Condition 4.4 – Monthly EM&A Report for February 2021 (no. 119) Version 1.0

10 March 2021

By Post

Dear Sir,

I refer to the captioned Monthly EM&A Report for February 2021 (version 1.0) submitted by ET on 8 March 2021 via email. In accordance with Condition 4.4 of Environmental Permit No. EP-322/2008/G, I hereby verify the captioned Monthly EM&A Report.

Yours faithfully for MOTT MACDONALD HONG KONG LIMITED

#### **EXECUTIVE SUMMARY**

#### Introduction

- 1. This is the 119<sup>th</sup> Monthly Environmental Monitoring and Audit (EM&A) Report prepared by Wellab Limited for DSD Contract No. DC/2009/10 "HATS Stage 2A – Upgrading Works at Stonecutters Island Treatment Works – Main Pumping Station, Sedimentation Tanks and Ancillary Facilities" (The Project) which documents the key information of EM&A and environmental monitoring works undertaken by other Contracts at the SCISTW under HATS Stage 2A with the same Environmental Permit (Permit No. EP-322/2008/G).
- 2. The site activities undertaken in the reporting month included:

MPS2

- Defects rectification (on-going)
- Pre-handover inspection and defects rectification for Valve Chamber

NaOCl Compound

• T&C for Washout Chamber, and Barge Unloading in progress

<u>CEPT</u>

- Preparation works and equipment trail run for opening of north Primary Sedimentation Tank (Stage 3 CEPT handover).
- Scraper removal and diffuser replacement Flocculation Tank 6 in progress

DOU3

- Replacement of Irrigation Pumps And pipework For Biotrickling Filter #4
- New Media in Biotrickling Filter #4

#### **Environmental Monitoring Works**

- 3. The environmental monitoring works of the Project were conducted by the ETs for Contract DC/2009/10, at the SCISTW under HATS 2A with the same Environmental Permit. The monitoring results were checked and reviewed and the site audits were conducted once per week. The implementation of the Environmental Mitigation Measures, Event Action Plans and Environmental Complaint Handling Procedures were also checked.
- 4. Summary of the non-compliance of the reporting month is tabulated in Table I.

| Table I | Summary | Table for | Non-compliance | <b>Recorded in</b> | the Reporting Month |
|---------|---------|-----------|----------------|--------------------|---------------------|
|---------|---------|-----------|----------------|--------------------|---------------------|

| Monitored  | Monitoring Boromotor |           | No. of Exceedance |                | No. of Exceedance<br>Due to the Project |                | Action |
|------------|----------------------|-----------|-------------------|----------------|---|----------------|--------|
| By         | Station              | Parameter | Action<br>Level   | Limit<br>Level | Action<br>Level                         | Limit<br>Level | Taken  |
|            | NM5                  | Noise     | 0                 | 0              | 0                                       | 0              | N/A    |
|            | NM6                  | Noise     | 0                 | 0              | 0                                       | 0              | N/A    |

|   |           | AMGh       | 1-hr TSP  | 0               | 0              | 0                      | 0              | N/A    |
|   |           | AM6b       | 24-hr TSP | 0               | 0              | 0                      | 0              | N/A    |

1-hour TSP Monitoring

5. All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

24-hour TSP Monitoring

6. All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

## Construction Noise

7. All construction noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

# **Environmental Licenses and Permits**

8. Licenses/Permits granted to the Project include the Environmental Permit (EP); Billing account for Disposal of Construction Waste, Registered as Chemical Waste Producer.

# **Environmental Mitigation Implementation Schedule**

9. According to the EIA Report Section 3.74, 4.56 and 13.44, air quality, noise and landscape and visual would be the key environmental issues and mitigation measures shall be implemented during the construction phase. Details of the implementation of mitigation measures are provided in the **Appendix J**.

## Key Information in the Reporting Month

10. Summary of key information in the reporting month is tabulated in **Table II**.

 Table II
 Summary Table for Key Information in the Reporting Month

| Event   | Event Details |  | Action Taken                     | Status        | Domoniz |
|---|---------------|--|----------------------------------|---------------|---------|
| Event   | Number        | Nature                                     | ACTION TAKEN                     | Status        | Remark  |
| Complaint received  | 0             |  | N/A                              | N/A           |         |
| Status of<br>submissions under<br>EP                          | 1             | Monthly EM&A<br>Report for<br>January 2021 | Submitted on<br>15 February 2021 | No<br>Comment |         |
| Notifications of<br>any summons &<br>prosecutions<br>received | 0             |  | N/A                              | N/A           |         |

# **Summary of Complaints and Prosecutions**

11. No environmental complaint and prosecution was received for the Project in the reporting month.

12. There were no environmental complaint and prosecution received since the commencement of the Project. The Complaint Log is presented in **Appendix K**.

#### **Future Key Issues:**

13. Major site activities for the coming two months include:

#### DOU3

• Reliability test for DOU3

#### MPS2

- Handover of Inlet Chamber and Valve Chamber
- Hand over for NaOCl Dosing System, Barge Unloading and Washout Chambers
- Defect rectification

#### CEPT Tank

- Handover of CEPT
- Corrective maintenance for Flocculation Tank 6
- 14. The environmental concerns in the coming months are mainly on construction waste and general refuse storage.

