### Development at West Kowloon Cultural District

Monthly Environmental Monitoring and Audit (EM&A) Report

for November 2023

12 December 2023

In accordance with the Environmental Permit, Condition 3.4, this Monthly EM&A Report has been certified by the Environmental Team Leader (ETL) and verified by the Independent Environmental Checker (IEC) as complying with the requirements as set out in Sections 1, 10, 11, 12 and 13 of the EM&A Manual.

Certified by:

**CK WU** Environmental Team Leader (ETL) West Kowloon Cultural District Authority

Date

12 December 2023

Verified by:

Claudine LEE Independent Environmental Checker (IEC) Meinhardt Infrastructure and Environment Ltd

### **Executive summary**

Mott MacDonald Hong Kong Limited (MMHK) was commissioned to undertake the Environmental Team (ET) services (including environmental monitoring and audit (EM&A)) for the construction of M+ Museum Main Works (Contract No.: CC/2015/3A/022) and Lyric Theatre Complex including the Foundation Works (Contract No.: CC/2015/3A/014), L1 Contract (Contract No. CC/2017/3A/030) and L2 Contract (Contract No. CC/2017/3A/031) at West Kowloon Cultural District (WKCD) (The Project) as part of the WKCD development. The Project Proponent is the West Kowloon Cultural District Authority (WKCDA). The construction works and EM&A programme for M+ Museum was commenced on 31 October 2015 and completed on 28 February 2021; while the construction works and EM&A programme for Lyric Theatre Complex (L1 and L2 Contracts) was commenced on 1 March 2016, and the EM&A programme for L1 Contract was completed on 30 June 2021.

The overall works for the WKCD fall under two separate categories of Designated Project (DP) of the Environmental Impact Assessment Ordinance (EIAO), namely an "engineering feasibility study of urban development projects with a study area covering more than 20 ha or involving a total population of more than 100 000" (Item 1 of Schedule 3) and "an underpass more than 100m in length under the built areas" (Item A.9, Part I, Schedule 2). An Environmental Permit No. EP-453/2013/B (EP) was issued with respect to the "Underpass Road and Austin Road Flyover Serving the West Kowloon Cultural District" which specifically includes the abovementioned category of DP under Item A.9, Part I, Schedule 2 of the EIAO.

This Monthly EM&A Report presents the monitoring works at Lyric Theatre Complex (L2 Contract) from 1 November to 30 November 2023.

#### **Exceedance of Action and Limit Levels**

There was no breach of Action or Limit levels for Air Quality (1-hour TSP and 24-hour TSP) and Noise in this reporting month.

#### Implementation of Mitigation Measures

Construction phase weekly site inspections were carried out on 1, 9, 15, 22 and 29 November 2023 for Lyric Theatre Complex (L2 Contract) to confirm the implementation measures undertaken by the Contractor in the reporting month. The outcomes are presented in Section 4 and the status of implementation of mitigation measures in the site is shown in **Appendix J**.

Landscape and visual impact inspections were conducted as part of the abovementioned weekly site inspection during the reporting month. No adverse comment on landscape and visual aspects were made during the inspections.

#### **Record of Complaints**

No environmental complaint was recorded in the reporting month.

#### **Record of Notifications of Summons and Successful Prosecutions**

No notifications of summons and successful prosecutions were recorded in the reporting month.

#### Future Key Issues

The major site works for L2 to be commissioned in the coming month include:

- LTC construction
  - Structure (Slab, wall, columns and beam)
    - Falsework and formwork erection
    - Reinforcement work
    - Concrete work

#### ABWF & MEP work

Façade work

- ASDA and Lyric Theatre Promenade
  - Structure, ABWF and MEP works
- Remaining Works for M+ Promenade
  - Hacking existing R.C. footing for modification of ICT cable and CLP works
- DCS cofferdam (Cofferdam B)
  - Seawater pipework installation
- Extended basement
  - ABWF & MEP works
- Underpass and Associated Area
  - Structure works
  - ABWF & MEP works

Potential environmental impacts due to the construction activities, including air quality, noise, water quality, waste, landscape and visual, will be monitored or reviewed. The recommended environmental mitigation measures shall be implemented on site and regular inspections as required will be carried out to ensure that the environmental conditions are acceptable.

### **1** Introduction

#### 1.1 Background

Mott MacDonald Hong Kong Limited (MMHK) was commissioned to undertake the Environmental Team (ET) services (including environmental monitoring and audit (EM&A)) for the construction of M+ Museum Main Works (Contract No.: CC/2015/3A/022) and Lyric Theatre Complex including the Foundation Works (Contract No.: CC/2015/3A/014), L1 Contract (Contract No. CC/2017/3A/030) and L2 Contract (Contract No. CC/2017/3A/031) at West Kowloon Cultural District (WKCD) (The Project) as part of the WKCD development. The Project Proponent is the West Kowloon Cultural District Authority (WKCDA). The construction works and EM&A programme for M+ Museum was commenced on 31 October 2015 and completed on 28 February 2021; while the construction works and EM&A programme for Lyric Theatre Complex (L1 and L2 Contracts) were commenced on 1 March 2016, and the EM&A programme for L1 Contract was completed on 30 June 2021.

The overall works for the WKCD fall under two separate categories of Designated Project (DP) of the Environmental Impact Assessment Ordinance (EIAO), namely an "engineering feasibility study of urban development projects with a study area covering more than 20 ha or involving a total population of more than 100 000" (Item 1 of Schedule 3) and "an underpass more than 100m in length under the built areas" (Item A.9, Part I, Schedule 2). An Environmental Permit No. EP-453/2013/B (EP) was issued with respect to the "Underpass Road and Austin Road Flyover Serving the West Kowloon Cultural District" which specifically includes the abovementioned category of DP under Item A.9, Part I, Schedule 2 of the EIAO. The captioned projects include part of the abovementioned underpass road located within the site boundary also falls under this same category.

The M+ Museum development aims to provide an iconic presence for the M+ Museum, semitransparent vertical plane, housing education facilities, a public restaurant and museum offices. At ground and lower levels, generous access will be provided to the park and other West Kowloon Cultural District facilities, alongside a public resource centre, theatres, retail and dining, and backof-house functions.

The 1,200-seat Lyric Theatre Complex will be Hong Kong's first world-class facility for dance performances, including ballet, contemporary and Chinese dance forms. In the run up to the opening of further major performing arts venues in the WKCD, it will also be used for a wide variety of performing arts events including drama, opera and musical performances. The Lyric Theatre Complex will act as a platform for Hong Kong's leading arts organisations and be a new major venue to show programmes from Asia and worldwide.

The Monthly EM&A Report is prepared in accordance with the Condition 3.4 of the Environmental Permit No. EP-453/2013/B. This Monthly EM&A Report presents the monitoring works at Lyric Theatre Complex (L2 Contract) from 1 November to 30 November 2023. The purpose of this report is to summarise the findings in the EM&A of the project over the reporting period.

#### 1.2 **Project Organisation**

The organisation chart and lines of communication with respect to the on-site environmental management structure together with the contact information of the key personnel are shown in **Appendix A**.

#### **1.3 Status of Construction Works in the Reporting Period**

During the reporting period, construction works at L2 undertaken include:

#### LTC construction

Structure (Slab, wall, columns and beam)

- Falsework and formwork erection
- Reinforcement work
- Concrete work

#### ABWF & MEP work

Façade work

- ASDA and Lyric Theatre Promenade
  - Structure, ABWF and MEP works
- Remaining Works for M+ Promenade
  - Hacking existing R.C. footing for modification of ICT cable and CLP works

4

- Construction of additional CLP draw pit
- Open up CLP draw pits (E & F) at M+ park for CLP inspection
- DCS cofferdam (Cofferdam A)
  - Backfilling
- Extended basement
  - ABWF & MEP works
- Underpass and Associated Area
  - Structure works
  - ABWF & MEP works
- M+ Day 2 Works
  - Removing of existing waring slab, RC kerb and railing

The Construction Works Programme of Lyric Theatre Complex (L2 Contract) is provided in **Appendix B**. As on 31 January 2023, site area P32 was handed over to Sun Hung Kai Properties and was thus excluded from the site boundary of Lyric Theatre Complex (L2 Contract), the area was delineated in red in the layout plan of the Project which is provided in **Figure 1**. Please refer to **Table 4.1** on the status of the environmental licenses.

#### **1.4 Summary of EM&A Requirements and Alternative Monitoring Locations**

The EM&A programme requires environmental monitoring of air quality, noise, landscape and visual as specified in the approved EM&A Manual.

#### 1.4.1 EM&A Requirements

A summary of impact EM&A requirements is presented in **Table 1.1**.

#### Table 1.1: Summary of Impact EM&A Requirements

| Parameters  | Descriptions | Locations                              | Frequencies                |
|-------------|--------------|----------------------------------------|----------------------------|
| Air Quality | 24-Hour TSP  | AM1 – International<br>Commerce Centre | At least once every 6 days |

| Parameters         | Descriptions                                                                                  | Locations                                                  | Frequencies                   |
|--------------------|-----------------------------------------------------------------------------------------------|------------------------------------------------------------|-------------------------------|
|                    | 1-Hour TSP                                                                                    | AM1 – International<br>Commerce Centre                     | At least 3 times every 6 days |
|                    | 24-Hour TSP                                                                                   | AM2 – The Harbourside<br>Tower 1                           | At least once every 6 days    |
|                    | 1-Hour TSP                                                                                    | AM2 – The Harbourside<br>Tower 1                           | At least 3 times every 6 days |
| Noise              | Leq, 30 minutes                                                                               | NM1- The Harbourside<br>Tower 1                            | Weekly                        |
| Landscape & Visual | Monitor implementation of<br>proposed mitigation<br>measures during the<br>construction stage | As described in Table 9.1<br>and 9.2 of the EM&A<br>Manual | Bi-weekly                     |

#### 1.4.2 Alternative Monitoring Locations

In the context of the monitoring activities at M+ Museum and the Lyric Theatre Complex, three monitoring stations had been considered, including AM1 (International Commerce Centre), AM2 (The Harbourside Tower 1) for air monitoring, and NM1 (The Harbourside Tower 1) for noise monitoring. Other monitoring locations (i.e. AM3 to AM5 and NM2 to NM5) were so far away from M+ Museum and the Lyric Complex and could not be representative for impact monitoring.

The Harbourside management office formally rejected our proposal of setting up air quality and noise monitoring equipment on its premises at the podium level of Tower 1 (AM2/NM1) on 10 November 2015. Nevertheless, a suitable air quality monitoring location at AM2 was identified on the ground floor in front of The Harbourside Tower 1, which is at the same location as that of baseline monitoring for consistency. No management approval is required on the ground floor for conducting the air monitoring. However, the electricity supply at AM2 was suspended from 31 August 2016. In order to have a more secure electricity supply, an alternative air monitoring location (AM2A) was identified at Austin Road West opposite to The Harbourside Tower 1, which is close to Lyric Theatre Complex site entrance. This alternative air monitoring location was approved by EPD on 28 September 2016. Due to the works programme, the air monitoring location AM2A has been relocated to the alternative monitoring location AM2B at the 1<sup>st</sup> floor of Gammon's site office, which was approved by EPD on 21 February 2019. In view of the upcoming construction works to be undertaken at the air monitoring station AM2B, AM2B was no longer available for conducting the impact air quality monitoring. Hence, an alternative air monitoring location was identified on the ground floor in front of The Harbourside Tower 1 (AM2) which is at the same location as the baseline monitoring and this previously approved monitoring location had also been used for the EM&A Programme from November 2015 to August 2016, the relocation was approved by EPD on 27 May 2021.

Alternative noise monitoring location was identified at The Arch (NM2); however, The Arch management office formally rejected our proposal of setting up noise monitoring equipment on its premises on 23 November 2015. On the other hand, noise monitoring at G/F of Harbourside could not be representative. However, approval from the management office of the International Commerce Centre has been granted on 29 February 2016 for conducting noise monitoring at the alternative noise monitoring location identified at the podium floor (NM1A) which is free from screening to the construction activities.

In short, 2 air quality monitoring stations and 1 noise impact monitoring station were confirmed for the impact monitoring.

The Environmental Quality Performance Limits for air quality and noise are shown in **Appendix C**.

The Event and Action Plan for air quality, construction noise, and landscape and visual are shown in **Appendix D**.

The EM&A programme followed the recommended mitigation measures in the EM&A Manual. The EM&A requirements as well as the summary of implementation status of the environmental mitigation measures are provided in **Appendix J**.

### 2 Impact Monitoring Methodology

#### 2.1 Introduction

For air quality and noise, the monitoring methodology, including the monitoring locations, monitoring equipment used, monitoring parameters, and frequency and duration etc., for air quality and noise are detailed in this Section. The environmental monitoring schedules for the reporting period and the tentative monitoring schedule for the coming month are provided in **Appendix E**.

For landscape and visual impact, the relevant EM&A monitoring requirements and details are also presented in this Section.

#### 2.2 Air Quality

#### 2.2.1 Monitoring Parameters, Frequency and Duration

Table 2.1 summarizes the monitoring parameters, frequency and duration of the TSP monitoring.

|             | All quality monitoring raramotoro, rroque | and Buration |
|-------------|-------------------------------------------|--------------|
| Parameter   | Frequency                                 | Duration     |
| 24-hour TSP | At least once in every six-days           | 24 hours     |
| 1-hour TSP  | At least 3 times every six-days           | 60 minutes   |

#### Table 2.1: Air Quality Monitoring Parameters, Frequency and Duration

#### 2.2.2 Monitoring Locations

Currently, the works under the captioned project are confined in the western part of the WKCD site. Therefore, only the monitoring stations AM1 and AM2 were set up at the proposed locations in accordance with updated EM&A Manual. Location of the monitoring station is given in **Table 2.2** and shown in **Figure 1**.

