EXECUTIVE SUMMARY

The construction works of *No. EP/SP/61/10 Organic Resources Recovery Centre Phase 1 (the Project)* commenced on 21 May 2015. This is the 28th quarterly Environmental Monitoring and Audit (EM&A) report presenting the EM&A works carried out during the period from 1 March 2022 to 31 May 2022 in accordance with the EM&A Manual. Substantial completion of the construction works was confirmed on 3 December 2018. In the meantime, the operation phase EM&A programme had commenced in March 2019. Substantial Completion in respect of substantial part of the Works was confirmed on 24 February 2020. The construction phase EM&A programme was completed in the end of February 2020.

Summary of Works undertaken during the Reporting Month

Works undertaken in the reporting month included:

- Operation of the Project, including organic waste reception, and operation of the pre-treatment facilities, anaerobic digesters, composting facilities, air pollution control systems, on-line emission monitoring system for the Centralised Air Pollution Control Unit (CAPCS), Co-generation Units (CHP)s and Ammonia Stripping Plant (ASP), and the wastewater treatment plant; and
- Process fine-tune, including adjustment of the ASP with new treatment media, modification of Continuous Environmental Monitoring System (CEMS) and Supervisory Control and Data Acquisition System (SCADA) rectification and improvement works following equipment failures and the alteration of different operation modes and measures to adapt to the high variation of SSOW nature and sources.
- Servicing (included adjusting of some of the operating parameters, valve check/adjustment, cable plug connection, ignition timing, spark plug checking, etc.) of the CHP2; and
- Modification of the ASP (included upgrading of the exhaust blower of the economizer, modification of the blower, motor, ducts and pipework and trials using various operation parameters to improve the performance of the equipment) to control the air emission.

Environmental Monitoring and Audit Progress

Air Quality Monitoring

Exceedances on SO₂ and NO_x from CHPs and CO, NO_x, SO₂, VOCs, NH₃ and HF from ASP were recorded on the on-line monitoring system from March 2022 to May 2022. It should be noted that measurements recorded under abnormal operating conditions, e.g. start up and stopping of stacks and unstable operation, as well as test runs and interference of sensor, are disregarded.

In March 2022, the exceedance of SO₂ from CHP1 occurred due to malfunctioning of an instrument (blower) of the de-sulphurisation system. The exceedance of CO, NO_x, VOCs and NH₃ from ASP occurred due to system instability caused by leakage of the internal tubing of the economiser. In April 2022, the exceedances of SO₂ from CHP 1, 2 and ASP occurred due to malfunctioning of an instrument (blower) of the de-sulphurisation system. The exceedances of NO_x from CHP 3 occurred due to unstable system caused by leakage in the CHP 3. The exceedance of CO, NO_x, VOCs and NH₃ from ASP occurred due to system instability caused by motor overheating, unstable water flow and leakage of pump. In May 2022, the exceedances of SO₂ from CHPs and the ASP occurred due to tripping of the de-sulphurisation system caused by the failure of one of the columns of the system. The exceedances of NO_x from CHP 3 in early May 2022 occurred due to insufficient feedstock. The exceedance of CO, NO_x, VOCs, NH₃ and HF from ASP occurred due to system instability caused by the ongoing performance optimisation of the ASP, resulting in a lowered temperature of the system and the incomplete combustion of biogas.

The Contractor has implemented mitigation measures to control the exceedance (including replacement of malfunctioned parts (desulphurisation system, columns of the ASP), cleaning for various parts (i.e. stripping column and packaging of the ASP), and carried out fine-tuning of equipment of the ASP).

The Contractor is recommended to closely monitor the processes of the modification of the ASP and the post-modification monitoring of emission level to avoid any exceedance.

As similar issues have been re-occurred for sometimes, the Contractor is advised to undertake a comprehensive review of the operation of the concerned systems and the effectiveness of the existing mitigation measures and proposed further measures to avoid the exceedance.

Odour

No odour patrol was required to be conducted for this reporting period.

Water Quality

No non-compliance to the effluent discharge limit stipulated in the discharge licence issued by the EPD under the Water Pollution Control Ordinance was recorded during this reporting period.

Waste Management

Waste generated from the operation of the Project includes chemical waste, waste generated from pre-treatment process and general refuse.

1,240 L of chemical waste was collected by licenced waste collector from the operation of the Project.

862.14 tonnes of waste generated from pre-treatment process from the operation of the Project was disposed of at landfill. Among the recyclable waste generated from pre-treatment process from the operation of the Project,

0.00 tonnes of metals, 0.00 tonnes of papers/ cardboard packing and 0.00 tonnes of plastics were sent to recyclers for recycling during the reporting period.

Around 7.94 tonnes of general refuse from the operation of the Project was disposed of at landfill. Among the recycled general refuse from the operation of the Project, 0.00 tonnes of metals, 0.00 tonnes of papers/ cardboard packing and 0.00 tonnes of plastics were sent to recyclers for recycling during the reporting period.

Findings of Environmental Site Audit

A summary of the monitoring activities undertaken in this reporting period is listed below:

- Joint Environmental Site Inspections 3 times
- Landscape & Visual Inspections 3 times

Monthly joint environmental site inspections were carried out. The environmental control/ mitigation measures (related to air quality, water quality, waste (including land contamination prevention), hazard-to-life and landscape and visual) recommended in the approved EIA Report and the EM&A Manual were properly implemented by the Contractor during the reporting month.

Environmental Exceedance/Non-conformance/Compliant/Summons and Prosecution

Exceedances for the air emission limits for the CHP and ASP stacks were recorded during the reporting period.

No complaint/ summon/prosecution was received in this reporting period.

Future Key Issues

Activities to be undertaken in the next reporting month include:

- Operation of the Project;
- Maintenance of CHP 2 (i.e. replacement of cylinder head) and modification of the ASP (i.e. repairing of economizer's heat exchanger, mixing units and diesel generator) to control the air emission; and
- Cleaning of the Suspension Buffer Tank.

ERM-Hong Kong, Limited (ERM) was appointed by OSCAR Bioenergy Joint Venture (the Contractor) as the Environmental Team (ET) to undertake the construction Environmental Monitoring and Audit (EM&A) programme for the *Contract No. EP/SP/61/10 of Organic Waste Treatment Facilities Phase I*, which the project name has been updated to *Organic Resources Recovery Centre (Phase I) (the Project)* since November 2017. ERM was also appointed by the Contractor to undertake the operation EM&A programme starting 1 March 2019.

1.1 PURPOSE OF THE REPORT

This is the 28th Quarterly EM&A report which summarises the monitoring results and audit findings for the EM&A programme during the reporting period from **1 March 2022 to 31 May 2022**.

1.2 STRUCTURE OF THE REPORT

The structure of the report is as follows:

Section 1: Introduction

It details the scope and structure of the report.

Section 2: Project Information

It summarises the background and scope of the Project, site description, project organisation and status of the Environmental Permits (EP)/licences.

Section 3: Environmental Monitoring and Audit Requirements

It summarises the environmental monitoring requirements including monitoring parameters, programmes, methodologies, frequency, locations, Action and Limit Levels, Event/ Action Plans, as well as environmental audit requirements as recommended in the EM&A Manual and approved EIA report.

Section 4: Monitoring Results

It summarises monitoring results of the reporting period.

Section 5: Site Audit

It summarises the audit findings of the environmental as well as landscape and visual site audits undertaken within the reporting period.

Section 6: Environmental Non-conformance

It summarises any exceedance of environmental performance standard, environmental complaints and summons received within the reporting period.

Section 7: Further Key Issues

It summarises the impact forecast for the next reporting month.

Section 8: Conclusions

2.1

BACKGROUND

The Organic Resources Recovery Centre (ORRC) Phase I development (hereinafter referred to as “the Project”) is to design, construct and operate a biological treatment facility with a capacity of about 200 tonnes per day and convert source-separated organic waste from commercial and industrial sectors (mostly food waste) into compost and biogas through proven biological treatment technologies. The location of the Project site is shown in *Annex A*.

The environmental acceptability of the construction and operation of the Project had been confirmed by findings of the associated Environmental Impact Assessment (EIA) Study completed in 2009. The Director of Environmental Protection (DEP) approved this EIA Report under the *Environmental Impact Assessment Ordinance* (EIAO) (Cap. 499) in February 2010 (Register No.: AEIAR-149/2010) (hereafter referred to as the approved EIA Report). Subsequent Report on Re-assessment on Environmental Implications and Report on Re-assessment on Hazard to Life Implications were completed in 2013, respectively.

An Environmental Permit (EP) (No. EP-395/2010) was issued by the DEP to the EPD (Project Team), the Permit Holder, on 21 June 2010 and varied on 18 March 2013 (No. EP-395/2010/A) and 21 May 2013 (No. EP-395/2010/B), respectively. The Design Build and Operate Contract for the ORRC Phase 1 (Contract No. EP/SP/61/10 Organic Resources Recovery Centre (Phase 1) (the Contract)) was awarded to SITA Waste Services Limited, ATAL Engineering Limited and Ros-Roca, Sociedad Anonima jointly trading as the OSCAR Bioenergy Joint Venture (OSCAR or the Contractor). A Further EP (No. FEP-01/395/2010/B) was issued by the DEP to the OSCAR on 16 February 2015. Variation to both EPs (Nos. EP-395/2010/B and FEP-01/395/2010/B) were made in December 2015. The latest EPs, Nos. EP-395/2010/C and FEP-01/395/2010/C, were issued by the DEP on 21 December 2015.

