Executive Summary

Mott MacDonald Hong Kong Ltd. ("MMHK") has been commissioned by the Gammon Engineering & Construction Company Limited, to undertake the Environmental Team (ET) services to carry out environmental monitoring and audit (EM&A) for Ocean Park Tai Shue Wan Development Water World.

This is the 3rd Quarterly EM&A Summary report for the Tai Shue Wan Development Water World under Section 11.4 of the EM&A Manual (Register No.: AEIAR-184/2014). This report summarises the findings on EM&A during the period from 1 December 2017 to 28 February 2018.

Environmental Monitoring and Audit Activities

Environmental monitoring activities under the EM&A programme in the Reporting Period are summarized in the following table:

Environmental Aspect	Environmental Monitoring Parameters / Inspection	Total Occasions
Construction Noise	L _{eq(30min)} Daytime	26
Ecology	Site Inspection	4
Landscape and Visual	Inspection of the mitigation measures implementation situation	6
Site Inspection / Audit	Environmental Team (ET), the Contractor and Project Management Representative (PMR) joint site inspection and auditing	13
	Independent Environmental Checker (IEC) joint site inspection and auditing	3

Breaches of Action/Limit Levels

No noise complaints (i.e. Action level) were received in the Reporting Period. No exceedance of construction noise measurement and no Notifications of Exceedances (NOEs) were issued to the PMR, IEC and the Contractor. The statistics of environmental exceedance, NOE issued and investigation of exceedance are summarized in the following table:

Environmental Aspect	Monitoring Parameter	Action Level	Limit Level	Event & Action		
				NOE Issued	Investigation	Corrective Actions
Construction Noise	L _{eq(30min)} Daytime	0	0	0	0	0

Environmental Complaints

There was no record of complaints received in the Reporting Period.

Notification of Summons and Successful Prosecutions

There was no record of notification of summons and successful prosecution in the Reporting Period.

Reporting Changes

There are no reporting changes.

Future Key Issues

The contractor should pay attention to the following environmental issues and maintain relevant mitigation measures:

- Site formation for ride footing construction
- Cut soil slope and soil nail installation for Ride P1, P2, P3, P4 and P5
- Rock breaking and slope stabilization works for Ride P1 to P5
- Construction of drainage channels to slopes
- Mini pile construction
- Utilities diversion at A4
- Drainage works at PJD office
- Skin wall construction for Tress boulder at entrance
- North Plant Room: East substation walls and double slab and L1 HL falsework, formwork, rebar, and casting.
- North Plant Room: Build walls and L1 HL slab. Construction on-grade at G.L. 1-4 and L1 HL slab.
- L2 Slab at Area 10E4: Construct remaining columns below L2, falsework, formwork, and rebar for Level 2 slab. Cast concrete.
- L3 slab at Area 10E4: falsework, formwork, and rebar for Level 3 slab. Cast concrete.
- L2 to L3 columns at Area 10E4: column, rebar, shutter, and casting of columns.
- Main Building: L1 and L2 slab, column and wall construction, L1 Zone 6 on grade slab, Steel deck along GL 10 – 15 for roof construction, ABWF.
- South Plant Room: Backfilling for B1 on grade slab, B1 on grade slab, L1 slab and wall construction, L1 roof slab waterproofing, ABWF works
- Level B1: Drainage works and on-grade slab construction
- South Transformer Room: Wall and slab construction, waterproof, duradeck installation, ABWF

1 Introduction

1.1 Project Background

On 27 August 2014, the Environment Impact Assessment (EIA) Report and Environmental Monitoring and Audit (EM&A) Manual (Register No.: AEIAR-184/2014) for the “Tai Shue Wan Development at Ocean Park” (the Project) was approved and an Environmental Permit (EP) (Permit No.: EP-487/2014) was issued to the Ocean Park Corporation (Project Proponent).

The current valid EP (Permit No.: EP-487/2014/A) was issued on 10 January 2018 based on the Variation of Environmental Permit No. VEP-539/2017 which comprise variation of project boundary, location of sump pit and size of rising main. The layout plan of the Project is indicated in **Appendix A**.

Mott MacDonald Hong Kong Ltd. (“MMHK”) has been commissioned by Gammon Engineering & Construction Company Limited to undertake the Environmental Team (ET) services to carry out environmental monitoring and audit for the Ocean Park Tai Shue Wan Water World Project.

As part of the EM&A program, baseline monitoring for the required parameters including background noise, landscape & visual baseline review and baseline ardeid inspection were carried out between 24 October 2014 and 10 December 2014 by the environmental consultants of Ocean Park Corporation. Furthermore, the baseline monitoring report which was verified by the previous IEC was submitted to EPD and endorsed in December 2014.

The previous contract (Contract No.: TSW-C004) of Site Formation and Foundation Works has been completed since 31 May 2017 and the next construction phase (Contract No.: TSW-C006) for the Ocean Park Tai Shue Wan Development was handed over to Gammon Engineering & Construction Company Limited on 31 May 2017.

This report summarizes the findings during the Reporting Period from 1 December 2017 to 28 February 2018.

