Attention: Mr. C L Lau

Dear Mr. Lau,

**Re: Contract No. CV/2013/06
Handling of Surplus Public Fill (2014 – 2016)
Monthly EM&A Report (No. 6) for June 2014 for the Tuen Mun Area 38 Fill Bank**

Reference is made to your submission of the revised draft Monthly EM&A Report for June 2014 for the TM Area 38 Fill Bank received by E-mail on 15 July 2014.

We are pleased to inform you that we have no comment on the captioned report.

Thank you very much for your attention and please do not hesitate to contact our Jason Lai or the undersigned should you have any queries.

Yours sincerely,

Tony Cheng
Independent Environmental Checker

EXECUTIVE SUMMARY

This monthly Environmental Monitoring and Audit (EM&A) report No.6 was prepared by Environmental Team (ET) of ETS-Testconsult Ltd (ETL) for the "Contract No. CV/2013/06 Handling of Surplus Public Fill (2014-2016) – Tuen Mun (TM) Area 38 Fill Bank" (The Project).

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at TM Area 38 in June 2014.

Site Activities

As informed by the Contractor, the site activities in this reporting period were as below:

1. Operation of the TM38 Fill Bank .
2. Transferring public fill to vessel and delivering to Taishan and other parties.
3. Construction of new wheel washing bay.
4. Repairing of the damaged cladding of tipping hall.

Environmental Monitoring Progress

The summary of the monitoring activities in this monitoring month is listed below:

- 24-hour TSP Monitoring: 5 Occasions at 2 designated locations
- 1-hour TSP Monitoring: 14 Occasions at 2 designated locations
- Noise, Daytime: 8 Occasions at 2 designated locations
- Marine Water Quality Monitoring: 12 Occasions at 4 designated locations
- Weekly-site inspection: 4 Occasions

Air Monitoring

No exceedance of Action and Limit level was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

Noise Monitoring

No exceedance of Action and Limit level for noise monitoring was recorded in the reporting month.

Marine Water Quality Monitoring

According to the marine water monitoring results, no exceedance of Action and Limit level was recorded.

Weekly Site Inspection

In general, performance on environmental mitigation measures implemented was found to be satisfactory in this reporting month. The major findings observed during site inspections are presented in the Section 7.0.

Environmental Complaints, Notification of summons and successful prosecutions

No complaint, notification of summon and prosecution with respect to environmental issues was received in this monitoring month.

Future Key Issues

Based on the site inspections and forecast of engineering works in the coming month, key issues to be considered are as follows:

- Dust generation from activities on site, such as vehicular movements along unpaved area and rock crushing activities;
- Noise impact from operating equipment and machinery on site;
- Wastewater and surface runoff from the site discharged into nearby water body; and
- Storage and usage of chemicals / fuel and chemical waste / waste oil.

1.0 INTRODUCTION

HKPFH Joint Venture (HKPFH-JV) appointed Environmental Team (ET) of ETS-Testconsult Limited (ETL) to undertake the Environmental Monitoring and Audit (EM&A) for the “Contract No: CV/2013/06 –Handling of Surplus Public Fill (2014-2016) – Tuen Mun (TM) Area 38 Fill Bank” (The Project).

In accordance with the Condition 5 of Part C of Environmental Permit (No.: EP-210/2005/B) (the EP), an EM&A programme as set out in the Project Profile should be implemented.

The EM&A programme requires environmental monitoring for air quality, water quality and environmental site inspections for air quality, water quality, landscape and visual, and waste management. The EM&A requirements for each parameter described in the following sections include:

- All monitoring parameters;
- Monitoring schedules for the reporting month and forthcoming months;
- Action and Limit levels for all environmental parameters;
- Event/Action Plans;
- Environmental mitigation measures, as recommended in the Project Profile; and
- Environmental requirements in contract documents.

Baseline monitoring was completed in May 2003 by Stanger Asia Ltd. Action and Limit Levels were established for air and water quality parameters based on the baseline monitoring results.

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at Tuen Mun Area 38 in June 2014.

2.0 PROJECT INFORMATION

2.1 Construction Programme

Details of construction programme are shown in Appendix G.

2.2 Project Organization and Management Structure

The organization chart and lines of communication with respect to the on-site environmental management and monitoring program are shown in Appendix A.

2.3 Contact Details of Key Personnel

The key personnel contact names and telephone numbers are shown in Table 2.1.

Table 2.1 Contact Details of Key Personnel

| Organization | Name of Key Staff | Project Role | Tel. No. | Fax No. |
|-----------------------|---|---------------------------|-----------|-----------|
| CEDD | Mr. P C Mok Mr. K C Wong Mr. C T Chock Mr. Y F Kwong | Engineer's Representative | 2762 5514 | 2714 0113 |
| IEC (ENVIRON) | Mr Tony Cheng | IEC | 3465 2888 | 3465 2899 |
| Contractor (HKPFH-JV) | Mr. K W Li | Project Manager | 9750 6438 | 2744 6937 |
| ET (ETL) | Mr C. L. Lau | ET Leader | 2946 7791 | 2695 3944 |

3.0 CONSTRUCTION PROGRESS IN THIS REPORTING MONTH

As informed by the Contractor, the activities in the reporting month include:

1. Operation of the TM38 Fill Bank .
2. Transferring public fill to vessel and delivering to Taishan and other parties.
3. Construction of new wheel washing bay.
4. Repairing of the damaged cladding of tipping hall.

4.0 AIR QUALITY MONITORING

4.1 Monitoring Requirement

1-hr and 24-hr TSP levels were monitored in the reporting month. Table 4.3 shows the Action and Limit Levels for the environmental monitoring works.

4.2 Monitoring Equipment

Both 1-hour and 24-hour TSP air quality monitoring was performed using a GMWS2310 High Volume Air Sampler (HVS) located at each of the designated monitoring station. Table 4.1 summarizes the equipment used in the air quality monitoring programme. Copies of the calibration certificates for the HVS and calibrator are attached in Appendix B1.

Table 4.1 Air Quality Monitoring Equipment

| <i>Equipment</i> | <i>Model and Make</i> |
|-------------------|-------------------------|
| <i>HVS</i> | <i>Greasby GMWS2310</i> |
| <i>Calibrator</i> | <i>Tisch TE-5025A</i> |

4.3 Monitoring Parameters, Frequency and Duration

Table 4.2 summarizes the monitoring parameters, monitoring duration and frequencies of air quality monitoring.

Table 4.2 Monitoring parameters, duration, frequency of air quality monitoring

| <i>Parameter</i> | <i>Duration</i> | <i>Frequency</i> |
|------------------|-----------------|---------------------------------|
| <i>24-hr TSP</i> | <i>24 hr</i> | <i>Once per six days</i> |
| <i>1-hr TSP</i> | <i>1 hr</i> | <i>Three times per six days</i> |

4.4 Monitoring Locations and Schedule

In accordance with the Project Profile, two air-quality monitoring stations, namely TM-A1 and TM-A2, were selected for the 1-hr TSP and 24-hr TSP sampling.

Since the area for existing air monitoring station TM-A2 near Tipping Hall No.1 was handed over to EcoPark, air monitoring station TM-A2 was cancelled and the air monitoring was carried out at an alternative air monitoring station TM-RA2 (refer to Figure 1 attached) from 28 October 2008.

