3.8	2.9		Use of Silt Screens	Minimize the effect of potential increase in SS levels at the seawater intakes	Contractor	WSD8, WSD9 and EMSD1	Construction Phase	
		A1	Silt Screens shall be installed at the flushing water intakes WSRs WSD1, WSD8~~, WSD9~~ and EMSD1 to minimise the effect of potential increase in SS levels at the seawater intakes.					Implemented
3.8	2.9		Use of Silt Curtains	Minimize the release of suspended soil from the dredging area	Contractor	Construction Work Sites	Construction Phase	
		A2	To minimize the potential SS impact from dredging, deployment of silt curtains around the grab dredgers is recommended; and Before commencement of dredging works, the holder of the Environmental Permit shall submit detailed proposal of the design and arrangement of the frame type silt curtain to EPD for approval.					Implemented
3.10	2.9	A3	Water Quality Monitoring Program	Perform water quality monitoring at sensitive receivers during construction phase	ET	Monitoring Locations as stated in Table 2.1 of the EM&A Manual	Construction Phase	
			Water quality monitoring shall be carried out in accordance with Section 2 of the Environmental Monitoring and Audit (EM&A) Manual. Event and Action Plan (EAP) for water quality shall be followed in case of any exceedance in action and limit level.					Implemented
3.8 (EP Ref 3)	-		Dredging Operation	Minimize potential adverse effect as a result of dredging activities	Contractor	Construction Work Sites	Construction Phase	
		A4	Only two types of dredgers are allowed for this Project: (a) grab dredger with closed grab, and (b) ~~cutter suction dredger~~ spud pole grab dredger.					Implemented
		A5	The speed of any construction vessels shall not exceed 10 knots when passing through the area of the Project.					Implemented

1. Introduction

Under the Contract No. CV/2013/04, China International Water & Electric Corporation Limited (CIWE) was appointed as the main contractor for the dredging works, to dredge tentatively 4.0 million cubic metres of sediment from the seabed of Kwai Tsing Container Basin, as well as portions of Northern Fairway and Western Fairway, to provide sufficient depth of container basin and approach channel to Kwai Tsing Container Terminal (KTCT) for the safe navigation of Ultra Large Container Ships (ULCS).

The Civil Engineering & Development Department, HKSAR (CEDD) was the project proponent. Mott MacDonald Hong Kong Ltd. (MMHK) was commissioned by CEDD as the Engineer for the Project. Ramboll Environ Hong Kong Limited (REHK) and MateriaLab Consultants Limited (MCL) were appointed as the Independent Environmental Checker (IEC) and Environmental Team (ET) respectively in the Project in accordance with Environmental Permit No. EP-426/2011/A condition 2.1 and 2.2. The EM&A programme under this Contract is governed by EP-426/2011/A, EM&A Manual (AEIAR-156/2010) and EM&A TIN (EPD Letter Ref: (34) in Ax(1) to EP2/N3/C/57Pt.7)).

2. Progress of the Construction Programme

Refer to the letter (attached in **Appendix A**) from the MMHK (ref. PEJ/CMH/SP/il/C259053/M15/900/L-0314) dated 27 May 2016, partial of Section 1 of Works were substantially completed on 28 April 2016 (excluded the remaining works including rock excavation outside Berth KC5 and Tsing Yi Submarine Outfall).

3. Purpose of the Proposal

Refer to the letter (attached in **Appendix A**) from CIWE (Ref: CV201304/M1a/2992/KO/pl), there will be no marine construction works carried out until the confirmation of execution of rock excavation outside Berth KC5 or the confirmation on the way forward of Tsing Yi Submarine Outfall, therefore the marine construction works has been temporarily suspended from 13 August 2016 (the Site Trial was delayed due to typhoon) until further notice.

In accordance with EM&A Manual (AEIAR-156/2010) section 2.1.6 "*During the course of the marine construction works, impact monitoring shall be undertaken at all monitoring stations three working days per week (except for monitoring of synthetic detergent which is one day per month), at mid-ebb and mid-flood tides, with sampling /measurement*.", as the marine construction works has been temporarily suspended from 13 August 2016 and will be resumed, tentatively, in the early November 2016, MCL is appointed to propose temporary suspension of the current impact water quality monitoring until the early November 2016.

The impact water quality monitoring works will be resumed 3 working days per week, tentatively, in early November 2016 based on the Engineer's latest estimation. A proposed routine water quality monitoring schedule in November 2016 is attached in **Appendix B**.

24-hour water quality monitoring is retained during the temporary suspension of marine construction works period according to the EP-426/2011/A condition 3.1 (g), "*the Permit Holder shall conduct 24-hour enhanced environmental monitoring and audit of water quality parameters at the four Fish Culture Zones i.e. Ma Wan (F1), Lo Tik Wan(F2), Sok Kwu Wan (F3), Cheung Sha Wan (F4), and three flushing or cooling intakes i.e. Tsing Yi (WSD1), Tsuen Wan(WSD8) and Kwai Chung Hospital (EMSD1) …<u>during the construction period</u>*.". As the removal of seabed rock material outside berth KC5 and the dredging works around Tsing Yi Submarine Outfall have not been completed, therefore the 24-hour water quality monitoring is retained until all the marine construction works of this Project have been completed and agreed with EPD.

The Event and Action Plan specified in the EM&A Manual will be followed as usual during the suspension of marine construction works. All monitoring data obtained during the no marine construction works will be reported in the monthly EM&A report for the project.

Since at the beginning of the water quality monitoring works, WSD9 - WSD Flushing Water Intake Near Hong Kong Garden, which was mentioned in the agreed EIA Report (AEIAR-156/2010), i.e. SR1, had been verified on site that the flushing water intake point did not exist. Therefore SR1 is proposed to be removed in the future water quality monitoring works if the marine construction works are resumed.
