HONG KONG SECTION OF GUANGZHOU – SHENZHEN – HONG KONG EXPRESS RAIL LINK

(Environmental Permit No. EP-349/2009/I)

Environmental Monitoring and Audit Report No. 39 (May 2013)

Certified by: 
Position: Environmental Team Leader

Date: 17 JUN 2013

EXECUTIVE SUMMARY

This is the 39th monthly Environmental Monitoring and Audit (EM&A) Report presenting the EM&A works undertaken during the period from 1 to 31 May 2013 for the Hong Kong Section of Guangzhou - Shenzhen - Hong Kong Express Rail Link (hereinafter referred to "the XRL" or "the Project") in accordance with the EM&A Manual and the requirement under EP-349/2009/I issued on 26 October 2012.

Air Quality

Air quality monitoring was conducted for 24-hour Total Suspended Particulates (TSP) at 17 air quality monitoring locations in the vicinity of Works Area in Mai Po (Works Area A), Ngau Tam Mei (Works Area B), Tai Kong Po (Works Area C), Shek Kong (Works Area D), Tse Uk Tsuen, (Works Area E), Pat Heung (Works Area F), Shing Mun (Works Area G), Shek Yam (Works Area I and H), Kwai Chung (Works Area J), Mei Foo (Works Area L), Nam Cheong (Works Area P, Q and R) and West Kowloon (Works Area V1 and V2) in the reporting month.

Please refer to the section "Environmental Complaints/Exceedance/Non-compliance/ Summons and Prosecution" below for the exceedance in air quality in the reporting month.

Airborne Noise

Airborne noise was measured in terms of $L_{eq(30min)}$dB(A) with L_{10} and L_{90} measurements as reference at 33 noise monitoring locations in the vicinity of Works Area in Mai Po (Works Area A), Ngau Tam Mei (Works Area B), Tai Kong Po (Works Area C), Shek Kong (Works Area D), Tse Uk Tsuen, (Works Area E), Pat Heung (Works Area F), Shing Mun (Works Area G), Shek Yam (Works Area I and H), Kwai Chung, (Works Area J and K), Mei Foo (Works Area L), Nam Cheong (Works Area M, N, O, P, Q, R, S and T) and West Kowloon (Works Area V1 and V2) once every week.

Please refer to the section "Environmental Complaints/Exceedance/Non-compliance/ Summons and Prosecution" below for the noise exceedance in the reporting month.

Monitoring of Avifaunal Species

Monthly ecological monitoring was conducted during the construction of Mai Po Ventilation Building Works Area (MPV), access road to Tai Kong Po Works Area (TPP-1/2/3), Shek Kong Stabling Sidings (SSS-2a/3), Pat Heung Ventilation Building Works Area (PHV-1) and Tse Uk Tsuen (TUW-1/2). The monitoring results indicated the survey areas were generally utilized by waterbirds in the reporting month during the monitoring. In general, most of the survey sites demonstrated similar magnitude in the number of species when compared to baseline results. Based on the monitoring results and observations, it was concluded that no adverse indirect impacts arising from the Project.

Monitoring of Impact at Fishpond due to Noise

In accordance with the Monitoring and Emergency Response Plan, impact noise monitoring was conducted at fish pond on weekly basis for assessment of impact at fishponds due to noise. It was revealed from the monitoring results that all monitoring results were within the Limit Level. Based on the monitoring results, there was no adverse impact at fishpond due to noise.

Landscape and Visual

Regular inspections and audits conducted by certified Arborist found that the tree protection works being carried out by the civil works and transplanting contractors were in accordance with the requirements of EP and EIA.

Environmental Audits

In this reporting month, regular site inspections attended by representative from MTRCL and Contractors were carried out at 810A, 810B, 811A and 811B in West Kowloon, 802, 805 and 820 in Nam Cheong, 821 in Kwai Chung, 822 in Pat Heung, Shing Mun, Shek Yam, Tai Shu Ha Road West Magazine Site, So Kwun Wat Nursery and Magazine Site and Tsing Chau Tsai Barging Point, 823A and 823B in Shek Kong, Tse Uk Tsuen, To Kau Wan stockpiling facility and Rambler Channel Barging Point, 824 in Ngau Tam Mei and Tai Kong Po and 825 in Mai Po. In addition to the regular site inspections, IEC environmental audits attended by IEC, MTRCL and Contractors were held on monthly basis. Issues observed during these audits are detailed in Section 6.

Environmental Complaints / Exceedance / Non-compliance / Summons and Prosecution

For the reporting month, a total of 2 environmental complaints were referred from EPD. The environmental complaints received were related to dust impact from MTR construction site at Ngau Tam Mei ventilation building. Complaint investigations were conducted in accordance with the complaint handling procedure in the EM&A Manual. Details of complaints are contained in Section 7.

In the reporting month, noise exceedances of air-borne noise Limit Level were recorded at HKIVE Haking Wong Waterfront Annex (CN23) on 2 May 2013; and Tower 3, the Waterfront (CN32) on 2 May 2013. No air-borne noise exceedance of Action Level was recorded in the reporting month.

In the reporting month, no exceedance of 24-hour TSP was recorded.

No non-compliance, notification of summons and prosecution was received during the reporting period.

Works for Coming Month

Construction works were started in Works Areas A, B, C, D, D1, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V1, V2, W, Y, Z, AA, AC, AE, AG, MWS, YY and ARW.

Please refer to Table 8-1 for the major works in the respective works areas. Impact monitoring would be continued in coming reporting month accordingly with reference to the EM&A Manual.

Further Environmental Key Issues

Air quality, airborne noise at NSRs and fishpond, ecological, landscape and visual monitoring shall continue in the following month. Considering the nature of

construction activities, key environmental issues in the coming months include the followings:

- Disposal of C&D waste;
- Dust generation from site activities;
- Noise impact from operating equipment;
- Site water discharge;
- Chemical wastes;
- Ecological impact;
- Trees protection

Reporting Changes

In the reporting period, there was no reporting change.

Table of Contents

Appendix

1. INTRODUCTION

1.1 Project Background

Further to the Government's decision made in April 2008, MTR Corporation (MTR) commenced to plan and design the Hong Kong Section of Guangzhou - Shenzhen - Hong Kong Express Rail Link (hereinafter referred to "the XRL" or "the Project"), which is a committed cross boundary transport infrastructure project.

The XRL would provide high speed rail services between Hong Kong and Guangzhou, and a connection to the national high-speed passenger rail network serving major mainland cities outside of Guangdong province. The Hong Kong section of the XRL is about 26km from new terminus located in West Kowloon (i.e. West Kowloon Terminus (WKT)) to the boundary at Huang gang. Along the railway corridor, there would be a total of eight ventilation buildings/ emergency access point (EAP), stabling sidings and a maintenance facility at Shek Kong Stabling Sidings (SSS) and an Emergency Rescue Station (ERS) next to SSS serving the operation of the XRL.

1.2 Coverage

This is the 39th monthly Environmental Monitoring and Audit (EM&A) Report presenting the EM&A works undertaken during the period from 1 to 31 May 2013 for XRL in accordance with the EM&A Manual and the requirement under Environmental Permit No. EP-349/2009/I, which was issued on 26 October 2012.

2. PROJECT INFORMATION

2.1 Project Management Organisation and Management Structure

The project management organisation chart and contact of key personnel are shown in Appendix B.

2.2 Construction Activities

This report marked the 39th month of civil construction in Works Area A, B, C, D, D1, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V1, V2, W, Y, Z, AA, AC, AE AG, MWS, YY and ARW for April 2013. It is anticipated that the civil construction be completed in year 2015. The updated construction activity for upcoming month is provided in Section 8. Major construction activities undertaken in the reporting month is summarized in the following table.

Contract	**Works Area**	**Major Construction Activities**
Nam Cheong		
802	Q	Bored pile construction, H-pile extraction, excavation.
805	N,O	Bridge construction
805	S	Bridge construction
West Kowloon		
810A	V1	Excavation & Site Formation; Slab Construction; Installing Cruciform Columns; Installing Socketted H-piles and Temporary Stanchions; Bored Piling and Welding
810A	Mong Wing Street (MWS)	Material Storage Area
810A	Yick Yuen Site (YY)	Material Storage Area
810A	Austin Road	Material Storage Area

Contract	Works Area	Major Construction Activities
	West (ARW)	
810B	V1	Predrilling; Installation/Dismantling of Strutting; Bored piling; Sheet piling; Bulk Excavation; Station Structure Construction Work; Construction of Desilting Chamber; Haul Road Improvement Work; Jet Grouting outside the Harbourside; King Post works and Grout Curtain Work for Pipepile Wall
810B	W	Operation of Barging Facilities
811A	V2	Waterproofing works, excavation, fabrication and installation of steel struts and walers, lateral support works, and rebar fixing and concreting for tunnel box
811A	U	Site Office
811B	V2	Pre-bored H-piles, Diaphragm and flood protection wall installation, culvert reinstatement, sheet pile wall installation, trial pits and bulk excavation
820	V2	Preparation works for TBM disassembly
Nam Cheong		
811B	Y	Operation of Nam Cheong Barging Point
820	M	Road reinstatement
820	P	TBM operation
820	R	Piling and drainage work
820	S	Nil
816D	T	Site Office
820	Y	Slurry Treatment Plant operation, C&D disposal from ground to barge

Contract	**Works Area**	**Major Construction Activities**
821	Y	Operation of the barging point, inert waste sorting, stockpiling, delivery of excavated materials from XRL projects by barge
Mei Foo		
820	L	Nil
Kwai Chung		
821	J	Adit and tunnel lining formwork, transportation of excavated materials to Barging Point, construction of Kwai Chung Ventilation Building
Pat Heung		
822	F	Construction of tunnel and building construction
Shek Yam		
822	H	Tunnel construction
822	I	Storage of equipment and material
822	K	Site Office
Shing Mun		
822	G	Shaft construction, building construction
So Kwun Wat		
822	AC	Nil
Tai Shu Ha Road West Magazine Site		
822	AE	Nil
Tsing Chau Tsai Barging Point		
822	AG	Nil

Contract	**Works Area**	**Major Construction Activities**
Shek Kong Stabling Sidings		
823A& 823B	D and D1	Foundation and superstructure works for buildings, cut and cover tunnel excavation, TBM operation
Tse Uk Tsuen		
822	E	Shaft construction
Rambler Channel Barging Point		
823B	Z	Nil
Ngau Tam Mei		
824	B	Tunnel construction
Tai Kong Po		
824	C	Tunnel construction
Mai Po		
825	A	TBM driving and mucking out activities
Siu Lam Barging Point		
825	AA	Nil
To Kau Wan Works Area		
823B	-	Nil

Table 2-1 Major construction activities in the reporting month

3. ENVIRONMENTAL STATUS

3.1 Status of Implementation of mitigation measures

Environmental mitigation measures recommended in the EIA report were implemented and their implementation statuses are summarized in Appendix C.

3.2 Status of Submissions under EP

A summary of the submissions submitted under the EP for this Project during the reporting month is presented in Table 3-1 below:

EP-349/2009/I Clause No.	**Document Title**
2.46	Monthly EM&A Report

Table 3-1 Summary of the status of submissions submitted under the EP in the reporting month

3.3 Status of Permit/License/Notifications

A summary of the status of permits, licences and notifications on environmental protection made, applied or approved under this Project during the previous and reporting month is presented in Table 3-2 below. The Environmental Permit No. EP-349/2009/I issued by EPD was used for the XRL project.

Item	**Item Description**	**Application Date**	**Permit Status**
Contract 802 (Works Area Q)			
1	Construction Noise Permit	30 Apr 2013	Validated on 16 May 2013 (Permit No.: GW-RW0320-12, valid until 15 Nov 2013)

Item	Item Description	Application Date	Permit Status
Contract 810A (Works Area V1)			
1	Construction Noise Permit for Construction Works other than Percussive Piling	17 Apr 2013	Approved on 30 Apr 2013 Permit No. GW-RE0417-13, valid from 1 Jun 2013 to 31 Aug 2013
2	Construction Noise Permit for Construction Works other than Percussive Piling	17 Apr 2013	Approved on 30 Apr 2013 Permit No. GW-RE0423-13, valid from 3 May 2013 to 31 May 2013
3	Construction Noise Permit for Construction Works other than Percussive Piling	16 May 2013	Approved on 30 May 2013 Permit No. GW-RE0529-13, valid from 3 Jun 2013 to 2 Dec 2013
Contract 810B (Works Area V1)			
1	Construction Noise Permit (Percussive Piling)	12 Apr 2013	Approved on 19 Apr 2013 Permit No. PP-RE0019-13, valid from 22 Apr 2013 to 21 Oct 2013
Contract 810B (Works Area W)			
1	Dumping Permit for Type 1 marine sediment to	4 Mar 2013	Granted on 18 Mar 2013

Item	Item Description	Application Date	Permit Status
	South of Cheung Chau		Permit No. EP/MD/13-135, valid period - 19 Mar 2013 to 18 Sept 2013
2	Dumping Permit for Type 1 marine sediment to East of Ninepin Group	11 Mar 2013	Granted on 21 Mar 2013 Permit No. EP/MD/13-137, valid period - 23 Mar 2013 to 22 Sept 2013
3	Dumping Permit for Type 2 marine sediment	26 Apr 2013	Granted on 10 May 2013 Permit No. EP/MD/14-011, valid period - 11 May 2013 to 10 Jun 2013
Contract 811A (Works Area V2)			
1	Construction Noise Permit	21 Dec 2012	Permit no. GW-RE0026-13 Date of EPD issued 11 Jan 2013 From 14 Jan 2013 valid till 13 Jul 2013
Contract 811B (Works Area V2 & Y)			
1	Construction Noise Permit (for loading / unloading at Barging Point)	18 Mar 13 (ref. no. 357059)	Licence No.: GW-RW0205-13 Valid from 10 Apr 13 to 9 Oct 13
2	Construction Noise Permit (for foundation and civil work at main	7 Mar 13 (ref no. 356630)	Licence No.: GW-RE0271-13 Valid from 22 Mar 13

Item	Item Description	Application Date	Permit Status
	site areas)		to 21 Sep 13
Contract 820 (Works Area L, M, P, R, S, Y, T, V)			
1	CNP for drainage work at SSP	5 Apr 2013	Permit GW-RW0262-13 obtained. Valid until 16 June 2013.
2	CNP for obstruction work at WD1, Tsuen Wan Line and Lai Chi Kok Interchange	6 May 2013	Permit GW-RW0344-13 obtained. Valid until 26 November 2013.
3	CNP for TBM (S630) Operation at construction site at Hoi Wang Road	10 May 2013	Permit GW-RE0519-13 obtained. Valid until 30 September 2013.
4	CNP for TBM (S631) Assembly and Operation at Construction site at Sham Mong Road of West Kowloon	16 May 2013	Permit GW-RW0363-13 obtained. Valid until 29 August 2013.
5	CNP for grouting work at junction of Hoi Wang Road and Hoi Ting Road	16 May 2013	Permit GW-RE0540-13 obtained. Valid until 20 July 2013.
Contract 821 (Works Area J, Y)			
1	CNP for Operation of Barging Point	3 Apr 2013	Renewal CNP GW-RW0249-13 was granted to replace GW-RW0813-12 Validity: 17 Apr 2013 – 13 Oct 2013

