1 INTRODUCTION

1.1 Background

- 1.1.1 The Shatin to Central Link (SCL) is a 17 km extension of the existing Ma On Shan Line (MOL) and East Rail Line (EAL) comprising (i) The East-West Corridor which extends the MOL from Tai Wai to Hung Hom via East Kowloon to connect with the West Rail Line (WRL) at Hung Hom Station (HUH) and Stabling Sidings at Hung Hom Freight Yard (HHS); and (ii) The North-South Corridor which is an extension of the East Rail Line (EAL) at Hung Hom across the harbour to Admiralty Station (ADM).
- 1.1.2 Shatin to Central Link Hung Hom to Admiralty Section [SCL (HUH ADM)] (hereafter referred to as "the Project") is part of the SCL.
- 1.1.3 The Environmental Impact Assessment (EIA) Report for SCL (HUH-ADM) (Register No.: AEIAR-166/2012) was approved on 17 February 2012 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) (EP No.: EP-436/2012) was granted on 22 March 2012 for construction and operation. Variations of environmental permit (VEP) was subsequently applied for EP-436/2012 and the latest Environmental Permit (EP No: EP-436/2012/F) was issued by Director of Environmental Protection (DEP) on 23 January 2019.

1.2 Project Programme

1.2.1 Eight civil construction works contracts of the Project have been awarded since January 2014. The construction of the Project commenced in May 2014 and is expected to complete in 2021¹. The Project will have to interface with other infrastructure projects, including Wan Chai Development Phase II and Central-Wan Chai Bypass. **Table 1.1** summarises the information of the awarded Works Contracts.

| able 1.1 Summary of Awarded Works Contracts | | | | | |
|---|--|----------------------------|--|--|--|
| Works Contract | Description | Construction Start Date | Contractor | Environmental Team | |
| 1121 ⁽¹⁾ | NSL Cross Harbour Tunnels | March 2015 | Penta-Ocean – China State JV | Wellab Limited | |
| 1122 ⁽²⁾ | Admiralty South Overrun Tunnel | August 2016 | Vinci Construction Grands Projects | AECOM Asia Co. Ltd. | |
| 1123 | Exhibition Station and Western Approach Tunnels | June 2015 | Leighton – China State JV | AECOM Asia Co. Ltd. | |
| 1124 | Admiralty SCL Related Works | February 2017 | Build King SCL 1124 JV | Action-United Environmental Services and Consulting (AUES) | |
| 1126 ⁽³⁾ | Reprovisioning of Harbour Road Sports Centre and Wan Chai Swimming Pool | July 2014 | Kaden Leader JV | Cinotech Consultants Ltd. (Cinotech) | |
| 1128 | South Ventilation Building to Admiralty Tunnels | November 2014 | Dragages Bouygues J.V. | AECOM Asia Co. Ltd. | |
| 1129 ⁽⁴⁾ | SCL – Advance Works for NSL | May 2014 | Hsin Chong Construction Co. Ltd. | AECOM Asia Co. Ltd. | |

 Table 1.1
 Summary of Awarded Works Contracts

¹ The commissioning date of SCL(HUH-ADM) will very likely be deferred to 2021 to allow flexibility for the topside development of the Exhibition Station, and to cater for the construction works under other infrastructure projects on Hong Kong Island.

| Works Contract | Description | Start Date | | Environmental Team |
|----------------------|--|------------|--|--|
| 11227 ⁽⁵⁾ | Advance Works for NSL Cross Harbour Tunnels August 2014 | | Concentric-Hong Kong River Joint Venture | Cinotech Consultants Ltd. (Cinotech) |

Note:

(1) The environmental team of Works Contract 1121 was taken over by Wellab Limited since 1 January 2019.

(2) Construction works under Works Contract 1122 were substantially completed since 10 November 2020 and the EM&A programme of the Project was terminated on 12 December 2020.

(3) Construction works under Works Contract 1126 was completed on 17 May 2015.

(4) Construction works under Works Contract 1129 was completed on 20 July 2015.

(5) Construction works in Victoria Harbour and Shek O Casting Basin under Works Contract 11227 were completed on 15 and 20 December 2014 respectively.

1.3 Purpose of the Report

1.3.1 The Environmental Monitoring and Audit (EM&A) programme for the Project commenced in May 2014. This is the eighty-second EM&A Report for the Project which summarises the EM&A works undertaken by the respective Contractor's ETs during the period from 1 to 28 February 2021.

2 ENVIRONMENTAL MONITORING AND AUDIT

2.1 **EM&A Results**

- 2.1.1 The EM&A Report for Works Contracts 1128, 1121, 1123 and 1124 prepared by the respective Contractor's ETs are provided in Appendices A to D respectively. The EM&A Reports provide details of the project information, EM&A requirements, impact monitoring and audit results for the corresponding Contracts.
- A summary of the major construction activities undertaken by the respective Contractors of 2.1.2 various Works Contracts during the reporting period are presented in Table 2.1.

| | Summary of Major Construction Activities in the Reporting Period | | | | |
|-------------------|---|---|--|--|--|
| Works Contract | Site | Construction Activities | | | |
| 1121 | Hung Hom & Victoria Harbour | Internal Finishes and Defect Remedial Works at NOV at Hung Hom; Access Shaft Closing (Up Track) and Backfilling at Up and Down Track; Waterproofing Work at Roof Slab (Previous Shaft Opening at Up Track); Re-provision of Finger Pier and Reinstatement Work at Hung Hom; and IMT Internal Fit Out Works. | | | |
| | Zone 1 – PTI Area | Waterproofing and Backfill above Roof Slab; Station ABWF; and Entrance B – Structure. | | | |
| | Zone 2 | Above Ground Structure; Station ABWF; and Entrance A – Structure. | | | |
| 1123 | Zone 3 – Swimming Pool Area (including W4, W5, partial W6, W7a and W7b) | Above Ground Structure; andStation ABWF. | | | |
| | Zone 4 – Tunnel at Tonnochy Road | Station ABWF; WCSG Reprovision Works-Storeroom and Pump Room Structure; and WCSG - Pile Removal. | | | |
| | Fleming Road Junction - Area E | Backfill. | | | |
| | Western Vent Shaft and WAT - Area C | Backfill (Include Mass Concrete Fill); WVS ABWF; and External Drainage Works. | | | |
| | WAT - Area B | Backfill; andBreakthrough with 1128 Interface. | | | |
| | WAT - Area A | Backfill. | | | |
| | Area W22 | Material Storage. | | | |
| 1124 | New Admiralty Station | Civil & ABWF Works Site Clearance and Defect Rectification; T&C for Smoke Vent; Installation of Smoke Curtain; Installation of Fire Shutter and Signage; ABWF Testing and Commissioning Works; Removal of Covered Walkway; Excavation for External Drainage along Harcourt Road; and Skylight Installation of Glazing Works and Weathertight. BS Works BS T&C and FSD Pre-Inspection. | | | |
| 1128 | Area W2 | External Works;Drainage Installation; | | | |

Table 2.1 Summary of Major Construction Activities in the Reporting Period

| | Alea wo | ELS Installation; | | |
| | | Backfilling; and | | |
| | | Crawler Crane Dismantlement. | | |

2.1.3 During the reporting month, impact monitoring for air quality and construction noise were conducted in accordance with the EM&A Manual. No impact and post water quality monitorings were conducted in the reporting period. Details could be referred to **Table 2.4** and the respective Monthly EM&A Report. Continuous noise monitoring was not required in the reporting period according to the Continuous Noise Monitoring Plan (CNMP). No exceedances of the Action / Limit Level of 24-hour TSP and construction noise due to the Project construction were recorded. Results of air quality and construction noise are summarised in **Tables 2.2** and **2.3** respectively. Details of the monitoring requirements, locations, equipment and methodology are presented in the EM&A Reports (**Appendices A** to **D**).

| Table 2.2 | Summary of 24-Hour TSP Monitoring Results in the Reporting Period |
|-----------|---|
| | ourinnary of 24-mourinor monitoring Results in the Reporting remote |

| Monitoring Station ID | Location | TSP Concentration (µg/m³) | Action Level (μg/m³) | Limit Level (µg/m³) | Exceedance due to the Project Construction (Yes/No) | |
|------------------------------------|--|---------------------------------|----------------------------|------------------------|---|--|
| Works Contrac | ct 1121 | | | | | |
| AM1 | Harbourfront Horizon ⁽¹⁾⁽²⁾ | 16.7 – 56.9 | 182 | 260 | No | |
| Works Contract 1123 ⁽⁴⁾ | | | | | | |
| Works Contract 1124 ⁽³⁾ | | | | | | |
| Works Contract 1123 and 1128 | | | | | | |
| AM2 | Wan Chai Sports Ground ⁽⁵⁾⁽⁶⁾ | 13.4 – 72.9 | 160 | 260 | No | |
| Works Contract 1128 | | | | | | |
| AM4 | Pedestrian Plaza | 29.4 – 121.8 | 198 | 260 | No | |

Note:

(1) Dust monitoring at AM1 (Harbourfront Horizon) was handed over to Works Contract 1121 from Works Contract 1112 in November 2020.

Since the access to Harbourfront Horizon was rejected, the monitoring would be conducted at the alternative location, which is within the site boundary of Finger Pier adjacent to Harbourfront Horizon.
 No TSP monitoring is required under this works contract.

 (4) Dust monitoring at AM3 (Existing Harbour Road Sports Centre) was handed over from Works Contract 1126 to Works Contract 1123 in June 2015 and terminated on 6 May 2017 as demolition of Existing Harbour Road Sports Centre commenced on 8 May 2017.

(5) The spectator stand at Wan Chai Sports Ground was not available for impact dust monitoring, therefore impact monitoring was conducted at the existing water pump room area at Wan Chai Sports Ground.

