Dredging, Management and Capping of Contaminated Sediment Disposal Facility at Sha Chau and to the South of The Brothers

Environmental Certification Sheet EP-312/2008/A & EP-427/2011/A

Reference Document/Plan

Document/Plan-to be Certified/ Verified: Monthly EM&A Report for Contaminated Mud Pits to the

East of Sha Chau and the South of The Brothers - July 2017

Date of Report: 11 August 2017

Date prepared by ET: 11 August 2017

Date received by IA: 11 August 2017

Reference EP Condition

Environmental Permit Condition:

Condition 3.4 of EP-312/2008/A and Condition 4.4 of EP-427/2011/A:

4 hard copies and 1 electronic copy of monthly EM&A Report shall be submitted to the Director within 2 weeks after the end of the reporting month. The EM&A Reports shall include a summary of all noncompliance (exceedances) of the environmental quality performance limits (Action and Limit Levels). The submissions shall be certified by the ET Leader and verified by the Independent Auditor. Additional copies of the submission shall be provided to the Director upon request by the Director.

ET Certification

I hereby certify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A and EP-427/2011/A

Jovy Tam,

Environmental Team Leader:

Date:

11/8/2017

IA Verification

I hereby verify that the above referenced document/plan complies with the above referenced condition of EP-312/2008/A and EP-427/2011/A

Dr Wang Wen Xiong, Independent Auditor: Date:

11/8/2017

MONTHLY EM&A REPORT FOR JULY 2017

1.1 BACKGROUND

- 1.1.1 The Civil Engineering and Development Department (CEDD) is managing a number of marine disposal facilities in Hong Kong waters, including the Contaminated Mud Pits (CMPs) to the South of The Brothers (SB) and to the East of Sha Chau (ESC) for the disposal of contaminated sediment, and opensea disposal grounds located to the South of Cheung Chau (SCC), East of Tung Lung Chau (ETLC) and East of Ninepins (ENP) for the disposal of uncontaminated sediment. Two Environmental Permits (EPs), EP-312/2008/A and EP-427/2011/A, were issued by the Environmental Protection Department (EPD) to the CEDD, the Permit Holder, on 28 November 2008 and 23 December 2011 for the Dredging, Management and Capping of Contaminated Sediment Disposal Facilities at ESC CMP V and SB CMPs, respectively.
- 1.1.2 Under the requirements of the two EPs for ESC CMP V and SB CMPs, EM&A programmes which encompass water and sediment chemistry, fisheries assessment, tissue and whole body analysis, sediment toxicity and benthic recolonisation studies as set out in the EM&A Manuals are required to be implemented. EM&A programmes have been continuously carried out during the operation of the CMPs at ESC and SB. A review of the collection and analysis of such environmental data from the monitoring programme demonstrated that there had not been any adverse environmental impacts resulting from disposal activities (1)(2)(3)(4)(5). The current programme will assess the impacts resulting from dredging, disposal and capping operations of CMP V as well as capping operations of SB CMPs.

ERM (2013) Environmental Monitoring and Audit for Contaminated Mud Pit V at East of Sha Chau. Final Report. For CEDD.

⁽²⁾ ERM (2014) Environmental Monitoring and Audit for Contaminated Mud Pit V at East of Sha Chau (2012 - 2017). Final First Annual Review Report. For CEDD.

⁽³⁾ ERM (2015) Environmental Monitoring and Audit for Contaminated Mud Pit V at East of Sha Chau (2012 - 2017). Final Second Annual Review Report. For CEDD.

⁽⁴⁾ ERM (2016) Environmental Monitoring and Audit for Contaminated Mud Pit V at East of Sha Chau (2012 - 2017). Final Third Annual Review Report. For CEDD.

⁽⁵⁾ ERM (2017) Environmental Monitoring and Audit for Contaminated Mud Pit V at East of Sha Chau (2012 - 2017). Final Fourth Annual Review Report. For CEDD.

- 1.1.3 The present EM&A programme under *Agreement No. CE 63/2016 (EP)* covers the dredging, disposal and capping operations of the ESC CMP V as well as the capping operations of the SB CMPs (see *Annex A* for the EM&A programme). Detailed works schedule for ESC CMP V and SB CMPs is shown in *Figure 1.1*. In July 2017, the following works were being undertaken:
 - Dredging operation at ESC CMP Vb;
 - Disposal of contaminated mud at ESC CMP Vd; and
 - Capping operation at SB CMP 2.