The locations of monitoring stations are shown in Figure 1.

During the reporting month, 1-hr and 24-hr TSP monitoring were carried out as the schedule. The details for 24-hr and 1-hr TSP monitoring carried out in this reporting month are summarized in Appendix B2.

4.5 Monitoring Methodology

Both 1-hr and 24-hr air quality monitoring (High Volume Sampler)

Instrumentation

High volume sampler, as HVS, (Greasby GMWS2310) complete with appropriate sampling inlets were employed for both 1-hour and 24-hour TSP monitoring. The sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

Installation

The installation of HVS refers to the requirement stated in Appendix D2 "General Technical Requirements of Environmental Monitoring" in the Environmental Monitoring and Audit Guidelines for Development Projects in Hong Kong published by EPD.

Operation/Analytical Procedures

Operating/analytical procedures for the operation of HVS are as below:

- Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 0.6m³/min and 1.7m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50. The flow rate is indicated on the flow rate chart.
- For TSP sampling, fiberglass filters (GA-55) were used.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated 5 minutes to establish thermal equilibrium before placing any filter media at designated air monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an air-tight seal on the outer edges of the filter. Then the filter holder frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The programmable timer will be set for a sampling period of 1 hour / 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number.).
- After sampling, the filter was transferred from the filter holder of the HVS to a sealed plastic bag and sent to the laboratory for weighting. The elapsed time was also recorded.
- Before weighting, all filters were equilibrated in a desiccator for 24 hour with the temperature of 25°C ± 3°C and the relative humidity (RH) <50% ±5%.

Maintenance & Calibration

- The HVS and their accessories should be maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVS should be calibrated at bi-monthly intervals.

Wind Data Monitoring

Wind data included wind speed and wind direction were directly extracted from Tuen Mun Station of Hong Kong Observatory during this reporting month. The wind data are presented in Appendix E.

4.6 Action and Limit Levels

Table 4.3 shows the Action and Limit levels for 24-hr TSP and 1-hr TSP monitoring.

Table 4.3 Action and Limit Levels for 24-hr TSP and 1-hr TSP

| Monitoring Location | 24-hr TSP ($\mu\text{g}/\text{m}^3$) | | 1-hr TSP ($\mu\text{g}/\text{m}^3$) | |
|---------------------|--|-------------|---------------------------------------|-------------|
| | Action Level | Limit Level | Action Level | Limit Level |
| TM-A1 | 192 | 260 | 344 | 500 |
| TM-RA2 * | 192 | 260 | 344 | 500 |

Remark (*): Since the area for existing air monitoring station TM-A2 near Tipping Hall No.1 was handed over to EcoPark, air monitoring station TM-A2 was cancelled and the air monitoring was carried out at an alternative air monitoring station TM-RA2 from 28 October 2008. Since dust monitoring stations TM-A2 and TM-RA2 are located close to the major dust emission sources and no significant difference between them on the prevailing meteorological conditions, the baseline data from TM-A2 can also be valid in the case of TM-RA2.

4.7 Event-Action Plans

Please refer to Appendix F for details.

4.8 Results and Observations

All monitoring data of both 1-hr and 24-hr TSP monitoring is provided in Appendix B2. Graphical presentation of 1-hr and 24-hr TSP monitoring results for the reporting month is shown in Appendix B3. Wind data, including wind speed and wind direction, are annexed in Appendix E.

No exceedance of Action and Limit level was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

Generally, the Contractor implemented sufficient dust mitigation measures, including operation of wheel washing facilities and road dampening by water bowzers on the main haul roads and unpaved areas.

5.0 MARINE WATER QUALITY MONITORING

5.1 Monitoring Requirements

In accordance with the Project Profile, impact marine water quality monitoring was conducted three days per week. Measurements were taken at both mid-flood and mid-ebb tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed) at two control monitoring stations (TM-FC1 and TM-FC2) and two impact monitoring stations (TM-FM1 and TM-FM2).

5.2 Monitoring Locations

As stipulated in the EM&A requirement, there were four monitoring stations undertaken during the impact monitoring. Figure 2 shows the locations of the marine water quality monitoring stations.

5.3 Monitoring Parameters and Frequency

Monitoring of the marine water quality parameters and frequency are listed in Table 5.1.

Table 5.1 Monitoring Parameters and Frequency of the marine water

| Monitoring Station | Parameter | Frequency | No. of Depths |
|--|---|-----------------------------|--|
| Control Stations: TM-FC1 (Mid-ebb) and TM-FC2 (Mid-flood) Impact Stations: TM-FM1 and TM-FM2 | Depth (m) | 3 days/week, 2 tides/day | 3 (Surface, mid- depth & bottom) |
| | Temperature ($^{\circ}\text{C}$) | | |
| | Dissolved Oxygen (mg/L and % saturation) | | |
| | Turbidity (NTU) | | |
| | Salinity (ppt) | | |
| | Suspended solids (mg/L) | | |

5.4 Monitoring Methodology and Equipment Used

For Location of the monitoring stations

Global Positioning System (GPS)

A hand-held digital GPS was used to identify the designated monitoring stations prior to water sampling.

For Water Depth measurement

Echo Sounder

A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

For In-situ Water Quality Measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use, and subsequently re-calibrated at 3 monthly intervals or sometimes longer throughout all stages of the water quality monitoring.

Dissolved Oxygen, Salinity and Temperature Measuring Equipment

A portable, weatherproof dissolved oxygen & salinity measuring instrument, which complete with cable, sensor and DC power source (e.g. YSI 85 or equivalent) was used for measuring:

- a dissolved oxygen level in the range of 0-20 mg/L and 0-200 % saturation;
- a salinity in range 0-40 ppt; and
- a temperature of 0-45 degree Celsius

A membrane electrode with automatic temperature compensation complete with a cable was installed.

Turbidity Measurement Instrument

A portable and weatherproof turbidity meter (HACH model 2100Q) was used during impact monitoring. It has a photoelectric sensor capable of measuring turbidity between 0-1000 NTU. Response of the sensor was checked with certified standard Turbidity solutions before the start of measurement.

For Water Sampling and Sample Analysis

In-situ monitoring was carried out at three depths: 1 meter below water surface, at mid-depth and 1 meter above the seabed. At each sampling depth, duplicate readings of dissolved oxygen content and turbidity were taken. The probes were retrieved out of the water after first measurement and then redeployed for the second measurement. The difference between the two readings of each set was more than 25% of the value of the first reading while a third measurement would be conducted to ensure data precision.

Water Sampler

A water sampler comprising a transparent PVC cylinder, with a capacity of not less than 2 liters, was lowered into the water body at the predetermined depth. The both opening ends of the sampler were then closed accordingly by dead weight and water samples were collected.

Water Container

The sample container, made by high-density polythene, was rinsed with a portion of the water sample. The water sample was then transferred to the container, labeled with a unique sample ID and sealed with a screw cap. The water samples were stored in a cool box maintained at 4°C. The water samples were then delivered to a local HOKLAS-accredited laboratory (Environmental Laboratory, ETS-Testconsult Ltd, HOKLAS Registration No. 022) on the same day for analysis.

The summary of testing method of testing parameter as recommended by EIA or required by EPD, with the QA/QC results in accordance with the requirement of HOKLAS or international accredited scheme is shown in Table 5.2. For the QA/QC procedures, one QC sample, one duplicate sample and one sample spike of every batch of 20 samples were analysis. The QA/QC results are summarized in Appendix K.