## 1. INTRODUCTION

#### Background

- 1.1 The Project 'HATS Stage 2A Upgrading works at Stonecutters Island Treatment Works (SCISTW) – Main Pumping Station, Sedimentation Tanks and Ancillary Facilities' under Contract No: DC/2009/10 mainly comprises the construction of a large underground pumping station with an internal diameter of 55 metres and a depth of more than 40 metres, the provision of additional double-tray sedimentation tanks, a new computer control system, the expansion and modification of existing installations of the SCISTW as well as the construction of other ancillary facilities. The general location plan of the Project is shown in **Figure 1**.
- 1.2 The Project is under Harbour Area Treatment Scheme (HATS) Stage 2A and is a designated project with Register No. : AEIAR-121/2008. The current works under the Project at SCISTW for HATS 2A are covered by the Environmental Permit (Permit No. EP-322/2008/G), which was issued on 9<sup>th</sup> May 2014 by the Environmental Protection Department (hereinafter called EPD) to the Drainage Services Department (hereinafter called the DSD) as the Permit Holder.
- 1.3 Sun Fook Kong Bestwise Joint Venture (hereafter called the SBJV) was commissioned by the DSD to undertake the construction of the Contract No. DC/2009/10 "HATS 2A –Upgrading works at Stonecutters Island Treatment Works Main Pumping, Sedimentation Tanks and Ancillary Facilities". The date of commencement of construction of the Project is 24<sup>th</sup> February 2011.
- 1.4 Wellab Limited was commissioned by SBJV to undertake the Environmental Monitoring and Audit (EM&A) works for the project and was appointed as the Environmental Team (ET) of the Project under Condition 2.1 of the EP. The date of commencement of EM&A works is 14<sup>th</sup> April 2011. The Project cover the environmental monitoring works at monitoring stations AM6b, AM7, AM8, NM5 and NM6.
- 1.5 This is the 119<sup>th</sup> monthly EM&A report summarizing the EM&A works conducted for the Project in February 2021.

#### **Project Organizations**

1.6 The contacts of the Project are shown in **Table 1.1** and the organization chart of ET for Contract is shown in **Figure 2**.

|                             | i u                          |                          |                                     |           |

#### Summary of EM&A Requirements

- 1.7 The EM&A programme requires construction phase monitoring for air quality and construction noise, landscape and visual and environmental site audit. The EM&A requirements for each parameter are described in the following sections, including:
  - All monitoring parameters;
  - Action and Limit levels for all environmental parameters;
  - Event Action Plans;
  - Environmental mitigation measures, as recommended in the project EIA study final report; and
  - Environmental requirements in contract documents.
- 1.8 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in **Section 4** of this report.
- 1.9 This report presents the monitoring results, observations, locations, equipment, period, for required monitoring parameter namely air quality, noise and audit works conducted for the Project in February 2021.

# 2. AIR QUALITY

# **Monitoring Requirements**

2.1 1-hour and 24-hour TSP monitoring were conducted to monitor the air quality. Appendix A shows the established Action/Limit Levels for the environmental monitoring works.

# **Monitoring Locations**

2.2 Three designated monitoring stations, AM6b, AM7 and AM8 were selected for impact dust monitoring for the Project. The pervious location of AM6a was not available for future monitoring due to no secured power supply for operation and therefore the previous location of AM6a was relocated to the monitoring station AM6b on 20<sup>th</sup> October 2020 after handover of part of Portion 7. **Table 2.1** describes the air quality monitoring locations, which are also depicted in **Figure 1**.

 Table 2.1
 Locations for Air Quality Monitoring

| Monitoring Station  | Monitored by | Location of Measurement                   |
|---------------------|--------------|---|
| AM6b <sup>(1)</sup> |              | Works site boundary                       |
| AM7                 | DC/2009/10   | North West Kowloon Sewage Pumping Station |
| AM8                 |              | Block A of Government Dockyard            |
| Domorly             |              |   |

Remark:

(1) AM6b – The pervious location of AM6a was relocated after handover of part of Portion 7.

# **Monitoring Equipment**

2.1 **Table 2.2** summarizes the air quality monitoring equipment and **Appendix B** shows the copies of calibration certificates for the equipment at AM6b, AM7 and AM8.

 Table 2.2
 Air Quality Monitoring Equipment

| Equipment          | Model and Make                      | Quantity |
|--------------------|-------------------------------------|----------|
| Laser Dust Monitor | Met One Instruments no. AEROCET-831 | 5        |
| HVS Sampler        | TISCH: Model no. TE-5170            | 3        |
| Calibrator         | TISCH: Model TE-5025A               | 1        |

# Monitoring Parameters, Frequency and Duration

2.2 **Table 2.3** summarizes the monitoring parameters and frequencies of impact dust monitoring for the whole construction period. The air quality monitoring schedule for AM6b, AM7 and AM8 are shown in **Appendix C.** 

# Table 2.3 Impact Dust Monitoring Parameters, Frequency and Duration

| Monitoring Station | Parameter   | Period        | Frequency             |
|--------------------|-------------|---------------|-----------------------|
| All monitoring     | 1-hour TSP  | 0700-1900 hrs | 3 times/ every 6 days |
| locations          | 24-hour TSP | 0000-2400 hrs | once in every 6 days  |

# Monitoring Methodology and QA/QC Procedure

2.3 The monitoring methodology and QA/QC procedures for monitoring station AM6b,

AM7 and AM8 are presented as follow:

2.4 The general weather conditions (i.e. sunny, cloudy or rainy) were recorded by the field staff's observation on the monitoring day.