1.2 REPORTING PERIOD

1.2.1 This *Monthly EM&A Report for July 2017* covers the EM&A activities for the reporting month of July 2017.

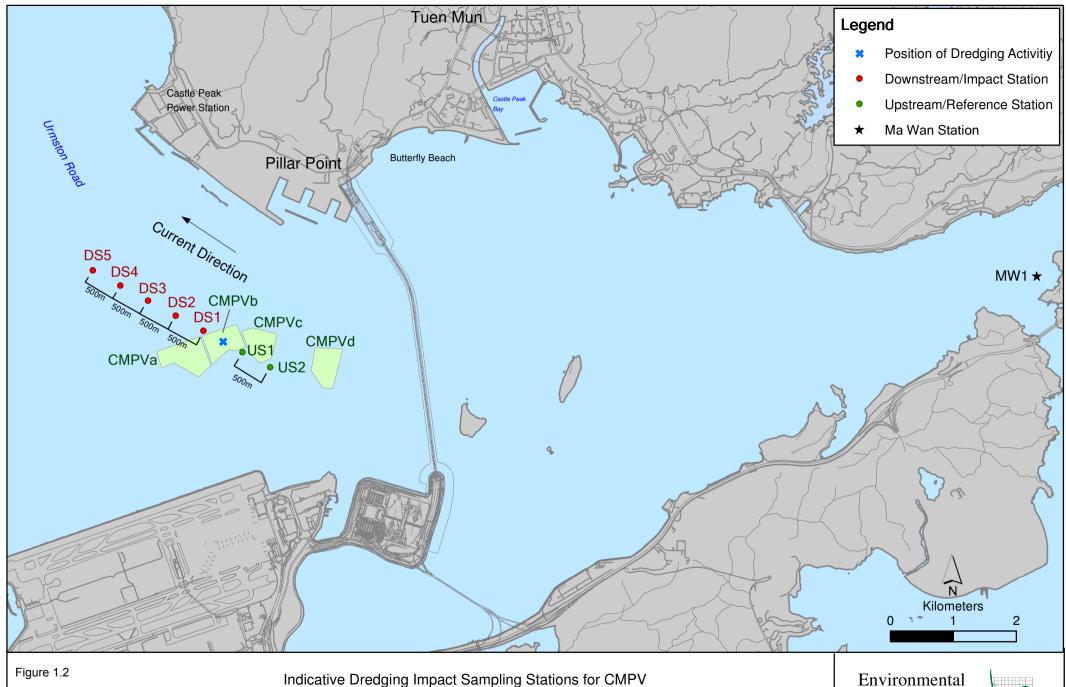

1.3 DETAILS OF SAMPLING AND LABORATORY TESTING ACTIVITIES

- 1.3.1 The following monitoring activities were undertaken for ESC CMP V in July 2017:
 - *Demersal Trawling for ESC CMPs* was undertaken on 5 and 6 July 2017;
 - *Pit Specific Sediment Chemistry of ESC CMP Vd* was undertaken on 12 July 2017;
 - Routine Water Quality Monitoring of ESC CMP V was undertaken on 13 July 2017;
 - Water Column Profiling of ESC CMP Vd was undertaken on 14 July 2017;
 - Sediment Chemistry after a Major Storm of ESC CMPs was undertaken on 25 July 2017; and
 - Water Quality Monitoring during Dredging of ESC CMP Vb was undertaken on 31 July 2017.

- 1.3.2 No monitoring activities were scheduled to be undertaken for SB CMPs in July 2017.
- 1.4 DETAILS OF OUTSTANDING SAMPLING AND/OR ANALYSIS
- 1.4.1 No outstanding sampling remained for July 2017.
- 1.4.2 The following laboratory analyses are in progress during the preparation of this monthly report and will be presented in the next monthly report once the data are available:
 - Laboratory analyses of sediment samples collected for *Sediment Chemistry* after a Major Storm of ESC CMPs in July 2017;
- 1.4.3 The following analyses are in progress and will be presented in the corresponding quarterly report:
 - Species identification of the biota samples collected from *Demersal Trawling for ESC CMPs* in July 2017.
- 1.5 Brief Discussion of the Monitoring Results for ESC CMPs
- 1.5.1 Brief discussion of the monitoring results of the following activities for ESC CMPs is presented in this *Monthly EM&A Report for July 2017*:
 - Water Quality Monitoring During Dredging of ESC CMP Vb in July 2017;
 - Water Column Profiling of ESC CMP Vd in July 2017;
 - Routine Water Quality Monitoring of ESC CMP V in July 2017;
 - Pit Specific Sediment Chemistry of ESC CMP Vd in June and July 2017;
 - Cumulative Impact Sediment Chemistry of ESC CMPs in June 2017; and
 - *Sediment Chemistry after a Major Storm of ESC CMPs* in June 2017.

- 1.5.2 Impact Water Quality Monitoring during Dredging Operations of ESC CMP Vb July 2017
- 1.5.3 Dredging activities for ESC CMP Vb commenced on 29 July 2017 and water quality monitoring was conducted three times per week during the reporting period starting from 31 July 2017. During each survey day, monitoring was conducted during both mid-ebb and mid-flood tides at two Reference (Upstream) stations and five Impact (Downstream) stations around the dredging operations at ESC CMP Vb. Monitoring was also conducted at one Sensitive Receiver station situated in Ma Wan. A total of eight (8) stations were monitored and locations of the sampling stations are shown in *Figure 1.2*. Levels of Dissolved Oxygen (DO), Turbidity and Suspended Solid (SS) were assessed for compliance with the Action and Limit Levels (see *Table B1* of *Annex B* for details) set in the *Baseline Monitoring Report* (1).
- 1.5.4 Monitoring results are presented in *Table B2* of *Annex B*. Daily dredging volume in July 2017 is reported in *Annex C*. Levels of DO, Turbidity and SS complied with the Action and Limit Levels at all stations.
- 1.5.5 The results indicated that the dredging operations at ESC CMP Vb did not appear to cause any unacceptable deterioration in water quality during this reporting period. Therefore, no further action, except for those recommended in the Environmental Permit (*EP-312/2008/A*), are considered necessary for the dredging operations.

ERM - Hong Kong, Ltd (2009) Baseline Monitoring Report. For the Civil Engineering & Development Department, Hong Kong SAR Government.

File: T:\GIS\CONTRACT\0400720\Mxd\0400720_modelling_stations_2017.mxd

Date: 19/6/2017

Note: The locations of sampling stations will be determined on site based on current direction and position of dredging activities.

1.5.6 Water Column Profiling of ESC CMP Vd - July 2017

1.5.7 Water Column Profiling was undertaken at a total of two sampling stations (Upstream and Downstream stations) on 14 July 2017. The monitoring results have been assessed for compliance with the Water Quality Objectives (WQOs) set by Environmental Protection Department (EPD). This consists of a review of the EPD routine water quality monitoring data for the wet season period (April to October) of 2006 - 2015 from stations in the Northwestern Water Control Zone (WCZ), where the ESC CMPs are located (1). For Salinity, the averaged value obtained from the Reference (Upstream) station was used for the basis as the WQO. Levels of Dissolved Oxygen (DO) and Turbidity were also assessed for compliance with the Action and Limit Levels (see Table B1 of Annex B for details).