#### Table 2.2: Air Quality Monitoring Station

| Monitoring Station | Location                               |  |
|--------------------|----------------------------------------|--|
| AM1                | International Commerce Centre (ICC)    |  |
| AM2                | The Harbourside Tower 1 – Ground Floor |  |

#### 2.2.3 Monitoring Equipment

For 24-hour TSP air quality monitoring, High Volume Sampler (HVS) was used at air monitoring station AM1 and portable direct reading dust meter was used at air monitoring station AM2 due to the unavailability of power supply for HVS at / in the vicinity of the AM2. The portable direct reading dust meter is capable of producing comparable results as that by the HVS method. For 1-hour TSP monitoring, portable direct reading dust meter was used for the measurement.

**Table 2.3** summarizes the equipment used in the impact air quality monitoring. Copies of the calibration certificates for the calibration kit and portable dust meters are attached in **Appendix F**.

#### Table 2.3: TSP Monitoring Equipment

| Model                                        |
|----------------------------------------------|
|                                              |
| TE-5170 (Serial No: 0767)                    |
| TE-5025A (Orifice I.D.: 2454)                |
| Sibata LD-5R (Serial No.: 841724)            |
|                                              |
| Sibata LD-3B (Serial No.: 235780 and 326285) |
|                                              |

Calibration of the HVS (five point calibration) using Calibration Kit was carried out every two months. The HVS calibration orifice will be calibrated annually. Calibration certificate of the TE-5025A Calibration Kit and the HVS are provided in **Appendix F**.

The portable direct reading dust meter should be determined periodically (e.g. annually) by the HVS to check the validity and accuracy of the results measured by direct reading method.

#### 2.2.4 Monitoring Methodology

#### 24-hour TSP Monitoring (HVS)

#### Installation

The HVS was installed at the site boundary. The following criteria were considered in the installation of the HVS.

- A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
- The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
- A minimum of 2 metres separation from walls, parapets and penthouse was required for rooftop sampler.
- A minimum of 2 metres separation from any supporting structure, measured horizontally was required.
- No furnace or incinerator flues or building vent were nearby.
- Airflow around the sampler was unrestricted.
- The sampler has been more than 20 metres from any drip line.
- Permission was obtained to set up the sampler and to obtain access to the monitoring station.
- A secured supply of electricity is needed to operate the sampler.

#### **Preparation of Filter Papers**

- Glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected.
- The filters used are specified to have a minimum collection efficiency of 99 percent for 0.3  $\mu$ m (DOP) particles.
- All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C with relative humidity (RH) < 50% and was not variable by more than ±5 %. A convenient working RH was 40%. All preparation of filters was done by Hong Kong Laboratory Accreditation Scheme (HOKLAS) accredited laboratory.

#### **Field Monitoring Procedures**

- The power supply was checked to ensure the HVS works properly.
- The filter holder and the area surrounding the filter were cleaned.
- The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
- The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
- The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges.
- The shelter lid was closed and was secured with the aluminium strip.
- The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
- A new flow rate record sheet was set into the flow recorder.
- The flow rate of the HVS was checked and adjusted at around 1.3 m<sup>3</sup>/min. The range specified in the EM&A Manual was between 0.6-1.7 m<sup>3</sup>/min.
- The programmable timer was set for a sampling period of 24 hours, and the starting time, weather condition and the filter number were recorded.
- The initial elapsed time was recorded.
- At the end of sampling, the sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
- It was then placed in a clean plastic envelope and sealed.
- All monitoring information was recorded on a standard data sheet.
- Filters were sent to a Hong Kong Laboratory Accreditation Scheme (HOKLAS) accredited laboratory for analysis.

#### Maintenance and Calibration

- The HVS and its accessories are maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVSs were calibrated upon installation and thereafter at bi-monthly intervals. The calibration kits were calibrated annually.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

#### 24-hour TSP Monitoring (Portable direct reading dust meter)

#### **Field Monitoring**

The measuring procedures of the portable direct reading dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- Turn the power on.
- Close the air collecting opening cover.
- Push the "TIME SETTING" switch to [BG].
- Push "START/STOP" switch to perform background measurement for 6 seconds.
- Turn the knob at SENSI ADJ position to insert the light scattering plate.
- Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.

- Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
- Pull out the knob and return it to MEASURE position.
- Setting time period of 24 hours for the 24-hour TSP measurement.
- Push "START/STOP" to start the 24-hour TSP measurement.
- Regular checking of the time period setting to ensure monitoring time of 24 hours.

#### **Maintenance and Calibration**

- The portable direct reading dust meter would be checked at 3-month intervals and calibrated at 1-year intervals throughout all stages of the air quality monitoring.
- Calibration records for direct dust meters are shown in Appendix F.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

#### **1-hour TSP Monitoring**

#### **Field Monitoring**

The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- Turn the power on.
- Close the air collecting opening cover.
- Push the "TIME SETTING" switch to [BG].
- Push "START/STOP" switch to perform background measurement for 6 seconds.
- Turn the knob at SENSI ADJ position to insert the light scattering plate.
- Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.
- Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
- Pull out the knob and return it to MEASURE position.
- Setting time period of 1 hour for the 1-hour TSP measurement.
- Push "START/STOP" to start the 1-hour TSP measurement.
- Regular checking of the time period setting to ensure monitoring time of 1 hour.

#### **Maintenance and Calibration**

- The 1-hour dust meter would be checked at 3-month intervals and calibrated at 1-year intervals throughout all stages of the air quality monitoring.
- Calibration records for direct dust meters are shown in Appendix F.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

#### 2.3 Noise

#### 2.3.1 Monitoring Parameters, Frequency and Duration

**Table 2.4** summarizes the monitoring parameters, frequency and duration of noise monitoring. The noise in A-weighted levels  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  are recorded in a 30-minute interval between 0700 and 1900 hours.

#### Table 2.4: Noise Monitoring Parameters, Period and Frequency

| Time Period                                     | Parameters                                           | Frequency       |
|-------------------------------------------------|------------------------------------------------------|-----------------|
| Daytime on normal weekdays<br>(0700-1900 hours) | $L_{eq}(30~min),~L_{90}(30~min)$ & $L_{10}$ (30 min) | Once every week |

#### 2.3.2 Monitoring Location

Currently, the works under the captioned project are confined in the western part of the WKCD site. Therefore, only the monitoring station NM1A was set up. Location of the monitoring station is given in **Table 2.5** and shown in **Figure 1**.

#### Table 2.5: Noise Monitoring Station

| Monitoring Station | Location                            |  |  |
|--------------------|-------------------------------------|--|--|
| NM1A               | International Commerce Centre (ICC) |  |  |

#### 2.3.3 Monitoring Equipment

Integrating Sound Level Meter was used for noise monitoring. It was a Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level ( $L_{Aeq}$ ) and percentile sound pressure level ( $L_x$ ). They comply with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). **Table 2.6** summarizes the noise monitoring equipment model being used.

#### Table 2.6: Noise Monitoring Equipment

| Monitoring Station | Equipment Model                  |                                        |  |  |  |
|--------------------|----------------------------------|----------------------------------------|--|--|--|
|                    | Integrating Sound Level Meter    | Calibrator                             |  |  |  |
| NM1A               | Rion NL-52 (Serial No. 00131627) | LARSON DAVIS CAL200 (Serial No. 10227) |  |  |  |

#### 2.3.4 Monitoring Methodology

#### **Field Monitoring**

- The microphone of the Sound Level Meter was set at least 1.2 m above the ground.
- Free Field measurement was made at the monitoring locations.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting: A
  - time weighting: Fast
  - time measurement: 30 minutes intervals (between 0700-1900 on normal weekdays)
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement

was more than 1 dB, the measurement would be considered invalid and has to be repeated after re-calibration or repair of the equipment.

- During the monitoring period, the L<sub>eq</sub>, L<sub>10</sub> and L<sub>90</sub> were recorded. In addition, any site observations and noise sources were recorded on a standard record sheet.
- A correction of +3dB(A) was made to the free field measurements.

#### **Maintenance and Calibration**

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The sound level meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
- Calibration records are shown in Appendix F.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

#### 2.4 Landscape and Visual

#### 2.4.1 Monitoring Program

**Table 2.7** details the monitoring program (as proposed in the WKCD EIA report) for landscape and visual impact during the construction phase.

### Table 2.7:Monitoring Program for Landscape and Visual Impact during ConstructionPhase

| Stage        | Monitoring Task                                                                             | Frequency | Report                                        | Approval                     |
|--------------|---------------------------------------------------------------------------------------------|-----------|-----------------------------------------------|------------------------------|
| Construction | Monitor implementation of<br>proposed mitigation measures<br>during the construction stage. | Bi-weekly | ET to report on<br>Contractor's<br>compliance | Counter-<br>signed by<br>IEC |

During the landscape and visual impact monitoring, any changes in relation to the landscape and visual amenity should be monitored with reference to the baseline conditions of the site. In addition, mitigation measures were proposed in the WKCD EIA report to minimise the landscape and visual impacts during the construction phase. The proposed mitigation measures as shown in Table 9.1 and Table 9.2 of the EM&A Manual should be checked for proper implementation.

### **3 Monitoring Results**

#### 3.1 Impact Monitoring

Construction impact monitoring for air quality, noise and landscape and visual impact was undertaken in compliance with the EM&A Manual during the reporting month.

#### 3.2 Air Quality Monitoring

#### 3.2.1 1-hour TSP

Results of 1-hour TSP at the monitoring location AM1 and AM2 are summarised in **Table 3.1**. Graphical plots of the monitoring results are shown in **Appendix G**.

| Monitoring | Monitoring | Ionitoring Start 1-hour TSP (µg/m3) |                           |                           | g/m3)                     | Range                 | Action           | Limit            |
|------------|------------|-------------------------------------|---------------------------|---------------------------|---------------------------|-----------------------|------------------|------------------|

No exceedance of 1-hour and 24-hour TSP (Action or Limit Level) was recorded in the reporting period.

#### 3.3 Noise Monitoring

The construction noise monitoring results at the monitoring location NM1A are summarized in **Table 3.3**. Graphical plots of the monitoring data and the station set-up of a free-field measurement are shown in **Appendix G**.

| Monitoring<br>Date | Start<br>Time | End<br>Time | L <sub>eq</sub> (30 mins)*,<br>dB(A) | Limit Level for L <sub>eq</sub><br>(dB(A)) |
|--------------------|---------------|-------------|--------------------------------------|--------------------------------------------|
| 01-Nov-23          | 09:20         | 09:50       | 66                                   |                                            |
| 07-Nov-23          | 09:25         | 09:55       | 67                                   |                                            |
| 13-Nov-23          | 09:20         | 09:50       | 66                                   | 75                                         |
| 23-Nov-23          | 09:27         | 09:57       | 67                                   |                                            |
| 29-Nov-23          | 09:16         | 09:46       | 67                                   |                                            |

 Table 3.3:
 Summary of noise monitoring results during normal weekdays

Remarks:

\* +3dB (A) correction was applied to free-field measurement.

No exceedance (Action/Limit Level) of construction noise was recorded in the reporting month.

#### 3.4 Landscape and Visual Impact

Landscape and visual impact inspections were conducted as part of the weekly site inspection on 1, 15 and 29 November 2023 for Lyric Theatre Complex (L2 Contract) during the reporting month. As reviewed by the registered Landscape Architect, no adverse comment on landscape and visual aspects was made during this inspection.

The landscape and visual mitigation measures were implemented during the reporting period. The summary of implementation status of the environmental mitigation measures is provided in **Appendix J**.

### **4** Site Environmental Management

#### 4.1 Site Inspection

Construction phase weekly site inspections were carried out on 1, 9, 15, 22 and 29 November 2023 at Lyric Theatre Complex (L2 Contract). While the site environmental management committee meeting with IEC, ET, ER and Contractor was held on 22 November 2023. All observations have been recorded in the site inspection checklist and passed to the Contractor together with the appropriate recommended mitigation measures where necessary.

The key observations from the site inspections and associated recommendations are summarized in **Table 4.1.** 

| Inspection<br>Date | Parameter           | Observation /<br>Recommendation                                                                                                                                    | Contactor's<br>Responses / Action(s)<br>Undertaken                                          | Close-out<br>(Date) |
|--------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|---------------------|
| 01-Nov-23          | Air Quality         | Dusty haul road was observed, the contractor was reminded to increase water spraying frequency.                                                                    | The contractor has<br>increased water spraying<br>frequency.                                | 02/11/2023          |
| 01-Nov-23          | Water Quality       | Chemicals were observed without<br>drip tray, the contractor was<br>reminded to provide suitable drip tray<br>for the chemicals.                                   | The contractor has removed the chemicals.                                                   | 06/11/2023          |
| 01-Nov-23          | Water Quality       | Stagnant water was observed within<br>the drip tray, the contractor was<br>reminded to clear the stagnant water<br>regularly.                                      | The contractor has cleared<br>the stagnant water within<br>the drip tray.                   | 02/11/2023          |
| 09-Nov-23          | Noise               | The noise insulating fabric was<br>observed broken, the contractor was<br>reminded to replace a proper noise<br>insulating fabric for the breaker.                 | The contractor has<br>replaced with a proper<br>noise insulating fabric for<br>the breaker. | 09/11/2023          |
| 09-Nov-23          | Waste<br>Management | The contractor was reminded to clear the waste regularly.                                                                                                          | The contractor has cleared the waste regularly.                                             | 14/11/2023          |
| 15-Nov-23          | Waste<br>Management | Unused materials and waste were<br>observed on ground, the contractor<br>was reminded to clear the waste<br>regularly.                                             | The contractor has cleared the waste regularly.                                             | 17/11/2023          |
| 22-Nov-23          | Air Quality         | Opened cement bags were<br>observed, the contractor was<br>reminded to properly cover the<br>cement bags or remove them if not in<br>use.                          | The contractor has<br>removed the opened<br>cement bags.                                    | 28/11/2023          |
| 22-Nov-23          | Waste<br>Management | Construction waste was observed<br>without proper storage, the contractor<br>was reminded to provide a suitable<br>storage area and remove the waste<br>regularly. | The contractor has removed the waste.                                                       | 24/11/2023          |
| 29-Nov-23          | Air Quality         | Breaking was conducted without<br>proper watering, the contractor was<br>reminded to provide active water<br>spraying to avoid fugitive dust<br>emission.          | The contractor has<br>adopted water spraying to<br>avoid fugitive dust<br>emission.         | 29/11/2023          |

#### Table 4.1: Summary of Site Inspections and Recommendations for L2

| 29-Nov-23 | Noise         | Noise insulating fabric was not<br>observed for the breaker, the<br>contractor was reminded to adopt<br>proper noise mitigation measures.                                       | The breaking works were<br>conducted for a short<br>period of time and the<br>breaker was removed<br>subsequently, the<br>contractor was reminded to<br>adopt proper noise<br>mitigation measures<br>should such works be<br>required. | 29/11/2023 |
|-----------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 29-Nov-23 | Water Quality | Chemical containers were observed<br>without proper cover, the contractor<br>was reminded to provide proper<br>cover for the chemical containers to<br>ensure a good condition. | The contractor has<br>properly covered the<br>chemical containers.                                                                                                                                                                     | 30/11/2023 |

#### 4.2 Advice on the Solid and Liquid Waste Management Status

The Contractor has been registered as a chemical waste producer for the Project. Construction and demolition (C&D) material sorting will be carried out on site. A sufficient number of receptacles were available for general refuse collection.

