Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 11:45-12:05.
SR9 monitoring station was under maintenance during 9:45-10:05.
SR11 monitoring station was under maintenance during 12:05-12:25.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 13:16-14:16.
SR12 monitoring station was under maintenance during 10:46-11:56.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 11:35-11:55.
SR9 monitoring station was under maintenance during 19:20-9:40.
SR10 monitoring station was under maintenance during 11:40-12:00.

Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 10:46-11:46.
SR12 monitoring station was under maintenance during 13:11-14:16.
SR13 monitoring station was under maintenance during 15:10-15:35.

Remark: Fonts with underline: Action Level Exceedance
Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 13:10-13:30.
SR9 monitoring station was under maintenance during 10:50-11:05.
SR11 monitoring station was under maintenance during 13:25-13:45.

Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 12:11-13:21.
SR12 monitoring station was under maintenance during 9:36-10:46.
SR13 monitoring station was under maintenance during 15:55-16:15.

Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 13:06-13:56.
SR12 monitoring station was under maintenance during 10:41-11:51.
SR13 monitoring station was under maintenance during 15:05-15:25.

Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 12:06-13:01.
SR12 monitoring station was under maintenance during 10:21-11:21.
SR13 monitoring station was under maintenance during 15:25-15:45.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 12:35-12:55.
SR9 monitoring station was under maintenance during 10:00-10:20.
SR10 monitoring station was under maintenance during 12:25-12:45.
SR11 monitoring station was under maintenance during 13:10-13:25.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 14:20-14:40.
SR9 monitoring station was under maintenance during 12:05-12:20.
SR10 monitoring station was under maintenance during 13:55-14:15.
SR11 monitoring station was under maintenance during 14:35-14:55.

Fonts in Bold with underline: Limit Level Exceedance
Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 13:06-13:51.
SR12 monitoring station was under maintenance during 9:46-10:46.
SR13 monitoring station was under maintenance during 15:10-15:30.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 11:50-12:10.
SR9 monitoring station was under maintenance during 9:50-10:10.
SR10 monitoring station was under maintenance during 12:05-12:25.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR5 monitoring station was under maintenance during 13:35-13:55.
SR9 monitoring station was under maintenance during 11:30-11:50.
SR11 monitoring station was under maintenance during 13:45-14:05.

Automatic Instrument calibration of NH3-N monitor was carried out during 5:57-6:37 at SR4 and SR12.
SR4 monitoring station was under maintenance during 10:31-11:31.
SR12 monitoring station was under maintenance during 13:01-13:56.

Typical Event and Action Plan for Water Quality for Construction Phase

Event	Action			
	ET Leader	**IEC**	**ER**	**Contractor**
Action Level				
Exceedance for one sample	1. Repeat in-situ measurement to confirm finding; 2. Identify source(s) of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; and 6. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC on the 2. proposed mitigation measures; and 3. Make agreement on the mitigation measures to be implemented.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER; and 6. Implement the agreed mitigation measures.
Exceedance for two or more consecutive samples	1. Repeat in-situ measurement to confirm finding; 2. Identify source(s) of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Ensure mitigation measures are implemented; 7. Prepare to increase the monitoring frequency to daily; and 8. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC on the proposed mitigation measures; 2. Make agreement on the mitigation measures to be implemented; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days; and 6. Implement the agreed mitigation measures.
Exceedance for two or more consecutive samples	1. Repeat in-situ measurement to confirm finding; 2. Identify source(s) of impact; 3. Inform IEC and Contractor; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC and Contractor; 6. Ensure mitigation measures are implemented; 7. Prepare to increase the monitoring frequency to daily; and 8. Repeat measurement on next day of exceedance.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC on the proposed mitigation measures; 2. Make agreement on the mitigation measures to be implemented; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and propose mitigation measures to IEC and ER within 3 working days; and 6. Implement the agreed mitigation measures.
Limit Level				
Exceedance for one sample	1. Repeat in-situ measurement to confirm finding; 2. Identify source(s) of impact; 3. Inform IEC, Contractor and EPD, if the exceedance is recorded at Fish Culture Zone, AFCD should be informed. If the exceedance is recorded at WSD Flushing Water intakes, WSD should be informed; 4. Check monitoring data, all plant, equipment	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; and 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; and 4. Assess the effectiveness of the implemented mitigation measures.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and ER and propose mitigation measures to IEC and ER within 3 working days; and 6. Implement the agreed mitigation measures.

Event	Action			
	ET Leader	**IEC**	**ER**	**Contractor**
	and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; and 7. Increase the monitoring frequency to daily until no exceedance of Limit level.			
Exceedance for two or more consecutive samples	1. Repeat in-situ measurement to confirm finding; 2. Identify source(s) of impact; 3. Inform IEC, Contractor and EPD, if the exceedance is recorded at Fish Culture Zone, AFCD should be informed. If the exceedance is recorded at WSD Flushing Water intakes, WSD should be informed; 4. Check monitoring data, all plant, equipment and Contractor's working methods; 5. Discuss mitigation measures with IEC, ER and Contractor; 6. Ensure mitigation measures are implemented; and 7. Increase the monitoring frequency to daily until no exceedance of Limit level for two consecutive days.	1. Discuss with ET and Contractor on the mitigation measures; 2. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly; and 3. Assess the effectiveness of the implemented mitigation measures.	1. Discuss with IEC, ET and Contractor on the proposed mitigation measures; and 2. Request Contractor to critically review the working methods; 3. Make agreement on the mitigation measures to be implemented; 4. Assess the effectiveness of the implemented mitigation measures; and 5. Consider and instruct, if necessary, the Contractor to slow down or to stop all or part of the marine work until no exceedance of Limit Level.	1. Inform the ER and confirm notification of the non-compliance in writing; 2. Rectify unacceptable practice; 3. Check all plant and equipment; 4. Consider changes of working methods; 5. Discuss with ET and IEC and ER and propose mitigation measures to IEC and ER within 3 working days; 6. Implement the agreed mitigation measures; and 7. As directed by the ER, to slow down or to stop all or part of the marine work or construction activities.

Event and Action Plan for 24-hour Water Quality Monitoring

Event	Action			
	ET Leader	Contractor	ER	IEC
Action Level				
On Action Level exceedance of turbidity or DO (mg/L) (over a period of 30-minute), or exceedance of ammonia (mg/L) (over a period of 60-minute). Notification is sent to ET, Contractor, ER, EPD, AFCD and WSD automatically via email	1. Check data and determine if the exceedance was due to equipment problem. If so, fix the problem within 1 working day. Continue monitoring 2. Carry out investigation as soon as possible after identification of exceedance. Check monitoring data (including data from regular water quality), all plant, equipment and Contractor's working methods; 3. Report the initial investigation results to the Contractor within 24 hours of identification of exceedance. Advise contractor if exceedance may be due to contractor's construction works. 4. Conduct water quality monitoring at the mariculture/ WSD flushing water intake station with exceedance recorded and gradient stations in vicinity within 18 hours of identification of exceedance if the exceedance may be due to the works. Parameters to monitor include DO (mg/L), turbidity and SS. 5. Report the monitoring data to the Contractor within 48 hours of identification of exceedance. Advise contractor if exceedance is due to contractor's construction works. 6. Discuss mitigation measures with IEC, ER and Contractor within 2 working days of submission of the investigation results. 7. Ensure mitigation measures are implemented; 8. Closely monitor the concerned 24-hr station.	1. Check all plant and equipment; 2. Consider changes of working methods; 3. Rectify unacceptable practice; 4. Submit the monitoring data and results of the investigation to IEC and ER within 48 hours of the identification of an exceedance Inform EPD, AFCD and WSD of the results; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within 2 working days of submission of the investigation results; 6. Implement the agreed mitigation measures within reasonable time scale	1. Request Contractor to critically review the working methods; 2. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 3. Ensure remedial measures are properly implemented 4. Assess the effectiveness of the implemented mitigation measures	1. Check monitoring data submitted by ET 2. Confirm ET assessment if exceedance is due /not due to the works 3. Discuss with ET, ER and Contractor on the mitigation measures 4. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly 5. Assess the effectiveness of the implemented mitigation measures
Limit Level				
On Limit Level exceedance of turbidity or DO (mg/L) (over a period of 30-minute or exceedance of ammonia (mg/L) (over a period of 60-minute). Notification is sent to ET, Contractor, ER, EPD, AFCD and	1. Check data and determine if the exceedance was due to equipment problem. If so, fix the problem within 1 working day. Continue monitoring 2. Carry out investigation as soon as possible after identification of exceedance. Check monitoring data (including data from regular water quality), all plant, equipment and Contractor's working methods;	1. Check all plant and equipment; 2. Consider changes of working methods; 3. Rectify unacceptable practice; 4. Submit the monitoring data and results of the investigation to IEC and ER within 48 hours of the identification of an exceedance Inform EPD, AFCD and WSD of the results; 5. Discuss with ET, IEC and ER and propose mitigation measures to IEC and ER within	1. Request Contractor to critically review the working methods; 2. Discuss with IEC, ET and Contractor on the proposed mitigation measures; 3. Ensure remedial measures are properly implemented 4. Assess the effectiveness of the implemented mitigation measures; 5. Consider and instruct, if necessary, the Contractor to slow down or to stop all or	1. Check monitoring data submitted by ET 2. Confirm ET assessment if exceedance is due /not due to the works 3. Discuss with ET, ER and Contractor on the mitigation measures 4. Review proposals on mitigation measures submitted by Contractor and advise the ER accordingly 5. Assess the effectiveness of the implemented mitigation measures

Event	Action			
	ET Leader	Contractor	ER	IEC
WSD automatically via email	3. Report the initial investigation results to the Contractor within 24 hours of identification of exceedance. Advise contractor if exceedance may be due to contractor's construction works. 4. Conduct water quality monitoring at the all monitoring stations within 18 hours of identification of exceedance if the exceedance may be due to the works. Parameters to monitor include DO (mg/L), turbidity and SS. 5. Report the monitoring data to the Contractor within 48 hours of identification of exceedance. Advise contractor if exceedance is due to contractor's construction works. 6. Discuss mitigation measures with IEC, ER and Contractor within 2 working days of submission of the investigation results. 7. Ensure mitigation measures are implemented; 8. Closely monitor the concerned 24-hr station.	2 working days of submission of the investigation results; 6. Implement the agreed mitigation measures within reasonable time scale; 7. As directed by ER, to slow down or stop all or part of the marine work or construction activities.	part of the marine work until no exceedance of Limit Level.

Interim Notification of Environmental Quality Limits Exceedances
Impact Water Quality Monitoring

Incident Report on Action Level or Limit Level Non-compliance

Reference No.:	20160428 /IM/SR9
Project:	CV/2013/04 - Providing Sufficient Water Depth for Kwai Tsing Container Basin and its Approach Channel
Date:	28/04/2016
Time: (hh:mm)	Mid-Flood: 09:00 Mid-Ebb: 14:50
Monitoring Location:	SR9 – Cheung Sha Wan FCZ
Action Level / Limit Level:	DO (S&M): 5/5 mg/L; TIN 0.37/0.49(wet season) or 0.22/0.29(dry season)mg/L DO (B): 4.41/4.25 mg/L; Turbidity: 4.0/8.7 NTU; TSS : 9 / 18 mg/L : / mg/L

Measured Level of exceeded parameters: (tick / fill in / circle as appropriate)	Mid-Flood:		Mid-Ebb:	
	DO (S&M): ____AL / LL	DO (B): ____AL / LL	DO (S&M): ____AL / LL	DO (B): ____AL / LL
	Turbidity: ____AL / LL	TIN(In-situ): 0.44 (AL) / LL	Turbidity: ____AL / LL	TIN(In-situ): 0.47 (AL) / LL
	TIN(Lab): 0.47 (AL) / LL	TSS : ____AL / LL	TIN(Lab): 0.48 (AL) / LL	TSS : ____AL / LL

Action taken / to be taken: (tick / fill in as appropriate)

Inspection:
- ☑ Silt curtain in proper condition
- ☑ Dredging rate within accepted rate
- ☑ Monitoring equipment is checked and confirmed without problem.
- ☐ Others: _____

Possible reason for Action or Limit Level Non-compliance: (tick / fill in as appropriate)

	DO(S&M)	DO(B)	Turbidity	TIN (In-situ)	TIN (Lab)
	Findings / Evidences				
☑ Station at Upstream Location at MF				✓	✓
☑ Upstream Control Station (or gradient station for TIN) exceeded AL/LL				MF: 0.51mg/L (G4) ME: 0.91mg/L (G2)	MF: 0.52mg/L (G4) ME: 0.96mg/L (G2)
☐ No increasing / decreasing (for DO) trend across the Project at ME	Upstream: ____ ( )mg/L Downstream: ____ ( )mg/L	Upstream: ____ ( )mg/L Downstream: ____ ( )mg/L	Upstream: ____ ( )NTU Downstream: ____ ( )NTU	Upstream: ____ ( )mg/L Downstream: ____ ( )mg/L	
☐ No Dredging Works carried out.					

Conclusion

☑ Due to change or/and influence of ambient condition in the vicinity, i.e. not Project related.				✓	✓

Remarks: (tick / fill in as appropriate)

Repeat In-situ measurement was done.

☑ Dredging works conducted at Portion A (Zone 1A, 1B and 3B) of the Project.
According to Contractor, dredged rate (in-situ) at Portion A (Zone 1A) and Portion A (Zone 1B) were 900m3/day and 538m3/day respectively.
Dredged rate (in-situ) at Portion A (Zone 3B) was 538m3/day.