Table 5.2 Summary of testing procedure

| Laboratory Analysis | Testing Procedure | Detection Limit |
|------------------------|---|-----------------|
| Total suspended solids | In house method based on APHA 19 th ed 2540D | 1.0 mg/L |

In-situ measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use. Responses of sensors and electrodes were checked with certified standard solutions before each use. Wet bulb calibration for a DO meter was carried out before the start of measurement.

At each measurement/sampling depth, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. For turbidity measurement, the sample was collected by using sampler and then transferred to the cell. The reading of turbidity of the sample was directly recorded from the Turbidimeter (HACH 2100Q) after inserting the cell to the Turbidimeter. For DO, DOS and Salinity, measurements were conducted three days per week at both mid-ebb and mid-flood tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed). The duplicate measurements were averaged if the difference was not greater than 25%. If the difference is greater than 25%, repeat measurement will be required to be carried out.

Table 5.3 shows the equipment used for in-situ monitoring of water quality. The calibration certificates are attached in Appendix C1.

Table 5.3 Details of Marine Water Quality Monitoring Equipment (In-site measurement)

| Parameter | Model | Date of Calibration | Due Date | Equipment No. |
|--|--|---------------------|----------|-----------------|
| Coordinate of Monitoring stations | Garmin eTrex 10 | ---- | ---- | ET/EW/005/04 |
| Dissolved Oxygen (Saturation), Temperature, Salinity | YSI Dissolved Oxygen, Salinity & Temperature Meter, YSI Pro 2030 | 28/04/14 | 27/07/14 | ET/EW/008/004 * |
| Turbidity | HACH Model 2100Q Turbid Meter | 07/04/14 | 06/07/14 | ET/0505/010 * |
| Water Depth | Speedtech SM-5 | ---- | ---- | ET/EW/002/06 |

Remark: (*) indicates the instrument should be calibrated on use.

5.5 Action and Limit Levels

The water quality criteria, namely Action and Limit (A/L) levels are presented in the table below.

Table 5.4 Water Quality Action and Limit Levels

| Parameter | Action Level | Limit Level |
|----------------------------------|--|--|
| DO (mg/L) | <u>Surface & Middle</u> <4.78 mg/L (5%-ile of baseline data) <u>Bottom</u> <4.16 mg/L (5%-ile of baseline data) | <u>Surface & Middle</u> <4.00 mg/L (1%-ile of baseline data) <u>Bottom</u> <2.00 mg/L |
| SS (mg/L) (Depth-averaged) | >120% of the upstream control station's SS at the same tide on the same day | >130% of the upstream control station's SS at the same tide on the same day |
| Turbidity (NTU) (Depth-averaged) | >120% of the upstream control station's turbidity at the same tide on the same day | >130% of the upstream control station's turbidity at the same tide on the same day |

5.6 Event and Action Plan

Please refer to the Appendix F for details.

5.7 Monitoring Duration and Period in this reporting month

Table 5.5 is the time schedule for the marine water quality monitoring events that were conducted in this reporting period. Duration of marine water quality monitoring is detailed in Appendix C2.

Table 5.5 Time Schedule of Marine Water Quality Monitoring

| June 2014 | | | | | | |

Remark (▼): Marine water quality monitoring carried out by ET

5.8 Marine Water Quality Monitoring Results

The impact water quality measurement results are detailed in Appendix C2. Appendix C3 presents the water quality monitoring data and graphical presentations of monitoring results respectively.

The summary of marine water quality exceedances is shown in Table 5.6.

Table 5.6 Summary of Marine Water Quality Exceedances in this reporting month

| Tide | Station | Exceedance Level | DO | | Turbidity | SS | Total |
|-----------|---------|------------------|------------------|--------|-----------|----|-------|
| | | | Surface & Middle | Bottom | | | |
| Mid-Ebb | TM-FM1 | Action | 0 | 0 | 0 | 0 | 0 |
| | | Limit | 0 | 0 | 0 | 0 | 0 |
| | TM-FM2 | Action | 0 | 0 | 0 | 0 | 0 |
| | | Limit | 0 | 0 | 0 | 0 | 0 |
| Mid-Flood | TM-FM1 | Action | 0 | 0 | 0 | 0 | 0 |
| | | Limit | 0 | 0 | 0 | 0 | 0 |
| | TM-FM2 | Action | 0 | 0 | 0 | 0 | 0 |
| | | Limit | 0 | 0 | 0 | 0 | 0 |
| Total | | Action | 0 | 0 | 0 | 0 | 0 |
| | | Limit | 0 | 0 | 0 | 0 | 0 |

According to the summary of marine water monitoring results, no exceedances of Action and Limit levels were recorded for this reporting month.

6.0 Noise Monitoring

6.1 Monitoring Requirements

Noise monitoring was conducted at 2 designated monitoring stations as specified in the Sections 26.10 to 26.12 of the Particular Specification for good site practice.

The equipment, parameter, frequency, duration, methodology, calibration details, results and observations of the noise monitoring for the reporting month are presented in this section.

6.2 Monitoring Equipment

An Integrating Sound Level Meter was used for noise monitoring. It was a Type 1 sound level meter capable of giving a continuous readout of the noise level reading including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (L_x). It complies with International Electro Technical Commission Publications 651:1979 (Type1) and 804:1985 (Type1), and speed in m/s was used to monitor the wind speed.

Table 6.1 summarizes noise monitoring equipment model being used. A copy of the calibration certificate for noise meter and calibrator are attached in Appendix D1.

Table 6.1 Noise Monitoring Equipment

| <i>Equipment</i> | <i>Model</i> |
|--------------------------|----------------------------------|
| <i>Sound Level Meter</i> | <i>Rion NL-31 / Rion NL-52</i> |
| <i>Calibrator</i> | <i>Rion NC-73 / Castle GA607</i> |

6.3 Monitoring Parameters, Duration and Frequency

Duration, frequencies and parameters of noise measurement are presented in Table 6.2.

Table 6.2 Duration, Frequencies and Parameters of Noise Monitoring

| <i>Time period</i> | <i>Duration/min</i> | <i>Parameters</i> | <i>Frequency</i> |
|--|---------------------|--|-----------------------|
| <i>Day-time: 0700-1900 hrs on normal weekday</i> | <i>30</i> | <i>L_{eq}, L_{10}, L_{90}</i> | <i>Twice per week</i> |

6.4 Monitoring Locations and Period

Since Lands Dept did not approve to carry out noise monitoring at their own area where the noise monitoring stations TM-N1 and TM-N2 located due to the security, noise monitoring carried out at two noise monitoring stations TM-RN1 and TM-RN2 (refer to the figure 3 attached) from 18 December 2007.

The noise monitoring locations, TM-RN1 and TM-RN2 are shown in Figure 3. The noise measurement at TM-RN1 and TM-RN2 are façade measurement.

The noise-monitoring period of monitoring stations is summarized in Appendix D2.

