Phase – Investigation

Contract No. DC/2007/23

Construction of Sewage Conveyance System from North Point to Stonecutters Island Condition 4.4 – Submission of Monthly EM&A Report for September 2011 (no. 22)

I refer to the captioned revised Monthly EM&A Report and received on 13 October 2011 via email. Pursuant to Condition 4.4 of Environmental Permit No. EP-322/2008/E, I hereby verify the captioned report.

Yours faithfully for MOTT MACDONALD HONG KONG LIMITED

EXECUTIVE SUMMARY

The construction works of **DC/2007/23 of Harbour Area Treatment Scheme Stage 2A (HATS2A) - Construction of Sewage Conveyance System from North Point to Stonecutters Island (the Project)** commenced on 1 December 2009. This is the 22nd monthly Environmental Monitoring and Audit (EM&A) report presenting the EM&A works carried out during the period from 1 to 30 September 2011 in accordance with the EM&A Manual.

Summary of Construction Works undertaken during Reporting Month

The major construction works undertaken during the reporting month include:

- Shaft sinking at North Point Production Shaft; and .
- Rock blast and pre-excavation grouting at North Point Production Shaft.

Environmental Monitoring and Audit Progress

A summary of the monitoring activities in this reporting period is listed below:

- 24-hour average TSP Monitoring at each monitoring station (AM1 6 sets • and AM2)
- 18 sets • 1-hour average TSP Monitoring at each monitoring station (AM1 and AM2)
- Construction Noise Monitoring during Normal Weekdays at NM1 5 times
- Construction Noise Monitoring during Restricted Hours at NM1 4 times
- Joint Environmental Site Inspection 5 times 1 time
- Landscape & Visual Monitoring

Air Quality

6 sets of 24-hour average TSP and 18 sets of 1-hr average TSP measurements were carried out at each of the designated monitoring stations during the reporting period. No exceedance was recorded during the reporting period.

Noise

5 sets of 30-minute construction noise measurements were carried out at the monitoring station NM1 during normal weekdays of the reporting period. 4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours (between 0700 and 2300 hours on Sundays and public holidays) during the reporting month. Exceedances of the limit level were recorded during restricted hour on 14 and 27 September 2011.

Landscape & Visual

Landscape and visual monitoring commenced in December 2009. Details of the audit findings and implementation status are presented in Section 3.5.3.

Cultural Heritage

No vibration monitoring was required to be conducted for this reporting month as the blasting of tunnel / shaft works has not started.

Waste Management

Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. A total of 7,013.56 tonnes of inert C&D materials, and 31.52 tonnes of non-inert C&D materials were generated during the reporting period. 0 L of chemical waste and no marine deposits requiring type 1, 2, or 3 disposal methods were generated during the reporting period. Non-inert C&D materials are made up of general refuse, steel materials and paper/cardboard packaging materials. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill, respectively. Paper/cardboard packaging, and plastics generated was sent to recyclers for recycling.

Environmental Site Inspection

5 weekly joint environmental site inspections were carried out by the representatives of the Contractor, the Engineer and the Environmental Team (ET). Details of the audit findings and implementation status are presented in *Section 3.6*.

Environmental Exceedance/Non-conformance/Complaint/Summons and Prosecution

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP was recorded during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM1 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the ambient traffic noise was the major cause of the noise levels recorded. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

No environmental complaint and summon/prosecution was received in this reporting period.

Future Key Issues

Works to be undertaken in the next two months include:

- Shaft sinking at North Point Production Shaft;
- Rock blast and pre-excavation grouting at North Point Production Shaft;
- Tunnel lateral development at North Point Production Shaft; and
- Pre-excavation grouting at North Point Drop Shaft.

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

Wan Chai East Production and Drop Shafts

Summary of Construction Works undertaken during Reporting Month

The major construction works undertaken during the reporting month include:

- Pre-excavation grouting at Wan Chai East Drop Shaft;
- Shaft sinking at Wan Chai East Production Shaft;
- Rock blast and pre-excavation grouting at Wan Chai East Production Shaft; and
- Tunnel lateral development at Wan Chai East Production Shaft.

Environmental Monitoring and Audit Progress

A summary of the monitoring activities in this reporting period is listed below:

•	24-hour average TSP Monitoring at AM3	5 sets
•	1-hour average TSP Monitoring at AM3	15 sets
•	Construction Noise Monitoring during Normal Weekdays at NM2	4 times
•	Construction Noise Monitoring during Restricted hours at NM2	4 times
•	Joint Environmental Site Inspection	5 times
•	Landscape & Visual Monitoring	1 time

Air Quality

5 sets of 24-hour average TSP and 15 sets of 1-hr TSP measurements were carried out at the designated monitoring station during the reporting period. No exceedance was recorded during the reporting period.

<u>Noise</u>

4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM2 during normal weekdays of the reporting period. 4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours during the reporting month. Exceedances of the limit level were recorded during restricted hour on 14 and 27 September 2011.

Landscape & Visual

Landscape and visual monitoring commenced in December 2009. Details of the audit findings and implementation status are presented in *Section 4.5.3*.

Cultural Heritage

No vibration monitoring was required to be conducted for this reporting month as the blasting of tunnel / shaft works was not carried out in the vicinity of the historical buildings mentioned in the EM&A Manual.

Waste Management

Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. A total of 7,013.56 tonnes of inert C&D materials, and 31.52 tonnes of non-inert C&D materials were generated during the reporting period. 0 L of chemical waste and no marine deposits requiring type 1, 2, or 3 disposal methods were generated during the reporting period. Non-inert C&D materials are made up of general refuse, steel materials and paper/cardboard packaging materials. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill, respectively. Paper/cardboard packaging, and plastics generated was sent to recyclers for recycling.

Environmental Site Inspection

5 weekly joint environmental site inspections were carried out by the representatives of the Contractor, the Engineer and the Environmental Team (ET). Details of the audit findings and implementation status are presented in *Section 4.6*.

Environmental Exceedance/Non-conformance/Complaint/Summons and Prosecution

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP were recorded during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM2 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the ambient traffic noise was the major cause of the noise levels recorded. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

No environmental complaint and summon/prosecution was received in this reporting period.

Future Key Issues

Works to be undertaken in the next two months include:

- Tunnel lateral development at Wan Chai East Production Shaft; and
- Rock blast and pre-excavation grouting at Wan Chai East Production Shaft.

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

Central Drop Shaft

Summary of Construction Works undertaken during Reporting Month

The major construction works undertaken during the reporting month include:

• Nil

Environmental Monitoring and Audit Progress

A summary of the monitoring activities in this reporting period is listed below:

24-hour average TSP Monitoring at AM4	5 sets
1-hour average TSP Monitoring at AM4	15 sets
Construction Noise Monitoring during Normal Weekdays at NM3	4 times
Joint Environmental Site Inspection	4 times
Landscape & Visual Monitoring	1 time
	1-hour average TSP Monitoring at AM4 Construction Noise Monitoring during Normal Weekdays at NM3 Joint Environmental Site Inspection

Air Quality

5 sets of 24-hour average TSP and 15 sets of 1-hr average TSP measurements were carried out at the designated monitoring station during the reporting period. No exceedance was recorded during the reporting period.

<u>Noise</u>

4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM3 during normal weekdays of the reporting period. No exceedance was recorded during the reporting period.

Landscape & Visual

Landscape and visual monitoring commenced in December 2009. Details of the audit findings and implementation status are presented in *Section 5.5.3*.

Cultural Heritage

No vibration monitoring was required to be conducted for this reporting month as the blasting of tunnel / shaft works has not started.

Waste Management

Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. A total of 7,013.56 tonnes of inert C&D materials, and 31.52 tonnes of non-inert C&D materials were generated during the reporting period. 0 L of chemical waste and no marine deposits requiring type 1, 2, or 3 disposal methods were generated during the reporting period. Non-inert C&D materials are made up of general refuse, steel materials and paper/cardboard packaging materials. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill, respectively. Paper/cardboard packaging, and plastics generated was sent to recyclers for recycling.

Environmental Site Inspection

4 weekly joint environmental site inspections were carried out by the representatives of the Contractor, the Engineer and the Environmental Team (ET). Details of the audit findings and implementation status are presented in *Section 5.6*.

Environmental Exceedance/Non-conformance/Complaint/Summons and Prosecution

No exceedance was recorded during the reporting period.

No non-compliance event was recorded during the reporting period.

No environmental complaint and summon/prosecution was received in this reporting period.

Future Key Issues

Works to be undertaken in the next two months include:

• Nil

•	24-hour average TSP Monitoring at AM5	5 sets
•	1-hour average TSP Monitoring at AM5	15 sets
•	Construction Noise Monitoring during Normal Weekdays at NM4	4 times
•	Construction Noise Monitoring during Restricted hours at NM4	4 times
•	Joint Environmental Site Inspection	4 times
•	Landscape & Visual Monitoring	1 time

Air Quality

5 sets of 24-hour average TSP and 15 sets of 1-hr average TSP measurements were carried out at the designated monitoring station during the reporting period. No exceedance was recorded during the reporting period.

Noise

4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM2 during normal weekdays of the reporting period. 4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours during reporting month. Exceedances of the limit level were recorded during restricted hour on 14 and 27 September 2011.

Landscape & Visual

Landscape and visual monitoring commenced in December 2009. Details of the audit findings and implementation status are presented in *Section 6.5.3*.

Cultural Heritage

No vibration monitoring was required to be conducted for this reporting month as the blasting of tunnel / shaft works has not started.

Waste Management

Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. A total of 7,013.56 tonnes of inert C&D materials, and 31.52 tonnes of non-inert C&D materials were generated during the reporting period. 0 L of chemical waste and no marine deposits requiring type 1, 2, or 3 disposal methods were generated during the reporting period. Non-inert C&D materials are made up of general refuse, steel materials and paper/cardboard packaging materials. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill, respectively. Paper/cardboard packaging, and plastics generated was sent to recyclers for recycling.

Environmental Site Inspection

4 weekly joint environmental site inspections were carried out by the representatives of the Contractor, the Engineer and the Environmental Team (ET). Details of the audit findings and implementation status are presented in *Section 6.6*.

Environmental Exceedance/Non-conformance/Complaint/Summons and Prosecution

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP were recorded during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM4 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the ambient traffic noise was the major cause of the noise levels recorded. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

No environmental complaint and summon/prosecution was received in this reporting period.

Future Key Issues

Works to be undertaken in the next two months include:

- Shaft sinking; and
- Rock blast and pre-excavation grouting.

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

Stonecutters Island Production and Riser Shafts

Summary of Construction Works undertaken during Reporting Month

The major construction works undertaken during the reporting month include:

- Rock blast and pre-excavation grouting at Stonecutters Island Production Shaft;
- Shaft sinking at Stonecutters Island Production Shaft;
- Pre-excavation grouting at Stonecutters Island Riser Shaft.

Environmental Monitoring and Audit Progress

A summary of the monitoring activities in this reporting period is listed below:

•	24-hour average TSP Monitoring at AM6	5 sets
•	1-hour average TSP Monitoring at AM6	15 sets
•	Construction Noise Monitoring during Normal Weekdays at NM5	4 times
•	Construction Noise Monitoring during Restricted Hours at NM5	4 times
•	Joint Environmental Site Inspection	5 times
•	Landscape & Visual Monitoring	1 time

Air Quality

5 sets of 24-hour average TSP and 15 sets of 1-hr average TSP measurements were carried out at the designated monitoring station during the reporting period. No exceedance was recorded during the reporting period.

Noise

4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM5 during normal weekdays of the reporting period. 4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours during reporting month. Exceedance of the limit level was recorded during restricted hour on 6 and 20 September 2011.

Landscape & Visual

Landscape and visual monitoring commenced in December 2009. Details of the audit findings and implementation status are presented in *Section* 7.5.3.

Cultural Heritage

No vibration monitoring was required to be conducted for this reporting month as the blasting of tunnel / shaft works has not started.

Waste Management

Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. A total of 7,013.56 tonnes of inert C&D materials, and 31.52 tonnes of non-inert C&D materials were generated during the reporting period. 0 L of chemical waste and no marine deposits requiring type 1, 2, or 3 disposal methods were generated during the reporting period. Non-inert C&D materials are made up of general refuse, steel materials and paper/cardboard packaging materials. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill, respectively. Paper/cardboard packaging, and plastics generated was sent to recyclers for recycling.

Environmental Site Inspection

5 weekly joint environmental site inspections were carried out by the representatives of the Contractor, the Engineer and the Environmental Team (ET). Details of the audit findings and implementation status are presented in *Section 7.6*.

Environmental Exceedance/Non-conformance/Complaint/Summons and Prosecution

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP were recorded during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM5 on 6 and 20 September 2011. Investigations into the incidents were made and concluded that the ambient environmental noise was the major cause of the noise levels recorded. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitiga tion measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

No environmental complaint and summon/prosecution was received in this reporting period.

Future Key Issues

Works to be undertaken in the next two months include:

- Rock blast and pre-excavation grouting at Stonecutters Island Production Shaft;
- Shaft sinking at Stonecutters Island Production Shaft; and
- Pre-excavation grouting at Stonecutters Island Riser Shaft.

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

1 INTRODUCTION

ERM-Hong Kong, Limited (ERM) has been appointed by Gammon Construction Limited (the Contractor) as the Environmental Team (ET) to undertake an Environmental Monitoring and Audit (EM&A) programme for the Contract - *No. DC/2007/23 of Harbour Area Treatment Scheme Stage 2A* (*HATS2A*) - *Construction of Sewage Conveyance System from North Point to Stonecutters Island* (the Project).

1.1 PURPOSE OF THE REPORT

This is the 22nd EM&A report which summarises the impact monitoring results and audit findings for the EM&A programme during the reporting period from **1 to 30 September 2011**.

1.2 STRUCTURE OF THE REPORT

The structure of the report is as follows:

Section 1: Introduction

details the scope and structure of the report.

Section 2: Project Information

summarises background and scope of the project, site description, project organization and contact details

Section 3: North Point Production and Drop Shafts

• Construction Activities

summarises the construction activities conducted during the reporting month.

Status of Environmental Approval Documents

summarises the environmental documents submissions under the EP condition during the reporting month.

• Environmental Monitoring Requirement

summarises the environmental monitoring including monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event and Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

• Implementation Status on Environmental Mitigation Measures summarises the implementation of environmental protection measures during the reporting period.

• Monitoring Results

summarises the monitoring results obtained in the reporting period.

• Environmental Site Inspection

summarises the audit findings of the weekly site inspections undertaken within the reporting period.

• Environmental Non-conformance

summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

• Future Key Issues

summarises the impact forecast and monitoring schedule for the next three months.

Section 4: Wan Chai East Production and Drop Shafts

Construction Activities

summarises the construction activities conducted during the reporting month.

• Status of Environmental Approval Documents

summarises the environmental documents submissions under the EP condition during the reporting month.

• Environmental Monitoring Requirement

summarises the environmental monitoring including monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event and Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

Implementation Status on Environmental Mitigation Measures summarises the implementation of environmental protection measures during the reporting period.

• Monitoring Results

summarises the monitoring results obtained in the reporting period.

• Environmental Site Inspection

summarises the audit findings of the weekly site inspections undertaken within the reporting period.

• Environmental Non-conformance

summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

• Future Key Issues

summarises the impact forecast and monitoring schedule for the next three months.

Section 5: Central Drop Shaft

• Construction Activities

summarises the construction activities conducted during the reporting month.

• Status of Environmental Approval Documents

summarises the environmental documents submissions under the EP condition during the reporting month.

• Environmental Monitoring Requirement

summarises the environmental monitoring including monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event and Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

• Implementation Status on Environmental Mitigation Measures summarises the implementation of environmental protection measures during the reporting period.

• Monitoring Results

summarises the monitoring results obtained in the reporting period.

• Environmental Site Inspection

summarises the audit findings of the weekly site inspections undertaken within the reporting period.

Environmental Non-conformance

summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

• Future Key Issues

summarises the impact forecast and monitoring schedule for the next three months.

Section 6: Sai Ying Pun Junction Shaft

• Construction Activities

summarises the construction activities conducted during the reporting month.

• Status of Environmental Approval Documents

summarises the environmental documents submissions under the EP condition during the reporting month.

Environmental Monitoring Requirement

summarises the environmental monitoring including monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event and Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

• Implementation Status on Environmental Mitigation Measures summarises the implementation of environmental protection measures during the reporting period.

Monitoring Results

summarises the monitoring results obtained in the reporting period.

• Environmental Site Inspection

summarises the audit findings of the weekly site inspections undertaken within the reporting period.

• Environmental Non-conformance

summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

• Future Key Issues

summarises the impact forecast and monitoring schedule for the next three months.

Section 7: Stonecutters Island Production and Riser Shafts

• Construction Activities

summarises the construction activities conducted during the reporting month.

• Status of Environmental Approval Documents

summarises the environmental documents submissions under the EP condition during the reporting month.

• Environmental Monitoring Requirement

summarises the environmental monitoring including monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event and Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

• Implementation Status on Environmental Mitigation Measures summarises the implementation of environmental protection measures during the reporting period.

• Monitoring Results

summarises the monitoring results obtained in the reporting period.

• Environmental Site Inspection

summarises the audit findings of the weekly site inspections undertaken within the reporting period.

• Environmental Non-conformance

summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

• Future Key Issues

summarises the impact forecast and monitoring schedule for the next three months.

Section 8: Conclusions

2.1 BACKGROUND AND GENERAL SITE DESCRIPTION

The Project comprises the construction of production shafts, drop shafts and riser shaft and approximately 12 km of tunnel excavation from North Point via Sai Ying Pun to Stonecutters Island. Shafts vary in depth from 140 m and 170 m below ground with 10 - 12 m diameter. Tunnel face area ranges from 16 m² to 23 m². Embedded drainage pipelines will be installed upon the completion of tunnel excavation.

Construction works to be carried out under this Contract include the following major items:

- construction of sewage conveyance system (SCS) from North Point Preliminary Treatment Works (NP PTW) to Stonecutters Island Sewage Treatment Works (SCI STW) via Wan Chai East Preliminary Treatment Works (WCE PTW), Central Preliminary Treatment Works (CEN PTW) and Fung Mat Street Sai Ying Pun (SYP) junction shaft;
- construction of drop shafts at NP PTW, WCE PTW and CEN PTW;
- construction of riser shaft at SCI STW;
- construction of junction shaft at SYP;
- construction of temporary production shafts at NP, WCE and SCI to provide access for the construction of SCS;
- construction of connection channels, pipes, chambers and tunnel connecting the proposed drop shafts / riser shaft to the facilities of the preliminary treatment works / sewage treatment works;
- carrying out survey of existing buildings, taking over of existing and installation of new piezometers and ground settlement markers and subsequent monitoring thereof and vibration monitoring along the alignment of the SCS;
- miscellaneous building, civil, electrical and mechanical works; and
- landscape works.

The potential environmental impacts of the Project have been studied in the *"Harbour Area Treatment Scheme (HATS) Stage 2A"* (EIAO Register No: AEIAR-121/2008). The EIA was approved on 2 June 2008 under the *Environmental Impact Assessment Ordinance* (EIAO) and an updated Environmental Permit (EP-322/2008/E) for the works was granted on 24 November 2010. Under the requirements of Condition 4.1 of Environmental Permit EP-322/2008/E,

EM&A programme as set out in the EM&A Manual is required to be implemented.

The construction works of this Project commenced on 1 December 2009 and are scheduled to be completed by 2014.

The general layout plan of the Project is shown in *Annex A*.

2.2 STATUS OF ENVIRONMENTAL APPROVAL DOCUMENTS AND REQUIRED SUBMISSIONS

A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project since December 2009 is presented in *Table 2.1*.