Item	Item Description	Application Date	Permit Status
2	CNP for 24 hour Construction Work at Tai Lin Pai Road J/O Wing Yip Street, Kwai Chung, N.T.	12 Apr 2013	CNP GW-RW0286-13 was granted and superseded GW-RW0090-13. Validity: 2 May 2013 – 25 Oct 2013
Contract 822 (Works Area F, G, H, AC, AE and AG)			
1	**Works Area F** **CNP** for the use of powered mechanical equipment for the purpose of carry out construction works (including dewatering) from 19:00 to 23:00 on any day not being holiday; from 07:00 to 23:00 on general holidays (including Sunday).	Applied on 15 March 2013 Approved on 3 April 2013	Licence No. GW-RN0204-13, valid from 19:00 hours, 9 April 2013 to 23:00 hours, 1 October 2013
2	**Works Area F** **CNP** for delivery of explosive and de-watering from 00:00 to 07:00 and 23:00 to 24:00 hours on any day (Designated)	Applied on 18 March 2013 Approved on 3 April 2013	Licence No. GW - RN0205-13, valid from 23:00 hours, 9 April 2013 to 07:00 hours, 1 October 2013
3	**Works Area F** **CNP** for delivery of explosive and de-watering from 00:00 to 07:00 and 23:00 to 24:00 hours on any day (Designated)	Applied on 23 May 2013	EPD is processing the application
4	**Works Area AG** **CNP** for the use of powered mechanical equipment for the purpose of carrying out construction works from 07:00 to 23:00 on general holidays (including Sunday); 19:00 to 23:00 on any day not being holiday	Applied on 20 March 2013 Approved on 3 April 2013	Licence No. GW-RN0213-13, valid from 19:00 hours, 26 April 2013 to 23:00 hours, 25 October 2013
Contract 823A (Works Areas D, D1 and E)			
1	Variation of WPCO license	20 May 2013	Being reviewed by EPD
2	CNP for welding and dewatering	25 Apr 2013	Permit GW-RN0287-13 Approved. Valid until

Item	Item Description	Application Date	Permit Status
			13 November 2013.
3	CNP for TBM operation	19 Apr 2013	Permit GW-RN0281-13 Approved. Valid until 31 October 2013.
4	CNP for ventilation fan operation	19 Apr 2013	Permit GW-RN0283-13 Approved. Valid until 31 October 2013.
Contract 823B (Works Area D, Z and To Kau Wan Works Area)			
1	Variation of WPCO License	15 April 2013	Licence granted on 16 May 2013 (Licence No: WT00015933-2013).
2	CNP for operation of excavator	15 March 2013	Permit GW-RN0199-13 Approved on 2 April 2013. Valid until 27 Sept 2013.
3	CNP for operation of PMEs at ERS	10 May 2013	Permit GW-RN0304-13 Approved on 28 May 2013. Valid until 4 Dec 2013.
4	CNP for operation of PMEs at ERS	25 April 2013	Permit GW-RN0304-13 Approved on 10 May 2013. Valid until 14 Nov 2013.
Contract 824 (Works Area B and C)			
1	Construction Noise Permit at Ngau Tam Mei	03 April 2013	Permit No. GW-RN0229-13 obtained. Valid until

Item	Item Description	Application Date	Permit Status
	Works Area		24 Oct 2013
2	Construction Noise Permit at Ngau Tam Mei Works Area	03 April 2013	Permit No. GW-RW0228-13 obtained. Valid until 24 Oct 2013
3	Construction Noise Permit at Tai Kong Po Works Area	28 January 2013	Permit No. GW-RN0111-13 obtained. Valid until 31 August 2013
Contract 825 (Works Area A and AA)			
1	Construction Noise Permit	22 November 2012	Permit No. GW-RN0600-12 obtained. Valid until 4 Jun 2013
2	Construction Noise Permit	27 March 2013	Permit No. GW-RN0212-13 obtained. Valid until 10 Oct 2013
3	Construction Noise Permit	3 Apr 2013	Permit No. GW-RN0232-13 obtained. Valid until 22 Oct 2013

Table 3-2 Summary of the status of permits, licences and notifications made, applied and approved under this Project during the previous and reporting month

4. SUMMARY OF EM&A REQUIREMENT

4.1 Air Quality

4.1.1 Air Quality Parameters

In accordance to the EM&A Manual, 24-hour Total Suspended Particulates (TSP) levels were measured at the 17 air monitoring locations in accordance with the EM&A Manual. Monitoring was undertaken at each monitoring location once per every 6 days. Information such as date of monitoring, duration, weather condition, equipment used and monitoring results shall be recorded on the field data sheet developed for the Project. Monitoring results are summarized in Section 5.

4.1.2 Monitoring Methodology and Calibration

Monitoring was undertaken to establish for 24-hour Total Suspended Particulates (TSP) at 17 monitoring locations in the vicinity of the Works Area A, B, C, D, E, F, G, H, J, L, P, Q, R, V1 and V2. Monitoring of 24-hour TSP was carried out using a high volume sampler (HVS) according to Part 50 Chapter 1 Appendix B, Title 40 of the Code of Federal Regulations of the USEPA.

The sampling procedure follows to that described Part 50 Chapter 1 Appendix B, Title 40 of the Code of Federal Regulations of the USEPA. TSP is sampled by drawing air through a conditioned, pre-weighed filter paper inside the high volume sampler at a controlled rate. After 24-hour sampling the filter paper with retained particles shall be collected and returned to HOKLAS accredited laboratory (ALS Technichem (HK) Pty Ltd) for drying in a desiccators followed by accurate weighing. TSP levels are calculated from the ratio of the mass of particulate retained on the filter paper to the total volume of air sampled.

The flow rate of the high volume sampler with mass flow controller was calibrated using an orifice calibrator. Initial calibration (five points) was conducted upon installation and prior to commissioning. Calibration was carried out every six months. Detail of calibration is shown in Table 4-1 below. The samplers shall be properly maintained. Prior to dust monitoring commencing, appropriate checks shall be made to ensure that all equipment and necessary power supply are in good working condition.

Monitoring Station ID	Air Quality Monitoring Location	HVS Serial Number	Last Calibration Date

4.1.3 Monitoring Location

According to the EM&A Manual, air quality monitoring was carried out at the locations as shown in Table 4-1 above. The monitoring locations are illustrated in Appendix D.

4.1.4 Action and Limit Levels

With reference to the baseline monitoring results, the Action and Limit Levels for the 24-hour TSP monitoring derived are shown in Table 4-2. In the case of exceedance of Action and/or Limit levels for air quality occur, the Event and Action Plan as stipulated the EM&A Manual shall be implemented.

Monitoring Station ID	24-hour TSP Level in μg/m^3	
	Action Level	Limit Level
AM 1	217.3	260
AM 2	179.4	260
AM 3	154.7	260
AM 4	148.6	260

Monitoring Station ID	24-hour TSP Level in μg/m^3

AM 17	179.3	260

Table 4-2 Action and Limit Levels for Air Quality

4.2 Air-borne Noise

4.2.1 Noise Parameters

In accordance to the EM&A Manual, construction noise monitoring shall be conducted to obtain one set of 30-minute measurement at each monitoring station between 0700 and 1900 hours on normal weekdays at a frequency of once per week when construction activities are underway. The L_{eq}, L_{10} and L_{90} were also recorded at the specified interval.

4.2.2 Monitoring Methodology and Calibration

As referred to the Technical Memorandum (TM) issued under the NCO, sound level

meters in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. In this baseline monitoring, B&K 2250 sound level meters, which complies with the above-mentioned specifications, were used.

Immediately prior to and following each noise measurement the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. Measurements may be accepted as valid only if the difference between calibration levels obtained before and after the noise measurement is less than 1.0 dB.

The sound level meters and calibrator are verified by the certified laboratory or manufacturer at a regular interval to ensure they perform to the same level of accuracy as stated in the manufacturer's specifications. Detail of calibration is shown in Table 4-3 below:

Monitoring Station ID	**Noise Monitoring Location**	**Serial Number**	**Last Calibration Date**

Table 4-3 Calibration details of noise monitoring equipments

Note:

1. Due to school closure, monitoring at Tsuen Wan Lutheran School (CN 17) was temporarily suspended. Monitoring would be carried out subject to confirmation of noise sensitive use of the

building.

2. A correction factor (9 dB(A)) has been applied at CN19 to take into account the noise barrier effect. The correction factor was agreed with IEC according to Section 3.11 of the EM&A Manual.

3. Impact monitoring at No. 142 Mai Po San Tsuen (CN1) had been temporarily suspended since December 2012 due to house removal. Monitoring at this location will be resumed when an alternative location is determined. Therefore, the sound level meter for CN1 is not calibrated until monitoring is resumed.

4.2.3 Monitoring Location

According to the EM&A Manual, noise quality monitoring was carried out at the locations as shown in Table 4-3 above. The monitoring locations are illustrated in Appendix D.

4.2.4 Action and Limit Levels

The Action and Limit Levels for the construction noise are shown in Table 4-4 below. In the case of non-compliance of Action and/or Limit level, the Event and Action Plan stipulated in the EM&A Manual shall be implemented.

Time Period	Action	Limit
0700-1900 hours on normal weekdays	When one documented complaint is received	75 dB(A) for residential premises
		70 dB(A) for school and 65 dB(A) during examination period

Table 4-4 Action and Limit Levels for Airborne Construction Noise

4.2.5 Review of baseline at CN 26 and CN 29

With reference to Baseline Monitoring Report, the baseline noise level at CN 26 and CN 29 would be reviewed regularly once every six months to confirm its validity and the results would be included in the EM&A report. Baseline monitoring was carried out in April and May for a consecutive of 14 days. One set of Leq (30 min) measurement was taken daily during the hours without any construction works at works area in the vicinity of CN 26 and CN 29. Dominant noise source at CN 26 and CN 29 during the time of baseline review measurement was identified as background traffic noise.

Date	Start time	End time	$L_{eq\ (30\ min)}$ dB(A)

Average Leq (30-min), dB(A)			66

Table 4-6: Review of baseline monitoring results at CN 29

As revealed from the tables above, the revised average daytime baseline noise level at both locations are comparable with the previously recorded baseline levels (71 dB(A) at CN 26 and 67 dB(A) at CN 29 previously). The revised baseline noise levels would be adopted as reference for impact monitoring in the coming 6 months before the next half-yearly review of baseline noise level.

4.3 Ground-borne Noise

No ground-borne noise monitoring was conducted in the reporting month in accordance with requirements in the EM&A Manual and the Construction Ground-borne Noise Monitoring Plan.

4.4 Ecological Monitoring

4.4.1 Ecological Monitoring on Avifaunal Communities

Monitoring methodology

In accordance with the Ecological Monitoring Plan, avifaunal communities would be surveyed quantitatively by transect count or/and point count method covering the vicinity of the works area as shown in Table 4-6 below. Birds heard or seen within the survey area would be identified to species level and counted. The nature of construction works within works area conducting during each impact monitoring would also be recorded. Weather condition and other noticeable activities occurring within or in the vicinity of the survey areas would be recorded. The impact monitoring results would be compared to the baseline data collected before construction. Should any unpredicted indirect ecological impacts arising from the Project be detected, remedial measures would be implemented by the Contractor.

Monitoring location, frequency and duration

In accordance with the EM&A Manual and Ecological Monitoring Plan, ecological monitoring should be conducted at Works Area in MPV, TPP, SSS/ERS, TUW and PHV. With the hoarding erection completed and construction works at MPV, TPP and PHV commenced, ecological monitoring on monthly basis was commenced accordingly. The location, frequency and duration of ecological monitoring at MPV, TPP, SSS/ERS, TUW and PHV are shown in the table below and figures in Appendix D.

Works Area	**Survey Site**	**Monitoring Location**	**Monitoring Frequency**	**Monitoring Duration**

Works Area	**Survey Site**	**Monitoring Location**	**Monitoring Frequency**	**Monitoring Duration**
Mai Po Ventilation Building Works Area (MPV)	MPV-1	• Fishponds in Wetland Conservation Area (WCA) within 500 m from the boundary of MPV works area	Monthly	• During construction phase of MPV works area
Access road leading to TPP	TPP-1/2/3	• The whole alignment of drainage channel KT5 (TPP-1) • The section of drainage channel 95CD along the proposed alignment of access upgrading (TPP-2) • The whole alignment of abandoned meander of conservation interest 43CD-1 (TPP-3)	Monthly	• During upgrading and operation of access road for construction phase activities
Access road leading to SSS / ERS	SSS-2a [1]	• The whole alignment of abandoned meanders of conservation interest 95CD-4	Monthly	• During upgrading and operation of access road for construction phase activities [1]

Works Area	Survey Site	Monitoring Location	Monitoring Frequency	Monitoring Duration
	SSS-3	• Agricultural land within 500 m from the boundary of SSS/ ERS works area between Shek Kong Road and Kam Sheung Road (SSS-3)	Monthly	• During construction phase of SSS / ERS works area
Tse Uk Tsuen Works Area (TUW)	TUW – 1/2 (TUW-2 grouped with PHV-1 due to overlapping of survey area)	• Agricultural land within 500 m from the boundary of TUW works area to the south of Kam Sheung Road (TUW-1) • Woodland in Conservation Area (CA) within 500 m from the boundary of TUW works area (TUW-2)	Monthly	• During construction phase of TUW works area
Pat Heung Ventilation Building Works Area (PHV)	PHV-1 (grouped with TUW-2 due to overlapping of survey area)	• Woodland in CA within 500m from the boundary of PHV works area	Monthly	• During construction phase of PHV works area

Table 4-6 Requirement of Construction Impact Monitoring for Avifaunal Group

Note: 1. Despite that upgrading of access road leading to SSS has yet commenced, monthly monitoring was commenced due to commencement of construction activities in the vicinity of SSS-2a.

4.4.2 Monitoring of impact at fishpond due to noise/vibrations

In accordance with the Monitoring and Emergency Response Plan, during construction stage, air-borne noise monitoring should be carried out at the respective monitoring location at nearby fishpond (Appendix D) when there are project-related construction activities being undertaken within a radius of 300m from the monitoring location. One set of 30-minute measurement at a frequency of once a week when the above-mentioned construction activities are underway.

As operation of TBM underneath fishponds in Mai Po is not expected in the coming reporting months, no monitoring of ground-borne noise was carried out.

Monitoring of impact due to air-borne noise

Monitoring methodology

With reference to the Monitoring and Emergency Response Plan, the noise acceptance criteria of 75 dB(A) was adopted for the assessment of adverse impact to fisheries due to air-borne noise.

Monitoring location, frequency and duration

The nearest fish-pond located in the vicinity of the works area in Mai Po as shown in Appendix D was identified as a representative air-borne and ground-borne noise/vibration monitoring location.

During construction stage, routine air-borne noise monitoring would be carried out at the respective monitoring location when there are project-related construction activities being undertaken within a radius of 300m from the monitoring station. One set of 30-minute measurement at a frequency of once a week when the above-mentioned construction activities are underway.

Action and Limit Levels

The Action and Limit levels for air-borne noise are defined in the table below. Should non-compliance of the noise quality criteria occur, actions in accordance with the Table 4-7 as should be carried out.

Time Period	Action Level	Limit Level
All time period	When one documented complaint related to adverse impact to fisheries from fish-pond operator or any abnormal ecological monitoring results	75 dB(A) for air-borne noise

Table 4-7: Action and Limit Level for potential impact at fishpond due to air-borne noise

4.5 Landscape and Visual

Monitoring of the implementation of the tree protection measures during construction phase was conducted in accordance with the requirements of EP condition 2.15 (iv). The landscape and visual monitoring and auditing was conducted in accordance with the requirement in Section 5.6 of the EM&A Manual throughout the construction stage.