6.5 Monitoring Procedures and Calibration Details

Operation/Analysis Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - *Frequency weighting: A*
 - *Time weighting : Fast*
 - *Time measurement : 30 min*
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000HZ. If the difference in the calibration level before and after measurement was more than 1dB(A), the measurement would be considered invalid and repeat measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with a portable wind meter.
- During the monitoring period, the L_{eq} , L_{10} and L_{90} were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Free Field correction to the measurements should be made. Correction factor of +3dB(A) should be made to the free Field measurements. Noise monitoring would be cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind gusts exceeding 10m/s.

Maintenance and Calibration

- The microphone head of the sound level meter and calibrator are cleaned with soft cloth in quarterly intervals.
- The meter is sent to the supplier or HOKLAS laboratory to check and calibrated in yearly intervals.

6.6 Action and Limit Levels

The Action and Limit levels for noise levels derived as illustrated in Table 6.3.

Table 6.3 Action and Limit Levels for noise monitoring

| <i>Time Period</i> | <i>Action *</i> | <i>Limit *</i> |
|----------------------------------|---|----------------|
| 0700-1900 hrs on normal weekdays | When one documented complaint is received | 65 dB(A) |

6.7 Event-Action Plans

Please refer to the Appendix F for details.

6.8 Results and Observation

The detail of the noise monitoring is provided in Appendix D2. Graphical presentation of the monitoring result for the reporting month is shown in Appendix D3.

Since no documented complaint on noise issue was received in this reporting month, no Action Level exceedance was recorded. Besides, no exceedance in Limit Level was recorded according to the result from Day-time noise monitoring.

The major sources of noise pollution observed in this reporting month were noise from the traveling dump trucks and from the operation of site machines.

7.0 ENVIRONMENTAL AUDIT

7.1 Weekly ET Site Inspection

Weekly site inspections were carried out by ET to monitor the timely implementation of proper environmental pollution control and mitigation measures for the Project. In this reporting month, four weekly site inspections were conducted on 05, 12, 19 and 25 June 2014. Summaries of key findings of weekly ET site inspections in this month are described in Table 7.1.

Table 7.1 Key Findings of Weekly ET Site Inspections in this reporting month

| <i>Date</i> | <i>Key Findings</i> | <i>Action(s) Taken recommended by ET</i> | <i>Action(s) Taken by the Contractor during the site audit</i> | <i>Rectification Status by ET</i> |
|--------------|---|--|---|-----------------------------------|
| 05 June 2014 | The enclosure of tipping hall No.2 was damaged. (Previous item) | To repair the damaged part of tipping hall properly. | The enclosure of tipping hall No.2 was repaired. | Closed |
| | Mud and silt were accumulated inside main drainage channel. (New item) | To clear the accumulated mud and silt properly. | --- | Follow-up |
| 12 June 2014 | Mud and silt were accumulated inside main drainage channel. (Previous item) | To clear the accumulated mud and silt properly. | --- | Follow-up |
| 19 June 2014 | Mud and silt were accumulated inside main drainage channel. (Previous item) | To clear the accumulated mud and silt properly. | Mud and silt accumulated inside main drainage channel were cleared. | Closed |

| Date | Key Findings | Action(s) Taken recommended by ET | Action(s) Taken by the Contractor during the site audit | Rectification Status by ET |
|--------------|---|---|---|----------------------------|
| 25 June 2014 | Too many chemical waste stored inside the chemical waste storage area. (New item) | To arrange the licensed collector to collect the chemical waste as soon as possible. | --- | Follow-up |
| | Stagnant water was found inside the idle tyre near Workshop. (New item) | To drain the stagnant water out and store the idle tyre properly to avoid accumulation of rain water. | --- | Follow-up |

7.2 Review of Environmental Monitoring Procedures

The monitoring works conducted by the ET were inspected internally on a regular basis. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded the observations around the monitoring stations within and outside of the construction site.
- The monitoring team recorded the temperature, air pressure and general weather condition on the monitoring day.

Water Quality Monitoring

- The monitoring team recorded the observations around the monitoring stations, which might affect the results; and
- Major water pollution sources were identified and recorded.

Noise Monitoring

- The monitoring team recorded the observations around the monitoring station, which might affect the results.
- Major noise sources were identified and recorded.

7.3 Status of Environmental Licensing and Permitting

All permits/licenses valid in this reporting month are summarized in Table 7.2.

Table 7.2 Summary of environmental licensing and permit status

| Description | Permit No. | Valid Period | | Section |
|------------------------------------|-------------------|--------------|----------|---|
| | | From | To | |
| Environmental Permit | EP-210/2005/B | 08/04/13 | --- | Issued |
| Marine Dumping Permit | EP/MD/14-156 | 01/04/14 | 30/06/14 | Approval for dumping 2,300,000 tons (approximately equal to 1,277,777 cu.m. bulked quantity) of Public Fill (Reclamation Materials) from Tseung Kwan O Area 137 Fill Bank and Tuen Mun Area 38 Fill Bank to designated dumping area at Guanghaiwan of Taishan |
| Chemical Waste Producer | 5296-421-H3555-01 | 21/01/14 | --- | Spent battery containing heavy metals and spent lubricating oil |
| Effluent Discharge License | WT00018973-2014 | 23/05/14 | 31/05/19 | Discharge of Industrial Trade Effluent arising from public fill reception facilities, screen and sedimentation tank |
| Billing Account for Waste Disposal | 7018998 | --- | --- | --- |

7.4 Implementation Status

7.4.1 Implementation Status of Environmental Mitigation Measures

An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is presented in Appendix I. Most of the necessary mitigation measures were implemented properly.

7.4.2 Implementation Status of Event and Action Plan

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

Apart from this, there was no exceedance on noise and marine water monitoring parameters recorded in this monitoring month. Hence no further actions were required.

7.4.3 Implementation Status of Environmental Complaint, Notification of Summon and Successful Prosecution Handling

No complaint, notification of summon and prosecution with respect to environmental issues was received in this monitoring month.

A summary of environmental complaints, notifications of summons and successful prosecutions was given in Table 7.3.

Table 7.3 Summary of Environmental Complaints and Prosecutions

| <i>Complaints logged</i> | | <i>Summons served</i> | | <i>Successful Prosecution</i> | |
|--------------------------|-------------------|-----------------------|-------------------|-------------------------------|-------------------|
| <i>June 2014</i> | <i>Cumulative</i> | <i>June 2014</i> | <i>Cumulative</i> | <i>June 2014</i> | <i>Cumulative</i> |
| 0 | 0 | 0 | 0 | 0 | 0 |

8.0 LANDSCAPE AND VISUAL

Landscape and visual site audit was carried out on a weekly basis to monitor environmental issues in order to ensure that all mitigation measures were implemented timely and properly. The findings in this reporting month were:

- The maximum stockpiling height at the Fill Bank was limited to a maximum of +40 mPD;
- The Contractor hydroseeded the outer slopes of the Fill Bank as far as practicable;
- The Contractor removed the stockpile of public fill in a sequence to allow the outer hydroseeded to be removed later than other portions as far as practicable; and
- Lighting was set to minimize night-time glare.