ENVIRONMENTAL RESOURCES MANAGEMENT

3.3 Environmental Monitoring Requirements

3.3.1 Air Quality Monitoring

Monitoring Location

In accordance with the EM&A Manual, 24-hour and 1-hour average Total Suspended Particulates (TSP) levels should be conducted at designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available, alternative locations, therefore, were proposed and agreed by the Engineer Representative (ER) and the Independent Environmental Checker (IEC). Due to security issue of the High Volume Sampler (HVS) mounted on the existing monitoring location (rooftop of WSD office) especially under adverse weather conditions, an alternative location, which is one floor below the existing rooftop was identified and agreed with the ER and IEC in July 2010.

The construction air quality monitoring stations for this Contract are listed in *Table 3.3* and shown in *Annex C2*.

Table 3.3Construction Phase Air Monitoring Location at North Point Production and
Drop Shafts

Worksite	Construction Air Quality Monitoring Stations			
	ID in EM&A Manual	ID	Location	Remark
North Point	-	AM1	Chan's Creative School (formerly known as Madam Chan Wai Chow Memorial School)	 Access for station setup to K.Wah Centre (CM_NP1) and Tin Chiu Street Children's Playground (CM_NP3) was
	CM_NP2	AM2	Hong Kong & Islands Regional Office, WSD	rejected.

Monitoring Parameters, Frequency and Programme

Air quality monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual (*Table 3.4*). The monitoring programme for this reporting period is shown in *Annex C3*.

Table 3.4TSP Monitoring Parameter and Frequency

Parameter	Frequency
24-hour average TSP	Once in every 6 days
1-hour average TSP	3 times in every 6 days

Monitoring Equipment

Continuous 24-hour average and three nos. of 1-hour average TSP monitoring were performed using High Volume Samplers (HVS) with appropriate sampling inlets installed and located at the designated monitoring station. The performance specification of HVS complied with the standard method *"Determination of Suspended Particulate Matter in the Atmosphere (High Volume* *Method)*" as stipulated in *US EPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50 Appendix B). Table 3.5* summarises the equipment that were deployed for the 24-hour and 1-hour average TSP monitoring respectively.

Table 3.5TSP Monitoring Equipment for North Point Production and Drop Shafts Sites

Monitoring Station	Monitoring Equipment (HVS and Calibrator)
24-hr and 1-hr TSP	
AM1	GMW GS-2310 (S/N 1808), CM-AIR-43 (S/N 0438320)
AM2	GMW GS-2310 (S/N 0145), CM-AIR-43 (S/N 0438320)

Monitoring Methodology

Installation

The setup locations of the HVSs at monitoring stations were listed in *Table 3.3*. All HVSs were free-standing with no obstruction.

The following criteria were considered in the installation of the HVSs:

- appropriate support to secure the samplers against gusty wind were provided at AM1 and AM2;
- a minimum of 2 m separation from walls, parapets and penthouses was required for rooftop samplers;
- no furnace or incinerator flues were nearby;
- airflow around the sampler was unrestricted; and
- permission was obtained to set up the samplers and to gain access to the monitoring stations.

Preparation of Filter Papers

- glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected;
- all filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was 40%; and
- SGS Hong Kong Ltd, a HOKLAS accredited laboratory, implements comprehensive quality assurance and quality control programmes.

Field Monitoring

- the power supply was checked to ensure that the HVSs were working properly;
- the filter holder and the area surrounding the filter were cleaned;

- the filter holder was removed by loosening the foul bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully;
- the filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter;
- the swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges;
- then the shelter lid was closed and secured with the aluminium strip;
- the HVSs were warmed-up for about 5 minutes to establish runtemperature conditions;
- a new flowrate record sheet was set into the flow recorder;
- the flow rates of the HVSs were checked and adjusted to between 1.22 -1.37 m³min⁻¹ which were within the range specified in the EM&A Manual (ie 0.6 – 1.7 m³min⁻¹);
- the programmable timer was set for a sampling period of 24 hours ± 1 hour, and the starting time, weather condition and the filter number were recorded;
- the initial elapsed time was recorded;
- at the end of sampling, the sampled filter was removed carefully and folder in half length so that only surfaces with collected particulate matter were in contact;
- it was then placed in a clean plastic envelope and sealed;
- all monitoring information was recorded on a standard data sheet; and
- filters were sent to SGS Hong Kong Ltd for analysis.

Maintenance and Calibration

- the HVSs and their accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply; and
- the flow rate of each HVS with mass flow controller was calibrated using an orifice calibrator. Initial calibrations of the dust monitoring equipments were conducted upon installation and prior to commissioning. Five-point calibration was carried out for HVSs using CM-AIR-43 Calibration Kit. HVSs are calibrated on a bi-monthly basis. The calibration records for the HVSs are given in *Annex H*.

Wind Data

The nearest weather station to North Point Production and Drop Shafts is Kai Tak Station. Average wind data (wind speed and wind direction) during the monitoring period were obtained from the meteorological station at Kai Tak of the Hong Kong Observatory (HKO) and are presented in *Annex C5*.

Action and Limit Levels

The Action and Limit (A/L) levels have been established and presented in *Table 3.6*.

Table 3.6Action and Limit Levels for Air Quality at North Point Production and Drop
Shafts

Parameter	Air Monitoring Station	Action Level, µgm ⁻³	Limit Level, µgm ⁻³
24-hour average TSP	AM1	185	260
	AM2	182	260
1-hour average TSP	AM1	340	500
	AM2	352	500

Event and Action Plan

The Event and Action Plan (EAP) for air quality monitoring is presented in *Annex I*.

3.3.2 Noise Monitoring

Monitoring Location

In accordance with the EM&A Manual, monitoring of construction noise impact should be conducted at the designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available; alternative locations, therefore, were proposed and agreed by the ER and the IEC. Construction activities were conducted at restricted hours (1900 – 2300 on all days and 0700 – 2300 on general holidays and Sundays) during the reporting month. As the constraint of Chan's Creative School's schedule (closed from 1900 to 0700 on normal week days and from 0000 to 2400 on public holidays as well as Sundays), the school (noise monitoring station NM1) is not accessible during restricted hours, noise monitoring during restricted hours would be conducted on the pedestrian walkway adjacent to the school boundary along Tin Chiu Street, which was agreed by the ER and the IEC. The construction noise monitoring location for this Contract is listed in *Table 3.7* and is shown in *Annex C2*.

Worksite	Proposed Construction Noise Monitoring Station					
	ID in EM&A	ID	Location	Type of	Remark	
	Manual			Measurement		
North	M1	NM1	Rooftop of Chan's Creative	Façade	0700 to 1900	
Point			School (formerly known as		on Monday	
			Madam Chan Wai Chow		to Saturday	
			Memorial School)			
			Pedestrian walkway adjacent	Façade	Restricted	
			to Chan's Creative School		hours (1900

			Chan Wai Chow Memorial		days and	
			School) boundary along Tin		0700 - 2300	
			Chiu Street		on general	
					holidays an	
					Sundays)	

Table 3.7Construction Phase Noise Monitoring Station at North Point Production and
Drop Shafts

Monitoring Parameters, Frequency and Programme

Weekly construction noise monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual. Additional noise monitoring were also conducted as per required in the EM&A Manual when works were carried out during restricted periods. The monitoring programme for this reporting period is shown in *Annex C3*.

The construction noise levels were measured in terms of A-weighted equivalent continuous sound pressure level (L_{eq}) in decibels dB(A). $L_{eq (30min)}$ were used as the monitoring parameter for the period in between 0700 – 1900 hours on normal weekdays, and $L_{eq (5min)}$ were used as the monitoring parameter for all restricted periods. Supplementary information for data auditing, two statistical sound levels L_{10} and L_{90} ; the levels exceeded for 10 and 90 percent of the time respectively, were also recorded during the monitoring for reference. The measured noise levels were logged in every 5 minutes throughout the impact monitoring period.

Monitoring Equipment and Methodology

Construction noise measurements were conducted in accordance with the calibration and measurement procedures as stated in *Annex – General Calibration and Measurement Procedures* of *Technical Memorandum on Noise from Construction Work other than Percussive Piling (GW-TM)* issued under the *Noise Control Ordinance (NCO)* (Cap.400).

The sound level meters and calibrator used for the noise measurement, as listed in *Table 3.8,* complies with IEC 651: 1979 and 804:1985 (Type 1) specification. The calibration certificates of the sound level meters are included in *Annex H*.

Table 3.8Noise Monitoring Equipment at North Point Production and Drop Shafts

Monitoring Station		Monitoring Equipment (Sound Level Meter and Calibrator)		
NM1		Calibrator: RION - NC73 (S/N 10997142)		
	•	Sound Level Meters: Rion NL-31 (S/N 00983400)		

Immediately prior to and following the noise measurements, the accuracy of the measurement equipment was checked using an acoustic calibrator generating a known sound pressure level at a known frequency.

Action and Limit Levels

The limit levels for noise monitoring during different monitoring periods are summarised in *Table 3.9*.

Table 3.9Limit Levels for Noise Monitoring at North Point Production and DropShafts

Noise Monitoring Location	Measurement Parameter	Limit Level (dB(A))	Remark
NM1	Leq(30mins)	70	During normal teaching period
	Leq(30mins)	69 (a)	During the school examination period
	Leq(30mins)	75	During school holidays
	Leq(5mins)	70	Evening (1900-2300); and
			Sundays and public holidays (0700-2300)
	Leq(5mins)	55	Night-time (2300-0700)
Note:			

(a) With reference to the Baseline Monitoring Report, the average L_{Aeq,30min} measured at NM1 between 0700 and 1900 hours is 69.0 dB(A), exceeding the Limit Level of daytime construction noise during examination periods (65 dB(A)), it will therefore be adopted as the Limit Level during the examination period at NM1.

Event and Action Plan

The Event and Action Plan (EAP) for noise monitoring is presented in Annex I.

3.3.3 Cultural Heritage

No vibration monitoring is required for this reporting month as no blasting of tunnel / shaft works was carried out.

3.3.4 Landscape and Visual Monitoring

In accordance with the EM&A Manual, landscape and visual monitoring is required to ensure that the design, implementation and maintenance of landscape and visual mitigation measures are fully achieved. The landscape and visual monitoring was carried out on site within the environmental site inspection. The monitoring procedures and criteria as described in the EM&A Manual were adopted.

Event and Action Plan

The Event and Action Plan (EAP) for landscape and visual monitoring is presented in *Annex I*.

3.4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit and EM&A Manual. The implementation status during the reporting period is summarised in *Annex C4*.

3.5 MONITORING RESULTS

3.5.1 Air Quality

A total of 6 sets of 24-hour average and 18 sets of 1-hour average TSP measurements were carried out at AM1 and AM2 respectively during the reporting period. The monitoring data for 24-hour average TSP and 1-hour average TSP together with wind data and graphical presentations are presented in *Annex C5*.

The weather condition during the monitoring period varied from sunny to rainy. The local impacts near the monitoring stations of AM1 to AM2 were mainly associated with vehicle emissions. No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP were recorded during the reporting period.

3.5.2 Noise

A total of 5 sets of 30-minute construction noise measurements were carried out at the monitoring station NM1 during normal weekdays of the reporting period. The local impacts at normal hours during weekdays observed near the monitoring stations of NM1 included traffic noise from King's Road, Java Road and nearby roads; school bell rings; student noise and the construction works by other parties undertaken in the vicinity. No exceedances of limit level for noise monitoring during normal working hours were recorded.

4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours (between 0700 and 1900 hours on Sundays and public holidays) on 4, 14, 18, and 27 September 2011 during the reporting month. The local impacts during restricted hours observed included traffic noise from King's Road, Java Road and nearby roads and the construction works by other parties undertaken in the vicinity. Exceedances of the limit level for noise monitoring during restricted hours were recorded on 14 and 27 September 2011 at NM1. Investigations had been conducted to review the potential causes for the noise level recorded. A summary of the investigation results is presented in *Section 3.7.1*.

The monitoring results together with graphical presentations are presented in *Annex C6*.

3.5.3 Landscape and Visual

Implementation and maintenance of landscape and visual mitigation measures are fully achieved and no major findings were observed during the reporting month.

3.5.4 *Cultural Heritage*

No vibration monitoring was conducted for this reporting month as the blasting of tunnel / shaft works have not commenced.

3.5.5 Waste Management

Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials, and marine deposit. Non-inert C&D materials are made up of general refuse, steel and paper/cardboard packaging materials. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. No marine deposits requiring Type 1, 2, and 3 disposal methods were generated during the reporting month. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (Annex]). The waste statistics provided in this section represent the cumulative quantity of wastes generated from all sites in this Project. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in Table 3.10. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill respectively. 289 kg of paper/cardboard packaging and 32 kg of plastics were generated during the reporting period.

Table 3.10Quantities of Waste Generated from the Project for all Sites

Month / Year			Quantity			
	C&D Materials	C&D Materials (non-inert) ^(b)	Chemical Waste	Marine Deposit		
	(inert) ^(a)			Type 1	Type 2	Type 3
September 2011	7,013.56 tonnes	31.52 tonnes	0 L	0 m ³	0 m ³	0 tonnes

Notes:

(a) Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil. Inert C&D materials were disposed of at the Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/ Chai Wan Barging Point. In addition, 3,453.84 tonnes of broken rock has been transferred to Lam Tei Quarry for use.

(b) Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. The non-inert C&D materials other than steel and paper/cardboard packaging were disposed of at SENT Landfill. No steel material, but 32 kg of plastics and 289 kg of paper/cardboard packaging was sent to recyclers for recycling during the reporting period.

3.6 Environmental Site Inspection

Weekly site inspections were carried out by the representatives of the Contractor, the Engineer and the ET. Site inspections were conducted on 1, 8, 15, 22, and 28 September 2011. The representative of the IEC joined the site inspection on 28 September 2011. There was no non-compliance recorded during the site inspections.

Major findings and recommendations are summarised as follows:

Production Shaft

• On 28 September, oil stain was observed on ground at the workshop area. The Contractor was reminded to remove the oil stain and dispose of as chemical waste.

Drop Shaft

• Nil

3.7 Environmental Non-conformance

3.7.1 Summary of Monitoring Exceedance

No exceedance of the A/L Levels of 1-hour average and 24-hour average TSP were recorded at monitoring stations during the reporting period.

Exceedances of noise Limit Level during restricted hours were reported at NM1 on 14 and 27 September 2011. Investigations into the incidents were conducted and concluded that the road traffic noise measured at the Project site was the major cause of the noise exceedance recorded. Although the exceedances were not caused by the Project, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

Station	Record of Exceedance	0		
NM1	Exceedance of Limit Level on 14 September 2011 (23:04 - 23:19)	It was observed no outdoor construction activities at the North Point Production and Drop Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities that have taken place during the same period.		
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included access control at tally room for confined space; winder operations, drilling of rock bolts and miscellaneous activities including equipment and electrical maintenance at North Point Production Shaft. These activities are relatively quiet in nature, and were carried out inside the noise enclosure.		
		Since all the works were inherently not noisy and were carried out inside the noise enclosure according to the conditions of the Construction Noise Permits (CNP GW-RS1050-10), it can reasonably believe that the exceedance measured is considered attributable to the road traffic noise from nearby roads and is considered non-project related.		
NM1	Exceedance of Limit Level on 27 September 2011 (23:07 – 23:12)	It was observed no outdoor construction activities at the North Point Production and Drop Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing only miscellaneous works have taken place outside the noise enclosure during the same period.		
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included access control at tally room for confined space; safety meeting and gas testing; checking of electrical panels, pumps and electrical wiring; winder operations; and miscellaneous works at North Point Production Shaft. These activities are relatively quiet in nature, and were carried out inside the noise enclosure.		
		Since all the works were inherently not noisy and were carried out inside the noise enclosure according to the conditions of the Construction Noise Permits (CNP GW-RS1050-10), it can reasonably believe that the exceedance measured is considered attributable to the road traffic noise from nearby roads and is considered non-project related.		

3.7.2 Summary of Environmental Non-Compliance

No non-compliance event was recorded during the reporting period.

3.7.3 Summary of Environmental Complaint

No complaint was received during the reporting period. The cumulative complaint log is shown in *Annex C7*.

3.7.4 Summary of Environmental Summon and Successful Prosecution

No summons was received during the reporting period. The cumulative summons/prosecution log is shown in *Annex C7*.

3.8 FUTURE KEY ISSUES

3.8.1 Key Issues for the Coming Months

Works to be undertaken for the coming two monitoring periods are summarised in *Table 3.12*.

Table 3.12Construction Works to be Undertaken in the Coming Two Months at North
Point Production and Drop Shafts

Work to be taken Production Shaft • Shaft sinking • Rock blast and pre-excavation grouting • Tunnel lateral development Drop Shaft • Pre-excavation grouting

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

3.8.2 Monitoring Schedule for the Next Month

The tentative schedule of TSP and noise monitoring for the next reporting period is presented in *Annex C3*. Environmental monitoring will be conducted at the same monitoring locations in this reporting period.

3.8.3 Construction Programme for the Next Month

The most updated construction programme for the Project is presented in *Annex C8*.

WAN CHAI EAST PRODUCTION AND DROP SHAFTS

4

4.1 CONSTRUCTION ACTIVITIES DURING THE REPORTING MONTH

A summary of the major construction activities undertaken in this reporting period is shown in *Table 4.1*. The locations of the construction activities are shown in *Annex D1*.

Table 4.1Summary of Construction Activities Undertaken from 1 to 30 September 2011
at Wan Chai East Production and Drop Shafts

Worksite	Construction Activities Undertaken
Production Shaft	Shaft sinking
	 Rock blasting and pre-excavation grouting
	Tunnel lateral development
Drop Shaft	Pre-excavation grouting

4.2 STATUS OF ENVIRONMENTAL APPROVAL DOCUMENTS

A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project since December 2009 is presented in *Table 4.2*.

Table 4.2Summary of Environmental Licensing, Notification and Permit Status at Wan
Chai East Production and Drop Shafts

Permit/ Licences/	Reference	Validity Period	Remarks

ENVIRONMENTAL RESOURCES MANAGEMENT

4.3 Environmental Monitoring Requirements

4.3.1 Air Quality Monitoring

Monitoring Location

In accordance with the EM&A Manual, 24-hour and 1-hour average Total Suspended Particulates (TSP) levels should be conducted at designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available, alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction air quality monitoring station for this Contract is listed in *Table 4.3* and shown in *Annex D2*.

Table 4.3Construction Phase Air Monitoring Location at Wan Chai East Production
and Drop Shafts

Worksite	Construction Air Quality Monitoring Station				
	ID in EM&A	ID	Location	Remark	
	Manual				
Wan Chai East	-	AM3	Rooftop of Wan Chai East PTW	• The rooftop of Society for the Prevention of Cruelty to Animals building (CM_WC1) was crowded with existing facilities (eg water tanks) that setup of HVSs for baseline monitoring is not feasible.	

Monitoring Parameters, Frequency and Programme

Air quality monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual (*Table 4.4*). The monitoring programme for this reporting period is shown in *Annex D3*.

Table 4.4TSP Monitoring Parameter and Frequency at Wan Chai East Production and
Drop Shafts

Parameter	Frequency
24-hour average TSP	Once in every 6 days
1-hour average TSP	3 times in every 6 days

Monitoring Equipment

Continuous 24-hour and 1-hour average TSP monitoring were performed using High Volume Samplers (HVS) with appropriate sampling inlets installed, located at the designated monitoring station. The performance specification of HVS complied with the standard method "*Determination of Suspended Particulate Matter in the Atmosphere (High Volume Method)*" as stipulated in US EPA Standard Title 40, Code of Federation Regulations Chapter 1 (*Part 50 Appendix B*). Table 4.5 summarises the equipment that was deployed for the 24-hour and 1-hour average TSP monitoring.

Table 4.5TSP Monitoring Equipment at Wan Chai East Production and Drop Shafts

Monitoring Station	Monitoring Equipment (HVS and Calibrator)	
24-hr and 1-hr TSP		
AM3	GMW GS-2310 (S/N 0481), CM-AIR-43 (S/N 0438320)	_

Monitoring Methodology

Installation

The setup location of the HVS at monitoring stations was listed in *Table 4.3*. The HVS was free-standing with no obstruction.