2 Project Organization

2.1 Project Organization

The project organization is shown in **Appendix B**. The responsibilities of respective parties are as follows:

Ocean Park Corporation

Ocean Park Corporation is the Project Proponent and the Permit Holder of the EP for the development of the Project and will assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by Ocean Park Corporation to audit the results of the EM&A works carried out by the ET.

Environmental Protection Department (EPD)

EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

Project Management Representative (PMR) of Ocean Park Corporation

The PMR is responsible for overseeing the construction works and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the ER with respect to EM&A are:

- Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
- Monitor Contractor's, ET's and IEC's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
- Facilitate ET's implementation of the EM&A programme
- Participate in joint site inspection by the ET and IEC
- Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
- Adhere to the procedures for carrying out complaint investigation
- Liaison with the related government departments, ET, IEC, the Contractor and the other Contractors of the Project discussing regarding the cumulative impact issues.

The Contractor

The duties and responsibilities of the Contractor are:

- Comply with the relevant contract conditions and specifications on environmental protection
- Employ an Environmental Team (ET) to undertake monitoring, and reporting of EM&A
- Facilitate ET's monitoring and site inspection activities
- Participate in the site inspections by the ET and IEC, and undertake any corrective actions
- Provide information / advice to the ET regarding works programme and activities which may contribute to the generation of adverse environmental impacts

- Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event / Action Plans
- Implement measures to reduce impact where Action and Limit levels are exceeded
- Adhere to the procedures for carrying out complaint investigation

Environmental Team (ET)

The ET should be employed by the Contractor to conduct the EM&A programme. The ET should be managed by the ET Leader. ET Leader should have relevant professional qualifications in environmental control and possess at least 7 years' experience in EM&A. Suitably qualified professional and technical staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in the time under the Contract, to enable fulfilment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The ET shall include qualified botanist/ecologist for the ecological service and a Registered Landscape Architect for review of implementation of landscape and visual mitigation measures. The ET should report to the OPC and the duties should include:

- to monitor and audit various environmental parameters as required in the Approved EM&A Manual;
- to analyze the EM&A data, review the success of EM&A programme and the adequacy of mitigation measures implemented, confirm the validity of the EIA predictions and identify any adverse environmental impacts arising;
- to monitor compliance with conditions in the EP, environmental protection, pollution prevention and control regulations and contract specifications;
- to audit environmental conditions on site;
- to report on the EM&A results to EPD, the ER, the IEC and Contractor or their delegated representatives;
- to recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans;
- to liaise with the IEC on all environmental performance matters, and ensure timely submission of all relevant EM&A pro forma for IEC's approval;
- to provide advice to the Contractor on environmental improvement, awareness and enhancement matters etc. on site;
- to adhere to the procedures for carrying out complaint investigation;
- to prepare reports on the environmental monitoring data and the site environmental conditions;
- to submit the EM&A report to Director of Environmental Protection (DEP) timely;
- to review proposals of mitigation measures from the Contractor in case of exceedance of Action and Limit levels, in accordance with the Event and Action Plan; and
- to carry out site inspection to investigate and audit the Contractor's site practice, equipment and work methodologies with respect to pollution control and mitigation measures.

Independent Environmental Checker (IEC)

- The IEC is empowered to audit the environmental performance of construction, but is independent from the management of construction works. As such, the IEC should not be in any way an associated body of the Contractor or the ET for the Project. The IEC should be employed by OPC prior to the commencement of the construction of the Project. The IEC

should be a person who has relevant professional qualifications in environmental control and at least 7 years' experience in EM&A and environmental management. The duties and responsibilities of the IEC are:

- to provide proactive advice to the ER and OPC on EM&A matters related to the project;
- to review and verify the monitoring data and all submissions in connection with the EP and EM&A Manual submitted by the ET;
- to arrange and conduct regular, at least monthly site inspections of the works during the construction phase, and to carry out ad hoc inspections if significant environmental problems are identified;
- to check compliance with the agreed Event and Action Plan in the event of any exceedance;
- to check compliance with the procedures for carrying out complaint investigation;
- to check the effectiveness of corrective measures;
- to feedback audit results to the ET by signing off relevant EM&A pro forma;
- to check that mitigation measures are effectively implemented;
- to report the works conducted, and the findings, recommendations and improvements of the site inspections, after reviewing ET's and Contractor's works, the ER and OPC on a monthly basis;
- to verify the investigation result of the environmental complaint cases and the effectiveness of corrective measures;
- to verify EM&A report that has been certified by ET leader; and
- to audit EIA recommendations and requirements against the status of implementation of environmental mitigation measures on site.