TSP Monitoring with Laser Dust Monitor

#### Measuring Procedures

- 2.5 The measuring procedures of the 1-hour dust meters were in accordance with the Manufacturer's Instruction Manual as follows:
  - The 1-hour dust meter is placed at least 1.3 meters above ground.
  - Remove the red rubber cap from the AEROCET-831 inlet nozzle.
  - Turn on the power switch that is located on the right side of the AEROCET-831.
  - On power up the product intro screen is displayed for 3 seconds. The intro screen displays the product name and firmware version.
  - Then the main counter screen will be displayed.
  - Press the START button. Internal vacuum pump start running. After 1 minute the pump will stop and the  $0.5\mu m$  and  $5\mu m$  channels will show the cumulative counts of particles larger than  $0.5\mu m$  and  $5\mu m$  per cubic foot.
  - The AEROCET-831 is now checked out and ready for use.
  - To switch off the AEROCET-831 power to stop the measuring after 1 hour sampling.
  - Information such as sampling date, time, and display value and site condition were recorded during the monitoring period.

#### Maintenance/Calibration

- 2.6 The following maintenance/calibration was required for the direct dust meters:
  - Check the meter at a 3-month interval and calibrate the meter at a 1-year interval throughout all stages of the air quality monitoring.

#### TSP Monitoring with High Volume Sampler

#### Instrumentation

2.7 High Volume Sampler (HVS) completed with appropriate sampling inlets was employed for air quality monitoring. Each sampler comprised of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

#### **HVS** Installation

- 2.8 The following guidelines were adopted during the installation of HVS:
  - Sufficient support was provided to secure the samplers against gusty wind.
  - No two samplers were placed less than 2 meters apart.
  - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler.
  - A minimum of 2 meters of separation from walls, parapets and penthouses was required for rooftop samples.
  - A minimum of 2 meters separation from any supporting structure, measured horizontally was required.

- No furnaces or incineration flues were nearby.
- Airflow around the sampler was unrestricted.
- The samplers were more than 20 meters from the drip line.
- Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring.

#### Filters Preparation

- 2.9 Fibre glass filters, which have a collection efficiency of larger than 99% of particles of 0.3 μm in diameter, were used. A HOKLAS accredited laboratory, Wellab Ltd., was responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for Wellab's monitoring team.
- 2.10 All filters, which were prepared by Wellab Ltd., were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.</p>
- 2.11 Wellab Ltd. has a comprehensive quality assurance and quality control programme.

## **Operating/Analytical Procedures**

- 2.12 Operating/analytical procedures for the air quality monitoring were highlighted as follows:
  - Prior to the commencement of the dust sampling, the flow rate of the HVS was properly set (between 1.1 m<sup>3</sup>/min. and 1.4 m<sup>3</sup>/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50.
  - The power supply was checked to ensure the sampler worked properly.
  - On sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
  - The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centred with the stamped number upwards, on a supporting screen.
  - The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
  - The shelter lid was closed and secured with the aluminium strip.
  - The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
  - After sampling, the filter was removed and sent to the Wellab Ltd. for weighing. The elapsed time was also recorded.
  - Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than  $\pm 3$ °C; the relative humidity (RH) should be < 50% and not vary by more than  $\pm 5$ %. A convenient working RH is 40%. Weighing results were returned to Wellab for further analysis of TSP concentrations collected by each filter.

#### Maintenance/Calibration

- 2.13 The following maintenance/calibration was required for the HVS:
  - The high volume motors and their accessories were properly maintained. Appropriate maintenance such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.

#### **Results and Observations**

2.14 **Table 2.4** summarizes the monitoring results at AM6b, AM7 and AM8 in the reporting month.

# Table 2.4Summary of 1-hour and 24-hour TSP Monitoring Result in the<br/>Reporting Month

| Air Quality<br>Monitoring<br>Station | Average<br>µg/m3 | Range<br>µg/m3 | Action Level<br>µg/m3 | Limit Level<br>µg/m3 |
|--------------------------------------|------------------|----------------|-----------------------|----------------------|
|                                      |                  | 1 hour TSP     |                       |                      |
| AM6b                                 | 73               | 26 - 137       | 346                   |                      |
| AM7                                  | 92.7             | 32.7 - 133.2   | 322                   | 500                  |
| AM8                                  | 80.9             | 24.4 - 117.5   | 307                   |                      |
|                                      | 24 hours TSP     |                |                       |                      |
| AM6b                                 | 71               | 21 - 92        | 196                   |                      |
| AM7                                  | 43               | 25 - 54        | 207                   | 260                  |
| AM8                                  | 47               | 16 - 63        | 158                   |                      |

- 2.15 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. Summary of exceedance is presented in **Appendix F.**
- 2.16 All 24-hr TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. Summary of exceedance is presented in **Appendix F.**
- 2.17 The details and graphical presentations of the air quality monitoring results at AM6b, AM7 and AM8 are shown in **Appendix D**.
- 2.18 According to field observations during site inspection, the identified dust sources at the monitoring stations were mainly from vehicles movement and construction activities from other Contract in the site.