In-situ Measurements

1.5.8 Analyses of results for July 2017 indicated that levels of DO and pH complied with the WQOs at both Downstream and Upstream stations (*Table B3* of *Annex B*). In addition, levels of DO and Turbidity at all stations complied with the Action and Limit Levels (*Tables B1* and *B3* of *Annex B*). Levels of Salinity at Downstream station were higher than the WQO. The higher salinity recorded at Downstream station is likely to be caused by its larger separation distance from the Pearl River mouth, which is a key source of freshwater inputs in the area, when compared to the Upstream station.

Laboratory Measurements for Suspended Solids (SS)

- 1.5.9 Analyses of results for July 2017 indicated that the SS levels complied with the WQO and the Action and Limit Levels at both Upstream and Downstream stations (*Tables B1* and *B3* of *Annex B*).
- 1.5.10 Overall, the monitoring results indicated that the mud disposal operation at ESC CMP Vd did not appear to cause any deterioration in water quality during this reporting period.

1.5.11 Routine Water Quality Monitoring of ESC CMP V – July 2017

1.5.12 Routine Water Quality Monitoring of ESC CMP V was undertaken on 13 July 2017. The monitoring results have been assessed for compliance with the WQOs (see Section 1.5.3 for details). The monitoring results are shown in Tables B4 and B5 of Annex B and Figures 1 - 10 of Annex D. A total of sixteen (16) monitoring stations were sampled in July 2017 as shown in Figure 1.3.

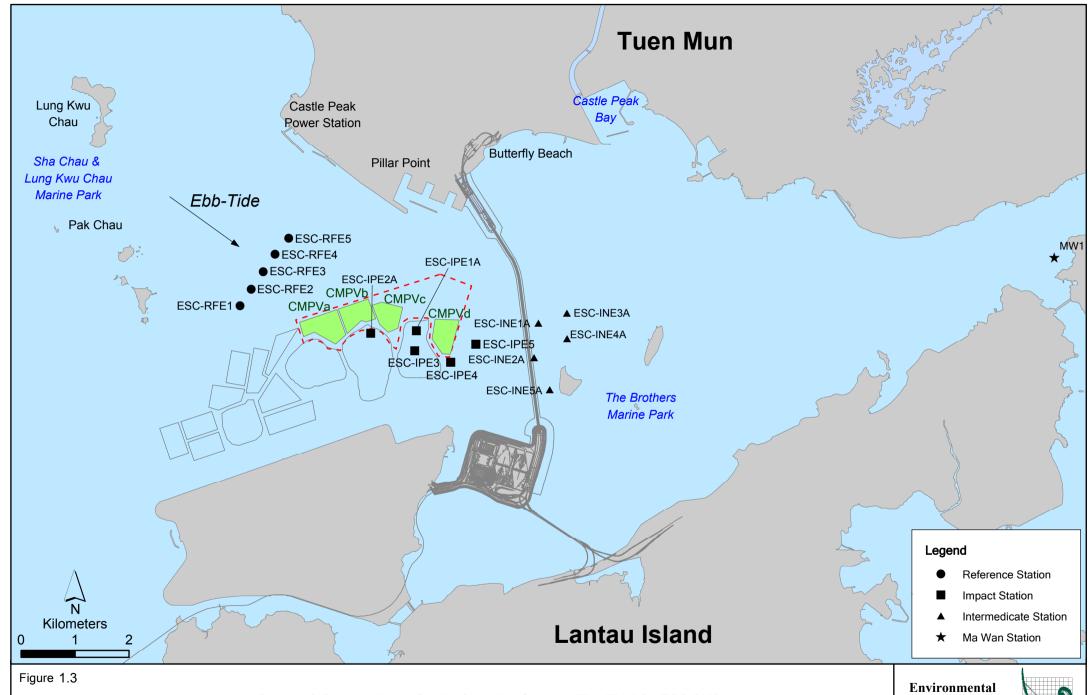

In-situ Measurements

- 1.5.13 Graphical presentation of the monitoring results (Temperature, DO, pH, Salinity and Turbidity) is shown in *Figures 1 6* of *Annex D*. Analyses of results for July 2017 indicated that the levels of pH, Salinity and DO complied with the WQOs at all stations (Impact, Intermediate, Reference and Ma Wan stations) in July 2017 (*Table B4* of *Annex B*; *Figures 1*, 3 and 5 of *Annex D*).
- 1.5.1 The levels of DO and Turbidity complied with the Action and Limit Levels at all stations (*Table B4* of *Annex B*; *Figures 3* and 6 of *Annex D*).
- 1.5.2 Overall, *in-situ* measurement results of the *Routine Water Quality Monitoring* indicated that the disposal operation at ESC CMP Vd did not appear to cause any unacceptable impacts in water quality in July 2017.

Laboratory Measurements

- 1.5.3 Laboratory analysis of July 2017 results indicated that concentrations of Cadmium, Silver and Mercury were below their limit of reporting at all stations. Arsenic, Chromium, Nickel, Lead, Copper and Zinc were detected in July 2017 samples and the concentrations of these metals and metalloids were similar amongst stations (*Table B5* of *Annex B*; *Figure 7* of *Annex D*).
- 1.5.4 For nutrients, concentrations of Total Inorganic Nitrogen (TIN) at all stations in July 2017 were higher than the WQO (0.5 mg/L) (*Table B5* of *Annex B*; *Figure 8* of *Annex D*). It should be noted that due to the effect of Pearl River, the North Western WCZ has historically experienced higher levels of TIN (1). Therefore, the exceedances of TIN WQO at these stations are unlikely to be caused by the disposal operation at ESC CMP Vd. Concentrations of Ammonia Nitrogen (NH₃-N) were relatively similar amongst all stations in July 2017 (*Table B5* of *Annex B*; *Figure 8* of *Annex D*). Levels of 5-day Biochemical Oxygen Demand (BOD₅) were higher at Ma Wan station in July 2017 (*Table B5* of *Annex B*; *Figure 9* of *Annex D*).
- 1.5.5 Analyses of results for July 2017 indicated that the SS levels at Impact station were higher than the WQO (11.0 mg/L for wet season), however the concentrations of SS were below the Action and Limit Levels at all stations (*Tables B1 and B4* of *Annex B*; *Figure 10* of *Annex D*).

