Notes:

1. Ammonia measurements and samples were taken at SR4, SR12, C1A, C2A only;
   UIA: In-situ unionized ammonia was calculated from in-situ measurement of NH_3-N, temperature, pH and salinity;
   Laboratory determined unionized ammonia was calculated from analysed NH_3-N from water samples and in-situ measurement of temperature, pH and salinity;
2. Total Inorganic Nitrogen (TIN) measurements and samples were taken at SR5, G2, C1A and C2A only;
3. BOD_5, *E.coli* and Synthetic Detergent samples were taken at SR4, SR12, C1A, C2A only.

1. UIA: In-situ unionized ammonia was calculated from in-situ measurement of NH_3-N, temperature, pH and salinity; laboratory determined unionized ammonia was calculated from analysed NH_3-N from water samples taken and in-situ measurement of temperature, pH and salinity.

3.2 Monitoring Locations

3.2.1 Referring to the Proposal for Temporary Suspension of Impact Water Quality Monitoring (0394_13_ED_0326F) which was submitted to EPD in August 2016 with no objection was received from EPD; removal of routine water quality monitoring stations at SR1 was effective on 24 December 2016.

3.2.2 Referring to the *Proposal on Removal of Some Water Quality Monitoring Stations After Resumption of Marine Construction Works (Dredging Works and Marine Works of the Northern Part of Kwai Tsing Container Basin Only)* (0394_13_ED_0332I) which has been submitted to EPD and relevant parties in December 2016 with no objection, removal of routine water quality monitoring stations at SR6, SR7, SR8, SR9, SR10 and SR11 was effective from 23 January 2017. Due to removal of some sensitive receivers in routine water quality monitoring, gradient stations G3, G5 and G6 were also be removed and gradient stations G1 and G4 replaced the previous control stations C1, C2 and C3 as C1A and C2A with reference to the approved proposal (0394_13_ED_0332I) which was effective from 23 January 2017.

3.2.3 Referring to the *Proposal of Scale down for the Water Quality Monitoring Stations during High Spots Removal at Sub-zone Z2B1, Z2B2 and Z2C1* (Ref.: 0394/13/ED/0370G), routine water quality monitoring stations at SR2 (Casam, Gazetted Beach) and SR3 (Approach, Gazetted Beach) were removed. The proposal was justified by ET and verified by IEC, also no objection was received from other parties. The proposal was approved by EPD as per EPD's memo (Ref. (6) in Ax(1) to EP2/N3/C/57 Pt.10) dated 20 August 2019. The removal of the water quality monitoring at SR2 and SR3 was effective from 23 August 2019.

3.2.4 Impact water quality monitoring was conducted at 7 locations, including 4 sensitive receivers (SR4, SR5, SR12 and SR13), 1 gradient station (G2) and 2 control stations (C1A and C2A). The locations of the stations are also shown in **Figure 2**.

3.3 Results and Observations

3.3.1 Impact water quality monitoring was conducted at all designated monitoring stations in the reporting quarter. Impact water quality monitoring results graphical presentations are provided in **Appendix D**.

3.3.2 During the monitoring period, some adverse weather conditions, including Tropical Cyclone Warning Signals, Rainstorm Warning Signals and Thunderstorm Warnings were reported. Heavy marine traffic (not associated with the Project) was commonly observed nearby the Project site and its vicinity, that the propeller wash from vessels could lead to potential disturbance of seabed sediment and affect the water quality. The above conditions may affect monitoring results. Summary of weather condition is provided in **Appendix I**.

3.3.3 According to the information provided by the Contractor, the construction work under this Contract has been temporarily suspended since 1 February 2020. The water quality monitoring programme (including routine water quality impact monitoring) was therefore proposed to be suspended from 21 February 2020 and was resumed on 30 March 2020. The proposal for temporary suspension of water quality monitoring works during no marine construction work period was agreed by EPD on 20 February 2020 (Ref: Ax(1) to EP2/N3/C/57 Pt.10).

4. EM&A REQUIREMENTS – 24-HR WATER QUALITY MONITORING

4.1 Monitoring Parameters

4.1.1 Dissolved oxygen, temperature and turbidity are recorded every 5 minutes, 24 hours a day 7 days a week during dredging works.

4.1.2 In-situ NH_3-N at WSD Flushing Water Intake is measured every 20 minutes, 24 hours a day 7 days a week during works.