The following criteria were considered in the installation of the HVSs:

- appropriate support to secure the sampler against gusty wind was provided at AM3;
- a minimum of 2 m separation from walls, parapets and penthouses was required for rooftop samplers;
- no furnace or incinerator flues were nearby;
- airflow around the sampler was unrestricted; and
- permission was obtained to set up the samplers and to gain access to the monitoring stations.

Preparation of Filter Papers

- glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected;
- all filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was 40%; and
- SGS Hong Kong Ltd, a HOKLAS accredited laboratory, implements comprehensive quality assurance and quality control programmes.

Field Monitoring

- the power supply was checked to ensure that the HVSs were working properly;
- the filter holder and the area surrounding the filter were cleaned;
- the filter holder was removed by loosening the foul bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully;

- the filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter;
- the swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges;
- then the shelter lid was closed and secured with the aluminium strip;
- the HVSs were warmed-up for about 5 minutes to establish runtemperature conditions;
- a new flowrate record sheet was set into the flow recorder;
- the flow rates of the HVSs were checked and adjusted to between 1.22 1.37 m³min⁻¹ which were within the range specified in the EM&A Manual (ie 0.6 1.7 m³min⁻¹);
- the programmable timer was set for a sampling period of 24 hours ± 1 hour, and the starting time, weather condition and the filter number were recorded;
- the initial elapsed time was recorded;
- at the end of sampling, the sampled filter was removed carefully and folder in half length so that only surfaces with collected particulate matter were in contact;
- it was then placed in a clean plastic envelope and sealed;
- all monitoring information was recorded on a standard data sheet; and
- filters were sent to SGS Hong Kong Ltd for analysis.

Maintenance and Calibration

- the HVSs and their accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply; and
- the flow rate of each HVS with mass flow controller was calibrated using an orifice calibrator. Initial calibrations of the dust monitoring equipments were conducted upon installation and prior to commissioning. Five-point calibration was carried out for HVSs using CM-AIR-43 Calibration Kit. HVSs are calibrated on a bi-monthly basis. The calibration record for the HVS is given in *Annex H*.

Wind Data

The nearest weather station to Wan Chai East Production and Drop Shafts is located at King's Park. Average wind data (wind speed and wind direction) during the monitoring period were obtained from the meteorological station at King's Park of the Hong Kong Observatory (HKO) and are presented in *Annex D5*.

Action and Limit Levels

The Action and Limit levels have been established and presented in Table 4.6.

Table 4.6Action and Limit Levels for Air Quality at Wan Chai East Production and
Drop Shafts

Parameter	Air Monitoring Station	Action Level, µgm ⁻³	Limit Level, µgm ⁻³
24-hour average TSP	AM3	181	260
1-hour average TSP	AM3	355	500

Event and Action Plan

The Event and Action Plan (EAP) for air quality monitoring is presented in *Annex I*.

4.3.2 Noise Monitoring

Monitoring Location

In accordance with the EM&A Manual, monitoring of construction noise impact should be conducted at the designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available; alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction noise monitoring location for this Contract is listed in *Table 4.7* and is shown in *Annex D2*.

Table 4.7Construction Phase Noise Monitoring Station at Wan Chai East Production
and Drop Shafts

Worksite	Constructi	on Noise	Monitoring Stati	on	
	ID in EM&A Manual	ID	Location	Type of Measurement	Remark
Wan Chai East	-	NM2	Rooftop of Hyde Building	Façade	 No guaranteed access for equipment set-up due to no caretaker of Kei Wah Building (M2) Alternative location, NM2, is located next to Kei Wah Building and is also the background noise monitoring station in the HATS2A EIA study.

Monitoring Parameters, Frequency and Programme

Weekly construction noise monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual. Additional noise monitoring were also conducted as per required in the EM&A Manual when works were carried out during restricted periods. The monitoring programme for this reporting period is shown in *Annex D3*.

The construction noise levels were measured in terms of A-weighted equivalent continuous sound pressure level (L_{eq}) in decibels dB(A). $L_{eq (30min)}$ were used as the monitoring parameter for the time period in between 0700 – 1900 hours on normal weekdays, and $L_{eq (5min)}$ were used as the monitoring parameter for all restricted periods. Supplementary information for data auditing, two statistical sound levels L_{10} and L_{90} ; the levels exceeded for 10 and 90 percent of the time respectively, were also recorded during the monitoring for reference. The measured noise levels were logged in every 5 minutes throughout the impact monitoring period.

Monitoring Equipment and Methodology

Construction noise measurements were conducted in accordance with the calibration and measurement procedures as stated in *Annex – General Calibration and Measurement Procedures* of *Technical Memorandum on Noise from Construction Work other than Percussive Piling* (*GW-TM*) issued under the *Noise Control Ordinance* (*NCO*) (Cap.400).

The sound level meters and calibrator used for the noise measurement, as listed in *Table 4.8*, complies with IEC 651: 1979 and 804:1985 (Type 1) specification. The calibration certificates of the sound level meters are included in *Annex H*.

Table 4.8Noise Monitoring Equipment at Wan Chai East Production and Drop Shafts

Monitoring Station	Monitoring Equipment (Sound Level Meter and Calibrator)
NM2	• Calibrator: RION - NC73 (S/N 10997142)
	• Sound Level Meters: Rion NL-31 (S/N 00983400)

Immediately prior to and following the noise measurements, the accuracy of the measurement equipment was checked using an acoustic calibrator generating a known sound pressure level at a known frequency.

Measurements were accepted as the calibration level from before and after the noise measurement agree to within 1.0 dB.

Action and Limit Levels

The limit levels for noise monitoring during different monitoring periods are summarised in *Table 4.9*.

Table 4.9Limit Levels for Noise Monitoring at Wan Chai East Production and Drop
Shafts

Noise Monitoring Location	Measurement Parameter	Limit Level (dB(A))	Remark
NM2	Leq(30mins)	75	Normal working hours during weekdays
	L _{eq(5mins)}	70	Evening (1900-2300); and
			Sundays and public holidays (0700-2300)
	Leq(5mins)	55	Night-time (2300-0700)

Event and Action Plan

The Event and Action Plan (EAP) for noise monitoring is presented in Annex I.

4.3.3 *Cultural Heritage*

No vibration monitoring is required for this reporting month as blasting of tunnel / shaft works was not carried out in the vicinity of the historical buildings mentioned in EM&A manual.

4.3.4 Landscape and Visual Monitoring

In accordance with the EM&A Manual, landscape and visual monitoring is required to ensure that the design, implementation and maintenance of landscape and visual mitigation measures are fully achieved. The landscape and visual monitoring was carried out on site within the environmental site inspection. The monitoring procedures and criteria as described in the EM&A Manual were adopted.

Event and Action Plan

The Event and Action Plan (EAP) for landscape and visual monitoring is presented in *Annex I*.

4.4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit and EM&A Manual. The implementation status during the reporting period is summarised in *Annex D4*.

4.5 MONITORING RESULTS

4.5.1 Air Quality

A total of 5 sets of 24-hour average and 15 sets of 1-hour average TSP measurements were carried out at AM3 during the reporting period. The monitoring data for 24-hour TSP and 1-hour average TSP together with wind data and graphical presentations are presented in *Annex D5*.

The weather condition during the monitoring period varied from sunny to rainy. The local impacts near the monitoring stations of AM3 were mainly associated with vehicle emissions. No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP were recorded during the reporting period.

4.5.2 Noise

A total of 4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM2 during normal working hours in weekdays of the reporting period. No exceedances of limit level for noise monitoring during normal working hours were recorded.

4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours on 4, 14, 18, and 27 September 2011 in this reporting month. Noise levels recorded during restricted hours on 14 and 27 September 2011 exceeded the limit level at NM2. Investigations had been conducted to review the potential causes for the noise level recorded. A summary of the investigation results is presented in *Section 4.7.1*.

The monitoring results together with graphical presentations are presented in *Annex D6*. The local impacts observed near the monitoring stations of NM2 were traffic noise from Gloucester Road and Hung Hing Road.

4.5.3 Landscape and Visual

Implementation and maintenance of landscape and visual mitigation measures are fully achieved and no major findings were observed during the reporting month.

4.5.4 Cultural Heritage

No vibration monitoring is required for this reporting month as blasting of tunnel/shaft works was not carried out in the vicinity of the historical buildings mentioned in EM&A manual.

4.5.5 Waste Management

Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials, and marine deposit. Non-inert C&D materials are made up of general refuse, steel and paper/cardboard packaging materials. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. No marine deposits requiring Type 1, 2, and 3 disposal methods were generated during the reporting month. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (*Annex J*). The waste statistics provided in this section represent the cumulative quantity of wastes generated from all sites in this Project. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in *Table 4.10*. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung

Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill respectively. 289 kg of paper/cardboard packaging and 32 kg of plastics were generated during the reporting period.

Table 4.10Quantities of Waste Generated from the Project for all Sites

Month / Year			Quantity			
	C&D Materials	C&D Materials	Chemical	Marine Deposit		
	(inert) ^(a)	(non-inert) ^(b)	Waste	Type 1	Type 2	Type 3

	d to Lam Tei Qua	0				
	C&D materials in	nclude steel, pape			· ·	

(b) Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. The non-inert C&D materials other than steel and paper/cardboard packaging were disposed of at SENT Landfill. No steel material, but 32 kg of plastics and 289 kg of paper/cardboard packaging was sent to recyclers for recycling during the reporting period.

4.6 Environmental Site Inspection

Weekly site inspections were carried out by the representatives of the Contractor, Engineer and the ET. Site inspections were conducted on 1, 8, 15, 22, and 28 September 2011. The representative of the IEC joined the site inspection on 28 September 2011. There was no non-compliance recorded during the site inspections.

Major findings and recommendations are summarised as follows:

Production Shaft

- On 1 September, chemical waste in a distilled water bottle was found behind the noise enclosure. The Contractor was reminded to keep all chemical waste in the designated chemical waste storage. Proper packaging, labelling and storage of chemical waste stated in *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes* should be followed.
- On 1 September, stagnant water was observed at the lower area behind the washroom. The Contractor was recommended to provide or improve drainage in the area to avoid water accumulation after rainy days or floor washing.
- On 8 September, fallen leaves, cigarette butt and some general refuse were observed within the tree protection area. The Contractor was reminded to ensure that retained trees were protected properly. Toolbox talks on proper disposal and segregation of waste should also be given to on-site employees where necessary.
- On 15 September, a can and a cigarette box were found on top of a roof next to site office. The Contractor was reminded to clear off the items,

and provide toolbox talk to all site staff on proper waste management as necessary.

- On 22 September, stagnant water was observed at the lower area behind the washroom. The Contractor was recommended to provide or improve drainage in the area to avoid water accumulation after rainy days or floor washing.
- On 28 September, a drip tray near a drainage channel was observed having an opening. The Contractor was reminded to close the opening immediately to prevent leakage of oil waste entering the drainage channel.

Drop Shaft

• Nil

4.7 Environmental Non-conformance

4.7.1 Summary of Monitoring Exceedance

No exceedance of the Action and Limit Levels of 1-hour average TSP and 24hour average TSP were recorded at monitoring station during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM2 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the traffic noise recorded at the Project site was the major cause of the exceedance recorded. Although the exceedance was not caused by the Project, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

Station	Record of Exceedance	Result of Investigation
NM2	Exceedance of Limit Level on 14 September 2011 (23:49 - 00:04)	It was observed no outdoor construction activities at the Wan Chai East Production and Drop Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities that have taken place during the same period.
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included drilling blast hole; cleaning blast holes and housekeeping; shaft lightings, wetsep, plant and electrical installations monitoring and maintenance; operating winder and gantry crane; performing general lifting works; underground equipment repairing, servicing, maintenance, fabrication and muck bin clearing and piling; access control for tally room and confined space and site supervision. These activities were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is considered attributable to the road traffic noise in the vicinity of the Site and is non-project related.
NM2	Exceedance of Limit Level on 27 September 2011 (23:52 –00:07)	It was observed no outdoor construction activities at the Wan Chai East Production and Drop Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities that have taken place during the same period.
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included setting the stage to position at the 21 st bunton level; lowering down and installing FSD platform; repairing, servicing, maintenance and fabrication of underground equipment; operating winder and gantry crane; general lifting works; and access controlling of tally room and confined space. These activities were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is considered attributable to the road traffic noise in the vicinity of the

Table 4.11Summary of Record of Exceedance at Wan Chai East Production and Drop
Shafts

4.7.2 Summary of Environmental Non-Compliance

No non-compliance event was recorded during the reporting period.

4.7.3 Summary of Environmental Complaint

No complaint was received during the reporting period. The cumulative complaint log is shown in *Annex D7*.

4.7.4 Summary of Environmental Summon and Successful Prosecution

No summons was received during the reporting period. The cumulative summons/prosecution log is shown in *Annex D7*.

4.8 FUTURE KEY ISSUES

4.8.1 Key Issues for the Coming Month

Works to be undertaken for the coming two monitoring periods are summarised in *Table 4.12*.

Table 4.12Construction Works to be Undertaken in the Coming Two Months at Wan
Chai East Production and Drop Shafts

Production Shaft			
Tunnel lateral	development		
Rock blast and	pre-excavation grou	ting	
Drop Shaft			
• Nil			

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

4.8.2 Monitoring Schedule for the Next Month

The tentative schedule of TSP and noise monitoring for the next reporting period is presented in *Annex D3*. Environmental monitoring will be conducted at the same monitoring locations in this reporting period.

4.8.3 Construction Programme for the Next Month

The most updated construction programme for the Project is presented in *Annex D8*.

5.1 CONSTRUCTION ACTIVITIES DURING THE REPORTING MONTH

A summary of the major construction activities undertaken in this reporting period is shown in *Table 5.1*. The location of the construction activities is shown in *Annex E1*.

Table 5.1Summary of Construction Activities Undertaken from 1 to 30 September 2011
at Central Drop Shaft

Co	nstruction Activities Undertaken
٠	Nil

5.2 STATUS OF ENVIRONMENTAL APPROVAL DOCUMENTS

A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project since December 2009 is presented in *Table 5.2* below.

Table 5.2Summary of Environmental Licensing, Notification and Permit Status at
Central Drop Shaft

Permit/ Licences/ Notification	Reference	Validity Period	Remarks
Wastewater Discharge	Central PTW Drop Shaft	09 October 2009 -31	
License	WT0005131-2009	October 2014	
Chemical Waste	Central PTW Drop Shaft		
Producer Registration	5213-115-G2347-06		
Construction Noise	Central Drop Shaft	14 January 2011 – 4	
Permit	GW-RS0042-11	July 2011	

5.3 Environmental Monitoring Requirements

5.3.1 Air Quality Monitoring

Monitoring Location

In accordance with the EM&A Manual, 24-hour and 1-hour average Total Suspended Particulates (TSP) levels should be conducted at designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available, alternative locations were therefore proposed and agreed by the ER and the IEC. The construction air quality monitoring station for this Contract is listed in *Table 5.3* and shown in *Annex E2*.

Table 5.3Construction Phase Air Monitoring Location at Central Drop Shaft

Worksite	Construct	ion Air Q	uality Monitoring Stati	on
	ID in EM&A Manual	ID	Location	Remark
Central	-	AM4	A Location within the DSD Central PTW	 Access to Sheung Wan Fire Station (CM_C1) was rejected. All possible locations along Connaught Road West and Connaught Road East have been exhausted and no suitable location is identified due to rejection by the premise owner, security reason, without guaranteed access or inaccessible. AM4 is the alternative location.

Monitoring Parameters, Frequency and Programme

Air quality monitoring has been conducted in accordance with the requirements stipulated in the EM&A Manual (*Table 5.4*). The monitoring programme for this reporting period is shown in *Annex E3*.

Table 5.4TSP Monitoring Parameter and Frequency at Central Drop Shaft

Parameter	Frequency
24-hour average TSP	Once in every 6 days
1-hour average TSP	3 times in every 6 days

Monitoring Equipment

Continuous 24-hour and 1-hour average TSP monitoring were performed using High Volume Samplers (HVS) with appropriate sampling inlets installed, located at the designated monitoring station. The performance specification of HVS complied with the standard method "*Determination of Suspended Particulate Matter in the Atmosphere (High Volume Method)*" as stipulated in US EPA Standard Title 40, Code of Federation Regulations Chapter 1 (*Part 50 Appendix B*). Table 5.5 summarises the equipment that was deployed for the 24-hour and 1-hour average TSP monitoring.

Table 5.5TSP Monitoring Equipment at Central Drop Shaft

Monitoring Station	Monitoring Equipment (HVS and Calibrator)
24-hr and 1-hr TSP	
AM4	GMW GS-2310 (S/N 9315), CM-AIR-43 (S/N 0438320)

Monitoring Methodology

Installation

The setup location of the HVS at monitoring stations was listed in *Table 5.3*. The HVS was free-standing with no obstruction.

The following criteria have been considered in the installation of the HVSs:

- appropriate support to secure the samplers against gusty wind were provided at AM4;
- a minimum of 2 m separation from walls, parapets and penthouses was required for rooftop samplers;
- no furnace or incinerator flues were nearby;
- airflow around the sampler was unrestricted; and
- permission was obtained to set up the samplers and to gain access to the monitoring stations.

Preparation of Filter Papers

- glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected;
- all filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was 40%; and
- SGS Hong Kong Ltd, a HOKLAS accredited laboratory, implements comprehensive quality assurance and quality control programmes.

Field Monitoring

- the power supply was checked to ensure that the HVSs were working properly;
- the filter holder and the area surrounding the filter were cleaned;
- the filter holder was removed by loosening the foul bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully;
- the filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter;
- the swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges;
- then the shelter lid was closed and secured with the aluminium strip;
- the HVSs were warmed-up for about 5 minutes to establish runtemperature conditions;

- a new flowrate record sheet was set into the flow recorder;
- the flow rates of the HVSs were checked and adjusted to between 1.22 1.37 m³min⁻¹ which were within the range specified in the EM&A Manual (ie 0.6 1.7 m³min⁻¹);
- the programmable timer was set for a sampling period of 24 hours ± 1 hour, and the starting time, weather condition and the filter number were recorded;
- the initial elapsed time was recorded;
- at the end of sampling, the sampled filter was removed carefully and folder in half length so that only surfaces with collected particulate matter were in contact;
- it was then placed in a clean plastic envelope and sealed;
- all monitoring information was recorded on a standard data sheet; and
- filters were sent to SGS Hong Kong Ltd for analysis.

Maintenance and Calibration

- the HVSs and their accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply; and
- the flow rate of each HVS with mass flow controller were calibrated using an orifice calibrator. Initial calibrations of the dust monitoring equipments were conducted upon installation and prior to commissioning. Five-point calibration was carried out for HVSs using CM-AIR-43 Calibration Kit. HVSs are calibrated on a bi-monthly basis. The calibration record for the HVS is given in *Annex H*.

Wind Data

The nearest weather stations to Central Drop Shaft are located at King's Park and Green Island. Average wind data (wind speed and wind direction) during the monitoring period were obtained from the meteorological stations at Green Island and King's Park of the Hong Kong Observatory (HKO) and are presented in *Annex E5*.

Action and Limit Levels

The Action and Limit levels have been established and presented in Table 5.6.

Table 5.6Action and Limit Levels for Air Quality at Central Drop Shaft

Parameter	Air Monitoring Station	Action Level, µgm ⁻³	Limit Level, µgm-3
24-hour average TSP	AM4	211	260
1-hour average TSP	AM4	393	500

Event and Action Plan

The Event and Action Plan (EAP) for air quality monitoring is presented in *Annex I*.

5.3.2 Noise Monitoring

Monitoring Location

In accordance with the EM&A Manual, monitoring of construction noise impact should be conducted at the designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available; alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction noise monitoring locations for this Contract are listed in *Table 5.7* and are shown in *Annex E2*.