Routine & Capping Water Quality Sampling Stations (Ebb-Tide) for ESC CMPs

File: T:\GIS\CONTRACT\0175086\Mxd\updated_20170419\0175086_R_C_WQMS_ebb.mxd

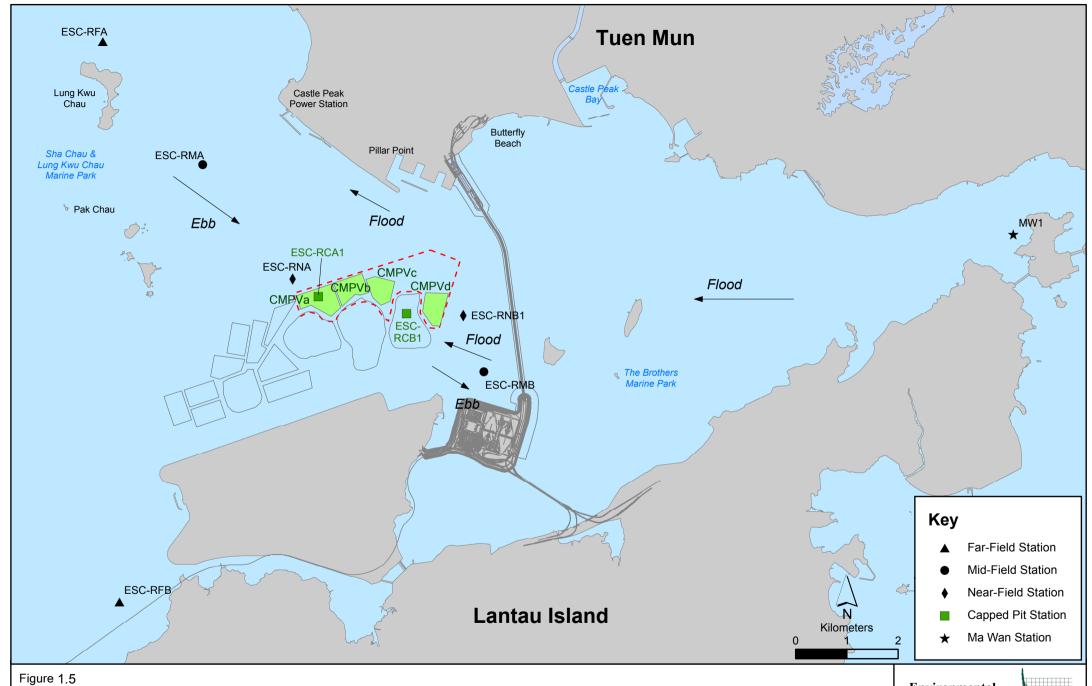

1.5.6 Overall, results of the *Routine Water Quality Monitoring* indicated that the disposal operation at ESC CMP Vd did not appear to cause any unacceptable deterioration in water quality in July 2017. Detailed statistical analysis will be presented in the Quarterly Report to investigate any spatial and temporal trends of potential concern.

- 1.5.7 Pit Specific Sediment Chemistry of ESC CMP Vd June and July 2017
- 1.5.8 Monitoring locations for *Pit Specific Sediment Chemistry for ESC CMP Vd* are shown in *Figure 1.4*. A total of six (6) monitoring stations were sampled in June and July 2017.
- 1.5.9 The concentrations of all inorganic contaminants were lower than the Lower Chemical Exceedance Level (LCEL) at all stations in June and July 2017, except Silver and Zinc in July 2017 (*Figures 11, 12, 15* and *16* of *Annex D*). In July 2017, concentrations of Silver, Copper and Zinc exceeded the LCEL at Active Pit station ESC-NPAA (*Figure 15* of *Annex D*).
- 1.5.10 For organic contaminants, the concentrations of Total Organic Carbon (TOC) were similar amongst the stations in June and July 2017 (*Figures 13* and 17 of *Annex D*). The concentrations of Tributyltin (TBT) were higher at Active Pit stations ESC-NPAA and ESC-NPAB in June and July 2017 (*Figures 14* and 18 of *Annex D*). Low and High Molecular Weight Polycyclic Aromatic Hydrocarbons (PAHs), Total Polychlorinated Biphenyls (PCBs), Total dichloro-diphenyl-trichloroethane (DDT) and 4,4'-dichlorodiphenyldichloroethylene (DDE) concentrations were below the limit of reporting at all stations in June and July 2017.
- 1.5.11 Overall, there is no evidence indicating any unacceptable environmental impacts to sediment quality as a result of the contaminated mud disposal operations at ESC CMP Vd in June and July 2017. Statistical analysis will be undertaken and presented in the corresponding quarterly report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.
- 1.5.12 Cumulative Impact Sediment Chemistry of ESC CMPs June 2017
- 1.5.13 Monitoring locations for *Cumulative Impact Sediment Chemistry for ESC CMPs* are shown in *Figure 1.5*. A total of nine (9) monitoring stations were sampled in June 2017.
- 1.5.14 Analyses of results for the *Cumulative Impact Sediment Chemistry Monitoring* indicated that the concentrations of all inorganic contaminants were below the LCEL in June 2017 (*Figures 19* and 20 of *Annex D*).
- 1.5.15 For organic contaminants, concentrations of TOC and TBT were recorded to be higher at Ma Wan station (*Figures 21 and 22* of *Annex D*). Low and High Molecular Weight PAHs, PCBs, DDT and DDE concentrations were recorded below the limit of reporting at all stations.
- 1.5.16 Overall, there is no evidence indicating any unacceptable environmental impacts to sediment quality as a result of the contaminated mud disposal operations at ESC CMP Vd in June 2017. Statistical analysis will be undertaken and presented in the corresponding quarterly report to investigate whether there are any unacceptable impacts in the area caused by the contaminated mud disposal.