Under the requirements of Condition 5 of the EP (No. FEP-01/395/2010/C), an Environmental Monitoring and Audit (EM&A) programme as set out in the approved EM&A Manual (hereinafter referred to as EM&A Manual) is required to be implemented during the construction and operation of the Project. ERM-Hong Kong, Ltd (ERM) has been appointed by OSCAR as the Environmental Team (ET) for the construction phase EM&A programme and the Monitoring Team (MT) for the operation phase EM&A programme for the implementation of the EM&A programme in accordance with the requirements of the EP and the approved EM&A Manual.

The construction works commenced on 21 May 2015. The operation phase of

the EM&A programme commenced on 1 March 2019 ⁽¹⁾. The construction phase EM&A programme was completed in the end of February 2020.

2.2 GENERAL SITE DESCRIPTION

The Project Site is located at Siu Ho Wan in North Lantau with an area of about 2 hectares. The layout of the Project Site is illustrated in *Annex A*. The facility received an average of 115.12 to 136.07 tonnes and treated an average of 106.93 to 124.62 tonnes of source separated organic waste per day during the reporting month.

2.3 MAJOR ACTIVITIES UNDERTAKEN

A summary of the major activities undertaken in the reporting period is shown in *Table 2.1*.

Table 2.1 Summary of Activities Undertaken in the Reporting Period

Activities Undertaken in the Reporting Period
<ul style="list-style-type: none">• Systems being operated – waste reception, pre-treatment, CAPCS extraction, the digesters, the centrifuge, the composting tunnels, the desulphurisation, the emergency flare, the CHPs, the ASP and the biological waste water treatment plant (about 115.12 – 136.07 t/d SSOW input); and• Process fine-tune – adjustment of the ASP operational parameters with new treatment media, CEMS/SCADA modification and improvement work following equipment failures and the alteration of different operation modes and measures to adapt to the high variation of SSOW nature and sources;• Servicing (included adjusting of some of the operating parameters, valve check/adjustment, cable plug connection, ignition timing, spark plug checking, etc.) of the CHP2; and• Modification of the ASP (included upgrading of the exhaust blower of the economizer, modification of the blower, motor, ducts and pipework and trials using various operation parameters to improve the performance of the equipment) to control the air emission.

2.4 PROJECT ORGANISATION AND MANAGEMENT STRUCTURE

The project organisation chart and contact details are shown in *Annex B*.

2.5 STATUS OF ENVIRONMENTAL APPROVAL DOCUMENTS

A summary of the valid permits, licences, and/or notifications on environmental protection for this Project is presented in *Table 2.2*.

(1) As some of the minor items are yet to be closed out in March 2019, the construction phase EM&A programme and Operation Phase EM&A programme were undertaking in parallel in March 2019.

Table 2.2 Summary of Environmental Licensing, Notification and Permit Status

Permit/ Licences/ Notification	Reference	Validity Period	Remarks
Environmental Permit	FEP-01/395/2010/C	Throughout the Contract	Permit granted on 21 December 2015
Notification of Construction Works under the Air Pollution Control (Construction Dust) Regulation	Ref No. 386715	Throughout the Contract	-
Effluent Discharge License	WT00038391-2021	7 July 2021 – 30 June 2026	Approved on 7 July 2021
Chemical Waste Producer Registration	WPN 5213-961-O2231-01	Throughout the Contract	Approved on 29 April 2015
Chemical Waste Producer Registration	WPN 5213-961-O2231-02	Throughout the Contract	Approved on 10 November 2017
Waste Disposal Billing Account	Account number: 702310	Throughout the Contract	-

3.1 ENVIRONMENTAL MONITORING

The air quality (including odour) monitoring to be carried out during the operation phase of the Project are described below. Although water quality monitoring is not required for the operation phase under the EM&A programme, there are water quality monitoring requirement under the Water Discharge Licence of the plant under the *Water Pollution Control Ordinance* (WPCO). As part of this EM&A programme, the monitoring results will be reviewed to check the compliance with the WPCO requirements.

3.1.1 Air Quality

According to the EM&A Manual and EP requirements, stack monitoring are required during the operation phase of the Project.

On-line monitoring (using continuous environmental monitoring system (CEMS) shall be carried out for the centralised air pollution unit (CAPCS), cogeneration units (CHP) and the ammonia stripping plant (ASP) during the operation phase. The last calibration was carried out in January 2023.

The monitoring data is transmitted instantaneously to EPD (Regional Office) by telemetry system.

When the on-line monitoring for certain parameter cannot be undertaken, monitoring will be carried out using the following methodology approved by the EPD.

Table 3.1 *Sampling and Laboratory Analysis Methodology*

Parameters	Method	Stacks to be Monitored
Gaseous and vaporous organic substances (including methane)	USEPA Method 18	<ul style="list-style-type: none"> • CAPCS • CHP • ASP
Particulate	USEPA Method 5	<ul style="list-style-type: none"> • CAPCS • CHP • ASP

Velocity and Volumetric Flow	USEPA Method 2	<ul style="list-style-type: none"> • CAPCS • CHP • ASP
Ammonia (NH ₃)	USEPA CTM 027	<ul style="list-style-type: none"> • ASP
Odour (including NH ₃ and H ₂ S)	EN 13725	<ul style="list-style-type: none"> • CAPCS
Water vapour content (continuous measurement of the water vapour content should not be required if the sample exhaust gas is dried before the emissions are analysed)	USEPA Method 4	<ul style="list-style-type: none"> • CAPCS • CHP • ASP
Temperature	USEPA Method 4	<ul style="list-style-type: none"> • CAPCS • CHP • ASP

With reference to the EM&A Manual, the air emission of the stacks shall meet the following emission limits as presented in *Tables 3.2 to 3.5*.

Table 3.2 *Emission Limit for CAPCS Stack*

Parameter	Emission Level (mg/Nm ³) ^(a)
VOCs (including methane)	680
Dust (or Total Suspended Particulates (TSP))	6
Odour (including NH ₃ & H ₂ S)	220 ^(b)
Notes:	
(a) Hourly average concentration	
(b) The odour unit is OU/Nm ³	

Table 3.3 *Emission Limit for CHP Stack*

Parameter	Maximum Emission Level (mg/Nm ³) ^{(a) (b)}
Dust (or Total Suspended Particulates)	15
Carbon Monoxide	650
NO _x	300
SO ₂	50
NMVOCs ^(c)	150
VOCs (including methane) ^(d)	1,500
HCl	10
HF	1
Notes:	
(a) All values refer to an oxygen content in the exhaust gas of 6% and dry basis.	
(b) Hourly average concentration	
(c) NMVOCs should be monitored by gas sampling and laboratory analysis at an agreed interval. For the first 12 months (starting from August 2019), monitoring should be carried out at quarterly intervals. The monitoring frequency should then be reduced to half-yearly for next 12 months (starting from August 2020).	
(d) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.	

Table 3.4 Emission Limit for ASP Stack

Parameter	Maximum Emission Level (mg/Nm ³) ^{(a) (b)}
Dust (or Total Suspended Particulates)	5
Carbon Monoxide	100
NO _x	200
SO ₂	50
VOCs (including methane) ^(c)	20
NH ₃	35
HCl	10
HF	1

Notes:

- (a) All values refer to an oxygen content in the exhaust gas of 11% and dry basis.
- (b) Hourly average concentration
- (c) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.

Table 3.5 Emission Limit for Standby Flaring Gas Unit⁽¹⁾

Parameter	Maximum Emission level (mg/Nm ³) ^{(a) (b)}
Dust (or Total Suspended Particulates)	5
Carbon Monoxide	100
NO _x	200
SO ₂	50
VOCs (including methane) ^(c)	20
HCl	10
HF	1

Notes:

- (a) All values refer to an oxygen content in the exhaust gas of 11% and dry basis.
- (b) Hourly average concentration
- (c) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.

3.1.2 Odour

To determine the effectiveness of the proposed odour mitigation measures and to ensure that the operation of the ORRC1 will not cause adverse odour impacts, odour monitoring of the CAPCS stack (see *Section 3.1.1*) and odour patrol will be carried out.

Odour patrol shall be conducted by independent trained personnel/competent persons in summer months (i.e. from July to September) for the first two operational years of ORRC1 at monthly intervals along an odour patrol route at the Project Site boundary as shown in *Annex A*.

The perceived odour intensity is divided into 5 levels. *Table 3.6* describes the odour intensity for different levels.

(1) A standby facility. Only operate when the CHPs are not in operation or when the biogas generated exceeded the utilisation rate of the CHPs.

Table 3.6 *Odour Intensity Level*

Level	Odour Intensity
0	Not detected. No odour perceived or an odour so weak that it cannot be easily characterised or described
1	Slight identifiable odour, and slight chance to have odour nuisance
2	Moderate identifiable odour, and moderate chance to have odour nuisance
3	Strong identifiable, likely to have odour nuisance
4	Extreme severe odour, and unacceptable odour level

Table 3.7 shows the action level and limit level to be used for odour patrol. Should any exceedance of the action and limit levels occurs, actions in accordance with the event and action plan in Table 3.8 should be carried out.

Table 3.7 *Action and Limit Levels for Odour Nuisance*

Parameter	Action Level	Limit Level
Odour Nuisance (from odour patrol)	When one documented compliant is received ^(a) , or Odour Intensity of 2 is measured from odour patrol.	Two or more documented complaints are received ^(a) within a week; or Odour intensity of 3 or above is measured from odour patrol.
Note:		
(a) Once the complaint is received by the Project Proponent (EPD), the Project Proponent would investigate and verify the complaint whether it is related to the potential odour emission from the ORRC1 and its on-site wastewater treatment unit.		