2.2 Construction Progress

During the Reporting Period, works of the Project undertaken include:

- Site formation for ride footing construction
- Cut soil slope and soil nail installation for Ride P1, P2, P3, P4 and P5
- Rock breaking and slope stabilization works for Ride P1 to P5
- Construction of drainage channels to slopes
- Mini pile construction
- North Plant Room Formation: HKE Substation On-grade slab and cable trench excavation and on-grade slab construction. Cart away excavated rock materials.
- North Plant Room and L2 slab (10E4): Column construction, install concrete block retaining wall to form ground for falsework erection, L2 slab falsework erection, formwork, rebar, concreting.
- Zone 3 Foundation at L2: Formwork, rebar, rock excavation and mucking out, rock mapping inspection, cast concrete blinding, construct footings
- Rising Main Soil Nail Installation
- North Plant Room: HKE West Substation on-grade slab formwork, rebar, and casting, East substation walls and double slab and L1 HL falsework, formwork, rebar, and casting.
- North Plant Room: Backfilling G.L. 7-9 for on-grade slab of generator plant room, construction on-grade slab, build walls and L1 HL slab.

- L2 Slab at Area 10E4: Construct remaining columns below L2, falsework, formwork, and rebar for Level 2 slab. Cast concrete.
- L2 to L3 columns at Area 10E4: column, rebar, shutter, and casting of columns.
- B1 and L1 underground manholes and drainage
- L1 zone 6 on grade slab
- Core wall
- L1 and L2 slab and column construction / L2-L3 Column construction
- Block wall construction at L1
- Balustrade installation at L2
- L2 Slab at Area 10E4: Construct remaining columns below L2, falsework, formwork, and rebar for Level 2 slab. Cast concrete.
- L2 to L3 columns at Area 10E4: column, rebar, shutter, and casting of columns.
- South Plant Room: Backfilling for B1 on grade slab, B1 on grade slab, L1 slab and wall construction, L1 roof slab waterproofing, EVA portal frame dismantling.
- Main Building: L1 and L2 slab, column and wall construction, L1 Zone 6 on grade slab, Steel ramp for haul road, EVA portal frame dismantling, B1 underground manhole and drainage

2.3 Summary of Environmental Submissions

Summaries of validity permits, licenses, and/or notifications on environmental protection for the Project are presented in **Table 1**.

Table 1: Status of Environmental Licenses and Permits of the Project

Type of Permit/ License	Submission Date	Reference/ License No.	Date of Issue	Date of Expiry	Status
Environmental Permit	/	EP-487/2014/A	10-Jan-18	N/A	Valid
Variation of Environmental Permit	18-Dec-17	VEP-539/2017	10-Jan-18	N/A	Valid
Environmental Permit	/	EP-487/2014	27-Aug-14	N/A	Superseded
Notification pursuant to Air Pollution Control (Construction Dust) Regulation	15-Mar-17	414651	N/A	N/A	Valid
Application for a Billing Account for Disposal of Construction Waste	14-Dec-16	Account No. 7026786	28-Dec-16	N/A	Valid
Discharge Licence under WPCO WT00028196-2017	15-Mar-17	414650	29-May-17	31-May-22	Valid
Registration as a Chemical Waste Producer (WPN: 5213-176- G2785-01)	21-Apr-17	415966	31-May-17	N/A	Completed

Type of Permit/ License	Submission Date	Reference/ License No.	Date of Issue	Date of Expiry	Status
Construction Noise Permit under NCO GW-RS0439-17	26-Apr-17	416080	15-May-17	29-Dec-17	Superseded
Construction Noise Permit under NCO GW-RS0825-17	8-Sep-17	420985	22-Sep-17	21-Mar-18	Superseded
Renew Construction Noise Permit under NCO GW-RS1024-17	3-Nov-17	422922	21-Nov-17	16-May-18	Valid

According to the EP stipulation, the required documents have been submitted to EPD for retention as listed below:

- Project Layout Plans
- Management Organization of Main Construction Companies
- Detailed Vegetation Survey Report
- Woodland Compensation Plan
- Ardeid Inspection Report
- Short-nosed Fruit Bat Inspection Report
- Baseline Monitoring Report Revision A of the Project

3 Summary of Environmental Monitoring and Audit Requirements

3.1 General

As specified in the approved EM&A Manual, environmental monitoring of construction noise, ecology, landscape and visual impacts as well as waste management are required. A summary of the monitoring parameters is presented in **Table 2**.

Table 2: Summary of Impact EM&A Requirements

Parameters	Description	Locations	Frequency
Construction Noise	<ul style="list-style-type: none"> ● L_{eq} (30min) on normal working days ● 3 sets of consecutive L_{eq}(5min) during restricted hours if construction is necessary ● Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference 	NM1A and NM2	<p>Weekly Normal working days: (07:00-19:00 except public holiday)</p> <p>Restricted hours: 19:00 to 07:00 next day, and whole day of public holiday or Sunday only when construction is necessary</p>
Ecology	<ul style="list-style-type: none"> ● Monitoring of in-situ preservation of <i>Platycodon grandifloras</i> ● Inspection of ardeids nest during breeding season (April to July) ● Monitoring for ardeid night roost (November to March) ● Inspection of enhancement area for ardeid roosting ● Monitoring on woodland compensation 	Project area and preservation area for <i>Platycodon grandifloras</i>	<p>Once per month</p> <p>An enhancement area provided as an alternative roosting site for ardeids should be developed during the first phase of the construction.</p> <p>Mitigation measures recommended in the approved Woodland Compensation Plan should be fully and properly implemented, including but not limited to the creation of 0.84 ha woodland compensation on-site and 0.78 ha on-site woodland reinstatement, to mitigate for permanent loss of woodland habitat.</p>