# 3. NOISE

#### **Monitoring Requirements**

- 3.1 Two noise monitoring stations, namely NM5 and NM6 was designated in the EM&A Manual for impact monitoring. **Appendix A** shows the established Action and Limit Levels for the environmental monitoring works.
- 3.2 Monitoring station (NM6) serves as an alternative location for FSD Diving Rescue and Diving Training Centre which is regarded as a Noise Sensitive Receiver (NSR) as it is an institution. Monitoring station (NM6) was set up at the proposed location in accordance with the Monitoring Proposal submitted by ET of Contract DC/2009/05, as agreed by the ER and IEC.

## **Monitoring Locations**

3.3 Noise monitoring was conducted at two designated monitoring stations as listed in **Table 3.1.** 

| Monitoring Station | Monitored By | Location of Measurement  |
|--------------------|--------------|--|
| NM5                | DC/2000/10   | Near FSD Diving Rescue and Training Centre                       |
| NM6                | DC/2009/10   | Customs' Marine Base<br>(Block H of Government Dockyard Rooftop) |

Table 3.1Location of Noise Monitoring Stations

# **Monitoring Equipment**

3.4 **Table 3.2** summarizes the noise quality monitoring equipment and **Appendix B** shows the copies of calibration certificates for the equipment used at NM5 and NM6 in the reporting month.

Table 3.2Noise Monitoring Equipment

| Equipment                        | Model and Make   | Quantity |
|----------------------------------|--|----------|
| Integrating Sound<br>Level Meter | BSWA, Model no.: BSWA 308<br>SVANTEK, Model no: SVAN 957 | 2        |
| Calibrator                       | SVANTEK, Model no: SV 30A                                | 2        |

## Monitoring Parameters, Frequency and Duration

3.5 **Table 3.3** summarizes the monitoring parameters, frequency and total duration of monitoring. The noise monitoring schedule of the reporting month for NM5 and NM6 is shown in **Appendix C**.

| Tuble 5.5 Troube from toring Furtameters, Frequency and Datation |                                    |                               |  |
|--|------------------------------------|-------------------------------|--|
| Monitoring<br>Stations   | Parameter                          | Period                        | Frequency  |
| NM5  | L <sub>eq</sub> (30 min.)<br>dB(A) | 0700-1900 hrs.<br>on weekdays | Once per week  |
| NM6  | L <sub>eq</sub> (5 min.)<br>dB(A)  | During<br>restricted hours    | Monitoring to be conducted when<br>construction works were to be carried out |

Table 3.3Noise Monitoring Parameters, Frequency and Duration

## Monitoring Methodology and QA/QC Procedures

- 3.6 The monitoring methodology and QA/QC procedure at NM5 and NM6 are presented as follow:
- 3.7 General weather conditions (i.e. sunny, cloudy or rainy) were recorded by field observation during equipment checking and estimated according to weather data from the Hong Kong Observatory.

## Field Monitoring

- 3.8 The monitoring procedures are as follows:
  - The Sound Level Meter was set on a tripod at a height of 1.2 m above the ground.
  - For free field measurement, the meter was positioned away from any nearby reflective surfaces. All records for free field noise levels were adjusted with a correction of +3 dB(A).
  - The battery condition was checked to ensure good functioning of the meter.
  - Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
    - Frequency weighting : A
    - Time weighting : Fast
    - Measurement time : 30 minutes
  - Prior to and after noise measurement, the meter was calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement was considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.
  - Noise monitoring was carried out 30 minutes during on the monitoring days. Monitoring data was recorded and stored automatically within the sound level meter system. At the end of the monitoring period, noise levels in term of  $L_{eq}$ ,  $L_{90}$  and  $L_{10}$  were recorded.
  - All the monitoring data within the sound level meter system was downloaded through the computer software, and all these data was checked and reviewed within the computer.

#### Maintenance and Calibration

- 3.9 Maintenance and Calibration procedures were as follows:
  - The microphone head of the sound level meter and calibrator were cleaned with a soft cloth at quarterly intervals.
  - The sound level meter and calibrator were checked and calibrated at yearly intervals.

#### **Results and Observations**

3.10 **Table 3.4** summarizes the monitoring results at NM5 and NM6 in the reporting month.

| For the time period 0700-1900 hrs. on weekdays |                           |             |
|--|---------------------------|-------------|
| Noise Monitoring                               | Range, dB(A)              | Limit Level |
| Station  | $L_{eq}(30 \text{ min.})$ | dB(A)       |
| NM5  | 59.8 - 60.8               | 75.0        |
| NM6  | 50.8 - 62.5               | 75.0        |

 Table 3.4
 Summary the Noise Monitoring Results in Reporting Month

- 3.11 The construction noise monitoring at the designated location was conducted by the ET of Contracts DC/2009/10 as scheduled in the reporting month. The monitoring results and graphical presentations could be referred to **Appendix E**.
- 3.12 1900-2300 hours noise monitoring was not conducted in the reporting month as there were no construction works during the period of restricted hours.
- 3.13 No Action/Limit Level exceedance was recorded in the reporting month. Summary of exceedance is presented in **Appendix F**.
- 3.14 The major noise sources identified at the designated noise monitoring stations were vehicle movement and construction activities from other Contract in Stonecutters Island STW.