Table 3.8 *Event and Action Plan for Odour Monitoring*

Event	Action	
	Person-in-charge of Odour Monitoring	Project Proponent ^(a)
Action Level		
Exceedance of action level (Odour Patrol)	<ol style="list-style-type: none"> 1. Identify source/reason of exceedance; 2. Repeat odour patrol to confirm finding. 	<ol style="list-style-type: none"> 1. Carry out investigation to identify the source/reason of exceedance. Investigation should be completed within 2 weeks; 2. Rectify any unacceptable practice; 3. Implement more mitigation measures if necessary; 4. Inform Drainage Services Department (DSD) or the operator of the Siu Ho Wan Sewage Treatment Works (SHWSTW) if exceedance is considered to be caused by the operation of the SHWSTW. 5. Inform North Lantau Refuse Transfer Station (NLTS) operator if exceedance is considered to be caused by the operation of NLTS.

Exceedance of action level (Odour Complaints)	<ol style="list-style-type: none"> 1. Identify source/reason of exceedance; 2. Carry out odour patrol to determinate odour intensity. 	<ol style="list-style-type: none"> 1. Carry out investigation and verify the complaint whether it is related to potential odour emission from the nearby SHWSTW; 2. Carry out investigation to identify the source/reason of exceedance. Investigation should be completed within 2 weeks; 3. Rectify any unacceptable practice; 4. Implement more mitigation measures if necessary; 5. Inform DSD or the operator of the SHWSTW if exceedance is considered to be caused by the operation of the SHWSTW. 6. Inform NLTS operator if exceedance is considered to be caused by the operation of NLTS.
Limit Level		
Exceedance of limit level	<ol style="list-style-type: none"> 1. Identify source/reason of exceedance; 2. Inform EPD; 3. Repeat odour patrol to confirm findings; 4. Increase odour patrol frequency to bi-weekly; 5. Assess effectiveness of remedial action and keep EPD informed of the results; 6. If exceedance stops, cease additional odour patrol. 	<ol style="list-style-type: none"> 1. Carry out investigation to identify the source/reason of exceedance. Investigation should be completed within 2 week; 2. Rectify any unacceptable practice; 3. Formulate remedial actions; 4. Ensure remedial actions properly implemented; 5. If exceedance continues, consider what more/enhanced mitigation measures should be implemented; 6. Inform DSD or the operator of the SHWSTW if exceedance is considered to be caused by the operation of the SHWSTW.

Note:

(a) Project Proponent shall identify an implementation agent.

3.2

SITE AUDIT

Environmental mitigation measures (related to air quality, water quality, waste, land contamination, hazard-to-life, and landscape and visual) to be implemented during the operation phase of the Project are recommended in the approved EIA Report and EM&A Manual and are summarised in *Annex C*. Monthly site audits for operation phase will be carried out to check the implementation of these measures.

3.2.1

Water Quality

Compliance audits are to be undertaken to ensure that a valid discharge licence has been issued by EPD prior to the discharge of effluent from the operation of the Project site. Under Effluent Discharge Licence WT00038391-2021 (effective from July 2021), the effluent quality shall meet the discharge limits as described in *Table 3.9* and *Table 3.10*.

Table 3.9 *Discharge Limits for Effluent from the Effluent Storage Tank (as stipulated in WT00038391-2021)*

Parameters	Discharge Limit (mg/L)
Flow Rate (m ³ /day) ^(a)	645
pH (pH units) ^(b)	6-10 ^(c)
Suspended Solids ^(b)	800
Biochemical Oxygen Demand (5 days, 20°) ^(b)	800
Chemical Oxygen Demand ^(b)	2,000

Surfactants (total) ^(b)	25

Notes:

- (a) Flow rate is not a parameter required to be monitored and reported by the Contractor in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (b) Parameters required to be monitored and reported by the Contractor in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (c) Range.

Table 3.10 *Discharge Limits for Effluent from the Petrol Interceptor(s) (as stipulated in WT00038391-2021)*

Parameters	Discharge Limit (mg/L)
Flow Rate (m ³ /day)	245 ^(a)
Suspended Solids ^(b)	30
Chemical Oxygen Demand ^(c)	80
Oil & Grease ^(c)	20
Surfactants (total) ^(b)	15

Notes:

- (a) The surface runoff flow rate limit was estimated by the overall yearly rainfall data. As the actual flowrate from the petrol interceptors depends on the weather condition instead of the performance of the petrol interceptor, monitoring and reporting of this parameter is not required. Hence this parameter is not reported in *Table 4.10* and *Table 4.11*.
- (b) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (c) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

3.2.2 *Landscape and Visual*

In accordance with EM&A Manual, the landscape and visual mitigation measures shall be implemented.

For operation phase, site inspection shall be conducted once a month for the first year of operation of the Project. All measures as stated in the implementation schedule of the EM&A Manual (see *Annex C*), including compensatory planting, undertaken by both the Contractor and the specialist Landscape Sub-Contractor during the first year of the operation phase shall be audited by a Registered Landscape Architect (RLA) to ensure compliance with

the intended aims of the measures and the effectiveness of the mitigation measures.

4.1 AIR QUALITY

4.1.1 Operation Phase Monitoring

The concentrations of concerned air pollutants emitted from the stacks of the CAPCS, CHP, and ASP during the reporting period are monitored on-line by the continuous environmental monitoring system (CEMS). During the reporting period, the standby flare operated on 14, 19, 20 April and 10 and 30 May 2022.

With reference to the emission limits shown in *Tables 3.2, 3.3 and 3.4*, the hourly average concentrations and the number of exceedances of the concerned air emissions monitored for the CAPCS, CHP, ASP and the Standby Flaring Gas Unit during this reporting period are presented in *Tables 4.1 to 4.5*.

It should be noted that measurements recorded under abnormal operating conditions, e.g. start up and stopping of stacks and unstable operation, as well as test runs and interference of sensor, are disregarded.

Table 4.1 *Hourly Average of Parameters Recorded for CAPCS*

Parameter	Range of Hourly Average Conc. (mg/Nm ³)	Emission Limit (mg/Nm ³)	Exceedance Identified	Remarks
VOCs (including methane)	0.00 – 533.48	680	Nil	Nil
Dust (or TSP)	0.00 – 0.02	6	Nil	Nil
Odour (including NH ₃ & H ₂ S) ^(a)	0.00 – 180.17	220	Nil	Nil
Note:				
(a) The odour unit is OU/Nm ³ .				

Table 4.2 *Hourly Average of Parameters Recorded for CHP 1*

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedance Identified	Remarks
Dust (or TSP)	0 - 12	15	Nil	Nil
Carbon Monoxide	0 - 639	650	Nil	Nil
NO _x	0 - 300	300	Nil	Nil
SO ₂	0 - 297 ^(c)	50	Identified ^(c)	De-sulphurisation system tripped / Under Maintenance
VOCs (including methane) ^(b)	0 - 1,037	1,500	Nil	Nil
HCl	0 - 3	10	Nil	Nil
HF	0 - 1	1	Nil	Nil
Notes:				

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedance Identified	Remarks
(a) All values refer to an oxygen content in the exhaust gas of 6% and dry basis.				
(b) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.				
(c) Dates with exceedances on SO ₂ (number of exceedance on the day) were identified on 25 (1) March 2022; 5 (1), 10 (16), 11 (13), 12 (2) and 15 (4) April 2022; 16 (6), 17 (1), 18 (1), 19 (10), 20 (24), 21 (24), 22 (4), 24 (6), 25 (1), 27 (4), 28 (8), 29 (3) and 30 (4) May 2022.				

Table 4.3 *Hourly Average of Parameters Recorded for CHP 2*

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedance Identified	Remarks
Dust (or TSP)	0 - 12	15	Nil	Nil
Carbon Monoxide	0 - 629	650	Nil	Nil
NO _x	0 - 300	300	Nil	Nil

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedances Identified	Remarks
(b)	The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.			
(c)	Dates with exceedances on NO _x (number of exceedances on the day) were identified on 4 (1), 21 (6), 22 (12), 23 (22), 24 (18), 25 (13), 26 (15), 28 (3), 29 (7) and 30 (23) April 2022; and 1 (1) May 2022.			
(d)	Date with exceedances on SO ₂ (number of exceedance on the day) was identified on 1 (1), 3 (1), 10 (4), 13 (1), 14 (22), 15 (18), 16 (3), 17 (16), 18 (24), 19 (12), 22 (21), 23 (24), 24 (18), 25 (18), 26 (22), 27 (16), 28 (15), 29 (19), 30 (20) and 31 (17) May 2022 .			