(6) Dust monitoring at AM2 (Wan Chai Sports Ground) was handed over to Works Contract 1123 from Works Contract 1128 on 28 October 2015.

MTR Corporation Limited

Table 2.3 Summary of Construction Noise Monitoring Results in the Reporting Dariad

| | | Noise Level (L _{Aeq} ,30mins, dB(A)) | | | | Exceedance |
|------------------------------------|---------------------------|---|----------|--------------------------|---------------------------|---|
| Monitoring Station ID | Location | Measured | Baseline | Corrected ⁽¹⁾ | Limit Level (dB(A)) | due to the Project Construction (Yes/No) |
| Works Cont | tract 1121 ⁽²⁾ | | | | | |
| Works Cont | tract 1123 | | | | | |
| NM2 ⁽³⁾⁽⁴⁾⁽⁵⁾ | Harbour Centre | 61.3 – 67.9 | 69.6 | < Baseline | 75 | No |
| Works Contract 1124 ⁽²⁾ | | | | | | |
| Work Contract 1128 ⁽⁶⁾ | | | | | | |
| NM1 ⁽⁷⁾ | Hoi Kung Court | 62.4 – 69.7 | 71.0 | < Baseline | 75 | No |

The measured noise levels are corrected against the corresponding baseline noise levels. (1)

No construction noise monitoring is required under this works contract. (2)

The impact monitoring at NM2 was handed over from Works Contract 1126 to Works Contract 1123 in June 2015. (3)Access to the designated monitoring location NM2 (i.e. Block A, Causeway Centre) was denied before the (4) commencement of impact monitoring under Works Contract 1126. Alternative noise monitoring location proposed at Harbour Centre was approved by the ER and agreed by IEC. It was approved by EPD on 18 December 2017. Impact noise monitoring was carried out at Harbour Centre from 20 August 2014 onwards.

(5) Impact noise monitoring has been carrying out on 7/F of Harbour Centre between 20 August and 15 December 2014, and on 8/F from 19 December 2014 onwards.

Noise monitoring at NM1 (Hoi Kung Court) was handed over from Works Contract 1129 to Works Contract 1128 (6)in August 2015.

Table 2.4 Summary of Impact Marine Water Quality Monitoring Results in the Reporting Period ⁽¹⁾

| | Parameters | | | |
|---------------------------------------|--|-----------------------------------|--|--|
| Locations | Depth-averaged Dissolved Oxygen (mg/L) | Depth-averaged Turbidity (NTU) | Depth-averaged Suspended Solids (mg/L) | |
| Shek O Casting Basin ⁽²⁾ | | | | |
| Victoria Harbour ⁽³⁾⁽⁴⁾⁽⁵⁾ | | | | |

Notes:

- (1) Marine water quality monitoring was conducted in the reporting period under Works Contract 1121.
- Removal of earth bunds at Shek O Casting Basin under Works Contract 1121 commenced on 17 March 2017 and (2)the removal of dock gate at Shek O Casting Basin was completed on 30 April 2017. Removal of southern dock gate at Shek O under Works Contract 1121 commenced on 8 November 2017 and was completed on 20 November 2017. A post-project water quality monitoring was hence conducted from 22 November 2017 to 18 December 2017 according to Section 9.25 of the EM&A Manual.
- Dredging / filling works within the Victoria Harbour commenced on 22 April 2015. Water Quality Monitoring at (3) Station 8 and 14 is suspended as these water intakes are not in use.
- All marine works within Causeway Bay Typhoon Shelter (i.e. Station 9) was completed in June 2019. According (4) to the EM&A Manual under Works Contract 1121, a post-project marine water quality monitoring was commenced on 2 July 2019 and completed on 26 July 2019.
- The dredging / filling operation in Victoria Harbour has been completed on 31 December 2019. No water guality monitoring was carried out in Victoria Harbour during the reporting month. According to the EM&A Manual under Works Contract 1121, a post-project marine water quality monitoring at station C1, C2, 21, 34, A, WSD 9 and WSD 17 was commenced on 2 January 2020 and completed on 28 January 2020.
- 2.1.4 One (1) Limit Level exceedance at monitoring location AM4 was recorded in the previous reporting month (on 11 January 2021). Based on the investigation, there was no adequate information to conclude the recorded Limit level exceedance was related to the Project-related construction works. Dust mitigation measures have been implementing for lower the possibility of further exceedance. No further Action / Limit Level exceedance was recorded at AM4.

2.1.5 No environmental complaints, notification of summons and successful prosecutions were recorded in the reporting period. Log for environmental complaints, notification of summons and successful prosecutions is provided in **Table 2.5**.

 Table 2.5
 Log for Environmental Complaints, Notification of Summons and Successful Prosecutions for the Reporting Month

| Works Contract | Environmental Complaints | Notification of Summons | Successful Prosecutions |
|-------------------|-----------------------------|----------------------------|----------------------------|
| 1121 | 0 | 0 | 0 |
| 1123 | 0 | 0 | 0 |
| 1124 | 0 | 0 | 0 |
| 1128 | 0 | 0 | 0 |

2.1.6 Regular site inspections were conducted by the Contractor's ET on a weekly basis to check the implementation of environmental pollution control and mitigation measures for the Project. No non-conformance was identified in the reporting period.

3 IMPLEMENTATION STATUS ON THE ENVIRONMENTAL PROTECTION REQUIREMENTS

3.1.1 The respective Contractors have implemented all mitigation measures and requirements as stated in the EIA Report, EM&A Manual and EP (EP-436/2012/F). The status of required submissions under the EP as of the reporting period are summarised in **Table 3.1**.

| EP Condition (EP-436/2012/F) | Submission | Submission date |
|---------------------------------|--|--|
| Condition 1.11 | Notification of Commencement Date of Construction of the Project | 19 Dec 2012 |
| Condition 2.3 | Notification of Setup of Community Liaison Group | 22 Jun 2016 |

EXECUTIVE SUMMARY

Shatin to Central Link Contract 1128 – South Ventilation Building (SOV) to Admiralty Tunnels (hereafter called "the Project") covers part of the construction of the Shatin to Central Link (SCL).

The Project comprises the Permanent Works and the associated temporary works necessary for TBM tunnels between SOV and Admiralty Tunnels, short sections of cut and cover tunnels near SOV and Fenwick Pier Emergency Egress Point (FPP), Re-provisioning, Remedial and Improvement Works (RRIW) for government and public bodies facilities.

The EM&A programme commenced on 17 November 2014. The impact EM&A for the Project includes air quality and noise monitoring.

This report documents the findings of EM&A works conducted in the period between 1 and 28 February 2021. As informed by the Contractor, major activities in the reporting period were:

| Location | Site Activities |
|------------------------------------|-----------------------------|
| Area W2 POC Building | External Works |
| | Drainage Installation |
| | • E&M |
| | ABWF |
| Area W2 SOV Building | External Works |
| Area W4 – Canal Rd. Box Culvert | Reinstatement of TARG |
| Area W8 (Area 1) | Backfilling work |
| Area W8 (Area 2) | ELS Installation |
| | Backfilling |
| | Crawler Crane Dismantlement |

Breaches of Action and Limit Levels for Air Quality

No exceedance of Action / Limit Level of air quality was recorded in the reporting month.

One (1) Limit Level exceedances at monitoring location AM4 was recorded in the previous reporting month (on 11 January 2021). Based on the investigation, there was no adequate information to conclude the recorded Limit level exceedance was related to the Project-related construction works. Dust mitigation measures have been implementing for lower the possibility of further exceedance. No further Action/Limit Level exceedance was recorded at AM4.

Breaches of Action and Limit Levels for Noise

No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.

No exceedance of Limit Level of noise was recorded in the reporting month.

Breaches of Action and Limit Levels for Water Quality

The monitoring results will be reported in the monthly EM&A Report prepared for Contract SCL1121, if any.

Complaint, Notification of Summons and Successful Prosecution

No environmental related complaint, notification of summons and successful prosecution was received in the reporting month. The summary and cumulative statistics on environmental complaints is provided in **Appendix J**.

Reporting Changes

There was no reporting change in the reporting month.

Future Key Issues

Key issues to be considered in the coming month included:

| Location | Site Activities |
|------------------------|-----------------------|
| Area W2 - POC Building | External Works |
| | Drainage Installation |
| | • E&M |
| | ABWF |
| Area W2 - SOV Building | ABWF |
| Area W4 – Canal Rd. | Reinstatement of TARG |
| Box Culvert | |
| Area W8 | Reinstatemnet Works |
| | EEP external Works |

Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

1 INTRODUCTION

Dragages Bouygues J.V. (JV) was commissioned by MTR as the Civil Contractor for Works Contract 1128. AECOM Asia Company Limited (AECOM) was appointed by JV as the Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the Project.

1.1 Purpose of the Report

1.1.1 This is the seventy-sixth monthly EM&A Report which summaries the impact monitoring results and audit findings for the Project during the reporting period between 1 and 28 February 2021.