Interim Notification of Environmental Quality Limits Exceedances
Impact Water Quality Monitoring

Incident Report on Action Level or Limit Level Non-compliance

Reference No.:	20160507 /IM/SR12
Project:	CV/2013/04 - Providing Sufficient Water Depth for Kwai Tsing Container Basin and its Approach Channel
Date:	07/05/2016
Time: (hh:mm)	Mid-Flood: 17:26 Mid-Ebb: 12:43
Monitoring Location:	SR12 – Tsing Yi, WSD Flushing Water Intake
Action Level / Limit Level:	DO (S&M): 2/2 mg/L; NH3-N: <1/<1 mg/L ; DO (B): 2/2 mg/L; Turbidity: <10/<10 NTU; Total Suspended Solids : <10/<10 mg/L _____ : _____/_____mg/L

Measured Level of exceeded parameters: (tick / fill in / circle as appropriate)	Mid-Food:		Mid-Ebb:	
	DO (S&M): _____AL / LL	DO (B): _____AL / LL	DO (S&M): _____AL / LL	DO (B): _____AL / LL
	Turbidity: _____AL / LL	NH3-N(In-situ): _____AL / LL	Turbidity: _____AL / LL	NH3-N(In-situ): _____AL / LL
	NH3-N(Lab): _____AL / LL	_____ : _____AL / LL	NH3-N(Lab): _____AL / LL	TSS : 11 AL (LL)

Action taken / to be taken: (tick / fill in as appropriate)

Inspection:
- ☑ Silt curtain in proper condition
- ☐ Dredging rate within accepted rate
- ☑ Monitoring equipment is checked and confirmed without problem.
- ☐ Others: _____

Possible reason for Action or Limit Level Non-compliance: (tick / fill in as appropriate)

	DO(S&M)	DO(B)	Turbidity	NH3-N	TSS
	Findings / Evidences				
☑ Station at Upstream Location at ME					✓
☐ Upstream Control Station ( ) exceeded AL/LL					
☐ No increasing / decreasing (for DO) trend across the Project at MF	Upstream: _____ ( )mg/L Downstream: _____ ( )mg/L	Upstream: _____ ( )mg/L Downstream: _____ ( )mg/L	Upstream: _____ ( )NTU Downstream: _____ ( )NTU	Upstream: _____ ( )mg/L Downstream: _____ ( )mg/L	
☑ No Dredging Works carried out.					

Conclusion

☑ Due to change or/and influence of ambient condition in the vicinity, i.e. not Project related. ✓

Remarks: (tick / fill in as appropriate)

Repeat In-situ measurement was done.

Mid-Flood:	DO (S&M): _____	DO (B): _____	Turbidity: _____
	NH3-N: _____	_____ : _____	_____ : _____
Mid-Ebb:	DO (S&M): _____	DO (B): _____	Turbidity: _____
	NH3-N: _____	_____ : _____	_____ : _____

☑ Dredging works conducted at Portion A (Zone 1A, 1B) and Portion B of the Project.
According to Contractor, dredged rate (in-situ) at Portion A (Zone 1A) and Portion A (Zone 1B) were 900m3/day and 576m3/day respectively.
Dredged rate (in-situ) at Portion B was 492m3/day.

Appendix J

Environmental Mitigation Implementation Schedule

The copyright of this document is owned by MateriaLab Consultants Ltd. It may not be reproduced except with prior written approval from the Company.

EIA Ref	EM& A Ref	No.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to Address	Who to implement the measure	Location of the measure	When to implement the measure?	Implementation Status
		A	Water Quality					
3.8	2.9		Use of Silt Screens	Minimize the effect of potential increase in SS levels at the seawater intakes	Contractor	WSD8, WSD9 and EMSD1	Construction Phase	
		A1	Silt Screens shall be installed at the flushing water intakes WSRs WSD1, WSD8~~, WSD9~~ and EMSD1 to minimise the effect of potential increase in SS levels at the seawater intakes.					Implemented
3.8	2.9		Use of Silt Curtains	Minimize the release of suspended soil from the dredging area	Contractor	Construction Work Sites	Construction Phase	
		A2	To minimize the potential SS impact from dredging, deployment of silt curtains around the grab dredgers is recommended; and Before commencement of dredging works, the holder of the Environmental Permit shall submit detailed proposal of the design and arrangement of the frame type silt curtain to EPD for approval.					Implemented
3.10	2.9	A3	Water Quality Monitoring Program	Perform water quality monitoring at sensitive receivers during construction phase	ET	Monitoring Locations as stated in Table 2.1 of the EM&A Manual	Construction Phase	
			Water quality monitoring shall be carried out in accordance with Section 2 of the Environmental Monitoring and Audit (EM&A) Manual. Event and Action Plan (EAP) for water quality shall be followed in case of any exceedance in action and limit level.					Implemented
3.8 (EP Ref 3)	-		Dredging Operation	Minimize potential adverse effect as a result of dredging activities	Contractor	Construction Work Sites	Construction Phase	
		A4	Only two types of dredgers are allowed for this Project: (a) grab dredger with closed grab, and (b) ~~cutter suction dredger~~ spud pole grab dredger.					Implemented
		A5	The speed of any construction vessels shall not exceed 10 knots when passing through the area of the Project.					Implemented
		A6	No more than ~~three~~ two grab dredgers with closed grab ~~(or one cutter suction dredger with two closed grab dredgers)~~ shall be operated within the Project Area at any one time for the Project.					Implemented
		A7	Only one closed grab dredger ~~or one cutter suction dredger~~ shall be operated in Zone 2B and during which no other closed grab dredger shall be allowed in other zones within the Project Area.					Implemented
		A8	No more than one grab dredger with closed ~~grab (or one cutter suction dredger)~~ shall be operated within each of the five main zones at any one time for the ~~Project in which the cutter suction dredger shall only be operated in Zones 2 and 4 with maximum dredging rate of 700 m³ in 30 minutes in any given hour (max. 8,400 m³/day, based on a 12-hour operation per day)~~.					Implemented
		A9	The maximum dredging rate for closed grab dredger at Rambler Channel – Zones 1 to 2 (subzones Z1A, Z1B, Z2A, Z2B and Z2C) shall follow the Dredging Plan for the Hotspot, as shown in EP-426/2011/A.					Implemented
		A10	The maximum dredging rate for closed grab dredger at Rambler Channel – Zones 3 to 4 (subzones Z3A to Z4B) shall not exceed 1,600 m³ per day during dry season or 3,440 m³ per day during wet season as shown in EP-426/2011/A.					Implemented
		A11	The maximum dredging rate for closed grab dredger at Rambler Channel – Zones 5 to 6 (subzones Z5A, Z5B and Z6A) shall not exceed 4,000 m³ per day during both dry and wet seasons as shown in EP-426/2011/A.					Implemented
		A12	The maximum dredging rate for closed grab dredger at Rambler Channel –					

EIA Ref	EM&A Ref	No.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to Address	Who to implement the measure	Location of the measure	When to implement the measure?	Implementation Status
			Zones 5 to 8 (subzones Z5C, Z6B, Z6C, Z6D, Z7 and Z8) shall not exceed 4,000 m³ per day during both dry and wet seasons as shown in EP-426/2011/A.					Implemented
		A13	The maximum dredging rate for closed grab dredger at Northern Fairway – Zones 9 to 12 shall not exceed 4,000 m³ per day during both dry and wet seasons as shown in EP-426/2011/A.					Implemented
		A14	The maximum dredging rate for closed grab dredger at Western Fairway – Zone 13A shall not exceed 4,000 m³ per day during both dry and wet seasons as shown in EP-426/2011/A.					NA-Dredging works substantially completed
		A15	The maximum dredging rate for closed grab dredger at Western Fairway – Zone 13B shall not exceed 4,000 m³ per day during both dry and wet seasons as shown in EP-426/2011/A.					NA-Dredging works substantially completed
		A16	~~The dredging pump of cutter suction dredger shall be operated during cutting to reduce the sediment loss to water body.~~					NA-no CSD employed
		A17	Project dredging works within Zone 1 to 6 (including sub-zones) of the Container Basin shall not be carried out at the same time with Terminal Operator's maintenance dredging activities.					NA-No Terminal Operator's maintenance dredging carried out
		A18	~~Cutter suction dredger is only to be deployed for the removal of harder material during daytime only (07:00 to 19:00) in Zone 2 (including subzones) of the Container Basin.~~					NA-no CSD employed
		A19	In case of rainstorm warning in effect during dredging works, the dredged material on barge shall be covered properly before transportation to disposal site.					Implemented
		A20	In case of exceedance of SS and NH3-N at the Tsing Yi WSD flushing intake due to dredging operation is evidenced, the Contractor shall propose mitigation measures not limited to reducing dredging rate. If exceedance persists, the Contractor shall propose not to undertake dredging operation in close proximity to the Tsing Yi flushing water intake during flood tide. The Contractor shall liaise with the ETL, IEC, ER, EPD and WSD for the proposed mitigation measures.					NA-no exceedance due to dredging operation
		A21	If further mitigation measures are required due to continuous exceedance of SS and NH_3-N, consideration shall then be given to dredge only on the state of the tide which would avoid migration of SS towards the WSD and EMSD intakes.					NA-no exceedance due to dredging operation
		A22	Dredging sub-zone Z2B where high NH_3-N in sediment is found shall be isolated with dredging works to be carried out towards the end of construction programme.					Implemented
		A23	Administrative control in terms of dredging rate adjustment in controlling the release of contaminants shall be employed as mitigation measures.					Implemented
		A24	Field trials shall be carried out to propose the most effective dredging process and rate to control the release of ammoniacal nitrogen and UIA into the water column and achieve compliance at the WSD1 seawater intake					Implemented

EIA Ref	EM& A Ref	No.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to Address	Who to implement the measure	Location of the measure	When to implement the measure?	Implementation Status
			(NH_3-N) and at the beaches for UIA. Capital dredging works in dredging sub-zone Z2B (Figure 1.2h refers) should not therefore be carried out until the proposed method and rate are confirmed.					
		A25	Detailed dredging plan shall be prepared providing details of individual dredging subzones and dredging rate taking into account of the field trial results.					Implemented
3.8	-		Other Good Site Practices for Dredging	Minimize potential adverse effect as a result of dredging activities	Contractor	Construction Work Sites	Construction Phase	
		A26	All vessels should be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash.					Implemented
		A27	The speed of all Contractor's vessels should be controlled within the works area to prevent propeller wash from stirring up the seabed sediments.					Implemented
		A28	All barges / dredgers used should be fitted with tight fitting seals to their bottom openings to prevent leakage of material.					Implemented
		A29	Construction activities should not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site or dumping grounds.					Implemented
		A30	No overflow of dredged mud should be allowed. Barges or hopper should not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation.					Implemented
		B	**Waste Management**					
			Good Site Practices	Minimize potential adverse effect arising from the handling of dredged material	Contractor	Construction Work Sites (General)	Construction Phase	
4.5	3.3	B1	Obtain the profile of different sediment categories and careful planning of sediment removal.					Implemented
		B2	Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.					Implemented
		B3	Training of site personnel in proper waste management and chemical handling procedures.					Implemented
		B4	Provision of sufficient waste disposal points and regular collection of waste.					Implemented
		B5	Well planned delivery programme for offsite disposal such that adverse environmental impact from transporting sediment material is not anticipated.					Implemented
		B6	Use well maintained PME on site.					Implemented
			General Refuse	Minimize the adverse effect arising from the handling of site general refuse	Contractor	Construction Work Sites (General)	Construction Phase	
4.5	3.3	B7	General refuse should be stored in enclosed bins. A reputable waste collector should be employed by the contractor to remove general refuse from the site.					Implemented
			Chemical Waste	Minimize the adverse effect arising from the handling of site chemical waste	Contractor	Construction Work Site	Construction Phase	
4.5	3.3	B8	If chemical wastes are produced at the construction site, the Contractor shall be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes shall be used, and incompatible chemicals should be stored separately. Appropriate labels shall be securely					Implemented

EIA Ref	EM&A Ref	No.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to Address	Who to implement the measure	Location of the measure	When to implement the measure?	Implementation Status
			attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport and dispose of the chemical wastes, to either the approved Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.					
4.5	3.3		Marine Dredged Sediment	Control of transportation and disposal of dredged material in a manner to minimize potential impacts on water quality	Contractor	Construction Work Site	Construction Phase	
		B9	Control of transportation and disposal of dredged material in a manner to minimize potential impacts on water quality.					Implemented
		B10	Bottom opening of barges will be fitted with tight fitting seals to prevent leakage of material. Excess material shall be cleaned from the decks and exposed fittings of barges and dredgers before the vessel is moved.					Implemented
		B11	Monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the EPD.					Implemented
		B12	Barges or hopper barges shall not be filled to a level that would cause the overflow of materials or sediment laden water during loading or transportation.					Implemented
		B13	Sediment Quality Report shall be prepared and submit to EPD under DASO.					Implemented
		B14	If disposal of Type 3 sediment is identified, agreement with EPD shall be reached regarding the treatment of sediment before disposal.					Implemented
		B15	Project works shall not be carried out before obtaining confirmation from MFC on disposal option.					Implemented
		B16	Follow strictly all conditions stipulated in the dumping permit.					Implemented
		C	**Marine Ecology**	Review and assess the potential adverse effect on marine ecology	Contractor	Construction Work Sites	Construction Phase	
5.7	4.1	C1	Water quality monitoring results shall be reviewed from time to time to assess if there were any impact to marine ecology due to dredging operation.					Implemented
		D	**Fisheries**	Review and assess the potential adverse effect on fisheries	Contractor	Construction Work Sites	Construction Phase	
6.7	5.1	D1	Water quality monitoring results shall be reviewed from time to time to assess if there were any impact to fisheries due to dredging operation.					Implemented
		E	**Hazard to Life**		Contractor	Construction Work Sites (General)	Construction Phase	
7.8.2	6.2	E1	Sound communication channel shall be established with the oil companies, Marine Department, and Fire Services Department for effective notification and emergency evacuation in case of accidents.					Implemented
		E2	Proper safety and emergency training shall be given to the relevant operation staff at the dredging site. Emergency plans and procedures should be prepared and drills should be performed periodically.					Implemented
		F	**Landscape Visual and Glare**	Minimize landscape and visual impacts during construction phase	Contractor	Construction activities' area	Throughout design, construction phase	
8.9 Table 8-3 & 8-6	7.2	F1	Visa shields to the lights of dredgers shall be provided.					Implemented
		F2	The light source shall not point directly to any VSRs.					Implemented
		F3	Lights shall be switched off if they are not in use.					Implemented
		G	**Cultural Heritage**	Minimize potential	Contractor	Locations of	During	