9.0 WASTE MANAGEMENT

9.1 Summary of Waste disposed of in this month

The actual amounts of different types of waste disposed of by the activities of the Project in the month are shown in Table 9.1

Table 9.1 Actual amounts of Waste generated in this reporting month

| <i>Waste Type</i> | <i>Actual Amount</i> | <i>Disposal Locations</i> |
|--|----------------------|--|
| <i>Public Fill (m³)</i> | 68 | <i>Tuen Mun 38 Fill Bank</i> |
| <i>C&D Waste (general refuse) (kg)</i> | 0 | <i>WENT Landfill</i> |
| <i>Chemical Waste (kg/L)</i> | 0 | <i>Collected by licensed collector</i> |

9.2 Advice on the Solid and Liquid Waste Management Status

The Contractor should provide sufficient preventive measures during equipment maintenance works so as to avoid oil leakage on the ground. In the event of any oil leakage, the Contractor should clean up the polluted soil and handle all the materials used for this cleaning works as chemical waste.

The drain outlet of all the bunded areas should be plugged properly. Besides, pre-cast drip trays were provided for oil drums at several areas, such as workshop and chemical storage area. The Contractor should collect and dispose of any stagnant water accumulated in the concrete bunding and drip trays and handle them as chemical waste.

The Contractor should use suitable containers with proper labels to store chemical wastes in accordance with Code of Practice on the Packaging, Labeling and Storage of Chemical Waste. The Contractor should also advise their workers of the proper procedures in handling the chemical waste. All the trip tickets for chemical waste disposal should be properly kept in the site office.

The Contractor was reminded to increase the frequency of inspection and cleaning of the site drainage system, including permanent desilting chambers, desilting facilities, oil interceptor bypass tank and all the trapezoidal channels. Moreover, the Contractor should apply approved pesticides in the stagnant water ponds.

All the runoff from the parking area should be pumped to the desilting facilities and oil interceptors to remove suspended solids and oil & grease prior to discharge.

10.0 ENVIRONMENTAL NON-CONFORMANCE

10.1 Summary of air quality, noise and marine water quality

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

According to the summary of marine water monitoring results, no exceedance of Action and Limit levels was recorded for this reporting month.

The noise level measured at the monitoring station complied with the Limit Level of 65dB(A). No complaint was received regarding noise issue in this reporting month.

10.2 Summary of Environmental Complaints

No complaint was occurred in this reporting month.

10.3 Summary of Notification of Summons and Prosecution

There was no notification of summon and prosecution respect to environmental issues registered in this reporting month.

11.0 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Impact monitoring of air quality, noise and water quality were carried out at designated locations in this reporting month.

According to the summary of air monitoring results, no exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

According to the summary of marine water monitoring results, no exceedance of Action and Limit levels was recorded in this reporting month.

The noise level measured at the monitoring station complied with the Limit Level of 65dB(A). No complaint was received regarding noise issue in this reporting month.

According to the weekly site inspections carried out in this reporting month, the Contractor generally implemented sufficient dust mitigation measures, including operation of the mist spraying systems and automatic wheel washing facilities, dampening of haul roads and stockpiling areas.

No complaint, prosecution or notification of summons was received in this reporting month.

Recommendations

According to the environmental site inspections performed in the reporting month, the following recommendations were provided:

Air Quality

- Ensure the frequency of water spraying on haul roads, unloading areas and stockpiles to be sufficient to suppress the dust sources;
- Provide proper maintenance for the powered mechanical equipment and barges to avoid emission of dark smoke;
- Provide water spraying onto the truckloads during inspection of fill material;
- Conduct road sweeping on all paved haul roads and public roads especially outside and near the site egress by the road sweeper. Undertake water spraying on stockpiling area by water bowsers;
- Erect adequate speed limit signs to advise the truck drivers of the speed limit;
- Operate mist spraying systems and automatic water sprinklers in the Fill Bank;
- Implement the dust mitigation measures for the construction activities;
- Designate proper haul roads to ensure effective water spraying; and
- Ensure all vehicles to be washed before leaving the site egress by provision, operation and maintenance of automatic wheel washing facilities.

Noise

- Conduct noisy activities at a farther location from the NSRs.

Water Quality

- Maintain the drainage system, including the trapezoidal channels and permanent desilting chambers regularly; and
- Remove the stagnant water or provide approved pesticides for the stagnant water in the permanent desilting chambers, if any.

Chemical and Waste Management

- Remove waste materials from the site to avoid accumulation regularly;
- Handle and store chemical wastes properly;
- Remove unwanted material in the existing stockpiles and avoid further dumping of such material;
- Provide and maintain sufficient drip trays for diesel drums, chemical containers, chemical waste storage drums and diesel operated generator set;
- Maintain good housekeeping at the workshop area;
- Ensure sufficient tarpaulin sheets are provided to cover drip trays; and
- Avoid soil being polluted during oil filling and equipment maintenance; hence, properly remove and store the contaminated soil, if any.

Landscape and Visual

- Provide hydroseeding on the exposed slopes, on which the final profile has been formed;
- Erect all the site hoarding/chaining fences in accordance with agreed design at proper location; and
- Maintain the hydroseeded slopes properly.

12.0 FUTURE KEY ISSUES

Based on the site inspections and forecast of engineering works in the coming month, key issues to be considered are as follows:

- Dust generation from activities on site, such as vehicular movements along unpaved area and rock crushing activities;
- Noise impact from operating equipment and machinery on site and
- Wastewater and surface runoff from the site discharged into nearby water body.

Appendix B3

Graphical Plots of Impact Air Quality Monitoring Data

24-hour TSP level at TM-A1

24-hour TSP level at TM-RA2

1-hour TSP level at TM-A1

1-hour TSP level at TM-RA2

Appendix C1

Calibration Certificates for Impact Marine Water Quality Monitoring Equipments

Internal Calibration Report of Dissolved Oxygen Meter

| | |
|---|--|
| Equipment Ref. No. : <u>ET/EW/008/004</u> | Manufacturer : <u>YSI</u> |
| Model No. : <u>Pro 2030</u> | Serial No. : <u>10F 101978</u> |
| Date of Calibration : <u>28/04/2014</u> | Calibration Due Date : <u>27/07/2014</u> |

Temperature Verification

Ref. No. of Reference Thermometer : ET/0521/008

Ref. No. of Water Bath : ---

| | | Temperature (°C) | | |
|-------------------------------|----------|------------------|------------|------|
| Reference Thermometer reading | Measured | 20.1 | Corrected | 19.7 |
| DO Meter reading | Measured | 19.6 | Difference | 0.1 |

Standardization of sodium thiosulphate (Na₂S₂O₃) solution

| | | | |
|---|--------------------|---|--------------------|
| Reagent No. of Na ₂ S ₂ O ₃ titrant | CPE/012/4.5/001/8 | Reagent No. of 0.025N K ₂ Cr ₂ O ₇ | CPE/012/4.4/001/26 |
| | Trial 1 | Trial 2 | |
| Initial Vol. of Na ₂ S ₂ O ₃ (ml) | 0.00 | 10.20 | |
| Final Vol. of Na ₂ S ₂ O ₃ (ml) | 10.20 | 20.45 | |
| Vol. of Na ₂ S ₂ O ₃ used (ml) | 10.20 | 10.25 | |
| Normality of Na ₂ S ₂ O ₃ solution (N) | 0.02451 | 0.02439 | |
| Average Normality (N) of Na ₂ S ₂ O ₃ solution (N) | 0.02445 | | |
| Acceptance criteria, Deviation | Less than ± 0.001N | | |