#### 4. ENVIRONMENTAL AUDIT

#### Site Audits

- 4.1 Site audits were conducted on a weekly basis to monitor the implementation of environmental management practices and mitigation measures at the site area by the Contractor.
- 4.2 Site inspections were undertaken to ensure and check that the implementation and maintenance of mitigation measures for Air Quality, Noise, Water Quality, Waste Management, Landscape and Visual are being properly carried out in the reporting month in accordance to section 14.1 of the EM&A Manual. No non-compliance was observed during the site inspections.
- 4.3 The summaries of site audits are attached in **Appendix G**.

#### **Implementation Status of Environmental Mitigation Measures**

- 4.4 Details of the implementation of mitigation measures are provided in the **Appendix J**.
- 4.5 During the weekly environmental site inspections in the reporting period, no nonconformance was identified. The observations of the site audit for the Projects are summarized in **Table 4.1**.

| Parameters              | Ref. Number | Observations  | Follow Up Action  |
|-------------------------|-------------|---|---|
| Water<br>Quality        | N/A         | There was no observation in the reporting month.                        | N/A   |
| Air<br>Quality          | N/A         | There was no observation in the reporting month.                        | N/A   |
| Waste/                  | 210210-R01  | To clear general refuse and keep site area clean and tidy.              | General refuse was cleared.                               |
| Chemical<br>Management  | 210225-R01  | To dispose of general refuse properly and keep the site clean and tidy. | Follow-up action will be reported in next monthly report. |
| Landscape<br>and Visual | N/A         | There was no observation in the reporting month.                        | N/A   |
| Noise                   | N/A         | There was no observation in the reporting month.                        | N/A   |
| Permit/<br>Licenses     | N/A         | There was no observation in the reporting month.                        | N/A   |

Table 4.1Observations of Site Audit

#### **Review of Environmental Monitoring Procedures**

4.6 The monitoring works conducted by Contract DC/2009/10's ET were reviewed at a regular basis to ensure the monitoring procedures were carried out properly.

#### Status of Environmental Licensing and Permitting

4.7 All permits/licenses obtained for the Contract DC/2009/10 are summarized in **Table 4.2**.

#### Table 4.2Summary of Environmental Licence / Permit for DC/2009/10

| Reference                          | Valid I       | Period       | Details                                     | Status |  |

#### **Status of Waste Management**

4.8 The amount of wastes generated by the activities of the Project in the reporting month is shown in **Appendix H**.

#### **Implementation Status of Event Action Plans**

4.9 The Event Action Plans for air quality and noise are presented in **Appendix I.** 

<u>1-hr TSP</u>

4.10 No Action/Limit Level exceedance was recorded.

24-hr TSP

4.11 No Action/Limit Level exceedance was recorded.

Construction Noise

4.12 No Action/Limit Level exceedance was recorded.

Landscape and Visual

4.13 No major deficiency was recorded.

#### **Summary of Complaints and Prosecutions**

- 4.14 No environmental complaint and prosecution was received for the Project in the reporting month.
- 4.15 There were no environmental complaint and prosecution received since the commencement of the Project. The Complaint Log is presented in **Appendix K**.

## 5. FUTURE KEY ISSUES

#### Key Issues for the Coming Month

- 5.1 Key environmental issues in the coming month include:
  - Disposal/ Storage of general refuse and construction waste on-site;

#### Monitoring Schedule for the Next Month

5.2 The tentative environmental monitoring schedule over the next month is shown in **Appendix C** of this report.

## **Construction Program for the Next Month**

5.3 The tentative construction program is provided in **Appendix L**.

#### 6. CONCLUSIONS AND RECOMMENDATIONS

#### Conclusions

6.1 Environmental monitoring and audit works were performed in the reporting month and all monitoring results were checked and reviewed.

#### 1-hour TSP Monitoring

6.2 All 1-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

#### 24-hour TSP Monitoring

6.3 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

#### Construction Noise Monitoring

6.4 All Construction Noise monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded.

#### Environmental Audit

6.5 Environmental site audits were conducted as weekly basis in the reporting month. No non-compliance was recorded.

#### Complaint and Prosecution

6.6 No environmental complaint and prosecution was received in the reporting month.

#### **Recommendations for next reporting month**

6.7 The following recommendations were made for the next report month:

#### Air Quality

- To regularly maintain the machinery and vehicles on site; and
- To follow up any exceedance caused by the construction works.

#### Noise

- To inspect the noise sources inside the site;
- To follow up any exceedance caused by the construction works;
- To space out noisy equipment and position the equipment as far away as possible from sensitive receivers;
- To provide temporary noise barriers for operations of noisy equipment near the noise sensitive receivers in an appropriate location;
- To provide adequate lubricant on mechanical equipments to reduce frictional noise; and
- To well maintain the mechanical equipments / machineries to avoid abnormal noise nuisance.

## Water Quality

- To provide adequate temporary drainage system with adequate capacity; and
- To avoid water accumulation on site and carry out larviciding against mosquito breeding for stagnant water when mosquito larvae are observed.