Pit Specific Sediment Quality Monitoring Stations for CMPV

Cumulative Impacts Sediment Quality Monitoring Stations for ESC CMPs

Environmental Resources Management

 $File: T:\GIS\CONTRACT\0175086\Mxd\updated_20170419\0175086_SQMS_cum_impact.mxd\\ Date: 19/4/2017$

1.5.17 Sediment Chemistry after a Major Storm of ESC CMPs – June 2017

1.5.18 Sampling for Sediment Chemistry after a Major Storm Event was conducted at nine (9) monitoring stations (*Figure 1.5*) on 19 June 2017 after the visit of tropical cyclone Merbok, which led to the issue of Gale or Storm Wind Signal No.8 on 12 June 2017. The track of Merbok is shown in *Figure 1.6*.

Figure 1.6 Track of Tropical Cyclone Merbok from 11 to 13 June 2017 (Source: Hong Kong Observatory)

- 1.5.19 Analyses of results for the *Sediment Chemistry after a Major Storm* indicated that the concentrations of all inorganic contaminants were below the LCEL (*Figures* 23 and 24 of *Annex D*).
- 1.5.20 Overall, there appeared to be no evidence showing the failure of CMPs in retaining disposed mud or causing contamination of sediments after the major storm event in June 2017.

1.6 ACTIVITIES SCHEDULED FOR THE NEXT MONTH

- 1.6.1 The following monitoring activities will be conducted in the next monthly period of August 2017 for ESC CMP V (see *Annex A* for the sampling schedule):
 - Water Quality Monitoring During Dredging of ESC CMP Vb;
 - Water Column Profiling of ESC CMP Vd;
 - Routine Water Quality Monitoring of ESC CMP Vd;
 - Pit Specific Sediment Chemistry of ESC CMP Vd;

- Cumulative Impact Sediment Chemistry of ESC CMPs;
- Sediment Toxicity Tests of ESC CMPs; and
- Demersal Trawling of ESC CMPs.
- 1.6.2 The following monitoring activities will be conducted in the next monthly period of August 2017 for SB CMPs (see *Annex A* for the sampling schedule):
 - Water Quality Monitoring During Capping of SB CMPs; and
 - Benthic Recolonisation Studies of SB CMPs.
- 1.7 STUDY PROGRAMME
- 1.7.1 A summary of the Study programme is presented in *Annex E*.

Notes:
The number shown in each cell represents the numbers of replicates per monitoring station Capping works are planned to be conducted between May and December 2017.

Annex B

Water Quality Monitoring Results

Table B1 Action and Limit Levels of Water Quality for Dredging, Disposal and Capping Activities at ESC CMP V

Parameter	Action Level	Limit Level
Dissolved Oxygen (DO) (1)	Surface and Mid-depth (2)	Surface and Mid-depth (2)
	5%-ile of baseline data for surface and	1%-ile of baseline data for surface and
	middle layer = 3.76 mg L ⁻¹	middle layer = 3.11 mg L^{-1} (3)
	and	and
	Significantly less than the reference	Significantly less than the reference
	stations mean DO (at the same tide of	stations mean DO (at the same tide of
	the same day)	the same day)
	Bottom	Bottom
	5%-ile of baseline data for bottom	The average of the impact station
	layers = 2.96 mg L -1	readings are <2 mg/L-1
	and	and
	Significantly less than the reference	Significantly less than the reference
	stations mean DO (at the same tide of the same day)	stations mean DO (at the same tide of the same day)
Depth-averaged Suspended	95%-ile of baseline data for depth	99%-ile of baseline data for depth
Solids (SS) (4) (5)	average = 37.88 mg L-1	average = 61.92 mg L -1
	and	
		and
	120% of control station's SS at the same	130% of control station's SS at the same
	tide of the same day	tide of the same day
Depth-averaged Turbidity (Tby) (4) (5)	95%-ile of baseline data = 28.14 NTU	99%-ile of baseline data = 38.32 NTU
•	and	and
	120% of control station's Tby at the same tide of the same day	130% of control station's Tby at the same tide of the same day

Notes:

- (1) For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
- (2) The Action and Limit Levels for DO for Surface & Middle layers were calculated from the combined pool of baseline surface layer data and baseline middle layer data.
- (3) Given the Action Level for DO for Surface & Middle layers has already been lower than 4 mg L-1, it is proposed to set the Limit Level at 3.11 mg L-1 which is the first percentile of the baseline data.
- (4) "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
- (5) For turbidity and SS, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

Table B2 Summary Table of DO, Turbidity and SS Levels Recorded in July 2017 for Impact Water Quality Monitoring during Dredging Operations of ESC CMP Vb

Sampling Date	Tidal Period	Station	_	DO Levels ng/L)	Average Turbidity	Average SS Level