Parameters	Description	Locations	Frequency
Landscape & Visual Impact	<ul style="list-style-type: none"> ● Ensure no construction activities / storage are undertaken outside the project boundary ● Ensure landscaping works are carried out in accordance with the specifications ● Ensure new planting is carried out properly and during the right season ● Review progress of engineering works on site to identify the earliest practical opportunities for landscape works 	Project site	Bi-weekly
Regular Site Inspection Air, water, waste management	To review the environmental situation, and monitor the implementation of proper environmental protection and pollution control measures for the Project	Project site	Weekly

3.2 Monitoring Locations

Two designated noise monitoring locations as established in the EM&A Manual are shown in **Appendix C**. After the baseline monitoring, alternative location NM1A was proposed by MMHK due to the rejection of the monitoring location set up at NM1. The proposal was verified and agreed by EPD in the Baseline Monitoring Report. The construction noise monitoring locations for the Project are shown in **Table 3** and **Appendix D**.

Table 3: Impact Monitoring Stations for Construction Noise

Monitoring location	Descriptions	Type of measurement
NM1A	Slope near Victoria Shanghai Academy (VSA) to replace NM1 of the VSA	Free field
NM2	Hong Kong Juvenile Care Centre (HKJCC)	Facade

3.3 Derivation of Action/Limit Levels

The baseline results formed the basis for determining the environmental acceptance criteria for impact monitoring. According to the approved EM&A Manual and baseline monitoring results, the following construction noise criterion, namely Action and Limit levels listed in **Table 4** were proposed:

Table 4: Action and Limit Levels for Construction Noise

Monitoring Location	Action Level	Limit Level in dB(A)
Time Period: 0700-1900 hours on normal weekdays		
NM1A and NM2	When one or more documented complaints are received	70 dB(A)*

Note: Acceptable Noise Levels for school should be reduced to 65 dB(A) during examination period. If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA must be followed.

3.4 Meteorological Information

Meteorological information including humidity, wind speed, wind direction, temperature and total rainfall was extracted from “the Hong Kong Observatory Wong Chuk Hang Station” to provide background weather information. The meteorological data for the Reporting Period is summarized in **Appendix E**.

4 Construction Noise Monitoring

4.1 Monitoring Results

Construction noise monitoring was conducted 26 times at the two designated locations in the Reporting Period. As shown in the summary of noise monitoring results in **Table 5**, no noise complaints were received in this Reporting Period and no exceedance of Action or Limit level in relation to construction noise was recorded.

Table 5: Summary of Construction Noise Monitoring Results

Monitoring Date	Time		Mean and range of noise levels, dB(A)		Limit Level for L _{eq} (dB(A)) ²
	Start	Finish	L _{eq} (30min)	Corrected L _{eq} (30min) ¹	
NM1A					
05-Dec-17	10:02	10:32	55.8	58.8	70
13-Dec-17	09:42	10:12	55.6	58.6	70

09-Jan-18	14:30	15:00	53.4	-	70
17-Jan-18	08:50	09:20	52.5	-	70
25-Jan-18	14:30	15:00	52.7	-	70

Monitoring Date	Time		Mean and range of noise levels, L _{eq} (dB(A))	Limit Level for L _{eq} (dB(A)) ²	
	Start	Finish		Corrected L _{eq} (30min) ¹	-
31-Jan-18	15:00	15:30	52.6	-	70
06-Feb-18	10:00	10:30	52.7	-	70
14-Feb-18	09:20	09:50	51.9	-	70
22-Feb-18	09:20	09:50	52.2	-	70
28-Feb-18	10:00	10:30	52.9	-	70

Note: 1. A correction of +3 dB(A) was made to the free field measurement at monitoring station NM1A.
 2. No examination has taken place in this Reporting Period.

A summary of data and the supplementary data auditing information are shown in **Appendix F**. Graphical plots of the monitoring data are shown in **Appendix G**.

5 Ecology Monitoring

5.1 Inspection Findings

The ecological inspections were undertaken on 15 December 2017, 12 January, 15 and 27 February 2018 by the qualified ecologist. The inspection findings are presented below.

Plants of Conservation Interest (*Platycodon grandiflorus*)

Platycodon grandiflorus is a perennial herb up to 120 cm high. Stems erect and scarcely any branches. It is often found on sunny grassy hillslopes in brushes. Two groups of *Platycodon grandiflorus* were recorded in 2015's growing season within the fenced area.

Wilting was observed on *Platycodon grandiflorus* during Reporting Period. On the other hand, the preventive mitigation measures, i.e., erecting of temporary protective fencing and sign post, were found to be effectively implemented for human disturbance, and there are no signs or evidence (e.g. dust coating of plant) to prove that the on-going construction activities within the project area has affected the health condition of the *Platycodon grandiflorus*. The stem wilting after flowering is part of the natural life cycle of this perennial herbaceous species, and new shoots would be expected to emerge from the underground part in the next growing season.