EIA Ref	EM& A Ref	No.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concerns to Address	Who to implement the measure	Location of the measure	When to implement the measure?	Implementation Status
9.5	8		Monitoring Brief	marine archaeological impact during dredging activities		the 20 unidentified sonar contacts and masked areas	Construction works	
		G1	A monitoring brief shall be conducted during the dredging. It shall only be required during dredging at the locations of the 20 unidentified sonar contacts and masked areas and does not need to cover all of the dredging activities. Dredging staff should be briefed about the possibility of locating archaeological objects and a marine archaeologist shall be available to monitor the dredged spoil and provide advice. If material indicative of archaeological remains is retrieved, the AMO should be contacted as soon as possible.					NA- no archaeological deposit was found during reporting period.
		H	**Noise**					
10.8	9		Good Site Practices	Control and minimize the generation of undue noise nuisance	Contractor	Construction Work Sites (Along the alignment of dredging	Construction Phase	
		H1	Only well-maintained plant shall be operated on-site and plant should be serviced regularly during the construction program.					Implemented
		H2	Machines and plant that may be in intermittent use should be shut down between works periods or should be throttled down to a minimum.					Implemented
		H3	Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from nearby NSRs.					Implemented
		H4	If dredging is to be carried out during restricted hours, work locations close to NSRs shall be avoided.					Implemented
		I	**Construction Dust**					
11.7	10		Dust Control	Good site practice to control dust and odour impact to the nearby sensitive receivers	Contractor	Construction Work Sites (General)	Construction Phase	
		I1	Requirements of the Air Pollution Control (Construction Dust) Regulation, where relevant, shall be adhered to during the construction period.					Implemented
			Odour		Contractor	Construction Work Sites (General)	Construction Phase	
		I2	To minimize potential odour emissions, if dredged sediment is anticipated to be placed on barge for more than a day the load shall be properly covered as far as practicable to minimise the exposed area and potential odour.					NA-no work in such condition
		I3	If dredged sediment is found to be malodorous it shall be removed from site as soon as possible within one hour after the barge being filled up.					NA-no work in such condition

Dear Sir/Madam

Agreement No. CE 63/2008 (CE)
Dredging Works in Kwai Tsing Container Basin and its Approach Channel – Investigation, Design and Construction
Methodology Report for Review of Operation Phase Silt Curtain and Water Quality Monitoring

Thank you to all parties for your feedback and advice on the captioned Methodology Report. We are pleased to enclose herewith a hardcopy of the finalised "Methodology Report for Review of Operation Phase Silt Curtain and Water Quality Monitoring" for your information and retention.

You may wish to note that this Methodology Report will also be documented in the subsequent Monthly EM&A Report as part of the EM&A programme for the captioned project.

The site trial as recommended in the above Methodology Report is currently targeted for commencement in June 2016. We will notify all parties before the site trial commences.

20/F AIA Kowloon Tower, Landmark East, 100 How Ming Street, Kwun Tong, Kowloon, Hong Kong

1 Background

1.1 Project Description

1.1.1 This project involves dredging of the seabed of the Kwai Tsing Container Basin and portions of Northern Fairway and Western Fairway (covering an area of about 446 ha) to -17.5 mCD. Construction of the project began in 2013 and is scheduled to be completed by end of Q1 / early Q2 of 2016. Thereafter, operation phase maintenance dredging will be conducted as required to maintain the seabed at an adequate depth for the navigation of container vessels.

1.1.2 The project is categorized as a Designated Project (DP) under the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) was completed in 2010 and the EIA Report was approved by the EPD in the same year (Register No.: AEIAR-156/2010). An Environmental Permit (EP-426/2011/A) was granted by the EPD on 20 July 2012. The EIA and EP specify requirements for the dredging works for the purpose of environmental protection. An environmental monitoring and audit (EM&A) programme is also specified for the purpose of checking and auditing environmental compliance during construction and operation phase of the project.

1.2 Environmental Requirements for Operation Phase

1.2.1 During operation phase maintenance dredging, one closed grab dredger will be deployed within the project area with a maximum dredging rate not exceeding 4,000 m^3/day.

1.2.2 As specified in Clause 4.1(c) of the EP, “silt curtains shall be deployed to fully enclose the grab of the grab dredger unless otherwise exempted under Environmental Monitoring and Audit Programme”.

1.2.3 The EM&A Manual specified that during operation phase maintenance dredging, water quality sampling and measurement of pH, temperature, salinity, SS, turbidity, DO, BOD_5 and *E.coli* shall be conducted at three control and six sensitive receiver locations, while NH_3-N shall be conducted at three WSD seawater intakes. However, this monitoring programme may be changed if supporting evidence is obtained through the operation phase water quality monitoring and audit programme.

1.2.4 The EIA report and EM&A Manual Annex A2 also specified that subject to the review of environmental performance of dredging operation, the deployment of silt curtain may be suspended if supporting evidence is

obtained through the operation phase water quality monitoring and audit programme.

1.3 Necessity of Silt Curtains during Operation Phase

1.3.1 While the approved EIA report recommended silt curtains surrounding the grab of the dredger during operation phase, the necessity of this mitigation measure is worth being further investigated. Specifically, the results of the quantitative water quality assessment for construction phase showed that exceedances were predicted at certain WSRs representing flushing / cooling water intakes in unmitigated scenarios. However, with the implementation of silt screens at these intakes as a mitigation measure, no further exceedance was predicted. Potential reductions in SS due to silt curtain deployment was not assessed in the approved EIA report. As such, silt curtains were recommended only as a measure to further minimise SS release, rather than identified as necessary for mitigation of water quality impacts associated with construction phase. The predicted water quality impacts would be adequately mitigated with implementation of the silt screens only, even with the conservative assumptions of much higher dredging rates and 24-hour dredging that was adopted in the water quality model.

1.3.2 During operation phase, the maintenance dredging required is small scale (approx. 30,000 m^3/yr), ad hoc (on an as-needs basis), and for short durations only (due to the need to work around normal operation of the Container Basin and berthing activities). In addition, only one grab dredger would be deployed at any time. Under these circumstances, the potential for water quality impact during operation phase maintenance dredging is significantly less than that assumed for construction phase dredging.

1.3.3 Meanwhile, the existing Container Basin is already subject to maintenance dredging works without silt curtains, which are exempted under the EIAO. During operation phase of the Project, the nature and frequency of maintenance dredging is not expected to be any different from the existing maintenance dredging undertaken by others.

1.3.4 A review of the water quality data from past maintenance dredging activities and the water quality at monitoring stations during construction phase of the Project has been conducted. The findings are presented in **Appendix A**. The results provide background information to support the view that silt curtains may not be necessary.

1.3.5 Given the aforementioned considerations, deployment of silt curtains during operation phase maintenance dredging appears to be unnecessary for protection of water quality, while such requirements would also pose operational dis-benefits. These include time implications due to the need for mobilisation and demobilisation of silt curtain before and after each dredging event within an already limited time window, which would further restrict the available dredging duration during each dredging event, and thereby necessitate more frequent deployment and reduced cost efficiency of the maintenance dredging works. The procurement of silt curtains during operation phase is also costly given the ad hoc nature and short duration of each maintenance dredging event. Removal of the silt curtain requirement would alleviate these operational dis-benefits and save public money.

1.4 Objectives of this Study

1.4.1 This study is to review the environmental requirements for operation phase maintenance dredging with a view to ascertain the following:

- The need for deployment of silt curtains surrounding the closed grab dredger.
- The need for water quality monitoring as part of the EM&A programme during operation phase.

1.4.2 To provide the supporting evidence needed to review the environmental requirements and where appropriate, effect a change in the operation phase water quality mitigation measures and monitoring and audit programme, a site trial of operation phase maintenance dredging without silt curtain deployment is proposed. Water quality monitoring would be conducted as part of the site trial to verify the potential water quality impacts associated with operation phase maintenance dredging. The findings of the site trial will be used to ascertain the need for silt curtains and where appropriate, recommend changes to the EM&A programme (and associated revision of the EM&A Manual where necessary) for operation phase maintenance dredging.

2 Methodology for Water Quality Monitoring of Site Trial

2.1 Description of the Site Trial

2.1.1 A site trial is proposed to be conducted for grab dredging in the absence of silt curtain surrounding the grab of the dredger.

2.1.2 For the site trial, the setup will replicate the field conditions of the actual operation phase maintenance dredging, whereby one closed grab dredger will be deployed at a constant dredging rate that is at or near the maximum allowable rate. In the EIA report and according to the EP Clause 4.1(a), the maximum allowable rate during operation phase is specified as 4,000 m^3/day. This is based on the worst case assumptions of 20 kg/m^3 of sediment loss from grab dredging and a loss rate of 1.44 kg/s as stated in the EIA report. Using these worst case sediment loss rate assumptions, the equivalent maximum hourly dredging rate is 259 m^3/hr[1], which may be carried out for approx. 15 hours each day.

2.1.3 During operation phase, maintenance dredging requirements will be sporadic and 24-hour dredging is unlikely to be necessary. At the maximum hourly dredging rate, one round of dredging (to fill the barge) would be completed in approx. 2 hours. For the purpose of the site trial, and taking into account certain on-site restrictions such as the limited time windows available for maintenance dredging within the container basin without affecting operation of the container terminals, continuous dredging will be conducted over a 2-hour period during each sampling event.

2.1.4 The site trial is proposed to be conducted during non-raining period within a period of 15 days within May – June 2016. Exact dates are subject to on-site conditions including the availability of appropriate 'time windows' to be agreed with container terminal operators and users. Two site trials are proposed – Site Trial A representing the northern part of the KTCB project area and Site Trial B representing the southern part. During this period, a total of 12 sampling events (three covering mid-flood and three covering mid-ebb for each site trial) will be carried out with the dredger at different locations. Water quality monitoring will be conducted around the dredger and at the nearest water quality monitoring stations under the EM&A programme to each site trial location.

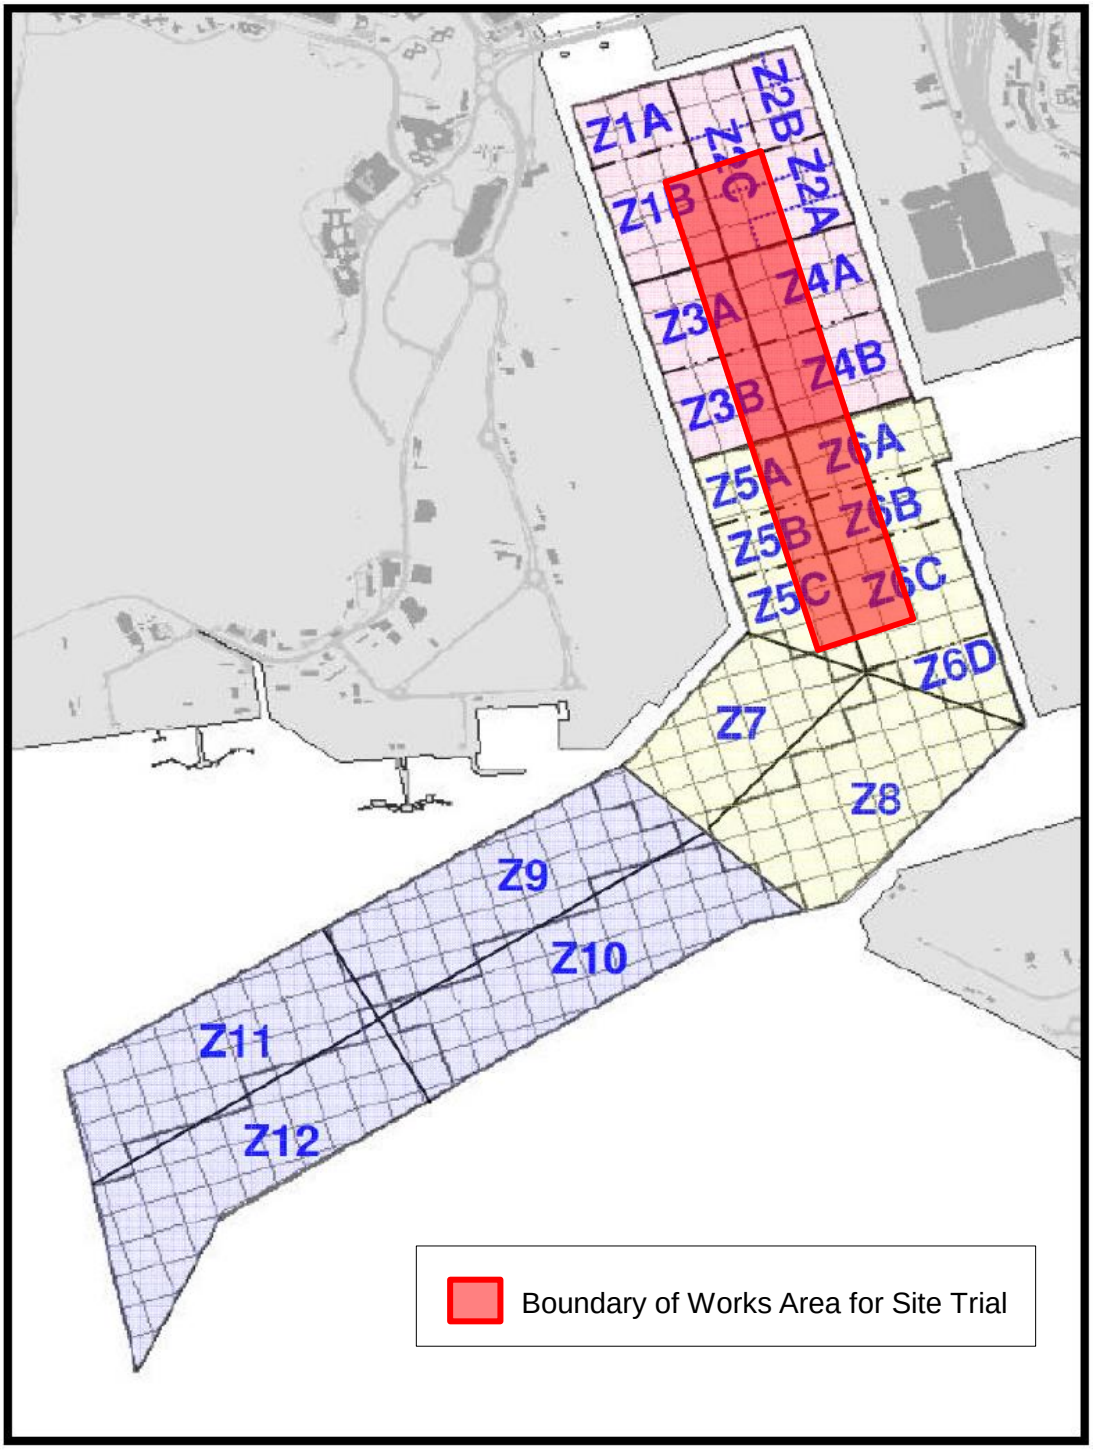
[1] Calculated from the 1.44 kg/s loss rate, which equates to 5,184 kg/hr, divided by 20 kg/m^3 gives a sediment loss rate of 259.2 m^3/hr. With a daily cap of 4,000 m^3/day, a rate of 259 m^3/hr can only be maintained for 15.44 hours.