 Table 5.7
 Construction Phase Noise Monitoring Station at Central Drop Shaft

Worksite	Constructi	on Noise	Monitoring Station		
	ID in EM&A Manual	ID	Location	Type of Measurement	Remark
Central	-	NM3	Rooftop of Goldfield Building	Façade	Chi Cheung Building (M4) is not accessible.

Monitoring Parameters, Frequency and Programme

Weekly construction noise monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual. Additional noise monitoring were also conducted as per required in the EM&A Manual when works were carried out during restricted periods. The monitoring programme for this reporting period is shown in *Annex E3*.

The construction noise levels were measured in terms of A-weighted equivalent continuous sound pressure level (L_{eq}) in decibels dB(A). $L_{eq (30min)}$ were used as the monitoring parameter for the time period in between 0700 – 1900 hours on normal weekdays, and $L_{eq (5min)}$ were used as the monitoring parameter for all restricted periods. Supplementary information for data auditing, two statistical sound levels L_{10} and L_{90} ; the levels exceeded for 10 and 90 percent of the time respectively, were also recorded during the monitoring for reference. The measured noise levels were logged in every 5 minutes throughout the impact monitoring period.

Monitoring Equipment and Methodology

Construction noise measurements were conducted in accordance with the calibration and measurement procedures as stated in *Annex – General Calibration and Measurement Procedures* of *Technical Memorandum on Noise from Construction Work other than Percussive Piling (GW-TM)* issued under the *Noise Control Ordinance (NCO)* (Cap.400).

The sound level meters and calibrator used for the noise measurement, as listed in *Table 5.8*, complies with IEC 651: 1979 and 804:1985 (Type 1) specification. The calibration certificates of the sound level meters are included in *Annex H*.

Table 5.8Noise Monitoring Equipment at Central Drop Shaft

Monitoring Station	Monitoring Equipment (Sound Level Meter and Calibrator)		
NM3	• Calibrator: RION - NC73 (S/N 10997142)		
	•	Sound Level Meters: Rion NL-31 (S/N 00983400)	

Immediately prior to and following the noise measurements, the accuracy of the measurement equipment was checked using an acoustic calibrator generating a known sound pressure level at a known frequency.

Measurements were accepted as the calibration level from before and after the noise measurement agree to within 1.0 dB.

Action and Limit Levels

The limit levels for the noise monitoring during different monitoring periods are summarised in *Table 5.9*.

Table 5.9Action and Limit Levels for Noise Monitoring at Central Drop Shaft

Noise Monitoring Location	Measurement Parameters	Limit Level (dB(A))	Remark
NM3	L _{eq(30mins)}	75	Normal working hours during
			weekdays
	Leq(5mins)	70	Evening (1900-2300); and
			Sundays and public holidays (0700-
			2300)
	Leq(5mins)	55	Night-time (2300-0700)

Event and Action Plan

The Event and Action Plan (EAP) for noise monitoring is presented in Annex I.

5.3.3 Cultural Heritage

No vibration monitoring is required for this reporting month as no blasting of tunnel / shaft works was carried out.

5.3.4 Landscape and Visual Monitoring

In accordance with the EM&A Manual, landscape and visual monitoring is required to ensure that the design, implementation and maintenance of landscape and visual mitigation measures are fully achieved. The landscape and visual monitoring was carried out on site within the environmental site inspection. The monitoring procedures and criteria as described in the EM&A Manual were adopted.

Event and Action Plan

The Event and Action Plan (EAP) for landscape and visual monitoring is presented in *Annex I*.

5.4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit and EM&A Manual. The implementation status during the reporting period is summarised in *Annex E4*.

5.5 MONITORING RESULTS

5.5.1 Air Quality

A total of 5 sets of 24-hour average and 15 sets of 1-hour average TSP measurements have been carried out at AM4 during the reporting period. The monitoring data for 24-hour and 1-hour average TSP together with wind data and graphical presentations are presented in *Annex E5*.

The weather condition during the monitoring period varied from sunny to fine. The local impacts near the monitoring stations of AM4 were mainly associated with vehicle emissions.

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP was recorded during the reporting period.

5.5.2 Noise

A total of 4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM3 during normal weekdays of the reporting period. The monitoring results together with graphical presentations are presented in *Annex E6*. The local impacts observed near the monitoring stations of NM3 were traffic noise from Connaught Road Central.

No exceedance of Action and Limit Levels of construction noise was recorded during the reporting period.

5.5.3 Landscape and Visual

Implementation and maintenance of landscape and visual mitigation measures are fully achieved and no major findings were observed during the reporting month.

5.5.4 *Cultural Heritage*

No vibration monitoring was conducted for this reporting month as the blasting of tunnel / shaft works have not started.

5.5.5 Waste Management

Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials, and marine deposit. Non-inert C&D materials are made up of general refuse, steel and paper/cardboard packaging materials. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. No marine deposits requiring Type 1, 2, and 3 disposal methods were generated during the reporting month. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (Annex]). The waste statistics provided in this section represent the cumulative quantity of wastes generated from all sites in this Project. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in Table 5.10. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill respectively. 289 kg of paper/cardboard packaging and 32 kg of plastics were generated during the reporting period.

Table 5.10Quantities of Waste Generated from the Project for all Sites

Month / Year			Quantity			
	C&D Materials	C&D Materials	Chemical	Marine D	eposit	
	(inert) ^(a)	(non-inert) ^(b)	Waste	Type 1	Type 2	Type 3
September 2011	7,013.56 tonnes	31.52 tonnes	0 L	0 m ³	0 m ³	0 tonnes

Notes:

(a) Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil. Inert C&D materials were disposed of at the Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/ Chai Wan Barging Point. In addition, 3,453.84 tonnes of broken rock has been transferred to Lam Tei Quarry for use.

(b) Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. The non-inert C&D materials other than steel and paper/cardboard packaging were disposed of at SENT Landfill. No steel material, but 32 kg of plastics and 289 kg of paper/cardboard packaging was sent to recyclers for recycling during the reporting period.

5.6 Environmental Site Inspection

Weekly site inspections were carried out by representatives of the Contractor, Engineer and the ET. Site inspections were conducted on 1, 8, 15, and 22 September 2011. Due to the scheduled SSEMC meeting on 28 September 2011 immediately after the joint inspection, inspection was not arranged for the CEN site on that day.

Major findings and recommendations are summarised as follows:

- On 15 September, large amount of stagnant water was observed on the ground. The Contractor was reminded to remove the stagnant water immediately.
- On 15 September, the fence for protecting tree was damaged. The Contractor was reminded to repair the fence in order to protect the tree.
- On 22 September, oil was observed at the bottom of the shaft. The Contractor was reminded to remove the oil and dispose of as chemical waste within 3 working days.
- On 22 September, stagnant water was observed on the general refuse bin near the entrance. The Contractor was reminded to remove the stagnant water immediately.

5.7 Environmental Non-conformance

5.7.1 Summary of Monitoring Exceedance

No exceedance of the Action and Limit Levels of 1-hour and 24-hour average TSP were recorded at monitoring station during the reporting period.

No exceedance of the Action and Limit Levels of construction noise was recorded at monitoring station during the reporting period.

5.7.2 Summary of Environmental Non-Compliance

No non-compliance event was recorded during the reporting period.

5.7.3 Summary of Environmental Complaint

No complaint was received during the reporting period. The cumulative complaint log is shown in *Annex E7*.

5.7.4 Summary of Environmental Summon and Successful Prosecution

No summons was received during the reporting period. The cumulative summons/prosecution log is shown in *Annex E7*.

5.8	Future Key Issues
5.8.1	Key Issues for the Coming Month
	Works to be undertaken for the coming two monitoring periods are summarised in <i>Table 5.11</i> .

6.3 Environmental Monitoring Requirements

6.3.1 Air Quality Monitoring

Due to contractual arrangements, air quality monitoring was implemented by the Environmental Team of Contract No. *DC*/2007/24 of Harbour Area Treatment Scheme Stage 2A (HATS2A) - Construction of Sewage Conveyance System from Aberdeen to Stonecutters Island.

Monitoring Location

In accordance with the EM&A Manual, 24-hour and 1-hour average Total Suspended Particulates (TSP) levels should be conducted at designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available, alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction air quality monitoring station for this Contract is listed in *Table 6.3* and shown in *Annex F2*.

Table 6.3Construction Phase Air Monitoring Location at Sai Ying Pun Junction Shaft

Worksite	Construction Air Quality Monitoring Station			
	ID in EM&A	ID	Location	Remark
	Manual			
Fung Mat Street	CM_FM1	AM5	Western Wholesale Food Market	-

Monitoring Parameters, Frequency and Programme

Air quality monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual (*Table 6.4*). The monitoring programme provided by *Contract No. DC/2007/24 – Harbour Area Treatment Scheme Stage 2A* (*HATS 2A*) *Construction of Sewage Conveyance System from Aberdeen to Sai Ying Pun* for this reporting period is shown in *Annex F3*.

Table 6.4TSP Monitoring Parameter and Frequency at Sai Ying Pun Junction Shaft

Parameter	Frequency

Monitoring Parameters, Frequency and Programme

Weekly construction noise monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual. Additional noise monitoring were also conducted as per required in the EM&A Manual when works were carried out during restricted periods. The monitoring programme for this reporting period is shown in *Annex F3*.

The construction noise levels were measured in terms of A-weighted equivalent continuous sound pressure level (L_{eq}) in decibels dB(A). $L_{eq (30min)}$ were used as the monitoring parameter for the time period in between 0700 – 1900 hours on normal weekdays, and $L_{eq (5min)}$ were used as the monitoring parameter for all restricted periods. Supplementary information for data auditing, two statistical sound levels L_{10} and L_{90} ; the levels exceeded for 10 and 90 percent of the time respectively, were also recorded during the monitoring for reference. The measured noise levels were logged in every 5 minutes throughout the impact monitoring period.

Monitoring Equipment and Methodology

Construction noise measurements were conducted in accordance with the calibration and measurement procedures as stated in *Annex – General Calibration and Measurement Procedures* of *Technical Memorandum on Noise from Construction Work other than Percussive Piling* (*GW-TM*) issued under the *Noise Control Ordinance* (*NCO*) (Cap.400).

The sound level meters and calibrator used for the noise measurement, as listed in *Table 6.7*, complies with IEC 651: 1979 and 804:1985 (Type 1) specifications. The calibration certificates of the sound level meters are included in *Annex H*.

Table 6.7Noise Monitoring Equipment at Sai Ying Pun Junction Shaft

Monitoring Station	Monitoring Equipment (Sound Level Meter and Calibrator)

	Leq(5mins)	70	Evening (1900-2300); and
			Sundays and public holidays (0700-
			2300)
	Leq(5mins)	55	Night-time (2300-0700)

Event and Action Plan

The Event and Action Plan (EAP) for noise monitoring is presented in Annex I.

6.3.3 Cultural Heritage

No vibration monitoring is required for this reporting month as no blasting of tunnel / shaft works was carried out.

6.3.4 Landscape and Visual Monitoring

In accordance with the EM&A Manual, landscape and visual monitoring is required to ensure that the design, implementation and maintenance of landscape and visual mitigation measures are fully achieved. The landscape and visual monitoring was carried out on site within the environmental site inspection. The monitoring procedures and criteria as described in the EM&A Manual were adopted.

Event and Action Plan

The Event and Action Plan (EAP) for landscape and visual monitoring is presented in *Annex I*.

6.4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit and EM&A Manual. The implementation status during the reporting period is summarised in *Annex F4*.

6.5 MONITORING RESULTS

6.5.1 *Air Quality*

A total of 5 sets of 24-hour average and 15 sets of 1-hour average TSP measurements were carried out at AM5 during the reporting period. The monitoring data for 24-hour and 1-hour average TSP together with wind data and graphical presentations are presented in *Annex F5*.

The weather condition during the monitoring period varied from sunny to fine. The local impacts near the monitoring stations of AM5 were mainly associated with vehicle emissions.

No exceedances of Action and Limit Levels of 1-hr and 24-hr TSP was recorded during the reporting period.

6.5.2 Noise

A total of 4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM4 during normal weekdays of the reporting period. No exceedance of limit level for noise monitoring during normal working hours was recorded.

4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours on 4, 14, 18, and 27 September 2011 during the reporting month. Noise levels recorded during restricted hours on 14 and 27 September 2011 exceeded the limit level at NM4. Investigations had been conducted to review the potential causes for the noise level recorded. A summary of the investigation results is presented in *Section 6.7.1*.

The monitoring results together with graphical presentations are presented in *Annex F6*. The local impacts observed near the monitoring stations of NM4 were traffic noise from Connaught Road West.

6.5.3 Landscape and Visual

Implementation and maintenance of landscape and visual mitigation measures are fully achieved and no major findings were observed during the reporting month.

6.5.4 *Cultural Heritage*

No vibration monitoring was conducted for this reporting month as the blasting of tunnel / shaft works have not started.

6.5.5 Waste Management

Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials, and marine deposit. Non-inert C&D materials are made up of general refuse, steel and paper/cardboard packaging materials. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. No marine deposits requiring Type 1, 2, and 3 disposal methods were generated during the reporting month. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (Annex]). The waste statistics provided in this section represent the cumulative quantity of wastes generated from all sites in this Project. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in Table 6.9. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill respectively. 289 kg of paper/cardboard packaging and 32 kg of plastics were generated during the reporting period.

Table 6.9Quantities of Waste Generated from the Project for all Sites

Month / Year	Quantity							
	C&D Materials	C&D Materials	Chemical	Marine Deposit				
	(inert) ^(a)	(non-inert) ^(b)	Waste	Type 1	Type 2	Type 3		
September 2011	7,013.56 tonnes	31.52 tonnes	0 L	0 m ³	0 m ³	0 tonnes		

Notes:

(a) Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil. Inert C&D materials were disposed of at the Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/ Chai Wan Barging Point. In addition, 3,453.84 tonnes of broken rock has been transferred to Lam Tei Quarry for use.

(b) Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. The non-inert C&D materials other than steel and paper/cardboard packaging were disposed of at SENT Landfill. No steel material, but 32 kg of plastics and 289 kg of paper/cardboard packaging was sent to recyclers for recycling during the reporting period.

6.6 Environmental Site Inspection

Joint site inspections were conducted by the representatives of the Contractor, Engineer and the ET on 1, 8, 15, and 22 September 2011. Due to the scheduled SSEMC meeting on 28 September 2011 immediately after the joint inspection, inspection was not arranged for the SYP site on that day. There was no non-compliance recorded during the site inspections.

Major findings observed during the reporting period were summarised as follows:

- On 1 September, the air conditioner was observed dripping water. The Contractor was reminded to installing a tube for directing water to the nearby drainage channel.
- On 8 September, stagnant water and moss were observed on the ground near the site office of RUC. The Contractor was reminded to remove the moss and stagnant water and keep the site tidy always as a good site practice.
- On 22 September, general refuses were observed outside RUC site office. The Contractor was reminded to remove the general refuses immediately.

6.7 Environmental Non-conformance

6.7.1 Summary of Monitoring Exceedance

No exceedance of the Action and Limit Levels of 1-hour average TSP and 24hour average TSP were recorded at monitoring station during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM4 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the traffic noise recorded at the Project site was the major cause of the exceedance recorded. Although the exceedance was not caused by the Project, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

NM4	Record of Exceedance	Result of Investigation
7 MINIT	Exceedance of Limit Level on 15 September 2011 (00:40 - 00:55) ^[a]	It was observed no outdoor construction activities at the Sai Ying Pun junction shaft during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities took place during the same period
		Other construction activity that took place during the normonitoring session included general site work and hous keeping work; operating winder and stage hoist; muckin of blasted materials; general electrical works; dewaterin of the shaft bottom and daily access control at tally room and confined space. These activities are relatively quie in nature, and were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is consider attributable to the road traffic noise in the vicinity of the Site and is non-project related.
NM4	Exceedance of Limit Level on 28 September 2011 (00:44 -00:59) ^[b]	It was observed no outdoor construction activities at the Sai Ying Pun junction shaft during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities took place during the same period
		Other construction activity that took place during the nor- monitoring session included general site work and hous keeping work; operating winder and stage hoist; muckir of blasted materials; general electrical works; general welding and grinding work; dewatering of the shaft bottom and daily access control at tally room and confin space. These activities are relatively quiet in nature, an were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is consider attributable to the road traffic noise in the vicinity of the Site and is non-project related.

6.8 FUTURE KEY ISSUES

6.8.1 Key Issues for the Coming Month

Works to be undertaken for the coming two monitoring periods are summarised in *Table 6.10*.

Table 6.11Construction Works to be Undertaken in the Coming Two Months at Sai Ying
Pun Junction Shaft

Wo	ork to be taken
٠	Shaft sinking
•	Rock blast and pre-excavation grouting

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

6.8.2 Monitoring Schedule for the Next Month

The tentative schedule of TSP and noise monitoring for the next reporting period is presented in *Annex F3*. Environmental monitoring will be conducted at the same monitoring locations in this reporting period.

6.8.3 Construction Programme for the Next Month

The most updated construction programme for the Project is presented in *Annex F8*.

7 STONECUTTERS ISLAND PRODUCTION AND RISER SHAFTS

7.1 CONSTRUCTION ACTIVITIES DURING THE REPORTING MONTH

A summary of the major construction activities undertaken in this reporting period is shown in *Table 7.1*. The locations of the construction activities are shown in *Annex G1*.

Rock blast and pre-excavation gro	uting

7.2 STATUS OF ENVIRONMENTAL APPROVAL DOCUMENTS

A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project since December 2009 is presented in *Table 7.2*.

Table 7.2Summary of Environmental Licensing, Notification and Permit Status at
Stonecutters Island Production and Riser Shafts

Permit/ Licences/ Notification	Reference	Validity Period	Remarks
Wastewater Discharge License	Stonecutters Island Production Shaft and Riser Shaft WT00005069-2009	11 August 2010 - 31 October 2014	
Chemical Waste Producer Registration	Stonecutters Island Production Shaft and Riser Shaft 5213-269-G2449-07		
Construction Noise Permit	Stonecutters Island Production Shaft and Riser Shaft GW-RW0458-11	19 July 2011 – 6 January 2012	Superseded by GW-RW0458-11
	Stonecutters Island Production Shaft and Riser Shaft GW-RW00648-11	20 September 2011 – 15 March 2012	

7.3 Environmental Monitoring Requirements

7.3.1 Air Quality Monitoring

Monitoring Location

In accordance with the EM&A Manual, 24-hour and 1-hour average Total Suspended Particulates (TSP) levels should be conducted at designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available, alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction air quality monitoring station for this Contract is listed in *Table 7.3* and shown in *Annex G2*.

Table 7.3Construction Phase Air Monitoring Location at Stonecutters Island
Production and Riser Shafts

Worksite	Construct	ion Air Q	Quality Monitor	ring Station
	ID in EM&A Manual	ID	Location	Remark
SCISTW	-	AM6	Works Site Boundary	 Power Access supply for operation of HVS was not feasible to the rooftop of Government Dockyard Offices (CM_SCI1). For COSCO HIT Terminal (CM_SCI2), access application was verbally rejected. Club House (CM_SCI3) is blocked by a high building, which will affect the dust levels during measurement. Work Site Boundary (near Ngong Shuen Chau Barracks Group 2 (CM_SCI4) was designed for the HATS2A Disinfection Facilities works and the station is separated by a small hill. Baseline dust monitoring data measured under HATS2A – Provision of Disinfection Facilities at SCISTW will also be obtained for the establishment of the action level for the impact monitoring.

Monitoring Parameters, Frequency and Programme

Air quality monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual (*Table 7.4*). The monitoring programme for this reporting period is shown in *Annex G3*.