Nesting Activities of Ardeids in Breeding Season

This monitoring parameter is only required during the breeding season of ardeids, i.e., from April to July. The last monitoring event for nesting activities of Ardeids in the 2017's breeding season was undertaken on 21 July 2017, and such monitoring would not be required for the Reporting Period.

Roosting Activities of Ardeids in Peak Wintering Season

According to the Approved EM&A Manual, monitoring of roosting activities of Ardeids within the project area should perform once a month during peak wintering season (November to March) during the construction phase.

Monitoring of roosting activities of Ardeids was carried out by direct observation at vantage point on 15 December 2017, 12 January 2018 and 27 February 2018, and covered the evening from an hour before sunset to last until nightfall.

One Black-crowned Night Heron was observed in the vicinity of the project area on 12 January 2018. The Black-crowned Night Heron was observed flying from Sham Wan and foraging at the artificial shore in Tai Shue Wan. However, no roosting activities were identified during the monitoring.

Compensation for Ardeid roosting Site

To be implemented.

Compensation of Woodland Habitat

To be implemented.

5.2 Conclusion

The implementation of the mitigation measures for the plant species of conservation interest, i.e., erecting of temporary protective fencing and sign post during the Reporting Period was noted. Wilting was observed on *Platycodon grandiflorus*, the stem wilting after flowering is part of the natural life cycle of this perennial herbaceous species, and new shoots would be expected to emerge from the underground part in the next growing season.

Roosting activities of ardeids was not observed within the project area during the monitoring.

6 Landscape and Visual Monitoring

6.1 Inspection Findings

In the Reporting Period, bi-weekly landscape and visual site inspection were conducted on 8, 22 December 2017, 5, 19 January 2018 and 9, 23 February 2018.

According to the bi-weekly site inspections, it was observed that the Contractor complied with the intended aims of the mitigation measures. For example, construction activities were not conducted and materials storage were not placed outside of the working site boundary. The Contractor was advised to improve and maintain the tree protection zone.

The Contractor was advised to maintain the tidiness and carry out regular weeding in the tree protection zone.

7 Waste Management

7.1 Record of Waste Quantities

The quantity of waste for disposal in this Reporting Period is summarized in **Table 6** and **Table 7**.

Table 6: Summary of Quantities of Inert C&D Materials

Type of Waste	Quantity (tonne)		
	Total Generated C&D Materials	Total Disposal as Public Fill	Total Reused
December 2017	5881.38	3970.50	1910.88

8 Site Inspection

8.1 Inspection Findings

In the Reporting Period, joint site inspections were undertaken by the PMR, ET and the Contractor on 1, 8, 15, 22 and 29 December 2017, and 5, 12, 19 and 26 January 2018 as well as 2, 9, 15 and 23 February 2018. Furthermore, site inspection and audit were performed by the IEC on 15 December 2017, 12 January and 15 February 2018. During the site inspections, non-compliance was not observed by ET and IEC. The site observations for the Reporting Period is summarized in **Table 8**.

Table 8: Site Observations of the Project

Reporting Period	Findings / Deficiencies
December 2017	<ul style="list-style-type: none"> ● Broken water barrier should be replaced to avoid mosquito breeding. ● Drip tray should be provided for chemical container to prevent potential leakage. ● Water spraying should be increased in the south plant room. ● Stagnant water should be cleared in the south plant room. ● Dust control measures should be enforced during the material transfer. ● Dust control measures should be enforced in EVA and rising main. ● Maintain site cleanliness and tidiness should be undertaken especially in clothes drying area and building inside. ● Muddy trail at EVA was observed, the contractor was reminded to clear it properly and ensure no surface runoff to the drainage nearby.
January 2018	<ul style="list-style-type: none"> ● Muddy trail at EVA was observed, the contractor was reminded to clear properly. ● Oil stain at EVA was observed, the contractor was reminded to clear and ensure no accidental spillage. ● Drip tray should be provided for chemical container to prevent chemical leakage at L3, Level 3. ● Stagnant water should be cleared to maintain tidiness in L3, Level 1.
February 2018	<ul style="list-style-type: none"> ● Water accumulated in drip tray under the electric generator at the EVA and under chemical containers near Tower Crane 2 (TC2) should be cleared. ● Oil stains observed at core zero should be cleared. ● Drip tray should be provided for chemical container. ● Appropriate chemical labels and drip trays should be provided for chemical containers at EVA and Zone B haul road. ● Open slope and stockpile should be covered before holiday.

Reporting Period	Findings / Deficiencies
	<ul style="list-style-type: none"><li data-bbox="716 309 1208 361">● Contractor is reminded to remove stagnant water regularly to avoid mosquito breeding.<li data-bbox="716 368 1232 417">● Stagnant water at south transformer room in Area B should be cleared to prevent mosquito breeding.

9 Summary of Environmental Quality Performance Limits

9.1 Record on Non-compliance of Action and Limit Levels

No exceedances of Action level or Limit levels were observed for construction noise during the Reporting Period.

9.2 Record on Environmental Complaints Received

No environmental complaints were received during the Reporting Period.