2.2 Location of the Site Trials

Site Trial A

2.2.1 This site trial is proposed to be conducted at the northern part of the Project area within the Kwai Tsing Container Basin, which represents the worst case potential impacts to WSRs located to the north of the Project area and in the vicinity of the container basin. The boundary of the works area for the site trial is shown in **Figure 2.1**.

Figure 2.1: Boundary of Works Area for Site Trial A

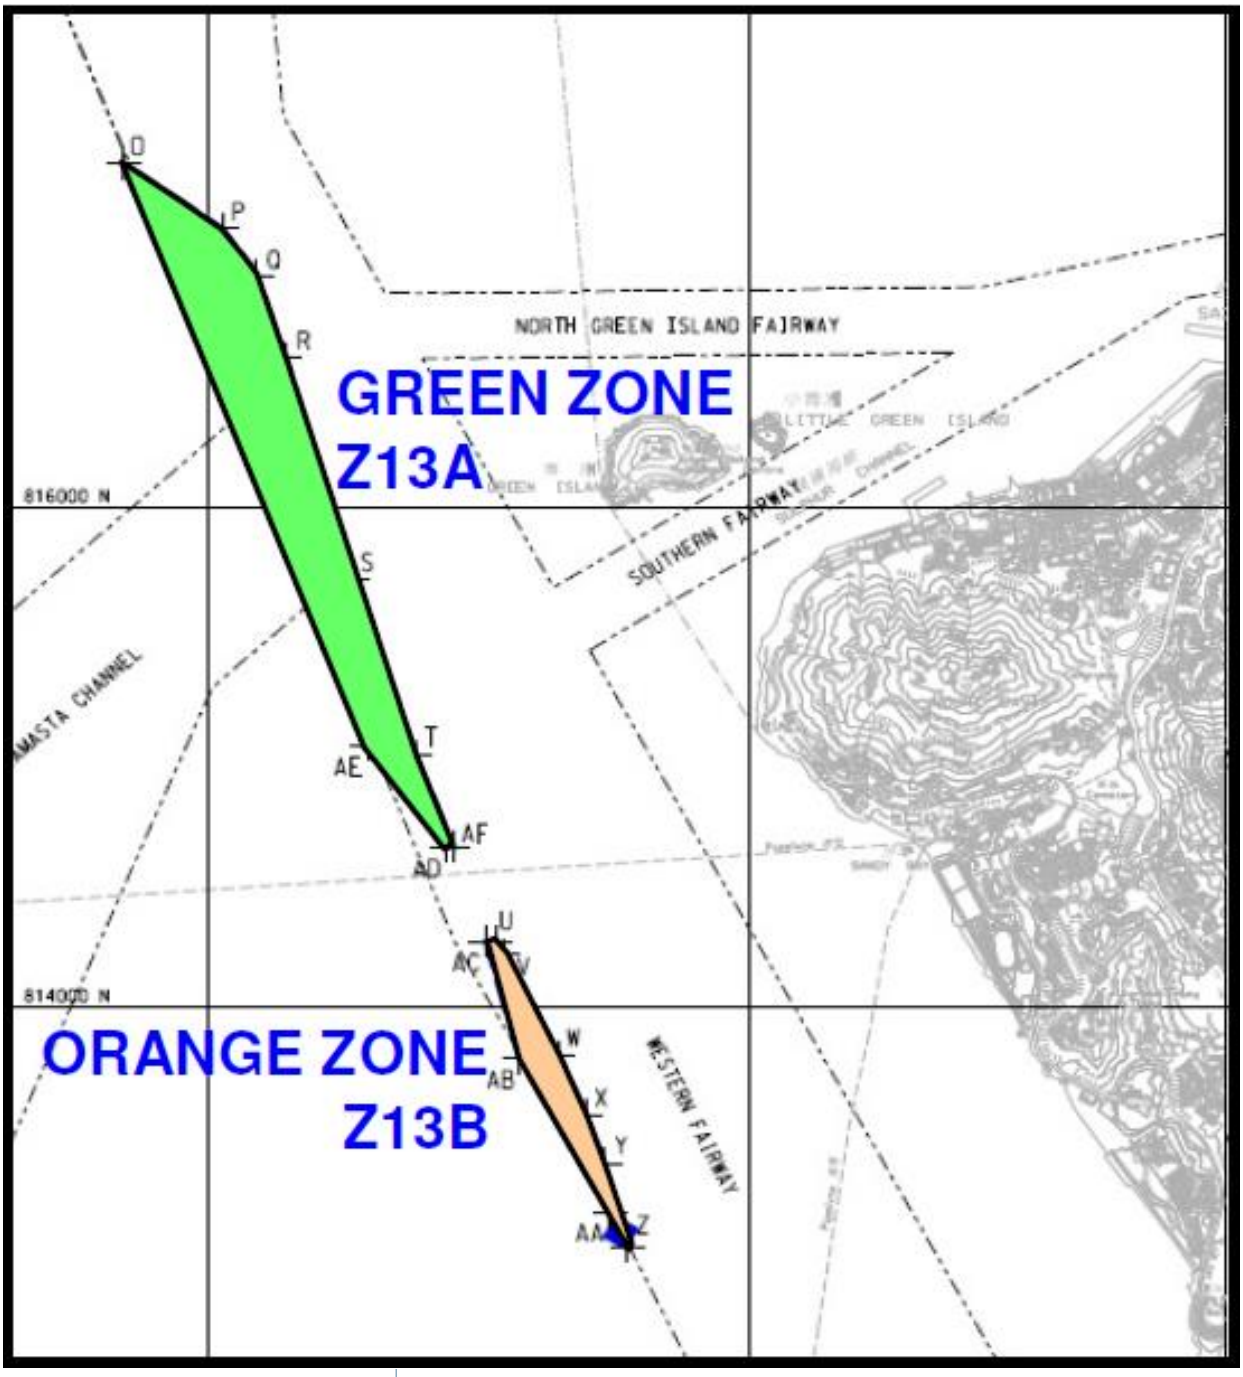


2.2.2 Given site constraints including location of hotspots requiring dredging and the need to avoid impacting operation of the container terminals, the specific location of the dredger will vary within the works area boundary.

Site Trial B

2.2.3 This site trial is proposed to be conducted at the southern part of the Project area within the Western Fairway, which represents the worst case potential impacts to WSRs located to the south and outside the container basin. The boundary of the works area for the site trial is within the green zone and orange zone as shown in **Figure 2.2**.

Figure 2.2: Boundary of Works Area for Site Trial B



2.2.4 The specific location of the dredger will vary within the works area boundary, which similarly reflects the conditions that would arise during operation phase maintenance dredging.

2.3 General Approach for Water Quality Monitoring

2.3.1 Water quality monitoring in line with the requirements specified in the EM&A Manual will be conducted during the site trials, however, some modifications are proposed primarily in relation to monitoring stations.

2.3.2 During the site trials, control and impact monitoring stations are proposed to be located within set distances from the dredging activity, i.e. the coordinate locations of these monitoring stations will change depending on the location of the dredger on that sampling event. The aim is to obtain a water quality profile near the dredging source for comparison against the control station results. The selected water quality monitoring stations representing WSRs (SR4, SR12 and SR13 for Site Trial A, and SR6, SR7 and SR8 for Site Trial B) would also be monitored. Other water quality monitoring stations representing sensitive receivers in the EM&A Manual are located further away from Site Trial A and Site Trial B, hence would be excluded given that the further away the receiver, the less influence by the Project and the more influence by other concurrent projects outside the Project area, which would hinder meaningful interpretation of the results.

2.3.3 Aside from monitoring stations, other water quality requirements including water quality parameters, equipment and sampling procedures will follow the requirements specified in the EM&A Manual.

2.4 Monitoring Stations

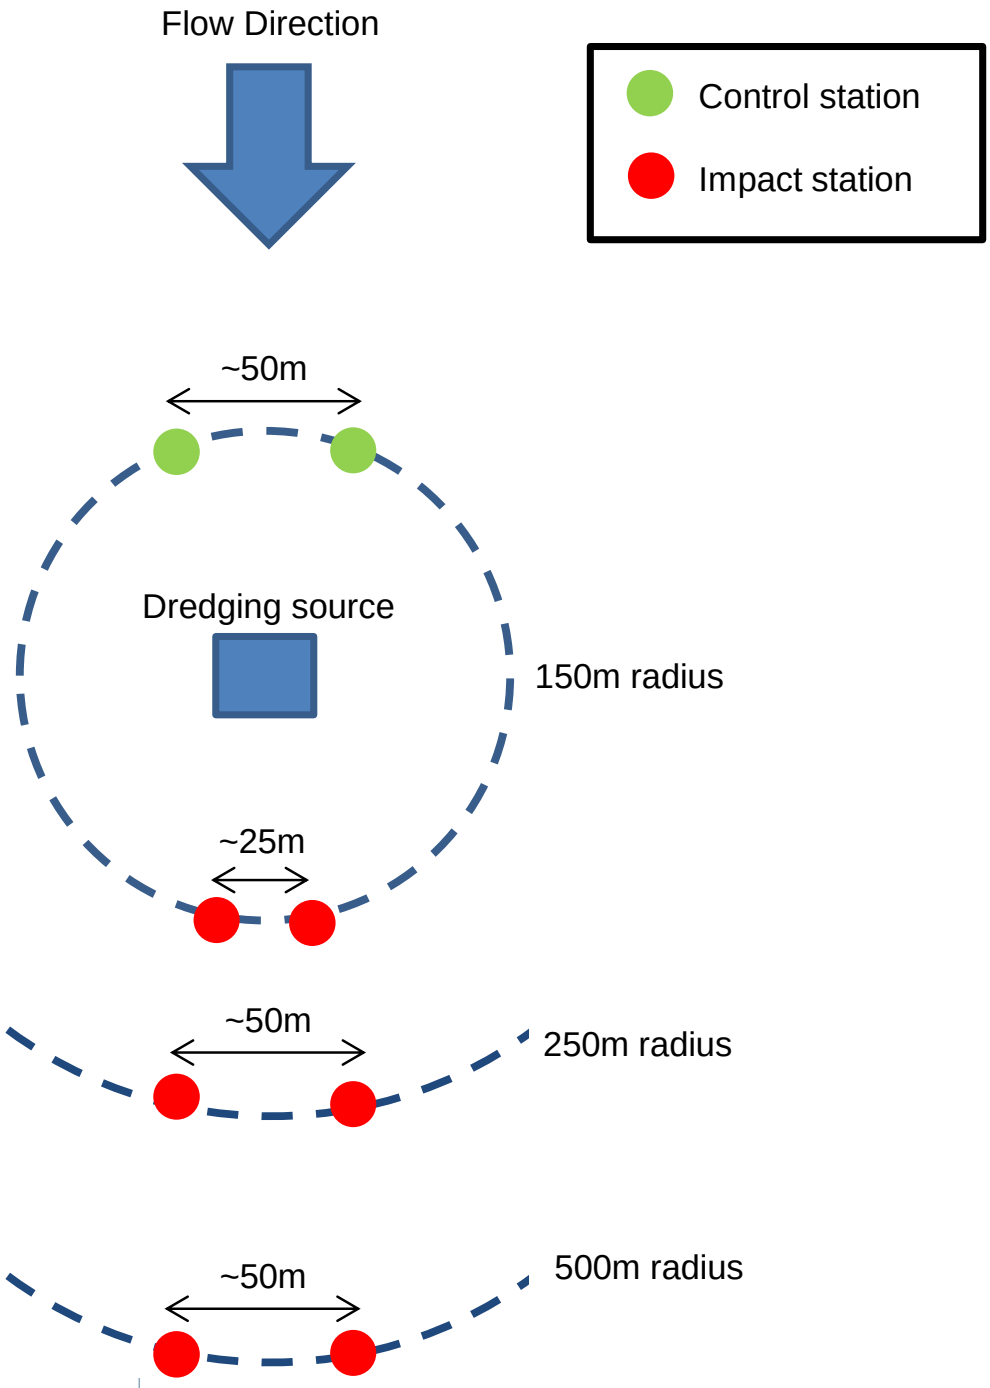
Control and Impact Monitoring Stations

2.4.1 Control and impact monitoring stations are proposed to be located at a fixed radius from the dredging activity. The nos. and locations are summarised in **Table 2.1** and illustrated in **Figure 2.3** below.