As advised by the Lyric Theatre Complex (L2 Contract) Contractor, 691.3 tonnes, 171.4 tonnes and 0.0 tonne of inert C&D materials were disposed of as public fill to Tseung Kwan O Area 137 Public Fill, Tuen Mun Area 38 Public Fill and Chai Wan Public Fill Barging Point respectively in the reporting month, while 436.4 tonnes of general refuse were disposed of at SENT and WENT landfill. 0.0 tonne of metals, 0.0 tonne of paper/cardboard packaging, 0.0 tonne of plastics and 0.0 tonne of timber were collected by recycling contractors in the reporting month. 0.0 tonne of inert C&D material was reused on site. 0.0 tonne of inert C&D material was reused in other projects and 0.0 tonne of inert C&D material was imported for reuse at site. 0.0 tonne of inert C&D material was disposed to sorting facility and 0.0 tonne of chemical waste were collected by licensed contractors in the reporting period.

The actual amounts of different types of waste generated by the activities of construction works at Lyric Theatre Complex in the reporting month are shown in **Appendix I**.

#### 4.3 Status of Environmental Licenses and Permits

The environmental permits, licenses, and/or notifications on environmental protection for this Project which were valid during the period are summarised in **Table 4.2**.

| Permit / License No. /           | Valid F          | Period    | Status         | Remarks |
|----------------------------------|------------------|-----------|----------------|---------|
| Notification /<br>Reference No.  | From             | То        | _              |         |

#### 4.4 Recommended Mitigation Measures

The EM&A programme followed the recommended mitigation measures in the EM&A Manual. The EM&A requirements as well as the summary of implementation status of the environmental mitigation measures are provided in **Appendix J**. In particular, the following mitigation measures were brought to attention during the site inspections:

#### **Air Quality**

- High standard of housekeeping should be maintained to prevent emission of fugitive dust.
- Water spraying should be adopted for active construction areas.

#### Noise

- Noise insulating fabric should be adopted for certain PME.

#### Water Quality

 All drainage facilities should be maintained to ensure proper and efficient operation at all times.

### **5** Compliance with Environmental Permit

The status of the required submission under the EP during the reporting period is summarized in **Table 5.1**.

#### Table 5.1: Status of Submissions under the Environmental Permit

| <b>EP Condition</b> | Submission                           | Submission Date  |
|---------------------|--------------------------------------|------------------|
| Condition 3.4       | Monthly EM&A Report for October 2023 | 14 November 2023 |

### 6 Report in Non-compliance, Complaints, Notification of Summons and Successful Prosecutions

#### 6.1 Record on Non-compliance of Action and Limit Levels

There was no breach of Action or Limit Levels for Air Quality and Noise monitoring in the reporting month.

#### 6.2 Record on Environmental Complaints Received

No environmental complaint was received in the reporting month.

The cumulative statistics on complaints were provided in **Appendix K**.

#### 6.3 Record on Notifications of Summons and Successful Prosecution

No notifications of summons or successful prosecutions were received this month. The cumulative statistics on notifications of summons and successful prosecutions were provided in **Appendix** K.

### 7 Future Key Issues

#### 7.1 Construction Works for the Coming Month(s)

The major site works for L2 to be commissioned in the coming month include:

LTC construction

Structure (Slab, wall, columns and beam)

- Falsework and formwork erection
- Reinforcement work
- Concrete work

ABWF & MEP work

Façade work

- ASDA and Lyric Theatre Promenade
  - Structure, ABWF and MEP works
- Remaining Works for M+ Promenade
  - Hacking existing R.C. footing for modification of ICT cable and CLP works
- DCS cofferdam (Cofferdam B)
  - Seawater pipework installation
- Extended basement
  - ABWF & MEP works
- Underpass and Associated Area
  - Structure works
  - ABWF & MEP works

#### 7.2 Paving for footwayKey Issues for the Coming Month

Key issues to be considered at Lyric Theatre Complex in the coming month include:

- Generation of dust from construction works;
- Noise impact from operating equipment and machinery on-site;
- Generation of site surface runoffs and wastewater from activities on-site;
- Management of stockpiles and slopes, particularly on rainy days;
- Sorting, recycling, storage and disposal of general refuse and construction waste;
- Management of chemicals and avoidance of oil spillage on-site; and
- Operating conditions of drainage facilities.

#### 7.3 Monitoring Schedule for the Coming Month

The environmental site inspection and environmental monitoring will be continued in the coming month. The tentative monitoring schedule for the coming month is shown in the **Appendix E**.

### 8 Conclusions and Recommendations

#### 8.1 Conclusions

The EM&A programme as recommended in the EM&A Manual has been undertaken. The construction works and EM&A programme for M+ Museum was commenced on 31 October 2015 and completed on 28 February 2021; while the construction works and EM&A programme for Lyric Theatre Complex (L1 and L2 Contracts) was commenced on 1 March 2016, and the EM&A programme for L1 Contract was completed on 30 June 2021.

Monitoring of air quality and noise with respect to the Project is underway. In particular, the 1-hour TSP, 24-hour TSP, noise level (as  $L_{eq}$ , 30 minutes) under monitoring have been checked against established Action and Limit levels. There was no breach of Action and Limit Levels for 1-hour TSP, 24-hour TSP and noise in the reporting month.

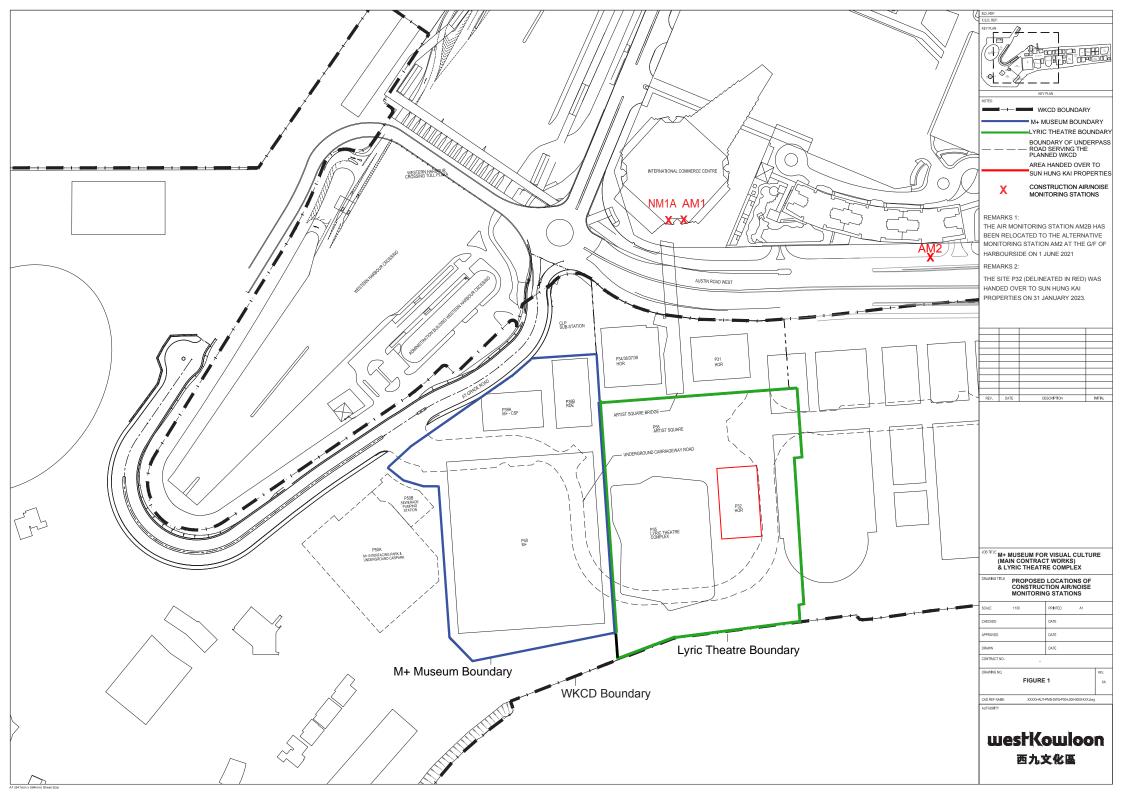

No environmental complaint was recorded in the reporting month. No notifications of summons or successful prosecutions were received during the reporting month.

Weekly construction phase site inspections and bi-weekly landscape and visual impact inspections were conducted during the reporting month as required. It was observed that the Contractors had implemented all possible and feasible mitigation measures to mitigate the potential environmental impacts during construction phase works.

#### 8.2 Recommendations

Potential environmental impacts due to the construction activities, including air quality, noise, water quality, waste, landscape and visual, will be monitored or reviewed. The recommended environmental mitigation measures shall be implemented on site and regular inspections as required will be carried out to ensure that the environmental conditions are acceptable.

|           |                                    |         |          |

# C. Action and Limit Levels for Construction Phase

## Air Quality

The Action and Limit Levels for 1-hour and 24-hour TSP for the monitoring station are presented in following tables:

| Table C-1:       Action and Limit Levels for 1-hour TSP |           |                                   |                                  |  |  |  |  |  |  |  |
|---------------------------------------------------------|-----------|-----------------------------------|----------------------------------|--|--|--|--|--|--|--|
| Monitoring                                              | g Station | Action Level (mg/m <sup>3</sup> ) | Limit Level (mg/m <sup>3</sup> ) |  |  |  |  |  |  |  |
| AM                                                      | 1         | 273.7                             | 500                              |  |  |  |  |  |  |  |
| AM                                                      | 2         | 274.2                             | 500                              |  |  |  |  |  |  |  |

## Table C-2: Action and Limit Levels for 24-hour TSP

| <b>Monitoring Station</b> | Action Level (µg/m³) | Limit Level (µg/m³) |
|---------------------------|----------------------|---------------------|
| AM1                       | 143.6                | 260                 |
| AM2                       | 151.1                | 260                 |

## <u>Noise</u>

The Action and Limit Levels for Noise for the monitoring stations are presented in following table:

## Table C-3: Action and Limit Levels for Construction Noise

| Time Period & Monitoring Locations | Action Level                                     | Limit Level |
|------------------------------------|--------------------------------------------------|-------------|
| NM1A                               |                                                  |             |
| 0700-1900 hours on normal weekdays | When one valid documented complaint is received. | 75 dB(A)    |

## **D.** Event and Action Plan for Air Quality, Noise, Landscape and Visual Impact

## Air Quality

In case the Action and Limit Levels are not complied during construction stage, the following Event and Action Plan should be followed:

| Table D-1: Event and Action | Plan for Air Quality |
|-----------------------------|----------------------|
|-----------------------------|----------------------|

| Event                                 | Action                                                                                           |                                                                                                                |                                                                 |                                                                                                              |  |  |  |  |  |  |