Table 4.5 *Hourly Average of Parameters Recorded for ASP*

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedances Identified	Remarks
Dust (or TSP)	0 – 5	5	Nil	Nil
Carbon Monoxide	0 – 1,046	100	Identified (c)	System unstable (e.g. low efficiency, unstable column temperature)
NO _x	0 – 541	200	Identified (d)	System unstable (e.g. low efficiency, unstable column temperature)
SO ₂	0 – 323	50	Identified (e)	Desulphurisation system tripped
VOCs (including methane) ^(b)	0 – 1,486	20	Identified (f)	System unstable (e.g. low efficiency, unstable column temperature)
NH ₃	0 – 229	35	Identified (g)	System unstable (e.g. low efficiency, unstable column temperature)
HCl	0 – 4	10	Nil	Nil
HF	0 – 2	1	Identified (h)	System unstable (e.g. low efficiency, unstable column temperature)

Notes:

- (a) All values refer to an oxygen content in the exhaust gas of 11% and dry basis.
- (b) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.
- (c) Date with exceedances on CO (number of exceedances on the day) were identified on 8 (1), 13 (1) and 27 (1) March 2022; 18 (1) April 2022; 20 (1) May 2022.
- (d) Date with exceedances on NO_x (number of exceedances on the day) were identified on 1 (1), 3 (1), 4 (1), 6 (2), 7 (2), 8 (8), 13 (1), 14 (6), 15 (3), 16 (6), 17 (3), 24 (4), 25 (7), 27 (1), 28 (1) and 31 (4) March 2022; 1 (1), 2 (2), 5 (4), 8 (2), 9(8), 11 (7), 12 (6), 14 (4), 15 (4), 16 (5), 17 (12), 19 (10), 20 (10), 21 (3), 22 (5), 26 (1), 27 (3), 28 (4) and 29 (4) April 2022; 1 (2), 2 (2), 3 (2), 5 (9), 8 (18), 9 (10), 10 (5), 11 (7), 12 (19), 13 (15), 14 (20), 17 (2), 18 (5), 19 (11), 20 (1), 21 (5), 22 (7), 23 (2), 25 (4), 27 (3), 28 (5), 29 (14) and 30 (4) May 2022.
- (e) Dates with exceedances on SO₂ (number of exceedances on the day) were identified on 6 (1) March 2022; 5 (3), 10 (16), 11 (9), 12 (2), 15 (5) and 28 (1) April 2022; 13 (8), 14 (23), 15 (24), 16 (24), 17 (24), 18 (24), 19 (18), 20 (23), 21 (24), 22 (18), 23 (24), 24 (24), 25 (23), 26 (24), 27 (23), 28 (20), 29 (15), 30 (18) and 31 (5) May 2022.
- (f) Dates with exceedances on VOCs (number of exceedances on the day) were identified on 13 (1) March 2022; 16 (1), 18 (1), 28 (1) and 29 (1) April 2022; 20 (1), 28 (1) and 29 (2) May 2022.

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^(a)	Max. Emission Limit (mg/Nm ³)	Exceedances Identified	Remarks
(g)	Dates with exceedances on NH ₃ (number of exceedances on the day) were identified on 2 (3), 3 (5), 4 (1), 6 (1), 8 (2), 12 (2), 13 (7), 14 (2), 16 (4), 17 (5), 24 (1), 25 (4), 26 (7), 27 (2), 28 (1), 30 (2) and 31 (4) March 2022; 3 (1), 6 (6), 8 (1), 9 (1), 11 (1), 12 (8), 13 (6), 17 (3), 18 (2), 21 (2), 23 (2), 28 (2) and 29 (1) April 2022; 3 (9), 5 (1), 15 (4), 17 (4), 18 (2), 20 (1), 22 (5), 23 (2) and 26 (6) May 2022.			
(h)	Dates with exceedances on HF (number exceedances on the day) were identified on 5 (2) and 22 (2) May 2022.			

Table 4.6 *Hourly Average of Parameters Recorded for the Standby Flaring Gas Unit*

Parameter	Range of Hourly Average Conc. (mg/Nm ³) ^{(a)(c)}	Max. Emission Limit (mg/Nm ³)	Exceedances Identified	Remarks
Dust (or TSP)	0 - 0	5	Nil	Nil
Carbon Monoxide	0 - 0	100	Nil	Nil
NO _x	0 - 19	200	Nil	Nil
SO ₂	0 - 30	50	Nil	Nil
VOCs (including methane) ^(b)	0 - 17	20	Nil	Nil
HCl	0 - 1	10	Nil	Nil
HF	0 - 1	1	Nil	Nil

Notes:

- (a) All values refer to an oxygen content in the exhaust gas of 11% and dry basis.
- (b) The VOCs emission limit include methane as biogas is adopted as fuel in the combustion process.
- (c) During the reporting period, the standby flare operated on 14, 19 and 20 April 2022; 10 and 30 May 2022

4.2 ODOUR

4.2.1 Operation Phase Monitoring

No odour patrol was required to be conducted for this reporting period.

4.3 WATER QUALITY

4.3.1 Operation Phase Monitoring

Effluent discharge was sampled from the outlet chamber of the Effluent Storage Tank monthly and from the Petrol Interceptor(s) bi-monthly as stipulated in the operation phase discharge licence. The results of the discharge samples from the outlet chamber of the Effluent Storage Tank are recorded in Table 4.7 to 4.9 and the results from the Petrol Interceptors are recorded in Table 4.10 and Table 4.11.

Table 4.7 *Results of the Discharge Sample Collected from the Outlet Chamber of the Effluent Storage Tank in March 2022*

Parameters	Discharged Effluent Concentration (mg/L)	Discharge Limit (mg/L)	Compliance with Discharge Limit
Flow Rate (m ³ /day) ^(a)	0 - 281 ^(e)	645	Yes
pH (pH units) ^(b)	7.60 - 8.27 ^(e)	6-10 ^(c)	Yes
Suspended Solids ^{(b) (d)}	76 ^(d)	800	Yes
Biochemical Oxygen Demand (5 days, 20°) ^{(b) (d)}	34 ^(d)	800	Yes
Chemical Oxygen Demand ^{(b) (d)}	760 ^(d)	2,000	Yes
Oil & Grease ^{(b) (d)}	<5 ^(d)	40	Yes
Total Nitrogen ^{(b) (d)}	77.3 ^(d)	200	Yes
Total Phosphorus ^{(b) (d)}	20.2 ^(d)	50	Yes
Surfactants (total) ^{(b) (d)}	5.5 ^(d)	25	Yes

Notes:

(a) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

(b) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

(c) Daily Range.

(d) Effluent sample collected on 30 March 2022.

(e) Data collected daily in the reporting month.

Table 4.8 *Results of the Discharge Sample Collected from the Outlet Chamber of the Effluent Storage Tank in April 2022*

Parameters	Discharged Effluent Concentration (mg/L)	Discharge Limit (mg/L)	Compliance with Discharge Limit
Flow Rate (m ³ /day) ^(a)	34 - 244 ^(e)	645	Yes
pH (pH units) ^(b)	7.69 - 8.08 ^(e)	6-10 ^(c)	Yes
Suspended Solids ^{(b) (d)}	75 ^(d)	800	Yes
Biochemical Oxygen Demand (5 days, 20°) ^{(b) (d)}	29 ^(d)	800	Yes
Chemical Oxygen Demand ^{(b) (d)}	756 ^(d)	2,000	Yes
Oil & Grease ^{(b) (d)}	<5 ^(d)	40	Yes
Total Nitrogen ^{(b) (d)}	50.2 ^(d)	200	Yes
Total Phosphorus ^{(b) (d)}	18.1 ^(d)	50	Yes
Surfactants (total) ^{(b) (d)}	<1.0 ^(d)	25	Yes

Notes:

(f) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

(g) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

(h) Daily Range.

(i) Effluent sample collected on 22 April 2022.

(j) Data collected daily in the reporting month.

Table 4.9 Results of the Discharge Sample Collected from the Outlet Chamber of the Effluent Storage Tank in May 2022

Parameters	Discharged Effluent Concentration (mg/L)	Discharge Limit (mg/L)	Compliance with Discharge Limit
Flow Rate (m ³ /day) ^(a)	7 – 303 ^(e)	645	Yes
pH (pH units) ^(b)	7.30 – 8.10 ^(e)	6-10 ^(c)	Yes
Suspended Solids ^{(b) (d)}	148 ^(d)	800	Yes
Biochemical Oxygen Demand (5 days, 20°) ^{(b) (d)}	33 ^(d)	800	Yes
Chemical Oxygen Demand ^{(b) (d)}	939 ^(d)	2,000	Yes
Oil & Grease ^{(b) (d)}	<5 ^(d)	40	Yes

Total Phosphorus ^{(b) (d)}	28.0 ^(d)	50	Yes
Surfactants (total) ^{(b) (d)}	1.4 ^(d)	25	Yes

Notes:

- (k) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (l) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (m) Daily Range.
- (n) Effluent sample collected on 19 May 2022.
- (o) Data collected daily in the reporting month.

Table 4.10 Results of the Discharge Sample from the Petrol Interceptor 1 on 13 April 2022

Parameters	Discharged Effluent Concentration (mg/L)	Discharge Limit (mg/L)	Compliance with Discharge Limit
Suspended Solids ^(b)	<2 ^(a)	30	Yes
Chemical Oxygen Demand ^(c)	<5 ^(a)	80	Yes
Oil & Grease ^(c)	<5 ^(a)	20	Yes
Surfactants (total) ^(b)	<1.0 ^(a)	15	Yes

Notes:

- (a) Effluent sample collected on 13 April 2022.
- (b) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (c) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

Table 4.11 Results of the Discharge Sample from the Petrol Interceptor 2 on 13 April 2022

Parameters	Discharged Effluent Concentration (mg/L)	Discharge Limit (mg/L)	Compliance with Discharge Limit
Suspended Solids ^(b)	<2 ^(a)	30	Yes
Chemical Oxygen Demand ^(c)	<5 ^(a)	80	Yes
Oil & Grease ^(c)	<5 ^(a)	20	Yes
Surfactants (total) ^(b)	<1.0 ^(a)	15	Yes

Notes:

- (a) Effluent sample collected on 13 April 2022.
- (b) Parameter not required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.
- (c) Parameters required to be reported in accordance to Section B2 of the Effluent Discharge Licence under the WPCO.