4.6 Cultural Heritage

4.6.1 Archaeology

Further archaeological investigation was completed at Shek Kong Stabling Sidings (SSS) in accordance with the Archaeological Action Plan.

No monitoring and reporting is required at Lung Kwu Sheng Tan (LKST) since construction have not started.

4.6.2 Built Heritage

Vibration monitoring at Cheung Yuen (LET-06) was conducted in report month as construction works were carried out within the 100m buffer area in accordance with the Vibration Monitoring Plan which was agreed with AMO. Vibration level at Cheung Yuen should be controlled to an acceptable level of 25mm/s during the vibration monitoring.

Calibrated vibration and overpressure monitors, Minimate Plus are used for the vibration monitoring at Cheung Yuen. When construction works are within 50m and between 50m and 100m from Cheung Yuen, monitoring will be conducted twice per day and once per week respectively at two specified monitoring locations

4.7 Landfill Gas

Monitoring was carried out in this reporting month for construction within the Ngau Tam Mei Landfill (NTML) consultation zone. No monitoring was carried out at Gin Drinker Bays Landfill (GDBL) since there was no construction carried out within consultation zone.

5. MONITORING RESULT

5.1 Air Quality

The monitoring schedule is shown in Appendix E. Results of 24-hour TSP level and the graphical presentation of monitoring results are shown in Appendix F.

In the reporting month, no exceedance of 24-hour TSP was recorded.

Impact monitoring at Tse Uk Tsuen (AM 7) on 28 May 2013 was not carried out due to power supply shortage.

5.2 Noise

The monitoring schedule is shown in Appendix E. Results of measured noise level, in terms of $L_{eq(30min)}$ and graphical presentations are presented in Appendix F.

In the reporting month, noise exceedances of air-borne noise Limit Level were recorded at HKIVE Haking Wong Waterfront Annex (CN23) on 2 May 2013; and the Waterfront (CN32) on 2 May 2013. No air-borne noise exceedance of Action Level was recorded in the reporting month.

For the noise exceedance at HKIVE Haking Wong Waterfront Annex (CN23), actions identified in the Event and Action Plan (Table 3.4 of the EM&A Manual) were undertaken. The ER, IEC and Contractors were informed of the exceedance. According to the investigation, the exceedance was not related to the construction of XRL.

Regarding the noise exceedance at Tower 3, The Waterfront (CN32) actions identified in the Event and Action Plan (Table 3.4 of the EM&A Manual) were undertaken. The ER, IEC and Contractors were informed of the exceedance. The exceedance was likely caused by the construction activities by the contractors of 810A. Proper noise control measure was continuously implemented on site by the Contractors which were reviewed by IEC and ET.

Since the data collected at Ying Wah College (CN26) on 2 May 2013 is at or below the baseline noise level revised in November 2012, the noise measurement is not considered as exceedances.

5.2.1 Ground-borne Noise

No ground-borne noise monitoring was conducted in the report month. The monitoring schedule is shown in Appendix E.

5.3 Ecological Monitoring

5.3.1 Ecological Monitoring on Avifaunal Communities

Ecological monitoring at MPV

The weather conditions and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring were summarized in Table 5-1. The MPV-1 survey site comprised about 20 fishponds with most of them being actively managed (Figure 1 in Appendix D refers). Commonly observed pond management activities during the monitoring include pond aeration, removal of bund weeds and fish feeding. Ongoing construction activities were also recorded at the works area of the project "Proposed Comprehensive Development at Wo Shang Wai, Yuen Long" (hereinafter to be referred to as "Wo Shang Wai Project") located near Point Count Location MPV-1/P9. The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date	**Weather Conditions**	**Noticeable Activities in the MPV-1 Survey Site**
13 May 2013	Sunny	• Pond aeration at Point Count Locations MPV-1/P8 and MPV-1/P10 • •

Table 5-1 Weather condition and noticeable activities observed in the MPV-1 survey site during monitoring in the reporting month

A total of 241 individuals from 30 avifauna species were recorded from the Point

Count Locations at MPV-1 in the reporting month (Table 5-2 refers). The total number of species recorded during the monitoring was 36. The population of the avifauna recorded mainly consisted of White-winged Tern, Eurasian Tree Sparrow and Chinese Pond Heron. Other recorded waterbirds and wetland-dependent species include Little Grebe, Egrets, Tufted Duck, Black Kite, White-breasted Waterhen, Common Sandpiper, Common Kingfisher and Red-billed Starling. Detailed records of avifauna at MPV-1 survey site are presented in Appendix G. During the monitoring, 55 individuals of White-winged Tern were observed flying around and foraging at the fish ponds at Point Count Location MPV-1/P6.

The monitoring results of the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009. The number of species at Point Count Locations and the total number of species (including the number of species of conservation interest) recorded from the MPV-1 survey site are above the baseline range, while the abundance at Point Count Locations is within the baseline range. (Table 5-2 refer).

The monitoring results indicated the fishponds within the survey area were utilized by a large number of waterbirds and wetland-dependent species in the reporting month during the monitoring. When compared with baseline results, no significant fluctuation in the number of species and abundance of avifauna was observed. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey	**MPV-1**	
	No. of Species	**Abundance**
13 May 2013	30	241
August 2009 to October2009 [1]	21 – 25	196 - 249

Note:

1. Seasonal range obtained from baseline bird survey.

Table 5-2 Number of species and abundance of avifauna recorded in the reporting month during bird survey at the point count locations of the MPV-1 survey site

Month	Total Number of Species Recorded [1,2]
13 May 2013	36 (7)
August 2009 to October2009[3]	21 - 25 (4 - 6)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-3 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the MPV-1 survey site

Ecological monitoring at Tai Kong Po (TPP-1)

The avifauna monitoring location for the proposed works area of the TPP access road was sub-divided into three survey sites namely TPP-1, TPP-2 and TPP-3. The TPP-1 survey site is a drainage channel (KT5) with gabion / masonry banks at upper portion. The rest of the channel is trapezoidal with vegetated grasscrete banks on both sides of the channel. The downstream end of the channel joins up with a main drainage channel (95CD) (Figure 3 in Appendix D refers).

The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-4. The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	Weather Condition	Noticeable Activities Observed in the TPP-1 Survey Site
13 May 2013	Sunny	- No project-related construction works located in the vicinity of the survey area

Table 5-4 Weather Condition and Noticeable Activities Observed in the TPP-1 Survey Site during the Monitoring in the Reporting Month

A total of 66 individuals from 15 avifauna species were recorded from the Point

Count Locations at TPP-1 in the reporting month (Table 5-5 refers). The total number of species recorded during the monitoring was 21. The population of the avifauna recorded mainly consisted of Scaly-breasted Munia and Eurasian Tree Sparrow. Detailed records of avifauna at TPP-1 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009. The abundance and number of bird species recorded at Point Count Locations are within the baseline range, while total number of species from the TPP-1 survey site is above the baseline range. The number of species of conservation interest is within the baseline range (Tables 5-7 and 5-8 refer). (Table 5-5 and Table 5-6 refer).

The monitoring results indicated the drainage channel within the survey area was utilized by waterbirds in the reporting month during the monitoring. When compared with the baseline results, no significant fluctuation in the number of species and abundance of avifauna was observed. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey Period	**TPP-1 Survey Site**	
	No. of Bird Species	**Abundance of Bird Species**
13 May 2013	15	66
August 2009 to October 2009 [1]	11 - 19	48 - 281

Note:

1. Seasonal range obtained from baseline bird survey.

Table 5-5 Number of Bird Species and Abundance of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the Point Count Locations of the TPP-1 Survey Site

Survey Period	**Total Number of Bird Species Recorded [1,2]**
13 May 2013	21 (2)
August 2009 to October 2009 [3]	11 - 19 (2 - 4)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-6 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the TPP-1 Survey Site

Ecological monitoring at Tai Kong Po (TPP-2)

The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-7. The TPP-2 survey site covered a section of main drainage channel 95CD, which is a concrete trapezoidal channel with grasscrete banks. Plantation of native or landscape vegetation was observed along the embankment of the channel (Figure 2 in Appendix D refers). The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	**Weather Condition**	**Noticeable Activities Observed in the TPP-2 Survey Site**
13 May 2013	Sunny	• Project-related construction activities located near Point Count Locations TPP-2/P2 to TPP-2/P4

Table 5-7 Weather Condition and Noticeable Activities Observed in the TPP-2 Survey Site during the Monitoring in the Reporting Month

A total of 58 individuals from 18 avifauna species were recorded from the Point Count Locations at TPP-2 in the reporting month (Table 5-8 refers). The total number of species recorded during the monitoring was 20. The population of the avifauna recorded mainly consisted of Scaly-breasted Munia, Cattle Egret and Barn Swallow. Other recorded waterbird and wetland-dependant species include Little Egret, Chinese Pond Heron, Black Kite and Little Ringed Plover. Detailed records of avifauna at TPP-2 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009. The abundance of bird species recorded at Point Count Locations is within the baseline range, while the number of bird species recorded at Point Count Locations and the total number of species from the TPP-2 survey site are above the baseline range. The number of species of conservation interest is within the baseline range. (Table 5-8 and Table

5-9 refer).

The monitoring results indicated the main drainage channel within the survey area was utilized by typical lowland stream birds in the reporting month during the monitoring. When compared with baseline results, no significant fluctuation in the number of species and abundance of avifauna was observed. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey Period	TPP-2 Survey Site	
	No. of Bird Species	Abundance of Bird Species
13 May 2013	18	58
August 2009 to October 2009 [1]	14	57 - 77

Note:

1. Seasonal range obtained from baseline bird survey.

13 May 2013	20 (2)
August 2009 to October 2009 [3]	14 - 19 (2 - 3)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-9 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the TPP-2 Survey Site

Ecological monitoring at Tai Kong Po (TPP-3)

The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-10. The TPP-3 survey site is an abandoned meander (43CD-1) of conservation interest with natural banks and substratum. The earthen banks of the meander were mostly dominated by grasses and weeds. The section near point count location TPP-3/P1

was found to be usually wet though the water was quite stagnant. Due to its close proximity to a village access road of Kam Hing Wai and Shui Mei Tsuen, this section of meander was subject to higher disturbance from villagers and traffic. Point count locations TPP-3/P2 and TPP-3/P3 were only seasonally wet. During the monitoring in reporting month, point count locations TPP-3/P2 and TPP-3/P3 were wet. The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	**Weather Condition**	**Noticeable Activities Observed in the TPP-3 Survey Site**
13 May 2013	Sunny	- No project-related construction work located in the vicinity of the survey area

Table 5-10 Weather Condition and Noticeable Activities Observed in the TPP-3 Survey Site during the Monitoring in the Reporting Month

A total of 15 individuals from 9 avifauna species were recorded from the Point Count Locations at TPP-3 in the reporting month (Table 5-11 refers). The total number of species recorded during the monitoring was 9. Detailed records of avifauna at TPP-3 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009.. The abundance and the number of bird species recorded from the Point Count Locations and the total number of bird species recorded from TPP-3 survey site are above the baseline results, while the number of species of conservation interest recorded from TPP-3 survey site is within the range of baseline result.

The monitoring results indicated the abandoned meander within the survey area was utilized by typical generalist and lowland stream species in the reporting month during the monitoring. No adverse indirect impacts arising from the Project were identified.

Survey Period	**TPP-3 Survey Site**

	No. of Bird Species	Abundance of Bird Species
13 May 2013	9	15
August 2009 to October 2009 [1]	3 - 4	4 - 9

Note:

1. Seasonal range obtained from baseline bird survey.

Table 5-11 Number of Bird Species and Abundance of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the Point Count Locations of the TPP-3 Survey Site

Survey Period	Total Number of Bird Species Recorded [1,2]
13 May 2013	9 (1)
August 2009 to October 2009 [3]	3 - 4 (0 - 1)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-12 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the TPP-3 Survey Site

Ecological monitoring at Shek Kong Stabling Sidings (SSS-2a)

Monthly avifauna monitoring at SSS-2a was conducted during the construction work in the vicinity of SSS-2a. Construction in the vicinity of SSS-1/2b was yet commenced and ecological monitoring would be conducted according to the construction programme. SSS-2a survey site is an abandoned meander (95CD-4) of conservation interest located in the north of Wan Toi Shan. The meander is adjacent to car repairing workshops and garage. Riparian vegetation was well established although some areas of the banks were lined with concrete. The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-13

Date of Monitoring	Weather Condition	Noticeable Activities Observed in the SSS-2a Survey Site
13 May 2013	Sunny	Project-related construction works in the vicinity of Point Count Location

Date of Monitoring	Weather Condition	Noticeable Activities Observed in the SSS-2a Survey Site
		SSS-2a/P1

Table 5-13 Weather Condition and Noticeable Activities Observed in the SSS-2a Survey Site during the Monitoring in the Reporting Month.

A total of 12 individuals from 6 avifauna species were recorded from the Point Count Locations at SSS-2a in the reporting month (Table 5-14 refers). The total number of species recorded during the monitoring was 6. Detailed records of avifauna at SSS-2a are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009. The abundance and number of species at Point Count Locations (including the number of species of conservation interest) and the total number of species recorded from the SSS-2a survey site are within the baseline range (Table 5-14 and Table 5-15 refer).

When compared with the baseline results, no significant fluctuation in the number of species and abundance of avifauna was observed. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey Period	SSS-2a Survey Site	
	No. of Bird Species	Abundance of Bird Species
13 May 2013	6	12
August 2009 to October 2009 [1]	5 - 7	10 - 22

Note:

1. Seasonal range obtained from baseline bird survey.

Table 5-14 Number of Bird Species and Abundance of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the Point Count Locations of the SSS-2a Survey Site

Survey Period	Total Number of Bird Species Recorded [1,2]
13 May 2013	6 (0)
August 2009 to October 2009 [3]	5 - 7 (0 - 1)

Note:

1. Total number of bird species recorded included the avifauna recorded from point count locations only as there is no walk transect for SSS-2a survey site.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-15 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the SSS-2a Survey Site

Ecological monitoring at Shek Kong Stabling Sidings (SSS-3)

Construction in the vicinity of SSS-1/2b was yet commenced and ecological monitoring would be conducted according to the construction programme. The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-16. The farmland in SSS-3 survey site displayed a distinctive seasonal crop rotation pattern between wet agriculture (*Ipomoea aquatica*) in summer season and dry agriculture (seasonal flowers such as *Gladiolus gandavensis*) in winter season (Figure 4 in Appendix D refers). The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	**Weather Condition**	**Noticeable Activities Observed in the SSS-3 Survey Site**
13 May 2013	Sunny	1. Project-related construction works at Point Count Location SSS-3/P8 and near Point Count Location SSS-3/P6 2. Both wet and dry agricultural activities such as farming of vegetables (Ipomoea aquatica and Lactuca sativa) and ornamental flowers were observed 3. Non project-related construction works at Point Count Location SSS-3/P6 4. One White-shouldered Starling nest and one Black-collared Starling nest were identified at Point Count

Date of Monitoring	Weather Condition	Noticeable Activities Observed in the SSS-3 Survey Site
		Location SSS-3/P11

Table 5-16 Weather Condition and Noticeable Activities Observed in the SSS-3 Survey Site during the Monitoring in the Reporting Month

A total of 235 individuals from 25 avifauna species were recorded from the Point Count Locations at SSS-3 in the reporting month (Table 5-17 refers). The total number of species recorded during the monitoring was 29. Detailed records of avifauna at SSS-3 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season data from August 2009 to October 2009. The abundance and number of bird species recorded at Point Count Locations are within the baseline range, while the total number of species from the SSS-3 survey site is above the baseline range. The number of species of conservation interest is within the baseline range (Table 5-17 and Table 5-18 refer).