 Table D-2:
 Event and Action Plan for Construction Noise

## Landscape and Visual Impact

In case of non-compliance of landscape and visual impacts, procedures in accordance with the Event and Action Plan should be followed:

| Event                          | Action                                                                                                                    |                                                                                                            |                                                                 |                                           |  |  |  |  |  |  |  |  |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|-------------------------------------------|--|--|--|--|--|--|--|--|
|                                | ET                                                                                                                        | IEC                                                                                                        | WKCDA                                                           | Contractor                                |  |  |  |  |  |  |  |  |
| Design Check                   | 1. Design check to make<br>sure the design complies<br>with all the proposed<br>mitigation measures in the<br>EIA report; | <ol> <li>Check report submitted<br/>by ET;</li> <li>Recommend remedial<br/>design if necessary.</li> </ol> | 1. Undertake<br>remedial design if<br>necessary.                | -                                         |  |  |  |  |  |  |  |  |
|                                | 2. Prepare and submit report.                                                                                             |                                                                                                            |                                                                 |                                           |  |  |  |  |  |  |  |  |
| Non-conformity on one occasion | 1. Identify source of non-<br>conformity;                                                                                 | 1. Check and verify source of non-conformity;                                                              | <ol> <li>Notify Contractor;</li> <li>Ensure remedial</li> </ol> | 1. Amend working<br>method as necessary;  |  |  |  |  |  |  |  |  |
|                                | 2. Report to IEC and WKCDA;                                                                                               | 2. Discuss remedial<br>actions with ET and                                                                 | actions are properly implemented.                               | 2. Rectify damage and undertake necessary |  |  |  |  |  |  |  |  |
|                                | 3. Discuss remedial actions with IEC, WKCDA and Contractor;                                                               | effectiveness of proposed                                                                                  |                                                                 | replacement and<br>remedial actions.      |  |  |  |  |  |  |  |  |
|                                | 4. Monitor remedial actions until rectification has been completed.                                                       | remedial actions;<br>4. Check implementation<br>of remedial actions.                                       |                                                                 |                                           |  |  |  |  |  |  |  |  |
| Repeated non conformity        | -1. Identify source of non-<br>conformity;                                                                                | 1. Check and verify source of non-conformity;                                                              | <ol> <li>Notify Contractor;</li> <li>Ensure remedial</li> </ol> | 1. Amend working<br>method as necessary;  |  |  |  |  |  |  |  |  |
|                                | 2. Report to IEC and<br>WKCDA;                                                                                            | 2. Check Contractor's<br>working method;                                                                   | actions are properly implemented.                               | 2. Rectify damage and undertake necessary |  |  |  |  |  |  |  |  |
|                                | <ol> <li>Increase monitoring<br/>frequency;</li> </ol>                                                                    | 3. Discuss remedial actions with ET and                                                                    |                                                                 | replacement and remedial actions.         |  |  |  |  |  |  |  |  |
|                                | 4. Discuss remedial actions with IEC, WKCDA and Contractor;                                                               | effectiveness of proposed                                                                                  |                                                                 |                                           |  |  |  |  |  |  |  |  |
|                                | 5. Monitor remedial actions until rectification has been completed;                                                       | remedial actions;<br>5. Supervise<br>implementation of                                                     |                                                                 |                                           |  |  |  |  |  |  |  |  |
|                                | 6. If non-conformity<br>rectified, reduce<br>monitoring frequency back<br>to normal.                                      | remedial actions.                                                                                          |                                                                 |                                           |  |  |  |  |  |  |  |  |

#### General Comments

- Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.
- Result(s) of sample(s) is/are reported on as received basis, unless otherwise specified. The result(s) is/are related only to the item(s) tested.
- No sample is received in this Work Order. The report presents non-laboratory testing data only. •
- Calibration was subcontracted to and analysed by Envirotech Services Co.

#### Signatories

This document has been signed by those names that appear on this report and are the authorised signatories

| PROJECT |                                                               | NO. OF SAMPLES : 1<br>CLIENT ORDER                              |

#### General Comments

 Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in ambient condition. The result(s) related only to the item(s) tested.

- Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.
- Result(s) of sample(s) is/are reported on as received basis, unless otherwise specified.
- Calibration was subcontracted to and analysed by Action-United Environmental Services & Consulting.

## **Equipment Verification Report (TSP)**

### Equipment Calibrated:

| Туре:          | Laser Dust monitor |  |  |  |
|----------------|--------------------|--|--|--|
| Manufacturer:  | Sibata LD – 3B     |  |  |  |
| Serial No.     | 235780             |  |  |  |
| Equipment Ref: | NA                 |  |  |  |
| Job Order      | HK2247804          |  |  |  |

## **Standard Equipment:**

| Standard Equipment:     | Higher Volume Sampler (TSP)    |
|-------------------------|--------------------------------|
| Location & Location ID: | AUES office (calibration room) |
| Equipment Ref:          | HVS 018                        |
| Last Calibration Date:  | 13 September 2022              |

## **Equipment Verification Results:**

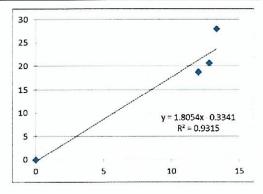

Verification Date:

6 December 2022

| Hour      | Time          | Mean<br>Temp °C | Mean<br>Pressure<br>(hPa) | Concentration in ug/m <sup>3</sup><br>(Standard Equipment) | Total Count<br>(Calibrated Equipment) | Count/Minute<br>(Total Count/min) |
|-----------|---------------|-----------------|---------------------------|------------------------------------------------------------|---------------------------------------|-----------------------------------|
| 2hr01mins | 09:37 ~ 11:38 | 17.1            | 1019.7                    | 18.8                                                       | 1451                                  | . 12.0                            |
| 2hr01mins | 11:42 ~ 13:43 | 17.1            | 1019.7                    | 20.7                                                       | 1543                                  | 12.8                              |
| 2hr01mins | 13:48 ~ 15:49 | 17.1            | 1019.7                    | 28.0                                                       | 1605                                  | 13.3                              |

## Linear Regression of Y or X

| Slope (K-factor):           | 1.8054 (µg/m <sup>3</sup> )/CPM |  |  |
|-----------------------------|---------------------------------|--|--|
| Correlation Coefficient (R) | 0.9651                          |  |  |
| Date of Issue               | 7 December 2022                 |  |  |

#### Remarks:

1. Strong Correlation (R>0.8)

2. Factor 1.8054 (µg/m<sup>3</sup>)/CPM should be applied for TSP monitoring

\*If R<0.5, repair or re-verification is required for the equipment

#### General Comments

 Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in ambient condition. The result(s) related only to the item(s) tested.

- Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.
- Result(s) of sample(s) is/are reported on as received basis, unless otherwise specified.
- Calibration was subcontracted to and analysed by Envirotech Services Company

# Certificate of Calibration

## for

| Description:  | Sound Level Meter            |
|---------------|------------------------------|
| Manufacturer: | RION                         |
| Type No.:     | NL-52 (Serial No.: 00131627) |
| Microphone:   | UC-59 (Serial No.: 04870)    |
| Preamplifier: | NH-25 (Serial No.: 10403)    |

## Submitted by:

Customer: Envirotech Services Co. Address: Rm.113, 1/F., My Loft, 9 Hoi Wing Road, Tuen Mun, Hong Kong

Upon receipt for calibration, the instrument was found to be:

✓ Within (31.5Hz – 8kHz)□ Outside

## the allowable tolerance.

The test equipment used for calibration are traceable to National Standards via:

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory

Date of receipt: 07 June 2023

Date of calibration: 08 June 2023

Date of NEXT calibration: 07 June 2024

Calibrated by:

Calibration Technician

Date of issue: 08 June 2023

Certificate No.: APJ23-029-CC001

Certified by:

Mr. Ng Yan Wa Laboratory Manager

Room 422,Leader Industrial Centre,57-59 Au Pui Wan Street ,Fo Tan, Shatin,N.T.,Hong Kong Tel: (852) 2668 3423 Fax:(852) 2668 6946 Homepage: http://www.aa-lab.com E-mail : inquiry@aa-lab.com

## 1. Calibration Precaution:

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

## 2. Calibration Conditions:

| Air Temperature:          | 22.5 °C         |
|---------------------------|-----------------|
| Air Pressure:             | 1006 <b>hPa</b> |
| <b>Relative Humidity:</b> | 64.5 %          |

## 3. Calibration Equipment:

## 5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

| 94 dB  | 31.5 Hz | ± 0.05     |
|--------|---------|------------|
|        | 63 Hz   | ± 0.05     |
|        | 125 Hz  | ± 0.05     |
|        | 250 Hz  | ± 0.05     |
|        | 500 Hz  | $\pm$ 0.05 |
|        | 1000 Hz | ± 0.05     |
|        | 2000 Hz | ± 0.05     |
|        | 4000 Hz | $\pm 0.05$ |
|        | 8000 Hz | ± 0.10     |
| 104 dB | 1000 Hz | ± 0.05     |
| 114 dB | 1000 Hz | ± 0.05     |

The uncertainties are evaluated for a 95% confidence level.

## Note:

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)\*L shall not be liable for any loss or damage resulting from the use of the equipment.

#### TEST RESULTS / 測試結果

The results apply to the particular unit-under-test only. The results are detailed in the subsequent page(s).

The test equipment used for calibration are traceable to National Standards via :

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory
- Agilent Technologies / Keysight Technologies
- Fluke Everett Service Center, USA

| TST150A      | Measuring Amplifier               | C221750         |

- 4. Test procedure : MA100N.
- 5. Results :
- 5.1 Sound Level Accuracy

| UUT           | Measured Value | Uncertainty of Measured Value |
|---------------|----------------|-------------------------------|
| Nominal Value | (dB)           | (dB)                          |
| 94 dB, 1 kHz  | 93.9           | ± 0.2                         |
| 114 dB, 1 kHz | 113.9          |                               |

#### 5.2 Frequency Accuracy

| UUT Nominal Value | Measured Value | Uncertainty of Measured Value |
|-------------------|----------------|-------------------------------|
| (kHz)             | (kHz)          | (Hz)                          |
| 1                 | 1.000          |                               |

Remark : The uncertainties are for a confidence probability of not less than 95 %.

Note :

Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

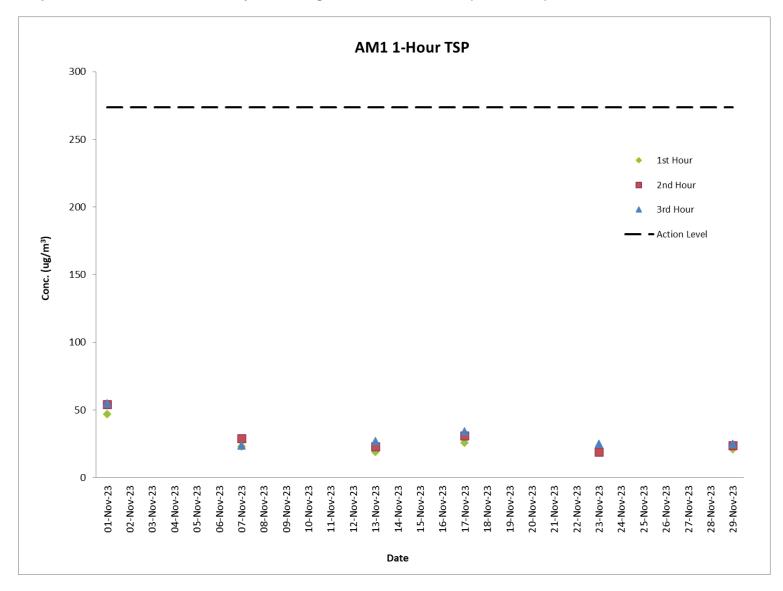

The test equipment used for calibration is traceable to the National Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

本證書所載校正用之測試器材均可溯源至國際標準。局部被印本證書需先獲本實驗所書面批准。

| 10.3.1      | The relevant best practices for dust control as stipulated in the Air Pollution Control (construction Dust) Regulation should be adopted to further reduce the construction dust impacts from the Project. These best practices include:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                          |
|             | Good Site Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                          |
|             | <ul> <li>Good site management is important to help reducing potential air quality impact down to an acceptable level. As a general guide, the Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission. Any piles of materials accumulated on or around the work areas should be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimising generation of fugitive dust emissions. The material should be handled properly to prevent fugitive dust emission before cleaning.</li> </ul> | Obs                                      |

|            | • material stockpiles and other structures to be effectively utilised, where practicable, to screen noise from on-site construction activities.                                                                                                                                                                                                                                                          | $\checkmark$         |
| 3.1 &      | Adoption of Quieter PME                                                                                                                                                                                                                                                                                                                                                                                  |                      |
| 10.4.1     | The recommended quieter PME adopted in the assessment were taken from the EPD's QPME Inventory and "Sound Power Levels of<br>Other Commonly Used PME" are presented in <b>Table 4.26</b> in the EIA report. It should be noted that the silenced PME selected for<br>assessment can be found in Hong Kong.                                                                                               | ✓                    |
| 3.1 &      | Use of Movable Noise Barriers                                                                                                                                                                                                                                                                                                                                                                            |                      |
| 10.4.1     | Movable noise barriers can be very effective in screening noise from particular items of plant when constructing the Project. Noise barriers located along the active works area close to the noise generating component of a PME could produce at least 10 dB(A) screening for stationary plant and 5 dB(A) for mobile plant provided the direct line of sight between the PME and the NSRs is blocked. | ✓                    |
| 3.1 &      | Use of Noise Enclosure/ Acoustic Shed                                                                                                                                                                                                                                                                                                                                                                    |                      |
| 10.4.1     | The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and concrete pump. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the EIAO Guidance Note No. 9/2010.                                                                                                         | ✓                    |
| 3.1 &      | Use of Noise Insulating Fabric                                                                                                                                                                                                                                                                                                                                                                           |                      |
| 10.4.1     | Noise insulating fabric can also be adopted for certain PME (e.g. drill rig, pilling machine etc). The fabric should be lapped such that there are no openings or gaps on the joints. According to the approved Tsim Sha Tsui Station Northern Subway EIA report (AEIAR-127/2008), a noise reduction of 10 dB(A) can be achieved for the PME lapped with the noise insulating fabric.                    | Obs                  |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Implementation Stage                                   |

| 4.1 &     | Construction site runoff and drainage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                        |
| 10.5.1    | The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and sensitive uses of the coastal area, and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts:                                                                                                                                                                                                                                                                                              |                                                        |
|           | <ul> <li>At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal<br/>drainage works and erosion and sedimentation control facilities implemented. Channels, earth bunds or sand bag barriers should<br/>be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site drainage system should be<br/>undertaken by the WKCDA's Contractor prior to the commencement of construction;</li> </ul>                                                                                                                                                                    | ~                                                      |
|           | <ul> <li>Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the WKCDA's Contractor prior to the commencement of construction.</li> </ul>                                                                                                                                                              | $\checkmark$                                           |
|           | • All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.                                                                                                                                                                                                                                                                                                               | Rem                                                    |
|           | <ul> <li>Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.</li> </ul>                                                                                                                                                                                                                                                                                                                                       | $\checkmark$                                           |
|           | <ul> <li>All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited<br/>by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where<br/>practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the<br/>process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with<br/>sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.</li> </ul> | $\checkmark$                                           |
|           | • Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.                                                                                                                                                                                                                                                                                                                                                                                                                 | $\checkmark$                                           |
|           | • Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers.                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                      |

| 10.7.1          | General refuse should be stored in enclosed bins or compaction units separated from inert C&D materials. A reputable waste collector should be employed by the Contractor to remove general refuse from the site, separately from inert C&D materials. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' light material.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | $\checkmark$                                                                                      |
| Land Cont       | amination (Construction)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                   |
| 7.1 &<br>10.8.1 | The potential for land contamination issues at the TST Fire Station due to its future relocation will be confirmed by site investigation after land acquisition. Where necessary, mitigation measures for minimising potential exposure to contaminated materials (if any) or remediation measures will be identified. If contaminated land is identified (e.g., during decommissioning of fuel oil storage tanks) after the commencement of works, mitigation measures are proposed in order to minimise the potentially adverse effects on the health and safety of construction workers and impacts arising from the disposal of potentially contaminated materials. The following measures are proposed for excavation and transportation of contaminated material:                                                                                                                                                                              |                                                                                                   |
|                 | <ul> <li>To minimize the chance for construction workers to come into contact with any contaminated materials, bulk earth-moving<br/>excavation equipment should be employed;</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N/A<br>TST Fire Station is out of this project<br>boundary, no mitigation measure is<br>required. |

# **Executive summary**

Apex Testing & Certification Limited (Apex) was commissioned to undertake the Environmental Team (ET) services (including environmental monitoring and audit (EM&A)) for the construction activities in Zone 2A, consisting of Foundation, Excavation and Lateral Support Works for Integrated Basement and Underground Road (Contract No.: GW/2020/05/073); and Zone 2B & 2C consisting of Piling Works for Integrated Basement and Underground Road (Contract No.: CC/2020/2B/088) at WKCD. The major construction works and EM&A programme for Zone 2A and Zone 2B & 2C commenced on 03 October 2020 and 30 September 2021 respectively. The construction work for Zone 2A (Contract No.: GW/2020/05/073) was completed and handover to WKCDA on 31 March 2023. No construction work and only maintenance work is carried out by Zone 2B & 2C Contractor at Zone 2A.