10 Implementation Status of Mitigation Measures

10.1 General Requirements

The environmental mitigation measures that were recommended in the Implementation Schedule for Environmental Mitigation Measures in the approved EM&A Manual covered the issues of dust, noise, water and waste and are presented in **Appendix H**.

Environmental mitigation measures generally implemented by the contractor are listed in **Table 9**.

Table 9: Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Construction Noise	<ul style="list-style-type: none"> • Construction equipment is shut down when not in use
Ecology	<ul style="list-style-type: none"> • Wire fencing was provided for temporary protection of the identified flora species of conservation concern • Site inspection of the flora species of conservation and the Ardeid breeding and nesting activities was undertaken
Landscape & Visual	<ul style="list-style-type: none"> • Good site management
Air Quality	<ul style="list-style-type: none"> • Good site management to reduce air quality impact • Main temporary access road paved with concrete • Prior to any loading or transfer operation, all dusty materials were sprayed with water to keep them wet • All debris had been covered entirely by impervious sheeting • Before debris was dumped into a chute, water was sprayed onto the debris to make them wet • Vehicles were covered with tarpaulin during transport of dusty materials • When vehicles were leaving the construction site, any vehicles loaded with dusty materials were covered with clean impervious sheeting to prevent fugitive dusty material emission • The speed of the trucks passing site areas was controlled to below 10 km/hour • Water spraying was provided for soil-nailing work
Water Quality	<ul style="list-style-type: none"> • Portable chemical toilets were provided on site • A licensed collector has been employed to collect effluent and off-site dispose.
Waste and Chemical Management	<ul style="list-style-type: none"> • A temporary container located far away from sea shore and drainage channel was provided for chemical materials and waste storage • Drip tray was provided for chemical materials at the working areas

Issues	Environmental Mitigation Measures
General	<ul style="list-style-type: none">● Waste skip was provided for general refuse disposal● The site was generally kept tidy and clean

11 Conclusions and Recommendations

11.1 Conclusions

The EM&A programme as recommended in the EM&A manual has been undertaken in the Reporting Period.

Monitoring of construction noise, ecology, landscape and visual, as well as waste management for the Project were conducted as scheduled in the Reporting Period. Data collected during construction noise monitoring were checked against the established Action and Limit levels and no exceedances were recorded.

For ecological monitoring, the implementation of the mitigation measures for the plant species of conservation interest, i.e., erecting of temporary protective fencing and sign post during the Reporting Period was noted. Wilting was observed on *Platycodon grandiflorus*, the stem wilting after flowering is part of the natural life cycle of this perennial herbaceous species, and new shoots would expect to emerge from the underground part in the next growing season.

Roosting activities of ardeids were not observed within the project area during the monitoring.

For landscape and visual monitoring, the Contractor was advised to maintain the tidiness, carry out regular weeding in the tree protection zone.

11.2 Recommendations

With considerations on the construction activities and environment, the following reminders and recommendations were provided:

- Dust mitigation measures for potential fugitive dust impact should be implemented in dry season.
- Noise mitigation measures, including the use of quiet plants, should be implemented in accordance with the EM&A requirement.
- Close monitoring of *Platycodon grandiflorus* will be necessary to track their condition.
- Cleanliness and tidiness in construction site should be enhanced.

Appendix C. Implementation Schedule for Environmental Mitigation Measures

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Stage ¹					Relevant Legislation & Guidelines
				Des	Con	Op	Dec		
Cat.:1 Key/specifc proposed mitigation measure									
Noise Impact (Construction)									
5.7	3.2	Selecting Quiet Plant The actual SWL of quiet plant is less than the value specified in GW-TM for the same piece of equipment. It should be noted that the silenced PME taken from EPD's Quality Powered Mechanical Equipment (QPME) Inventory.	Within Project area / Duration of the construction phase / Prior to commencement of operation	Contractor appointed by OPC	✓			EIAO and Noise Control Ordinance	
5.7	3.2	Use of Movable Barriers Movable noise barriers can be very effective in screening noise from particular items of plant when constructing the Project. Noise barriers located along the active works area close to the noise generating component of a PME could produce at least 10 dB(A) screening for stationary plant and 5 dB(A) for mobile plant provided that the direct line of sight between the PME and the NSRs is blocked.	Within Project area / Duration of the construction phase / Prior to commencement of operation	Contractor appointed by OPC	✓			EIAO and Noise Control Ordinance	
Ecological Impact									
10.7	8.3	Inspection of Active Ardeid Nest Prior to site clearance works at the planting area abandoned for ardeid breeding, the area around the boundary of the ardeids roosting site as indicatively shown in Figure 8.1 should be inspected to confirm no active ardeid nest is present. If any active ardeid nest is observed, suitably sized buffer area should be established to avoid human or machinery disturbance until the nest is abandoned.	Indicative boundary of the ardeids roosting site within Project construction site (location indicated in Figure 8.1) / For once / Before site clearance	Qualified ecologist appointed by OPC	✓			EIAO-TM; HK Ordinance Cap. 170	
10.7	8.3	Inspection of Short-nosed Fruit Bat As precautionary measure, prior to any proposed arboricultural works of the trees (particularly the Chinese Fan-palms), daytime	Project construction site / For once / Before arboricultural works of	ET appointed by OPC	✓	✓		EIAO-TM; HK Ordinance Cap. 170