The monitoring results indicated the agricultural lands within the survey area were utilized by typical bird species found in dry farmland in the reporting month during the monitoring. No significant fluctuation was observed in the number of species and abundance of avifauna. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey Period	SSS-3 Survey Site	
	No. of Bird Species	Abundance of Bird Species
13 May 2013	25	235
August 2009 to October 2009 [1]	21 - 27	126 - 289

Note:

1. Seasonal range obtained from baseline bird survey.

13 May 2013	29 (3)
August 2009 to October 2009 [3]	22 - 27 (2 - 4)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-18 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the SSS-3 Survey Site

Ecological monitoring at PHV and TUW

The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-19. The TUW-1 survey site encompassed a large piece of agricultural land located to the south of Kam Sheung Road (i.e. Tse Uk Tsuen). The agricultural land in TUW-1 survey site shared the habitat characteristics of SSS-3 survey site. Similar seasonal alternation between wet and dry agriculture was also recorded from TUW-1 survey site (Figure 5 in Appendix D refers). The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	**Weather Condition**	**Noticeable Activities Observed in the TUW-1 Survey Site**
13 May 2013	Sunny	• Project-related construction works near Point Count Location TUW-1/P1 • Wet and dry agricultural activities such as farming of vegetables (Ipomoea aquatica and Zea mays) at Point Count Locations TUW-1/P2, TUW-1/P3 and TUW-1/P4

Table 5-19 Weather Condition and Noticeable Activities Observed in the TUW-1 Survey Site during the Monitoring in the Reporting Month

A total of 117 individuals from 23 avifauna species were recorded from the Point

Count Locations at TUW-1 in the reporting month (Table 5-20 refers). The total number of species recorded during the monitoring was 30. The population of the avifauna recorded mainly consisted of Barn Swallow and Chinese Bulbul. Detailed records of avifauna at TUW-1 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season data from August 2009 to October 2009. The abundance of bird species recorded from Point Count Locations are below the baseline range, while the number of bird species recorded from Point Count Locations is within the baseline range. The total number of bird species recorded from TUW-1 is above the baseline range. The number of species of conservation interest is within the baseline range. (Table 5-20 and Table 5-21 refer).

The monitoring results indicated the agricultural lands within the survey area were utilized by typical bird species found in dry farmland in the reporting month during the monitoring. No significant fluctuation in the number of species and abundance of avifauna was observed. Therefore, no adverse indirect impacts arising from the Project were identified.

Survey Period	**TUW-1 Survey Site**	
	No. of Bird Species	**Abundance of Bird Species**
13 May 2013	23	117
August 2009 to October 2009[1]	21 - 24	124 - 134

Note:
1. Seasonal range obtained from baseline bird survey.

13 May 2013	30 (3)
August 2009 to October 2009 [3]	21 - 24 (2 - 3)

Note:

1. Total number of species recorded included the avifauna recorded from both point count locations and walk transect.

2. The numbers in brackets denote the number of species of conservation interest.

3. Seasonal range obtained from baseline bird survey.

Table 5-21 Total Number of Bird Species Recorded in the Reporting Month Avifauna Monitoring at the TUW-1 Survey Site

Since the extent of PHV-1 survey site is overlapped with that of TUW-2 survey site, the survey data of the TUW-2 and PHV-1 survey sites were reported collectively. Monthly avifauna monitoring at TUW-2 and PHV-1 survey site was conducted on 16 April 2013 during the construction of TUW and PHV. The weather condition and other noticeable activities occurring within or in the vicinity of the survey area during the monitoring are summarized in Table 5-22. The TUW-2 and PHV-1 survey site comprised the woodland in Conservation Area (CA) within 500 m from the boundary of the PHV works area (Figure 6 in Appendix D refers). The bird species and their abundance recorded during the avifauna monitoring for the reporting month are presented in Appendix G.

Date of Monitoring	**Weather Condition**	**Noticeable Activities Observed in the TUW-2 and PHV-1 Survey Site**
13 May 2013	Sunny	- Construction works located in the vicinity of the survey area

Table 5-22 Weather Condition and Noticeable Activities Observed in the TUW-2 and PHV-1 Survey Site during the Monitoring in the Reporting Month

A total of 14 individuals from 8 avifauna species were recorded from the Point Count Locations at TUW-2 and PHV-1 in the reporting month (Table 5-23 refers). The total number of species recorded during the monitoring was 18. Detailed records of avifauna at TUW-2 and PHV-1 are presented in Appendix G.

The monitoring results in the reporting month were compared against the wet season results of the baseline data from August 2009 to October 2009. The abundance and the number of bird species recorded from the Point Count Locations are within the baseline range, while the total number of species (including the number of species of conservation interest) recorded from TUW-2 and PHV-1 survey site is above the baseline range. (Table 5-23 and Table 5-24 refer).

The monitoring results indicated the woodland within the survey area was utilized by typical forest birds in the reporting month during the monitoring. No adverse indirect impacts arising from the Project were identified.

Survey Period	TUW-2 and PHV-1 Survey Site

5.3.2 Monitoring of impact at fishpond due to noise

In accordance with the Monitoring and Emergency Response Plan, impact noise monitoring was conducted at fish pond on weekly basis for assessment of impact at fishponds due to noise. The results are displayed in the table below. It was revealed from the monitoring results that all monitoring results were within the Limit Level of 75 dB(A). Based on the monitoring results, there was no adverse impact at fishpond due to noise.

Monitoring Date	L_{eq}, dB(A)
4/5/2013	55
11/5/2013	51
18/5/2013	51
25/5/2013	54

May 2013	18,075	45.01	0

Table 5-26 Summary of construction waste generated and disposed

Note:

1. Inert C&D materials include bricks, concrete, building debris, rubble and excavated soil.
2. Non-inert C&D materials include steel, paper / cardboard packaging waste, plastics and other wastes such as general refuse.
3. Alternative disposal site for inert C&D Material from 802 include TPTL No. 187, Pak Shek Kok, Tai Po, N.T.
4. Alternative disposal sites for inert C&D material from 810A include SENT Landfill, Zhongshan & Zhuhai, Mainland China.
5. Alternative disposal sites for inert C&D Material from 810B include Central-Wan Chai Bypass (Typhoon Shelter and HKCEC) and Zhongshan Torch Hi-Tech Zone.
6. Alternative disposal sites for inert C&D Material from Contract 811B include Widening of Tolo highway / Fanling Highway (HY/2009/908), SIL Contract 908, MaXin District Development, Zhong Shan.
7. Alternative disposal sites for inert C&D Material from Contract 820 include Zhuhai and Zhongshan, China.
8. Alternative disposal sites for inert C&D Material from Contract 821 include Zongshan, China.
9. Alternative disposal sites for inert C&D Material from Contract 822 include Lam Tei Quarry , WENT landfill, New School Campus in Sai Kung for Hong Kong Academv, Proposed Comprehensive Development at STTL 502 Lok Wo Sha Ma On Shan And HY/2008/12 Bus-bus interchanges on Tuen Mun Road, Drainage Services Department Contract No. *DC/2010102* Drainage Improvement Works in Shuen Wan and Shek Wu Wai,
10. Alternative disposal sites for inert C&D Material from Contract 823A include NENT landfill (re-used as cover material) and Shui Mei Tsuen
11. Alternative disposal sites for inert C&D Material from Contract 823B include WENT landfill, CCSV, Pak Fu Shan (DC/2011/06) and Pillar Point (DC/2008/03).
12. Alternative disposal sites for inert C&D Material from Contract 824 include WENT landfill for re-use.
13. Alternative disposal sites for inert C&D Material from Contract 825 include WENT landfill for re-use.
14. Solid waste such as waste battery and paint cans are reported in kilograms (kg) and liquid chemical waste such as lube and paint are reported in litres (l). Alternative disposal sites for inert

C&D Material from 811A include Central-Wan Chai Bypass (Typhoon Shelter and HKCEC) and Zhongshan Torch Hi-Tech Zone.

15 Figures in { } denotes the quantity of marine sediment disposal not included in inert C&D Material.

5.5. Landscape and Visual

5.5.1 Monitoring Requirement

A Certified Arborist was employed and has conducted inspection and audits and found that the tree protection works being carried out by the civil works and transplanting contractors were in accordance with EP/EIA.

Monitoring of the implementation of landscape and visual aspect including the tree protection measures during construction phase was conducted in accordance with the requirements of EP condition 2.15 and Section 5.6 of the EM&A Manual.

5.5.2 Audit Result

Regular monitoring and audit was undertaken in accordance with the requirement of EP condition 2.15 and Section 5.6 of the EM&A Manual.

<u>Tree Transplanting Works at Contract 801</u>

801 Contractor was pending for some maintenance work in two nursery sites for 2 months e.g. spraying of fungicides and insecticides and weeding. Meeting was held with 801 contractor to improve the response time and MTR has requested 801 to propose date for the above works.

Some of planter box was collapsed. Contractor have replaced the old planter with new planter. The replacement process would be continued.

<u>Tree Protection Work 802</u>

No major tree issue on site. Tree protection measures that implemented by the contractor was required to enhance on site.

Tree Protection Work 805

No major tree issue on site. Tree protection measures that implemented by the contractor was required to enhance on site.

Tree Protection Work 811A

Trees have been fenced off but temporary pedestrian access has been established through the retained trees. Some of branches were wrapped by protection materials. Scaffolding structure has been adjusted so it does not attach to the tree branches / stems. No specific issue on tree protection.

Tree Protection Work 811B

No major tree defects or damaged was observed after installation of noise barrier near T1808. No major tree issue..

Tree Protection Work 816D

No specific issue.

Tree Protection Work 820

No specific issue but some of the transplanted trees in the nursery sites were required horticultural maintenance e.g. replacement of collapsed rootball, weeding and spraying of fungicides and insecticides.

Tree Protection Work 821

T7181 was found dead since Aug 2012 due to problem of soil compaction. The contractor was requested to submit the compensation proposal for the approval of MTR. Contractor was requested to remove T7181 immediately. For the other trees, some are required to carry out pest control by using fungicides and insecticides.

Tree Protection Work 822

Some of the protective fencing was pushed inward due to placement of storage materials. The contractor is strictly required to follow the recommendations given by EP Arborist for the improvement of tree protection. Reminder was given to

contractor as precautionary measures. Transplanted trees in Pat Heung is required to be compensated by the contractor once those trees could not recovered by the transplantation shock.

Tree Protection Work 823A

Tree protection work was completed - on stage and reinforced once again. Close monitoring on progress of the contractor in improving tree protection measures was undertaken.

Tree Protection Wok 823B

As 823 A and B is the same civil contractor. All the observation in 823A is applicable to 823B. The major focus on the retained trees and improvement on the overall sense of tree protection measures of the contractor was required to be improved. T3113 may have potential to be damaged by construction work. Re-design of alignment of pedestrian link was under reviewed to ensure the protection measures was sufficiently protected the trees.

Tree Protection Work 824

No specific issue. Tree protection measures was recommended to contractor for further site improvement.

Tree Protection Work 825

Important tree (T1539(P)) was properly protected and no specific issue. There was no specific observation on other aspects of landscape and visual monitoring.

Tree Protection Work 826

7 transplanted trees from 825 were regarded as retained trees for 826. Weeding was carried out. Proper drainage was recommended.

5.6 Cultural Heritage

Construction works between 50m and 100m from Cheung Yuen (LET-06) were conducted in the reporting month. Regular vibration monitoring at 2 monitoring locations were conducted weekly in the reporting month. Calibrated vibration and overpressure monitors, Minimate Plus were used for the vibration monitoring. There was no exceedance of vibration level of 25mm/s for the monitoring on 08, 13, 20 and 30 May 2013. Monitoring location plan are attached in Appendix D.

	Peak Vector Sum (mm/s)	
Date	***C823B_NB142_VIBR1***	***C823B_NB142_VIBR2***
08 May 2013	0.398	1.730
13 May 2013	0.275	0.307
20 May 2013	0.172	0.116
30 May 2013	1.670	0.255

5.7 Landfill Gas

No monitoring was carried out in this reporting month since there was no construction within Gin Drinker Bays Landfill (GDBL) consultation zone. Monitoring was carried out in the reporting month within the Ngau Tam Mei Landfill (NTML) and no exceedance was recorded.

6. SITE INSPECTION

Regular site inspections on all environmental aspects under the EM&A Manual were attended by representatives from ET and Contractors. The site inspections were carried out at 802/805 in Nam Cheong, 810A/B and 811A/B in West Kowloon, 820/821 in Nam Cheong, 822 in Shing Mun, Shek Yam and So Kwun Wat, Tsing Chau Tsai and Tai Shu Ha Road West, 823A/B in Shek Kong Stabling Sidings, 824 in Tai Kong Po and Ngau Tam Mei, 825 in Mai Po and Siu Lam Barging Point and dates are shown in the following table. In addition to the regular site inspections attended by ET and Contractors, monthly IEC environmental audits attended by IEC, ET and Contractors were held on 15 May 2013 for 802; 15 May 2013 for 805; 9 May 2013 for 810A; 30 May 2013 for 810B; 7 May 2013 for 811A; 15 May 2013 for 811B; 16 May 2013 for 820; 6 May 2013 for 821, 2 May 2013 for 822; 7 May 2013 for 823A; 7 May for 823B; 21 May 2013 for 824 and 9 May 2013 for 825.

Contract	**Date of Site Inspections**
802	3/5, 7/5, 15/5, 22/5 and 31/5
810A	2/5, 9/5, 16/5, 23/5 and 30/5
810B	2/5, 8/5, 15/5, 23/5 and 30/5
805	3/5, 7/5, 15/5, 22/5 and 31/5
811A	7/5, 14/5, 21/5 and 28/5
811B	2/5, 10/5, 15/5 and 23/5
820	2/5, 9/5, 16/5, 23/5 and 30/5
821	6/5, 13/5, 20/5 and 27/5
822	2/5, 9/5, 16/5, 23/5 and 30/5
823A	2/5, 7/5, 15/5, 23/5 and 29/5
823B	2/5, 7/5, 15/5, 23/5 and 29/5
824	7/5, 14/5, 21/5 and 30/5

Contract	Date of Site Inspections
825	2/5, 9/5, 15/5, 24/5 and 29/5

Table 6-1: Date of site inspection

All observations have been recorded in the audit checklist and passed to the Contractor together with the appropriate recommended mitigation measures where necessary. The key observations from these site inspections and Contractor's follow-up action are summarized in Table 6-2 below.