Table 2.1: Control and Impact Monitoring Stations at Dredging Source

Station Type	Number of Stations	Distance from Dredging Source
Control	2	150m (upstream)
1st Impact	2	150m (downstream)
2nd Impact	2	250m (downstream)
3rd Impact	2	500m (downstream)

Figure 2.3: Illustrative Layout of Control and Impact Monitoring Stations

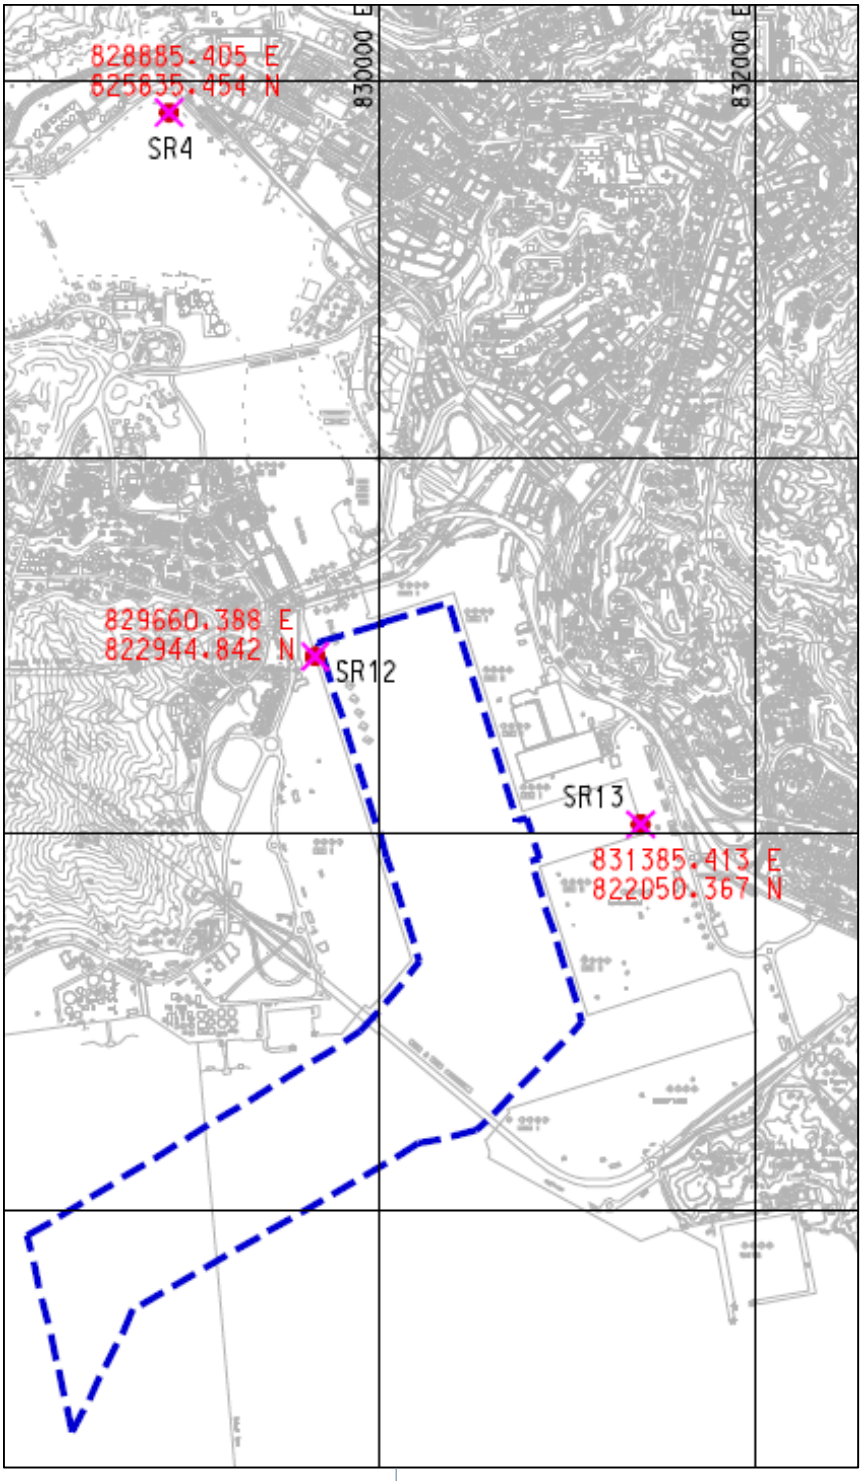


2.4.2 Digital Global Positioning Systems (GPS) shall be used during monitoring to ensure the monitoring vessels are at the correct locations before taking measurements. On-site verification of current direction shall be conducted for each monitoring station using a current meter to ensure impact monitoring stations and control stations are located appropriately downstream and upstream of the site trial respectively.

Sensitive Receiver (SR) Monitoring Stations

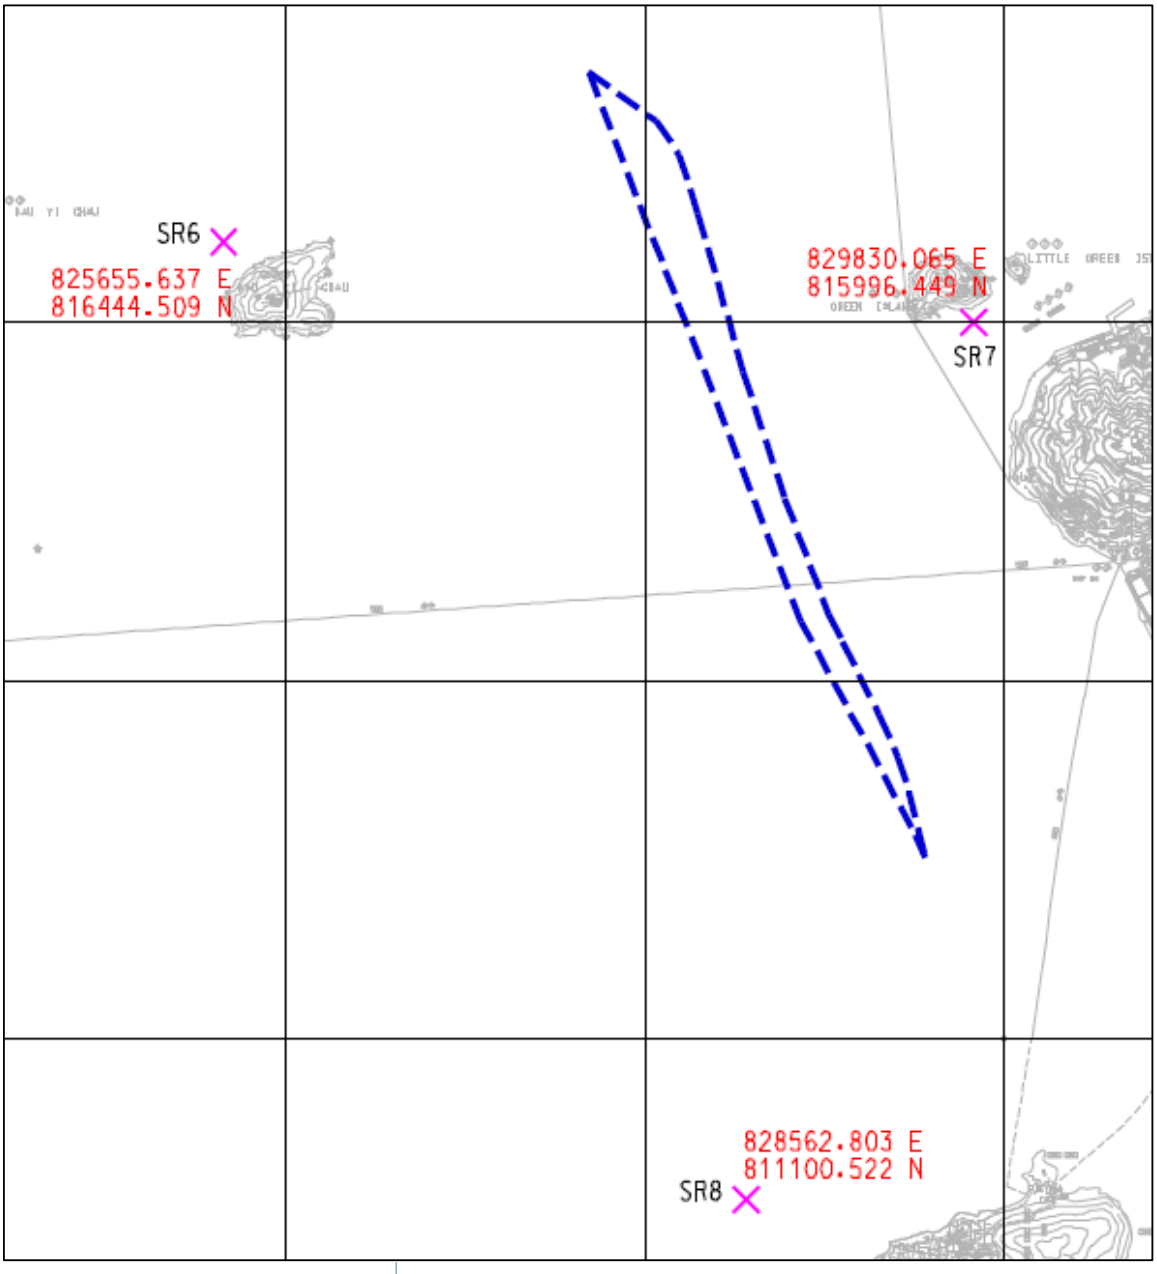
2.4.3 For Site Trial A, additional monitoring will be conducted in front of the intake points at three WSRs (SR4 – WSD flushing water intake at Tsuen Wan, SR12 – WSD flushing water intake at Tsing Yi and SR13 – EMSD cooling water intake for Kwai Chung Hospital), which represents the nearest water quality monitoring stations to this Site Trial A location under the EM&A programme. SR12 and SR13 require silt screens during operation phase. However, it should be noted that these two WSRs have existing permanent silt screens provided by the relevant owner in place. The locations of the water quality monitoring stations for Site Trial A are shown in **Figure 2.4**.

Figure 2.4: Location of Additional Monitoring Stations for Site Trial A



2.4.4 For Site Trial B, additional monitoring will be conducted at SR6 – Kau Yi Chau corals, SR7 – Green Island corals and SR8 – Shek Kok Tsui corals, which represents the nearest water quality monitoring stations to this Site Trial B location under the EM&A programme. The locations of the water quality monitoring stations for Site Trial B are shown in **Figure 2.5**.

Figure 2.5: Location of Additional Monitoring Stations for Site Trial B



2.5 Sampling Requirements

2.5.1 At the SR monitoring stations, sampling will be conducted before, during and after dredging. For the monitoring stations surrounding the grab dredger, sampling will be conducted during and after dredging.

2.5.2 Immediately prior to start of dredging, baseline water quality will be taken at the SR monitoring stations. During dredging, sampling at all monitoring stations shall commence only after 1 hour of continuous dredging, and shall be completed before the end of the dredging period. One hour after completion of dredging, the post-dredging water quality will be taken at all monitoring stations.

2.5.3 All measurements shall be taken at three water depths, namely, 1m below water surface, mid-depth and 1m above sea bed, except where the water depth is less than 6m, the mid-depth is omitted.

2.5.4 During the site trial, there should be no concurrent dredging activities within the Kwai Tsing Container Basin area, and no other marine vessels operating in the immediate vicinity. In the event that these conditions cannot be met during the 2-hour time window for the site trial, the trial works will be aborted and rescheduled.

2.6 Water Quality Monitoring Parameters

2.6.1 Parameters to be measured in-situ at each of the monitoring stations include:

1. Dissolved oxygen (DO) (% saturation)
2. Dissolved oxygen (DO) (mg/L)
3. Temperature (℃)
4. pH
5. Turbidity (NTU)
6. Salinity (ppt)
7. Water depth (m)

2.6.2 Parameters to be measured in the laboratory include:

8. Suspended solids (mg/L)
9. 5-day Biological oxygen demand (BOD_5) (mg/L)
10. *E.coli* (counts per 100ml)
11. Ammonia (NH_3-N) (mg/L) *(at SR4 and SR12 only)*

2.7 Sampling Procedures

2.7.1 Two consecutive measurements shall be taken for all in situ parameters according to the stated sampling method. The monitoring probe shall be retrieved out of water after the first measurement and then redeployed for the second measurement. Where the difference in value between the first and second measurement is more than 25% of the value of the first reading, the reading shall be discarded and further readings shall be taken. For laboratory measurements, replicate (2 nos. of) water samples shall be collected at the same depths for each sampling depth.

2.7.2 For each sampling event, monitoring location/position, time, tidal stages, weather conditions, sea conditions, and any special phenomena or work underway within and/or in the vicinity of the site trial shall be recorded in the format as specified in the Sample of In-situ Water Quality Monitoring Data Record Sheet in **Appendix B**.

2.7.3 Water samples for all monitoring parameters shall be collected, stored, preserved and analyzed according to Standard Methods, APHA 21st Edition.