Table 7.4TSP Monitoring Parameter and Frequency at Stonecutters Island Production
and Riser Shafts

Parameter	Frequency
24-hour average TSP	Once in every 6 days
1-hour average TSP	3 times in every 6 days

Monitoring Equipment

Continuous 24-hour and 1-hour average TSP monitoring were performed using High Volume Samplers (HVS) with appropriate sampling inlets installed, located at the designated monitoring station. The performance specification of HVS complied with the standard method "*Determination of Suspended Particulate Matter in the Atmosphere (High Volume Method)*" as stipulated in US EPA Standard Title 40, Code of Federation Regulations Chapter 1 (*Part 50 Appendix B*). Table 7.5 summarises the equipment that was deployed for the 24-hour and 1-hour average TSP monitoring.

Table 7.5TSP Monitoring Equipment at Stonecutters Island Production and Riser
Shafts

Monitoring Station	Monitoring Equipment (HVS and Calibrator)
24-hr and 1-hr TSP	
AM6	GMW GS-2310 (S/N 1254), CM-AIR-43 (S/N 0438320)

Monitoring Methodology

Installation

The setup location of the HVS at monitoring station was listed in *Table 7.3*. The HVS was free-standing with no obstruction.

The following criteria were considered in the installation of the HVSs:

- appropriate support to secure the samplers against gusty wind were provided at AM6;
- a minimum of 2 m separation from walls, parapets and penthouses was required for rooftop samplers;
- no furnace or incinerator flues were nearby;
- airflow around the sampler was unrestricted; and
- permission was obtained to set up the samplers and to gain access to the monitoring stations.

Preparation of Filter Papers

- glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected;
- all filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ± 3 °C; the relative humidity (RH) was 40%; and
- SGS Hong Kong Ltd, a HOKLAS accredited laboratory, implements comprehensive quality assurance and quality control programmes.

Field Monitoring

- the power supply was checked to ensure that the HVSs were working properly;
- the filter holder and the area surrounding the filter were cleaned;
- the filter holder was removed by loosening the foul bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully;

- the filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter;
- the swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges;
- then the shelter lid was closed and secured with the aluminium strip;
- the HVSs were warmed-up for about 5 minutes to establish runtemperature conditions;
- a new flowrate record sheet was set into the flow recorder;
- the flow rates of the HVSs were checked and adjusted to between 1.22 -1.37 m3min-1 which were within the range specified in the EM&A Manual (ie 0.6 – 1.7 m3min-1);
- the programmable timer was set for a sampling period of 24 hours ± 1 hour, and the starting time, weather condition and the filter number were recorded;
- the initial elapsed time was recorded;
- at the end of sampling, the sampled filter was removed carefully and folder in half length so that only surfaces with collected particulate matter were in contact;
- it was then placed in a clean plastic envelope and sealed;
- all monitoring information was recorded on a standard data sheet; and
- filters were sent to SGS Hong Kong Ltd for analysis.

Maintenance and Calibration

- the HVSs and their accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply; and
- the flow rate of each HVS with mass flow controller were calibrated using an orifice calibrator. Initial calibrations of the dust monitoring equipments were conducted upon installation and prior to commissioning. Five-point calibration was carried out for HVSs using CM-AIR-43 Calibration Kit. HVSs are calibrated on a bi-monthly basis. The calibration record for the HVS is given in *Annex H*.

Wind Data

The nearest weather station to Stonecutters Island Production and Riser Shafts is located at Tsing Yi. Average wind data (wind speed and wind direction) during the monitoring period were obtained from the meteorological station at Tsing Yi of the Hong Kong Observatory (HKO) and are presented in *Annex G*5.

Action and Limit Levels

The Action and Limit levels have been established and presented in *Table 7.6*. The baseline air monitoring data (24-hr and 1-hr TSP average) measured under *HATS2A – Provision of Disinfection Facilities at SCISTW* (DF) is also included to establish the Action Level at AM6.

Table 7.6Action and Limit Levels for Air Quality at Stonecutters Island Production
and Riser Shafts

Parameter	Parameter Air Monitoring Station		Limit Level, µgm ⁻³	
24-hour	AM6 (with 24-hr TSP data from	196	260	
average TSP	DF project)			
1-hour average	AM6 (with 1-hr TSP data from	346	500	
TSP	DF project)			

Event and Action Plan

The Event and Action Plan (EAP) for air quality monitoring is presented in *Annex I*.

7.3.2 Noise Monitoring

Monitoring Location

In accordance with the EM&A Manual, monitoring of construction noise impact should be conducted at the designated monitoring stations. Since access to some of the proposed monitoring locations stated in the EM&A Manual were denied or not available; alternative locations, therefore, were proposed and agreed by the ER and the IEC. The construction noise monitoring location for this Contract is listed in *Table 7.7* and is shown in *Annex G2*.

Worksite	Constructi	on Noise	Monitoring Station		
	ID in	ID	Location	Type of	Remark
	EM&A			Measurement	
	Manual				
SCISTW	-	NM5	A Location near the FSD Diving Rescue and Diving Training Centre near the Site Boundary	Free-Field (3dB(A) was added to the measured results)	 Access to FSD Fire Rescue and Diving Training Centre (M11) wa rejected. NM5 is located next to the original proposed location.

Table 7.7Construction Phase Noise Monitoring Station at Stonecutters Island
Production and Riser Shafts

Monitoring Parameters, Frequency and Programme

Weekly construction noise monitoring was conducted in accordance with the requirements stipulated in the EM&A Manual. Additional noise monitoring were also conducted as per required in the EM&A Manual when works were carried out during restricted periods. The monitoring programme for this reporting period is shown in *Annex G3*.

The construction noise levels were measured in terms of A-weighted equivalent continuous sound pressure level (L_{eq}) in decibels dB(A). $L_{eq (30min)}$ were used as the monitoring parameter for the time period in between 0700 – 1900 hours on normal weekdays, and $L_{eq (5min)}$ were used as the monitoring parameter for all restricted periods. Supplementary information for data auditing, two statistical sound levels L_{10} and L_{90} ; the levels exceeded for 10 and 90 percent of the time respectively, were also recorded during the monitoring for reference. The measured noise levels were logged in every 5 minutes throughout the impact monitoring period.

Monitoring Equipment and Methodology

Construction noise measurements were conducted in accordance with the calibration and measurement procedures as stated in *Annex – General Calibration and Measurement Procedures* of *Technical Memorandum on Noise from Construction Work other than Percussive Piling (GW-TM)* issued under the *Noise Control Ordinance (NCO)* (Cap.400).

The sound level meters and calibrator used for the noise measurement, as listed in *Table 7.8*, complies with IEC 651: 1979 and 804:1985 (Type 1) specification. The calibration certificates of the sound level meters are included in *Annex H*.

Table 7.8Noise Monitoring Equipment at Stonecutters Island Production and Riser
Shafts

Monitoring Station	Monitoring Equipment (Sound Level Meter and Calibrator)		
NM5 •		Calibrator: Rion NC-73 (S/N 10786708)	
	•	Sound Level Meters: Rion NL-31 (S/N 00320533)	

Immediately prior to and following the noise measurements, the accuracy of the measurement equipment was checked using an acoustic calibrator generating a known sound pressure level at a known frequency.

Measurements were accepted as the calibration level from before and after the noise measurement agree to within 1.0 dB. A correction of +3 dB(A) was made to the free field measurement at NM5.

Action and Limit Levels

The limit levels for the noise monitoring during different monitoring periods are summarised in *Table 7.9*.

Table 7.9Limit Levels for Noise Monitoring at Stonecutters Island Production and
Riser Shaft

Noise Monitoring Location	Measurement Parameter	Limit Level (dB(A))	Remark
NM5	Leq(30mins)	75	Normal working hours during
			weekdays
	Leq(5mins)	70	Evening (1900-2300); and
			Sundays and public holidays (0700-
			2300)
	Leq(5mins)	55	Night-time (2300-0700)

Event and Action Plan

The Event and Action Plan (EAP) for noise monitoring is presented in Annex I.

7.3.3 Cultural Heritage

No vibration monitoring is required for this reporting month as no blasting of tunnel / shaft works was carried out.

7.3.4 Landscape and Visual Monitoring

In accordance with the EM&A Manual, landscape and visual monitoring is required to ensure that the design, implementation and maintenance of landscape and visual mitigation measures are fully achieved. The landscape and visual monitoring was carried out on site within the environmental site inspection. The monitoring procedures and criteria as described in the EM&A Manual were adopted.

Event and Action Plan

The Event and Action Plan (EAP) for landscape and visual monitoring is presented in *Annex I*.

7.4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit and EM&A Manual. The implementation status during the reporting period is summarised in *Annex G4*.

7.5 MONITORING RESULTS

7.5.1 Air Quality

A total of 5 sets of 24-hour average and 15 sets of 1-hour average TSP measurements were carried out at AM6 during the reporting period. The monitoring data for 24-hour and 1-hour average TSP together with wind data and graphical presentations are presented in *Annex G5*.

The weather condition during the monitoring period varied from sunny to rainy. The local impacts near the monitoring stations of AM6 were mainly associated with vehicle emissions.

No exceedance of Action and Limit Levels of 1-hr and 24-hr TSP was recorded during the reporting period.

7.5.2 Noise

A total of 4 sets of 30-minute construction noise measurements were carried out at the monitoring station NM5 during normal weekdays of the reporting period. No exceedance of limit level for noise monitoring during normal working hours were recorded.

Construction work was also conducted on public holidays and Sundays in this reporting month. 4 sets of 3 x 5-minute construction noise measurements were carried out during restricted hours on 6, 11, 20, and 25 September 2011 during the reporting month. Noise levels recorded during restricted hours on 6 and 20 September 2011 exceeded the limit level at NM5. Investigations had been conducted to review the potential causes for the noise level recorded. A summary of the investigation results is presented in *Section* 7.7.1.

The monitoring results together with graphical presentations are presented in *Annex G6*. The local impacts observed near the monitoring stations of NM5 included operations at the Government Dockyard, other construction sites activities and traffic within the SCISTW in the vicinity.

7.5.3 Landscape and Visual

Implementation and maintenance of landscape and visual mitigation measures are fully achieved and no major findings were observed during the reporting month.

7.5.4 Cultural Heritage

No vibration monitoring was conducted for this reporting month as the blasting of tunnel / shaft works have not started.

7.5.5 Waste Management

Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials, and marine deposit. Non-inert C&D materials are made up of general refuse, steel and paper/cardboard packaging materials. Steel materials generated from the project are also grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. No marine deposits requiring Type 1, 2, and 3 disposal methods were generated during the reporting month. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (Annex]). The waste statistics provided in this section represent the cumulative quantity of wastes generated from all sites in this Project. With reference to relevant handling records and trip tickets of this Project, the quantities of different types of waste generated in the reporting month are summarised in *Table 7.10*. The inert C&D materials and general refuse generated from the Project were disposed of at Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/Chai Wan Barging Point and SENT Landfill respectively. 289 kg of paper/cardboard packaging and 32 kg of plastics were generated during the reporting period.

Table 7.10Quantities of Waste Generated from the Project for all Sites

Month / Year			Quantity			
	C&D Materials	C&D Materials	Chemical Waste	Marine Deposit		
	(inert) ^(a)	(non-inert) ^(b)		Type 1	Type 2	Type 3
September 2011	7,013.56 tonnes	31.52 tonnes	0 L	0 m ³	0 m ³	0 tonnes

Notes:

(a) Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil. Inert C&D materials were disposed of at the Tuen Mun Area 38/Tseung Kwan O Area 137 Fill Bank/ Chai Wan Barging Point. In addition, 3,453.84 tonnes of broken rock has been transferred to Lam Tei Quarry for use.

(b) Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials. The non-inert C&D materials other than steel and paper/cardboard packaging were disposed of at SENT Landfill. No steel material, but 32 kg of plastics and 289 kg of paper/cardboard packaging was sent to recyclers for recycling during the reporting period.

7.6 Environmental Site Inspection

Weekly site inspections were carried out by the representatives of the Contractor, Engineer and the ET. Site inspections were conducted on 1, 8, 15, 22, and 29 September 2011. The representative of the IEC joined the site inspection on 29 September 2011. There was no non-compliance recorded during the site inspections.

Major findings and recommendations are summarised as follows:

Riser Shaft

• On 8 September, it was observed that two drip trays near the production shaft were fully filled with oil and water. The Contractor was reminded to remove the oil and water and dispose of as chemical waste.

Production Shaft

- On 1 September, a can with waste oil inside was observed inside the noise enclosure. The Contractor was reminded to remove the can and dispose if of as chemical waste.
- On 8 September, leaked Oil was observed on the ground inside the noise enclosure near the winder. The Contractor was reminded to remove the oil and dispose of as chemical waste.
- On 8 September, the skip collecting general refuse was observed not properly covered and was full. The Contractor was reminded to clear the skip and cover the skip properly by tarpaulin sheet to prevent accumulation of stagnant water especially during rainy season.
- On 15 September, leaked Oil was observed on the ground inside the noise enclosure near the winder. The Contractor was reminded to remove the oil and dispose of as chemical waste.
- On 22 September, stagnant water was observed on the tarpaulin sheet near Gate 2. The Contractor was reminded to remove the stagnant waster within 3 working days.

7.7 Environmental Non-conformance

7.7.1 Summary of Monitoring Exceedance

No exceedance of the Action and Limit Levels of 1-hour average TSP and 24hour average TSP was recorded at monitoring station during the reporting period.

Exceedances of noise limit level during restricted hours were reported at NM5 on 6 and 20 September 2011. Investigations into the incidents were made and concluded that environmental noise in the vicinity recorded at the Project site was the major cause of the exceedance recorded. Although the exceedance was not caused by the Project, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures recommended or specified in the EIA, EM&A Manual, EMP, Method Statements, General and Particular Specifications of this Project to avoid exceedance of noise limit levels or causing noise nuisance.

Table 7.11	Summary of Record of Exceedance at Wan Chai East Production and Drop
	Shafts

Station	Record of Exceedance	Result of Investigation
NM5	Exceedance of Limit Level on 6 September 2011 (23:02 - 23:17)	It was observed no outdoor construction activities at the Stonecutter Island Production and Riser Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities that have taken place during the same period.
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included access control in tally room and before work briefing. These activities are quiet in nature, and were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is considered probably attributable to the traffic noise from Tsing Sha Highway near the Site and is non-project related.
NM5	Exceedance of Limit Level on 20 September 2011 (23:02 - 23:17)	It was observed no outdoor construction activities at the Stonecutter Island Production and Riser Shafts during the noise monitoring session. This is consistent with the works summary provided by the Contractor showing no outdoor construction activities that have taken place during the same period.
		According to the works summary provided by the Contractor, construction activities that took place during the noise monitoring session included access control in tally room; monitoring of Wetseps and drilling at G16, G1 G9, G10 and G6. These activities are quiet in nature, and were carried out inside the noise enclosure.
		Based on the above, the exceedance observed is considered probably attributable to the traffic noise from Tsing Sha Highway near the Site and is non-project related.

7.7.3 Summary of Environmental Complaint

7.7.2

No complaint was received during the reporting period. The cumulative complaint log is shown in *Annex G7*.

7.7.4 Summary of Environmental Summon and Successful Prosecution

No summon was received during the reporting period. The cumulative summons/prosecution log is shown in *Annex G7*.

7.8 FUTURE KEY ISSUES

7.8.1 Key Issues for the Coming Month

Works to be undertaken for the coming two monitoring periods are summarised in *Table 7.11*.

Table 7.12Construction Works to be Undertaken in the Coming Two Months at
Stonecutters Island Production and Riser Shafts

Rise	er Shaft		
•	Pre-excavation grouting		
Prod	duction Shaft		
•	Shaft sinking		
•	Rock black and pre-excavation grouting		

Potential environmental impacts arising from the above construction activities are mainly associated with dust, construction noise, site runoff and waste management.

7.8.2 Monitoring Schedule for the Next Month

The tentative schedule of TSP and noise monitoring for the next reporting period is presented in *Annex G3*. Environmental monitoring will be conducted at the same monitoring locations in this reporting period.

7.8.3 Construction Programme for the Next Month

The most updated construction programme for the Project is presented in *Annex G8*.

CONCLUSIONS

8

This Environmental Monitoring and Audit (EM&A) Report presents the EM&A programme undertaken during the period from 1 to 30 September 2011 in accordance with EM&A Manual and the requirement under EP-322/2008/E. The conclusions for the five different sites are summarised below.

8.1 NORTH POINT PRODUCTION AND DROP SHAFTS

No exceedance of Action and Limit Levels of 24-hour and 1-hour average TSP were recorded at the air quality monitoring stations during the reporting period.

Exceedances of the noise limit level during restricted hours was reported at NM1 on 14 and 27 September 2011. Investigations into the incidents were conducted and concluded that the ambient traffic noise was the major cause of the exceedance recorded and hence was non-project related.

No non-compliance event was recorded during the reporting period.

There was no complaint or summons/prosecution received during the reporting period.

8.2 WAN CHAI EAST PRODUCTION AND DROP SHAFTS

No exceedance of Action and Limit Levels of 24-hour and 1-hour average TSP were recorded at the air quality monitoring station during the reporting period.

Exceedances of the noise limit level during restricted hours were reported at NM2 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the ambient traffic noise was the major cause of the exceedance recorded and hence was non-project related. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

There was no complaint or summons/prosecution received during the reporting period.

8.3 CENTRAL DROP SHAFT

No exceedance of Action and Limit Levels of 24-hour and 1-hour average TSP were recorded at the air quality monitoring station during the reporting period.

No exceedance of Limit Levels for construction noise was recorded at the monitoring station during the reporting period.

No non-compliance event was recorded during the reporting period.

There was no complaint or summons/prosecution received during the reporting period.

8.4 SAI YING PUN JUNCTION SHAFT

No exceedance of Action and Limit Levels of 24-hour and 1-hour average TSP were recorded at the air quality monitoring station during the reporting period.

Exceedances of the noise limit level during restricted hours were reported at NM4 on 14 and 27 September 2011. Investigations into the incidents were made and concluded that the ambient traffic noise was the major cause of the exceedance recorded and hence was non-project related. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

There was no complaint or summon/prosecution received during the reporting period.

8.5 STONECUTTERS ISLAND PRODUCTION AND RISER SHAFTS

No exceedance of Action and Limit Levels of 24-hour and 1-hour average TSP were recorded at the air quality monitoring station during the reporting period.

Exceedances of the noise limit level during restricted hours were reported at NM5 on 6 and 20 September 2011. Investigations into the incidents were made and concluded that environmental noise in the vicinity was the major cause of the exceedance recorded and hence was non-project related. However, the Contractor of this Project was reminded to adhere strictly to the Construction Noise Mitigation Plan and to implement all relevant noise mitigation measures to avoid exceedance of noise limit levels or causing noise nuisance.

No non-compliance event was recorded during the reporting period.

There was no complaint or summons/prosecution received during the reporting period.