The Project Proponent is the West Kowloon Cultural District Authority (WKCDA). The overall works for the WKCD fall under two separate categories of Designated Project (DP) of the Environmental Impact Assessment Ordinance (EIAO), namely an "engineering feasibility study of urban development projects with a study area covering more than 20 ha or involving a total population of more than 100 000" (Item 1 of Schedule 3) and "an underpass more than 100m in length under the built areas" (Item A.9, Part I, Schedule 2). An Environmental Permit No. EP-453/2013/B (EP) was issued with respect to the "Underpass Road and Austin Road Flyover Serving the West Kowloon Cultural District" which specifically includes the abovementioned category of DP under Item A.9, Part I, Schedule 2 of the EIAO.

This Monthly EM&A Report presents the monitoring works at Zone 2B & 2C from 01 to 30 November 2023.

#### Exceedance of Action and Limit Levels

There was no breach of Action or Limit levels for Air Quality (1-hour TSP and 24-hour TSP) and Construction Noise in this reporting month.

#### Implementation of Mitigation Measures

Construction phase weekly site inspections were carried out on 01, 08, 15, 22 and 29 November 2023 for Zone 2B & 2C to confirm the implementation measures undertaken by the Contractors in the reporting month. The outcomes are presented in Section 4 and the status of implementation of mitigation measures in the site is shown in **Appendix J**.

Landscape and visual impact inspections were conducted as part of the abovementioned weekly site inspections during the reporting month. No adverse comment on landscape and visual aspects was made during these inspections.

FEHD inspection was conducted at Zone 2B & 2C on 30 November 2023.

#### **Record of Complaints**

No environmental complaint was recorded in the reporting month.

#### **Record of Notifications of Summons and Successful Prosecutions**

No notifications of summons and successful prosecutions were recorded in the reporting month.

## Future Key Issues

The major site works for Zone 2B & 2C scheduled to be commissioned in the coming month include:

- Site Maintenance
- Backfilling of Testing Pipes
- Pile Testing
  - Full Core Drilling

Potential environmental impacts due to the construction activities, including air, noise, water quality, waste, landscape and visual, will be monitored or reviewed. The recommended environmental mitigation measures shall be implemented on site and regular inspections as required will be carried out to ensure that the environmental conditions are acceptable.

# **1** Introduction

# 1.1 Background

Apex Testing & Certification Limited (Apex) was commissioned to undertake the Environmental Team (ET) services (including environmental monitoring and audit (EM&A)) for the construction activities in Zone 2A, consisting of Foundation, Excavation and Lateral Support Works for Integrated Basement and Underground Road (Contract No.: GW/2020/05/073) ; and Zone 2B & 2C consisting of Piling Works for Integrated Basement and Underground Road (Contract No.: GV/2020/2B/088) at WKCD. The purpose of the development in Zone 2A and Zone 2B & 2C is to reserve for Integrated Basement (IB) and Underground Road (UR). The Zone 2A construction activities involve the foundation, excavation and lateral support (ELS) works, road works, drainage diversion works, and temporary car parking. The Zone 2B & 2C construction activities involve the piling works. The major construction works and EM&A programme for Zone 2A and Zone 2B & 2C commenced on 03 October 2020 and 30 September 2021 respectively. The major construction work for Zone 2A (Contract No.: GW/2020/05/073) was completed and handover to WKCDA on 31 March 2023. No construction work and only maintenance work is carried out by Zone 2B & 2C Contractor at Zone 2A.

The overall works for the WKCD fall under two separate categories of Designated Project (DP) of the Environmental Impact Assessment Ordinance (EIAO), namely an "engineering feasibility study of urban development projects with a study area covering more than 20 ha or involving a total population of more than 100 000" (Item 1 of Schedule 3) and "an underpass more than 100m in length under the built areas" (Item A.9, Part I, Schedule 2). An Environmental Permit No. EP-453/2013/B (EP) was issued with respect to the "Underpass Road and Austin Road Flyover Serving the West Kowloon Cultural District" which specifically includes the abovementioned category of DP under Item A.9, Part I, Schedule 2 of the EIAO. The captioned projects include part of the abovementioned underpass road located within the site boundary falls under this same category.

The Monthly EM&A Report is prepared in accordance with the Condition 3.4 of the Environmental Permit No. EP-453/2013/B. This Monthly EM&A Report presents the monitoring works at Zone 2B & 2C from 01 to 30 November 2023. The purpose of this report is to summarise the findings in the EM&A of the project over the reporting period.

## 1.2 **Project Organisation**

The organisation chart and lines of communication with respect to the on-site environmental management structure together with the contact information of the key personnel are shown in **Appendix A**.

# 1.3 Construction Works Status in the Reporting Period

During the reporting period, construction works at Zone 2B & 2C undertaken include:

- Site Maintenance
- Backfilling of Testing Pipes
- Pile Testing
  - Full Core Drilling

The Construction Works Programme of Zone 2B & 2C is provided in **Appendix B**. A layout plan of the Project is provided in **Figure 1**. Please refer to **Table 4.2** on the status of the environmental licenses.

# 1.4 Summary of EM&A Requirements and Alternative Monitoring Locations

## **1.4.1** EM&A Requirements

The EM&A programme requires environmental monitoring of air quality, noise, landscape and visual as specified in the approved EM&A Manual.

A summary of impact EM&A requirements is presented in Table 1.1.

| Parameters            | Descriptions                                                                                  | Locations                                                 | Frequencies                      |
|-----------------------|-----------------------------------------------------------------------------------------------|-----------------------------------------------------------|----------------------------------|
|                       | 24-Hours TSP                                                                                  | AM3-The Victoria Towers Tower 1                           | At least once every 6 days       |
|                       | 1-Hour TSP                                                                                    | AM3-The Victoria Towers Tower 1                           | At least 3 times every<br>6 days |
| Air Quality           | 24-Hours TSP                                                                                  | AM4-Canton Road Government Primary<br>School              | At least once every 6<br>days    |
| All Quality           | 1-Hour TSP                                                                                    | AM4-Canton Road Government Primary<br>School              | At least 3 times every<br>6 days |
|                       | 24-Hours TSP                                                                                  | AM5-Topside Developments at West<br>Kowloon Terminus Site | At least once every 6<br>days    |
|                       | 1-Hour TSP                                                                                    | AM5-Topside Developments at West<br>Kowloon Terminus Site | At least 3 times every<br>6 days |
|                       | Leq, 30 minutes                                                                               | NM2-The Arch, Sun Tower                                   | Weekly                           |
|                       | Leq, 30 minutes                                                                               | NM3-The Victoria Towers Tower 1                           | Weekly                           |

|                       | Leq, 30 minutes                                                                               | NM5-Development next to Austin Station                    | Weekly                           |
| Landscape &<br>Visual | Monitor implementation<br>of proposed mitigation<br>measures during the<br>construction stage | As described in Table 9.1 and 9.2 of the EM&A Manual      | Bi-Weekly                        |

 Table 1.1:
 Summary of Impact EM&A Requirements

## **1.4.2** Alternative Monitoring Locations

The EM&A programme for the Project should require 5 noise monitoring station and 5 air quality monitoring stations located closest to the Project area. With regard to the monitoring activities at M+ Museum and the Lyric Complex, three monitoring stations had been considered, including AM1 (International Commerce Centre), AM2 (The Harbourside Tower 1) for air monitoring, and NM1 (The Harbourside Tower 1) for noise monitoring.

In the context of the construction activities in Zone 2A and Zone 2B & 2C, all other monitoring locations including AM3 (The Victoria Towers Tower 1), AM4 (Canton Road Government Primary School), and AM5 (Topside Developments at West Kowloon Terminus Site) for air monitoring; and NM2 (The Arch, Sun Tower), NM3 (The Victoria Towers Tower 1), NM4 (Canton Road Government Primary School) and NM5 (Development next to Austin Station) for noise monitoring,

have been taken into account. However, access to all these originally designated monitoring stations was declined as described below point-by-point.

The Arch management office and owners' committee have formally declined the proposal of setting up noise monitoring instrument on its premises at the podium level of Sun Tower (NM2) on 24 July 2014. Thus, alternative noise monitoring location was identified at the ground floor in front of The Arch – Sun Tower (NM2A), which is at the same location as stated in the EM&A Manual for consistency. No management approval is required at the ground floor for conducting the noise monitoring. This alternative air monitoring location was approved by EPD on 29 September 2020.

The Victoria Towers management office formally declined the proposal of setting up air quality and noise monitoring instruments on its premises at the podium area of Tower 1 (AM3/NM3) on 16 June 2020. Alternative air monitoring location was identified at ground floor at the Northeast corner of West Kowloon Station's station box (AM3A), in the same direction to the area of site activities in Zone 2A. This alternative air monitoring location was identified at the ground floor in front of the Xiqu Centre (NM3A), which is set closer to the construction site boundary with more direct line sight to the major site activities and higher exposure to the construction noise with no disturbance to the premises' occupants during noise monitoring activities. No management approval is required at the ground floor for conducting the noise monitoring. This alternative air monitoring location was approved by EPD on 29 September 2020.

Canton Road Government Primary School formally declined the proposal of setting up air quality and noise monitoring instruments on its premise at the podium level (AM4/NM4) on 16 June 2020. Alternative air monitoring location was identified at ground floor at the Southeast corner of West Kowloon Station's station box (AM4A), in same direction to the area of site activities in Zone 2A. This alternative air monitoring location was approved by EPD on 29 September 2020. An alternative noise monitoring location was identified at the ground floor next to Tsim Sha Tsui Fire Station (NM4A), which is set closer to the construction site boundary with more direct line sight to the major site activities and higher exposure to the construction noise with no disturbance to the premises' occupants during noise monitoring activities. No management approval is required at the ground floor for conducting the noise monitoring. This alternative air monitoring location was approved by EPD on 29 September 2020.

MTR also formally declined the access to the designated AM5 location (topside developments at West Kowloon Terminus Site) on 15 July 2020. Alternative air monitoring location was identified at ground floor at the North of West Kowloon Station's station box (AM5A), in same direction to the area of major construction site activities in Zone 2A. This alternative air monitoring location was approved by EPD on 29 September 2020.

Grand Austin property management office formally declined our proposal of setting up noise monitoring instrument on its premises at the podium level (NM5) on 10 July 2020. Alternative noise monitoring location was identified at the Pedestrian road (ground floor) outside West Kowloon Station (NM5A), which is set closer to the construction site boundary with more direct line sight to the major site activities and higher exposure to the construction noise with no disturbance to the premises' occupants during noise monitoring activities. No management approval is required at the ground floor for conducting the noise monitoring. This alternative air monitoring location was approved by EPD on 29 September 2020.

The Environmental Quality Performance Limits for air quality and noise are shown in **Appendix C**.

The Event and Action Plan for air quality, construction noise, and landscape and visual are shown in **Appendix D**.

The EM&A programme followed the recommended mitigation measures in the EM&A Manual. The EM&A requirements as well as the summary of implementation status of the environmental mitigation measures are provided in **Appendix J**.

# 2 Impact Monitoring Methodology

# 2.1 Introduction

Air quality and noise monitoring methodology, including the monitoring locations, equipment used, parameters, frequency and duration etc., are described in this Section. The environmental monitoring schedules for the reporting period and the tentative monitoring Schedule for the coming month are provided in **Appendix E**.

The relevant EM&A monitoring requirements and details for landscape and audit impact, are also presented in this Section.

#### 2.2 Air Quality

# 2.2.1 Monitoring Parameters, Frequency and Duration

Table 2.1 summarizes the monitoring parameters, frequency and duration of the TSP monitoring.

| Table 2.1:  | Air Quality Monitoring Parameters, Frequency and Duration |            |  |
|-------------|-----------------------------------------------------------|------------|--|
| Parameter   | Frequency                                                 | Duration   |  |
| 24-hour TSP | At least once in every six-days                           | 24 hours   |  |
| 1-hour TSP  | At least 3 times every six-days                           | 60 minutes |  |

# 2.2.2 Monitoring Locations

Monitoring stations and locations are given in Table 2.2 and shown in Figure 1.