No non-compliance of discharge limit of all parameters from Petrol Interceptor 1 and 2 was recorded during the reporting period.

4.4 WASTE MANAGEMENT

4.4.1 Operation Phase Monitoring

Wastes generated from the operation of the Project include chemical waste, wastes generated from pre-treatment process and general refuse ⁽¹⁾. Reference has been made to the Monthly Summary Waste Flow Table prepared by the Contractor (see *Annex D*). With reference to the relevant handling records and trip tickets of this Project, the quantities of different types of waste generated from the operation of the Project in the reporting month are summarised in *Table 4.12*.

Table 4.12 Quantities of Waste Generated from the Operation of the Project

Month / Year	Chemical Waste	Waste Generated from Pre-treatment Process		General Refuse	
		Disposal of at CWTC	Disposed of at Landfill ^(a)	Recycled ^(b)	Disposed of at Landfill ^{(a) (c)}
March 2022	0 L	253.75 tonnes	0.00 tonnes	2.65 tonnes	0.00 tonne
April 2022	1,240 L ^(e)	253.45 tonnes	0.00 tonnes	2.53 tonnes	0.00 tonne
May 2022	0 L	354.94 tonnes	0.00 tonnes	2.76 tonnes	0.00 tonne

Notes:

- (a) Waste generated from pre-treatment process and general refuse other than chemical waste and recyclables were disposed of at NENT landfill by sub-contractors.
- (b) Among waste generated from pre-treatment process, 0.00 tonne of metals, 0.00 tonne of papers/ cardboard packing and 0.00 tonne of plastics were sent to recyclers for recycling during the reporting period.
- (c) It was assumed that four 240-litre bins filled with 80% of general refuse were collected at each collection. The general refuse density was assumed to be around 0.15 kg/L.
- (d) Among general refuse, 0.00 tonnes of metals, 0.00 tonnes of papers/ cardboard packing and 0 tonnes of plastics were sent to recyclers for recycling during the reporting period.
- (e) It included 20 L of spent acid, 1,200 L of spent lube oil, 20 L of spent alkaline material.

(1) Public fill and construction waste may only be generated during maintenance works when there are civil or structural works.

5 *SITE AUDIT*

5.1 *ENVIRONMENTAL SITE AUDIT*

5.1.1 *Operation Phase*

The monthly inspections of the operation phase of the Project covered the operation phase environmental site inspections. The inspections checked the implementation of the recommended mitigation measures for air quality, landscape and visual, water quality, waste (land contamination) and hazard-to-life stated in the Implementation Schedule (see *Annex C*).

Follow-up actions resulting from the site inspections were generally taken as reported by the Contractor. The Contractor has implemented environmental mitigation measures recommended in the approved EIA Report and EM&A Manual.

March 2022

The monthly inspection of the operation phase of the Project on 11 March 2022 covered the operation phase environmental site audit. Joint site inspections was conducted by representatives of the Contractor, IEC and the MT on 11 March 2022 as required for the operation of the Project.

April 2022

The monthly inspection of the operation phase of the Project on 8 April 2022 covered the operation phase environmental site audit. Joint site inspections was conducted by representatives of the Contractor, IEC and the MT on 8 April 2022 as required for the operation of the Project.

May 2022

The monthly inspection of the operation phase of the Project on 20 May 2022 covered the operation phase environmental site audit. Joint site inspections was conducted by representatives of the Contractor, IEC and the MT on 20 May 2022 as required for the operation of the Project.

5.2 *LANDSCAPE AND VISUAL AUDIT*

It was confirmed that the necessary landscape and visual mitigation measures during the operation phase as summarised in *Annex C* were generally implemented by the Contractor. No non-compliance in relation to the landscape and visual mitigation measures was identified during the site audits in this reporting period and therefore no further actions are required. The ET/MT will keep track of the EM&A programme to check compliance with environmental requirements and the proper implementation of all necessary mitigation measures.

March 2022

Monthly inspection of the landscape and visual mitigation measures for the operation phase of the Project was performed on 11 March 2022.

April 2022

Monthly inspection of the landscape and visual mitigation measures for the operation phase of the Project was performed on 8 April 2022.

May 2022

Monthly inspection of the landscape and visual mitigation measures for the operation phase of the Project was performed on 20 May 2022.

6.1

SUMMARY OF ENVIRONMENTAL NON-COMPLIANCE

March 2022

Non-compliance of emission limits of SO₂ from CHP 1 and CO, NO_x, VOCs and NH₃ from ASP were recorded during the reporting period.

The Contractor has reviewed the organic waste treatment processes (i.e. waste reception, waste pre-treatment, anaerobic digesters, and composting processes) and found that they were operated normally during the reporting period. The Contractor has investigated the de-sulphurisation system and the ASP, the potential causes for the exceedance were identified.

The exceedances of SO₂ from CHP 1 occurred due to malfunctioning of the control instrument. A blower within the de-sulphurisation system was tripped and immediate maintenance work was carried out by on-site maintenance team and the issue was fixed on the same day.

The exceedance of CO, NO_x, VOCs and NH₃ from ASP occurred due to system instability caused by leakage of the internal tubing of the economiser. The Contractor arranged urgent maintenance to the structure. The ASP has been under continuous upgrading work throughout the reporting month.

The investigation reports of the above exceedance are presented in Annex F.

April 2022

Non-compliance of emission limits of SO₂ and NO_x from the CHPs and CO, NO_x, SO₂, VOCs and NH₃ from ASP were recorded during the reporting period.

The Contractor has reviewed the organic waste treatment processes (i.e. waste reception, waste pre-treatment, anaerobic digesters, and composting processes) and found that they were operated normally during the reporting period. The Contractor has investigated the de-sulphurisation system and the ASP, the potential causes for the exceedance were identified.

The exceedances of SO₂ from CHP 1, 2 and ASP occurred due to tripping of the de-sulphurisation system caused by malfunctioning of a blower. Immediate maintenance work and filter cleaning was carried out. The issue was fixed on the same day. The exceedances of NO_x occurred due to unstable system caused by leakage in the CHP 3. The issues was temporarily fixed and the situation will be monitored continuously by the Contractor.

The exceedance of CO, NO_x, VOCs and NH₃ from ASP occurred due to system instability caused by motor overheating, unstable water flow and leakage of pump. The Contractor arranged urgent maintenance to the affected system and upgrading works are on-going.

The investigation reports of the above exceedance are presented in Annex F.

May 2022

Non-compliance of emission limits of SO₂ from the CHPs, NO_x from CHP3 and CO, NO_x, SO₂, VOCs, NH₃ and HF from ASP were recorded during the reporting period.

The Contractor has reviewed the organic waste treatment processes (i.e. waste reception, waste pre-treatment, anaerobic digesters, and composting processes) and found that they were operated normally during the reporting period. The Contractor has investigated the de-sulphurisation system, CHPs and the ASP, the potential causes for the exceedance were identified.

The exceedances of SO₂ from CHPs and ASP occurred due to tripping of the de-sulphurisation system caused by failure of one of the columns. The Contractor inspected the column and the pipes and pumps of the systems when exceedance and malfunctioning of the system were observed. Isolation of the affected system and maintenance of the columns were carried out and the performance of the system resumed to normal in late-May 2022. Activated carbon filter will be replaced in the coming reporting period to improve the SO₂ removal efficiency.

The exceedances of NO_x from CHP 3 in early May 2022 occurred due to insufficient feedstock. The exceedance of CO, NO_x, VOCs, NH₃ and HF from ASP occurred due to system instability caused by the ongoing performance optimisation of the ASP, resulting in a lowered temperature of the system and the incomplete combustion of biogas. The Contractor will continue to carry out maintenance and optimisation measures to restore the combustion efficiency so that the concerned pollutants will be effectively destroyed.

The investigation reports of the above exceedance are presented in Annex F.

6.2 *SUMMARY OF ENVIRONMENTAL COMPLAINT*

No complaint was received during the reporting period.

6.3 *SUMMARY OF ENVIRONMENTAL SUMMON AND SUCCESSFUL PROSECUTION*

No summon/prosecution was received during the reporting period. The cumulative summons/prosecution log is shown in *Annex E*.

7 *FUTURE KEY ISSUES*

7.1 *KEY ISSUES FOR THE COMING REPORTING PERIOD*

Activities to be undertaken for the coming reporting period are:

- Operation of the Project; and
- Maintenance of CHP 2 (i.e. replacement of cylinder head) and modification of the ASP (i.e. repairing of economizer's heat exchanger, mixing units and diesel generator) to control the air emission; and
- Cleaning of the suspension Buffer Tank.

This EM&A Report presents the EM&A programme undertaken during the reporting period from **1 March 2022** to **31 May 2022** in accordance with EM&A Manual (Version F) and requirements of EP (FEP-01/395/2010/C).

For the operation phase, exceedances of the emission limits for stack monitoring (including CAPCS, CHP and ASP stacks) were recorded under normal operating conditions during the reporting period (see *Table 8.1*).