				Des	Con	Op	Dec	Relevant Legislation & Guidelines	
		<p>roads, particularly during dry weather.</p> <ul style="list-style-type: none"> ▪ Covering 80% of stockpiling area by impervious sheets and spraying all dusty material with water immediately prior to any loading transfer operations to keep the dusty materials wet during material handling at the stockpile areas <p>Relevant dust control practices as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted:</p> <p>Good Site Management</p> <ul style="list-style-type: none"> ▪ Good site management is important to help reduce potential air quality impact down to an acceptable level. As a general guide, the Contractor should maintain high standards of housekeeping to prevent emissions of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission. Any piles of materials accumulated on or around the work areas should be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimising generation of fugitive dust emissions. The material should be handled properly to prevent fugitive dust emission before cleaning. <p>Disturbed Parts of the Roads</p> <ul style="list-style-type: none"> ▪ Main temporary access points should be paved with concrete, bituminous hardcore materials or metal plates and be kept clear of dusty materials; or ▪ Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet. <p>Exposed Earth</p> <ul style="list-style-type: none"> ▪ Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies. <p>Loading, Unloading or Transfer of Dusty Materials</p> <ul style="list-style-type: none"> ▪ All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as 							

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Stage ¹					Relevant Legislation & Guidelines
				Implementation Agent	Des	Con	Op	Dec	
5.7	3.2	Good Site Practice Good site practice and noise management can significantly reduce the impact of construction site activities on nearby NSRs. <ul style="list-style-type: none">▪ only well-maintained plant to be operated on-site and plant should be serviced regularly during the construction works;▪ machines and plant that may be in intermittent use to be shut down between work periods or should be throttled down to a minimum;▪ plant known to emit noise strongly in one direction, should, where possible, be orientated to direct noise away from the NSRs;▪ mobile plant should be sited as far away from NSRs as possible; and▪ material stockpiles and other structures to be effectively utilised, where practicable, to screen noise from on-site construction activities.	Project construction site / Duration of the construction phase / Prior to commencement of operation	Contractor appointed by OPC	✓			EIAO and Noise Control Ordinance	
5.7	3.3.2	Noise Impact (Operation) Fixed Plant Noise With the adoption of the proposed maximum allowable SWLs, all representative NSRs is expected to comply with the relevant noise criteria for the daytime and evening time periods. No adverse fixed plant noise impact is anticipated. It is also recommended that the following noise reduction measures should be considered as far as practicable during design stage: <ul style="list-style-type: none">▪ choose quiet plant such as those which have been effectively silenced;▪ include noise levels specification when ordering new plant (including chiller and E&M equipment);▪ locate fixed plant / louvre away from any NSRs as far as practicable;▪ locate fixed plant in walled plant rooms or in specially designed enclosures;▪ locate noisy machine in a basement or a completely separate building;	Within Project area / Prior to operation phase / Duration of the operation phase / Throughout operation phase	Design Architect / Contractor appointed by OPC	✓	✓	✓	EIAO and Noise Control Ordinance	

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Stage ¹					
				Implementation Agent	Des	Con	Op	Dec	Relevant Legislation & Guidelines
		<ul style="list-style-type: none"> ▪ install direct noise mitigation measures including silencers, acoustic louvres and acoustic enclosure where necessary, and ▪ develop and implement a regularly scheduled plant maintenance programme so that equipment is properly operated and serviced in order to maintain a controlled level of noise. <p>Prior to the operation of the Project, noise commissioning tests for all major fixed noise sources should be conducted.</p>							EIAO and Noise Control Ordinance
5.7	3.3.2	<p>Open Air Entertainment Noise</p> <p>With the adoption of the proposed maximum allowable SWILs, all representative NSRs is expected to comply with the relevant noise criteria for the daytime and evening periods, the following measures should be considered as far as practicable during stage:</p> <ul style="list-style-type: none"> ▪ use small clusters of small power loudspeakers rather than a few large power loudspeakers; and ▪ loudspeakers should be pointed away from nearby NSRs. 	Within Project area / Duration of the operation phase / Throughout operation phase	Design Architect / Contractor appointed by OPC	✓	✓			EIAO and Noise Control Ordinance
6.7	4.2	<p>Water Quality Impact (Construction)</p> <p>Construction Site Runoff</p> <p>The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and erosion. The following measures are recommended to protect water quality of the inland areas:</p> <ul style="list-style-type: none"> ▪ At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels, earth bunds or sand bag barriers should be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractors prior to the commencement of construction; ▪ Sand/ silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in 	Project construction site / Duration of the construction phase	Contractor appointed by OPC		✓			EIAO-TM; ProPECC Note PN 1/94; WPCO; TM-DSS