#### Table 2.2: Air Quality Monitoring Station

| <b>Monitoring Station</b> | Location Description                                         |
|---------------------------|--------------------------------------------------------------|
| AM3A                      | Northeast corner of West Kowloon Station's station box (G/F) |
| AM4A                      | Southeast corner of West Kowloon Station's station box (G/F) |
| AM5A                      | North of West Kowloon Station's station box (G/F)            |

#### 2.2.3 Monitoring Equipment

Continuous 24-hour TSP air quality monitoring was conducted using High Volume Sampler (HVS) (Model: TE-5170) located at the designated monitoring station. The HVS meets all the requirements stated in of the EM&A Manual. Portable direct reading dust meter was used to carry out the 1-hour TSP monitoring. **Table 2.3** summarizes the equipment used in the impact air quality monitoring. Copies of the calibration certificates for the HVS, calibration kit and portable dust meters are attached in **Appendix F**.

#### Table 2.3: TSP Monitoring Equipment

| Equipment              | Model                                  |  |
|------------------------|----------------------------------------|--|
| 24-hour TSP monitoring |                                        |  |
| High Volume Sampler    | TE-5170 (Serial No.: 4340; 3998; 4344) |  |

| Equipment                          | Model                                             |  |
|------------------------------------|---------------------------------------------------|--|
| Calibrator                         | TE-5025A (Orifice I.D.: 4088)                     |  |
| 1-hour TSP monitoring              |                                                   |  |
| Portable direct reading dust meter | Sibata LD-3B (Serial No.: 235811, 336338, 567188) |  |

Calibration of the HVS (five-point calibration) using Calibration Kit was carried out every two months. The HVS calibration orifice will be calibrated annually. Calibration certificate of the TE-5025A Calibration Kit and the HVS are provided in **Appendix F**.

The 1-hour TSP monitoring should be determined periodically (e.g. annually) by the HVS to check the validity and accuracy of the results measured by direct reading method.

# 2.2.4 Monitoring Methodology

#### 24-hour TSP Monitoring

#### Installation

The HVS was installed at the site boundary. The following criteria were considered in the installation of the HVS.

- A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
- The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
- A minimum of 2 metres separation from walls, parapets and penthouse was required for rooftop sampler.
- A minimum of 2 metres separation from any supporting structure, measured horizontally was required.
- No furnace or incinerator flues or building vent were nearby.
- Airflow around the sampler was unrestricted.
- The sampler has been more than 20 metres from any drip line.
- Permission was obtained to set up the sampler and to obtain access to the monitoring station.
- A secured supply of electricity is needed to operate the sampler.

## **Preparation of Filter Papers**

- Glass fibre filters were labelled and sufficient filters that were clean and without pinholes were selected.
- The filters used are specified to have a minimum collection efficiency of 99 percent for 0.3 µm (DOP) particles.
- All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C with relative humidity (RH) < 50% and was not variable by more than ±5 %. A convenient working RH was 40%. All preparation of filters was done by Hong Kong Laboratory Accreditation Scheme (HOKLAS) accredited laboratory.

## **Field Monitoring Procedures**

- The power supply was checked to ensure the HVS works properly.
- The filter holder and the area surrounding the filter were cleaned.

- The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
- The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
- The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied should be sufficient to avoid air leakage at the edges.
- The shelter lid was closed and was secured with the aluminium strip.
- The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
- A new flow rate record sheet was set into the flow recorder.
- The flow rate of the HVS was checked and adjusted at around 1.3 m<sup>3</sup>/min. The range specified in the EM&A Manual was between 0.6-1.7 m<sup>3</sup>/min.
- The programmable timer was set for a sampling period of 24 hours, and the starting time, weather condition and the filter number were recorded.
- The initial elapsed time was recorded.
- At the end of sampling, the sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
- It was then placed in a clean plastic envelope and sealed.
- All monitoring information was recorded on a standard data sheet.
- Filters were sent to a Hong Kong Laboratory Accreditation Scheme (HOKLAS) accredited laboratory for analysis.

#### **Maintenance and Calibration**

- The HVS and its accessories are maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVSs were calibrated upon installation and thereafter at bi-monthly intervals. The calibration kits were calibrated annually.
- Calibration records for HVS and calibration kit are shown in Appendix F.

## **1-hour TSP Monitoring**

#### **Field Monitoring**

The measuring procedures of the 1-hour dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- Turn the power on.
- Close the air collecting opening cover.
- Push the "TIME SETTING" switch to [BG].
- Push "START/STOP" switch to perform background measurement for 6 seconds.
- Turn the knob at SENSI ADJ position to insert the light scattering plate.
- Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.
- Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
- Pull out the knob and return it to MEASURE position.
- Setting time period of 1 hour for the 1-hour TSP measurement.
- Push "START/STOP" to start the 1-hour TSP measurement.
- Regular checking of the time period setting to ensure monitoring time of 1 hour.

#### **Maintenance and Calibration**

- The 1-hour dust meter would be checked at 3-month intervals and calibrated at 1-year intervals throughout all stages of the air quality monitoring.
- Calibration records for direct dust meters are shown in Appendix F.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

## 2.3 Noise

# 2.3.1 Monitoring Parameters, Frequency and Duration

**Table 2.4** summarizes the monitoring parameters, frequency and duration of noise monitoring. The noise in A-weighted levels  $L_{eq}$ ,  $L_{10}$  and  $L_{90}$  are recorded in a 30-minute interval between 0700 and 1900 hours.

## Table 2.4: Noise Monitoring Parameters, Period and Frequency

Location

| Time Period                                     | Parameters                                                                 | Frequency       |
|-------------------------------------------------|----------------------------------------------------------------------------|-----------------|
| Daytime on normal weekdays<br>(0700-1900 hours) | $L_{eq}(30 \text{ min}), L_{90}(30 \text{ min}) \& L_{10}(30 \text{ min})$ | Once every week |
|                                                 |                                                                            |                 |

Note: \*70 dB(A) for schools and 65 dB(A) during school examination periods.

If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.

# 2.3.2 Monitoring Location

Maniforing Clation

Noise monitoring stations and locations are given in Table 2.5 and shown in Figure 1.

## Table 2.5: Noise Monitoring Station

| Monitoring Station | Location                                           |
|--------------------|----------------------------------------------------|
| NM2A               | The Arch – Sun Tower (G/F)                         |
| NM3A               | Xiqu Centre (G/F)                                  |
| NM4A               | Next to Tsim Sha Tsui Fire Station (G/F)           |
| NM5A               | Pedestrian road (G/F) outside West Kowloon Station |

## 2.3.3 Monitoring Equipment

Integrating Sound Level Meter was used for noise monitoring. It was a Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level ( $L_{Aeq}$ ) and percentile sound pressure level ( $L_x$ ). They comply with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). **Table 2.6** summarizes the noise monitoring equipment model being used.

## Table 2.6: Noise Monitoring Equipment

| Equipment Model               |                                     |
|-------------------------------|-------------------------------------|
| Integrating Sound Level Meter | Calibrator                          |
| AWA5661 (Serial No.: 301135)  | Quest QC-10 (Serial No.: Q19010183) |

# 2.3.4 Monitoring Methodology

#### **Field Monitoring**

- The microphone of the Sound Level Meter was set at least 1.2 m above the ground.
- Free Field measurement was made at NM5A monitoring location.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - frequency weighting: A
  - time weighting: Fast
  - time measurement: 30 minutes intervals (between 0700-1900 on normal weekdays)
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement was more than 1 dB, the measurement would be considered invalid and has to be repeated after re-calibration or repair of the equipment.
- During the monitoring period, the L<sub>eq</sub>, L<sub>10</sub> and L<sub>90</sub> were recorded. In addition, any site observations and noise sources were recorded on a standard record sheet.
- A correction of +3dB(A) was made to the free field measurements.

#### **Maintenance and Calibration**

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The sound level meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
- Calibration records are shown in **Appendix F**.

#### Weather Condition

 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in Appendix H.

# 2.4 Landscape and Visual

## 2.4.1 Monitoring Program

**Table 2.7** details the monitoring program (as proposed in the WKCD EIA report) for landscape and visual impact during the construction phase.

# Table 2.7:Monitoring Program for Landscape and Visual Impact during ConstructionPhase

| Stage        | Monitoring Task                                                                             | Frequency | Report                                        | Approval                     |
|--------------|---------------------------------------------------------------------------------------------|-----------|-----------------------------------------------|------------------------------|
| Construction | Monitor implementation of<br>proposed mitigation measures<br>during the construction stage. | Bi-weekly | ET to report on<br>Contractor's<br>compliance | Counter-<br>signed by<br>IEC |

During the landscape and visual impact monitoring, any changes in relation to the landscape and visual amenity should be monitored with reference to the baseline conditions of the site. In addition, mitigation measures were proposed in the WKCD EIA report to minimise the landscape and visual impacts during the construction phase. The proposed mitigation measures as shown in Table 9.1 and Table 9.2 of the EM&A Manual should be checked for proper implementation.

# **3 Monitoring Results**

## 3.1 Impact Monitoring

Air quality, noise and landscape and visual impact monitoring was undertaken in compliance with the EM&A Manual during the reporting month.

## 3.2 Air Quality Monitoring

#### 3.2.1 1-hour TSP

Results of 1-hour TSP are summarised in **Table 3.1**. Graphical plots of the monitoring results are shown in **Appendix G**.

| Monitoring | Monitoring | Start | 1-ho          | ur TSP (µg    | g/m3)         | Range   | Action           | Limit            |

Remarks:

\* +3dB (A) correction was applied to free-field measurement.

^ 70 dB(A) for schools and 65 dB(A) during school examination periods.

<sup>#</sup> School examination was conducted on 16 to 17 and 20 to 21 November 2023 in the reporting period.

No exceedance of Construction Noise (Action or Limit Level) was recorded in the reporting month

School examination was conducted on 16 to 17 and 20 to 21 November 2023 during the reporting period. Additional monitoring was carried out at NM4A on the examination date on 16, 17, 20 and 21 November 2023 and the  $L_{eq}$  (5 mins) is in the range of 57.2-59.0 dB(A).

#### 3.4 Landscape and Visual Impact

Landscape and visual impact inspections were conducted as part of the weekly site inspections on 01, 15 and 29 November 2023 for Zone 2B & 2C during the reporting month. As reviewed by the registered Landscape Architect, no adverse comment on landscape and visual aspects was made during these inspections.

The landscape and visual mitigation measures were implemented during the reporting period. The summary of implementation status of the environmental mitigation measures is provided in **Appendix J**.

# 4 Site Environmental Management

# 4.1 Site Inspection

## 4.1.1 Zone 2B & 2C

Construction phase weekly site inspections were carried out on 01, 08, 15, 22 and 29 November 2023 at Zone 2B & 2C. The joint site inspection with IEC, ET, ER and Contractor for Zone 2B & 2C was held on 15 November 2023. All observations have been recorded in the site inspection checklist and passed to the Contractor together with the appropriate recommended mitigation measures where necessary.

FEHD inspection was carried out on 30 November 2023 at Zone 2B & 2C site. The purpose of FEHD visit was to inspect the potential mosquito breeding. No adverse comment has been given. FEHD officers advised contractor shall pay attention to some potential stagnant water.

The key observations from the site inspections and associated recommendations are summarized in **Table 4.1**.

| Inspecti<br>on Date | Parameter                              | Observation /<br>Recommendation                                                                                                                                                  | Contactor's Responses /<br>Action(s) Undertaken                                  | Close-out<br>(Date) |
|---------------------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|---------------------|
| 01-Nov-23           | Water<br>Quality/Land<br>Contamination | The contractor was reminded that<br>fuel drum shall only be stored in<br>designated areas which have<br>pollution prevention facilities or<br>drip trays with adequate capacity. | The contractor has removed<br>the fuel drum to designated<br>areas.              | 03-Nov-23           |
| 01-Nov-23           | Air Quality                            | The contractor was reminded that<br>dust suppression measures shall<br>be strengthened at the access<br>road to minimize dust impact.                                            | The contractor has sprayed water at the access road.                             | 03-Nov-23           |
| 15-Nov-23           | Air<br>Quality/Water<br>Quality        | The contractor was reminded that<br>idle stockpile of dusty materials<br>shall be fully covered with<br>tarpaulin or removed off site as<br>frequently as practicable.           | The contractor has removed<br>the idle stockpile of dusty<br>materials off site. | 16-Nov-23           |

Table 4.1: Summary of Site Inspections and Recommendations for Zone 2B & 2C

# 4.2 Advice on the Solid and Liquid Waste Management Status

The Contractors have been registered as a chemical waste producer for the Project. Construction and demolition (C&D) material sorting will be carried out on site. A sufficient number of receptacles were available for general refuse collection.

# 4.2.1 Zone 2B & 2C

As advised by the Zone 2B & 2C Contractor, 3539.38 tonnes and 513.43 tonnes of inert C&D material were disposed of as public fill to Tseung Kwan O Area 137 Public Fill and Tuen Mun Area 38 Public Fill respectively, while 42.50 tonnes of general refuse were disposed of at SENT landfill. 0.0 tonne of metals, 0.0 tonne of paper/cardboard packaging, 0.0 tonne of plastics and 0.0 tonne of timber was collected by recycling contractors in the reporting month. 0.0 tonne of inert C&D material were reused on site. 0.0 tonne of inert C&D material were reused in other

projects and 0.0 tonne of inert C&D material was imported for reuse at site in the reporting month. 0.0 tonne of inert C&D material was disposed to sorting facility and 0.0 tonne of chemical waste was collected by licensed contractors in the reporting period.

The cumulative waste generation records for Zone 2B & 2C are shown in Appendix I.