Annex D

Graphical Presentations

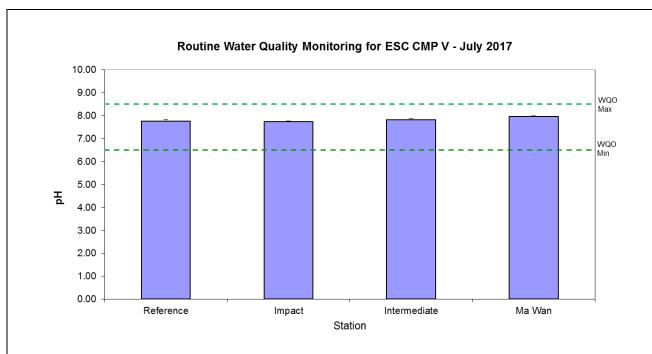

Figure 1: Level of pH recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

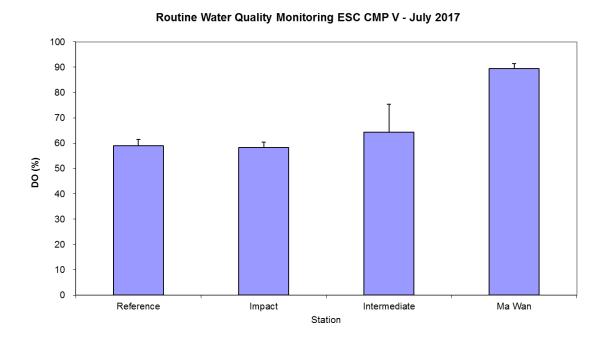

Figure 2: Level of Dissolved Oxygen (DO) (% saturation; mean + SD) recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

Date: August 2017

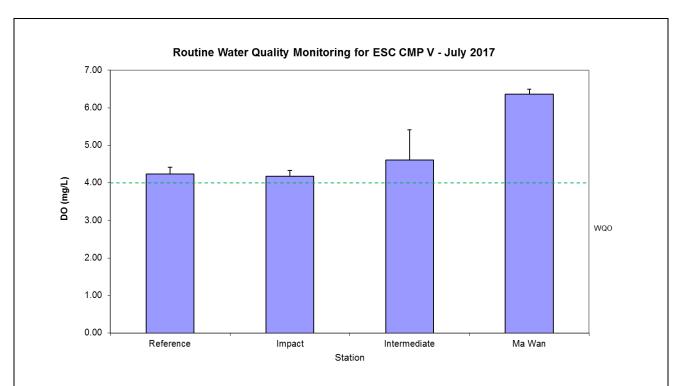

Figure 3: Concentration of Dissolved Oxygen (DO) (mg/L; mean + SD) recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

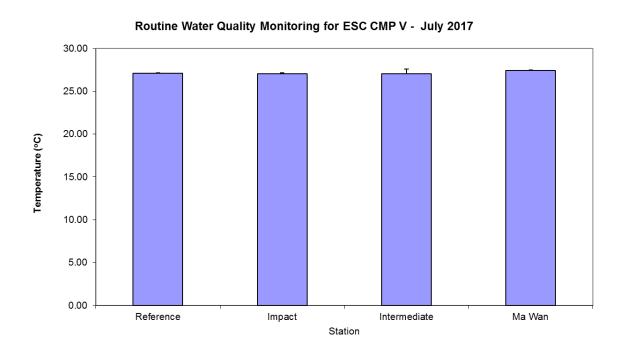

Figure 4: Level of Temperature (°C; mean + SD) recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

Date: August 2017

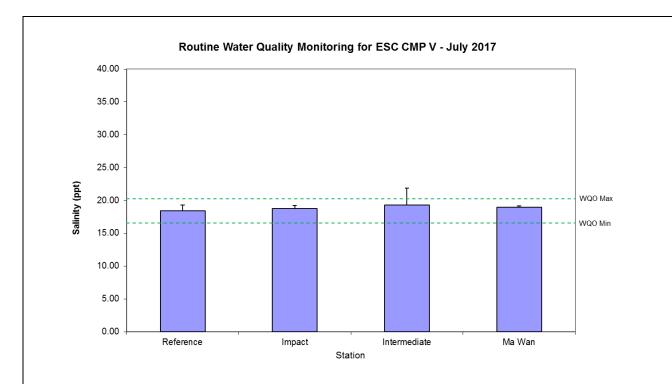

Figure 5: Level of Salinity (ppt; mean + SD) recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

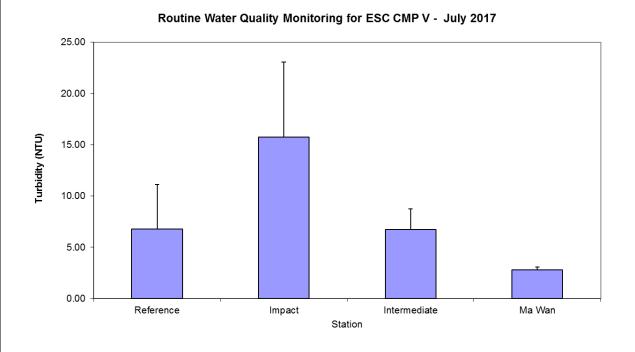

Figure 6: Levels of Turbidity (NTU; mean + SD) recorded during Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

Date: August 2017

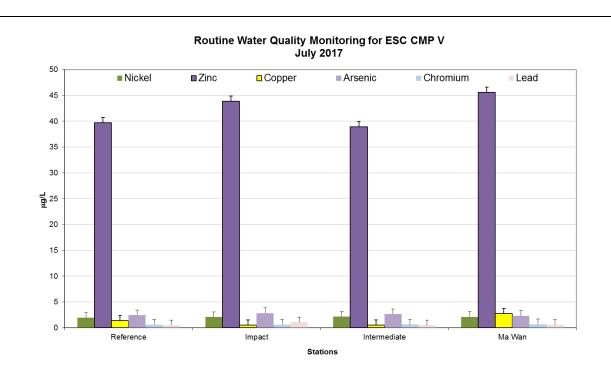

Figure 7: Concentration of Arsenic, Chromium, Nickel, Lead, Copper and Zinc (μg/L; mean + SD) in water samples collected from Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