2.8 Monitoring Equipment (for in-situ parameters)

Dissolved Oxygen and Temperature

2.8.1 DO and water temperature shall be measured in-situ by a DO/temperature meter. The instrument shall be portable and weatherproof using a DC power source. It shall have a membrane electrode with automatic temperature compensation complete with a cable. The equipment shall be capable of measuring:

- DO level in the range of 0 – 20 mg/L and 0 – 200% saturation
- Temperature of between 0 and 45 degree Celsius

2.8.2 Sufficient stocks of spare electrodes and cables shall be available for replacement where necessary.

pH Measurement

2.8.3 A portable pH meter capable of measuring a range between 0.0 and 14.0 shall be provided to measure pH under the specified conditions according to the Standard Methods, APHA.

Turbidity Measurement

2.8.4 Turbidity shall be measured in-situ by the nephelometric method. The instrument shall be portable and weatherproof and shall be operated using a DC power source. It shall have a photoelectric sensor capable of measuring turbidity between 0 – 1000 NTU.

Salinity Measurement

2.8.5 A portable salinometer with measuring range of 0 – 40 mg/L shall be used to determine the salinity of the water at each monitoring station.

Water Depth Detector

2.8.6 A portable, battery-operated echo sounder (Seafarer 700 or a similar approved instrument) shall be used for the measurement of water depth at each designated monitoring station.

Current Meter

2.8.7 A portable, electronic current meter (such as Valeport 108 MKIII current meter or product having equivalent functions and/or performance) shall be used for the measurement of current speed and direction at each designated monitoring station.

Calibration of In-situ Equipment

2.8.8 All in-situ monitoring instruments shall be calibrated and certified by a laboratory accredited under HOKLAS before use. Responses of sensors and electrodes shall be checked with certified standard solutions before each use.

2.8.9 Wet bulb calibration for a DO probe shall be carried out at least once per monitoring day. A zero check in distilled water shall be performed with the turbidity probe at least once per monitoring day. The probe shall then be calibrated with a solution of known NTU.

2.9 Water Sampling Equipment (for laboratory parameters)

2.9.1 A water sampler comprising a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends, shall be used. The sampler shall have a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth.

2.9.2 Water samples for measurements in laboratory shall be collected in high density polythene bottles, packed in ice (cooled to 4°C without being frozen), and delivered to the laboratory on the day of collection where possible, and no later than the morning after the day of collection (if the sampling is completed after the laboratory's closing time).

2.10 Laboratory Analysis

2.10.1 Laboratory analysis shall be carried out in a HOKLAS or other accredited laboratory. Water samples of about 2L shall be collected at the monitoring stations for carrying out the laboratory determinations. The determination work shall start within 24 hours after collection of the water samples. The analysis shall follow the methods as summarised in **Table 2.2** below.

Table 2.2: Water Quality Parameters for Laboratory Testing

Parameter	Determination Method*	Reporting Limit
Suspended Solids	APHA 2540D	1 mg/L
Biological Oxygen Demand	APHA 5210B	1 mg/L
E.coli	Membrane Filtration (procedure following DoE (1983) The Bacteriological Examination of Drinking Water Supplies, 1982 Sections 7.8 and 7.9)	1 cfu/100mL
Ammonia Nitrogen	APHA 4500-NH3	0.01 mg/L

*The stated determination method is the recommended method. Any alternative methods proposed by the laboratory must be HOKLAS accredited and recognised as equivalent to the recommended method.

2.10.2 The QA/QC details shall be in accordance with requirements of HOKLAS or another internationally accredited scheme. The laboratory shall carry out analysis of known standards for quality assurance. The QA/QC results shall be reported as part of the laboratory testing results report.

2.10.3 Remaining samples after analysis shall be kept by the laboratory for at least 1 month in case repeat analysis is required.

2.11 Analysis and Reporting

2.11.1 Findings from the site trials will be evaluated to determine the acceptability of water quality conditions immediately surrounding the

dredger in the absence of silt curtains, and at the representative SR monitoring stations. A site trial report will be prepared and will contain the following:

- Final location plan of the site trials and water quality monitoring stations;
- In-situ monitoring and laboratory testing results (in summary and full dataset); and
- Findings from the evaluation of water quality results and recommendations for changes to the EM&A programme, if any.

A. Review of Past Dredging and Water Quality at the Container Basin 20
B. Sample of In-Situ Water Quality Monitoring Data Record Sheet 33

A. Review of Past Dredging and Water Quality at the Container Basin

A.1 Introduction

A.1.1 The Kwai Tsing container basin and its container terminals / berthing areas has historically required regular maintenance dredging to ensure safe passage and berthing of container vessels. Such existing maintenance dredging activities have been conducted without the deployment of silt curtains surrounding the dredgers, while the nearest WSRs (SR12 and SR13) have continued to operate with existing silt screens in place.

A.1.2 With operation phase of the Project, maintenance dredging activities similar to those that have historically been conducted will take place. In light of existing maintenance dredging without silt curtains (by others) and given that the nearest WSRs have been able to operate normally with just the existing silt screens as measure to reduce SS at the intake, the need for, and significance of SS reduction that may be accrued from deployment of silt curtains surrounding the grab dredger of the Project during operation phase maintenance dredging is worth being further investigated.

A.1.3 This section reviews the available past information on dredging and water quality at the container basin to provide an initial view as to the likely significance of SS generated by maintenance dredging activities in the absence of silt curtains.

A.2 List of Past Information Available

A.2.1 The following types of information / data has been compiled for the purpose of this review:

- Past maintenance dredging activities by Port Works Division (CEDD) within the container basin and associated water quality data
- Water quality data during the Project's construction phase – specifically the water quality within the container basin during periods of dredging and non-dredging by the Project and by terminal operators in the vicinity of the Project

A.2.2 The following sections present the findings of the review for each of the aforementioned datasets.

A.3 Past Maintenance Dredging by Port Works Division

A.3.1 Prior to the Project, maintenance dredging within the common areas of the container basin (i.e. areas not under the responsibility of individual terminal operators) has been carried out periodically by CEDD, using grab dredgers without silt curtains in place. While there is no statutory requirement for conducting environmental monitoring and audit during these maintenance dredging contracts, CEDD has nevertheless undertaken voluntary EM&A to monitor the water quality during the works.

A.3.2 The most recent maintenance dredging by CEDD before the Project commenced was in August to November 2012, for a total dredge volume of approx. 44,000m^3. The areas that were dredged and the water quality monitoring station locations are shown in **Figure A.1**.

A.3.3 A total of four monitoring stations (CT1, CT2, C1 and C2) were selected for water quality monitoring. CT1 and CT2 represented control stations during flood and ebb tide respectively.

A.3.4 Baseline monitoring was conducted in May 2012 to obtain the pre-maintenance dredging conditions and determine the action and limit levels for water quality monitoring. The action and limit levels for SS and the calculated reference WQOs (based on 30% above the 90th percentile of baseline data) are shown in **Table A.1**.

Table A.1: Compliance Levels based on the Baseline Monitoring Results

Suspended Solids (SS)	Flood Tide	Ebb Tide
Action Level	9.0 mg/l or 120% of upstream control station at same tide of the same day	
Limit Level	9.2 mg/l or 120% of upstream control station at same tide of the same day	
Reference WQO	CT1 – 9.3 mg/l	CT2 – 10.4 mg/l

Source: Action and Limit Levels are taken from the Baseline Water Quality Monitoring Report for Contract No. CV/2010/03 (Works Order No. MD/029/10)

A.3.5 During flood tides, CT1 is the designated control station, while both C2 and CT2 are located downstream of the maintenance dredging activities, hence are impact stations. During ebb tides, CT2 is the control station while C1 and CT1 are impact stations. The impact water quality monitoring results are shown in **Figure A.2** and summarised in **Table A.2**.

Figure A.1: Maintenance Dredging Locations and Locations of Water Quality Monitoring Stations

Post-Dredging						
Mean SS	7.4	7.1	7.1	7.5	6.5	7.3
Median SS	7.6	7.4	7.3	7.7	7.0	7.5
Max SS	8.7	8.0	8.3	8.5	8.3	8.8

Source: Derived from data extracted from the Monthly EM&A Reports for Contract No. CV/2010/03 (Works Order No. MD/029/10)

Evaluation of Results

A.3.6 In **Figure A.2**, it can be seen that there are somewhat larger differences between control and impact station results during the early period of maintenance dredging (in August to early September), and most of the action / limit level exceedances occur during this period, particularly for flood tides. For the remainder of the time during maintenance dredging, there is less differentiation between control and impact monitoring results.

A.3.7 When comparing between the impact monitoring summary data, there is generally little variation between control and impact stations in terms of mean, median and maximum SS levels over the duration of the maintenance dredging. In terms of exceedances, only a small number of exceedances arise due to differences between same day control

station versus impact station results, while no exceedances arise due to fixed threshold values from the action, limit and reference WQOs being exceeded.

A.3.8 These results suggest a lack of clear cause and impact, as days when impact stations show SS results that are below the control station result of the same day are just a prevalent as those days when impact station results are higher than the corresponding control. The only period when cause and impact is more obvious is the period of approx. 2 weeks in mid-August to early September (out of the total of approx. 11 weeks duration of impact monitoring).

A.3.9 It is interesting to note that in general, the post-dredging water quality monitoring data show larger mean and median SS values compared to the data obtained during maintenance dredging. As both control and impact stations during post-dredging water quality monitoring reflect this, the cause of the generally higher post-dredging SS levels do not appear to be project-related.

Conclusions

A.3.10 Evaluation of water quality data for past maintenance dredging by CEDD at the container basin shows that there is no clear impact on water quality arising from maintenance dredging in the absence of silt curtains. While a few exceedances of same day control were identified during impact monitoring, there was no exceedance of baseline or reference WQO threshold values throughout the duration of maintenance dredging, and the overall mean, median and maximum SS results suggest no discernible differences between control and impact station results.

A.3.11 Based on these results, it can be concluded that no adverse water quality impact arose due to this past maintenance dredging activity, and for future maintenance dredging of similar scale and scope, it can be expected that the risk of adverse water quality impacts in the absence of silt curtains is similarly low.

A.4 Water Quality during the Project's Construction Phase (during dredging and non-dredging)

A.4.1 As part of the Project's construction phase EM&A requirements, regular water quality monitoring has been conducted at representative locations surrounding the Project area over the past two years (since

April 2014). The purpose of this water quality monitoring is to monitor the potential impact of construction phase dredging (with silt curtain surrounding the grab dredger in place).

A.4.2 Within the container basin, maintenance dredging is required to be conducted by the terminal operators at their berthing areas, which are outside of the Project area. Depending on the Project's construction schedule (i.e. whether dredging is occurring within the container basin or at the northern or western fairways part of the Project area) and the ad hoc maintenance dredging schedule by terminal operators, the following three scenarios may be observed within the container basin during the dates when water quality monitoring is conducted by the Project:

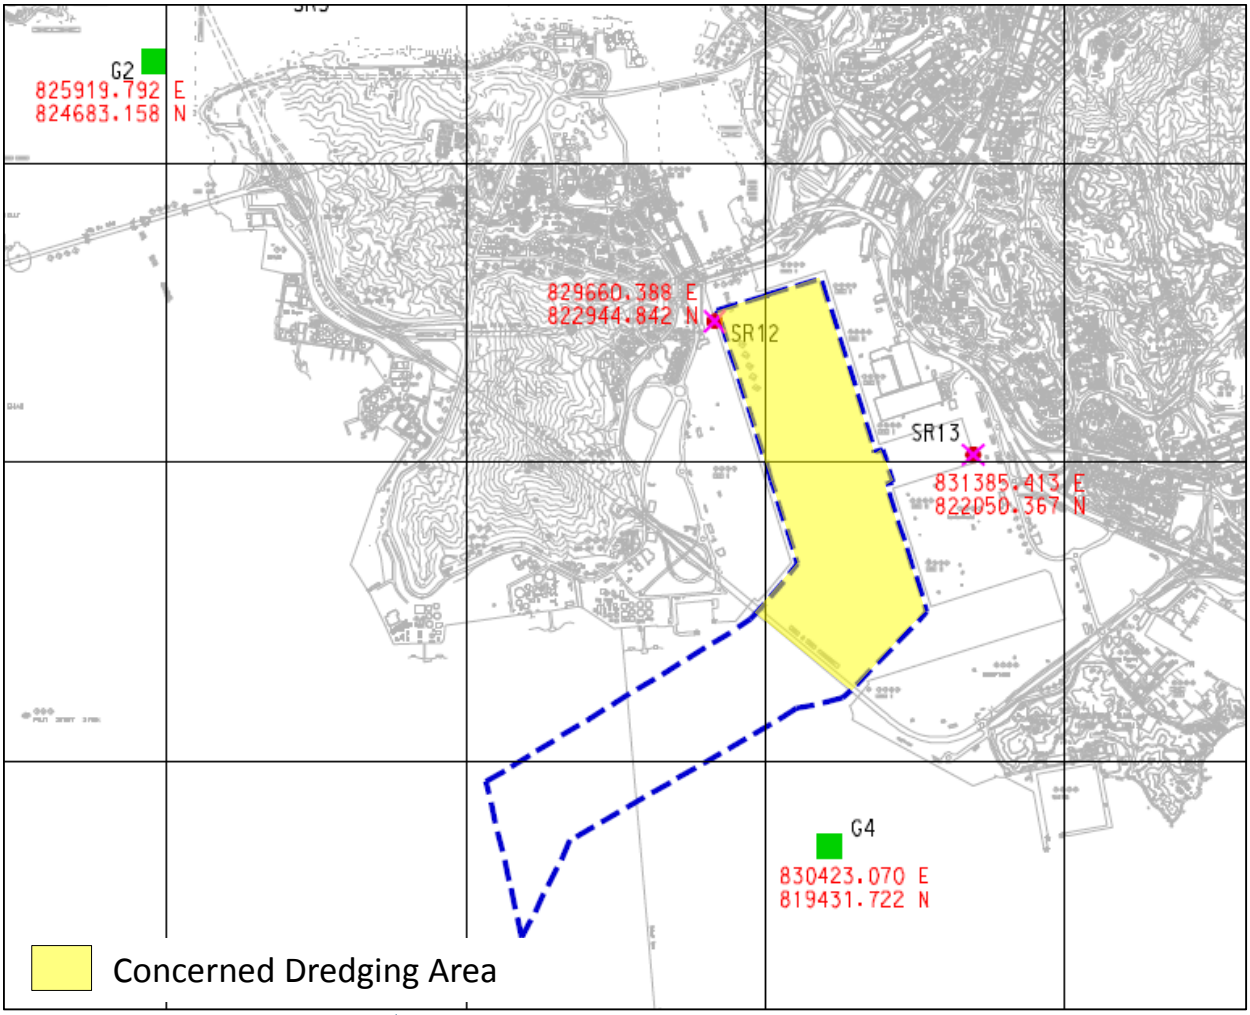
- Scenario A - active dredging within the container basin by the Project without concurrent maintenance dredging by terminal operators
- Scenario B – no dredging within the container basin by the Project while there is active maintenance dredging by terminal operators
- Scenario C - no dredging within the container basin by the Project and no maintenance dredging by terminal operators

A.4.3 Maintenance dredging by terminal operators is conducted without silt curtains. For WSRs located within the container basin (SR12 and SR13), the observed SS at these WSRs are expected to be influenced by the different scenarios identified above.