4.1.3 The water quality parameters measured at particular locations are shown in **Table 4-1**.

Table 4-1 24-hr Water Quality Monitoring Parameters

ID	Description	Parameters				
		Temperature	Turbidity	DO (mg/L)	DO%	NH_3-N
SR4	Tsuen Wan, WSD Flushing Water Intake	O	O	O	O	O
SR5	Ma Wan, Fish Culture Zone	O	O	O	O	
SR12	Tsing Yi, WSD Flushing Water Intake	O	O	O	O	O
SR13	EMSD Cooling Water Intake for Kwai Chung Hospital	O	O	O	O	

4.2 Monitoring Locations

4.2.1 Referring to the *Proposal on Removal of Some Water Quality Monitoring Stations After Resumption of Marine Construction Works (Dredging Works and Marine Works of the Northern Part of Kwai Tsing Container Basin Only)* (0394_13_ED_0332I) which has been submitted to EPD and relevant parties in December 2016 with no objection, removal of 24 hour monitoring stations at SR9, SR10 and SR11 was effective from 23 January 2017. The setups of 24 hour monitoring stations at SR9, SR10 and SR11 were removed on 7 February 2017.

4.2.2 As shown in Table 4-1, the 24 hours water quality monitoring works are performed at SR4, SR5, SR12 and SR13.

4.2.3 Revisions on monitoring locations were proposed in previous submission (MateriaLab Report No. Ref: 0394/13/ED/0103 – WATER QUALITY MONITORING LOCATION) and were agreed among AFCD, EMSD, WSD and EPD.

4.3 Results and Observations

4.3.1 24-hr water quality monitoring was conducted at all designated monitoring stations in the reporting quarter. Monitoring result graphical presentations are provided in **Appendix E**.

4.3.2 During the monitoring period, some adverse weather conditions, including Tropical Cyclone Warning Signals, Rainstorm Warning Signals and Thunderstorm Warnings were reported. Heavy marine traffic (not associated with the Project) was commonly observed nearby the Project site and its vicinity, that the propeller wash from vessels could lead to potential disturbance of seabed sediment and affect the water quality. The above conditions may affect monitoring results. Furthermore, the fish culturing or other activities occurring on the fish rack may cause adverse impact on the receiving water. Summary of weather condition is provided in **Appendix I**.

4.3.3 According to the information provided by the Contractor, the construction work under this Contract has been temporarily suspended since 1 February 2020. The water quality monitoring programme (including 24-hour water quality monitoring) was therefore proposed to be suspended from 21 February 2020 and was resumed on 30 March 2020. The proposal for temporary suspension of water quality monitoring works during no marine construction work period was agreed by EPD on 20 February 2020 (Ref: Ax(1) to EP2/N3/C/57 Pt.10).

4.3.4 Number of exceedances recorded in the reporting period at each impact station is summarized in Table 4.2.

4.3.5 No exceedance was recorded in the reporting quarter.

5. ENVIRONMENTAL SITE INSPECTION AND AUDIT

5.1 Site Inspections

5.1.1 The Environmental Team conducted 10 site inspections in the reporting period. No particular observation was recorded in the reporting period.

5.1.2 According to Contractor, no archaeological deposit was found during reporting period.

5.2 Implementation Status of Environmental Mitigation Measures

5.2.1 A summary of the Implementation Schedule of Environmental Mitigation Measures (EMIS) is presented in **Appendix F**. In general, the necessary mitigation measures were implemented properly.

5.2.2 The mitigation measures recommended in the EIA report and required by the EP are considered effective in minimizing environmental impacts. The Contractor has implemented the recommended mitigation measures except those mitigation measures not applicable at this stage.

5.3 Summary of Action taken

5.3.1 The exceedances recorded were considered not related to the Project, follow-up actions are not required.

5.4 Advice on the Solid and Liquid Waste Management Status

5.4.1 According to the Contractor, no general refuse was disposed of site in the reporting period. Summary of waste flow table is detailed in **Appendix G**.

5.4.2 There was marine sediment Type 2 sediment (Confined Marine Disposal) disposed to East of Sha Chau Contaminated Mud Pit. The details can be referred to the **Table 5-1**.

Note:
1. All the Type 3 (Cat. Hf) sediment dredging and disposal was completed on 18 May 2016.

5.5 Review of Action and Limit Level

5.5.1 Referring to the ER Letter ref. (CV/2013/04)/M45/400/1247 dated 19 March 2015, a Revised Baseline Water Quality Monitoring Test Methodology – Review of Action and Limit Levels has been submitted to EPD by ER in March 2015. The Action and Limit Level for the wet season (April – October) was effected and applied to the water quality monitoring data from 1 April 2015. The Action and Limit Level is given in **Appendix C**.

5.6 Quarterly Review of Constructional Impacts on Water Quality

5.6.1 The construction impact on water quality was assessed by comparing the quarterly mean values with the relevant ambient or baseline mean values. Results showed that the mean values of TSS at all clusters of monitoring stations were below the 1.3 x baseline value. Cluster stations with higher impact data are statistically compared to 1.3 x baseline levels or other relevant levels to assess the constructional impacts.