1.2 Report Structure

- 1.2.1 This monthly EM&A Report is organized as follows:
 - Section 1: Introduction
 - Section 2: Project Information
 - Section 3: Environmental Monitoring Requirement
 - Section 4: Implementation Status of Environmental Mitigation Measures
 - Section 5: Monitoring Results
 - Section 6: Environmental Site Inspection and Audit
 - Section 7: Environmental Non-conformance
 - Section 8: Future Key Issues
 - Section 9: Conclusions and Recommendations

2 **PROJECT INFORMATION**

2.1 Background

- 2.1.1 The Shatin to Central Link (SCL) is a 17km extension of the existing Ma On Shan Line (MOL) and East Rail Line (EAL) comprising (i) The East-West Corridor which extends the MOL from Tai Wai via East Kowloon to connect with the West Rail Line (WRL) at Hung Hom Station (HUH); and (ii) The North-South Corridor which is an extension of the East Rail Line (EAL) at Hung Hom across the harbour to Admiralty Station (ADM).
- 2.1.2 The Environmental Impact Assessment (EIA) Reports for SCL Hung Hom to Admiralty Section [SCL (HUH-ADM)] (Register No.: AEIAR-166/2012) was approved on 17 February 2012 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) was granted on 22 March 2012, which covers SCL (HUH-ADM) EP No.: EP-436/2012), for the construction and operation. Variation of EP (VEP) was subsequently applied and the latest EP (EP No. EP-436/2012/F) was issued by the Director of Environmental Protection (DEP) on 23 January 2019.
- 2.1.3 The construction of the SCL is divided into different civil construction works contracts and the Project comprises the Permanent Works and the associated temporary works necessary for TBM tunnels between SOV and Admiralty Tunnels, short sections of cut and cover tunnels near SOV and Fenwick Pier Emergency Egress Point (FPP), Re-provisioning, Remedial and Improvement Works (RRIW) for government and public bodies facilities under the EP.
- 2.1.4 The site layout plan of the Project is shown in **Figure 1.1**.

2.2 Site Description

- 2.2.1 The major construction activities under Works Contract 1128 include:
 - Taking over the 160m section of the SCL tunnels (ME4 Tunnel) constructed under the Central Wan Chai Bypass (CWB) project and construction of walkways, sealing, connection and various finishing works inside the tunnels;
 - (b) Construction of cut and cover tunnels connecting from South Ventilation Building (SOV) to the ME4 Tunnel;
 - (c) Removal of temporary reclamation and reinstatement of seawall;
 - (d) Construction of SOV;
 - (e) Bored tunnels between SOV and Exhibition Station (EXH);
 - (f) Construction of cut and cover tunnels connecting from the SCL tunnels under Convention Avenue by Contract 1123 to the bored tunnels as stated in sub-clause
 - (g) Construction of Fenwick Pier Emergency Egress Point (FPP);
 - (h) Bored tunnels between Fenwick Pier Emergency Egress Point (FPP) and Admiralty Station (ADM);
 - (i) Pile/obstruction detections and removals for construction of SCL running tunnels and for future North Island Line (NIL) running tunnels;
 - (j) Demolition of existing Police Officer's Club (POC);
 - (k) Reprovisioning of new POC;
 - (I) Other RRIW;
 - (m) Essential piling works at future Government, Institution and Community (GIC) site
 - (n) Diversion and modification of utilities and services;
 - (0) Modification, re-provisioning or reinstatement of footpath, carriageway or road features;
 - (p) Provisions for Designated and Interfacing Contracts;
 - (q) Tree felling, tree compensation, transplanting works and landscaping works;
 - (r) Permanent reprovisioning works at the Fleet Arcade;
 - (s) Miscellaneous signage; and
 - (t) External works comprising new and reinstated roads, footpaths, drains, landscaping, staircase and street furniture.

2.3 Construction Programme and Activities

2.3.1 The major construction activities undertaken in the reporting month are summarised below:

| Location | Site Activities |
|----------------------|-----------------------------|
| Area W2 POC Building | External Works |
| | Drainage Installation |
| | • E&M |
| | ABWF |
| Area W2 SOV Building | External Works |
| Area W4 – Canal Rd. | Reinstatement of TARG |
| Box Culvert | |
| Area W8 (Area 1) | Backfilling work |
| Area W8 (Area 2) | ELS Installation |
| | Backfilling |
| | Crawler Crane Dismantlement |

2.3.2 The construction programme is presented in **Appendix A**.

2.4 Project Organisation

2.4.1 The project organization structure is shown in **Appendix B**. The key personnel contact names and numbers for the Project are summarised in **Table 2.1.**

| Party | Role | Position | Name | Telephone | Fax |
|------------|--|---|------------------|-----------|------------|
| | Residential | Construction Manager | Mr. Jimmy Poon | 2171 3610 | 2171 3609 |
| MTR | Engineer (ER) | SCL Project Environmental Team Leader | Ms. Lisa Poon | 3127 6295 | 3127 6422 |
| Meinhardt | Independent Environmental Checker | Independent Environmental Checker | Ms. Claudine Lee | 2859 5409 | 2540 1580 |
| n <i>(</i> | | Project Director | Mr. Eddie Chu | 2171 3618 | 0.174.0745 |
| JV | Contractor | Environmental Officer | Ms. Gemini Lam | 9130 9104 | 2171 3715 |
| AECOM | Contractor's Environmental Team (ET) | ET Leader | Mr. Y T Tang | 3922 9393 | 2317 7609 |

Table 2.1 Contact Information of Key Personnel

2.5 Status of Environmental Licences, Notification and Permits

2.5.1 Relevant environmental licenses, permits and/or notifications on environmental protection for this Project and valid in the reporting month are summarized in **Table 2.2**.

Table 2.2 Status of Environmental Licenses, Notifications and Permits

| Permit / License | Valid Period | | 0 . / | Dunch | |
|--------------------------------------|------------------|-----------------------|-------------------|--|--|
| No. / Notification/ Reference No. | From | То | Status | Remarks | |
| Environmental Permit | | | | | |
| EP-436/2012/F | 23 Jan 2019 | End of the Project | Valid | SCL (HUH - ADM) | |
| Construction Noise | Permit | | | | |
| GW-RS0656-20 | 01 Oct 2020 | 31 Mar 2021 | Valid | Construction site near Lung King Street and Convention Avenue (W8 and W14) | |
| GW-RS0647-20 | 01 Oct 2020 | 31 Mar 2021 | Valid | Construction site near Ex-Police Officers' Club, Causeway Bay, Hong Kong | |
| Wastewater Discharg | ge License | | | | |
| WT00035380-2019 | 7 Feb 2020 | 31 Dec 2024 | Valid | Gloucester Road near Hung Hing Road (W4) | |
| WT00035181-2019 | 5 Dec 2019 | 31 Dec 2024 | Valid | Works Area at POC (W1 + W2) | |
| Chemical Waste Proc | ducer Registrati | on | | · | |
| 5213-135-D2551-01 | 16 Dec 2014 | End of the Project | Valid | Gloucester Road near Hung Hing Road (W4) | |
| 5111-151-D2552-02 | 05 Jan 2015 | End of the Project | Valid | Victoria Park Road near POC (W1) | |
| Billing Account for C | Construction Wa | ste Disposal | | | |
| 7020686 | 15 Sep 2014 | End of Contract | Valid | For disposal of C&D waste to public fills and landfills | |
| Notification Under A | ir Pollution Con | trol (Constructio | n Dust) Regulatio | n | |
| 378806 | 2 Sep 2014 | End of Contract | Valid | For Wan Chai, Causeway Bay, Hong Kong Island | |
| 380227 | 7 Oct 2014 | End of Contract | Valid | For Gloucester Road near Cross Harbour Tunnel | |
| 380228 | 7 Oct 2014 | End of Contract | Valid | Near Convention Avenue and Fenwick Pier Street, HK Island | |

3 ENVIRONMENTAL MONITORING REQUIREMENTS

3.1 Construction Dust Monitoring

Monitoring Requirements

3.1.1 In accordance with the approved EM&A Manuals, 24-hour Total Suspended Particulates (TSP) level at the designated air quality monitoring station is required. Impact 24-hour TSP monitoring should be carried out for at least once every 6 days. The Action and Limit level of the air quality monitoring is provided in **Appendix D**.

Monitoring Equipment

3.1.2 24-hour TSP air quality monitoring was performed using High Volume Sampler (HVS) located at the designated monitoring stations. The HVS meets all the requirements of the EM&A Manual. Brand and model of the equipment is given in **Table 3.1**.

Table 3.1 Air Quality Monitoring Equipment

| Equipment | Brand and Model | |
|--------------------------------------|---|--|
| High Volume Sampler (24-hour TSP) | Andersen Total Suspended Particulate Mass Flow Controlled High Volume Air Sampler (Model No. GS 2310 (S/N:10273)) | |
| Calibration Kit | TISCH Environmental Orifice (Model TE-5025A (S/N: 0988)) | |

Monitoring Locations

3.1.3 Two monitoring station were set up at the proposed location in accordance with the approved EM&A Manuals for SCL(HUH-ADM) as well as the works areas of the Project. The location of the construction dust monitoring stations are summarised in **Table 3.2** and shown in **Figure 3.1**.

Table 3.2 Locations of Construction Dust Monitoring Station

| ID | Air Sensitive Receiver (ASR) ID in EIA Report | Dust Monitoring Station |
|------|--|-------------------------|
| AM2* | EXA6 | Wanchai Sports Ground |
| AM4 | EXA4 | Pedestrian Plaza |

The monitoring station at AM2 was handed-over from Contract SCL1126 in April 2015 and handed-over to Contract SCL1123 on 28 October 2015.

Monitoring Methodology

- 3.1.4 24-hour TSP Monitoring
 - (a) The HVS was installed in the vicinity of the air sensitive receivers. The following criteria were considered in the installation of the HVS as far as practicable:
 - (i) A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
 - (ii) Two samplers should not be placed less than 2m apart from each other;
 - (iii) The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
 - (iv) A minimum of 2 meters separation from walls, parapets and penthouse for rooftop sampler.
 - (v) A minimum of 2 meters separation from any supporting structure, measured horizontally is required.
 - (vi) No furnace or incinerator flues nearby.
 - (vii) Airflow around the sampler was unrestricted.