Item	Description	Contractor's Follow-up Action(s) Undertaken
Contract 802		
1	Cement bags were not covered.	The cement bags were covered properly. Rectified on 31/5.
Contract 805		
1	Dust suppression measure was not implemented for dusty stockpile at depot.	The excavated material was covered entirely with tarpaulins.
2	Some chemical waste (paint can) was not properly stored.	Painting can have been stored in chemical storage area.
Contract 810A		
1	No proper drainage system was connected to the manually vehicle washing at the material storage area adjacent to the Site Office.	The surface of material storage area has been repaved and diverted the washed water to the water collection system for treatment next to the Site Office.
Contract 810B		
1	Surface washing water (mixed with sand) near site gate WKT-1 was ran off to the public walkway.	Sandbags have been provided to prevent washed water running out of the site.
Contract 811A		

Item	Description	Contractor's Follow-up Action(s) Undertaken
1	U-channel leading to outside the site boundary was found without proper blockage.	The U-channel was cleaned and blocked by sand bag.
2	Cover of dump truck was found damaged.	The cover of the dump truck has been repaired.
Contract 811B		
1	A drum of lubricant was found without a drip tray.	The chemical container had been removed off-site.
2	Bare ground and haul road was found dry and dusty.	Water would be sprayed regularly.
Contract 820		
1	Direct discharge of stagnant water from excavated trench to the effluent discharge point was observed at the Rising Main site.	The water was diverted to a water tank for further treatment by wetsep.
2	Idled stockpile was observed without dust suppression measure at the Barging Point.	The stockpile was covered properly.
Contract 821		
1	Dust curtain was observed broken at the tipping hall of the Barging Point.	The dust curtain was replaced.
2	Chemical drum was observed storing on the bare ground at the KCV site.	The chemical drum was removed by the sub-contractor.
Contract 822		
1	Some containers of chemical waste were not properly labelled.	Chemical Waste Labels were fitted on the oil drums.
Contract 823A		
1	Dark smoke was observed from crawler crane	Regular maintenance was provided
2	Mud was observed near the surface channel at Tsat Sing Kong	Mud was removed from the concerned area

Item	Description	Contractor's Follow-up Action(s) Undertaken
Contract 823B		
1	Chemicals for Wetsept was observed without drip tray	Concrete bund has been constructed to avoid leakage of chemical.
2	Drip tray for Wesept was full of water	Water was cleared regularly
Contract 824		
1	Silt and mud observed at U-channel within TKP site.	Silt and mud was cleared.
2	Dump trucks would rely on manual direction for use of wheel washing bay before leaving site	A large and clear signage to be put up on-site.
Contract 825		
1	Large pile of soil was observed sitting on ground at mud pits area.	The soil not in use was covered by tarpaulin sheet.
2	Sediments was observed at u-channel along hoarding.	The sediments at u-channel was cleaned.
3	Mud trail was observed at the access road.	The trail was cleared immediately.

Table 6-2 Summary of site inspections, recommendations and follow-up actions

7. NON-COMPLIANCE AND DEFICIENCY

7.1 Summary of Complaint

For this reporting month, a total of 2 environmental complaints were referred from EPD. There are a total of 167 environmental complaints since commencement of the construction. The complaints were handled in accordance to the EM&A Manual and relevant parties including the Engineer's Representative and IEC were informed of the complaint. The details of complaint are summarized as below:

The environmental complaints received were related to dust impact and concern on surface runoff from MTR construction site at Ngau Tam Mei ventilation building.

Two complaints were referred from EPD on 28 May 2013 regarding dust impact and concern on surface runoff from MTR construction site and vehicles at Ngau Tam Mei. The complaint handling procedures in accordance with the EM&A Manual have been undertaken. Investigations showed that dust suppression measures such as water spraying system and wheel washing functioned properly. At the area where haul road is constructing, the exposed soil was covered as far as practicable; also, a water pump is provided at the slope toe to collect any runoff during heavy rainfall. Nonetheless, the Contractor was reminded to reinforce the implementation of dust suppression measures.

7.2 Summary of Exceedance

In the reporting month, noise exceedances of air-borne noise Limit Level were recorded. Air-borne noise Limit Level exceedances were recorded at HKIVE Haking Wong Waterfront Annex (CN23) on 2 May 2013; and Tower 3, the Waterfront (CN32) on 2 May 2013. No air-borne noise exceedance of Action Level was recorded in the reporting month

In the reporting month, no exceedance of 24-hour TSP was recorded.

For the noise exceedance at HKIVE Haking Wong Waterfront Annex (CN23), actions identified in the Event and Action Plan (Table 3.4 of the EM&A Manual)

were undertaken. The ER, IEC and Contractors were informed of the exceedance. According to the investigation, the exceedance was not related to the construction of XRL.

Regarding the noise exceedances at Tower 3, The Waterfront (CN32) actions identified in the Event and Action Plan (Table 3.4 of the EM&A Manual) were undertaken. The ER, IEC and Contractors were informed of the exceedance. The exceedance was likely caused by the construction activities by the contractors of 810A. Proper noise control measure was continuously implemented on site by the Contractors which were reviewed by IEC and ET.

7.3 Summary of Notification of Summons, Prosecutions, Non-compliance and Corrective Actions

No non-compliance, notification of summons and prosecution was received during the reporting period.

8. FUTURE KEY ISSUES

8.1 Construction Works in Coming Months

Works to be undertaken for the following months are summarized below. The works presented below is tentative and subject to change in actual construction programme.

Contract 802 (Works Area Q)
H-pile extraction, excavation, bored pile construction
Contract 805 (Works Area N & O)
Bridge construction Demolition of temporary footbridge
Contract 805 (Works Area S)
Bridge construction
Contract 810A (Works Area V1)
Excavation & Site Formation; Slab Construction; Installing Cruciform Columns; Installing Socketted H-piles and Temporary Stanchions; Bored Piling; Welding and Sheet Piling
Contract 810B (Works Area V1)
Predrilling; Installation/Dismantling of Strutting; Bored piling; Sheet piling; Bulk Excavation; Station Structure Construction Work; Construction of Desilting Chamber; Haul Road Improvement Work; Jet Grouting outside the Harbourside; King Post works and Grout Curtain Work for Pipepile Wall
Contract 810B (Works Area W)
Operation of Barging Facilities
Contract 811A (Works Area V2)
Construction of tunnel box, rebar fixing, waterproof works, installation of

steel waler and strut, and main excavation
Contract 811A (Works Area U)
Site Office
Contract 811B (Works Area V2 & Y)
Construction for diaphragm wall, pre-bored H-piles installation, casting of capping beam and flood protection wall, casting of B2 slab, bulk excavation, pipe jacking, and operation of Nam Cheong Barging Point
Contract 820 (Works Area L)
Nil
Contract 820 (Works Area M)
Nil
Contract 820 (Works Area P)
TBM operation
Contract 820 (Works Area R)
Piling and drainage work
Contract 820 (Works Area S)
Nil
Contract 816D (Works Area T)
Site Office
Contract 820 (Works Area Y)
Slurry Treatment Plan operation, C&D disposal from ground to barge
Contract 820 (Works Area V2)
Preparation works for TBM disassembly
Contract 821 (Works Area J)
Construction of sump pit, tunnel lining formwork, construction of Kwai Chung Ventilation Building

Contract 821 (Works Area Y)
Operation of the barging point, inert waste sorting, stockpiling, delivery of excavated materials from XRL projects by barge
Contract 822 (Works Area F)
Tunnel construction, building construction
Contract 822 (Works Area G)
Shaft construction and building construction
Contract 822 (Works Area H)
Main tunnel construction.
Contract 822 (Works Area I)
Storage of equipment and material
Contract 822 (Works Area K)
Site Office
Contract 822 (Works Area AC)
Nil
Contract 822 (Works Area AE)
Nil
Contract 822 (Works Area AG)
Nil
Contract 823A and 823B (Works Areas D and D1)
Foundation and superstructure works for buildings, cut and cover tunnel excavation, TBM operation
Contract 823A and 822(Works Area E)
Shaft construction
Contract 823B (To Kau Wan Works Areas)
Nil

Contract 823B (Works Areas Z)
Nil
Contract 824 (Works Area B)
Tunnel construction
Contract 824 (Works Area C)
Tunnel construction
Contract 824 (Works Area AF)
Nil
Contract 825 (Works Area A)
TBM driving and mucking out activities Second TBM initial drive
Contract 825 (Works Area AA)
Nil

Table 8-1 Summary of construction works in coming months

Impact monitoring would be continued according to the construction programme.

8.2 Monitoring Schedule for Next Month

According to the latest programme, ground-borne noise monitoring at GN 5 will be resumed. The tentative schedule of TSP, noise and ecological monitoring for the next reporting period is presented in Appendix E.

9. CONCLUSIONS

The Report presents the results of EM&A works and the impact monitoring for the construction works of the XRL project undertaken during the period of from 1 to 31 May 2013. The major construction activities in the reporting period included works in the West Kowloon Works Areas, Nam Cheong, Kwai Chung, Shing Mun, Shek Yam, Pat Heung, Shek Kong, Tai Kong Po, Ngau Tam Mei, Mai Po Works Area and Barging Points.

Impact monitoring for air quality and noise were conducted in accordance with the EM&A Manual in the reporting period. Exceedances of Limit Level in air-borne noise were recorded at HKIVE Haking Wong Waterfront Annex (CN23); and Tower 3, the Waterfront (CN32). No air-borne noise action level exceedance was recorded in the reporting month. In the reporting month, no ground-borne noise monitoring was conducted. In the reporting month, no exceedance of 24-hour TSP was recorded. No non-compliance, notification of summons and prosecution was received during the reporting period.

For the reporting month, a total of 2 environmental complaints were referred from EPD. The environmental complaints received were related to dust impact and concern on surface runoff from MTR construction site at Ngau Tam Mei ventilation building. Complaint investigations are being conducted in accordance with the complaint handling procedure in the EM&A Manual.

Site inspections were conducted regularly to monitor proper implementation of environmental pollution control and mitigation measures for the Project. The ET would continue the implementation of the environmental monitoring and audit programme in accordance to the EM&A Manual and to a level consistent with MTRCL's Corporate Sustainability Policy.

Appendix C

Implementation Status

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
Ecological Impact (Detailed design Phase / Pre-construction Phase)						
S3.398	- Prior to commencement of channel works, an ecological habitat management plan should be prepared to provide the detailed specifications for the habitats and ecological functions to be provided, and control of colonization of invasive plant species at the mitigation stream habitats and define the long-term management and ecological monitoring and audit requirements for these habitats.	To mitigate the avoidable loss of watercourse habitat	MTR	SSS	Detailed design phase / Prior to commencement of channel works	Ecological Habitat Management Plan (EHMP) formulated and submitted to EPD
S3.388 - S3.397	- The constructed channel in the SSS site should include open channel with ecologically friendly stream feature to mitigate the direct impact due to the loss of a watercourse habitat in Shek Kong.	To mitigate the avoidable loss of watercourse habitat	MTR / DDC	SSS	Detailed design phase	AFCD's comment has been sought during formulation of the EHMP
S3.410	- The implementation details of the impact monitoring programme should be described in ecological monitoring plan for EPD approval before commencement of construction activities.	To outline details of ecological impact monitoring	MTR	MPV, TPP, SSS / ERS, PHV and TUW	Before commencement of construction activities	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S3.327 & S3.412	- A monitoring and emergency response plan (to be prepared by the Contractor), in relation to potential impacts due to groundwater drawdown, will form part of the EM&A requirement in the EM&A Manual subject to approval by EPD and AFCD before commencement of the tunnelling and MPV construction in Mai Po area. The plan should include, but not be limited to, details of monitoring locations and programme, a mechanism to monitor the implication from the works to the groundwater system and fish pond, action levels and emergency responses such as immediate action, remedial action and investigation.	To detect potential impacts due to groundwater drawdown	Contractor	MPV	Before commencement of the tunnelling and MPV construction	AFCD's comment has been sought during formulation of Plan
S3.413	- A monitoring and emergency response plan, in relation to impacts due to noise/vibration, should form part of the EM&A requirement in the EM&A Manual subject to approval by EPD and AFCD before commencement of the tunnelling and MPV construction in Mai Po area.	To detect and monitor noise / vibration impacts	Contractor	MPV	Before commencement of bore tunnelling and MPV construction	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
Ecological Impact (Construction Phase)						
S3.325 - S3.326	- Implementation of precautionary measures during tunnelling works.	To avoid potential hydrogeological impacts	Contractor	All works areas	Construction phase	Implemented
S3.409 to S3.410	- Ecological impact monitoring focusing on habitats and species of conservation interest should be conducted during the construction phase at the MPV, TPP, SSS / ERS, PHV, and TUW sites where a number of avifauna of conservation interest (e.g. overwintering bird, Greater Painted-snipe) and areas of conservation interest (e.g. country parks, conservation areas, and wetlands) were recorded. - Avifaunal communities should be surveyed quantitatively along transects. Birds heard or seen along the transects should be identified to species and counted. The nature of construction works within works area conducting during each impact monitoring visit should also be recorded. The quantitative monitoring results should be compared to pre-construction condition. The impact monitoring results should be undertaken by qualified ecologist(s) with relevant working experience.	To monitor potential indirect construction impacts to wildlife	MTR MTR	MPV, TPP, SSS / ERS, PHV, and TUW	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	- Should any unpredicted indirect ecological impacts arising from the proposed Project be detected, remedial measures should be developed and implemented by the Contractor.		Contractor			
S3.327 & S3.412	- Implementation of the groundwater monitoring and emergency response plan.	To detect and minimize hydrological impacts	Contractor	MPV	Construction phase (During bore tunneling works and construction of Mai Po Ventilation Shaft)	Refer to Item for S3.327 & S3.412.
S3.413	- Implementation of monitoring and emergency response plan on noise and vibration.	To detect and minimize noise / vibration impacts	Contractor	MPV	Construction phase (During bore tunneling works and construction of Mai Po Ventilation Shaft)	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S3.364 -S3.369	- Use of quiet construction plant and temporary noise barriers. - Access to the ventilation building sites should follow existing access roads, such as the maintenance access along the existing drainage channels. - Site hoarding of about 2.4 m high should be erected around the works area of access roads along drainage channels in the TPP and SSS / ERS sites. - Gate and fences should be installed along the construction accesses that are adjacent to public areas. - Gates and hoardings should be provided at the entrances/exits and along the boundary of the works areas respectively to prevent any trespassers from encroaching or will fully disturbing any wild animals and their habitats within the works areas. - A trip-ticket system should be adopted to monitor the disposal of construction and demolition materials. CCTV and warning signs should be provided at the entrance of the proposed temporary and permanent	To minimise impacts to surrounding habitats	MTR / Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	vehicular access.					
3.370 -3.371 and 3.373	- Vegetation located within the works areas should be preserved as far as practicable. - To avoid soil compaction, heavy machinery should not be used in close proximity to vegetation. Soils that become compacted through the activities of the development should be loosened to an appropriate depth to allow seed germination. - All temporarily affected habitats should be reinstated after the completion of works. - Placement of equipment or stockpiles should be confined to designated works areas. Access routes should be confined on existing disturbed land, where practicable.	To minimize impacts to vegetation	MTR / Contractor	All works areas	Construction phase	Implemented
	- Detailed vegetation survey should be conducted in TSW site prior to commencement of site clearance.	To minimize impacts to vegetation	MTR / Contractor	TSW	Prior to commencement of site clearance	Vegetation Survey Report formulated and deposited

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
						to EPD
	- To mitigate the loss of the vegetation and habitats, planting of native species should be provided in the areas affected by the Project in TSW site, and other works area, where practicable.	To minimize impacts to vegetation	MTR / Contractor	TSW and all other works areas	Construction phase	Proposal of mitigatory planting at TSW was included in the Vegetation Survey Report. Mitigatory planting to be implemented as per construction programme
S3.372	- The affected individuals of Incense Tree within the NTV works area should be transplanted to nearby suitable habitats prior to the commencement of site clearance at NTV works area as far as practicable. - A detailed vegetation survey covering the affected	To minimize impacts to vegetation	MTR / Contractor	NTV	Construction phase	Vegetation survey was conducted and included in the Vegetation