#### Waste/Chemical Management

- To provide proper rubbish bins / skips for waste collection;
- To check for any accumulation of wasted materials or rubbish on site;
- To provide adequate chemical waste storage area on site;
- To avoid any discharge or accidental spillage of chemical waste or oil directly from the equipment; and
- To avoid improper handling or storage of oil drum and cement on site.

#### Landscape and Visual

- To erect and maintain the protection fence around the retained trees; and
- To avoid any construction materials being placed inside the tree protection zone.

FIGURES

APPENDIX A ACTION AND LIMIT LEVELS FOR AIR QUALITY AND NOISE QUALITY

# Appendix A Action and Limit Levels

#### Table A-1 Action and Limit Levels for 1-Hour TSP and 24-Hour TSP

| Monitoring Stations | Action Level (µg/m <sup>3</sup> ) |         | Limit Level (µg/m <sup>3</sup> ) |         |
|---------------------|-----------------------------------|---------|----------------------------------|---------|
| Monitoring Stations | 1-hour                            | 24-hour | 1-hour                           | 24-hour |
| AM6b                | 346                               | 196     | 500                              | 260     |
| AM7                 | 322                               | 207     | 500                              | 260     |
| AM8                 | 307                               | 158     | 500                              | 260     |

#### Table A-2 Action and Limit Level for Construction Noise

| Monitoring<br>Stations | Time Period   | Action Level                                    | Limit Level in dB(A) |
|------------------------|---|---|----------------------|

#### DC/2009/10, HATS 2A Upgrading Main Pumping Station, Sedimentation Tanks and Ancillary Facilities at SCISTW Tentative Impact Air Quality and Noise Monitoring Schedule (March 2021)

The schedule may be changed due to unforeseen circumstances (adverse weather, etc)

#### **Air Quality Monitoring Station**

AM7 - West Kowloon No.2 Sewage Pumping Station AM8 - Block A of Government Dockyard AM6b - Works Site Boundary

#### **Noise Monitoring Station**

NM6 - Customs' Marine Base (Block H of Government Dockyard) Rooftop NM5 - FSD Diving Training Centre

APPENDIX D 1-HOUR AND 24-HOUR TSP MONITORING RESULTS AND GRAPHICAL PRESENTATION

# Appendix D - 1-hour TSP Monitoring Results

Notes: (1) The performance targets are given in PS Clause 25.41(14).

(2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

(3) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material

DSD

(4) The conversion factor for tonne to  $m^3$  for inert C&D materials is 1.9 tonne/ $m^3$ .

(5) The conversion factor for tonne to  $m^3$  for general refuse is 1.8 tonne/m<sup>3</sup>.

| being        | 2. Carry out investigation;               | results submitted by the ET;   | notification of failure in writing; | proposals to IEC and ER;       |
| exceeded     | 3. Report the results of investigation to | 2. Review the proposed         | 2. Notify Contractor;               | 2. Implement noise mitigation  |
| Checeded     | the IEC, ER and Contractor;               | remedial measures by the       | 3. In consolidation with the IEC,   | proposals                      |
|              | 4. Discuss with the IEC and               | Contractor and advise the ER   | agree with the Contractor on the    |                                |
|              | Contractor on remedial measures           | accordingly;                   | remedial measures to be             |                                |
|              | required;                                 | 3. Advise the ER on the        | implemented;                        |                                |
|              | 5. Increase monitoring frequency to       | effectiveness of the proposed  | 4. Supervise the implementation of  |                                |
|              | check mitigation effectiveness            | remedial measures              | remedial measures                   |                                |
| Limit Level  | 1. Inform IEC, ER, Contractor and         | 1. Discuss amongst ER, ET,     | 1. Confirm receipt of               | 1. Take immediate action to    |
| being        | EPD;                                      | and                            | notification of failure in writing; | avoid further exceedance;      |
| exceeded     | 2. Repeat measurements to confirm         | Contractor on the potential    | 2. Notify Contractor;               | 2. Submit proposals for        |
| execcueu     | findings;                                 | remedial actions;              | 3. In consolidation with the        | remedial actions to IEC        |
|              | 3. Increase monitoring frequency;         | 2. Review Contractor's         | IEC, agree with the Contractor on   | and ER within 3 working        |
|              | 4. Identify source and investigate the    | remedial                       | the remedial measures to be         | days of notification;          |
|              | cause of exceedance;                      | actions whenever necessary     | implemented;                        | 3. Implement the agreed        |
|              | 5. Carry out analysis of Contractor's     | to assure their effectiveness  | 4. Supervise the implementation of  | proposals;                     |
|              | working procedures;                       | and advise the ER accordingly. | remedial measures;                  | 4. Submit further proposal if  |
|              | 6. Discuss with the IEC, Contractor       |                                | 5. If exceedance continues,         | problem still not under        |
|              | and ER on remedial measures               |                                | consider stopping the Contractor to | control;                       |
|              | required;                                 |                                | continue working on that portion of | 5. Stop the relevant portion   |
|              | 7. Assess effectiveness of Contractor's   |                                | work which causes the exceedance    | of works as instructed by      |
|              | remedial actions and keep IEC, EPD        |                                | until the exceedance is abated      | the ER until the exceedance is |
|              | and ER informed of the results;           |                                |                                     | abated                         |
|              | 8. If exceedance stops, cease             |                                |                                     |                                |
|              | additional monitoring                     |                                |                                     |                                |