- (viii) The sampler was located more than 20 meters from any dripline.
- (ix) Any wire fence and gate, required to protect the sampler, did not obstruct the monitoring process.
- (x) Permission was obtained to set up the samplers and access to the monitoring station.
- (xi) A secured supply of electricity was obtained to operate the sampler.
- (b) Preparation of Filter Papers
 - (i) Glass fibre filters, G810 were labelled and sufficient filters that were clean and without pinholes were selected.
 - (ii) All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.
 - (iii) All filter papers were prepared and analysed by ALS Technichem (HK) Pty Ltd., which is a HOKLAS accredited laboratory and has comprehensive quality assurance and quality control programmes.
- (c) Field Monitoring
 - (i) The power supply was checked to ensure the HVS works properly.
 - (ii) The filter holder and the area surrounding the filter were cleaned.
 - (iii) The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
 - (iv) The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
 - (v) The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied was sufficient to avoid air leakage at the edges.
 - (vi) Then the shelter lid was closed and was secured with the aluminium strip.
 - (vii) The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
 - (viii) A new flow rate record sheet was set into the flow recorder.
 - (ix) On site temperature and atmospheric pressure readings were taken and the flow rate of the HVS was checked and adjusted at around 1.3 m³/min, and complied with the range specified in the EM&A Manual (i.e. 0.6-1.7 m³/min).
 - (x) The programmable digital timer was set for a sampling period of 24 hrs, and the starting time, weather condition and the filter number were recorded.
 - (xi) The initial elapsed time was recorded.
 - (xii) At the end of sampling, on site temperature and atmospheric pressure readings were taken and the final flow rate of the HVS was checked and recorded.
 - (xiii) The final elapsed time was recorded.
 - (xiv) The sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
 - (xv) It was then placed in a clean envelope and sealed.
 - (xvi) All monitoring information was recorded on a standard data sheet.
 - (xvii) Filters were then sent to ALS Technichem (HK) Pty Ltd. for analysis.

- (d) Maintenance and Calibration
 - (i) The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
 - (ii) HVSs were calibrated using TE-5025A Calibration Kit upon installation and thereafter at bi-monthly intervals.
 - (iii) Calibration certificate of the TE-5025A Calibration Kit and the HVSs are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.1.5 The schedule for environmental monitoring in February 2021 is provided in **Appendix F**.

3.2 Construction Noise Monitoring

Monitoring Requirements

3.2.1 In accordance with the EM&A Manual, impact noise monitoring should be conducted for at least once a week during the construction phase of the Project. **Table 3.3** summarises the monitoring parameters, frequency and duration of impact noise monitoring. The Action and Limit level of the noise monitoring is provided in **Appendix D**.

Table 3.3Noise Monitoring Parameters, Frequency and Duration

| Parameter and Duration | Frequency |
|--|------------------------|
| 30-mins measurement at each monitoring station between 0700 and 1900 on normal weekdays. Leq, L ₁₀ and L ₉₀ would be recorded. | At least once per week |

Monitoring Equipment

3.2.2 Noise monitoring was performed using sound level meter at each designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Brand and model of the equipment is given in **Table 3.4**.

Table 3.4 Noise Monitoring Equipment for Regular Noise Monitoring

| Equipment | Brand and Model |
|------------------------------|--|
| Integrated Sound Level Meter | Model No. B&K 2250-L (S/N: 2681366) Model No. B&K 2238 (S/N: 2800927) |
| Acoustic Calibrator | Model No. CAL21 (S/N: 34113610 (2011)) |

Monitoring Locations

3.2.3 The monitoring station for construction noise monitoring pertinent to the Project has been identified based on the approved EM&A Manual for SCL (HUH-ADM) of the Project. Location of the noise monitoring station is summarised in **Table 3.5** and shown in **Figure 3.1**.

Table 3.5 Noise Monitoring Station during Construction Phase

| Identification No. | Noise Sensitive Receiver (NSR) ID in EIA Report | Noise Monitoring Station |
|-----------------------|--|--------------------------|
| NM1* | CH2 | Hoi Kung Court |

The noise monitoring at NM1 was handed-over from SCL Contract 1129 in August 2015.

Monitoring Methodology

- 3.2.4 Monitoring Procedure
 - (a) Façade measurement was made at NM1.
 - (b) The battery condition was checked to ensure the correct functioning of the meter.
 - (c) Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - (i) frequency weighting: A
 - (ii) time weighting: Fast
 - (iii) time measurement: L_{eq(30-minutes)} during non-restricted hours i.e. 0700 1900 on normal weekdays.
 - (d) Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator for 94 dB(A) at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
 - (e) During the monitoring period, the L_{eq}, L₁₀ and L₉₀ were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
 - (f) Noise measurement was paused during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible. Observations were recorded when intrusive noise was unavoidable.
 - (g) Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind with gusts exceeding 10m/s.
- 3.2.5 Maintenance and Calibration
 - (a) The microphone head of the sound level meter was cleaned with soft cloth at regular intervals.
 - (b) The meter and calibrator were sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
 - (c) Calibration certificates of the sound level meters and acoustic calibrators are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.2.6 The schedule for environmental monitoring in February 2021 is provided in **Appendix F**.

3.3 Water Quality Monitoring

Monitoring Requirements

3.3.1 In accordance with the EM&A Manual, impact water quality monitoring should be conducted during dredging and filling operation. **Table 3.6** summarises the monitoring parameters and frequency of impact water quality monitoring. The Action and Limit level of the impact water quality monitoring is provided in **Appendix D**.

Table 3.6 Water Quality Monitoring Parameters and Frequency

| Parameter | Frequency |
|---|---|
| Turbidity, Suspended Solid, Dissolved Oxygen, Temperature and Salinity | Three days per week, at mid-flood and mid-ebb tides |

Monitoring Equipment

3.3.2 The monitoring equipment, monitoring methodology are detailed in the monthly EM&A Reports prepared for Contract SCL1121.

Monitoring Locations

3.3.3 The monitoring station for impact water quality monitoring has been extracted from the EM&A Manual for SCL (HUH-ADM) of the Project. Location of the water monitoring station is summarised in **Table 3.7**.

| Monitoring | Description | Coordinates | |
|------------------|---|-------------|----------|
| Station | Description | Easting | Northing |
| Victoria Harbour | | | |
| 8 | Cooling Water Intake for Excelsior Hotel and World Trade Centre / No. 27 – 63 Paterson Street | 837036 | 816008 |
| 9 | Cooling Water Intake for Windsor House | 837223 | 816150 |
| 14 | Flushing Water Intake for Kowloon Station | 834477 | 817891 |
| 21 | Cooling Water Intake for East Rail Extension | 836484 | 817642 |
| 34 | Cooling Water Intake for Metropolis | 836828 | 817844 |
| А | Wan Chai WSD Flushing Water Intake (Reprovisioned) ⁽¹⁾ | 836268 | 816045 |
| WSD9 | Tai Wan WSD Flushing Water Intake ⁽²⁾ | 837930 | 818357 |
| WSD17 | Quarry Bay WSD Flushing Water Intake | 839863 | 817077 |
| C1 | Control Station 1 | 833977 | 817442 |
| C2 | Control Station 2 | 841088 | 817223 |

 Table 3.7
 Monitoring Station for Impact Water Quality Monitoring

- Note: 1. According to the Baseline Water Quality Monitoring Report for SCL (MKK-HUH & HUH-ADM), the original coordinates of monitoring location A (Easting: 836286, Northing: 816024) is the exact location taken from the design of reprovisioned Wan Chai Salt Water Pumping Station and Salt Water Intake Culvert. Based on actual site condition for taking water sampling, minor adjustment was made on monitoring location.
 - 2. According to the Baseline Water Quality Monitoring Report for SCL (MKK-HUH & HUH-ADM), the original coordinates of monitoring location WSD9 (Easting: 838133, Northing: 817790) as proposed in WQMP were moved closer to sensitive receiver according to the actual site condition.

Monitoring Methodology

3.3.4 The monitoring methodology is detailed in the monthly EM&A Reports prepared for Contract SCL1121.

Monitoring Schedule for the Reporting Month

3.3.5 According to the information from Contract SCL1121, the dredging / filling operation in Victoria Harbour has been completed on 31 December 2019. A post-project water quality monitoring has been completed on 28 January 2020 for four weeks.

3.4 Landscape and Visual

3.4.1 As per the EM&A Manuals, the landscape and visual mitigation measures shall be implemented and site inspections should be undertaken once every two weeks during the construction period. A summary of the implementation status is presented in **Section 6.**

4 IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

4.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Reports, the EP and EM&A Manuals. The implementation status of the environmental mitigation measures during the reporting period is summarized in **Appendix C.** Status of required submissions under the EP during the reporting period is summarised in **Table 4.1**.

Table 4.1 Status of Required Submission under Environmental Permit

| EP Condition | Submission | Submission Date |
|-------------------------------|---|------------------|
| Condition 3.4 (EP-436/2012/F) | Monthly EM&A Report for January 2021 | 11 February 2021 |

5 MONITORING RESULTS

5.1 Construction Dust Monitoring

5.1.1 The monitoring results for 24-hour TSP are summarised in **Table 5.1**. Detailed air quality monitoring results and wind monitoring data extracted from the nearest Automatic Weather Station are presented in **Appendix G**.

| ID | Average (µg/m³) | Range (µg/m³) | Action Level (μg/m ³) | Limit Level (µg/m³) |
|------------------|----------------------|---------------|--------------------------------------|------------------------|
| AM2 [#] | 43.2 | 13.4 – 72.9 | 160 | 260 |
| AM4 | 66.7 | 29.4 – 121.8 | 198 | 260 |
| ·· | the standard and AMO | | | |

 Table 5.1
 Summary of 24-hour TSP Monitoring Result in the Reporting Period

The monitoring station at AM2 was handed-over from Contract SCL1126 in April 2015 and handed-over to Contract SCL1123 on 28 October 2015.

- 5.1.2 No exceedance of Action / Limit Level of air quality was recorded in the reporting month.
- 5.1.3 One (1) Limit Level exceedances at monitoring location AM4 was recorded in the previous reporting month (on 11 January 2021). Based on the investigation, there was no adequate information to conclude the recorded Limit level exceedance was related to the Project-related construction works. Dust mitigation measures have been implementing for lower the possibility of further exceedance. No further Action/Limit Level exceedance was recorded at AM4.
- 5.1.4 The event and action plan is annexed in **Appendix I**.
- 5.1.5 Major dust sources during the monitoring included construction dust, nearby traffic emission and other nearby construction sites.