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	habitat at NTV works area should be conducted by a suitably qualified botanist / ecologist to identify and record the affected individuals in order to provide details for the transplantation scheme prior to the commencement of site clearance. Feasibility and suitability of transplanting the affected individuals would be studied and suitable receptor sites would be identified. The transplantation proposal for the affected individuals should be prepared as necessary and transplantation should be supervised by a suitably qualified ecologist / horticulturist.					Survey Report. Transplantation of Incense Tree was completed and monitored.
S3.374 - S3.377	- Site hoarding of 2.4 m high should be set up along the boundary of the works areas as far as practicable.	To minimize disturbance to wildlife	Contractor	All works areas	Construction phase	Implemented
	- The erection of hoarding (2.4 m) along KT5 in the area with high Greater Painted-snipe occurrence (e.g. the proposed access road next to KT5) should avoid their breeding season, prior to construction activities in the area.			KT5 (near TPP)	Prior to the construction of access road	Implemented
	- The use of noisy construction equipment such as hydraulic breakers should be avoided at the area with			KT5 (near TPP)	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	high painted-snipe occurrence (e.g. the proposed access road next to KT5) during their breeding season as far as practicable.					
	- Hoardings of 2.4 m height should be put in place before commencement of construction activities. Hoarding at the section along the northern boundary of the MPV works area should be installed first. The duration of hoarding erection should be kept as brief as practicable. - Upon the erection of site hoarding, all construction activities should be conducted within the fenced area.			MPV	Right after possession of site	Implemented
	- Major construction site lighting should point inward and downward. Unnecessary lighting should be turned off outside working hours of the construction sites.			All works area	Construction phase	Implemented
S3.378 - S3.380	- Excavation works carried out within waterbodies should be carried out in dry season where practicable. - Excavation works within the watercourse / drainage channel should be restricted when possible to an	To minimise pollution to waterbodies	Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	enclosed dry section of the watercourse / drainage channel, with containment measures such as bunds and barriers used within the watercourse / drainage channel. - Site runoff should be directed towards regularly cleaned and maintained silt traps and oil / grease separators. The silt and oil / grease separators should be appropriately designed for the local drainage and ground conditions. Tightly sealed closed grab excavators should be deployed where material to be handled is wet. - The flow of the watercourse and drainage channel located with the Project Area should be maintained throughout the construction phase.					
Terrestrial Ecological Impact (Post-construction / Operation Phase)						
S3.327 & S3.412	- Implementation of the groundwater monitoring and emergency response plan.	To detect and minimize hydrogeological impacts	Contractor	MPV	Post-construction phase	To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S3.381	- The affected agricultural land should be restored to a condition suitable for agricultural use before handing over to landowners / operators.	To minimize impacts to surrounding habitats	MTR / Contractor	All temporarily occupied agricultural land	Operation phase	To be implemented as per construction programme
S3.382 – S3.384	- Vegetation control in the constructed channels should be implemented to prevent the excessive growth of vegetation that would impede the drainage capacity of the channel. To minimise sedimentation, de-silting should be limited to the dry season (November to March). The natural stream bed substrate should not be removed from the channel during de-silting works. - For maintenance de-silting, temporary barrier walls should be used to provide a dewatered zone for de-silting works. Waste material produced during de-silting should be disposed of in a timely and appropriate manner.	To minimise impacts to constructed channels	MTR	All constructed channels in SSS	Operation phase	To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S3.385 & S3.387	- Large areas of reflective material (including glass) should not be used on the outer surfaces of the buildings. - All the major lighting sources should point inward and downward to minimise glare disturbance to wildlife. The intensity of light should also be controlled to the lowest possible level.	To minimise impacts to wildlife	MTR / DDC	All ventilation buildings in northern section and SSS	Detailed design and Operation phases	To be implemented as per construction programme
S3.411	- Implementation of ecological habitat management plan. - Ecological monitoring of the mitigation stream habitats according to ecological habitat management plan.	To monitor the wildlife use of the mitigation stream habitat	MTR	Mitigation stream habitat in SSS / ERS	Operation phase	To be implemented as per construction programme
Marine Ecological Impact (Construction Phase)						
Appendix3.6 (S1.102)	- The use of high-speed vessels should also be avoided during the construction and operation of the proposed barging point.	To minimise the indirect impact to Chinese White Dolphin habitat	Contractor	LKB	Construction phase	To be implemented as per construction programme
Appendix3.6	- No dumping of rubbish, oil or chemicals would be allowed.	To minimise the pollution to marine habitats	Contractor	LKB	Construction phase	To be implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
(S1.103)						as per construction programme
Appendix3.6 (S1.104)	- Deployment of silt curtains around the closed grab dredgers to minimize the suspended sediment impact due to dredging activities in dredging region. - To minimize impact on the gorgonians along the coastline near the dredging area, double silt curtains should be deployed around the works area.	To minimise the impact to subtidal habitats	Contractor	LKB	Construction phase	To be implemented as per construction programme
Appendix3.6 (S1.106)	- The number of work vessels and small crafts should be minimized. Dredging should be carried out continuously without unnecessary break to prevent unpredictable or sudden noise outbursts at random intervals.	To minimise disturbance impact on Chinese White Dolphin	Contractor	LKB	Construction phase	To be implemented as per construction programme
Appendix3.7 (S1.83)	- Mitigation measures to control water quality impacts proposed under Section 11 should be adopted.	To minimise indirect impact to intertidal and subtidal flora and fauna	Contractor	WKT	Construction phase	Implemented
Appendix3.6 (S1.105)	- Engines of vessels moored at the barging point would be turned off to minimize unnecessary underwater	To minimise disturbance impact on Chinese White Dolphin	Contractor	LKB	Construction phase	To be implemented as per

	inspection of excavated materials should be conducted to screen soil for signs of contamination (e.g. discoloration, stains and odour). The inspection process should also be assisted by a photo ionization detector (PID) for volatile organics. If suspected materials are encountered during tunnel boring, further sampling and testing should also be undertaken to verify any contamination. The soil bored out during excavation and tunnel boring should be temporary stockpiled and if laboratory analysis indicated exceedance of relevant RBRG levels, remediation works, should be undertaken depending on the quantity and quality of contaminated soil identified.	tunnel boring/ excavation at CLP transformer station at Lai Cheung Road and Petrol Filling Station at 82 Tai Kok Tsui Road		Cheung Road and Petrol Filling Station at 82 Tai Kok Tsui Road where signs of contamination is identified	transformer station at Lai Cheung Road and Petrol Filling Station at 82 Tai Kok Tsui Road	programme
S9.35 (iii)	For sites with contamination identified (Site H and Site Q) the following environmental mitigation measures should be undertaken during the course of the site remediation: ▪ Excavation profiles must be properly designed and executed with attention to the relevant requirements for environment, health and safety; ▪ Excavation should be carried out during dry season as far as possible to minimise contaminated runoff from contaminated soils; ▪ Supply of suitable clean backfill material is needed after excavation; ▪ The chemical oxidant proposed (RegenOxTM) as a	To minimise the potentially adverse environmental impacts arising from the handling of potentially contaminated materials.	Contractor	Sites H and Q /during transportation	Site remediation and prior to construction phase	For Site H: Implemented For Site Q: To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	contaminant mass reduction technology. Comprises a solid oxidant complex (sodium percarbonate/catalytic formulation) and an activator complex (a composition of ferrous salt embedded in a micro-scale catalyst gel). These chemical will be securely stored, separately and way from sources of ignition or oxidizable items. Handling will & will be undertaken by persons specifically trained and wearing appropriate PPE. ▪ Vehicles containing any excavated materials should be suitably covered to limit potential dust emissions or contaminated wastewater run-off, and truck bodies and tailgates should be sealed to prevent any discharge during transport or during wet conditions; ▪ Speed control for the trucks carrying contaminated materials should be enforced; and ▪ Vehicle wheel and body washing facilities at the site's exist points should be established and used.					
S9.35(iv)	In order to minimise the potentially adverse effects on health and safety of construction workers during the course of site remediation, the Occupation Safety and Health Ordinance (OSHO) (Chapter 509) and its subsidiary Regulations should be followed by all site personnel working on the site at all times. In addition, the following basic health and safety measures should be	To minimise the potentially adverse effects on health and safety of construction workers during the course of site remediation	Contractor	Sites H and Q	Site remediation and prior to construction phase	

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	implemented as far as possible: ▪ Set up a list of safety measures for site workers; ▪ Provide written information and training on safety for site workers; ▪ Keep a log-book and plan showing the contaminated zones and clean zones; ▪ Maintain a hygienic working environment; ▪ Avoid dust generation; ▪ Provide face and respiratory protection gear to site workers; ▪ Provide personal protective clothing (e.g. chemical resistant jackboot, liquid tight gloves) to site workers; and ▪ Provide first aid training and materials to site workers.					
9.35(v)	For Areas Feasible or Infeasible for On-Site Inspection and Site Investigation (i) Phase 2 supplementary SI works ▪ Upon site access is granted, site inspection should be carried out to ascertain any contaminative sources and hotspot of contamination within the site. ▪ The sampling and testing schedule as recommended	(i) To identify areas with land contamination concern, report laboratory results and propose remediation measures if necessary. (ii) To ensure remediation works have been undertaken to before	MTR/ Contractor	Areas Infeasible for On-Site Inspection and Site Investigation and WSW	After land resumption and prior to the construction works commencement at respective sites	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	in the approved CAP should then be updated based on respective site situation and the number of sampling locations may be significantly reduced. A revised CAP should then be submitted to EPD for endorsement. ▪ For supplementary CARs and RAP(s), upon completion of SI and laboratory testing, supplementary CARs should be submitted to EPD for endorsement. If contamination is identified, RAP(s) should also be submitted to EPD for endorsement. ▪ The revised CAPs and supplementary CARs and /or RAP(s) should be submitted in separate packages for different works area depending on the schedule of land resumption and the commencement of construction works for each works area. ▪ RR(s) should be submitted to demonstrate completion of remediation works before construction work starts at the site. (ii) WSW ▪ According to WSW EP Condition 3.14, the Project Proponent of the WSW development shall prepare and submit CAR/RAP to EPD within 2 months after commencement of construction of the WSW development and the recommendations in the endorsed CAR/RAP shall be fully implemented before the commencement of any construction	the commencement of any construction works of the Project that may disturb the ground of the south-western portion of the MPV.				