Calculation: Normality of Na₂S₂O₃, N = 0.25 / ml Na₂S₂O₃ used

Linearity Checking

Determination of dissolved oxygen content by Winkler Titration *

| Purging Time (min) | 2 | | 5 | | 10 | |
|---|---------------------|-------|---------------------|------|---------------------|-------|
| | 1 | 2 | 1 | 2 | 1 | 2 |
| Initial Vol. of Na ₂ S ₂ O ₃ (ml) | 0.00 | 12.00 | 24.00 | 0.00 | 8.10 | 12.90 |
| Final Vol. of Na ₂ S ₂ O ₃ (ml) | 12.00 | 24.00 | 32.00 | 8.10 | 12.90 | 17.60 |
| Vol. (V) of Na ₂ S ₂ O ₃ used (ml) | 12.00 | 12.00 | 8.00 | 8.10 | 4.80 | 4.70 |
| Dissolved Oxygen (DO), mg/L | 7.88 | 7.88 | 5.25 | 5.32 | 3.15 | 3.08 |
| Acceptance criteria, Deviation | Less than + 0.3mg/L | | Less than + 0.3mg/L | | Less than + 0.3mg/L | |

Calculation: DO (mg/L) = V x N x 8000/298

| Purging time, min | DO meter reading, mg/L | | | Winkler Titration result *, mg/L | | | Difference (%) of DO Content |
|-------------------------------|------------------------|------|---------|----------------------------------|------|---------|------------------------------|
| | 1 | 2 | Average | 1 | 2 | Average | |
| 2 | 7.75 | 7.71 | 7.73 | 7.88 | 7.88 | 7.88 | 1.92 |
| 5 | 5.39 | 5.41 | 5.40 | 5.25 | 5.32 | 5.29 | 2.06 |
| 10 | 3.14 | 3.11 | 3.13 | 3.15 | 3.08 | 3.12 | 0.32 |
| Linear regression coefficient | | | | 0.9977 | | | |

Performance Check of Salinity Meter

Equipment Ref. No. : ET/EW/008/004 Manufacturer : YSI
Model No. : Pro 2030 Serial No. : 10F 101978
Date of Calibration : 28/04/2014 Due Date : 27/07/2014

Ref. No. of Salinity Standard used (30ppt)

S/001/5

| Salinity Standard (ppt) | Measured Salinity (ppt) | Difference * (%) |
|-------------------------|-------------------------|------------------|
| 30.0 | 31.5 | 5.00 |

(*) Difference (%) = (Measured Salinity – Salinity Standard value) / Salinity Standard value x 100

Acceptance Criteria

Difference : -10 % to 10 %

The salinity meter complies * / ~~does not comply~~ * with the specified requirements and is deemed acceptable * / ~~unacceptable~~ * for use. Measurements are traceable to national standards.

Calibration Certificates for Impact Noise Monitoring Equipments

Calibration Certificate

Certificate No. **38596**

Page 1 of 3 Pages

Customer : ETS-Testconsult Limited

Address : 8/F., Block B, Veristrong Industrial Centre, 34-36 Au Pui Wan St., Fotan, Hong Kong.

Order No. : Q33513

Date of receipt : 27-Nov-13

Item Tested

Description : Precision Integrating Sound Level Meter (ET/EN/003/06)

Manufacturer : Rion

Model : NL-31

Serial No. : 00110024

Test Conditions

Date of Test : 4-Dec-13

Ambient Temperature : (23 ± 3)°C

Supply Voltage : --

Relative Humidity : (50 ± 25) %

Test Specifications

Calibration check.

Ref. Document/Procedure : Z01.

Test Results

All results were within the IEC 651 Type 1 & IEC 804 Type 1 specification.
The results are shown in the attached page(s).

Main Test equipment used:

| <u>Equipment No.</u> | <u>Description</u> | <u>Cert. No.</u> | <u>Traceable to</u> |
|----------------------|-----------------------------|------------------|---------------------|
| S017 | Multi-Function Generator | C127181 | SCL-HKSAR |
| S205 | Ref. Sound Level Calibrator | PHCO40002 | SCL-HKSAR |

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI).
The test results apply to the above Unit-Under-Test only

CEDD Contract No.: CV/2013/06
Handling of Surplus Public Fill(2014-2016) - Tuen Mun Area 38 Fill Bank

Inspection Date : 5/6/14
 Time : 10:15
 Weather : Sunny (fine) / Cloudy / Overcast / Drizzle / Rain / Storm / Hazy
 Wind : Calm / (Light) / Breeze / Strong
 Temperature : 32°C
 Humidity : High / Moderate / (Low)

| Inspected by | CEDD | Contractor / Sub-Contractor | ET |
|--------------|--------------|-----------------------------|-------------|
| Signature: | | | |
| Name: | WONG KI LING | Wilson Au | Mark Kei Wu |
| Title | LOW/P3 | Site Eng | ET |

| | Implementation Stages* | | | Remark |
|--|------------------------|----|-----|--------|
| | Yes | No | N/A | |
| Fugitive Dust Emission | | | | |
| ▪ Dust control / mitigation measures shall be provided to prevent dust nuisance. | ✓ | | | |
| ▪ Water sprays shall be provided and used to dampen materials. | ✓ | | | |
| ▪ All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition. | ✓ | | | |
| ▪ Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin. | ✓ | | | |
| ▪ Unpaved areas should be watered regularly to avoid dust generation. | ✓ | | | |
| ▪ The designated site main haul road shall be paved or regular watering. | ✓ | | | |
| ▪ The haul road inside the site and public road around the site entrance should be kept clean and free from dust. | ✓ | | | |
| ▪ Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site. | ✓ | | | |
| ▪ Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank. | ✓ | | | |
| ▪ The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. | ✓ | | | |
| ▪ Vehicle and equipment should be switched off while not in use. | ✓ | | | |
| ▪ All plant and equipment should be well maintained e.g. without black smoke emission. | ✓ | | | |
| ▪ Open burning should be prohibited. | ✓ | | | |
| Noise Impact | | | | |
| ▪ The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted. | ✓ | | | |
| ▪ The constructions works should be scheduled to minimize noise nuisance. | ✓ | | | |
| ▪ Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works. | ✓ | | | |
| ▪ Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials. | ✓ | | | |
| ▪ Air compressors and hand held breakers should have noise labels. | ✓ | | | |
| ▪ Compressors and generators should operate with door closed. | ✓ | | | |
| ▪ Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. | ✓ | | | |
| ▪ Noisy equipment and mobile plant shall always be site away from NSRs. | ✓ | | | |

| Environmental Checklist | Implementation Stages* | | | Remark |
|---|------------------------|----|-----|--------|
| | Yes | No | N/A | |
| Waste Management | | | | |
| Construction Waste Management | | | | |
| <ul style="list-style-type: none"> ▪ Relevant licence / permits for disposal of construction waste or excavated materials available for inspection. ▪ Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal. ▪ Mud and debris should be removed from waterworks access roads and associated drainage systems. ▪ Provision of sufficient waste disposal points and regular collection for disposal. Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. ▪ Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. ▪ Prior to disposal of C&D waste, recyclable materials should be salvaged for reuse (such as wood and metal) and inert waste utilised as public fill to minimise the quantity of waste to be disposed of to landfill. ▪ In order to monitor the disposal of C&D material and solid wastes at public filling areas and landfills, and to control fly-tipping, a trip-ticket system should be included as one of the contractual requirements. ▪ Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials. | √ | | | |
| Chemical Waste Management | | | | |
| <ul style="list-style-type: none"> ▪ It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. ▪ After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. ▪ Spent chemicals should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation. ▪ Chemical wastes should be separated for special handling and appropriate treatment at the Chemical Waste Treatment Facility. ▪ Chemical wastes including waste oil should be stored properly in designated areas, e.g. chemical waste storage area. ▪ The designated chemical waste storage area should only be used for storing chemical wastes. ▪ The set-up of chemical waste storage area should <ul style="list-style-type: none"> ▪ Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition. ▪ Be enclosed on at least 3 sides and securely closed. ▪ Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest. ▪ Have adequate ventilation. ▪ Be covered to prevent rainfall entering (water collected within the bund must be tested and disposal as chemical waste if necessary). ▪ Be arranged so that incompatible materials are adequately separated. | √ | | | |