OVERALL

8.6

The ET has managed the EM&A programme to monitor the compliance status of various environmental requirements and to verify proper implementation of necessary mitigation measures. Annex A

30-Oct	31-Oct					
Noise Monitoring (during daytime of sundays/ public holidays)						

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Construction Phase		X	
Air Quality	 The Air Pollution Control (Construction Dust) Regulation shall be implemented and good site practices shall be incorporated in the contract clauses to minimize construction dust impact. Control measures relevant to this Project are listed below: skip hoist for material transport should be totally enclosed by impervious sheeting; every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site; the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; where a site boundary adjoins a road, streets or other accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit; every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides; regular watering, with complete coverage, to reduce dust emission from exposed site surfaces and unpaved roads, particularly during dry weather; site enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering should be applied to aggregate fines; open stock piles should be avoided or covered and prevent placing dusty material storage piles near ASRs if possible; tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; and instigation of an environmental monitoring auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise. 		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Air Quality	The following watering measures for specific site would be required to control the fugitive dust impacts:	All work sites / during construction	\checkmark
	• watering twice per day within the worksites at North Point PTW; and		
	• watering 8 times per day within worksites at the SCS works area at North Point.		
Operational Phase			
Air Quality	 Good housekeeping for SCISTW and PTWs listed below should be followed to ameliorate any odour impact from the plant and these standard practices should be included in the plant operator manual. Screens should be cleaned regularly to remove any accumulated organic debris Grit and screening transfer systems should be flushed regularly with 	All work sites / during construction	NA. Measures not required until commencement of operational phase
	 Grit and screening transfer systems should be fushed regularly with water to remove organic debris and grit Grit and screened materials should be transferred to closed containers to minimize odour escape 		
	 Scum and grease collection wells and troughs should be emptied and flushed regularly to prevent putrefaction of accumulated organics Skim and remove floating solids and grease from primary clarifiers 		
	regularly		
	 Frequent sludge withdrawal from tanks is necessary to prevent the production of gases 		
	Sludge cake should be transferred to closed containers		
	• Sludge containers should be flushed with water regularly		
Air Quality	Commissioning tests for all deodorization system should be included in the Design and Construction Contract Document.	All PTW and SCISTW/ during operational phase	
Construction Phase		• •	
Noise	Use of quiet PME, movable barriers and acoustic mats	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Noise	 Good Site Practice: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program; silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program; mobile plant, if any, should be sited as far from NSRs as possible; machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities; Environmental audit shall be carried out to ensure that appropriate noise control measures would be properly implemented. 		
Construction Phase			
Water Quality	Construction Site Runoff and General Construction Activities The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	All work sites / during construction	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Effluent Discharge	All work sites / during construction	\checkmark
	There is a need to apply to EPD for a discharge licence for		
	discharge of effluent from the construction site under the		
	WPCO. The discharge quality must meet the requirements		
	specified in the discharge licence. If monitoring of the treated		
	effluent quality from the works areas is required during the		
	construction phase of the Project, the monitoring should be		
	carried out in accordance with the WPCO license which is		
	under the ambit of regional office (RO) of EPD. Minimum		
	distances of 100 m should be maintained between the		
	discharge points of construction site effluent and the existing		
	saltwater intakes.		
Water Quality	Accidental Spillage of Chemicals	All work sites / during construction	\diamond
	Contractor must register as a chemical waste producer if		
	chemical wastes would be produced from the construction		
	activities. The Waste Disposal Ordinance (Cap 354) and its		
	subsidiary regulations in particular the Waste Disposal		
	(Chemical Waste) (General) Regulation should be observed		
	and complied with for control of chemical wastes.		
Water Quality	Any service shop and maintenance facilities should be located	All work sites / during construction	\checkmark
	on hard standings within a bunded area, and sumps and oil		
	interceptors should be provided. Maintenance of vehicles and		
	equipment involving activities with potential for leakage and		
	spillage should only be undertaken within the areas		
	appropriately equipped to control these discharges.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Disposal of chemical wastes should be carried out in compliance with the	All work sites / during construction	
	Waste Disposal Ordinance. The Code of Practice on the Packaging,	Ŭ	
	Labelling and Storage of Chemical Wastes published under the Waste		
	Disposal Ordinance details the requirements to deal with chemical		
	wastes.		
	General requirements are given as follows:		
	• Suitable containers should be used to hold the chemical wastes to		
	avoid leakage or spillage during storage, handling and transport.		
	• Chemical waste containers should be suitably labelled, to notify and		
	warn the personnel who are handling the wastes, to avoid accidents.		
	• Storage area should be selected at a safe location on site and adequate		
	space should be allocated to the storage area.		

Гуре of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Construction Works in Close Proximity of Storm Drains or Seafront	All work sites / during construction	\checkmark
	To minimize the potential water quality impacts from the construction		
	works located at or near any watercourse, the practices outlined below		
	should be adopted where applicable.		
	 The use of less or smaller construction plants may be specified to 		
	reduce the disturbance to the storm water courses or marine environment.		
	• Temporary storage of materials (e.g. equipment, filling materials,		
	chemicals and fuel) and temporary stockpile of construction materials		
	should be located well away from any water courses during carrying out of the construction works.		
	• Stockpiling of construction materials and dusty materials should be covered and located away from any water courses.		
	• Construction debris and spoil should be covered up and/or disposed		
	of as soon as possible to avoid being washed into the nearby water receivers.		
	• Construction activities, which generate large amount of wastewater,		
	should be carried out in a distance away from the waterfront, where practicable.		
	1		
	 Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert or sea 		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Operational Phase			
Water Quality	Dual power supply, standby facilities for the main treatment units and standby equipment parts / accessories should be provided as far as possible at the SCISTW to minimize the chance of emergency discharge.	SCISTW and all the Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Water Quality	Standby unit(s) and dual (backup) power supply would be provided at all the Stage 2 PTWs to reduce the risk of equipment breakdown at the PTWs.	Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Construction Phase			
Waste	Reusable steel or concrete panel shutters, fencing and hoarding and signboard should be used as a preferred alternative to items made of wood, to minimise wastage of wood. Attention should be paid to WBTC No. 19/2001 - Metallic Site Hoardings and Signboards to reduce the amount of timber used on construction sites. Metallic alternatives to timber are readily available and should be used rather than new timber. Precast concrete units should be adopted wherever feasible to minimize the use of timber formwork.	All work sites / during the construction period	\checkmark
Waste	 All waste materials should be segregated into categories covering: excavated materials suitable for reuse on-site; excavated materials suitable for public filling facilities; remaining C&D waste for landfill; chemical waste; and general refuse for landfill. 	All work sites / during the construction period	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
<u>Fype of Impact</u> Waste	 Environmental Protection Measures Recommendations to achieve waste reduction include: Sort C&D waste from demolition of existing facilities to recover recyclable portions such as metals; Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from other general refuse generated by the work force; Any unused chemicals or those with remaining functional capacity shall be recycled; and Proper storage and site practices to minimise the potential for damage or contamination of construction materials. 	Location / Timing All work sites / during the construction period	<>
Waste	 Recommendations for good site practices during construction activities include:- Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site Training of site personnel in proper waste management and chemical waste handling procedures Develop and provide toolbox talk for on-site sorting of C&D materials to enhance worker's awareness in handling, sorting, reuse and recycling of C&D materials. Provision of sufficient waste disposal points and regular collection of waste Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors 	All work sites / during the construction period	\$
Waste	Bentonite slurries used in diaphragm wall construction should be reconditioned and reused wherever practicable. The disposal of residual used bentonite slurry should follow the good practice guidelines stated in ProPECC PN 1/94 "Construction Site Drainage".	All work sites / during the construction period	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.	All work sites / during the construction period	\checkmark
Waste	General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.	All work sites / during the construction period	\checkmark
Waste	The recyclable component of the municipal waste generated by the workforce, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	All work sites / during the construction period	\checkmark
Waste	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	All work sites / during the construction period	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste Construction Phase	Prior to excavation of the marine deposit layer, the deposit should be tested in accordance with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary Sediment Quality Report. The marine deposit should be disposed of at the disposal site designated by the Marine Fill Committee (MFC) or Director of Environmental Protection (DEP) depending on the test results.	All work sites / during the construction period	\checkmark
Landscape & Visual	 Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. Existing trees to be retained on site should be carefully protected during construction. Trees unavoidably affected by the works should be transplanted where practical. Compensatory tree planting should be provided to compensate for felled trees. Control of night-time lighting. Erection of decorative screen hoarding compatible with the surrounding setting. 	All the works areas, PTWs and SCISTW/ during the construction period	v
Operational Phase	•		
Landscape & Visual	 Aesthetic design of the façade of PTW and associated structures to harmonize with the surrounding settings. Shrub and Climbing Plants to soften proposed structures / Roof Greening. Buffer Tree and Shrub Planting to screen proposed associated structures. Reinstated of disturbed area 	All the works areas, PTWs and SCISTW/ during the construction period	NA. Measures not required until commencement of operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Cultural Heritage	The construction vibration control limit (ppv of 25mm/s) shall be strictly followed.	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.
	Monitoring of vibration limits shall be conducted and reported as a requirement of EM&A programme	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.

Remark:

 $\sqrt{}$ Compliance of Mitigation Measures

<> Compliance of Mitigation but need improvement

x Non-compliance of Mitigation Measures

Δ Deficiency of Mitigation Measures but rectified by Gammon Construction Limited

Noise Monitoring (during daytime of sundays/ public holidays)						

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Construction Phase			
Air Quality	 The Air Pollution Control (Construction Dust) Regulation shall be implemented and good site practices shall be incorporated in the contract clauses to minimize construction dust impact. Control measures relevant to this Project are listed below: skip hoist for material transport should be totally enclosed by impervious sheeting; every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site; the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; where a site boundary adjoins a road, streets or other accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit; every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides; regular watering, with complete coverage, to reduce dust emission from exposed site surfaces and unpaved roads, particularly during dry weather; site enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering should be applied to aggregate fines; open stock piles should be avoided or covered and prevent placing dusty material storage piles near ASRs if possible; tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; and instigation of an environmental monitoring auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise. 		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Air Quality	The following watering measures for specific site would be required to control the fugitive dust impacts:	All work sites / during construction	
	• watering twice per day within the worksites at Wan Chai East PTW;		
	 the barging points should be continuous watering throughout the whole unloading process; and 		
	 watering 8 times per day within worksites at the SCS works area at 		
	Wan Chai East.		
Operational Phase			
Air Quality	Good housekeeping for SCISTW and PTWs listed below should be	All work sites / during construction	NA. Measures not required
	followed to ameliorate any odour impact from the plant and these		until commencement of
	standard practices should be included in the plant operator manual.		operational phase
	 Screens should be cleaned regularly to remove any accumulated organic debris 		
	• Grit and screening transfer systems should be flushed regularly with water to remove organic debris and grit		
	Grit and screened materials should be transferred to closed containers to minimize odour escape		
	• Scum and grease collection wells and troughs should be emptied and flushed regularly to prevent putrefaction of accumulated organics		
	 Skim and remove floating solids and grease from primary clarifiers regularly 		
	 Frequent sludge withdrawal from tanks is necessary to prevent the production of gases 		
	 Sludge cake should be transferred to closed containers 		
	 Sludge containers should be flushed with water regularly 		
Air Quality	Commissioning tests for all deodorization system should be	All PTW and SCISTW/ during	NA. Measures not required
~)	included in the Design and Construction Contract Document.	operational phase	until commencement of operational phase
Construction Phase			
Noise	Use of quiet PME, movable barriers and acoustic mats	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Noise	 Good Site Practice: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program; silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program; mobile plant, if any, should be sited as far from NSRs as possible; machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities; 	All work sites / during construction	V
	Environmental audit shall be carried out to ensure that appropriate noise control measures would be properly implemented.		
Construction Phase			
Water Quality	Construction Site Runoff and General Construction Activities The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Effluent Discharge	All work sites / during construction	
	There is a need to apply to EPD for a discharge licence for		
	discharge of effluent from the construction site under the		
	WPCO. The discharge quality must meet the requirements		
	specified in the discharge licence. If monitoring of the treated		
	effluent quality from the works areas is required during the		
	construction phase of the Project, the monitoring should be		
	carried out in accordance with the WPCO license which is		
	under the ambit of regional office (RO) of EPD. Minimum		
	distances of 100 m should be maintained between the		
	discharge points of construction site effluent and the existing		
	saltwater intakes.		
Water Quality	Accidental Spillage of Chemicals	All work sites / during construction	
	Contractor must register as a chemical waste producer if		
	chemical wastes would be produced from the construction		
	activities. The Waste Disposal Ordinance (Cap 354) and its		
	subsidiary regulations in particular the Waste Disposal		
	(Chemical Waste) (General) Regulation should be observed		
	and complied with for control of chemical wastes.		
Water Quality	Any service shop and maintenance facilities should be located	All work sites / during construction	<>
	on hard standings within a bunded area, and sumps and oil		
	interceptors should be provided. Maintenance of vehicles and		
	equipment involving activities with potential for leakage and		
	spillage should only be undertaken within the areas		
	appropriately equipped to control these discharges.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Disposal of chemical wastes should be carried out in compliance with the	All work sites / during construction	
~)	Waste Disposal Ordinance. The Code of Practice on the Packaging,	C C	
	Labelling and Storage of Chemical Wastes published under the Waste		
	Disposal Ordinance details the requirements to deal with chemical		
	wastes.		
	General requirements are given as follows:		
	• Suitable containers should be used to hold the chemical wastes to		
	avoid leakage or spillage during storage, handling and transport.		
	• Chemical waste containers should be suitably labelled, to notify and		
	warn the personnel who are handling the wastes, to avoid accidents.		
	• Storage area should be selected at a safe location on site and adequate		
	space should be allocated to the storage area.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Construction Works in Close Proximity of Storm Drains or Seafront	All work sites / during construction	<>
	To minimize the potential water quality impacts from the construction		
	works located at or near any watercourse, the practices outlined below		
	should be adopted where applicable.		
	 The use of less or smaller construction plants may be specified to 		
	reduce the disturbance to the storm water courses or marine environment.		
	• Temporary storage of materials (e.g. equipment, filling materials,		
	chemicals and fuel) and temporary stockpile of construction materials should be located well away from any water courses during carrying out of the construction works.		
	 Stockpiling of construction materials and dusty materials should be covered and located away from any water courses. 		
	• Construction debris and spoil should be covered up and/or disposed		
	of as soon as possible to avoid being washed into the nearby water receivers.		
	• Construction activities, which generate large amount of wastewater,		
	should be carried out in a distance away from the waterfront, where		
	practicable.		
	• Proper shoring may need to be erected in order to prevent soil/mud		
	from slipping into the storm culvert or sea		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Operational Phase			
Water Quality	Dual power supply, standby facilities for the main treatment units and standby equipment parts / accessories should be provided as far as possible at the SCISTW to minimize the chance of emergency discharge.	SCISTW and all the Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Water Quality	Standby unit(s) and dual (backup) power supply would be provided at all the Stage 2 PTWs to reduce the risk of equipment breakdown at the PTWs.	Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Construction Phase			
Waste	Reusable steel or concrete panel shutters, fencing and hoarding and signboard should be used as a preferred alternative to items made of wood, to minimise wastage of wood. Attention should be paid to WBTC No. 19/2001 - Metallic Site Hoardings and Signboards to reduce the amount of timber used on construction sites. Metallic alternatives to timber are readily available and should be used rather than new timber. Precast concrete units should be adopted wherever feasible to minimize the use of timber formwork.	All work sites / during the construction period	\checkmark
Waste	 All waste materials should be segregated into categories covering: excavated materials suitable for reuse on-site; excavated materials suitable for public filling facilities; remaining C&D waste for landfill; chemical waste; and general refuse for landfill. 	All work sites / during the construction period	<>

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Type of Impact Naste	 Recommendations to achieve waste reduction include: Sort C&D waste from demolition of existing facilities to recover recyclable portions such as metals; Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be segregated from other general refuse generated by the work force; Any unused chemicals or those with remaining functional capacity shall be recycled; and Proper storage and site practices to minimise the potential for 	Location/ Timing All work sites / during the construction period	√
Waste	 damage or contamination of construction materials. Recommendations for good site practices during construction activities include:- Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site Training of site personnel in proper waste management and chemical waste handling procedures Develop and provide toolbox talk for on-site sorting of C&D materials to enhance worker's awareness in handling, sorting, reuse and recycling of C&D materials. Provision of sufficient waste disposal points and regular collection of waste Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors 	All work sites / during the construction period	\$
Waste	Bentonite slurries used in diaphragm wall construction should be reconditioned and reused wherever practicable. The disposal of residual used bentonite slurry should follow the good practice guidelines stated in ProPECC PN 1/94 "Construction Site Drainage".	All work sites / during the construction period	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.	All work sites / during the construction period	\checkmark
Waste	General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.	All work sites / during the construction period	\checkmark
Waste	The recyclable component of the municipal waste generated by the workforce, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	All work sites / during the construction period	\checkmark
Waste	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	All work sites / during the construction period	1

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Prior to excavation of the marine deposit layer, the deposit should be tested in accordance with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary Sediment Quality Report. The marine deposit should be disposed of at the disposal site designated by the Marine Fill Committee (MFC) or Director of Environmental Protection (DEP) depending on the test results.	All work sites / during the construction period	\checkmark
Construction Phase			
Landscape & Visual	 Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. Existing trees to be retained on site should be carefully protected during construction. Trees unavoidably affected by the works should be transplanted where practical. Compensatory tree planting should be provided to compensate for felled trees. Control of night-time lighting. Erection of decorative screen hoarding compatible with the surrounding setting. 	All the works areas, PTWs and SCISTW/ during the construction period	N
Operational Phase	•		
Landscape & Visual	 Aesthetic design of the façade of PTW and associated structures to harmonize with the surrounding settings. Shrub and Climbing Plants to soften proposed structures / Roof Greening. Buffer Tree and Shrub Planting to screen proposed associated structures. Reinstated of disturbed area 	All the works areas, PTWs and SCISTW/ during the construction period	NA. Measures not required until commencement of operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Cultural Heritage	The construction vibration control limit (ppv of 25mm/s) shall be strictly followed.	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.
	Monitoring of vibration limits shall be conducted and reported as a requirement of EM&A programme	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.

Remark:

 $\sqrt{}$ Compliance of Mitigation Measures

<> Compliance of Mitigation but need improvement

x Non-compliance of Mitigation Measures

Δ Deficiency of Mitigation Measures but rectified by Gammon Construction Limited

Гуре of Impact	Environmental Protection Measures	Location/ Timing	Status
Construction Phase			
ir Quality	 The Air Pollution Control (Construction Dust) Regulation shall be implemented and good site practices shall be incorporated in the contract clauses to minimize construction dust impact. Control measures relevant to this Project are listed below: skip hoist for material transport should be totally enclosed by impervious sheeting; every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site; the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; where a site boundary adjoins a road, streets or other accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit; every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides; regular watering, with complete coverage, to reduce dust emission from exposed site surfaces and unpaved roads, particularly during dry weather; site enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering should be applied to aggregate fines; open stock piles should be avoided or covered and prevent placing dusty material storage piles near ASRs if possible; tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; and instigation of an environmental monitoring auditing program to monitor the construction process in order to enforce controls and 	All work sites / during construction	
Air Quality	modify method of work if dusty conditions arise. The following watering measures for specific site would be required to	All work sites / during construction	
	control the fugitive dust impacts:	in work sites / during construction	Y
	• watering four times per day within worksites at the Central PTW.		

ENVIRONMENT MANAGEMENT LIMITED

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Air Quality	 Good housekeeping for SCISTW and PTWs listed below should be followed to ameliorate any odour impact from the plant and these standard practices should be included in the plant operator manual. Screens should be cleaned regularly to remove any accumulated organic debris Grit and screening transfer systems should be flushed regularly with water to remove organic debris and grit Grit and screened materials should be transferred to closed containers to minimize odour escape Scum and grease collection wells and troughs should be emptied and flushed regularly to prevent putrefaction of accumulated organics Skim and remove floating solids and grease from primary clarifiers regularly Frequent sludge withdrawal from tanks is necessary to prevent the production of gases Sludge cake should be transferred to closed containers Sludge containers should be transferred to closed containers 	All work sites / during construction	NA. Measures not required until commencement of operational phase
Air Quality	Commissioning tests for all deodorization system should be included in the Design and Construction Contract Document.	All PTW and SCISTW/ during operational phase	NA. Measures not required until commencement of operational phase
Construction Phase			
Noise	Use of quiet PME, movable barriers and acoustic mats	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Noise	 Good Site Practice: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program; silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program; mobile plant, if any, should be sited as far from NSRs as possible; machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities; 	All work sites / during construction	V
	Environmental audit shall be carried out to ensure that appropriate noise control measures would be properly implemented.		
Construction Phase			
Water Quality	Construction Site Runoff and General Construction Activities The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Water Quality	Effluent Discharge	All work sites / during construction			
	There is a need to apply to EPD for a discharge licence for				
	discharge of effluent from the construction site under the				
	WPCO. The discharge quality must meet the requirements				
	specified in the discharge licence. If monitoring of the treated				
	effluent quality from the works areas is required during the				
	construction phase of the Project, the monitoring should be				
	carried out in accordance with the WPCO license which is				
	under the ambit of regional office (RO) of EPD. Minimum				
	distances of 100 m should be maintained between the				
	discharge points of construction site effluent and the existing				
	saltwater intakes.				
Water Quality	Accidental Spillage of Chemicals	All work sites / during construction	\diamond		
	Contractor must register as a chemical waste producer if				
	chemical wastes would be produced from the construction				
	activities. The Waste Disposal Ordinance (Cap 354) and its				
	subsidiary regulations in particular the Waste Disposal				
	(Chemical Waste) (General) Regulation should be observed				
	and complied with for control of chemical wastes.				
Water Quality	Any service shop and maintenance facilities should be located	All work sites / during construction	\checkmark		
	on hard standings within a bunded area, and sumps and oil				
	interceptors should be provided. Maintenance of vehicles and				
	equipment involving activities with potential for leakage and				
	spillage should only be undertaken within the areas				
	appropriately equipped to control these discharges.				