5.2 Construction Noise Monitoring

- 5.2.1 Noise monitoring at NM1 was handed over from SCL Contract 1129 in August 2015.
- 5.2.2 The monitoring results for noise are summarized in **Table 5.2** and the monitoring data is provided in **Appendix H**.

Table 5.2 Summary of Construction Noise Monitoring Results in the Reporting Period

| ID | Range, dB(A), L _{eq (30 mins)} | Limit Level, dB(A), L _{eq (30 mins)} |
|--------------------|--|--|
| NM1 ^(*) | <baseline< th=""><th>75</th></baseline<> | 75 |

(*) Baseline correction will be made to the measured Leq when the measured noise level exceeded the corresponding baseline noise level and presented in the table.

- 5.2.3 No environmental related complaint, notification of summons and successful prosecution was received in the reporting month.
- 5.2.4 No Limit Level exceedance of noise was recorded at the monitoring station in the reporting month.
- 5.2.5 The event and action plan is annexed in **Appendix I**.
- 5.2.6 Major noise sources during the monitoring included construction noise from the Project site, nearby traffic noise and the community.

5.3 Water Quality Monitoring

5.3.1 According to the information from Contract SCL1121, the dredging / filling operation in Victoria Harbour has been completed on 31 December 2019. A post-project water quality monitoring has been completed on 28 January 2020 for four weeks.

5.4 Waste Management

- 5.4.1 C&D materials and wastes sorting were carried out on site. Receptacles were available for C&D wastes and general refuse collection.
- 5.4.2 As advised by the Contractor, 82.55 m³ of inert C&D material was generated in the reporting month and disposed of as fill bank at TKO137. 47.39 m³ of general refuse was generated in the reporting month. No paper/cardboard packaging material, metals and plastic was collected by recycling contractor in the reporting month. No chemical waste was collected by licensed contractor. No marine dumping was undertaken in the reporting period.
- 5.4.3 SCL1128 delivered the spoil to WDII C1, CWB, SCL 1121, SCL 1103, WDII C3, WDII C2, 8217, HY/2010/08, PSK226, SCL1112, Area 56A, M+ and XRL810B for beneficial use. If spoil could not be fully utilized at these sites, the spoil will be transported to Mainland China for reuse. The waste flow table is annexed in **Appendix K**.
- 5.4.4 The Contractor is advised to properly maintain on site C&D materials and wastes collection, sorting and recording system and maximize reuse / recycle of C&D materials and wastes. The Contractor is reminded to properly maintain the site tidiness and dispose of the wastes accumulated on site regularly and properly.
- 5.4.5 The Contractor is reminded that chemical waste containers should be properly treated and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practise on the Packaging, Labelling and Storage of Chemical Wastes.

5.5 Landscape and Visual

5.5.1 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 8 and 23 February 2021. A summary of the site inspection is provided in **Appendix C**. The observations and recommendations made during the site inspections are presented in **Table 6.1**.

6 ENVIRONMENTAL SITE INSPECTION AND AUDIT

- 6.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the mitigation measures implementation schedule is provided in **Appendix C**.
- 6.1.2 In the reporting month, 4 site inspections were carried out on 1, 8, 16 and 23 February 2021. Joint inspection with the IEC, ER, the Contractor and the ET was conducted on 23 February 2021. No non-compliance was recorded during the site inspections. Details of observations recorded during the site inspections are presented in **Table 6.1**.

| Parameters | Date | Observations and Recommendations | Follow-up |
|----------------------------------|-----------------|---|--|
| | 1 February 2021 | <u>Reminder:</u> The Contractor was reminded to provide watering to the excavation work carried at W2. | This item was rectified on 8 Feb 2021. |
| Air Quality | 8 February 2021 | • Stockpile stored without cover was observed at W2. The Contractor was advised to cover the stockpile with imperious sheeting for dust suppression. | This item was rectified on 9 Feb 2021. |
| Noise | Nil | Nil | Nil |
| Water Quality | Nil | Nil | Nil |
| Waste/ Chemical Management | Nil | Nil | Nil |
| Landscape & Visual | Nil | Nil Nil | |
| Permits/ Licenses | Nil | Nil | Nil |

| Table 6.1 Observations and Recommendations of S | f Site Audit |
|---|--------------|
|---|--------------|

6.1.3 No follow-up action was requested by Contractor's ET and IEC on 16 and 23 February 2021.

6.1.4 All follow-up actions requested by Contractor's ET during the site inspection were undertaken as reported by the Contractor and confirmed in the following weekly site inspection conducted during the reporting period.

7 ENVIRONMENTAL NON-CONFORMANCE

7.1 Summary of Monitoring Exceedances

- 7.1.1 No exceedance of Action / Limit Level of air quality was recorded in the reporting month.
- 7.1.2 One (1) Limit Level exceedances at monitoring location AM4 was recorded in the previous reporting month (on 11 January 2021). Based on the investigation, there was no adequate information to conclude the recorded Limit level exceedance was related to the Project-related construction works.
- 7.1.3 No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.
- 7.1.4 No Limit Level exceedance for noise was recorded at all monitoring stations in the reporting month.

7.2 Summary of Environmental Non-Compliance

7.2.1 No environmental non-compliance was recorded in the reporting month.

7.3 Summary of Environmental Complaints

7.3.1 No environmental related complaint was received in the reporting month. The summary and cumulative statistics on environmental complaints is provided in **Appendix J**.

7.4 Summary of Environmental Summon and Successful Prosecutions

7.4.1 No environmental related prosecution or notification of summons was received in the reporting month. Cumulative statistics on notification of summons and successful prosecutions is provided in **Appendix J**.

8 FUTURE KEY ISSUES

8.1 Construction Programme for the Next Three Month

8.1.1 The major construction works in between March and May 2021 will be:

| Location | Site Activities |
|------------------------|-----------------------|
| Area W2 - POC Building | External Works |
| | Drainage Installation |
| | • E&M |
| | ABWF |
| Area W2 - SOV Building | ABWF |
| Area W4 – Canal Rd. | Reinstatement of TARG |
| Box Culvert | |
| Area W8 | Reinstatemnet Works |
| | EEP external Works |

8.2 Key Issues for the Coming Month

8.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

8.3 Monitoring Schedule for the Next Three Month

8.3.1 The tentative schedules for environmental monitoring between March and May 2021 are provided in **Appendix F**.

9 CONCLUSIONS AND RECOMMENDATIONS

9.1 Conclusions

- 9.1.1 24-hour TSP and noise monitoring were carried out in the reporting month.
- 9.1.2 All 24-hour TSP monitoring result complied with the Action / Limit Level at in the reporting month.
- 9.1.3 One (1) Limit Level exceedances at monitoring location AM4 was recorded in the previous reporting month (on 11 January 2021). Based on the investigation, there was no adequate information to conclude the recorded Limit level exceedance was related to the Project-related construction works.
- 9.1.4 No exceedance of Action Level of air quality was recorded in the reporting month.
- 9.1.5 No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.
- 9.1.6 No Limit Level exceedance for noise was recorded at all monitoring stations in the reporting month.
- 9.1.7 4 nos. of environmental site inspections were carried out in February 2021. Recommendations on remedial actions were given to the Contractor for the deficiencies identified during the site audit.
- 9.1.8 No complaint, notification of summons and successful prosecution was received in the reporting month.

9.2 Recommendations

9.2.1 According to the environmental site inspections performed in the reporting month, the following recommendations were provided:

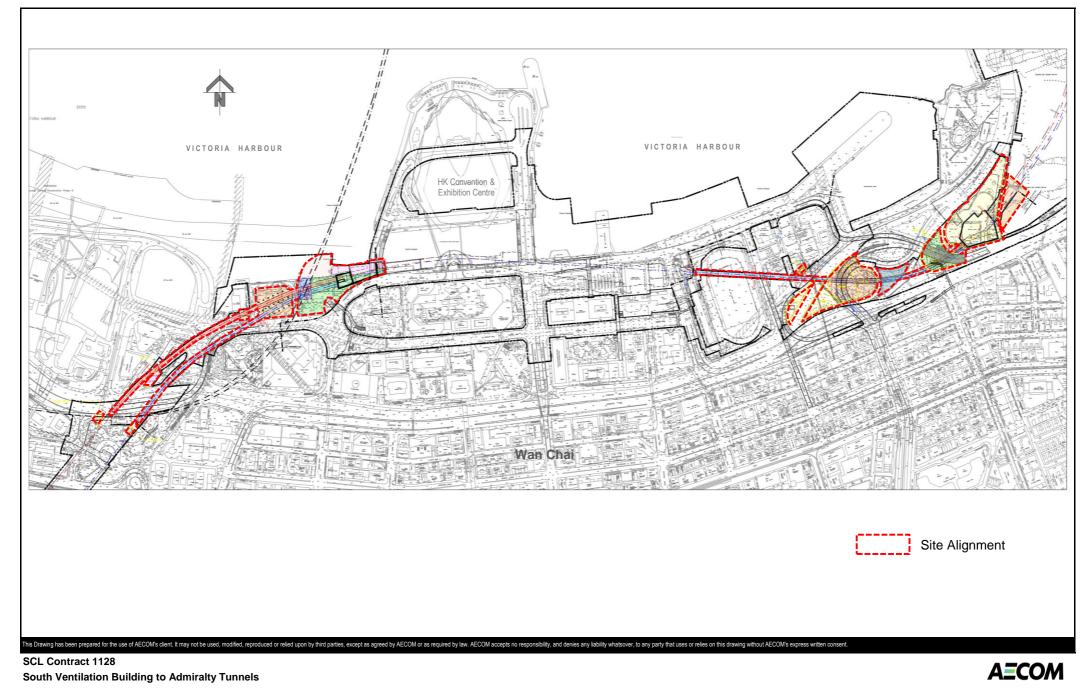

Air Quality Impact

- The Contractor was reminded to provide watering to excavation work carried onsite.
- The Contractor was advised to cover the stockpile with imperious sheeting for dust suppression.