## 4.3 Status of Environmental Licenses and Permits

# 4.3.1 Zone 2B & 2C

The environmental permits, licenses, and/or notifications on environmental protection for this Project which were valid during the period are summarised in **Table 4.2**.

# Table 4.2:Status of Environmental Submissions, Licenses and Permits for Zone 2B& 2C

| Permit / License                         | Valid                 | Period               | Status         | Remarks |  |

## 4.4 Recommended Mitigation Measures

The EM&A programme followed the recommended mitigation measures in the EM&A Manual. The EM&A requirements as well as the summary of implementation status of the environmental mitigation measures are provided in **Appendix J**. In particular, the following mitigation measures were brought to attention during the site inspections:

# 4.4.1 Zone 2B & 2C

#### Air Quality

- Dust suppression measures should be strengthened on site.
- Idle stockpile of dusty materials should be fully covered with tarpaulin.

#### Waste Management

 Fuel drums should be properly placed with drip trays/removed to storage area to prevent chemical spillage.

#### **Temporary Water Drainage System & Water Quality**

- Temporary drainage system shall be maintained regularly to ensure efficient operation.

# 5 Compliance with Environmental Permit

The status of the required submission under the EP during the reporting period is summarized in **Table 5.1**.

| Table 5.1. Status of Submissions under the Environmental Permi | Table 5.1: | Status of Submissions under the Environmental Permit |
|----------------------------------------------------------------|------------|------------------------------------------------------|
|----------------------------------------------------------------|------------|------------------------------------------------------|

| EP Condition  | Submission                           | Submission Date  |  |
|---------------|--------------------------------------|------------------|--|
| Condition 3.4 | Monthly EM&A Report for October 2023 | 14 November 2023 |  |

# 6 Report in Non-compliance, Complaints, Notification of Summons and Successful Prosecutions

# 6.1 Record on Non-compliance of Action and Limit Levels

There was no breach of Action or Limit levels for Air Quality (1-hour TSP and 24-hour TSP) and Construction Noise in this reporting month.

# 6.2 Record on Environmental Complaints Received

No environmental complaint was received in the reporting month.

The cumulative statistics on complaints were provided in **Appendix K**.

# 6.3 Record on Notifications of Summons and Successful Prosecution

No notifications of summons or successful prosecutions were received this month. The cumulative statistics on notifications of summons and successful prosecutions were provided in **Appendix** K.

# 7 Future Key Issues

# 7.1 Construction Works for the Coming Month(s)

The major site works for Zone 2B & 2C scheduled to be commissioned in the coming month include:

- Site Maintenance
- Backfilling of Testing Pipes
- Pile Testing
  - Full Core Drilling

# 7.2 Key Issues for the Coming Month

## 7.2.1 Zone 2B & 2C

Key issues to be considered in the coming month include:

- Generation of dust from construction works;
- Noise impact from general site works;
- Generation of site surface runoffs and wastewater from activities on-site;
- Management of stockpiles and slopes, particularly on rainy days;
- Sorting, recycling, storage and disposal of general refuse and construction waste; and
- Management of chemicals and avoidance of oil spillage on-site.

# 7.3 Monitoring Schedule for the Coming Month

The environmental site inspection and environmental monitoring will be continued in the coming month. The tentative monitoring schedule for the coming month is shown in the **Appendix E**.

# 8 **Conclusions and Recommendations**

# 8.1 Conclusions

The EM&A programme as recommended in the EM&A Manual has been undertaken with the commencement of the construction activities at Zone 2A and Zone 2B & 2C on 03 October 2020 and 30 September 2021 respectively; and the construction work for Zone 2A (Contract No.: GW/2020/05/073) was completed and handover to WKCDA on 31 March 2023. No construction work and only maintenance work was carried out by Zone 2B & 2C Contractor at Zone 2A.

Monitoring of air quality and noise with respect to the Projects is underway. In particular, the 1-hour TSP, 24-hour TSP, Noise Level (as L<sub>eq</sub>, 30 minutes) under monitoring have been checked against established Action and Limit levels. There was no breach of Action or Limit levels for Air Quality (1-hour TSP and 24-hour TSP) and Construction Noise in this reporting month.

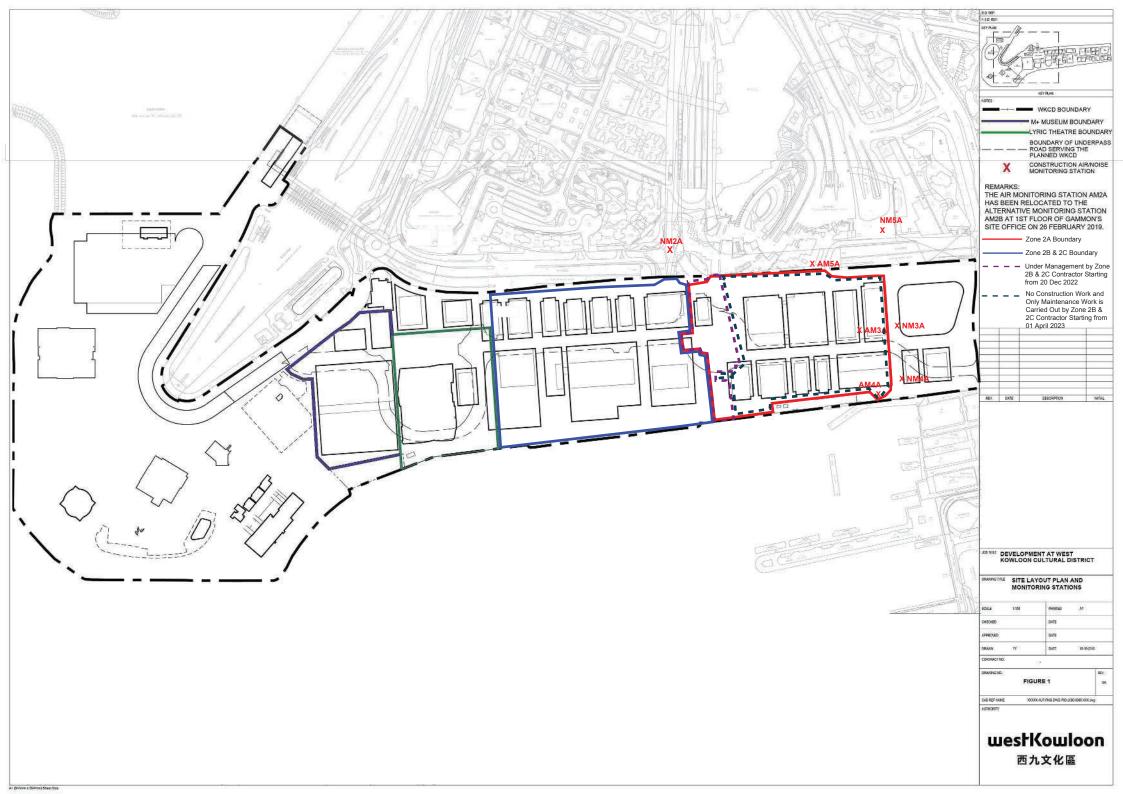

No environmental complaint was recorded in the reporting month. No notifications of summons or successful prosecutions were received during the reporting month.

Weekly construction phase site inspections and bi-weekly landscape and visual impact inspections were conducted during the reporting month as required. It was observed that the Contractors had implemented all possible and feasible mitigation measures to mitigate the potential environmental impacts during construction phase works.

## 8.2 Recommendations

Potential environmental impacts due to the construction activities, including air quality, noise, water quality, waste, landscape and visual, will be monitored or reviewed. The recommended environmental mitigation measures shall be implemented on site and regular inspections as required will be carried out to ensure that the environmental conditions are acceptable.

# C. Action and Limit Levels for Construction Phase

#### Air Quality

The Action and Limit Levels for 1-hour and 24-hour TSP for the monitoring stations are presented in following tables:

#### Table C-1: Action and Limit Levels for 1-hour TSP

| Monitoring Station | Action Level (µg/m3) | Limit Level (µg/m3) |
|--------------------|----------------------|---------------------|
| AM3A               | 280.4                | 500                 |
| AM4A               | 278.5                | 500                 |
| AM5A               | 275.4                | 500                 |

#### Table C-2: Action and Limit Levels for 24-hour TSP

| Monitoring Station | Action Level (µg/m3) | Limit Level (μg/m3) |
|--------------------|----------------------|---------------------|
| AM3A               | 152.4                | 260                 |
| AM4A               | 152.6                | 260                 |
| AM5A               | 141.1                | 260                 |

#### <u>Noise</u>

The Action and Limit Levels for Noise for the monitoring stations are presented in following table:

#### Table C-3: Action and Limit Levels for Construction Noise

| Time Period & Monitoring Locations | Action Level                                    | Limit Level |
|------------------------------------|-------------------------------------------------|-------------|
| NM2A, NM3A, NM4A and NM5A          |                                                 |             |
| 0700-1900 hours on normal weekdays | When one valid documented complaint is          | 75          |
|                                    | received from any one of the sensitive receiver |             |

Note:

\*Reduce to 70dB(A) for school and 65 dB(A) during school examination period.

### **D.** Event and Action Plan for Air Quality, Noise, Landscape and Visual Impact

#### Air Quality

In case the Action and Limit Levels are not complied during construction stage, the following Event and Action Plan should be followed:

| Event                                                      | Action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                |                                                                                                                                                                                                                     |  |  |  |  |  |

# **CERTIFICATE OF ACCREDITATION**

This is to attest that

### **AQUALITY TESTCONSULT LIMITED**

11A&B, KAI FONG GARDEN, PING CHE ROAD FANLING, HONG KONG

**Calibration Laboratory CL-207** 

has met the requirements of AC204, *IAS Accreditation Criteria for Calibration Laboratories*, and has demonstrated compliance with ISO/IEC Standard 17025:2017, *General requirements for the competence of testing and calibration laboratories*. This organization is accredited to provide the services specified in the scope of accreditation.

Effective Date December 17, 2021

Expiration Date December 1, 2023

President

## **FAQ / Information**

## Mutual Recognition Arrangements (MRA) / Multilateral Recognition Arrangements (MLA)

### Mutual Recognition Arrangement (MRA) Partners for HOKLAS <

Every effort is made to promote acceptance of test data from accredited laboratories, both internationally and locally. HKAS has concluded mutual recognition arrangements with accreditation bodies listed below by being one of the signatories of the International Laboratory Accreditation Cooperation Mutual Recognition Arrangement (ILAC MRA) and the Asia Pacific Accreditation Cooperation Mutual Recognition Arrangement (APAC MRA) for testing, calibration, medical testing, Proficiency Testing Providers (PTP) and Reference Material Producers (RMP). Click here to view the up-to-date signatories of ILAC and here to access the up-to-date signatories of APAC.

Visitors checking the names, logos and accreditation symbols shown on an endorsed certificate or report should note that some of our MRA partners may have their names, logos or accreditation symbols changed recently and test reports or certificates endorsed by displaying their old accreditation symbols may still be valid during the change-over period. For details, please visit their websites or contact them directly.

» Mutual Recognition Arrangement (MRA) Partners for HOKLAS

HKAS MRA partners will recognise HOKLAS endorsed test certificates as having the same technical validity as certificates endorsed by their respective schemes.

Report Number: 230827MCA-166FDate of Report: 29-Aug-23Page Number: 2 of 2Customer \*: Apex Testing & Certification Ltd.Customers Ref. \*: A005

#### **Details of Calibration**

- 1. The calibration was performed in accordance with AQuality Testconsult Procedure Number ENV-L-003 (in-house method), by comparison with the laboratory's reference equipment which have traceable international standards of measurement.
- 2. The item under calibration (IUC) was allowed to stabilize in the laboratory for 0.25 hour before commencement of calibration.
- 3. A set of readings were made at each calibration concentration. The values quoted in the results are the average of each set of readings.
- 4. The values given in this calibration certificate only relate to the values measured at the time of calibration. Any uncertainties quoted do not include allowance for the capability of any other laboratory to repeat the measurement. The uncertainty quoted relate only to item at time of calibration. AQuality Testconsult Limited is not liable for any loss or damage resulting from the use of this equipment.
- 5. The identification, calibration certificate numbers for the reference equipment used were as follows :

| Equipment Number | Certificate Number | Description |
|------------------|--------------------|-------------|
| CH-LDM-1         | HBW202201864       | 粉尘测试仪       |

6. Copies of the Calibration certificates of the reference equipment used in this calibration may be obtained from AQuality Testconsult Limited, if necessary.

- 1. The calibration was performed in accordance with AQuality Testconsult Procedure Number ENV-L-003 (in-house method), by comparison with the laboratory's reference equipment which have traceable international standards of measurement.
- 2. The item under calibration (IUC) was allowed to stabilize in the laboratory for 0.25 hour before commencement of calibration.
- 3. A set of readings were made at each calibration concentration. The values quoted in the results are the average of each set of readings.
- 4. The values given in this calibration certificate only relate to the values measured at the time of calibration. Any uncertainties quoted do not include allowance for the capabiliy of any other laboratory to repeat the measurement. The uncertainty quoted relate only to item at time of calibration. AQuality Testconsult Limited is not liable for any loss or damage resulting from the use of this equipment.
- 5. The identification, calibration certificate numbers for the reference equipment used were as follows :

| Equipment Number | Certificate Number | Description |
|------------------|--------------------|-------------|
| CH-LDM-1         | HBW202201864       | 粉尘测试仪       |

6. Copies of the Calibration certificates of the reference equipment used in this calibration may be obtained from AQuality Testconsult Limited, if necessary.