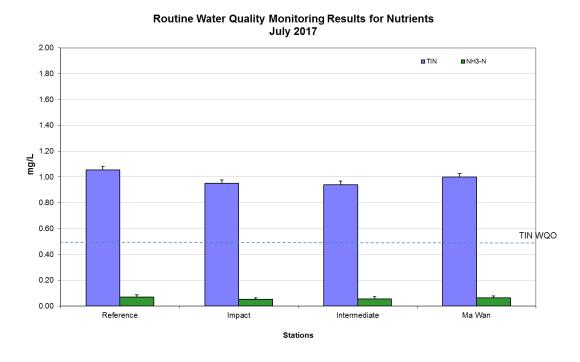

Figure 8: Concentration of Total Inorganic Nitrogen (TIN) and Ammonia Nitrogen (NH3-N) $(\mu g/L; mean + SD)$ in water samples collected from Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

Date: August 2017

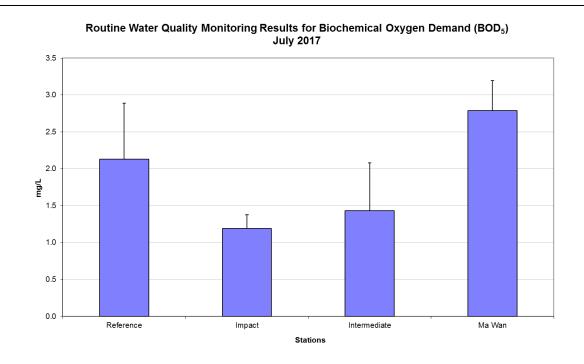

Figure 9: Level of Biochemical Oxygen Demand (BOD5) (mg/L; mean + SD) in water samples collected from Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

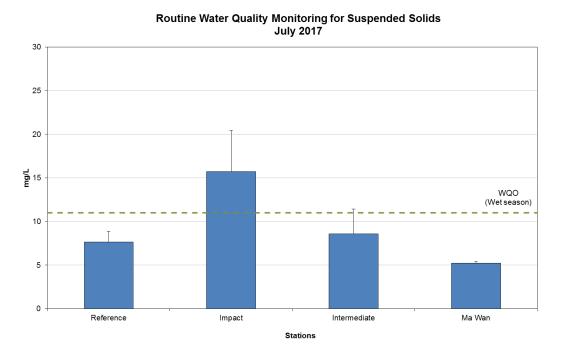

Figure 10: Concentration of Suspended Solids (SS) (mg/L; mean + SD) in water samples collected from Routine Water Quality Monitoring for disposal operations at ESC CMP V in July 2017.

Date: August 2017

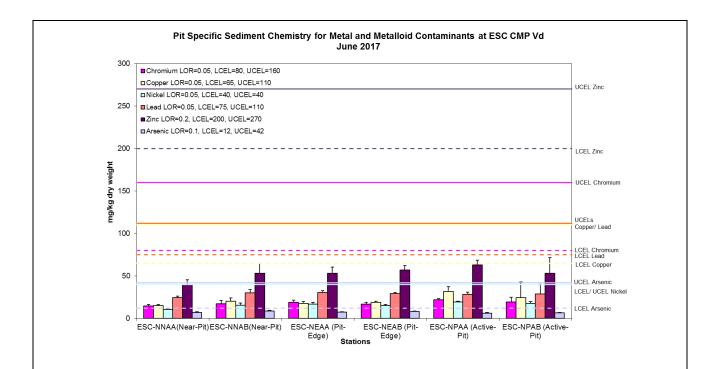

Figure 11: Concentration of Metals and Metalloid (Cr, Cu, Ni, Pb, Zn, As; mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in June 2017.

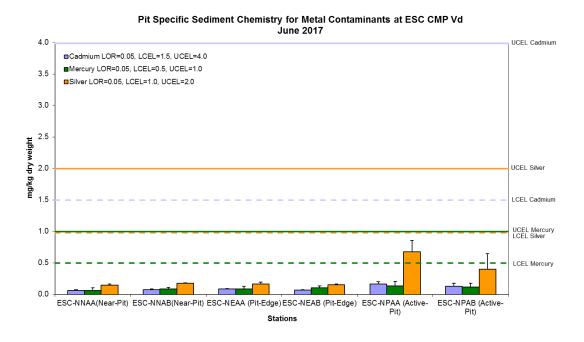

Figure 12: Concentration of Metals (Cd, Hg, Ag; mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in June 2017.

Date: August 2017

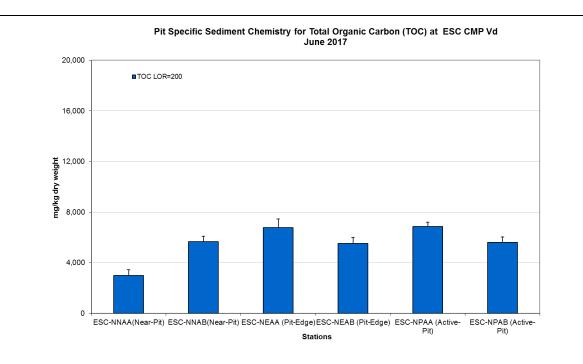

Figure 13: Concentration of Total Organic Carbon (TOC) (mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in June 2017.

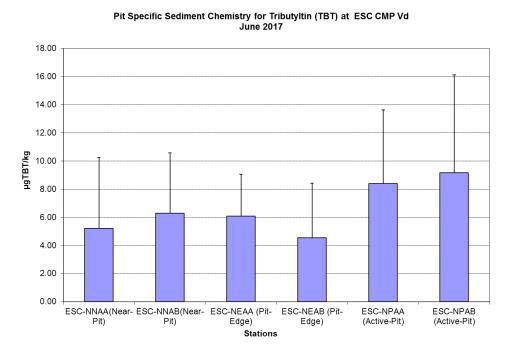

Figure 14: Concentration of Tributyltin (TBT) (μg TBT/kg; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in June 2017.