Approach for Evaluation of Water Quality

A.4.4 Water quality data from SR12 and SR13 was evaluated with respect to these three different scenarios. Water quality data from gradient stations G2 and G4 were also evaluated as references for ambient upstream (control) water quality. The area defined as 'within the container basin' is shown in **Figure A.3**. The exact dredging location of the Project and by terminal operators will vary within this container basin area.

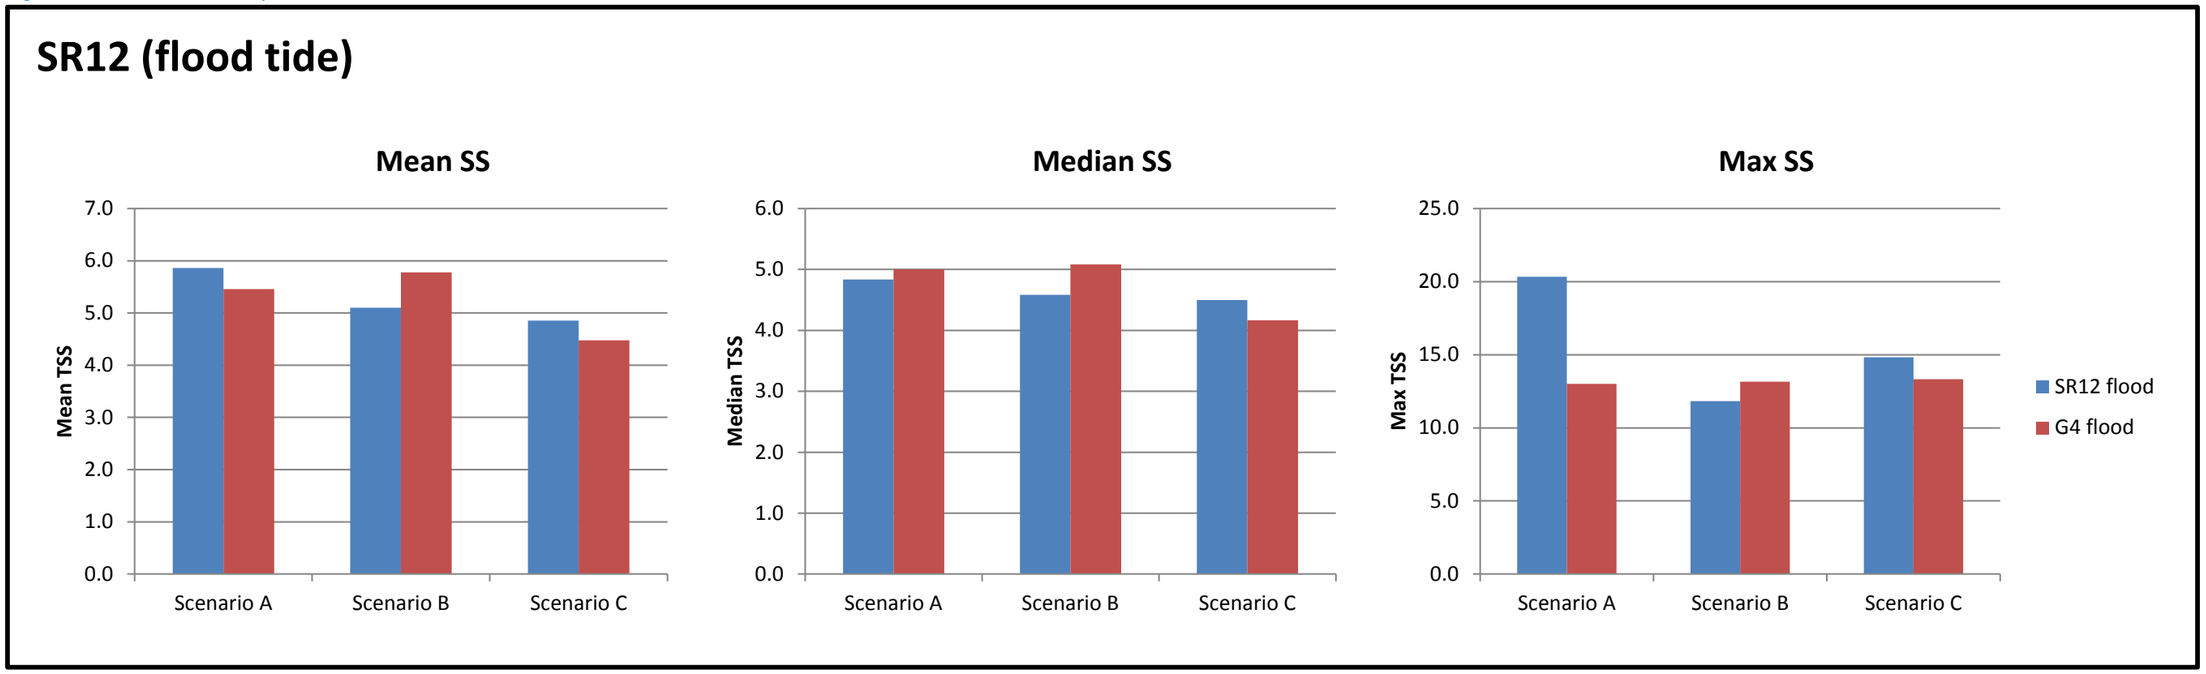
Figure A.3: Location of Water Quality Monitoring Stations and the Dredging Area of Concern



A.4.5 By comparing between the observed water quality for each of the three scenarios (A, B, and C), it is possible to infer the SS contribution due to different activities (with and without the Project's dredging activities within the container basin, and with and without maintenance dredging by terminal operators).

A.4.6 Water quality data covering the period from April 2014 to February 2016 was grouped to determine the mean, median and maximum SS for each scenario. The results are tabulated in **Table A.3** to **Table A.5** and illustrated in **Figure A.4** and **Figure A.5**.

Figure A.4: Results of Comparison between Scenarios for SR12 and the Gradient Stations



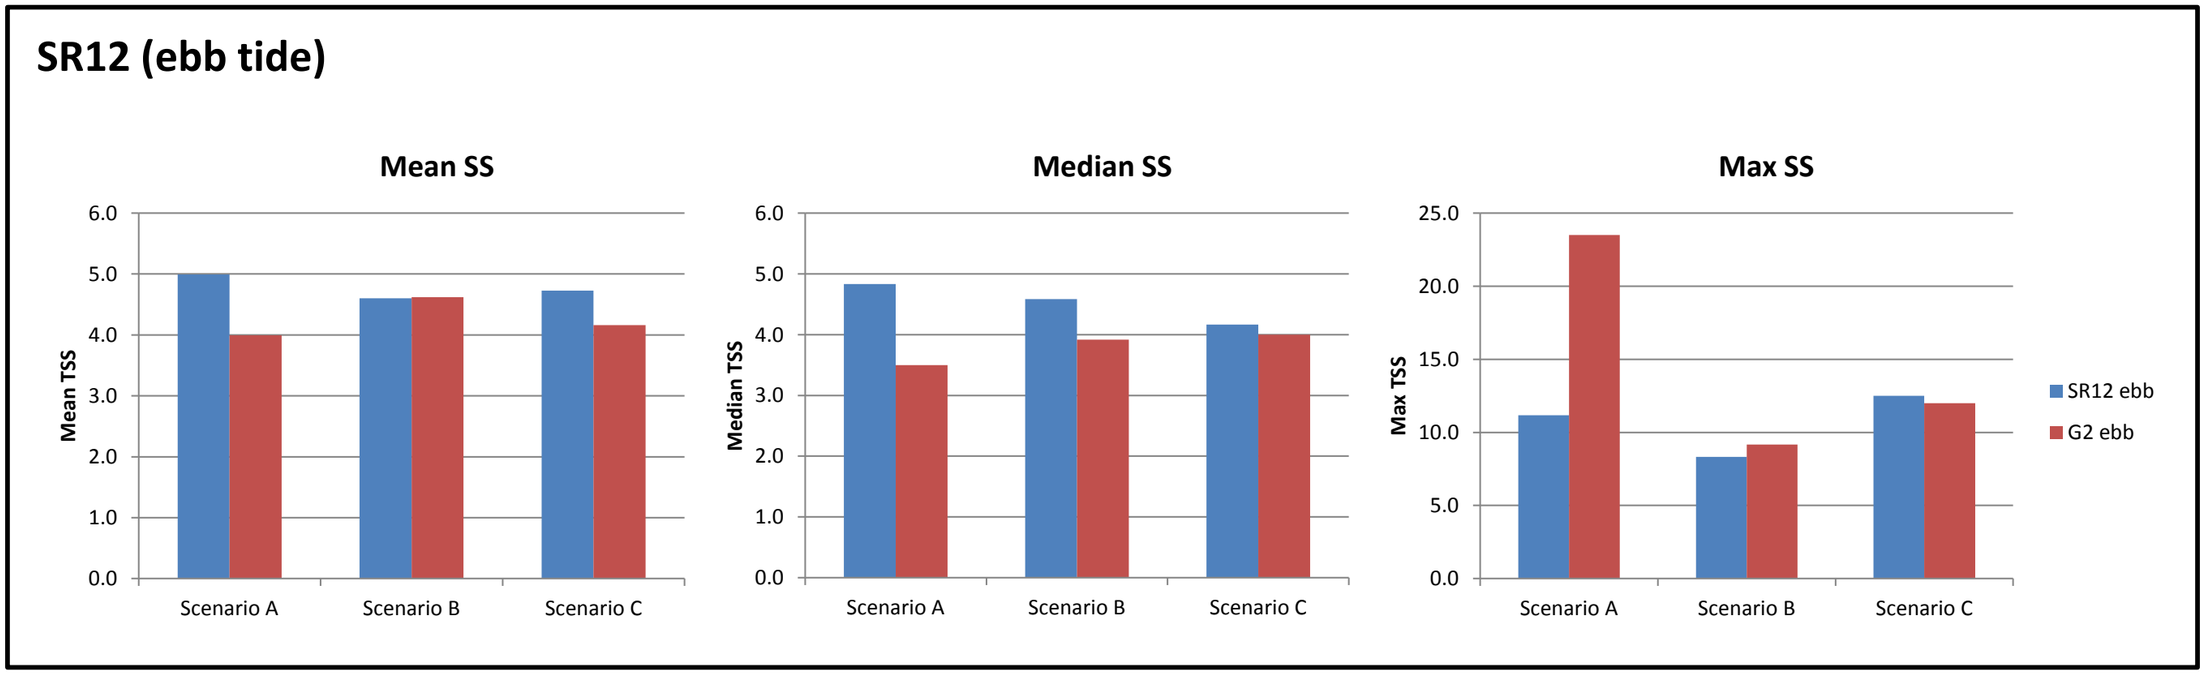


Figure A.5: Results of Comparison between Scenarios for SR13 and the Gradient Stations