APPENDIX J ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE (EMIS)

#### APPENDIX J IMPLEMENTATION SCHEDULE OF ENVIRONMENTAL MITIGATION MEASURES (EMIS)

| EIA  | Recommended Mitigation Measures  | Location of the measure | Implementation Status |
|------|--|-------------------------|-----------------------|
| Ref. |  |                         |                       |
|      |  |                         |                       |
| Α    | Air Quality  |                         |                       |
| 3.74 | Skip hoist for material transport should be totally enclosed by impervious sheeting.   | All construction sites  | ^                     |
|      | Vehicle washing facilities should be provided at every vehicle exit point.   |                         | ^                     |
|      | The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcore.                                    |                         | ^                     |
|      | Where a site boundary adjoins a road, streets or other areas accessible to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit. |                         | N/A                   |
|      | Use of regular watering, with complete coverage, to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather.   |                         | ٨                     |
|      | Side enclosure and covering of any aggregate or dusty material storage piles to reduce<br>emissions. Where this is not practicable owing to frequent usage, watering shall be<br>applied to aggregate fines.                 |                         | ^                     |
|      | Open stockpiles shall be avoided or covered. Where possible, prevent placing dusty material storage piles near ASRs.   |                         | ^                     |
|      | Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations.   |                         | ^                     |
|      | Imposition of speed controls for vehicles on unpaved site roads. Ten kilometers per hour is the recommended limit.   |                         | ^                     |
|      | Every stock of more than 20 bags of cement should be covered entirely by impervious sheeting placed in an area sheltered on the top and the 3 sides.   |                         | ^                     |
|      | Every vehicle should be washed to remove any dusty materials from its body and wheels before leaving the construction sites.   |                         | ^                     |
| 3.74 | Instigation of an environmental monitoring and auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise.  | All construction sites  | ^                     |

| EIA               | Recommended Mitigation Measures  | Location of the measure | Implementation Status |
|-------------------|--|-------------------------|-----------------------|
| Ref.              |  |                         |                       |
|                   |  |                         |                       |
| В                 | Airborne Noise   |                         |                       |
| 4.56-             | Use of quiet PME, movable barriers and acoustic mats.  | All construction sites  | ٨                     |
| 4.61              |  |                         |                       |
| 4.67              | Only well-maintained plant shall be operated on-site and plant shall be serviced regularly during the construction program.  |                         | ^                     |
|                   | Silencers or mufflers on construction equipment shall be utilized and shall be properly maintained during the construction program.  |                         | ^                     |
|                   | Mobile plant, if any, shall be sited as far away from NSRs as possible.  |                         | ٨                     |
|                   | Machines and plant (such as trucks) that may be in intermittent use shall be shut down between works periods or shall be throttled down to a minimum.  |                         | ^                     |
| 4.67              | Plant known to emit noise strongly in one direction shall, wherever possible, be orientated so that the noise is directed away from the nearby NSRs.   |                         | ^                     |
|                   | Material stockpiles and other structures shall be effectively utilized, wherever practicable,  |                         | ^                     |
|                   | in screening noise from on-site construction activities. Water Quality   |                         |                       |
| C                 |  |                         |                       |
| 6.349 to<br>6.375 | Construction Site Runoff and General Construction Activities<br>The mitigation measures as outlined in the ProPECC PN 1/94 Construction Site Drainage<br>should be adopted where applicable.   | All construction sites  | ^                     |
| 6.376             | Effluent Discharge<br>There is a need to apply to EPD for a discharge licence for discharge of effluent from the<br>construction site under the WPCO. The discharge quality must meet the requirements<br>specified in the discharge licence. If monitoring of the treated effluent quality from the<br>works areas is required during the construction phase of the Project, the monitoring should<br>be carried out in accordance with the WPCO license which is under the ambit of regional<br>office (RO) of EPD.<br>Minimum distances of 100 m should be maintained between the discharge points of<br>construction site effluent and the existing saltwater intakes.<br>Accidental Spillage of Chemicals |                         | ∧<br>                 |
|                   | Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General)   |                         |                       |

| EIA   | Recommended Mitigation Measures  | Location of the measure | Implementation Status |
|-------|--|-------------------------|-----------------------|
| Ref.  |  |                         |                       |
|       |  |                         |                       |
|       | Regulation should be observed and complied with for control of chemical wastes.  |                         |                       |
| 6.378 | Any service shop and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges.   |                         | Λ                     |
| 6.379 | <ul> <li>Disposal of chemical wastes should be carried out in compliance with the Waste Disposal Ordinance. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the Waste Disposal Ordinance details the requirements to deal with chemical wastes. General requirements are given as follows: <ul> <li>Suitable containers should be used to hold the chemical wastes to avoid leakage or spillage during storage, handling and transport.</li> <li>Chemical waste containers should be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents.</li> <li>Storage area should be selected at a safe location on site and adequate space should be allocated to the storage area.</li> </ul> </li> </ul>   |                         | Λ                     |
| 6.380 | Construction Works in Close Proximity of Storm Drains or Seafront:   | All construction sites  | ٨                     |
|       | <ul> <li>To minimize the potential water quality impacts from the construction works located at or near any watercourse, the practices outlined below should be adopted where applicable.</li> <li>The use of less or smaller construction plants may be specified to reduce the disturbance to the storm water courses or marine environment.</li> <li>Temporary storage of materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction materials should be located well away from any water courses during carrying out of the construction works.</li> <li>Stockpiling of construction materials and dusty materials should be covered and located away from any water courses.</li> <li>Construction debris and spoil should be covered up and/or disposed of as soon as possible to avoid being washed into the nearby water receivers.</li> <li>Construction activities, which generate large amount of wastewater, should be carried out in a distance away from the waterfront, where practicable.</li> <li>Proper shoring may need to be erected in order to prevent soil/mud from slipping into the storm culvert or sea.</li> </ul> |                         |                       |