Date: August 2017

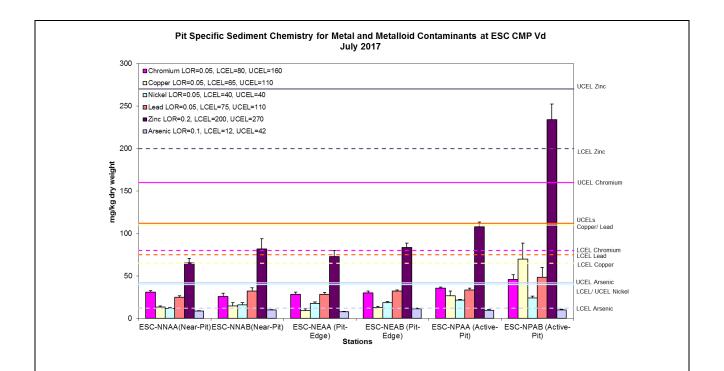

Figure 15: Concentration of Metals and Metalloid (Cr, Cu, Ni, Pb, Zn, As; mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in July 2017.

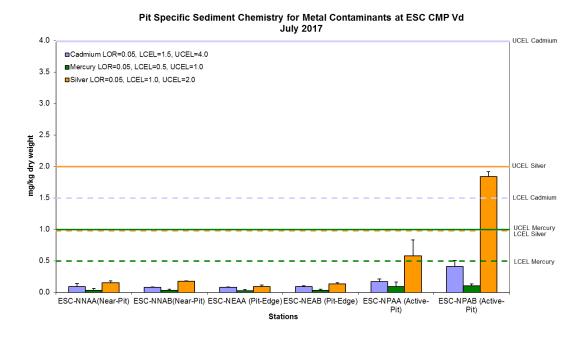

Figure 16: Concentration of Metals (Cd, Hg, Ag; mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in July 2017.

Date: August 2017

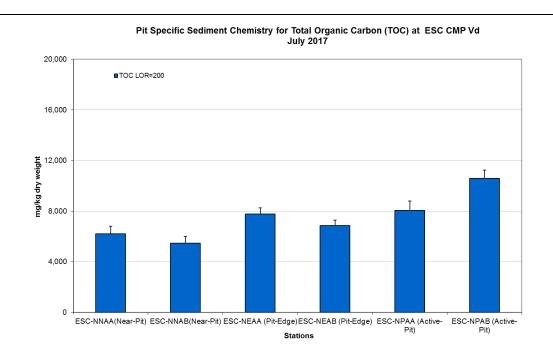

Figure 17: Concentration of Total Organic Carbon (TOC) (mg/kg dry weight; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in July 2017.

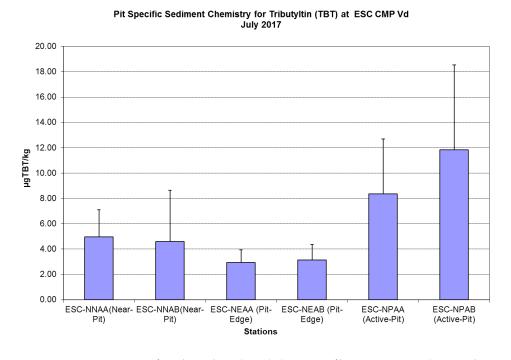

Figure 18: Concentration of Tributyltin (TBT) (µg TBT/kg; mean +SD) in sediment samples collected from Pit Specific Sediment Chemistry Monitoring for ESC CMP Vd in July 2017.

Date: August 2017

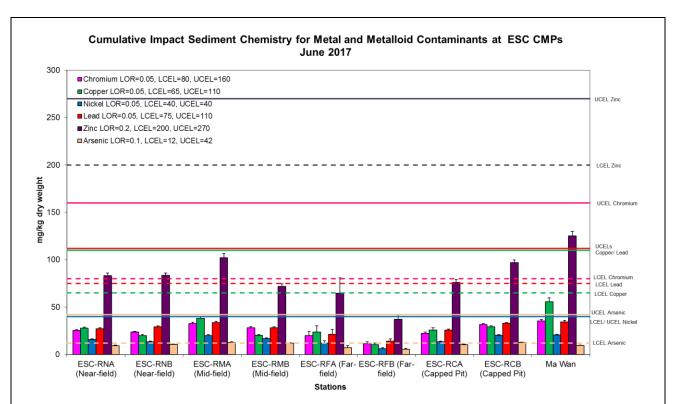

Figure 19: Concentration of Metals and Metalloid (Cr, Cu, Ni, Pb, Zn, As; mean +SD) in sediment samples collected from Cumulative Impact Sediment Chemistry Monitoring for ESC CMPs in June 2017.

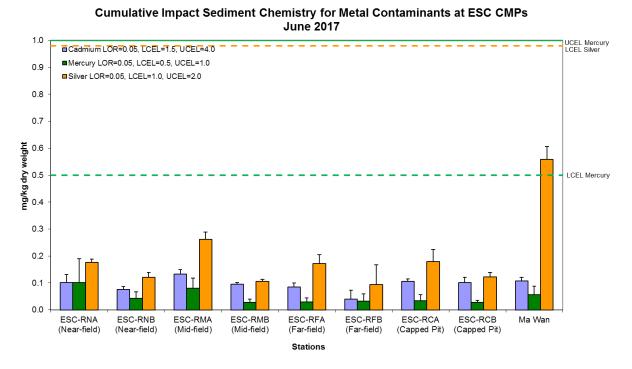

Figure 20: Concentration of Metals (Cd, Hg, Ag; mean +SD) in sediment samples collected from Cumulative Impact Sediment Chemistry Monitoring for ESC CMPs in June 2017.