Table 8.1 *Exceedances for Stack Emissions*

Stack	Exceedances During the Reporting Period
Centralised Air Pollution Control Unit (CAPCS)	<ul style="list-style-type: none"> • Nil
Cogeneration Unit (CHP) 1	<ul style="list-style-type: none"> • Exceeded mission limit of SO₂ on 25 March 2022; 5, 10, 11, 12 and 15 April 2022; 6, 17, 18, 19, 20, 21, 22, 24, 25, 27, 28, 29 and 30 May 2022.
Cogeneration Unit (CHP) 2	<ul style="list-style-type: none"> • Exceeded emission limit of SO₂ on 10, 11 and 15 April 2022; 10, 16, 17, 18, 19, 20, 21, 24, 25, 26, 27, 28, 29, 30 and 31 May 2022.
Cogeneration Unit (CHP) 3	<ul style="list-style-type: none"> • Exceeded emission limit of NO_x on 4, 21, 22, 23, 24, 25, 26, 28, 29 and 30 April 2022; 1 May 2022. • Exceeded emission limit of SO₂ on 1, 3, 10, 13, 14, 15, 16, 17, 18, 19, 22, 23, 24, 25, 26, 27, 28, 29, 30 and 31 May 2022.
Ammonia Stripping Plant (ASP)	<ul style="list-style-type: none"> • Exceeded emission limit of CO on 8, 13 and 27 March 2022; 18 April 2022; 20 May 2022. • Exceeded emission limit of NO_x on 1, 3, 4, 6, 7, 8, 13, 14, 15, 16, 17, 24, 25, 27, 28 and 31 March 2022; 1, 2, 5, 8, 9, 11, 12, 14, 15, 16, 17, 19, 20, 21, 22, 26, 27, 28 and 29 April 2022; 1, 2, 3, 5, 8, 9, 10, 11, 12, 13, 14, 17, 18, 19, 20, 21, 22, 23, 25, 27, 28, 29 and 30 May 2022. • Exceeded emission limit of SO₂ on 5, 10, 11, 12, 15 and 28 April 2022; 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30 and 31 May 2022. • Exceeded emission limit of VOCs on 13 March 2022; 16, 18, 28 and 29 April 2022; 20, 28 and 29 May 2022. • Exceeded emission limit of NH₃ on 2, 3, 4, 6, 8, 12, 13, 14, 16, 17, 24, 25, 26, 27, 28, 30 and 31 March 2022; 3, 6, 8, 9, 11, 12, 13, 17, 18, 21, 24, 28 and 29 April 2022; 3, 5, 15, 17, 18, 20, 22, 23 and 26 May 2022. • Exceeded emission limit of HF on 5 and 22 May 2022.

In March 2022, the exceedances of SO₂ from CHP 1 and CO, NO_x, VOCs and NH₃ from ASP were recorded during the reporting period. The exceedances of SO₂ from CHP 1 occurred due to malfunctioning of an instrument (blower) of the de-sulphurisation system. The exceedance of CO, NO_x, SO₂, VOCs and NH₃ from ASP occurred due to system instability caused by the leakage of the internal tubing of the economiser of the ASP.

In April 2022, the exceedances of SO₂ from CHP 1, 2 and CO, NO_x, SO₂, VOCs and NH₃ from ASP were recorded during the reporting period. The

exceedances of SO₂ from CHP 1, 2 and ASP occurred due to malfunctioning of an instrument (blower) of the de-sulphurisation system. The exceedances of NO_x from CHP 3 occurred due to unstable system caused by leakage in the CHP 3. The exceedance of CO, NO_x, VOCs and NH₃ from ASP occurred due to system instability caused by motor overheating, unstable water flow and leakage of pump.

In May 2022, non-compliance of emission limits of SO₂ from the CHPs, NO_x from CHP 3 and CO, NO_x, SO₂, VOCs, NH₃ and HF from ASP were recorded during the reporting period. The exceedances of SO₂ from CHPs and the ASP occurred due to tripping of the de-sulphurisation system caused by the failure of one of the columns of the system. The exceedances of NO_x from CHP 3 in early May 2022 occurred due to insufficient feedstock. The exceedance of CO, NO_x, VOCs, NH₃ and HF from ASP occurred due to system instability caused by the ongoing performance optimisation of the ASP, resulting in a lowered temperature of the system and the incomplete combustion of biogas.

The Contractor has replaced and maintained the malfunctioned parts (desulphurisation system, columns of the ASP, air blower), cleaning for various parts (i.e. stripping column and packaging of the ASP, air blow's filter), reinstalled the ASP feed pump, and carried out fine-tuning of equipment of the ASP, the investigation on the underlying reasons of exceedances in CHP and ASP and the continuous seeking of better and more feedstock to increase biogas loading and testing at ASP to optimise combustion efficiency and overall performance.

No non-compliance to the effluent discharge limit was recorded during this reporting period.

The environmental control /mitigation measures related to air quality, water quality, waste (including land contamination prevention), hazard-to-life and landscape and visual recommended in the approved EIA Report and the EM&A Manual were properly implemented by the Contractor during the reporting period.

Monthly landscape and visual monitoring were conducted in the reporting period. The necessary landscape and visual mitigation measures recommended in the approved EIA Report were generally implemented by the Contractor.

No complaint/summon/prosecution was received.

Implementation Schedule of Mitigation Measures

Annex C Summary of Mitigation Measures Implementation Schedule for Operation Phase