第 4 页, 共 4 页 Page of

#### 说明:

#### Note:

1 测量结果扩展不确定度:

Expanded uncertainty of measurement results:

声压级: U=0.15 dB

Sound Pressure Level

频率: U<sub>rel</sub>=0.1%

Frequency

总失真+噪声: U=0.4%

Total distortion + noise

包含因子: k=2

Coverage factor

2 本证书中给出的扩展不确定度依据JJF1059.1-2012《测量不确定度评定与表示》评定,由合成标准不确定 度乘以包含概率约为95%时对应的包含因子k得到。

The expanded uncertainty given in this certificate is evaluated according to JJF 1059.1-2012 "Evaluation and Expression of Uncertainty in Measurement", which is obtained by multiplying the combined standard uncertainty by the coverage factor k corresponding to the coverage probability of about 95%.

3 校准结果符合性判定依据JJF 1094-2002《测量仪器特性评定》之5.3.1和JJG 176-2022《声校准器检定规程》。 Decision rules of conformity are JJF 1094-2002 Evaluation of the Characteristics of Measuring Instruments (5.3.1) and JJG 176-2022 V.R. of Sound Calibrators.

4 结论: 被校准仪器校准结果符合 JJG 176-2022 (1级)全部后续项目技术要求。
 Conclusion: The data of instrument calibrated comply with the technical characteristics of all subsequent items in JJG 176-2022 (for Class 1).

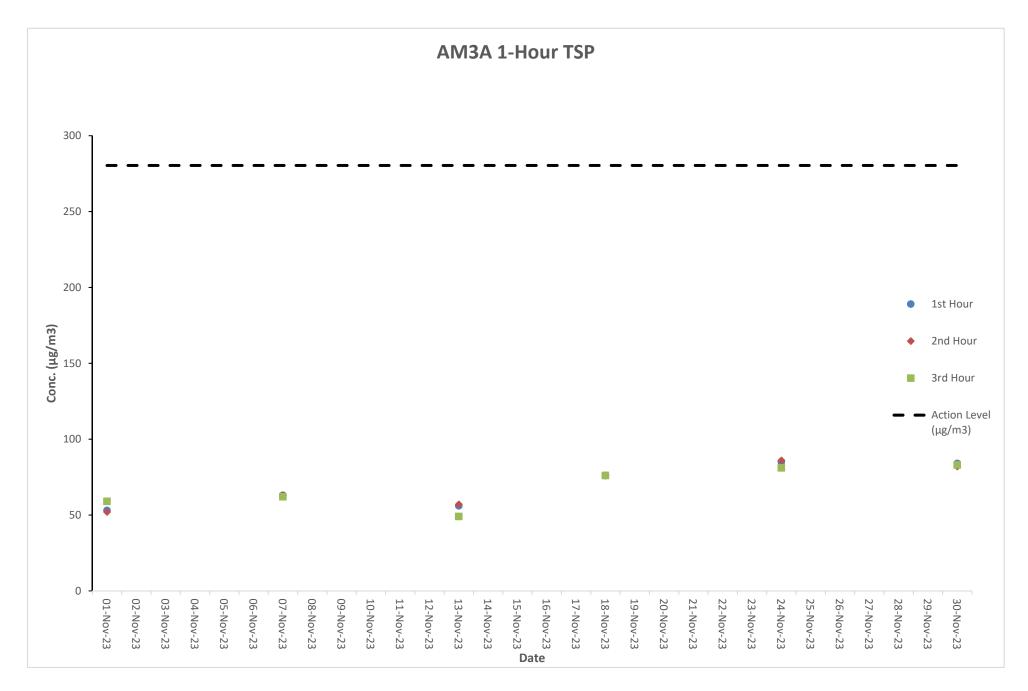

5 按照所依据技术文件的规定,建议复校时间间隔不超过1年。更换重要部件、维修或对仪器性能有怀疑时, 应及时校准。

According to the demand of reference document, next calibration is proposed within 1 year. In case of replacement of important parts, maintenance or doubt on the performance of the instrument, it shall be calibrated in time.

#### Note:

-3539.38 tonnes and 513.43 tonnes of inert C&D material were disposed of as public fill to Tseung Kwan O Area 137 Public Fill and Tuen Mun Area 38 respectively in the reporting month.

\* Due to data delay in Oct-2023, 280.81 tonnes(disposed as Public Fill) of inert C&D materials and 9.85 tonnes(disposed in Landfill) of non-inert C&D materials were included in Nov-2023.

### J. Environmental Mitigation Measures – Implementation Status

#### Table J-1: Environmental Mitigation Measures Implementation Status (November 2023)

| 2.1                               | Best Practice for Dust Control                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                   |  |  |
|                                   | The relevant best practices for dust control as stipulated in the Air Pollution Control (construction Dust) Regulation should be adopted to further reduce the construction dust impacts from the Project. These best practices include:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                   |  |  |
|                                   | Good Site Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | $\checkmark$                      |  |  |
|                                   | <ul> <li>Good site management is important to help reducing potential air quality impact down to<br/>an acceptable level. As a general guide, the Contractor should maintain high standard of<br/>housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and<br/>storage of raw materials, wastes or by-products should be carried out in a manner so as<br/>to minimise the release of visible dust emission. Any piles of materials accumulated on or<br/>around the work areas should be cleaned up regularly. Cleaning, repair and maintenance<br/>of all plant facilities within the work areas should be carried out in a manner minimising<br/>generation of fugitive dust emissions. The material should be handled properly to prevent<br/>fugitive dust emission before cleaning.</li> </ul> |                                   |  |  |

| EM&A Ref. | Recommendation Measures                                                                                      | Zone 2B & 2C |  |  |  |  |  |
|-----------|--------------------------------------------------------------------------------------------------------------|--------------|--|--|--|--|--|
| 3.1       | Good Site Practice                                                                                           |              |  |  |  |  |  |
|           | Good site practice and noise management can significantly reduce the impact of construction                  |              |  |  |  |  |  |
|           | site activities on nearby NSRs. The following package of measures should be followed during                  |              |  |  |  |  |  |
|           | each phase of construction:                                                                                  |              |  |  |  |  |  |
|           | <ul> <li>only well-maintained plant to be operated on-site and plant should be serviced regularly</li> </ul> | $\checkmark$ |  |  |  |  |  |
|           | during the construction works;                                                                               |              |  |  |  |  |  |
|           | • machines and plant that may be in intermittent use to be shut down between work                            | $\checkmark$ |  |  |  |  |  |
|           | periods or should be throttled down to a minimum                                                             |              |  |  |  |  |  |
|           | • plant known to emit noise strongly in one direction, should, where possible, be orientated                 | $\checkmark$ |  |  |  |  |  |
|           | to direct noise away from the NSRs;                                                                          |              |  |  |  |  |  |
|           | <ul> <li>mobile plant should be sited as far away from NSRs as possible; and</li> </ul>                      | $\checkmark$ |  |  |  |  |  |
|           | • material stockpiles and other structures to be effectively utilised, where practicable, to                 | $\checkmark$ |  |  |  |  |  |
|           | screen noise from on-site construction activities.                                                           |              |  |  |  |  |  |
| 3.1       | Adoption of Quieter PME                                                                                      | $\checkmark$ |  |  |  |  |  |
|           | The recommended quieter PME adopted in the assessment were taken from the EPD's QPME                         |              |  |  |  |  |  |
|           | Inventory and "Sound Power Levels of Other Commonly Used PME" are presented in Table 4.26                    |              |  |  |  |  |  |
|           | in the EIA report. It should be noted that the silenced PME selected for assessment can be found             |              |  |  |  |  |  |
|           | in Hong Kong.                                                                                                |              |  |  |  |  |  |
| 3.1       | Use of Movable Noise Barriers                                                                                | $\checkmark$ |  |  |  |  |  |
|           | Movable noise barriers can be very effective in screening noise from particular items of plant               |              |  |  |  |  |  |
|           | when constructing the Project. Noise barriers located along the active works area close to the               |              |  |  |  |  |  |
|           | noise generating component of a PME could produce at least 10 dB(A) screening for stationary                 |              |  |  |  |  |  |

|               |                                                                                                    | Implementation Stage |
|---------------|----------------------------------------------------------------------------------------------------|----------------------|
| EM&A Ref.     | Recommendation Measures                                                                            | Zone 2B & 2C         |
|               | plant and 5 dB(A) for mobile plant provided the direct line of sight between the PME and the       |                      |
|               | NSRs is blocked.                                                                                   |                      |
| 3.1           | Use of Noise Enclosure/ Acoustic Shed                                                              | $\checkmark$         |
|               | The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor      |                      |
|               | and concrete pump. With the adoption of the noise enclosure, the PME could be completely           |                      |
|               | screened, and noise reduction of 15 dB(A) can be achieved according to the EIAO Guidance Note      |                      |
|               | No. 9/2010.                                                                                        |                      |
| 3.1           | Use of Noise Insulating Fabric                                                                     | $\checkmark$         |
|               | Noise insulating fabric can also be adopted for certain PME (e.g. drill rig, pilling machine etc). |                      |
|               | The fabric should be lapped such that there are no openings or gaps on the joints. According to    |                      |
|               | the approved Tsim Sha Tsui Station Northern Subway EIA report (AEIAR-127/2008), a noise            |                      |
|               | reduction of 10 dB(A) can be achieved for the PME lapped with the noise insulating fabric.         |                      |
| 3.1           | Scheduling of Construction Works outside School Examination Periods                                | $\checkmark$         |
|               | During construction phase, the contractor should liaise with the educational institutions          |                      |
|               | (including NSRs LCS and CRGPS) to obtain the examination schedule and avoid the noisy              |                      |
|               | construction activities during school examination periods.                                         |                      |
| Water Quality | y Impact (Construction)                                                                            |                      |
| 4.1           | Construction site runoff and drainage                                                              |                      |
|               | The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in    |                      |
|               | order to minimise surface runoff and the chance of erosion. The following measures are             |                      |

recommended to protect water quality and sensitive uses of the coastal area, and when properly implemented should be sufficient to adequately control site discharges so as to avoid water

quality impacts:

- At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels, earth bunds or sand bag barriers should be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the WKCDA's Contractor prior to the commencement of construction;
- Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the WKCDA's Contractor prior to the commencement of construction.
- All drainage facilities and erosion and sediment control structures should be regularly
  inspected and maintained to ensure proper and efficient operation at all times and
  particularly during rainstorms. Deposited silt and grit should be regularly removed, at the
  onset of and after each rainstorm to ensure that these facilities are functioning properly
  at all times.
- Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.
- All vehicles and plant should be cleaned before leaving a construction site to ensure no

- earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.
- Open stockpiles of construction materials or construction wastes onsite should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.
- Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers.
- Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.
- Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.

Zone 2B & 2C

√ N/A No bentonite slurries are used in this project.

|-----------------------------------------------------------------------------------------------|--------------|
| segregate any inert materials for reuse or disposal of at PFRFs whereas the non-inert         |              |
| materials will be disposed of at the designated landfill site.                                |              |
| • In order to monitor the disposal of inert and non-inert C&D materials at respectively PFRFs | $\checkmark$ |
| and the designated landfill site, and to control fly-tipping, it is recommended that the      |              |
| Contractor should follow the Technical Circular (Works) No. 6/2010 for Trip Ticket System     |              |
| for Disposal of Construction & Demolition Materials issued by Development Bureau. In          |              |
| addition, it is also recommended that the Contractor should prepare and implement a           |              |
| Waste Management Plan detailing their various waste arising and waste management              |              |
| practices in accordance with the relevant requirements of the Technical Circular (Works)      |              |
| No. 19/2005 Environmental Management on Construction Site.                                    |              |

### 6.1 Chemical Waste

- If chemical wastes are produced at the construction site, the Contractor will be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the "Code of Practice on the Packaging Labelling and Storage of Chemical Wastes". Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor should use a licensed collector to transport and dispose of the chemical wastes at the approved Chemical Waste Treatment Centre or other licensed recycling facilities, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.
- Potential environmental impacts arising from the handling activities (including storage,

|             |                                                                                                  | Implementation Stage                                            |
|-------------|--------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| EM&A Ref.   | Recommendation Measures                                                                          | Zone 2B & 2C                                                    |
|             | collection, transportation and disposal of chemical waste) are expected to be minimal            |                                                                 |
|             | with the implementation of appropriate mitigation measures as recommended.                       |                                                                 |
| 6.1         | General Refuse                                                                                   | $\checkmark$                                                    |
|             | General refuse should be stored in enclosed bins or compaction units separated from inert C&D    |                                                                 |
|             | materials. A reputable waste collector should be employed by the Contractor to remove general    |                                                                 |
|             | refuse from the site, separately from inert C&D materials. Preferably an enclosed and covered    |                                                                 |
|             | area should be provided to reduce the occurrence of 'wind blown' light material.                 |                                                                 |
| Land Contam | ination (Construction)                                                                           |                                                                 |
| 7.1         | The potential for land contamination issues at the TST Fire Station due to its future relocation |                                                                 |
|             | will be confirmed by site investigation after land acquisition. Where necessary, mitigation      |                                                                 |
|             | measures for minimising potential exposure to contaminated materials (if any) or remediation     |                                                                 |
|             | measures will be identified. If contaminated land is identified (e.g., during decommissioning of |                                                                 |
|             | fuel oil storage tanks) after the commencement of works, mitigation measures are proposed in     |                                                                 |
|             | order to minimise the potentially adverse effects on the health and safety of construction       |                                                                 |
|             | workers and impacts arising from the disposal of potentially contaminated materials. The         |                                                                 |
|             | following measures are proposed for excavation and transportation of contaminated material:      |                                                                 |
|             | • To minimize the chance for construction workers to come into contact with any                  | N/A                                                             |
|             | contaminated materials, bulk earth-moving excavation equipment should be employed;               | TST Fire Station is out of this project boundary, no mitigation |
|             |                                                                                                  | measure is required.                                            |
|             | • Contact with contaminated materials can be minimised by wearing appropriate clothing           | N/A                                                             |
|             | and personal protective equipment such as gloves and masks (especially when interacting          | TST Fire Station is out of this project boundary, no mitigation |