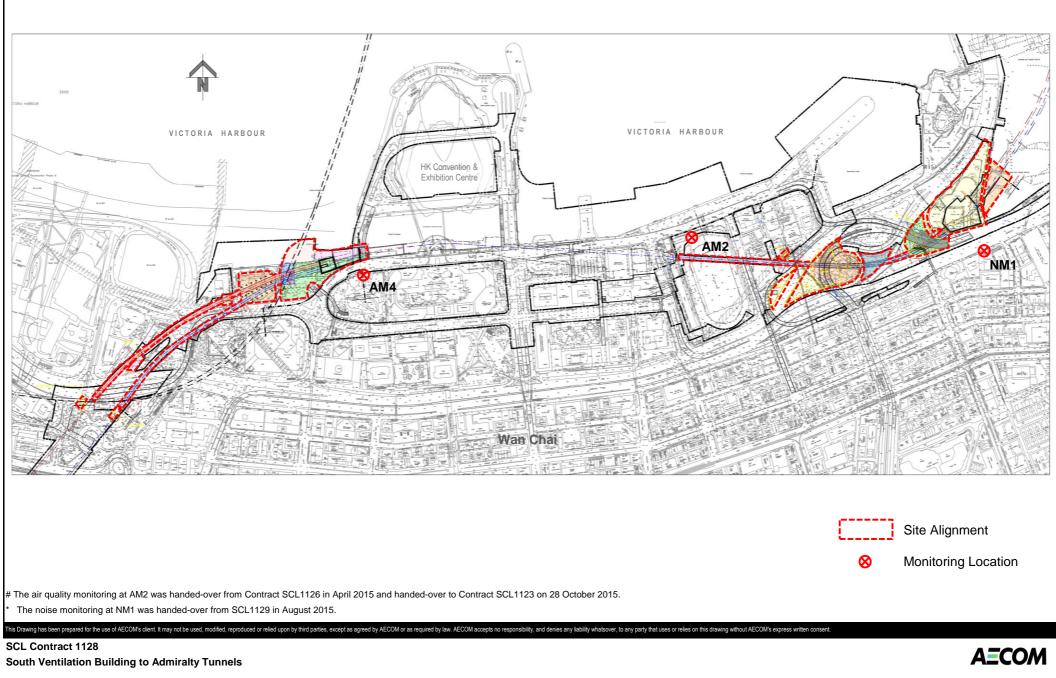

Construction Noise Impact

- No specific observation was identified in the reporting month.
 <u>Water Quality Impact</u>
- No specific observation was identified in the reporting month.
 <u>Chemical and Waste Management</u>
- No specific observation was identified in the reporting month. Landscape & Visual Impact
- No specific observation was identified in the reporting month.
 <u>Permits/licenses</u>
- No specific observation was identified in the reporting month.

| Constructio | on Dust Impact | | | | | |
| Table 8.5 | Barging facilities: (i) Transportation of spoils to the barging point – Pave all road surfaces within the barging facilities and provide watering once along with the haul road for every working hours to reduce dust emission by 91.7%. This dust suppression efficiency is derived based on the average haul road traffic, average evaporation rate and an assumed application intensity of 1.0 L/m ² once every working hour. Any potential dust impact and watering mitigation would be subject to the actual site condition. For example, a construction activity that produces inherently wet conditions or in cases under rainy weather, the above water application intensity of 1.0 L/m ² watering may any depending on actual site conditions but should be sufficient to maintain an equivalent intensity of no less than 1.0L/m ² to achieve the removal efficiency. The dust levels would be monitored and managed under an EM&A programme as specified in the EM&A Manual. | To minimize dust impacts | Contractor | All barging points | Construction phase | N/A |
| | (ii) Original provide water spraying and flexible dust curtains at the discharge point for dust suppression. (iii) Vehicles leaving the barging facilities – Pass vehicles through the wheel washing facilities provided at site exits. | | | | | V |
| S8.63 | For concrete batching plant, the requirements and mitigation measures stipulated in the <i>Guidance</i> Note on the Best Practicable Means for Cerment Works (Concrete Batching Plant) BPM 3/2(93) shall be followed and implemented. | To minimize dust impact | Contractor | Concrete Batching Plant | Construction phase | N/A |
| Table 8.6 | During operation of concrete batching plant: (i) Unloading of aggregates from the tipper trucks to receiving hopper – unload the aggregates from the tipper trucks to the receiving hopper equipped with enclosures on 3 sides and top cover, and water spraying system. (ii) Unloading of cement and PFA from tankers into the silo – Directly load the cement and PFA into the silo via a flexible duct. Install dust collectors at cement/PFA silos. (iii) Storage of aggregates in overhead storage bins – Store the aggregates in fully enclosed overhead storage bins. Cover the top of overhead storage bins with cladding. Install water spraying system at the top of storage bins for watering the aggregates, and fully enclose aggregates storage bins. (iv) Weighing and batching of cementitious materials – Perform the whole process of weighing and mixing in a fully enclosed environment. Equip all the mixers with dust collectors. (v) Loading of concrete from mixer into transit mixer of a truck – Directly load the concrete from the winter into the mainst inviter of a truck form". (vi) Tipper trucks and cement tankers leaving the Concrete Batching Plant – Haul road within the site is unpaved. Install where ly at the gate of the concrete batching plant would be provided. | To minimize dust impacts | Contractor | Concrete Batching Plant | Construction phase | N/A |
| 58.89 | Watering once every working hour on active works areas, exposed areas and paved haul roads to reduce dust emission by 91.7%. This dust suppression efficiency is derived based on the average haul road traffic, average evaporation rate and an assumed application intensity of 1.7 L/m2 for Kowkoon side and 1.0 L/m2 for Hong Kong side once every working hour. Any potential dust impact and watering mitigation would be subject to the actual site condition. For example, a construction activity that produces inherently wet conditions or in cases under rainy weather, the above water application intensity may not be unreservedly applied. While the above watering frequency is to be followed, the extent of watering may vary depending on actual site conditions but should be sufficient to maintain an equivalent intensity of no less than 1.7 L/m2 for Kowkoon side and 1.0 L/m2 for Hong Kong side to achieve the removal efficiency. The dust levels would be monitored and managed under an EM&A programme as specified in the EM&A Manual. | To minimize dust impact | Contractor | Works areas | Construction Phase | V |

| Water Qual | ity Impact | | | | | |
|----------------------|---|---|------------|---|-----------------------|---------------|
| Constructio | on Phase | | | | | |
| S11.216 | The following mitigation measures are proposed to minimize the potential water quality impacts from the construction works at or close to the seafront: Temporary storage of construction materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction and demolition materials shall be located well away from the seawater front and storm drainage during carrying out of the works. Stockpiling of construction and demolition materials and dusty materials shall be covered and located away from the seawater front and storm drainage. Construction debris and spoil shall be covered up and/or disposed of as soon as possible to avoid being washed into the nearby receiving waters. | To minimize release of construction wastes from construction works at or close to the seafront | Contractor | Construction works at or close to the seafront | Construction Phase | V V N/A |
| S11.222 to 11.245 | The site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" shall be followed where practicable. <u>Surface run-off</u> • Surface run-off from construction sites shall be discharged into storm drains via adequately designed sand/sit removal facilities such as sand traps, sit traps and sedimentation basins. Channels or earth bunds or sand bag barriers shall be provided on site to properly direct stormwater to such sit removal facilities. Perimeter channels at site boundaries shall be provided where necessary to intercept storm run-off from outside the site os that it will not wash across the site. Catchpits and perimeter channels shall be constructed in advance of site formation works and earthworks. | To minimize water quality impacts from construction site runoff and general construction activities | Contractor | Works areas | Construction Phase | v |
| | • Silt removal facilities, channels and manholes shall be maintained and the deposited situ and grit shall be removed regularly, at the onset of and after each rainstorm to prevent local flooding. Any practical options for the diversion and re-alignment of drainage shall comply with both engineering and environmental requirements in order to provide adequate hydraulic capacity of all drains. Minimum distances of 100 m shall be maintained between the discharge points of construction site runoff and the existing saltwater intakes. Construction works shall be programmed to minimize soil excavation works in rainy seasons (April to September). If excavation is soil cannot be avoided in these months or at any time of year when rainstorms are likely, for the purpose of preventing oil erosion, temporary exposed slope surfaces shall be covered e.g. by tarpaulin, and temporary access roads shall be protected by crushed stone or gravel, as exavation proceeds. Intercepting channels shall be protected by crushed stone or gravel, as exavation proceeds. Intercepting channels shall be protected by crushed stone or gravel, as exavation proceeds. Intercepting channels shall be protected by crushed stone or gravel, as exavation proceeds. Intercepting channels shall be protected by crushed stone or gravel. | | | | | v v |
| | Arrangements shall always be in place in such a way that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Earthworks final surfaces shall be well compacted and the subsequent permanent work or surface protection shall be carried out immediately after the final surfaces are formed to prevent erosion caused by rainstorms. Appropriate drainage like intercepting channels shall be provided where necessary. | | | | | N/A V |
| | Measures shall be taken to minimize the ingress of rainwater into trenches. If excavation of trenches in wet seasons is necessary, they shall be dug and backfilled in short sections. Rainwater pumped out from trenches or foundation excavations shall be discharged into storm drains via silt removal facilities. | | | | | v |
| | Open stockpiles of construction materials (e.g. aggregates, sand and fill material) on sites shall be covered with tarpaulin or similar fabric during rainstorms. Manholes (including newly constructed ones) shall always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debrs from getting into the drainage system, | | | | | V |
| | and to prevent storm run-off from getting into foul sewers. Discharge of surface run-off into foul sewers must always be prevented in order not to unduly overload the foul sewerage system. Good site practices shall be adopted to remove rubbish and litter from construction sites so as to | | | | | V |

| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
| | prevent the rubbish and litter from spreading from the site area. It is recommended to clean the construction sites on a regular basis. <u>Boring and Drilling Water</u> • Water used in ground boring and drilling for site investigation or rock / soil anchoring shall as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the wastewater shall be discharged into storm drains via filt removal facilities. | | | | | V |
| | Wheel Washing Water All vehicles and plant shall be cleaned before they leave a construction site to minimize the deposition of earth, mud, debris on roads. A wheel washing bay shall be provided at every site exit if practicable and wash-water shall have sand and silt settled out or removed before discharging into storm drains. The section of construction road between the wheel washing bay and the public road shall be paved with backfall to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. | | | | | v |
| | Bentonite Slurries Bentonite slurries used in diaphragm wall and bore-pile construction shall be reconditioned and used again wherever practicable. If the disposal of a certain residual quantity cannot be avoided, the bentonite slurries shall either be dewatered or mixed with inert fill material for disposal to a public filling area. | | | | | v |
| | If the used bentonite slurry is intended to be disposed of through the public drainage system, it shall be treated to the respective effluent standards applicable to foul sever, storm drains or the receiving waters as set out in the TM-DSS. Water for Testing & Sterilization of Water Retaining Structures and Water Pipes | | | | | V |
| | • Water used in water testing to check leakage of structures and pipes shall be used for other purposes | | | | | N/A |
| | as far as practicable. Surplus unpolluted water will be discharged into storm drains. Sterilization is commonly accomplished by chlorination. Specific advice from EPD shall be sought during the design stage of the works with regard to the disposal of the sterilizing water. The sterilizing water shall be used again wherever practicable. | | | | | N/A |
| | Acid Cleaning, Etching and Pickling Wastewater • Acidic wastewater generated from acid cleaning, etching, pickling and similar activities shall be neutralized to within the pH range of 6 to 10 before discharging into foul sewers. If there is no public foul sewer in the vicinity, the neutralized wastewater shall be tankered off site for disposal into foul sewers or treated to a standard acceptable to storm drains and the receiving waters. | | | | | N/A |
| | <u>Wastewater from Site Facilities</u> • Wastewater collected from any temporary canteen kitchens, including that from basins, sinks and floor drains, shall be discharged into foul sewer via grease traps. In case connection to the public foul sewer is not feasible, wastewater generated from kitchens or canteen, if any, shall be collected in a temporary storage tank. A licensed waste collector shall be deployed to clean the temporary storage | | | | | N/A |
| | tank on a regular basis. • Drainage serving an open oil filling point shall be connected to storm drains via petrol interceptors with peak storm bypass. | | | | | N/A |
| | Vehicle and plant servicing areas, vehicle wash bays and lubrication bays shall as far as possible be located within roofed areas. The drainage in these covered areas shall be connected to foul sewers via a petrol interceptor. Oil leakage or spillage shall be contained and cleaned up immediately. Waste oil shall be collected and stored for recycling or disposal in accordance with the Waste Disposal Ordinance. | | | | | v |
| 11.246 & 1.247 | Construction work force sewage discharges on site are expected to be discharged to the nearby existing trunk sewer or sewage treatment facilities. If disposal of sewage to public sewerage system is not feasible, appropriate numbers of portable toilets shall be provided by a licensed contractor to serve the construction workers over the construction site to prevent direct disposal of sewage into the water environment. The Contractor shall also be responsible for waste disposal and maintenance practices. Notices shall be posted at conspicuous locations to remind the workers not to discharge any sewage or wastewater into the nearby environment. | To minimize water quality impacts due to sewage generated from construction workforce | Contractor | Works areas | Construction Phase | N/A |

| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
|--------------------------------|--|---|--------------------------------------|--|---------------------------------------|--------------------------|
| \$11.248 | In case seepage of uncontaminated groundwater occurs, groundwater shall be pumped out from the works areas and discharged into the storm system via silt removal facilities. Uncontaminated groundwater from dewatering process shall also be discharged into the storm system via silt traps. | To minimize impact from discharge of uncontaminated groundwater | Contractor | Works areas | Construction Phase | V |
| 311.249 | If land contaminated site is identified from the Stage 2 SI work (refer to Sections 11.188 to 11.191 of the EIA Report), the following mitigation measures shall be implemented for the identified contaminated area. Any transient pile of contaminated soil / material shall be minimized and shall be bottom-lined, bunded and covered with impervious membrane during rain event to avoid generation of contaminated runoff. Appropriate intercepting channels and partial shelters shall be provided where necessary to prevent rainwater from collecting within trenches or footing excavations. Any contaminated water and wastewater generated from the decontamination process shall not be directly discharged to public severs or site drainage. They shall be treated or tanked away as necessary for proper disposal in compliance with the TM-DSS. | To control site run-off generated from any potential contaminated works areas. | Contractor | Any potential contaminated areas to be identified from the Stage 2 SI | Construction Phase | N/A |
| 311.250 & 311.251 | No direct discharge of groundwater from contaminated areas shall be adopted. If land contamination impact and generation of contaminated groundwater is identified from the Stage 2 SI works (refer to Sections 11.189 to 11.192 of the EIA Report), the following mitigation measures shall be adopted. Any contaminated groundwater shall be either properly treated in compliance with the requirements of the TM-DSS or properly recharged into the ground. If wastewater treatment is deployed for treating the contaminated groundwater, the wastewater treatment unit shall deploy suitable treatment processes (e.g. oil interceptor / activated carbon) to reduce the pollution level to an acceptable standard and remove any prohibited substances (such as TPH) to an undetectable range. All treated effluent from the wastewater treatment plant shall meet the requirements as stated in TM-DSS and shall be discharged into the foul severs. If groundwater recharging wells are deployed, the recharging wells shall be installed as appropriate for recharging the contaminated groundwater pushit will not be affected by the recharge operation as indicated in Section 0.2.3 of the TM-DSS. The baseline groundwater quality shall be deboratory analytical results showing the quality of groundwater take working plan (including the laboratory analytical results showing the quality of groundwater take proposed recharge location(s) as well as the pollutant levels of groundwater to be recharged shall not be higher than pollutant levels of ambient groundwater at the recharge well. Prior to recharge, any prohibited substance such as TPH products shall be discharge licence under the WPCO through the Regional Office of EPD for groundwater recharge operation or discharge of treated groundwater. | To minimize potential water quality impact from discharge of contaminated groundwater | Contractor | Any potential contaminated areas to be identified from the Stage 2 SI | Construction Phase | N/A |
| \$11.252 | Construction of ubound of the devices shall be adopted for the proposed barging points: all vessels shall be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash all hopper barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of material construction activities shall not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site loading of barges and hoppers shall be controlled to prevent splashing of material into the surrounding water. Barges or hoppers shall not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation | To minimize water quality impacts generated from the barging points. | Contractor | Barging points | Construction Phase | N/A N/A N/A |
| S11.253 | There is a need to apply to EPD for a discharge licence for discharge of effluent from the construction site under the WPCO. The discharge quality must meet the requirements specified in the discharge licence. All the runoff and wastewater generated from the works areas shall be treated so that it satisfies all the standards listed in the TM-DSS. Minimum distances of 100 m shall be maintained between the discharge points of construction site effluent and the existing seawater intakes. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimise water consumption and | To minimize water quality impact from effluent discharges from construction sites | Contractor | All construction works areas | Construction Phase | V |

| ppendix C | - Environmental Mitigation Implementation Schedule | ppendix C – Environmental Mitigation Implementation Schedule | | | | | |
|--------------------------------|---|--|--------------------------------------|---|---|--------------------------|--|
| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status | |
| S12.88 | Sediments The basic requirements and procedures for excavated / dredged sediment disposal specified under ETWB TC(W) No. 34/2002 shall be followed. MFC is managing the disposal facilities in Hong Kong for the dredged and excavated sediment, while EPD is the authority of issuing marine dumping permit under the Dumping at Sea Ordinance. | To ensure the sediment to be disposed of in an authorized and least impacted way | Contractor | All works areas with sediments concern | Construction Phase | N/A | |
| S12.89 | Sediments (con't) The contractor for the excavation / dredging works shall apply for the site allocations of marine sediment disposal based on the prior agreement with MFC/CEDD. A request for reservation of sediment disposal space have been submitted to MFC for onward discussions of disposal approach and feasible disposal sites and the letter is attached in Appendix 12.6. The Project proponent shall also be responsible for the application of all necessary permits from relevant authorities, including the dumping permit as required under DASO from EPD, for the disposal of dredged and excavated sediment prior to the commencement of the excavation works. | To determine the best handling and disposal option of the sediments | MTR / Contractor | All works areas with sediments concern | Detailed Design Stage and Construction Phase | N/A | |
| \$12.91 - 12.94 | Sediments (con't) Stockpiling of contaminated sediments shall be avoided as far as possible. If temporary stockpiling of contaminated sediments is necessary, the excavated sediment shall be covered by tarpaulin and the area shall be placed within earth bunds or sand bags to prevent leachate from entering the ground, nearby drains and/or surrounding water bodies. The stockpiling areas shall be completely paved or covered by linings in order to avoid contamination to underlying soil or groundwater. Separate and clearly defined areas shall be provided for stockpiling of contaminated and uncontaminated materials. Leachate, if any, shall be collected and discharged according to the Water Pollution Control Ordinance (WPCO). In order to minimise the potential odour / dust emissions during excavation / material handling and shall be properly covered when placed on trucks or barges. Loading of the excavated sediment to the barge shall be concolled to a level that would cause overflow of materials to prevent leakage and shall not be filled to a level that would cause overflow of materials or laden water during loading or transportation. In addition, monitoring of the barge loading shall be conclucted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP. In order to minimise the exposure to contaminated materials, workers shall, when necessary, wear appropriate personal protective equipments (PPE) when handling contaminated sediments devalue to alceas that bals be down in the set of the materials. Adequate washing and cleaning take devices at specified by the DEP. | To ensure handling of sediments are in accordance to statutory requirements | Contractor | Work Sites, Sediment disposal sites | Construction Phase | N/A | |
| S12.95 | Sediments (con') A possible arrangement for Type 3 disposal is by geosynthetic containment. A geosynthetic containment method is a method whereby the sediments are sealed in geosynthetic containers and, at the disposal site, the containers would be dropped into the designated containmated mud pit where they would be covered by further mud disposal and later by the mud pit capping, thereby meeting the requirements for fully confined mud disposal. The technology is readily available for the manufacture of the geosynthetic containers to the project-specific requirements. Similar disposal methods have been used for projects in Europe, the USA and Japan and the issues of fill retention by the geosynthetic fabrics, possible rupture of the containers and sediment loss due to impact of the container on the seabed have been addressed. | To ensure handling of sediments are in accordance to statutory requirements | Contractor | Work Sites, Sediment disposal sites | Construction Phase | N/A | |
| / | Accidental spillage To prevent accidental spillage of chemicals, the following is recommended: Proper storage and handling facilities will be provided. All the tanks, containers, storage area will be bunded and the locations will be locked as far as possible from the sensitive watercourse and stormwater drains. | To minimize potential adverse environmental impacts arising from accidental spillage | Contractor | Work Sites | Construction Phase | V V | |