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
<i>Summary of Environmental Mitigation Measures in the EIA and EM&A Manual</i>				
<i>A. Air Quality</i>				
3.78	2.7 & 2.13 – 2.19	<p><u>Air Pollution Control (Construction Dust) Regulation & Good Site Practices</u></p> <ul style="list-style-type: none"> •Commissioning tests shall be conducted to confirm the centralized air pollution control unit, the cogen units, the standby flaring unit and ASP against the design emission levels as stated in Tables 2.2 - 2.5. •Odour monitoring shall be conducted at the stack exhaust of the centralized air pollution control unit weekly in the first month of the commissioning stage. 	OWTF Stacks/ During Commissioning Stage	√
3.78	2.7-2.12	<p><u>Air Pollution Control and Stack Monitoring</u></p> <ul style="list-style-type: none"> •Stack monitoring shall be installed for the centralized air pollution control unit, cogen units and ASP of OWTF to ensure that the air emissions from OWTF would meet the design emission limits as well as EPD criteria. 	During Operation	√
3.78	2.20- 2.28	<ul style="list-style-type: none"> •Odour Patrol at site boundary of OWTF 	OWTF Site Boundary/ During Operation (The need to continue the odour patrol after the end of the 2-year monitoring period would depend on the monitoring results and should be agreed with EPD)	N/A
<i>B. Hazard to Life</i>				
4.103	3.4	<p><u>Operation Phase</u></p> <ul style="list-style-type: none"> •3m high fence should be constructed along the boundary facing the SHWWTW •Emergency evacuation procedures should be formulated and the Contractor should ensure on site staff should be familiar with these procedures. Diagram showing the escape routes to a safe place should be posted in the site notice boards and at the entrance/exit of site. A copy of the latest version emergency procedures should be dispatched to Tung Chung Fire Station for reference once available. •The emergency procedures should specify means of providing a rapid and direct warning (e.g. Siren and Flashing Light) to personnel on site in the event of chlorine gas release in the SHWWTW. 	Work Site / During Operation Period	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		<ul style="list-style-type: none"> •The Contractor should establish a communication channel with the SHWWTW operation personnel and FSD. In case of any hazardous incidents in the treatment works, operation personnel of SHWWTW should advise the Contractor to inform personnel on site to proceed with emergency procedure. The Contractor should appoint a Liaison Officer to communicate with FSD Incident Commander on site in case of emergency. •Periodic drills should be coordinated and conducted to ensure all on site personnel are familiar with the emergency procedures. Upon completion of the drills, a review on every step taken should be conducted to identify area of improvement. Prior notice of periodic drills should be given to Station Commander of Tung Chung Fire Station. Joint operational exercise with FSD and SHWWTW is recommended. 		
<i>C. Water Quality</i>				
5.44	4.5	<p><u>Wastewater from Organic Waste Treatment Process</u></p> <p>The Project site will be equipped with an adequately sized wastewater treatment plant. A high rate type of active sludge system specifically designed for the removal of nitrogen components from the wastewater in combination with conversion of residual BOD and COD would be deployed. The wastewater treatment plant would also be incorporated with SHARON or annamox technology or equivalent to achieve high total overall nitrogen removal. Wastewater generated from the OWTF (including wastewater from dewatering process, leachate from waste reception area, condensate from biogas handling, wastewater from scrubber of air treatment system and any surplus water from truck washing facility) will be diverted to the wastewater treatment plant. Treated effluent will then be stored temporarily in order to be used as process water within the plants. The storage volume would be around 20 m³. Overflow from the tank will be discharged to foul sewers. The polluting parameters in effluent shall be in compliance with the requirements specified in the TM- DSS. The design, installation and operation of the wastewater treatment plant shall be licensed under the Waste Disposal Ordinance and subject to the effluent monitoring as required under the WPCO which is under the ambit of regional office (RO) of EPD. To ensure that wastewater can be adequately treated and effluent from treatment plant can meet the standards listed in TM- DSS, the following mitigation measure should be conducted.</p> <ul style="list-style-type: none"> • Cleaning and maintenance of treatment facilities should be conducted on a regular basis to ensure that removal rate of each treatment facility would not be reduced. • Cleaning and maintenance of pipelines should be carried out on a regular basis to prevent block of pipeline and leaching of wastewater, and therefore prevent overflowed or leached wastewater discharging into nearby drainages and water streams. • Regular site inspection should be conducted to ensure that no wastewater can be directly discharged into nearby water streams. 	Work Site / During Design & Operation Period	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
5.55	4.5	In the scrubber, spraying water should be re-circulated to minimize the need for external water. The spraying water would be collected at the bottom of the scrubber. Excess water would be discharged to the wastewater treatment plant as described in Section 5.54.	Work Site / During Design & Operation Period	√
5.56	4.5	The waste reception, treatment facilities and compost storages of OWTF should be located in enclosed buildings to prevent generation of contaminated rain runoff. All surface runoff such as washed water generated in the treatment processes areas should be properly collected and diverted to the on-site wastewater treatment plant as described in Section 5.54.	Work Site / During Design & Operation Period	√
5.57	4.5	All drainage system for collection and transferring wastewater generated in the OWTF to the on-site wastewater treatment plant as described in Section 5.54 should be capable of preventing clogging and easy maintenance and cleaning.	Work Site / During Design & Operation Period	√
<i>D. Waste Management</i>				
6.50	5.12	<p><u>Good Site Practices</u> Good operational practices should be adopted to Minimize waste management impacts:</p> <ul style="list-style-type: none"> •Obtain the necessary waste disposal permits from the appropriate authorities, in accordance with the Waste Disposal Ordinance (Cap. 354), Waste Disposal (Chemical Waste) (General) Regulation and the Land (Miscellaneous Provision) Ordinance (Cap. 28); •Nomination of an approved person to be responsible for good site practice, arrangements for collection and effective disposal to an appropriate facility of all wastes generated at the site; •Use of a waste haulier licensed to collect specific category of waste; •A trip-ticket system should be included as one of the contractual requirements and implemented by the Environmental Team to monitor the disposal of solid wastes at public filling facilities and landfills, and to control fly tipping. Reference should be made to ETWB TCW No. 31/2004. •Training of site personnel in proper waste management and chemical waste handling procedures; •Separation of chemical wastes for special handling and appropriate treatment at a licensed facility; •Routine cleaning and maintenance programme for drainage systems, sumps and oil interceptors; •Provision of sufficient waste disposal points and regular collection for disposal; •Adoption of appropriate measures to minimize windblown litter and dust during transportation of waste, such as covering trucks or transporting wastes in enclosed containers; and •Implementation of a recording system for the amount of wastes generated, recycled and 	During Operation Period	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		disposed of (including the disposal sites).		
6.51	5.13	<p><u>Waste Reduction Measures</u></p> <p>Good management and control can prevent the generation of significant amounts of waste. It is recommended that the following good operational practices should be adopted to ensure waste reduction:</p> <ul style="list-style-type: none"> •Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; •Encourage collection of aluminum cans, plastic bottles and packaging material (e.g. carton boxes) and office paper by individual collectors. Separate labelled bins should be provided to help segregate this waste from other general refuse generated by the work force; and •Any unused chemicals or those with remaining functional capacity should be reused as far as practicable. 	During Operation Period	√
6.52	5.14	<p><u>Wastes Generated from Pre-Treatment Process</u></p> <p>Wastes generated from pre-treatment process should be recycled as far as possible. Wastes generated from pre-treatment process should also be separated from any chemical waste and stored in covered skips. The recyclables should be collected by licensed collectors, while the rest of the waste should be removed from the site on a daily basis to minimize odour, pest and litter impacts. Open burning must be strictly prohibited.</p>	Pre-Treatment Process/ During Operation Period	√
6.53-6.56	5.15-5.18	<p><u>Chemical Wastes</u></p> <ul style="list-style-type: none"> •Chemical waste generated from machinery maintenance and servicing should be managed in accordance with Code of Practice on the Packaging, Labelling and storage of Chemical Wastes under the provisions of Waste Disposal (Chemical Waste) (General) Regulation. The chemical waste should be collected by drum-type containers and removed by licensed chemical waste contractors. •Plant / equipment maintenance schedules should be planned in order to minimize the generation of chemical waste. •Non-recyclable chemical wastes and lubricants should be disposed of at appropriate facilities, such as CWTC. Copies or counterfoils from collection receipts issued by the licensed waste collector should be kept for recording purpose. •Recyclable chemical waste will be transported off-site for treatment by a licensed collector. The Contractor will need to register with EPD as a chemical waste producer. Where possible, chemical wastes (e.g. waste lubricants) would be recycled at appropriate facilities, such as Dunwell's oil re-refinery. 	Whole Site / During Operation Period	√
6.57-6.58	5.19-5.20	<u>General Refuse</u>	Whole Site / During Operation	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		<ul style="list-style-type: none"> •Waste generated in offices should be reduced through segregation and collection of recyclables. To promote the recycling of wastes such as used paper, aluminum cans and plastic bottles, it is recommended that recycling bins should be clearly labelled and placed at locations with easy access. For the collection of recyclable materials, they should be collected by licensed collectors. •General refuse, other than segregated recyclable wastes, should be separated from any chemical waste and stored in covered skips. The general refuse should be removed from the site on a daily basis to minimize odour, pest and litter impacts. Also, open burning of refuse must be strictly prohibited. 	Period	
<i>E. Proposed Land Contamination Preventive Measures</i>				
6.65	5.21 (i)	<u>Fuel Oil Containers</u> <ul style="list-style-type: none"> •Fuel oil should be stored in suitable containers. •All fuel oil containers should be securely closed. •Appropriate labels showing the name of fuel oil should be posted on the containers. •Drip trays should be provided for all containers. 	Fuel Oil Storage Containers /During Operation Period	√
6.65	5.21 (ii)	<u>Storage Area</u> <ul style="list-style-type: none"> •Distance between the fuel oil refuelling points and the fuel oil containers should be minimized. •The storage area should be used for fuel oil storage only. •No surface water drains or foul sewers should be connected to the storage area. •The storage area should be enclosed by three sides by a wall and have an impermeable floor or surface. 	Fuel Oil Storage Area /During Operation Period	√
6.65	5.21 (iii)	<u>Fuel Oil Spillage Response</u> An Oil Spill Response Plan should be prepared by the operator to document the appropriate response procedures for oil spillage incident in detail. General procedures to be taken in case of fuel oil spillage are presented below. <ul style="list-style-type: none"> • <u>Training</u> Training on oil spill response actions should be given to relevant staff. The training should cover the followings: <ul style="list-style-type: none"> - Tools & resources to combat oil spillage and fire, e.g. locations of oil spill handling equipment and firefighting equipment; - General methods to deal with oil spillage and fire incidents; - Procedures for emergency drills in the event of oil spills and fire; and - Regular drills should be carried out. • <u>Communication</u> Establish communication channel with the Fire Services Department (FSD) and EPD to 	Whole Site / During Operation Phase	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		<p>report any oil spillage incident so that necessary assistance from relevant department could be quickly sought.</p> <ul style="list-style-type: none"> • <u>Response Procedure</u> Any fuel oil spillage within the Project Site should be immediately reported to the Site Manager with necessary details including location, source, possible cause and extent of the spillage Site Manager should immediately attend to the spillage and initiate any appropriate action to confine and clean up the spillage. The response procedures should include the following: <ul style="list-style-type: none"> - Identify and isolate the source of spillage as soon as possible. - Contain the oil spillage and avoid infiltration into soil / groundwater and discharge to storm water channels. - Remove the oil spillage. - Clean up the contaminated area. - If the oil spillage occurs during refuelling, the refuelling operation should immediately be stopped. - Recovered contaminated fuel oil and the associated material to remove the spilled oil should be considered as chemical waste. The handling and disposal procedures for chemical wastes are discussed in the following paragraphs. 		
6.66	5.22 (i)	<p><u>Chemicals and Chemical Wastes Handling & Storage</u></p> <ul style="list-style-type: none"> • Chemicals and chemical wastes should only be stored in suitable containers in purpose-built areas. • The storage of chemical wastes should comply with the requirements of the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. • The storage areas for chemicals and chemical wastes should have an impermeable floor or surface. The impermeable floor I surface should possess the following properties: <ul style="list-style-type: none"> - Not liable to chemically react with the materials and their containers to be stored. - Able to withstand normal loading and physical damage caused by container handling - The integrity and condition of the impermeable floor or surface should be inspected at regular intervals to ensure that it is satisfactorily maintained • For liquid chemicals and chemical wastes storage, the storage area should be bonded to contain at least 110% of the storage capacity of the largest containers or 20% of the total quantity of the chemicals/chemical wastes stored, whichever is the greater. 	Whole Site / During Operation Period	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		<ul style="list-style-type: none"> Storage container should be checked at regular intervals for their structural integrity and to ensure that the caps or fill points are tightly closed. Chemical handling should be conducted by trained workers under supervision. 		
6.66	5.22 (ii)	<p><u>Chemicals and Chemical Wastes Spillage Response</u> A Chemicals and / or Chemical Wastes Spillage Response Plan should be prepared by the operator to document in detail the appropriate response procedures for chemicals or chemical wastes spillage incidents. General procedures to be undertaken in case of chemicals I chemical waste spillages are presented below</p> <ul style="list-style-type: none"> Training Training on spill response actions should be given to relevant staff. The training should cover the followings: <ul style="list-style-type: none"> Tools & resources to handle spillage, e.g. locations of spill handling equipment; General methods to deal with spillage; and Procedures for emergency drills in the event of spills. Communication Establish communication channel with Fire Services Department (FSD) and EPD to report the spillage incident so that necessary assistance from relevant department could be quickly sought. Response Procedures Any spillage within OWTF site should be reported to the Site Manager. Site Manager shall attend to the spillage and initiate any appropriate actions needed to confine and clean up the spillage. The response procedures should include the followings: <ul style="list-style-type: none"> Identify and isolate the source of spillage as soon as possible; Contain the spillage and avoid infiltration into soil / groundwater and discharge to storm water channels (in case the spillage occurs at locations out of the designated storage areas); Remove the spillage; the removal method / procedures documented in the Material Safety Data Sheet (MSDS) of the chemicals spilled should be observed; Clean up the contaminated area (in case the spillage occurs at locations out of the designated storage areas); and The waste arising from the cleanup operation should be considered as chemical wastes. 	Whole Site / During Operation Period	√
6.67 - 6.69	5.23- 5.25	<p><u>Incident Record</u></p> <ul style="list-style-type: none"> After any spillage, an incident report should be prepared by the Site Manager. The incident report should contain details of the incident including the cause of the 	Whole Site / During Operation Period	√