5.6.2 Quarterly means of cluster 1 stations (i.e. SR4 and SR12) of UIA (in-situ) (at mid flood) are compared to their 1.3 x baseline data. Result shows the quarterly mean of cluster 1 (i.e. SR4 and SR12) UIA (UIA) (at mid flood) is not significantly different to the 1.3 x baseline level ($p>0.05$), indicating the background UIA (in-situ) level is high and the contribution from the project is not significant. Quarterly means of cluster 1 stations (i.e. SR4 and SR12) of UIA (lab) (at mid flood) are compared to their 1.3 x baseline data. Result shows the quarterly mean of cluster 1 (i.e. SR4 and SR12) UIA (lab) (at mid flood) is significantly larger than 1.3 x baseline level ($p<0.05$). They are further compared to the quarterly UIA levels at upstream control station (i.e. C2A (at mid flood)). Result shows the quarterly mean of cluster 1 (i.e. SR4 and SR12) UIA (lab) (at mid flood) is also significantly larger than level of upstream control (i.e. C2A), however, based on the finding from the investigation on the recorded cases of exceedances, the cause was found not related to the project.

5.6.3 Quarterly means of cluster 1 station (i.e. SR5) of TIN (lab & in-situ) (at mid flood) are compared to their 1.3 x baseline data respectively. Result shows the quarterly mean of cluster 1 (i.e. SR5) TIN (lab & in-situ) (at mid flood) is significantly larger than their 1.3 x baseline level ($p<0.05$) respectively. They are further compared to the quarterly TIN levels at upstream gradient station (i.e. G2 (at mid flood)) respectively. Result shows TIN (lab & in-situ) level of upstream gradient station (i.e. G2) is not significantly different from that of impact stations (i.e. SR5) ($p>0.05$), indicating the background TIN level is high and the contribution from the project is not significant.

5.6.4 Data from ebb tide for TIN (lab & in-situ) at cluster 1 station (i.e. SR5) & UIA (lab & in-situ) at cluster 1 station (i.e. SR4 & SR12) were not further compared to their 1.3 x baseline data as SR4, SR5 & SR12 were situated at upstream position at ebb tide and not subject to project impact. Comparison between quarterly mean and 1.3 x baseline mean is given in **Table 5.2**, while the summary of key statistical analysis is provided in **Table 5.3**. Details of key statistical analysis results are provided in **Appendix H**.

5.6.5 As 24-hr monitoring is to supplement the routine WQM activities (EM&A Manual Section 2.1.10) and there is no baseline value and/or control / gradient value for a meaningful statistical analysis. Thus no statistical analysis was done for 24-hr monitoring. Also, statistical analysis was not performed for some parameters without exceedances (DO (S&M), DO (B), Turbidity, Ammonia, BOD5, *E. coli* and Synthetic Detergent) in the reporting quarter.

7. CONCLUSIONS

7.1.1 The dredging works was commenced on 23 April 2014. The EM&A programme was carried out in accordance with the EM&A Manual requirements. As per the EM&A Manual, water quality impact monitoring was conducted during the dredging works.

7.1.2 During the reporting period, exceedances were recorded for UIA (in-situ & lab), TIN (in-situ & lab) and Suspended Solids in the routine impact monitoring. No exceedance was recorded in 24-hr monitoring. Investigation found that the exceedances were not project related and were considered caused by influences in the vicinity of the stations or change in ambient conditions.

7.1.3 Ten (10) environmental site inspections were carried out weekly in the reporting period.

7.1.4 No environmental complaint was received and followed up by Environmental Team in the reporting period.

7.1.5 No notification of summons and prosecution was received in the reporting period.

7.1.6 Referring to the Memo from CEDD (Ref.: FM-30-0005-CE 63/2008-08), the construction works for the Contract No. CV/2013/04 – Dredging Works in Kwai Tsing Container Basin and its Approach Channel (Agreement No. CE63/2008 – Providing Sufficient Water Depth for Kwai Tsing Container Basin and its Approach Channel were completed on 31 July 2020.Post-construction water quality monitoring works will be commenced on 4 August 2020 for a period of 4 weeks in accordance with Section 2.1.7 of the EM&A Manual. The monitoring results of the post-construction water quality monitoring will be reported in the Final EM&A Report.

# According to EM&A Manual, LL of DO (surface & middle) is 5 mg/L or 1 percentile of baseline data in FCZ; 4 mg/L or 1 percentile of baseline data in other impact monitoring stations.
+ According to EM&A Manual, LL of DO (bottom) is 2 mg/L or 1 percentile of baseline data
For DO measurement, non-compliance occurs when monitoring result is lower than the limits;
For TIN, UIA, NH_3-N, SS, BOD_5, E.coli, synthetic detergent and turbidity, non-compliance of water quality results when monitoring results is higher than the limits;
AL/LL of TIN and NH_3-N are determined from laboratory results for better accuracy and reliability. These AL/LL will be applied to both laboratory and in-situ measurements at impact stage.