| Environmental Checklist | Implementation Stages* | | Remark |
|---|------------------------|----|--------|
| | Yes | No | |
| Warming panels should be displayed at the waste storage area. | √ | | |
| Waste storage area should be cleaned and maintained regularly. | √ | | |
| Chemical waste should be transported by a registered chemical waste collector to a facility licensed to receive chemical waste. | √ | | |
| All generators, fuel and oil storage should be within bundle areas. | √ | | |
| Oil leakage from machinery, vehicle and plant should be prevented. | √ | | |
| In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed. | √ | | |
| The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place. | √ | | |
| Good Site Practices | | | |
| Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. | √ | | |
| Training of site personnel in proper waste management and chemical handling procedures should be provided. | √ | | |
| Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment. | √ | | |
| Proper storage and site practices to minimise the potential for damage or contamination of construction materials. | √ | | |
| The Environmental Permit should be displaced conspicuously on site. | √ | | |
| Construction noise permits should be posted at site entrance or available for site inspection. | √ | | |
| Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste. | √ | | |
| Chemical storage area provided with lock and located on sealed areas. | √ | | |
| All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank). | √ | | |
| Any unused chemicals or those with remaining functional capacity should be recycled. | √ | | |
| Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors. | √ | | |
| To encourage collection of aluminium cans by individual collectors. | √ | | |
| Separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce. | √ | | |
| A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods. | √ | | |
| A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be banded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system. | √ | | |

| | | Yes | No | N/A | |
| Fugitive Dust Emission | | | | | |
| ▪ | Dust control / mitigation measures shall be provided to prevent dust nuisance. | ✓ | | | |
| ▪ | Water sprays shall be provided and used to dampen materials. | ✓ | | | |
| ▪ | All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition. | ✓ | | | |
| ▪ | Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin. | ✓ | | | |
| ▪ | Unpaved areas should be watered regularly to avoid dust generation. | ✓ | | | |
| ▪ | The designated site main haul road shall be paved or regular watering. | ✓ | | | |
| ▪ | The haul road inside the site and public road around the site entrance should be kept clean and free from dust. | ✓ | | | |
| ▪ | Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site. | ✓ | | | |
| ▪ | Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank. | ✓ | | | |
| ▪ | The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. | ✓ | | | |
| ▪ | Vehicle and equipment should be switched off while not in use. | ✓ | | | |
| ▪ | All plant and equipment should be well maintained e.g. without black smoke emission. | ✓ | | | |
| ▪ | Open burning should be prohibited. | ✓ | | | |
| Noise Impact | | | | | |
| ▪ | The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted. | ✓ | | | |
| ▪ | The constructions works should be scheduled to minimize noise nuisance. | ✓ | | | |
| ▪ | Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works. | ✓ | | | |
| ▪ | Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials. | ✓ | | | |
| ▪ | Air compressors and hand held breakers should have noise labels. | ✓ | | | |
| ▪ | Compressors and generators should operate with door closed. | ✓ | | | |
| ▪ | Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. | ✓ | | | |
| ▪ | Noisy equipment and mobile plant shall always be site away from NSRs. | ✓ | | | |

| | | Implementation Stages* | | Remark |
|-----------------------------|--|------------------------|----------|--------|
| | | Yes | No / N/A | |
| Water Quality | | | | |
| ▪ | Drainage system and the sand / silt removal facilities should be adequate and well maintained to prevent flooding and overflow, especially after rain storms. | √ | | Item 1 |
| ▪ | The storm water intercepting system shall be effective to collect of runoff and remove suspended solids before discharge. | √ | | |
| ▪ | Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. | √ | | |
| ▪ | The material shall be properly covered to prevent washed away especially before rainstorm. | √ | | |
| ▪ | The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. | √ | | |
| ▪ | Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shotconcrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD. | √ | | |
| ▪ | Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. | √ | | |
| ▪ | A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. | √ | | |
| ▪ | The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcore to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. | √ | | |
| ▪ | Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. | √ | | |
| ▪ | The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities. | √ | | |
| ▪ | Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water. | √ | | |
| ▪ | The barges shall be in right size such that adequate clearance in maintained between the vessels and the seabed at all states of the tide to ensure the undue turbidity is not generated by turbulence from vessel movement or propeller wash. | √ | | |
| ▪ | All vessels used for transportation of fill material shall have tight fitting seals to their bottom openings to prevent leakage of material during transport. | √ | | |
| ▪ | Barges shall not be filled to a level which may cause the overflow of material during loading or transportation. Barge effluents shall be properly collected and treated before disposal. | √ | | |
| ▪ | Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. | √ | | |
| ▪ | The work activities shall not cause any visible foam, oil, grease, scum, litter or other objectionable matters to be present on the water in the vicinity of the barging facilities. | √ | | |
| ▪ | A waste collection vessel shall be deployed to remove floating debris. | √ | | |
| Landscape and Visual | | | | |
| ▪ | The maximum stockpiling height at the fill bank shall be limited to a maximum of +40mPD. | √ | | |
| ▪ | Surface of outer slopes of the Fill Bank shall preferably be hydroseeded. | √ | | |
| ▪ | Stockpile of public fill shall be removed in a sequence to allow the outer hydroseeded to be removed later than other portions as far as practicable. | √ | | |
| ▪ | Casuarina equisetifolia were planted as buffer tree along the northern perimeter of the Site. The height of Casuarina equisetifolia was maintained at least 3m above soil level. | √ | | |
| ▪ | Lighting shall be set to minimise night-time glare. | √ | | |

| | Implementation Stages* | Remark |
|--|------------------------|--------|
| | | |
| Environmental Checklist | | |
| Waste Management | | |
| Construction Waste Management | | |
| ▪ Relevant licence / permits for disposal of construction waste or excavated materials available for inspection. | √ | |
| ▪ Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal. | √ | |
| ▪ Mud and debris should be removed from waterworks access roads and associated drainage systems. | √ | |
| ▪ Provision of sufficient waste disposal points and regular collection for disposal. Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. | √ | |

| ▪ Dust control / mitigation measures shall be provided to prevent dust nuisance. | √ | | | |
| ▪ Water sprays shall be provided and used to dampen materials. | √ | | | |
| ▪ All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition. | √ | | | |
| ▪ Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin. | √ | | | |
| ▪ Unpaved areas should be watered regularly to avoid dust generation. | √ | | | |
| ▪ The designated site main haul road shall be paved or regular watering. | √ | | | |
| ▪ The haul road inside the site and public road around the site entrance should be kept clean and free from dust. | √ | | | |
| ▪ Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site. | √ | | | |
| ▪ Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank. | √ | | | |
| ▪ The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. | √ | | | |
| ▪ Vehicle and equipment should be switched off while not in use. | √ | | | |
| ▪ All plant and equipment should be well maintained e.g. without black smoke emission. | √ | | | |
| ▪ Open burning should be prohibited. | √ | | | |
| Noise Impact | | | | |
| ▪ The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted. | √ | | | |
| ▪ The constructions works should be scheduled to minimize noise nuisance. | √ | | | |
| ▪ Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works. | √ | | | |
| ▪ Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials. | √ | | | |
| ▪ Air compressors and hand held breakers should have noise labels. | √ | | | |
| ▪ Compressors and generators should operate with door closed. | √ | | | |
| ▪ Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. | √ | | | |
| ▪ Noisy equipment and mobile plant shall always be site away from NSRs. | √ | | | |