| EIA  | Recommended Mitigation Measures | Location of the measure | Implementation Status |
|------|---------------------------------|-------------------------|-----------------------|
| Ref. |                                 |                         |                       |
|      |                                 |                         |                       |

| D     | Waste Management   |                        |   |
|-------|--|------------------------|---|
| 9.107 | Reusable steel or concrete panel shutters, fencing and hoarding and signboard should be used as a preferred alternative to items made of wood, to minimize wastage of wood. Attention should be paid to WBTC No. 19/2001 - Metallic Site Hoardings and Signboards to reduce the amount of timber used on construction sites. Metallic alternatives to timber are readily available and should be used rather than new timber. Precast concrete units should be adopted wherever feasible to minimize the use of timber formwork. | All construction sites | ۸ |
| 9.109 | <ul> <li>All waste materials should be segregated into categories covering:</li> <li>excavated materials suitable for reuse on-site;</li> <li>excavated materials suitable for public filling facilities;</li> <li>remaining C&amp;D waste for landfill;</li> <li>chemical waste; and</li> <li>general refuse for landfill.</li> </ul>   | All construction sites | ^ |
| 9.113 | Sort C&D waste from demolition of existing facilities to recover recyclable portions such as metals.   |                        | ^ |
|       | Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal.   |                        | ^ |
|       | Encourage collection of aluminum cans, PET bottles and paper by providing separate labeled bins to enable these wastes to be segregated from other general refuse generated by the work force.   |                        | ^ |
|       | Any unused chemicals or those with remaining functional capacity shall be recycled.  |                        | ٨ |
|       | Proper storage and site practices to minimize the potential for damage or contamination of construction materials.   |                        | ^ |
| 9.115 | Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.   |                        | ^ |
|       | Training of site personnel in proper waste management and chemical waste handling procedures.  |                        | ^ |
| 9.115 | Develop and provide toolbox talk for on-site sorting of C&D materials to enhance worker's awareness in handling, sorting, reuse and recycling of C&D materials.  |                        | ^ |
|       | Provision of sufficient waste disposal points and regular collection of waste.   |                        | ^ |
|       | Regular cleaning and maintenance programme for drainage systems, sumps and oil   |                        | ^ |

| EIA   | Recommended Mitigation Measures  | Location of the measure | Implementation Status |
|-------|--|-------------------------|-----------------------|
| Ref.  |  |                         |                       |
|       | interceptors.  |                         |                       |
|       | increeptors.   |                         |                       |
| 9.125 | Bentonite slurries used in diaphragm wall construction should be reconditioned and reused wherever practicable. The disposal of residual used bentonite slurry should follow the good practice guidelines stated in ProPECC PN 1/94 "Construction Site Drainage".  | All construction sites  | ^                     |
| 9.131 | Adequate number of portable toilets at temporary works areas or the PTWs to ensure that sewage from site staff would be properly collected.  |                         | ٨                     |
| 9.133 | General refuse should be stored in enclosed bins, skips or compaction units separating from C&D material and disposed of at designated landfill.   |                         | *                     |
| 9.135 | The recyclable component of the municipal waste generated by the workforce, such as<br>aluminum cans, paper and cleansed plastic containers should be separated from other<br>waste. Provision and collection of recycling bins for different types of recyclable waste<br>should be set up by the Contractor. The Contractor should also be responsible for<br>arranging recycling companies to collect these materials.  |                         | Λ                     |
| 9.137 | If chemical wastes are produced at the construction site, the Contractor would be required<br>to register with the EPD as a chemical waste producer and to follow the guidelines stated<br>in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.<br>Good quality containers compatible with the chemical wastes should be used, and<br>incompatible chemicals should be stored separately. Appropriate labels should be securely<br>attached on each chemical waste container indicating the corresponding chemical<br>characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant,<br>toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport<br>and dispose of the chemical wastes, to either the approved Chemical Waste Treatment<br>Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical<br>Waste) (General) Regulation. |                         | Λ                     |
| 9.142 | Prior to excavation of the marine deposit layer, the deposit should be tested in accordance<br>with the ETWB TC(W) No. 34/2002 and the results should be presented in a Preliminary<br>Sediment Quality Report. The marine deposit should be disposed of at the disposal site<br>designated by the Marine Fill Committee (MFC) or Director of Environmental Protection<br>(DEP) depending on the test results.   |                         | N/A                   |