Type of Impact	Environmental Protection Measures	Location/ Timing	Status									
Water Quality	Disposal of chemical wastes should be carried out in compliance with the											
	Waste Disposal Ordinance. The Code of Practice on the Packaging,	C C										
	Labelling and Storage of Chemical Wastes published under the Waste											
	Disposal Ordinance details the requirements to deal with chemical											
	wastes.											
	General requirements are given as follows:											
	Suitable containers should be used to hold the chemical wastes to											
	avoid leakage or spillage during storage, handling and transport.											
	• Chemical waste containers should be suitably labelled, to notify and											
	warn the personnel who are handling the wastes, to avoid accidents.											
	• Storage area should be selected at a safe location on site and adequate											
	space should be allocated to the storage area.											

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Construction Works in Close Proximity of Storm Drains or Seafront	All work sites / during construction	\checkmark
	To minimize the potential water quality impacts from the construction		
	works located at or near any watercourse, the practices outlined below		
	should be adopted where applicable.		
	 The use of less or smaller construction plants may be specified to 		
	reduce the disturbance to the storm water courses or marine environment.		
	• Temporary storage of materials (e.g. equipment, filling materials,		
	chemicals and fuel) and temporary stockpile of construction materials		
	should be located well away from any water courses during carrying out of the construction works.		
	• Stockpiling of construction materials and dusty materials should be		
	covered and located away from any water courses.		
	• Construction debris and spoil should be covered up and/or disposed		
	of as soon as possible to avoid being washed into the nearby water receivers.		
	• Construction activities, which generate large amount of wastewater,		
	should be carried out in a distance away from the waterfront, where		
	practicable.		
	• Proper shoring may need to be erected in order to prevent soil/mud		
	from slipping into the storm culvert or sea		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Operational Phase					
Water Quality	Dual power supply, standby facilities for the main treatment units and standby equipment parts / accessories should be provided as far as possible at the SCISTW to minimize the chance of emergency discharge.	SCISTW and all the Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase		
Water Quality	Standby unit(s) and dual (backup) power supply would be provided at all the Stage 2 PTWs to reduce the risk of equipment breakdown at the PTWs.	Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase		
Construction Phase					
Waste	Reusable steel or concrete panel shutters, fencing and hoarding and signboard should be used as a preferred alternative to items made of wood, to minimise wastage of wood. Attention should be paid to WBTC No. 19/2001 - Metallic Site Hoardings and Signboards to reduce the amount of timber used on construction sites. Metallic alternatives to timber are readily available and should be used rather than new timber. Precast concrete units should be adopted wherever feasible to minimize the use of timber formwork.	All work sites / during the construction period	\checkmark		
Waste	 All waste materials should be segregated into categories covering: excavated materials suitable for reuse on-site; excavated materials suitable for public filling facilities; remaining C&D waste for landfill; chemical waste; and general refuse for landfill. 	All work sites / during the construction period	\checkmark		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Recommendations to achieve waste reduction include:	All work sites / during the construction	
	 Sort C&D waste from demolition of existing facilities to recover 	period	
	recyclable portions such as metals;		
	 Segregation and storage of different types of waste in different 		
	containers, skips or stockpiles to enhance reuse or recycling of		
	materials and their proper disposal;		
	• Encourage collection of aluminium cans, PET bottles and paper by		
	providing separate labelled bins to enable these wastes to be		
	segregated from other general refuse generated by the work force;		
	• Any unused chemicals or those with remaining functional capacity		
	shall be recycled; and		
	• Proper storage and site practices to minimise the potential for		
	damage or contamination of construction materials.		1
Waste	Recommendations for good site practices during construction	All work sites / during the construction	N
	activities include:-	period	
	• Nomination of an approved person, such as a site manager, to be		
	responsible for good site practices, arrangements for collection and		
	effective disposal to an appropriate facility, of all wastes generated at		
	the site		
	• Training of site personnel in proper waste management and chemical		
	waste handling proceduresDevelop and provide toolbox talk for on-site sorting of C&D		
	materials to enhance worker's awareness in handling, sorting, reuse		
	and recycling of C&D materials.		
	 Provision of sufficient waste disposal points and regular collection of 		
	waste		
	 Regular cleaning and maintenance programme for drainage systems, 		
	sumps and oil interceptors		
Vaste	Bentonite slurries used in diaphragm wall construction should	All work sites / during the construction	
-	be reconditioned and reused wherever practicable. The	period	
	disposal of residual used bentonite slurry should follow the	1	
	good practice guidelines stated in ProPECC PN 1/94 "Construction Site		
	Drainage".		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste	Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.	All work sites / during the construction period	\sim		
Waste	General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.	All work sites / during the construction period	\checkmark		
Waste	The recyclable component of the municipal waste generated by the workforce, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	All work sites / during the construction period	\checkmark		
Waste	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	All work sites / during the construction period			

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste Construction Phase	Prior to excavation of the marine deposit layer, the deposit should be tested in accordance with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary Sediment Quality Report. The marine deposit should be disposed of at the disposal site designated by the Marine Fill Committee (MFC) or Director of Environmental Protection (DEP) depending on the test results.	All work sites / during the construction period	\checkmark		
Landscape & Visual	 Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. Existing trees to be retained on site should be carefully protected during construction. Trees unavoidably affected by the works should be transplanted where practical. Compensatory tree planting should be provided to compensate for felled trees. Control of night-time lighting. Erection of decorative screen hoarding compatible with the surrounding setting. 	All the works areas, PTWs and SCISTW/ during the construction period	<>		
Operational Phase	•				
Landscape & Visual	 Aesthetic design of the façade of PTW and associated structures to harmonize with the surrounding settings. Shrub and Climbing Plants to soften proposed structures / Roof Greening. Buffer Tree and Shrub Planting to screen proposed associated structures. Reinstated of disturbed area 	All the works areas, PTWs and SCISTW/ during the construction period	NA. Measures not required until commencement of operational phase		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Cultural Heritage	The construction vibration control limit (ppv of 25mm/s) shall be strictly followed.	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.
	Monitoring of vibration limits shall be conducted and reported as a requirement of EM&A programme	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.

Remark:

Noise Monitoring (during daytime of sundays/ public holidays)						

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Construction Phase			
Air Quality	 The Air Pollution Control (Construction Dust) Regulation shall be implemented and good site practices shall be incorporated in the contract clauses to minimize construction dust impact. Control measures relevant to this Project are listed below: skip hoist for material transport should be totally enclosed by impervious sheeting; every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site; the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; where a site boundary adjoins a road, streets or other accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit; every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides; regular watering, with complete coverage, to reduce dust emission from exposed site surfaces and unpaved roads, particularly during dry weather; site enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering should be applied to aggregate fines; open stock piles should be avoided or covered and prevent placing dusty material storage piles near ASRs if possible; tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; and instigation of an environmental monitoring auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise. 		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Air Quality	The following watering measures for specific site would be required to control the fugitive dust impacts:	All work sites / during construction	\checkmark
	• watering twice per day within the worksites at Fung Mat Road Site;		
	 the barging points should be continuous watering throughout the whole unloading process. 		
Operational Phase			
Air Quality	Good housekeeping for SCISTW and PTWs listed below should be followed to ameliorate any odour impact from the plant and these standard practices should be included in the plant operator manual.	All work sites / during construction	NA. Measures not required until commencement of operational phase
	 Screens should be cleaned regularly to remove any accumulated organic debris 		
	• Grit and screening transfer systems should be flushed regularly with water to remove organic debris and grit		
	• Grit and screened materials should be transferred to closed containers to minimize odour escape		
	 Scum and grease collection wells and troughs should be emptied and flushed regularly to prevent putrefaction of accumulated organics 		
	 Skim and remove floating solids and grease from primary clarifiers regularly 		
	 Frequent sludge withdrawal from tanks is necessary to prevent the production of gases 		
	 Sludge cake should be transferred to closed containers 		
	 Sludge containers should be flushed with water regularly 		
Air Quality	Commissioning tests for all deodorization system should be	All PTW and SCISTW/ during	NA. Measures not required
	included in the Design and Construction Contract Document.	operational phase	until commencement of operational phase
Construction Phase			
Noise	Use of quiet PME, movable barriers and acoustic mats	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Noise	 Good Site Practice: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program; silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program; mobile plant, if any, should be sited as far from NSRs as possible; machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities; 	All work sites / during construction	V
	Environmental audit shall be carried out to ensure that appropriate noise control measures would be properly implemented.		
Construction Phase			
Water Quality	Construction Site Runoff and General Construction Activities The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	All work sites / during construction	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Effluent Discharge	All work sites / during construction	
	There is a need to apply to EPD for a discharge licence for		
	discharge of effluent from the construction site under the		
	WPCO. The discharge quality must meet the requirements		
	specified in the discharge licence. If monitoring of the treated		
	effluent quality from the works areas is required during the		
	construction phase of the Project, the monitoring should be		
	carried out in accordance with the WPCO license which is		
	under the ambit of regional office (RO) of EPD. Minimum		
	distances of 100 m should be maintained between the		
	discharge points of construction site effluent and the existing		
	saltwater intakes.		
Water Quality	Accidental Spillage of Chemicals	All work sites / during construction	
	Contractor must register as a chemical waste producer if		
	chemical wastes would be produced from the construction		
	activities. The Waste Disposal Ordinance (Cap 354) and its		
	subsidiary regulations in particular the Waste Disposal		
	(Chemical Waste) (General) Regulation should be observed		
	and complied with for control of chemical wastes.		
Water Quality	Any service shop and maintenance facilities should be located	All work sites / during construction	
	on hard standings within a bunded area, and sumps and oil		
	interceptors should be provided. Maintenance of vehicles and		
	equipment involving activities with potential for leakage and		
	spillage should only be undertaken within the areas		
	appropriately equipped to control these discharges.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Disposal of chemical wastes should be carried out in compliance with the	All work sites / during construction	
	Waste Disposal Ordinance. The Code of Practice on the Packaging,	Ŭ	
	Labelling and Storage of Chemical Wastes published under the Waste		
	Disposal Ordinance details the requirements to deal with chemical		
	wastes.		
	General requirements are given as follows:		
	• Suitable containers should be used to hold the chemical wastes to		
	avoid leakage or spillage during storage, handling and transport.		
	• Chemical waste containers should be suitably labelled, to notify and		
	warn the personnel who are handling the wastes, to avoid accidents.		
	• Storage area should be selected at a safe location on site and adequate		
	space should be allocated to the storage area.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Construction Works in Close Proximity of Storm Drains or Seafront	All work sites / during construction	\checkmark
	To minimize the potential water quality impacts from the construction		
	works located at or near any watercourse, the practices outlined below		
	should be adopted where applicable.		
	 The use of less or smaller construction plants may be specified to 		
	reduce the disturbance to the storm water courses or marine environment.		
	• Temporary storage of materials (e.g. equipment, filling materials,		
	chemicals and fuel) and temporary stockpile of construction materials		
	should be located well away from any water courses during carrying		
	out of the construction works.		
	• Stockpiling of construction materials and dusty materials should be covered and located away from any water courses.		
	• Construction debris and spoil should be covered up and/or disposed		
	of as soon as possible to avoid being washed into the nearby water receivers.		
	• Construction activities, which generate large amount of wastewater,		
	should be carried out in a distance away from the waterfront, where		
	practicable.		
	• Proper shoring may need to be erected in order to prevent soil/mud		
	from slipping into the storm culvert or sea		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Operational Phase		¥	
Water Quality	Dual power supply, standby facilities for the main treatment units and standby equipment parts / accessories should be provided as far as possible at the SCISTW to minimize the chance of emergency discharge.	SCISTW and all the Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Water Quality	Standby unit(s) and dual (backup) power supply would be provided at all the Stage 2 PTWs to reduce the risk of equipment breakdown at the PTWs.	Stage 2 PTWs / Operation Stage	NA. Measures not required until commencement of operational phase
Construction Phase			
Waste	Reusable steel or concrete panel shutters, fencing and hoarding and signboard should be used as a preferred alternative to items made of wood, to minimise wastage of wood. Attention should be paid to WBTC No. 19/2001 - Metallic Site Hoardings and Signboards to reduce the amount of timber used on construction sites. Metallic alternatives to timber are readily available and should be used rather than new timber. Precast concrete units should be adopted wherever feasible to minimize the use of timber formwork.	All work sites / during the construction period	\checkmark
Waste	 All waste materials should be segregated into categories covering: excavated materials suitable for reuse on-site; excavated materials suitable for public filling facilities; remaining C&D waste for landfill; chemical waste; and general refuse for landfill. 	All work sites / during the construction period	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Recommendations to achieve waste reduction include:	All work sites / during the construction	
	• Sort C&D waste from demolition of existing facilities to recover	period	
	recyclable portions such as metals;		
	• Segregation and storage of different types of waste in different		
	containers, skips or stockpiles to enhance reuse or recycling of		
	materials and their proper disposal;		
	• Encourage collection of aluminium cans, PET bottles and paper by providing separate labelled bins to enable these wastes to be		
	segregated from other general refuse generated by the work force;		
	 Any unused chemicals or those with remaining functional capacity 		
	shall be recycled; and		
	 Proper storage and site practices to minimise the potential for 		
	damage or contamination of construction materials.		
Waste	Recommendations for good site practices during construction	All work sites / during the construction	\diamond
	activities include:-	period	
	• Nomination of an approved person, such as a site manager, to be	-	
	responsible for good site practices, arrangements for collection and		
	effective disposal to an appropriate facility, of all wastes generated at		
	the site		
	• Training of site personnel in proper waste management and chemical		
	waste handling procedures		
	• Develop and provide toolbox talk for on-site sorting of C&D		
	materials to enhance worker's awareness in handling, sorting, reuse		
	and recycling of C&D materials.Provision of sufficient waste disposal points and regular collection of		
	 Provision of sufficient waste disposal points and regular collection of waste 		
	 Regular cleaning and maintenance programme for drainage systems, 		
	sumps and oil interceptors		
Naste	Bentonite slurries used in diaphragm wall construction should	All work sites / during the construction	
	be reconditioned and reused wherever practicable. The	period	
	disposal of residual used bentonite slurry should follow the	•	
	good practice guidelines stated in ProPECC PN 1/94 "Construction Site		
	Drainage".		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.	All work sites / during the construction period	\checkmark
Waste	General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.	All work sites / during the construction period	\checkmark
Waste	The recyclable component of the municipal waste generated by the workforce, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	All work sites / during the construction period	\checkmark
Waste	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	All work sites / during the construction period	

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Waste	Prior to excavation of the marine deposit layer, the deposit should be tested in accordance with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary Sediment Quality Report. The marine deposit should be disposed of at the disposal site designated by the Marine Fill Committee (MFC) or Director of Environmental Protection (DEP) depending on the test results.	All work sites / during the construction period	\checkmark
Construction Phase			
Landscape & Visual	 Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. Existing trees to be retained on site should be carefully protected during construction. Trees unavoidably affected by the works should be transplanted where practical. Compensatory tree planting should be provided to compensate for felled trees. Control of night-time lighting. Erection of decorative screen hoarding compatible with the surrounding setting. 	All the works areas, PTWs and SCISTW/ during the construction period	N
Operational Phase	•		
Landscape & Visual	 Aesthetic design of the façade of PTW and associated structures to harmonize with the surrounding settings. Shrub and Climbing Plants to soften proposed structures / Roof Greening. Buffer Tree and Shrub Planting to screen proposed associated structures. Reinstated of disturbed area 	All the works areas, PTWs and SCISTW/ during the construction period	NA. Measures not required until commencement of operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Cultural Heritage	The construction vibration control limit (ppv of 25mm/s) shall be strictly followed.	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.
	Monitoring of vibration limits shall be conducted and reported as a requirement of EM&A programme	Identified historical buildings/structures as mentioned in Tables 15.8 and 15.9. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.

Remark:

 $\sqrt{}$ Compliance of Mitigation Measures

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Construction Phase			
Air Quality	 The Air Pollution Control (Construction Dust) Regulation shall be implemented and good site practices shall be incorporated in the contract clauses to minimize construction dust impact. Control measures relevant to this Project are listed below: skip hoist for material transport should be totally enclosed by impervious sheeting; every vehicle should be washed to remove any dusty materials from its body and wheels before leaving a construction site; the area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; where a site boundary adjoins a road, streets or other accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit; every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides; regular watering, with complete coverage, to reduce dust emission from exposed site surfaces and unpaved roads, particularly during dry weather; site enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering should be applied to aggregate fines; open stock piles should be avoided or covered and prevent placing dusty material storage piles near ASRs if possible; tarpaulin covering of all dusty vehicle loads transported to, from and between site locations; and instigation of an environmental monitoring auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise. 		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Air Quality	The following watering measures for specific site would be required to	All work sites / during construction	
	control the fugitive dust impacts:		
	 the barging points should be continuous watering throughout the 		
	whole unloading process; and		
	 watering 8 times per day within worksites at the SCS works area at 		
	SCISTW and the Disinfection Facilities of SCISTW.		
Operational Phase			
Air Quality	Good housekeeping for SCISTW and PTWs listed below	All work sites / during construction	NA. Measures not required
	should be followed to ameliorate any odour impact from the		until commencement of
	plant and these standard practices should be included in the		operational phase
	plant operator manual.		
	• Screens should be cleaned regularly to remove any accumulated organic debris		
	• Grit and screening transfer systems should be flushed regularly with		
	water to remove organic debris and grit		
	• Grit and screened materials should be transferred to closed		
	containers to minimize odour escape		
	• Scum and grease collection wells and troughs should be emptied and		
	flushed regularly to prevent putrefaction of accumulated organics		
	• Skim and remove floating solids and grease from primary clarifiers		
	regularly		
	• Frequent sludge withdrawal from tanks is necessary to prevent the		
	production of gases		
	• Sludge cake should be transferred to closed containers		
	• Sludge containers should be flushed with water regularly		
Air Quality	To avoid excessive extraction of the foul air from the drop	SCISTW /during operational phase	NA. Measures not required
	shafts of the sedimentation tanks and also from the effluent		until commencement of
	flume structure of SCISTW to deodorization system, the		operational phase
	extraction vent(s) of the deodorization system should be		1 1
	located away from the top openings of the drop shafts.		
Air Quality	Commissioning tests for all deodorization system should be	All PTW and SCISTW/ during	NA. Measures not required
	included in the Design and Construction Contract Document.	operational phase	until commencement of operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Noise	Use of quiet PME, movable barriers and acoustic mats	All work sites / during construction	
Noise	 Good Site Practice: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction program; silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction program; mobile plant, if any, should be sited as far from NSRs as possible; machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities; Environmental audit shall be carried out to ensure that appropriate noise control measures would be properly implemented. 		√
Construction Phase			
Water Quality	Construction Site Runoff and General Construction Activities The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	All work sites / during construction	\checkmark

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Effluent Discharge	All work sites / during construction	\checkmark
	There is a need to apply to EPD for a discharge licence for		
	discharge of effluent from the construction site under the		
	WPCO. The discharge quality must meet the requirements		
	specified in the discharge licence. If monitoring of the treated		
	effluent quality from the works areas is required during the		
	construction phase of the Project, the monitoring should be		
	carried out in accordance with the WPCO license which is		
	under the ambit of regional office (RO) of EPD. Minimum		
	distances of 100 m should be maintained between the		
	discharge points of construction site effluent and the existing		
	saltwater intakes.		
Water Quality	Accidental Spillage of Chemicals	All work sites / during construction	\diamond
	Contractor must register as a chemical waste producer if		
	chemical wastes would be produced from the construction		
	activities. The Waste Disposal Ordinance (Cap 354) and its		
	subsidiary regulations in particular the Waste Disposal		
	(Chemical Waste) (General) Regulation should be observed		
	and complied with for control of chemical wastes.		
Water Quality	Any service shop and maintenance facilities should be located	All work sites / during construction	<>
	on hard standings within a bunded area, and sumps and oil		
	interceptors should be provided. Maintenance of vehicles and		
	equipment involving activities with potential for leakage and		
	spillage should only be undertaken within the areas		
	appropriately equipped to control these discharges.		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status					
Water Quality	Disposal of chemical wastes should be carried out in compliance with the	All work sites / during construction						
	Waste Disposal Ordinance. The Code of Practice on the Packaging,	C C						
	Labelling and Storage of Chemical Wastes published under the Waste							
	Disposal Ordinance details the requirements to deal with chemical							
	wastes.							
	General requirements are given as follows:							
	• Suitable containers should be used to hold the chemical wastes to							
	avoid leakage or spillage during storage, handling and transport.							
	• Chemical waste containers should be suitably labelled, to notify and							
	warn the personnel who are handling the wastes, to avoid accidents.							
	Storage area should be selected at a safe location on site and adequate							
	space should be allocated to the storage area.							