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location/ Timing	Status
		<p>incident, the material spilled and estimated spillage amount, and also the response actions undertaken. The incident record should be kept carefully and able to be retrieved when necessary.</p> <ul style="list-style-type: none"> • The incident report should provide sufficient details for the evaluation of any environmental impacts due to the spillage and assessment of the effectiveness of measures taken. • In case any spillage or accidents results in significant land contamination, EPD should be informed immediately and the Project operator should be responsible for the cleanup of the affected area. The responses procedures described in Sections 6.65 - 6.66 of the EIA Report should be followed accordingly together with the land contamination assessment and remediation guidelines stipulated in the <i>Guidance Manual for Use of Risk-based Remediation Goals for Contaminated Land Management</i> and the <i>Guidance Note for Contaminated Land Assessment and Remediation</i>. 		
<i>F. Landscape and Visual</i>				
7.98 & Table 7.8	Table 6.2	<p><u>Operation Phase</u></p> <ul style="list-style-type: none"> • Aesthetic design of the facade, including its colour theme, pattern, texture, materials, finishing and associated structures to harmonize with the surrounding settings • Grass / groundcover planting to soften the roof • Heavy standard tree planting to screen proposed associated structures • Grasscrete paving to soften the harshness of large paved surface areas wherever possible 	Within Project Area / During Design & Operation Stages	√

Notes:

1. General refuse was disposed of at NENT by subcontractors.
2. Metal and paper/cardboard packaging were collected by recycler for recycling.
3. Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material collected by recycler for recycling.
4. It was assumed that four 240-litre bins filled with 80% of general refuse were collected at each collection. The general refuse density was assumed to be around 0.15 kg/L.

Annex F

Investigation Report

Annex F1

Investigation Report for March 2022

Investigation Report of CEMS Exceedances

Date	1 – 31 March 2022
Time	Continuous monitoring throughout March 2022
Monitoring Location	Continuous Environmental Monitoring System (CEMS)
Parameter	Various emission parameters of the Cogeneration Units (CHP) and the Ammonia Stripping Plant (ASP)
Exceedance Description	<p>1. Continuous monitoring was carried out at the CAPCS, CHP and ASP throughout the reporting period using the CEMS. According to the EM&A Manual, exceedance is considered if the emission concentration of the concerned pollutants is higher than the emission limits stated in Tables 2.2, 2.3 and 2.5 of the EM&A Manual (Version F) for CAPCS, CHP and ASP respectively. The concentration of the concerned air pollutants were monitored on-line by the CEMS. Exceedances of various emission parameters were recorded on the CEMS including:</p> <ul style="list-style-type: none"> • SO₂ in CHP 1 • CO, NO_x, VOCs and NH₃ in the ASP <p>2. The Contractor has investigated the cause of the exceedance and identified that</p> <ul style="list-style-type: none"> • The exceedances of SO₂ from CHP 1 occurred due to tripping of a blower in the de-sulphurisation system. • The exceedances from ASP occurred due to system instability caused by leakage of tubing within the economiser of the ASP.
Action Taken / Action to be Taken	The Contractor arranged immediate maintenance work after the malfunctioning of internal instruments of the de-sulphurisation system and the ASP were identified.
Remedial Works and Follow-up Actions	<p>The ASP is under optimisation by the Contractor.</p> <p>The Contractor is recommended to closely monitor the processes, including the modification works and follow-up emission monitoring of the ASP to avoid exceedance.</p> <p>The Contractor should review the routine inspection and maintenance schedule of the ASP and conduct preventative maintenance to avoid similar re-occurrence of the equipment failure.</p>

Date: 15 April 2022

Annex F2

Investigation Report for April 2022

Investigation Report of CEMS Exceedances

Date	1 - 30 April 2022
Time	Continuous monitoring throughout April 2022
Monitoring Location	Continuous Environmental Monitoring System (CEMS)
Parameter	Various emission parameters of the Cogeneration Units (CHP) and the Ammonia Stripping Plant (ASP)
Exceedance Description	<p>1. Continuous monitoring was carried out at the CAPCS, CHP and ASP throughout the reporting period using the CEMS. According to the EM&A Manual, exceedance is considered if the emission concentration of the concerned pollutants is higher than the emission limits stated in Tables 2.2, 2.3 and 2.5 of the EM&A Manual (Version F) for CAPCS, CHP and ASP respectively. The concentration of the concerned air pollutants were monitored on-line by the CEMS. Exceedances of various emission parameters were recorded on the CEMS including:</p> <ul style="list-style-type: none"> • SO₂ in CHP 1 and 2 • NO_x in CHP 3 • CO, NO_x, SO₂, VOCs and NH₃ in the ASP <p>2. The Contractor has investigated the cause of the exceedance and identified that</p> <ul style="list-style-type: none"> • The exceedances of SO₂ from CHP 1, 2 and ASP occurred due to tripping of a blower in the de-sulphurisation system, affecting air supply to the system. • The exceedances of NO_x occurred due to unstable system caused by leakage within the CHP 3. • Other exceedances from ASP occurred due to system instability caused by motor overheating, unstable water flow and leakage of the ASP feed pump.
Action Taken / Action to be Taken	<p>For the SO₂ exceedance, the Contractor arranged immediate maintenance work for the air blower and cleaned its filter when the issue was identified. The air blower was fixed on the same day.</p> <p>For the NO_x exceedance, the Contractor has temporarily fixed the leakage upon identification of the cause of exceedances. The Contractor will continue to monitor the situation.</p> <p>For the other exceedances from the ASP, the Contractor has reinstalled the ASP feed pump on 29 March 2022 but were unable to completely resolve the leakage. The Contractor is pending the required parts for maintenance.</p>
Remedial Works and Follow-up Actions	<p>The Contractor will continue to monitor the leakage within CHP3 and will resolve the leakage in the ASP as soon as the parts required for maintenance are available.</p> <p>The Contractor is recommended to closely monitor the processes, including the modification works and follow-up emission monitoring of the ASP to avoid exceedance.</p>

	The Contractor should review the routine inspection and maintenance schedule of the ASP and conduct preventative maintenance to avoid similar re-occurrence of the equipment failure.

Date 14 May 2022

Annex F3

Investigation Report for May 2022

Investigation Report of CEMS Exceedances

Date	1 - 31 May 2022
Time	Continuous monitoring throughout May 2022
Monitoring Location	Continuous Environmental Monitoring System (CEMS)
Parameter	Various emission parameters of the Cogeneration Units (CHP) and the Ammonia Stripping Plant (ASP)
Exceedance Description	<p>1. Continuous monitoring was carried out at the CAPCS, CHP and ASP throughout the reporting period using the CEMS. According to the EM&A Manual, exceedance is considered if the emission concentration of the concerned pollutants is higher than the emission limits stated in Tables 2.2, 2.3 and 2.5 of the EM&A Manual (Version F) for CAPCS, CHP and ASP respectively. The concentration of the concerned air pollutants were monitored on-line by the CEMS. Exceedances of various emission parameters were recorded on the CEMS including:</p> <ul style="list-style-type: none"> • SO₂ in CHPs and ASP • NO_x in CHP 3 • CO, NO_x, SO₂, VOCs, NH₃ and HF in the ASP <p>2. The Contractor has investigated the cause of the exceedance and identified that</p> <ul style="list-style-type: none"> • The exceedances of SO₂ from CHPs and the ASP occurred due to failure of a column in the de-sulphurisation system caused by the cleaning activities of the columns. • The exceedances of NO_x from CHP 3 in early May 2022 occurred due to insufficient feedstock. • Other exceedances from ASP occurred due to system instability caused by the ongoing performance optimisation of the ASP. The change of other system parameters has lowered the temperature of the thermal unit of the ASP and resulted in the incomplete combustion of biogas.
Action Taken / Action to be Taken	<p>For the SO₂ exceedance, the Contractor inspected the column and the pipes and pumps of the systems when exceedance and malfunctioning of the system were observed. Isolation of the affected system and maintenance of the columns were carried out. The performance of the system resumed to normal in late-May 2022.</p> <p>For the other exceedances from the ASP, the Contractor will continue to carry out maintenance and optimisation measures to restore the combustion efficiency so that the concerned pollutants will be effectively destroyed.</p>
Remedial Works and Follow-up Actions	The Contractor will replace the activated carbon filter in the de-sulphurisation system in the coming reporting period to improve the SO ₂ removal efficiency.

	<p>The Contractor is recommended to closely monitor the processes, including the modification works and follow-up emission monitoring of the ASP to avoid exceedance.</p> <p>The Contractor should review the routine inspection and maintenance schedule of the ASP and conduct preventative maintenance to avoid similar re-occurrence of the equipment failure.</p>