Handling of Surplus Public Fill (2014 – 2016) - Tuen Mun Area 38 Fill Bank

| Environmental Checklist | Implementation Stages* | | | Remark |
|--|------------------------|----|-----|--------|
| | Yes | No | N/A | |
| Water Quality | | | | |
| Drainage system and the sand / silt removal facilities should be adequate and well maintained to prevent flooding and overflow, especially after rain storms. | √ | | | |
| The storm water intercepting system shall be effective to collect of runoff and remove suspended solids before discharge. | √ | | | |
| Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. | √ | | √ | Item 2 |
| The material shall be properly covered to prevent washed away especially before rainstorm. | √ | | | |
| The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. | √ | | | |
| Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shotconcrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD. | √ | | | |
| Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. | √ | | | |
| A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. | √ | | | |
| The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcores to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. | √ | | | |
| Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. | √ | | | |
| The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities. | √ | | | |
| Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water. | √ | | | |
| The barges shall be in right size such that adequate clearance is maintained between the vessels and the seabed at all states of the tide to ensure the undue turbidity is not generated by turbulence from vessel movement or propeller wash. | √ | | | |
| All vessels used for transportation of fill material shall have tight fitting seals to their bottom openings to prevent leakage of material during transport. | √ | | | |
| Barges shall not be filled to a level which may cause the overflow of material during loading or transportation. Barge effluents shall be properly collected and treated before disposal. | √ | | | |
| Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. | √ | | | |
| The work activities shall not cause any visible foam, oil, grease, scum, litter or other objectionable matters to be present on the water in the vicinity of the barging facilities. | √ | | | |
| A waste collection vessel shall be deployed to remove floating debris. | √ | | | |
| Landscape and Visual | | | | |
| The maximum stockpiling height at the fill bank shall be limited to a maximum of +40mPD. | √ | | | |
| Surface of outer slopes of the Fill Bank shall preferably be hydroseeded. | √ | | | |
| Stockpile of public fill shall be removed in a sequence to allow the outer hydroseeded to be removed later than other portions as far as practicable. | √ | | | |
| Casuarina equisetifolia were planted as buffer tree along the northern perimeter of the Site. The height of Casuarina equisetifolia was maintained at least 3m above soil level. | √ | | | |
| Lighting shall be set to minimise night-time glare. | √ | | | |

| Environmental Checklist | Implementation Stages* | | | Remark |
|---|------------------------|----|-----|--------|
| | Yes | No | N/A | |
| Waste Management | | | | |
| Construction Waste Management | | | | |
| <ul style="list-style-type: none"> ▪ Relevant licence / permits for disposal of construction waste or excavated materials available for inspection. ▪ Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal. ▪ Mud and debris should be removed from waterworks access roads and associated drainage systems. ▪ Provision of sufficient waste disposal points and regular collection for disposal. Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. ▪ Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. ▪ Prior to disposal of C&D waste, recyclable materials should be salvaged for reuse (such as wood and metal) and inert waste utilised as public fill to minimise the quantity of waste to be disposed of to landfill. ▪ In order to monitor the disposal of C&D material and solid wastes at public filling areas and landfills, and to control fly-tipping, a trip-ticket system should be included as one of the contractual requirements. ▪ Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials. | √ | | | |
| Chemical Waste Management | | | | |
| <ul style="list-style-type: none"> ▪ It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. ▪ After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. ▪ Spent chemicals should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation. ▪ Chemical wastes should be separated for special handling and appropriate treatment at the Chemical Waste Treatment Facility. ▪ Chemical wastes including waste oil should be stored properly in designated areas, e.g. chemical waste storage area. ▪ The designated chemical waste storage area should only be used for storing chemical wastes. ▪ The set-up of chemical waste storage area should <ul style="list-style-type: none"> ▪ Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition. ▪ Be enclosed on at least 3 sides and securely closed. ▪ Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest. ▪ Have adequate ventilation. ▪ Be covered to prevent rainfall entering (water collected within the bund must be tested and disposal as chemical waste if necessary). ▪ Be arranged so that incompatible materials are adequately separated. | √ | | | |

| Environmental Checklist | Implementation Stages* | | | Remark |
|---|------------------------|----|-----|--------|
| | Yes | No | N/A | |
| <ul style="list-style-type: none"> ▪ Warning panels should be displayed at the waste storage area. | √ | | | |
| <ul style="list-style-type: none"> ▪ Waste storage area should be cleaned and maintained regularly. | √ | | | |
| <ul style="list-style-type: none"> ▪ Chemical waste should be transported regularly by a registered chemical waste collector to a facility licensed to receive chemical waste. | | √ | | Item 1 |
| <ul style="list-style-type: none"> ▪ All generators, fuel and oil storage should be within bundle areas. | √ | | | |
| <ul style="list-style-type: none"> ▪ Oil leakage from machinery, vehicle and plant should be prevented. | √ | | | |
| <ul style="list-style-type: none"> ▪ In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed. | √ | | | |
| <ul style="list-style-type: none"> ▪ The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place. | √ | | | |
| <p>Good Site Practices</p> <ul style="list-style-type: none"> ▪ Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. ▪ Training of site personnel in proper waste management and chemical handling procedures should be provided. • Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment. • Proper storage and site practices to minimise the potential for damage or contamination of construction materials. • The Environmental Permit should be displayed conspicuously on site. • Construction noise permits should be posted at site entrance or available for site inspection. ▪ Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste. ▪ Chemical storage area provided with lock and located on sealed areas. ▪ All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank). ▪ Any unused chemicals or those with remaining functional capacity should be recycled. ▪ Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors. ▪ To encourage collection of aluminium cans by individual collectors. ▪ Separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce. ▪ A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods. ▪ A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be banded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system. | √ | | | |

Summary of the Weekly Site Inspection:

| Item | Details of defective works or observations | Proposed Follow Up Action | Photo Ref. | Further Action Required (Yes/No) | Target Completion Date |
|------|--|---|------------|----------------------------------|------------------------|
| 1 | Too many chemical waste stored inside the chemical waste storage area. | To arrange the licensed collector to collect the chemical waste as soon as possible. | 140625_001 | Yes | 03/07/14 |
| 2 | Stagnant water was found inside the idle tyre near Workshop. | To drain the stagnant water out and store the idle tyre properly to avoid accumulation of rain water. | 140625_002 | Yes | 03/07/14 |

Remark

No defective observation was recorded during the weekly site inspection,