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Construction Works in Close Proximity of Storm Drains or Seafront	All work sites / during construction	\checkmark
	To minimize the potential water quality impacts from the construction		
	works located at or near any watercourse, the practices outlined below		
	should be adopted where applicable.		
	• The use of less or smaller construction plants may be specified to		
	reduce the disturbance to the storm water courses or marine environment.		
	• Temporary storage of materials (e.g. equipment, filling materials,		
	chemicals and fuel) and temporary stockpile of construction materials		
	should be located well away from any water courses during carrying out of the construction works.		
	 Stockpiling of construction materials and dusty materials should be 		
	covered and located away from any water courses.		
	• Construction debris and spoil should be covered up and/or disposed		
	of as soon as possible to avoid being washed into the nearby water		
	receivers.		
	• Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where		
	practicable.		
	1		
	 Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert or sea 		
	nom suppling into the storm curven of sea		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	Temporary Sewage Bypass	SCISTW/ construction period	
	It is recommended that the temporary sewage bypass required for (i) the		
	modification to the existing pumping station at SCISTW and (ii) the		
	interconnection between the existing		
	main pumping station and the new pumping station on		
	Stonecutters Island, if needed, should be scheduled at the		
	same time as far as practicable in order to minimise the		
	temporary discharge duration. It is also recommended that all		
	the modification and interconnection to the existing facilities		
	(including the modification to the existing NWKPS) should be		
	programmed to avoid temporary sewage bypass in wet or		
	bathing season (March to October) to minimize the potential		
	impacts. Relevant government departments including EPD		
	and LCSD should be informed of the planned sewage bypass		
	prior to any discharge. During the sewage bypass period,		
	water quality monitoring should be carried out at the water		
	sensitive receivers to quantify the water quality impacts and to determine when the baseline water quality conditions are restored. Also,		
	a framework of the response procedures has been formulated to minimize the impact of temporary discharges. Details		
	are provided in the standalone EM&A		
	Manual.		
Operational Phase	Manual.		
Water Quality	Dual power supply, standby facilities for the main treatment	SCISTW and all the	NA. Measures not required
	units and standby equipment parts / accessories should be provided as	Stage 2 PTWs / Operation Stage	until commencement of
	far as possible at the SCISTW to minimize the		operational phase
	chance of emergency discharge.		
Water Quality	The response procedure and monitoring requirements for	SCISTW / Operation Stage	NA. Measures not required
	emergency discharge as stated in EM&A Manual should be		until commencement of
	followed.		operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Water Quality	In case of total power outage of the dechlorination plant, the uninterruptible power supply (UPS) system to be provided would switch the power supply of the sodium bisulphite dosing pump to a backup battery almost instantaneously, allowing continuous dosage of sodium bisulphite for at least half an hour so that sufficient time can be provided for shutting down the chlorination plant to avoid the possibility of discharge of chlorinated effluent.	SCISTW / Operation Stage	NA. Measures not required until commencement of operational phase
Water Quality	The model predicted that if Stage 2B is not implemented for HATS in 2021 as scheduled, the nutrient contents (both P and N) in the marine water would ultimately increase to exceed the baseline Stage 1 level when the HATS flow is reaching its design capacity of 2.45M m3/day. It is recommended that the future review study for Stage 2B should review the validity of the model predictions provided in this EIA and confirm the need of enhanced nutrient removal for HATS after 2021.	SCISTW / Operation Stage	NA. Measures not required until commencement of operational phase
Water Quality	It should be noted that the mixing zone for TIN predicted for Stage 2B was large with an area of about 30 km2 and the area of exceedance would encroach on the nearby water sensitive receivers (e.g. Ma Wan Fish Culture Zone). This is due to the elevated oxidized nitrogen assumed for the proposed nitrification process at Stage 2B as well as the increased HATS effluent flow assumed for Stage 2B. It is recommended that these water quality issues should be further investigated / assessed under the future EIA for Stage 2B. Further mitigation measures / alternative treatment designs should also be considered under the future EIA for Stage 2B to mitigate / minimize the potential TIN exceedances.	SCISTW / Operation Stage	NA. Measures not required until commencement of operational phase

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste	Reusable steel or concrete panel shutters, fencing and	All work sites / during the construction			
	hoarding and signboard should be used as a preferred	period			
	alternative to items made of wood, to minimise wastage of				
	wood. Attention should be paid to WBTC No. 19/2001 -				
	Metallic Site Hoardings and Signboards to reduce the amount				
	of timber used on construction sites. Metallic alternatives to				
	timber are readily available and should be used rather than				
	new timber. Precast concrete units should be adopted				
	wherever feasible to minimize the use of timber formwork.				
Waste	All waste materials should be segregated into categories	All work sites / during the construction	<>		
	covering:	period			
	 excavated materials suitable for reuse on-site; 				
	 excavated materials suitable for public filling facilities; 				
	 remaining C&D waste for landfill; 				
	chemical waste; and				
	general refuse for landfill.				
Waste	Recommendations to achieve waste reduction include:	All work sites / during the construction			
	 Sort C&D waste from demolition of existing facilities to recover 	period			
	recyclable portions such as metals;				
	 Segregation and storage of different types of waste in different 				
	containers, skips or stockpiles to enhance reuse or recycling of				
	materials and their proper disposal;				
	• Encourage collection of aluminium cans, PET bottles and paper by				
	providing separate labelled bins to enable these wastes to be				
	segregated from other general refuse generated by the work force;				
	• Any unused chemicals or those with remaining functional capacity				
	shall be recycled; and				
	• Proper storage and site practices to minimise the potential for				
	damage or contamination of construction materials.				

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste	 Recommendations for good site practices during construction activities include:- Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site Training of site personnel in proper waste management and chemical waste handling procedures Develop and provide toolbox talk for on-site sorting of C&D materials to enhance worker's awareness in handling, sorting, reuse and recycling of C&D materials. Provision of sufficient waste disposal points and regular collection of waste Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors 	All work sites / during the construction period	<>		
Waste	Bentonite slurries used in diaphragm wall construction should be reconditioned and reused wherever practicable. The disposal of residual used bentonite slurry should follow the good practice guidelines stated in ProPECC PN 1/94 "Construction Site Drainage".	All work sites / during the construction period	\checkmark		
Waste	Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.	All work sites / during the construction period	\checkmark		
Waste	General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.	All work sites / during the construction period	<>		
Waste	The recyclable component of the municipal waste generated by the workforce, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	All work sites / during the construction period	\checkmark		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	All work sites / during the construction period	<>		
Waste	Prior to excavation of the marine deposit layer, the deposit should be tested in accordance with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary Sediment Quality Report. The marine deposit should be disposed of at the disposal site designated by the Marine Fill Committee (MFC) or Director of Environmental Protection (DEP) depending on the test results.	All work sites / during the construction period	\checkmark		
Operation Phase					
Waste	The sludge tanks should be air-tighten. Rotating brushes or other alternative devises should be installed at the upper frame of the sludge tank washing facilities to provide better cleaning of the surface around the top loading opening of the sludge tanks. Prior to making such provision, the top covers of the sludge transfer tanks should be water cleaned manually after unloading.	SCISTW / Operation Stage	NA. Measures not required until commencement of operational phase		

Type of Impact	Environmental Protection Measures	Location/ Timing	Status		
Waste	Since the air tightness of tankers highly relies on the effectiveness of rubber seals at the loading openings and unloading doors, odour leakage from tankers are commonly resulted from the aging rubber seals. It is recommended to develop a preventive maintenance programme for rubber seals of loading openings and unloading doors of sludge transfer tanks to ensure the tightness of covers and doors. Rubber seals should be regularly replaced within its design life as specified by suppliers.	SCISTW / Operation Stage	NA. Measures not required until commencement of operational phase		
Construction Phase					
Landscape & Visual	 Topsoil, where identified, should be stripped and stored for re-use in the construction of the soft landscape works, where practical. Existing trees to be retained on site should be carefully protected during construction. Trees unavoidably affected by the works should be transplanted where practical. Compensatory tree planting should be provided to compensate for felled trees. Control of night-time lighting. Erection of decorative screen hoarding compatible with the surrounding setting. 	All the works areas, PTWs and SCISTW/ during the construction period	<>		
Operational Phase	•				
Landscape & Visual	 Aesthetic design of the façade of PTW and associated structures to harmonize with the surrounding settings. Shrub and Climbing Plants to soften proposed structures / Roof Greening. Buffer Tree and Shrub Planting to screen proposed associated structures. Reinstated of disturbed area 	All the works areas, PTWs and SCISTW/ during the construction period	NA. Measures not required until commencement of operational phase		
Construction Phase	•				

Type of Impact	Environmental Protection Measures	Location/ Timing	Status
Cultural Heritage	The construction vibration control limit (ppv of 25mm/s) shall be strictly followed.	Identified historical buildings/structures as mentioned in Tables 15.10 and 15.11. During blasting for tunnel, shafts, effluent conveyance system and disinfection facilities in the vicinity of the buildings/ structures	NA. Vibration monitoring has not been launched during the reporting period.

Remark:

- $\sqrt{}$ Compliance of Mitigation Measures
- <> Compliance of Mitigation but need improvement
- x Non-compliance of Mitigation Measures
- Δ Deficiency of Mitigation Measures but rectified by Gammon Construction Limited
- NA Not Applicable

Monitoring Equipment

Aonitoring Station ID	Monitoring Equipment	Model & Serial No.	Last Calibration Date	Next Calibration Date
		Rion NC-73 (S/N 10786708)	16 July 2011	16 July 2012
	Calibrator	Rion NC-73 (S/N 10997142)	11 July 2011	11 July 2012
NM1 – NM5 (a) –				
	Sound Level Meter	Rion NL-31 (S/N 00320533)	16 July 2011	16 July 2012
	Sound Level Meter	Rion NL-31 (S/N 00983400)	25 October 2010	25 October 2011

(a) The sound level meter (Rion NL-31 (S/N 00320533) or Rion NL-31 (S/N 00983400)) and the calibrator (Rion NC-73 (S/N 10786708) or Rion NC-73 (S/N 10997142)) is used in NM1, NM2, NM3, NM4 and NM5.

Remarks

Monitoring Station ID	Location
NM1	Rooftop of Chan's Creative School (formerly known as Madam Chan Wai Chow Memorial School)
NM2	Rooftop of Hyde Building
NM3	Rooftop of Goldfield Building
NM4	Rooftop of Block A, Kwan Yick Building Phase III
NM5	A Location near the FSD Diving Rescue and Diving Training Centre near the Site Boundary

Qstd slop intercept coefficie	z (b) =	2.00506 -0.02062 0.99998		Qa slope intercept coefficie	c (b) =	1.25553 -0.01297 0.99998
y axis =	SQRT [H20 (1	Pa/760) (298/1	[[a)]	y axis =	SQRT [H20 (7	[a/Pa)]

CALCULATIONS

Vstd = Diff. Vol[(Pa-Diff. Hg)/760](298/Ta) Qstd = Vstd/Time

Va = Diff Vol [(Pa-Diff Hg)/Pa] Qa = Va/Time

For subsequent flow rate calculations:

Qstd = $1/m\{ [SQRT(H2O(Pa/760)(298/Ta))] - b \}$ Qa = $1/m\{ [SQRT H2O(Ta/Pa)] - b \}$

Certificate No. : C113973

Certificate of Calibration

This is to certify that the equipment

Description : Sound Level Meter Manufacturer : Rion Model No. : NL-31 Serial No. : 00320533

has been calibrated for the specific items and ranges. The results are shown in the Calibration Report No. C113973.

The equipment is supplied by

Co. Name : Envirotech Services Co.

Address : Shop 6, G/F., Casio Mansion, 209 Shaukeiwan Road, Hong Kong

Date of Issue: 18 July 2011

Certified by: Un Un Chan HC Chan

The test equipment used for calibration are traceable to the National Standards as specified in this report. This report shall not be reproduced except in full and with prior written approval from this laboratory.

1	0.991	1 kHz ± 2 %	± 1	

Remark : - The uncertainties are for a confidence probability of not less than 95 %.

Note :

The values given in this Calibration Report only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to the National Standards as specified in this report. This report shall not be reproduced except in full and with prior written approval from this laboratory.

Calibration and Testing Laboratory of Sun Creation Engineering Limited

Annex I

Event / Action Plans for Air Quality, Noise and Landscape and Visual Monitoring

Table I1	Event Action Plan for Air Quality Monitoring
----------	--

Action Level/Limit Level	Environmental Team Leader (ETL)	Independent Environmental Checker (IEC)	Engineer's Representative (ER)	Contractor
Action Level				
Exceedance for one sample	 Identify source, investigate the causes of exceedance and propose remedial measures; Inform IEC and ER; Repeat measurement to confirm finding; and, Increase monitoring frequency to daily. 	 Check monitoring data submitted by ET; and, Check Contractor's working method. 	Notify Contractor	 Rectify any unacceptable practice; and, Amend working methods if appropriate.
Exceedance for two or more consecutive samples	 Identify source; Inform IEC and ER; Advise the ER on the effectiveness of the proposed remedial measures; Repeat measurements to confirm findings; Increase monitoring frequency to daily; and, Discuss with IEC and Contractor on remedial actions required; 	 Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ET on the effectiveness of the proposed remedial measures; and, Supervise Implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contractor, and, Ensure remedial measures properly implemented. 	 Submit proposals for remedial to ER within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate.

Action Level/Limit Level	Environmental Team Leader (ETL)	Independent Environmental Checker (IEC)	Engineer's Representative (ER)	Contractor
Limit Level Exceedance for one sample	 Identify source, investigate the causes of exceedance and propose remedial measures; Inform ER, Contractor and EPD; Repeat measurement to confirm finding; Increase monitoring frequency to daily; and, Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results. 	 Check monitoring data submitted by ET; Check Contractor's working method; Discuss with ET and Contractor on possible remedial measures; Advise the ER on the effectiveness of the proposed remedial measures; and, Supervise implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contractor; and, Ensure remedial measures properly implemented. 	 Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; and, Amend proposal if appropriate.
Exceedance for two or more consecutive samples	 Notify IEC, ER, Contractor and EPD; Identify source; Repeat measurement to confirm findings; Increase monitoring frequency to daily; Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; Arrange meeting with IEC and ER to discuss the remedial actions to be taken; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and, If exceedance stops, cease additional monitoring. 	actions whenever necessary to assure their effectiveness and advise the ER accordingly; and,	 Confirm receipt of notification of failure in writing; Notify Contractor; In consultation with the IEC, agree with the Contractor on the remedial measures to be implemented; Ensure remedial measures properly implemented; and, If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated. 	 Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control; and, Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Action Level/Limit Level	Environmental Team Leader (ETL)	Independent Environmental Checker (IEC)	Engineer's Representative (ER)	Contractor		
Action Level being exceeded	 Notify ER, IEC and Contractor; Carry out investigation; Report the results of investigation to the IEC, ER and Contractor; Discuss with the IEC and Contractor on remedial measures required; and, Increase monitoring frequency to check mitigation effectiveness. 	 Review the investigation results submitted by the ET; Review the proposed remedial measures by the Contractor and advise the ER accordingly; and, Advise the ER on the effectiveness of the proposed remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contractor; In consultation with the IEC, agree with the Contractor on the remedial measures to be implemented; and, Supervise the implementation of remedial measures. 	 Submit noise mitigation proposals to IEC and ER; and, Implement noise mitigation proposals. 		

Table I2Event Action Plan for Noise Monitoring

Action Level/Limit Level	Environmental Team Leader (ETL)	Independent Environmental Checker (IEC)	Engineer's Representative (ER)	Contractor
Limit Level being exceeded	 Inform IEC, ER, Contractor and EPD; Repeat measurements to confirm findings; Increase monitoring frequency; Identify source and investigate the cause of exceedance; Carry out analysis of Contractor's working procedures; Discuss with the IEC, Contractor and ER on remedial measures required; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and, If exceedance stops, cease additional monitoring. 	 Discuss amongst ER, ET, and Contractor on the potential remedial actions; and, Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly. 	 Confirm receipt of notification of failure in writing; Notify Contractor; In consultation with the IEC, agree with the Contractor on the remedial measures to be implemented; Supervise the implementation of remedial measures; and, If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated. 	 Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC and ER within 3 working days of notification; Implement the agreed proposals; Submit further proposal if problem still not under control; and, Stop the relevant portion of works as instructed by the ER until the exceedance is abated.

Action Level	Environmental Team Leader (ETL)	Independent Environmental Checker (IEC)	Engineer's Representative (ER)	Contractor		
Non-conformity on one occasionIdentify source Inform the IEC and the ER Discuss remedial actions with 		Check report Check the Contractor's working method Discuss with the ER and the Contractor on possible remedial measures Advise the ER on effectiveness of proposed remedial measures	Notify the Contractor Ensure remedial measures are properly implemented	Amend working methods Rectify damage and undertake remedial measures or any necessary replacement		
Repeated Non- conformity	Identify source Inform the IEC and the ER Increase monitoring (site audit) frequency Discuss remedial actions with the IEC, the ER and the Contractor Monitor remedial actions until rectification has been completed If exceedance stops, cease additional monitoring (site audit)	Check report Check the Contractor's working method Discuss with the ER and the Contractor on possible remedial measures Advise the ER on effectiveness of proposed remedial measures Supervise implementation of remedial measures	Notify the Contractor Ensure remedial measures are properly implemented	Amend working methods Rectify damage and undertake remedial measures or any necessary replacement

Total	6.673	0	0	0	5.818	0.855	100.2	0.036	0	0	0.403			

Notes: (1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

(2) Metal and paper/cardboard packaging will be collected by recycler for recycling.

(3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material and the wastes are collected by recycler for recycling.

(4) Broken concrete for recycling into aggregates

(5) If necessary, use the conversion factor: 1 full load of dumping truck being equivalent to 6.5 m³ by volume.

(6) For chemical waste, the actual quantities of empty paint cans will be in kilogram (kg) and spent lubrication oil will be in litre (L).

Harbour Area Treatment Scheme Stage 2A – Construction of Sewage Conveyance System from North Point to Stonecutters Island Contract No. : DC/2007/23 Monthly Summary Waste Flow Table for 2010 (year)