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	works that may disturb the ground of the relevant sites. ▪ This project will ensure that the completion of remediation works before the construction works at contaminated areas start.					
Waste Management Implications (Construction Phase)						
S10.107	Recommendations for good site practices: ▪ Prepare a Waste Management Plan approved by the Engineer/Supervising Officer of the Project based on current practices on construction sites; ▪ Training of site personnel in, site cleanliness, proper waste management and chemical handling procedures; ▪ Provision of sufficient waste disposal points and regular collection of waste; ▪ Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers; ▪ Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors; and ▪ Separation of chemical wastes for special handling and appropriate treatment.	To implement good site practice for handling, sorting reuse and recycling of C&D materials	Contractor	All works areas	Construction phase	Implemented
S10.108	Recommendations for waste reduction measures: ▪ Sorting of demolition debris and excavated materials from demolition works to recover	To implement on-site sorting facilitating reuse and recycling of materials	Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	reusable/ recyclable portions (i.e. soil, broken concrete, metal etc.); ▪ Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; ▪ Encourage collection of aluminium cans by providing separate labelled bins to enable this waste to be segregated from other general refuse generated by the workforce; ▪ Proper storage and site practices to minimize the potential for damage or contamination of construction materials; ▪ Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste; and ▪ Training should be provided to workers about the concepts of site cleanliness and appropriate waste management procedures, including waste reduction, reuse and recycle.	as well as proper disposal of waste				
S10.109	The Contractor should prepare and implement a Waste Management Plan (WMP) as a part of the Environmental Management Plan (EMP) in accordance with ETWB TCW No. 19/2005 which describes the arrangements for avoidance, reuse, recovery, recycling, storage, collection, treatment and disposal of different categories of waste to be generated from the	To keep trace of the generation, minimization, reuse and disposal of C&D materials in the Project	Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	construction activities.					
S10.112	Storage of materials on site may induce adverse environmental impacts if not properly managed, recommendations to minimise the impacts include: ▪ Waste, such as soil, should be handled and stored well to ensure secure containment, thus minimising the potential of pollution; ▪ Maintain and clean storage areas routinely; ▪ Stockpiling area should be provided with covers and water spraying system to prevent materials from wind-blown or being washed away; and ▪ Different locations should be designated to stockpile each material to enhance reuse.	To minimise potential impacts of waste storage and enhance reusable volume	Contractor	All work areas	Construction phase	Implemented
S10.113	Waste hauliers must hold a valid permit for the collection of waste as stipulated in their permits. Removal of waste should be done in a timely manner.	To collect and remove waste generated	Contractor	All work areas	Construction phase	Implemented
S10.114-115	Implementation of trip-ticket system to monitor waste disposal and control fly-tipping. Set up warning signs at vehicular access points reminding drivers of designated disposal sites and penalties of an offence. Installation of close-circuited television at access points	To monitor disposal of waste and control fly-tipping	Contractor	All work areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	of vehicles to monitor and prevent illegal dumping.					
S10.117	Recommendations for excavated materials within works areas: ▪ Several ramps should be used for transportation of different materials as far as practicable (at SSS/ERS site, both soft and hard materials could be generated with the provision of three ramps, each of them can be used for single material for primary separation). Each ramp should be used for transportation of a single material as far as practicable. ▪ If a conveyor system is used, materials should be transported separately on the belts, it is therefore proposed that more than one conveyor belt should be installed if possible. If more than one material is needed to be transported on a single belt, each material should be stockpiled separately once they are removed from the excavation face to the ground and the belt should operate at different times with different materials as far as practicable. ▪ Enclosure should also be provided for the conveyor belt, as far as practicable to minimize the of dust generation. ▪ Different locations should be designated for each material during stockpiling. Stockpiling may be needed when the conveyor system is under	To mitigate and minimize the potential impacts from the storage and transportation of materials within works areas	Contractor	All works areas	Construction Phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	constraint or when the spoil could not be transported away from works area immediately after excavation. Cover should be provided to dusty stockpiles to avoid the materials from being wind-blown or flushed away by water. It is expected that water spraying system should also be equipped to moisten the materials.					
S10.119	Wet spoil generated from TBM construction, construction of bored piles and D-wall should be properly handled before disposal to Taishan and Fill Banks respectively for reuse in other projects. Dry materials should be mixed with the wet spoil or by the use of lime to reduce water content where applicable.	To minimise impacts to disposal outlet from reception of wet spoil	Contractor	All works areas	Construction phase	Implemented
S10.120	Wheelwash facilities should be provided before the trucks leave the works area.	To minimise dust impact	Contractor	All works areas	Construction phase	Implemented
S10.121	The Contractor should ensure the on-site separation from inert portion. The waste delivered to landfill should not contain any free water or have water content more than 70% by weight. The haulier must ensure suitable amount of waste would be loaded on different types of trucks used. A one-week notice should be given to EPD with information on Contractor's name and respective contact details.	To meet the requirement for disposal at landfill	Contractor and Waste haulier	All works areas	Construction phase	Implemented
S10.125	This will generally follow the PNAP 25 in handling of dredged/excavated sediment. The dredged / excavated sediments would be loaded onto barges and transported	To dispose sediment in an authorized and least impacted way	Contractor	All works areas with sediments	Detailed Design and Construction	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	to existing designated disposal sites allocated by the MFC according to their levels of contamination, as presented below: ▪ For Type 1 sediment, the sediments will be excavated/dredged and transport to designated CEDD Facilities, typically at South Cheung Chau and/or Ninepin. ▪ For Type 2 sediment, the sediments will be dredged/excavated and transport to designated CEDD Facilities, typically at East Sha Chau for confined marine disposal. ▪ For Type 3 sediment, it would require special treatment/disposal before confined marine disposal at CEDD Facilities, typically at East Sha Chau. In order to have the least potential of loss of contaminants to the marine environment, containment of the sediments in geosynthetic containers is proposed when transporting the sediment. Field trials are recommended to be undertaken during the detailed design stage to establish the optimum handling method for this approach. The details of the disposal methodology could therefore be confirmed during the detailed design stage, prior to construction.			concern	phase	
S10.126	The basic requirements and procedures for dredged / excavated sediment disposal specified under PNAP 252 shall be followed.	To dispose sediment in an authorized and least impacted way	Contractor	All works areas with sediments concern	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S10.127	The Project Proponent will agree in advance with MFC of CEDD on the site allocation by submitting a Construction & Demolition Material Management Plan. The final disposal sites and arrangement will be determined by the MFC and a dumping permit will be obtained from the DEP prior to the commencement of the dredging and excavation works.	To determine the best handling and disposal option of the sediments.	MTR/ Contractor	All works areas with sediments concern	Detailed Design and Construction phase	Implemented
S10.128	The contractor for the dredging/ excavation works shall apply for the site allocations of marine sediment disposal based on the prior agreement with MFC/CEDD. The contractor shall apply for all necessary permits from relevant authorities for the disposal of dredged / excavated sediment.	To dispose the sediments in an authorized way.	Contractor	All works areas with sediments concern	Construction phase	Implemented
S10.129	If temporary stockpiling of sediments is necessary, the sediment should be covered by tarpaulin and earth bunds or sand bag barriers should be provided on site to prevent leachate from entering the drains and surrounding water bodies. The stockpiling areas should be completely paved or covered by lining avoiding contaminating the soil or groundwater underneath.	To prevent the cross contamination of surrounding soils and water bodies	Contractor	All works areas with sediments concern	Construction phase	Implemented
S10.130	The dredged / excavated sediment should be transported by covering trucks to designated barging points. The barge transporting the sediments to the designated disposal site should be equipped with tight fitting seals to prevent leakage. Besides, the barge should not be filled to a level that would cause overflow of materials or laden water during loading or transportation.	To prevent overflowing of sediments to the surrounding area and water bodies	Contractor	All works areas with sediments concern / trucks / barges	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S10.131	Loading of the dredged / excavated sediment to the barge should be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.	To prevent overflowing of sediments to the surrounding area and water bodies	Contractor	Barging points	Construction phase	Implemented
S10.132	In order to minimise the potential odour emissions during the dredging / excavation operation and transportation of the sediment, the dredged / excavated sediment placed on barges should be properly covered as far as practicable. Requirement of the *Air Pollution Ordinance (Construction Dust) Regulation*, where relevant, should be adhered to during the construction phase of the Project.	To minimise dust and odor impacts to surrounding environment	Contractor	All works areas with sediments concern / Barging points	Construction phase	Implemented
S10.134	Workers should wear protective gloves when carrying out the dredging / excavation works. Adequate washing and cleaning facilities should be provided on site.	To minimise the exposure to the contaminated sediments	Contractor	All works areas with sediments concern	Construction phase	Implemented
S10.135	For allocation of sediment disposal site and application of marine dumping permit, another proposal for sampling and chemical testing of the sediment will be prepared and submitted to the EPD for approval following the procedures in PNAP 252. The approved detailed sampling and chemical testing will be carried out prior to the commencement of the dredging/excavation activities to confirm the sediment disposal method. The contamination levels of the marine sediment to be dredged / excavated have to be analysed and recorded. After carrying out the sampling and testing, a Sediment Quality Report (SQR) will be prepared for EPD approval as required under the	To analyse the sediments quality and determine the best disposal option	Contractor	All works areas with sediments concern	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	Dumping at Sea Ordinance to agree and confirm the quantities and extent of the contamination of the sediments prior to the dredging/ construction contract being tendered. The SQR will include the sampling details, the chemical testing results, quality control records, proposed classification and delineation of sediment according to the requirements of the Appendix A of PNAP 252.					
S10.136	If chemical wastes are produced at the construction site, the Contractor would be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. Containers used for storage of chemical waste should : ▪ Be compatible with the chemical wastes being stored, maintained in good condition and securely sealed; ▪ Have a capacity of less than 450 litres unless the specifications have been approved by EPD; and ▪ Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the *Waste Disposal (Chemical Waste) (General) Regulation*.	To properly store the chemical waste within works areas	Contractor	All works areas	Construction phase	Implemented
S10.137	The chemical storage areas should: ▪ Be clearly labelled to indicate corresponding chemical characteristics of the chemical waste and used for storage of chemical waste only;	To prepare appropriate storage areas for chemical waste at works areas	Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	▪ Be enclosed on at least 3 sides; ▪ Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest; ▪ Have adequate ventilation; ▪ Be covered to prevent rainfall from entering; and ▪ Be properly arranged so that incompatible materials are adequately separated.					
S10.138	Lubricants, waste oils and other chemical wastes would be generated during the maintenance of vehicles and mechanical equipments. Used lubricants should be collected and stored in individual containers which are fully labelled in English and Chinese and stored in a designated secure place.	To clearly label the chemical waste at works areas	Contractor	All works areas	Construction phase	Implemented
S10.139	A trip-ticket system should be operated in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation* to monitor all movements of chemical waste. The Contractor should employ a licensed collector to transport and dispose of the chemical wastes, to either the approved CWTC at Tsing Yi, or another licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.	To monitor the generation, reuse and disposal of chemical waste	Contractor	All works areas	Construction phase	Implemented
S10.140	General refuse should be stored in enclosed bins or compaction units separate from C&D materials and chemical waste. A reputable waste collector should be	To properly store and separate from other C&D materials for subsequent	Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	employed by the contractor to remove general refuse from the site, separately from C&D materials and chemical wastes.	collection and disposal				
S10.141	The recyclable component of general refuse, such as aluminium cans, paper and cleansed plastic containers should be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste should be set up by the Contractor. The Contractor should also be responsible for arranging recycling companies to collect these materials.	To facilitate recycling of recyclable portions of refuse	Contractor	All works areas	Construction phase	Implemented
S10.142	The Contractor should carry out a training programme for workers in avoiding, reducing, reusing and recycling of materials generation. Posters and leaflets advising on the use of the bins should also be provided in the sites as reminders.	To raise workers' awareness on recycling issue	Contractor	All works areas	Construction phase	Implemented
Waste Management Implications (Operation Phase)						
S10.146-10.147	Chemical waste: ▪ The requirements stipulated in the *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes* should be followed in handling of chemical waste as in construction phase. ▪ A trip-ticket system should be operated in accordance with the *Waste* Disposal *(Chemical*	To avoid environmental impacts in handling, storage and disposal of chemical waste	MTR	Ventilation buildings, SSS and WKT	Operation phase	To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	Waste) (General) Regulation to monitor all movements of chemical wastes which would be collected by a licensed collector to a licensed facility for final treatment and disposal. ▪ The recommendations proposed for the mitigation of impacts from chemical waste in construction phase should also be followed (refer to S10.104-S10.106).					
S10.148-S10.149	General refuse: ▪ Provide recycling bins at designated areas for proper recycling of papers, aluminium cans and plastics bottles. ▪ Separation from other waste types and collected by licensed collectors at daily basis to minimize the potential impacts from odour and vermin.	To separate general refuse from other waste types and proper disposal of the refuse	MTR	Ventilation buildings, SSS and WKT	Operation phase	To be implemented as per construction programme
S10.150	Industrial waste: ▪ Separation of reusable components like steel before collection by licensed collector	To recycle useful materials from industrial waste and proper disposal	MTR	Ventilation buildings, SSS and WKT	Operation phase	To be implemented as per construction programme
Water Quality Impact (Construction Phase)						

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S11.128 - S11.153	Construction site run-off and general construction activities: ▪ The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage should be adopted where applicable.	To control water quality impact from construction site runoff and general construction activities	MTR / Contractor	All works areas	Construction phase	Implemented
S11.154	Groundwater seepages from uncontaminated area: ▪ In case seepage of uncontaminated groundwater occurs, groundwater should be pumped out from the works areas and discharged into the storm system via silt removal facilities. Uncontaminated groundwater from dewatering process should also be discharged into the storm system via silt traps.	To control water quality impact from groundwater from uncontaminated area	MTR / Contractor	All works areas	Construction phase	Implemented
S11.155	As the proposed WKT is near the Victoria Harbour, high ground water level regime due to both tidal effects and rainwater infiltration is anticipated. A cofferdam wall should be built to limit groundwater inflow to the excavation works areas in the WKT site.	To control water quality impact from groundwater from uncontaminated area	MTR / Contractor	WKT	Construction phase	Implemented
S11.156	To monitor the tide and groundwater relationship, it is recommended to install groundwater level loggers at the nearest tidal areas (i.e. near Mai Po).	To monitor the groundwater level	MTR / Contractor	Mai Po	Construction phase	Implemented
S11.157 - S11.158	Site Runoff or Groundwater from contaminated areas: ▪ No directly discharge of groundwater from contaminated areas should be adopted.	To control water quality impact from contaminated groundwater	MTR / Contractor	Excavation areas where contaminated	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	▪ Prior to any excavation works within the potentially contaminated areas, the baseline groundwater quality in the areas should be reviewed based on the past relevant site investigation data and any additional groundwater quality measurements to be performed with reference to *Guidance Note for Contaminated Land Assessment and Remediation* and the review results should be submitted to EPD for examination. If the review results indicated that the groundwater to be generated from the excavation works would be contaminated, this contaminated groundwater should be either properly treated or properly recharged into the ground in compliance with the requirements of the TM-DSS. ▪ If wastewater treatment is to be deployed for treating the contaminated groundwater, the wastewater treatment unit shall deploy suitable treatment processes (e.g. oil interceptor / activated carbon) to reduce the pollution level to an acceptable standard and remove any prohibited substances (such as TPH) to an undetectable range. ▪ All treated effluent from the wastewater treatment plant shall meet the requirements as stated in TM-DSS and should be either discharged into the foul sewers or tankered away for proper disposal. ▪ If deployment of wastewater treatment is not feasible for handling the contaminated			ground-water is found		

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	groundwater, groundwater recharging wells should be installed as appropriate for recharging the contaminated groundwater back into the ground. The recharging wells should be selected at places where the groundwater quality will not be affected by the recharge operation as indicated in section 2.3 of the TM-DSS. The baseline groundwater quality should be determined prior to the selection of the recharge wells, and submit a working plan to EPD for agreement. Pollution levels of groundwater to be recharged shall not be higher than pollutant levels of ambient groundwater at the recharge well. Groundwater monitoring wells should be installed near the recharge points to monitor the effectiveness of the recharge wells and to ensure that no likelihood of increase of groundwater level and transfer of pollutants beyond the site boundary. Prior to recharge, free products should be removed as necessary by installing the petrol interceptor. The Contractor should apply for a discharge licence under the WPCO through the Regional Office of EPD for groundwater recharge operation or discharge of treated groundwater.					
S11.128 - S11.136,	Barging points: Mitigation measures for control water quality impact from surface run-off should be applied.	To control water quality impact from barging point	MTR / Contractor	All barging Points	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
S11.160	The following good site practices should also be adopted: ▪ all vessels should be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash ▪ all hopper barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material ▪ construction activities should not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site ▪ loading of barges and hoppers should be controlled to prevent splashing of material into the surrounding water. Barges or hoppers should not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation					
S11.161	Effluent discharge: There is a need to apply to EPD for a discharge licence for discharge of effluent from the construction site under the WPCO. The discharge quality should meet the requirements specified in the discharge licence. Minimum distances of 100 m should be maintained between the discharge points of construction site effluent and the existing seawater intakes. If	To control water quality impact from effluent discharge from construction site	MTR / Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring should be carried out in accordance with the WPCO license which is under the ambit of regional office (RO) of EPD.					
S11.162	Accidental spillage of chemicals: Contractor should register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes**.**	To control water quality impact from accidental chemical spillage	MTR / Contractor	All works areas	Construction phase	Implemented
S11.163	Any service shop and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges.	To control water quality impact from accidental chemical spillage	MTR / Contractor	All works areas	Construction phase	Implemented
S11.164	Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance details the requirements to deal with chemical wastes. General requirements are given as follows:	To control water quality impact from accidental chemical spillage	MTR / Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	▪ Suitable containers should be used to hold the chemical wastes to avoid leakage or spillage during storage, handling and transport. ▪ Chemical waste containers should be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents. ▪ Storage area should be selected at a safe location on site and adequate space should be allocated to the storage area.					
S11.165	Surface construction works at or in close proximity of watercourses or seafront: ▪ The proposed surface construction works should be carried out in dry season as far as practicable where the flow in the river channel or stream is low. ▪ The use of less or smaller construction plants may be specified to reduce the disturbance to the riverbed or pond deposits. ▪ Temporary sewerage system should be designed to prevent wastewater from entering the river, streams and sea. ▪ Temporary storage of materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction materials should be located well away from any water courses during carrying out of the construction works.	To control water quality impact from construction works at or in close proximity of watercourses or seafront	MTR / Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	▪ Stockpiling of construction materials and dusty materials should be covered and located away from any water courses. ▪ Construction debris and spoil should be covered up and/or disposed of as soon as possible to avoid being washed into the nearby water receivers. ▪ Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where practicable. ▪ Mitigation measures to control site run-off from entering the nearby water environment should be implemented to minimize water quality impacts. Surface channels should be provided along the edge of the waterfront within the work sites to intercept the run-off. ▪ Construction effluent, site run-off and sewage should be properly collected and/or treated. ▪ Any works site inside the water courses should be temporarily isolated. The water flow should be temporarily diverted to downstream by using PVC pipes, steel arrays in concrete case or similar, restricting the excavation works to be conducted within an enclosed dry section of the channel. This works arrangement would provide a dry zone for excavation works within the river channel and would prevent the conveyance of suspended					

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	sediment downstream. Dewatering at works section should be conducted prior to the commencement of works. Further limiting or reducing the works area inside the water courses should be considered during wet season or rainstorm event in order to reduce the area of exposed surface. ▪ Silt curtain should be installed around the construction activities at or near the watercourses to minimize the potential impacts due to accidental spillage of construction wastes and excavated materials. ▪ Proper shoring may need to be erected in order to prevent soil or mud from slipping into the watercourses. ▪ Supervisory staff should be assigned to station on site to closely supervise and monitor the works.					
S11.166	Surface construction works close to water gathering grounds: ▪ The conditions as specified in WSD guidelines on protection of Water Gathering Ground should be followed or observed where practicable	To control water quality impact from surface construction works close to Water Gathering Ground	MTR / Contractor	Works areas close to water gathering ground	Construction phase	To be implemented as per construction programme
S11.167	Dredging of marine sediments at LKST: ▪ Closed grab dredger should be used to minimize the loss of sediment during the raising of the loaded	To minimize the loss of fine sediment to suspension during	MTR / Contractor	Marine dredging at LKST	Construction phase	To be implemented as per