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Stage ¹					
				Des	Con	Op	Dec	Relevant Legislation & Guidelines	
		<p>Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractors prior to the commencement of construction;</p> <ul style="list-style-type: none"> ▪ All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times; ▪ Measures should be taken to minimise the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from site formation excavations should be discharged into storm drains via silt removal facilities; ▪ All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfill toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains; ▪ Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system; ▪ Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers; ▪ Precautions should be taken at any time of the year when 							

EIA Ref.	EM&A Log Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Stage ¹					
				Des	Con	Op	Dec	Relevant Legislation & Guidelines	
		<ul style="list-style-type: none"> rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarised in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes; and, Bentonite slurries used on site should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries. <p>The Contractor would be required to obtain a license from EPD under the WPCO for discharge to the public drainage system or the marine environment. Construction site discharge should be collected by the temporary drainage system installed by the Contractor and treated or desilted on-site to fulfil the WPCO discharge licence requirements before discharge.</p>						EIAO-TM; ProPECC Note PN 1/94	
6.7	4.2	<p>General Construction Activities</p> <p>Best Management Practices (BMPs) should be implemented at the construction site, including proper handling, sorting and storage of construction solid waste, debris and refuse generated on-site prior to disposal. Stockpiles of cement and other construction materials should be kept covered when not being used. The Contractor should also follow the guidelines set in the "Pesticides Used for Outdoor Mosquito Control", published by AFCD in 2010, for mosquito control on site.</p>	Project construction site / Duration of the construction phase	Contractor appointed by OPC	✓				
6.7	4.2	<p>Expansion of Existing Storm U-Channel</p> <p>Guidelines and measures summarised in ProPECC PN 1/94 for trenching activities should be implemented.</p>	Project construction site / Duration of the construction phase	Contractor appointed by OPC	✓			ProPECC Note PN 1/94

				Des	Con	Op	Dec	Con	Op	
		covered by a tarpaulin or other means, as far as practicable. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Measures will be taken to minimise water ingress into the excavation. Diverting any water from the excavated areas to on-site wastewater treatment facilities for treatment prior to discharge should also be performed. Other measures that need to be implemented before, during and after rainstorms are summarised in ProPECC PN 1/94.								
6.7	4.2	Construction of Sewage Sump Pit and Rising Mains Measures for excavation works summarised for site formation works should also be implemented during construction of the sewage sump pit. During the laying of rising mains, guidelines and measures summarised in ProPECC PN 1/94 for trenching activities should be performed. Concrete water generated from the construction of the concrete support should be collected and treated with the wastewater treatment facilities prior to discharge.	Project construction site / Duration of the construction phase	Contractor appointed by OPC		✓				ProPECC Note PN 1/94
6.7	4.2	Accidental Spillage The Contractor should register as a chemical waste producer if chemical wastes are produced from construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and compiled with for control of chemical wastes. This will prevent contamination of top soil and water pollution due to construction site runoff. Maintenance of vehicles and equipment, involving activities with potential for leakage and spillage, should only be undertaken within areas appropriately equipped to control these discharges. Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby storm water drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event. Table 12.14 (OP01)	Table 9.2 (OP01)	Sensitive Design and Disposition All proposed hard structures should be sensitively designed in a manner that responds to the existing and planned landscape context, and minimises potential adverse landscape and visual impacts. The structural design should seek to reduce the apparent visual mass through the use of natural materials such as wooden frame and semi-transparent panels. Subdued tones should be considered for the colour palette with non-reflective finishes to reduce glare effect. Site specific measures, such as the disposition of the key structures closer to the northern slopes, the design of building forms as extension along the existing slope topography, the use of concave roof form and the location of ride platforms on or near the slopes to minimise structural support, should also be considered for better integration with the surroundings and minimisation of potential visual impacts.	Project buildings / During design stage / Throughout operation phase	Design Architect / Contractor appointed by OPC	✓		✓	EIAO-TM
Table 12.14 (OP03)	Table 9.2 (OP03)	Enhancement Planting Other than compensatory tree planting, additional trees, shrubs, groundcovers and lawn should also be considered to maximise greening within the redevelopment area.	Project area / During design stage / Throughout operation phase	Design Architect / Contractor appointed by OPC	✓		✓	EIAO-TM
Table 12.14 (OP06)	Table 9.2 (OP06)	Responsive Lighting Design Overall lighting design would carefully consider a reasonable level of functional and thematic lighting with due consideration of possible light pollution and night-time glare to the surroundings. Consideration shall be made by the lighting designers to the following measures: <ul style="list-style-type: none">▪ Lighting shall be designed with due consideration of mounting height and direction of light fixtures so as not to point directly towards any sensitive receiver.▪ Lighting shall be arranged with due consideration of reflectance so as to avoid glare effect.▪ Lighting shall be regularly monitored during operation.▪ Lights located adjacent or in proximity to neighbours shall be carefully designed to prevent possible light intrusion.▪ Lighting operation schedule shall specify only lights necessary for security to be left on after business hours.▪ Paving materials should be selected as necessary to reduce	Project area / During design stage / Throughout operation phase	Design Architect / Contractor appointed by OPC	✓		✓	EIAO-TM