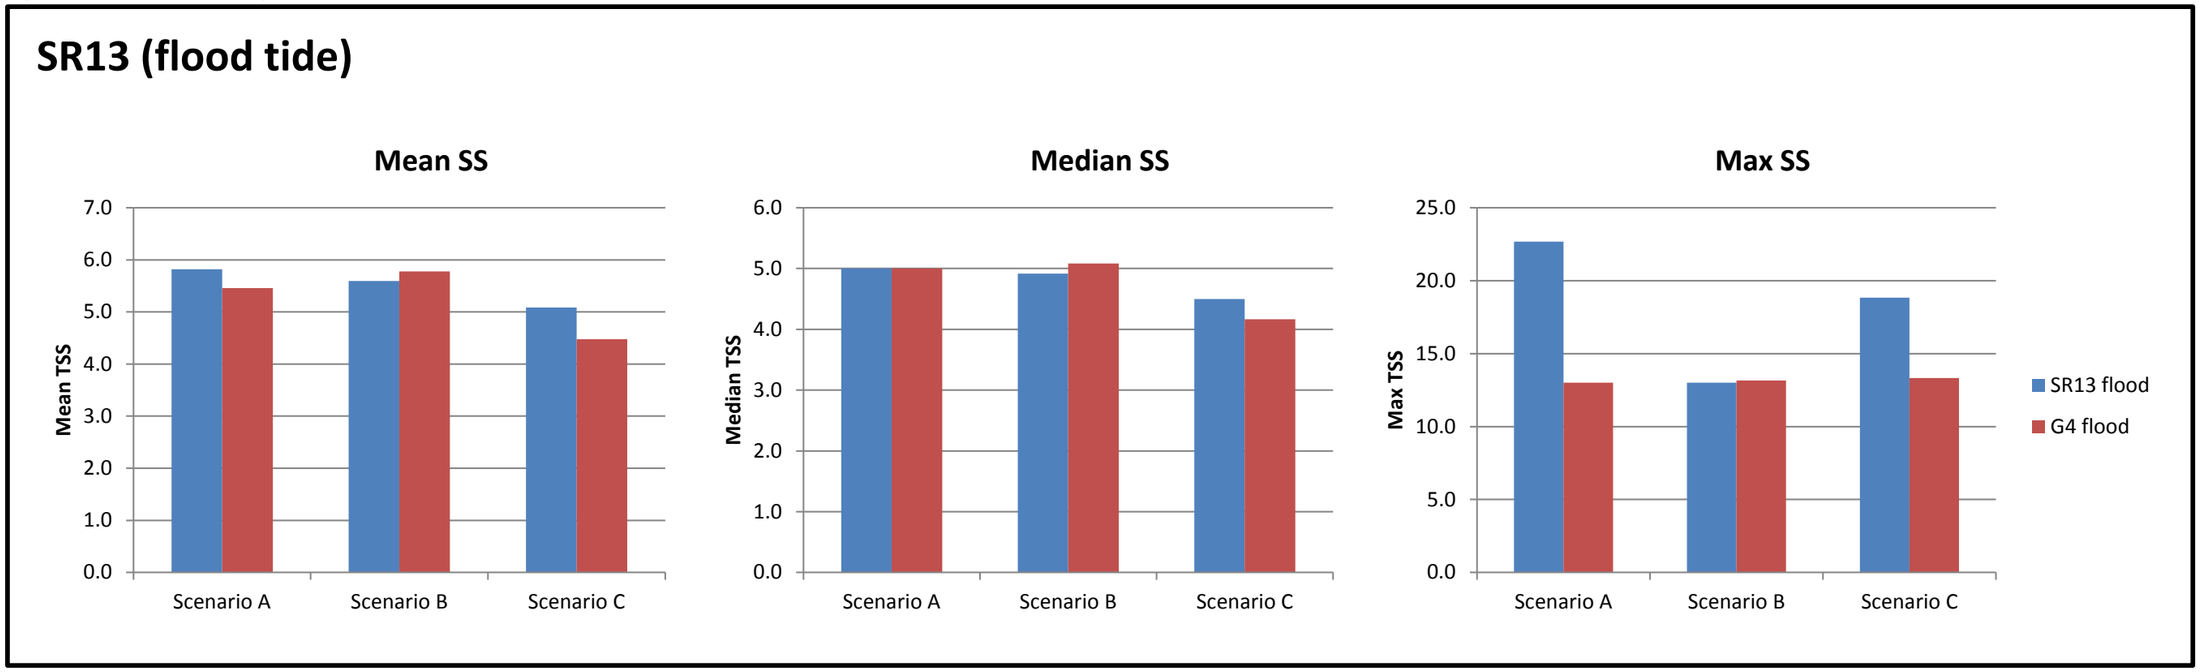

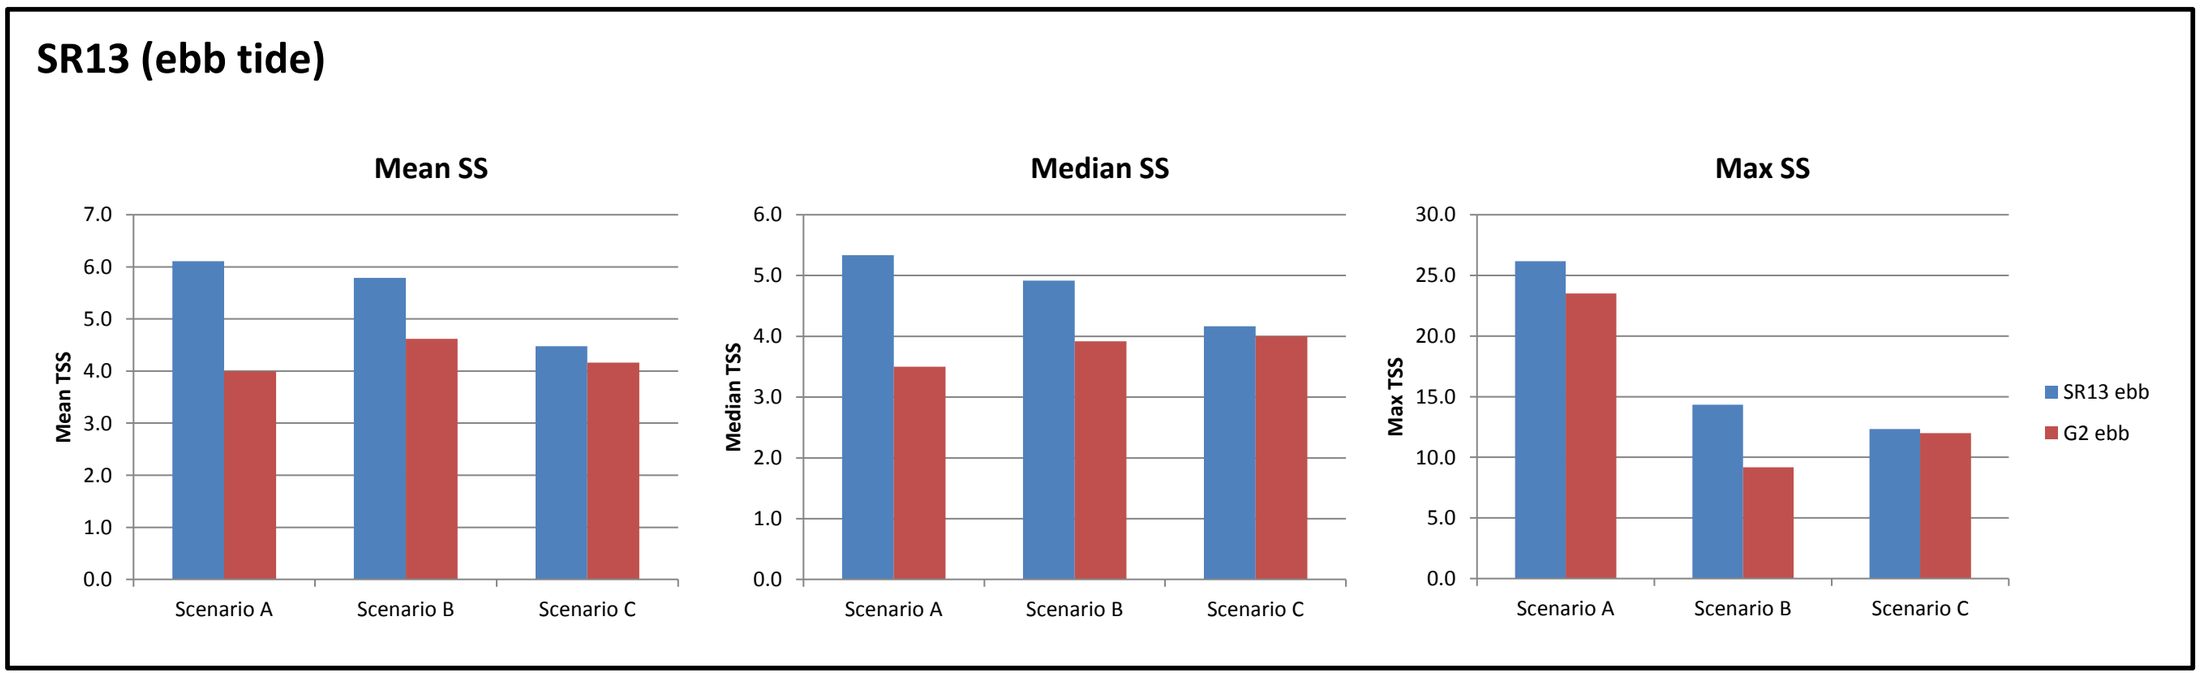

Table A.3: Summary of Results at SR12

Flood Tide	Scenario A	Scenario B	Scenario C	Ebb Tide	Scenario A	Scenario B	Scenario C
Mean SS	5.9	5.1	4.9	Mean SS	5.0	4.6	4.7
Median SS	4.8	4.6	4.5	Median SS	4.8	4.6	4.2
Maximum SS	20.3	11.8	14.8	Maximum SS	11.2	8.3	12.5
No. Samples >10mg/l	14	1	5	No. Samples >10mg/l	3	0	2
No. Samples> Indicative WQO*	6	0	9	No. Samples> Indicative WQO*	11	0	13
Total No. Samples	93	18	136	Total No. Samples	93	18	133

Note: * The number of samples greater than WPCO WQO refers to samples with values that are higher than the reference WQO of the gradient (control) station for each scenario for flood and ebb tides respectively, as shown in Table A.5.

Table A.4: Summary of Results at SR13

Flood Tide	Scenario A	Scenario B	Scenario C	Ebb Tide	Scenario A	Scenario B	Scenario C
Mean SS	5.8	5.6	5.1	Mean SS	6.1	5.8	4.5
Median SS	5.0	4.9	4.5	Median SS	5.3	4.9	4.2
Maximum SS	22.7	13.0	18.8	Maximum SS	26.2	14.3	12.3
No. Samples >10mg/l	9	1	10	No. Samples >10mg/l	10	1	2
No. Samples> Indicative WQO*	5	1	15	No. Samples> Indicative WQO*	17	1	11
Total No. Samples	93	18	136	Total No. Samples	93	18	133

Note: * The number of samples greater than WPCO WQO refers to samples with values that are higher than the reference WQO of the gradient (control) station for each scenario for flood and ebb tides respectively, as shown in Table A.5.

Table A.5: Summary of Results at Gradient (Control) Stations

Flood Tide (G4)	Scenario A	Scenario B	Scenario C	Ebb Tide (G2)	Scenario A	Scenario B	Scenario C
Mean SS	5.5	5.8	4.5	Mean SS	4.0	4.6	4.2
Median SS	5.0	5.1	4.2	Median SS	3.5	3.9	4.0
Maximum SS	13.0	13.2	13.3	Maximum SS	23.5	9.2	12.0
90th Percentile	9.5	9.4	6.6	90th Percentile	6.5	7.0	6.0
Indicative WQO (30% of 90th percentile)	12.3	12.2	8.6	Indicative WQO (30% of 90th percentile)	8.5	9.1	7.8
Total No. Samples	93	18	136	Total No. Samples	93	18	133

Note: The WQO specified in this table is based on the water quality data from the gradient stations on the basis of assuming the upstream gradient (control) acts as baseline water quality for comparison purposes only.

Evaluation of Results

A.4.7 As can be expected, the lowest mean and median SS typically occurs during Scenario C, when there is no dredging. However, the mean and maximum SS at SR12 during ebb tides do not quite conform to this, which is not unusual when considering that SR12 is upstream of both the Project and maintenance dredging by terminal operators during such ebb tides, hence the water quality at SR12 during ebb tides may not be notably affected by dredging activities as represented in Scenario A and B.

A.4.8 Of the three scenarios, a comparison between Scenario B and Scenario C (with and without maintenance dredging by terminal operators in the absence of the Project) is the most relevant for elucidating the potential change in ambient SS at the WSRs in the event of operation phase maintenance dredging by the Project without silt curtains in place.

A.4.9 As shown in the results for SR12 during flood tides, there is marginal to no difference between the mean and median SS observed at SR12 for Scenario B and Scenario C. However, the results at SR13 show more notable differences between Scenario B and Scenario C, particularly during ebb tides, though the difference in SS between the two scenarios is less than 2 mg/l SS on average and as maximum.

A.4.10 It should be noted that SR13 is located closer to the berthing areas of the terminal operators compared to SR12, which is where the maintenance dredging by terminal operators would take place. The specific location of SR13 also means that it is more sheltered from the currents during flood tides, and conversely more exposed to the currents during ebb tides, which may explain the more significant differences observed in the ebb tide results.

A.4.11 These findings suggests that while maintenance dredging by terminal operators (without silt curtains) would increase the SS on average, this increase is less than 2 mg/l in general, and the effects are relatively localised.

A.4.12 In terms of compliance with water quality objectives for SS (10 mg/l for WSD's intakes), the mean and median values from all scenarios are less than 10 mg/l, while all maximum values at SR12 and SR13 exceed 10 mg/l (except at SR12 during ebb tides). Ambient water quality plays a key role, and it appears that non-compliance of 'indicative' WQOs at

SR stations is just as likely to arise when there is no dredging (Scenario C) compared to when there is dredging (Scenarios A and B) within the container basin.

A.4.13 Separately, it is interesting to note that the mean, median and maximum SS observed from the upstream gradient stations are not always less than those at the SR stations, and are often similar in magnitude to the SR station result (except generally for SR13 during ebb tides).

A.4.14 Overall, these results suggest that maintenance and/or Project dredging activities are not necessarily significant sources of SS to these SR stations.

Conclusions

A.4.15 Comparison of the three scenarios within the container basin has provided additional insight into the dynamics between dredging activities with and without silt curtains in place, and the associated effect on SS. While certain patterns / trends are identified, the findings are not considered to be conclusive, due to various uncontrolled variables (such as sample size, dredging locations, quantities and durations) that add to the uncertainties of the summarised results.

A.4.16 Overall, this evaluation does not directly determine the acceptability of future maintenance dredging by the Project in the absence of silt curtains, but it also cannot rule out this possibility. A site trial would enable more controlled variables which would allow SS release and dispersion from grab dredging in the absence of silt curtains to be better defined, in order to obtain conclusive results.