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	grabs through the water column. ▪ No more than one closed grab dredger should be operated at any one time. ▪ Double silt curtains should be deployed around the dredging operations as far as practicable. ▪ The descent speed of grabs should be controlled to minimize the seabed impact speed. ▪ Barges should be loaded carefully to avoid splashing of material. ▪ All barges used for the transport of dredged materials should be fitted with tight bottom seals in order to prevent leakage of material during loading and transport. ▪ All barges should be filled to a level which ensures that material does not spill over during loading and transport to the disposal site and that adequate freeboard is maintained to ensure that the decks are not washed by wave action.	dredging of marine sediments at LKST				construction programme
S11.83 and S11.165	Diversion of watercourse: ▪ The excavation works at the existing stream in Shek Kong/ Kam Tin Nullah should be carried out by approved methods by the Engineer to minimise erosion. Should excavation works be carried out at the designated section of water course, temporary river diversion should be conducted prior to the commencement of works to avoid water flowing	To control water quality impact due to diversion of watercourse	MTR / Contractor	Watercourse to be diverted in Shek Kong	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	into works area. The temporary diversion of water flow should be performed by appropriate means, such as completing the construction of the proposed channel section for carrying diverted flow prior to excavation works, or other similar methods, as approved by the Engineer to suit the works condition. This works arrangement would provide a dry zone for excavation works within the river channel and would prevent the conveyance of suspended sediment downstream. Dewatering at works section should also be conducted prior to the commencement of works. ▪ Mitigation measures for minimizing the water quality impact for surface construction works at or close to the watercourses should also be applied.					
S. 11.169 - 11.173	Hydrogeological Impact: For the cut and cover tunnels and associated excavations for vent buildings and emergency access/escape points, the following measures should be in place in order to mitigate any drawdown effects to the groundwater table during the operation of the temporary dewatering works: ▪ Toe grouting should be applied beneath the toe level of the temporary/permanent cofferdam walls as necessary to lengthen the effective flow path of groundwater from outside and thus control the amount of water inflow to the excavation.	To control groundwater hydrogeological impact and groundwater drawdown	MTR/ Contractor	All works areas	Construction phase	Implemented

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	▪ Recharge wells should be installed as necessary outside the excavation areas. Water pumped from the excavation areas should be recharge back into the ground. The bored tunnels should be constructed using a closed face tunnel boring machine to limit water inflow into the excavation face. The cutter head for the machine will be sealed during excavation and therefore the water inflow from the face will be very small. Precast undrained linings should be installed and back grouted behind the tunnel boring machine as it advances along the alignment to minimize the potential inflow of water behind the cutter head. The Contractor should initially adopt suitable water control strategies while undertaking the excavation works. The water control strategies are shown as follow: ▪ Probing Ahead: As normal practice, the Contractor will undertake rigorous probing of the ground ahead of tunnel excavation works to identify zones of significant water inflow. The probe drilling results will be evaluated to determine specific grouting requirements in line with the tunnel advance. In such zones of significant water inflow that could occur as a result of discrete, permeable features, the intent would be to reduce overall					

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	inflow by means of cut-off grouting executed ahead of the tunnel advance. ▪ Pre-grouting: Where water inflow quantities are excessive, pre-grouting will be required to reduce the water inflow into the tunnel. The pre-grouting will be achieved via a systematic and carefully specified protocol of grouting. ▪ In principle, the grout pre-treatment would be designed on the basis of probe hole drilling ahead of the tunnel face. In the event of excessive drawdown being observed within the ground water table as a result of the tunnelling works even after incorporation of the water control strategies, post-grouting will be applied as described below: ▪ Post-grouting: Groundwater drawdown will be most likely due to inflows of water into the tunnel that have not been sufficiently controlled by the pre-grouting measures. Where this occurs post grouting will be undertaken before the lining is cast. Whilst unlikely to be required in significant measure, such a contingency should be allowed for reduction in permeability of the tunnel surround (by grouting) to limit inflow to acceptable levels.					

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	A detailed groundwater monitoring programme should be developed in detailed design stage to monitor both the proposed works and the impact of those works on the adjacent area.					
Water Quality Impact (Operation Phase)						
S11.174	Tunnel run-off and drainage: ▪ Track drainage channels discharge should pass through oil/grit interceptors/chambers to remove oil, grease and sediment before being pumped to the foul sewer/holding tank for further disposal. ▪ The silt traps and oil interceptors should be cleaned and maintained regularly. ▪ Oily contents of the oil interceptors should be transferred to an appropriate disposal facility, or to be collected for reuse, if possible.	To control runoff from rail track	MTR / DDC	Tunnels and rail tracks	Operation phase	To be implemented as per construction programme
S11.175 – S11.176	Sewage effluents: ▪ Connection of domestic sewage generated from the Project should be diverted to the foul sewer wherever possible. If public sewer system is not available, sewage tanking away services or on-site sewage treatment facilities should be provided to prevent direct discharge of sewage to the nearby storm system and all the discharge should comply with the requirements stipulated in the TM-DSS. ▪ For handling, treatment and disposal of other	To control water quality impact from sewage effluent discharge ventilation buildings, SSS and WKT	MTR / DDC	Ventilation buildings, SSS and WKT	Operation phase	To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	operation stage effluent, the practices outlined in ProPECC PN 5/93 should be adopted where applicable.					
S11.177-S11.181	Shek Kong Stabling Sidings (SSS): ▪ All the maintenance areas within the SSS should be housed or covered to prevent generation of contaminated rainwater runoff. All wastewater generated from the maintenance and cleaning activities should be collected and diverted to oil interceptor or other appropriate treatment facilities for proper treatment so that it satisfies the requirements stipulated in the TM-DSS. ▪ In case there is no pubic sewer available for the SSS during the operation phase, all wastewater generated or collected in the SSS should be tankered away for proper disposal to prevent direct discharge of any wastewater to the nearby surface water system. ▪ Oil interceptors should be regularly inspected and cleaned to avoid wash-out of oil during storm conditions. A bypass would be provided to avoid overload of the interceptor's capacity. ▪ All waste oils and fuels should be collected and handled in compliance with the Waste Disposal Ordinance. Site drainage should be well maintained and good management practices should be observed to ensure that oils and chemicals are managed,	To control water quality impacts from the operation of Shek Kong Stabling Sidings	MTR/DDC	SSS	Operation phase	To be implemented as per construction programme

EIA Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measures & Main Concern to Address	Who to implement the measures?	Location of the measures	When to implement the measures?	Implementation Status
	stored and handled properly and do not enter the nearby water streams. Areas for chemical storage should be securely locked. The storage area should have an impermeable floor and bunding of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest, to minimize the impacts from any potential accidents. In case of the occurrence of accidental spillage of chemicals, it is required to take immediate actions to control the release of chemicals. ▪ Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance details the requirements to deal with chemical wastes.					
S11.182	For any future maintenance desilting of the newly constructed or diverted watercourses, temporary barrier walls should be used to provide a dry zone for desilting work. Maintenance desilting should be carried out during periods of low flow in the dry season.	To control water quality impact due to maintenance desilting of the newly constructed or diverted watercourses	MTR	Diverted watercourses in Shek Kong	Operation phase	To be implemented as per construction programme

Appendix E Monitoring Schedule

Works Area	Survey Site	Date of Survey in May 2013	Tentative Date of Survey in June 2013
MPV	MPV-1	14 May 2013	13 June 2013
Access road leading to TPP	TPP-1	14 May 2013	13 June 2013
Access road leading to TPP	TPP-2	14 May 2013	13 June 2013
Access road leading to TPP	TPP-3	14 May 2013	13 June 2013
Access road leading to SSS / ERS	SSS-2a	14 May 2013	13 June 2013
Access road leading to SSS / ERS	SSS-3	14 May 2013	13 June 2013
TUW	TUW-1	14 May 2013	13 June 2013
TUW	TUW-2 (grouped with PHV-1 due to overlapping of survey area	14 May 2013	13 June 2013
PHV	PHV-1 (grouped with TUW-2 due to overlapping of survey area)	14 May 2013	13 June 2013

Appendix F

Graphical Plots of Monitoring Results

APPENDIX F: Air Quality Monitoring Results - 24-hour TSP Monitoring

- AM1

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-04	16.8	217.3	260
2013-05-10	26.4	217.3	260
2013-05-15	22.8	217.3	260
2013-05-21	29.9	217.3	260
2013-05-27	22.0	217.3	260

- AM2

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-04	50.7	179.4	260
2013-05-10	34.1	179.4	260
2013-05-15	22.3	179.4	260
2013-05-21	27.4	179.4	260
2013-05-27	29.3	179.4	260

- AM3

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-06	31.6	154.7	260
2013-05-11	17.2	154.7	260
2013-05-16	14.4	154.7	260
2013-05-22	25.2	154.7	260
2013-05-27	24.8	154.7	260

- AM4

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-04	10.1	148.6	260
2013-05-10	20.7	148.6	260
2013-05-15	36.7	148.6	260
2013-05-21	19.0	148.6	260
2013-05-27	25.2	148.6	260

- AM5

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-06	50.5	152	260
2013-05-11	24.6	152	260
2013-05-16	21.1	152	260
2013-05-22	19.7	152	260
2013-05-28	24.5	152	260

- AM6

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-06	30.9	145.6	260
2013-05-11	16.6	145.6	260
2013-05-16	12.6	145.6	260
2013-05-22	10.3	145.6	260
2013-05-28	20.4	145.6	260

- AM7

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-06	36.6	149.8	260
2013-05-11	14.6	149.8	260
2013-05-16	24.3	149.8	260
2013-05-22	11.1	149.8	260
2013-05-28	N/A	149.8	260

- AM8

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-06	17.8	158.2	260
2013-05-11	17.9	158.2	260
2013-05-16	13.1	158.2	260
2013-05-22	10.1	158.2	260
2013-05-28	15.4	158.2	260

Note:
- Impact monitoring at Tse Uk Tsuen (AM 7) on 28 May 2013 was not carried out due to power supply shortage.

APPENDIX F: Air Quality Monitoring Results - 24-hour TSP Monitoring

- AM9

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-04	22.2	171.2	260
2013-05-10	31.5	171.2	260
2013-05-15	51.2	171.2	260
2013-05-21	27.4	171.2	260
2013-05-27	27.8	171.2	260

- AM10

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-04	24.2	174.8	260
2013-05-10	21.3	174.8	260
2013-05-15	23.6	174.8	260
2013-05-21	24.8	174.8	260
2013-05-27	10.0	174.8	260

- AM11

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	13.1	160.3	260
2013-05-08	9.0	160.3	260
2013-05-13	27.9	160.3	260
2013-05-18	13.3	160.3	260
2013-05-24	12.9	160.3	260
2013-05-30	45.5	160.3	260

- AM12

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	36.5	162.5	260
2013-05-08	41.5	162.5	260
2013-05-13	32.2	162.5	260
2013-05-18	11.7	162.5	260
2013-05-24	14.3	162.5	260
2013-05-30	27.5	162.5	260

- AM13

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	38.6	180.3	260
2013-05-08	23.5	180.3	260
2013-05-13	23.2	180.3	260
2013-05-18	25.0	180.3	260
2013-05-24	14.0	180.3	260
2013-05-30	9.5	180.3	260

- AM14

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	29.2	158.2	260
2013-05-08	40.7	158.2	260
2013-05-13	21.1	158.2	260
2013-05-18	12.4	158.2	260
2013-05-24	92.7	158.2	260
2013-05-30	14.7	158.2	260

- AM15

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	55.4	168.8	260
2013-05-08	16.0	168.8	260
2013-05-13	30.7	168.8	260
2013-05-18	13.7	168.8	260
2013-05-24	130.1	168.8	260
2013-05-30	29.4	168.8	260

- AM16

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	33.9	155.9	260
2013-05-08	28.4	155.9	260
2013-05-13	25.8	155.9	260
2013-05-18	13.8	155.9	260
2013-05-24	89.6	155.9	260
2013-05-30	29.7	155.9	260

- AM17

Date	24-hour TSP Monitoring Results ($\mu g/m^3$)	Action Level ($\mu g/m^3$)	Limit Level ($\mu g/m^3$)
2013-05-02	40.4	179.3	260
2013-05-08	27.8	179.3	260
2013-05-13	27.6	179.3	260
2013-05-18	28.4	179.3	260
2013-05-24	155.8	179.3	260
2013-05-30	25.6	179.3	260

Remark: Bold value indicated an Action level exceedance
Bold & Italic value indicated an Limit level exceedance

Note:
- Impact monitoring at Tsuen Wan Lutheran School (CN 17) had been temporarily suspended since December 2010 due to school closure. Monitoring at this location will be resumed subject to confirmation of school operation or other noise sensitive use at CN 17.
- A correction factor (-9 dB(A)) has been applied at CN19 to take into account the noise barrier effect. The correction factor was agreed with IEC according to Section 3.11 of the EM&A Manual.
- Noise limit level of CN20, CN21, CN23, CN24, CN25, CN26 & CN29, which are school, is 70dB(A) on normal weekdays and 65dB(A) during examination period.

Certified Arborist Inspection Record

MTR Express Rail Link, Contract 801

Monthly Audit Inspection Record

May 2013

Audit of tree works, including tree protection, pruning work, transplanting work, maintenance works in the temporary holding nursery, and compensation tree planting

Date	Contract	Activity Description	Purpose
23/05/13 (SLS) 27/05/13 (SKW)	801 – Siu Lang Shui (Nursery) So Kwun Wat Nursery	Inspection of trees to be transplanted within the contract	Regular audit of tree works
03/06/13	802 - Nam Cheong Property Parcel 40.2, and Sham Mong Rd Footpath, Private Lot NKIL6436	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
03/06/13	805 - Sham Mong Road Parcel 41.4,38.3, Sham Mong Road Footpath (near 38.3), and Footpath of Sham Mong Rd, Parcels 38.6/38.7 (footpath alongside CLP Building) NKIL 6363 (CLP Building)	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
23/05/13	811A—WKT station North Ngo Cheung Road, Hoi Wang Road, Lin Cheung Road	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
23/05/13	811B - WKT Approach Tunnels – South Parcel 44.1, Lin Cheung Road, and Jordan Road Footpath & Central Divider	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
03/06/13	816D WRK – Integrated Series Contractors Site Office Private Lot – STT-RDS/KSL-002	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
03/06/13	820 - Mei Lai Road to Hoi Ting Road Tunnels Parcel 37.2, 37.3, Kwai Chung Road (Footpath near 37.5) Sham Mong Road & Hing Wah Street West Footpath Parcel 39.1, 40.4, Sham Mong Road (Nam Cheong Park) Private Lot STT-KX2382, Private Lot STT-KX2416	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works

27/05/13	821—Shek Yam to Mei Lai Road Tunnels Parcel NT-9 (slope) NT-10	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
27/05/13 24/05/13 27/05/13	822 - Tse Uk Tsuen to Shek Yam Tunnels Parcels NT-6 (Pat Heung), NT-7, and NT-8, Site Office - San Kwai Street, Kwai Hing, Parcel NT-17 (6.6, 6.9) 822—Siu Lam FW Service Reservoir	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
24/05/13	823A - Kam Tin Tunnels Parcels NT-5A, NT-5.1A, and NT-5.3A	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
24/05/13	823B - SSS and ERS Parcels NT-5.1B, NT-5.2, and NT-5.3B	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
28/05/13 (NTM) 24/05/13 (TKP)	824 Ngau Tam Mei to Tai Kong Po Tunnels NT-3, NT-5.1A, NT-4	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
28/05/13	825 - Mai Po to Ngau Tam Mei Tunnels Parcels NT-1a (Mai Po), CP-12, and verges of Castle Peak Road - Mai Po	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
28/05/13	826 – Huang Gang to Mai Po Tunnel	Inspection of retained trees and trees to be transplanted within the contract	Regular audit of tree works