|--------------------------------|--|--|--------------------------------------|-------------------------|---------------------------------------|---|
| | The contractor will register as a chemical waste producer if chemical wastes would be generated. Storage of chemical waste arising from the construction activities will be stored with suitable labels and warnings. Disposal of chemical wastes will be conducted in compliance with the requirements as stated in the Waste disposal (Chemical Waste) (General) Regulation. | | | | | |
| S12.97 | Containers for Storage of Chemical Waste The Contractor shall register with EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Containers used for storage of chemical wastes shall: Be compatible with the chemical wastes being stored, maintained in good condition and securely sealed; Have a capacity of less than 450 litters unless the specifications have been approved by EPD; and Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Waste Disposal (Chemical Waste) | To register with EPD as a Chemical waste producer and store chemical waste in appropriate containers | Contractor | Work Sites | Construction Phase | |
| S12.98 | Chemical Waste Storage Area Be clearly labeled to indicate corresponding chemical characteristics of the chemical waste and used for storage of chemical waste only; Be enclosed on at least 3 sides; Have an impermeable floor and bunding of canacity to accommodate 110% of the volume of | To prepare appropriate storage areas for chemical waste at works areas | Contractor | Work Sites | Construction Phase | |

Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest; Have adequate ventilation: v Be covered to prevent rainfall from entering; and Be properly arranged so that incompatible materials are adequately separated. emical Waste Ń S12.99 Che To clearly label the Contractor Work Sites Construction Chemical Waste
 Lubricants, waste oils and other chemical wastes would be generated during the maintenance
 of vehicles and mechanical equipments. Used lubricants shall be collected and stored in
 individual containers which are fully labelled in English and Chinese and stored in a
 designated secure place.
 Collection and Disposal of Chemical Waste
 A trip-ticket system shall be operated in accordance with the Waste Disposal
 (Chemical Waste) (General) Regulation to monitor all movements of chemical wastes, to
 either the approved CVWTC at Tsing Yi, or another licensed facility, in accordance with the Waste
 Disposal (Chemical Waste) (General) Regulation.
 General Refuse
 General Refuse shall be stored in enclosed bins or compaction units separate from C&D materials N/A chemical waste at Phase works areas S12.100 Contractor Work Sites N/A To monitor the Construction generation, reuse and disposal of chemical Phase waste S12.101 Work Sites Contractor ۷ To properly store and Construction General refuse shall be stored in enclosed bins or compaction units separate from C&D materials separate from other C&D materials for Phase General refuse shall be stored in enclosed bins or compaction units separate from C&D materials and chemical waste. A reputable waste collector shall be employed by the contractor to remove general refuse from the site, separately from C&D materials and chemical wastes. Preferably, an enclosed and covered area shall be provided to reduce the occurrence of wind-blown light material **General Refuse (con't)** The recyclable component of general refuse, such as aluminum cans, paper and cleansed plastic containers shall be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste shall be set up by the Contractor. The Contractor shall also be responsible for arrapping recycling companies to collect these materials. C&D materials for subsequent collection and disposal To facilitate recycling of recyclable portions of refuse S12.102 Contractor Work Sites Construction Phase General Refuse (con't) The Contractor shall carry out an education programme for workers in avoiding, reducing, reusing and recycling of materials generation. Posters and leaflets advising on the use of the bins shall also To raise workers awareness on recycling issue S12.103 Contractor Work Sites Construction Phase be provided in the sites as reminders.

| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
|--------------------------------|---|--|--------------------------------------|--|---|--------------------------|
| Land Conta | amination Impact | | | | | |
| S13.23– 13.24 | For construction works at sites under the current stage of site investigation (Stage 1 SI): Precautionary measures such as visual inspection are recommended to be undertaken during construction activities that disturb soil. The inspection process shall involve a visual observation of excavated soils for discolouration and the presence of oils, together with identifying the presence of odours, which may also indicate soil and/or groundwater contamination. If soil materials suspected to be contaminated are encountered during excavation, sampling and testing shall be undertaken to verify the presence of contamination. The soil extracted during demolition, excavation and cut & cover construction shall be temporary stockpiled. Shall concentrations of contamination works shall be undertaken with reference to the Contamination Assessment Report (CAR) and Remediation Action Plans (RAP). | To act as a general precautionary measure to screen soils for the presence contamination during excavation works for Cut-and-Cover. | Contractor | Within Project Boundary where signs of contamination is identified | During excavation works for Cut-and- Cover | N/A |
| S13.30 | For some sites with currently no SI proposed (i.e. sites ID 2-02, 2-18, 2-22, 2-23, 2-27, 2-29, 10 be conservative, visual inspection shall be conducted during demolition and excavation to detect any abnormal colour, smell or other characteristics of the soil, due to the nearby land use and/ or construction method. If abnormal colour, smell or other characteristics of contamination are identified for any of these sites, sampling and testing shall be undertaken to verify the presence of contamination. The soil extracted during demolition, excavation and cut & cover construction shall be temporary stockpiled. Should the concentrations of contaminants of concern (COCs) exceed relevant RBRGs as indicated by laboratory analyses, remediation works shall be undertaken with reference to the CAR and RAP. | To act as a general precautionary measure to screen soils for the presence contamination during excavation works for Cut-and-Cover. | Contractor | Areas with no SI proposed (Sites ID 2-02, 2-18, 2-22, 2-23, 2-27, 2-28) | During excavation works for Cut-and- Cover | N/A |
| S13.36 – 13.38 | For areas inaccessible for proper site appraisal and investigation (Stage 2 SI) (i) Site 2-15 Upon site access being granted, visual inspection shall be carried out where intrusive works and soil excavation is encountered, for attention on any potential contamination due to its current operation A supplementary CAP shall then be submitted to EPD for endorsement. A CAR/RAP shall be prepared and submitted to EPD for endorsement on completion of the SI and analytical testing. Shall remediation be undertaken a Remediation Report (RR) shall be prepared and submitted to EPD for endorsement to demonstrate that the decontamination work is adequate and is carried out in accordance with the endorsed CAR and RAP. Information such as soil treatment/ disposal records (including trip tickets), confirmatory sampling results, and photographs shall be included in the aforesaid RR. No construction work shall be carried out prior to the endorsement of the RR by EPD. | To identify areas with land contamination concern, report laboratory results and propose remediation measures if necessary. To ensure remediation works have been undertaken to before the commencement of any construction works of the Project. | Contractor | Areas unable to be accessed during Stage 1 SI (Site 2-15) | After land resumption and prior to the construction works commencement at the site | N/A |
| S13.39 | Potential Remediation of Contaminated Soil Excavation profiles must be properly designed and executed with attention to the relevant requirements for environment, health and safety; Excavation shall be carried out during dry season as far as possible to minimise contaminated runoff from contaminated soils; Supply of suitable clean backfill material is needed after excavation; I fremediation is required with chemical oxidation proposed as a contaminant mass reduction technology, chemicals will be securely and separately stored away from sources of ignition or oxidisable items. Handling will be undertaken by personnel with appropriate training and personal protective equipment (PPE). Vehicles containing any excavated materials shall be suitably covered to limit potential dust emissions or contaminated ouring transport or during wet conditions; Speed control for the trucks carrying contaminated materials shall be established and used; and Pollution control measures for air emissions e.g. from biopile blower, noise emissions e.g. from blower, and water discharge e.g. runoff control shall be implemented and complied with relevant requirements and quielines. | To remediate contaminated soil | Contractor | Identified contaminated sites | Site remediation | NA |

| S13. 40 | In order to minimize the potential adverse effects on health and safety of construction workers during the course of site remediation, the Occupation Safety and Health Ordinance (OSHO) (Chapter 509) and its subsidiary Regulations shall be followed by all site personnel working on the site at all times. In addition, the following basic health and safety measures shall be implemented as far as possible: • Set up a list of safety measures for site workers; • Provide written information and training on safety for site workers; • Keep a log-book and plan showing the contaminated zones and clean zones; • Maintain a hygienic working environment; • Avoid dust generation; • Provide face and respiratory protection gear to site workers; • Provide personal protective clothing (e.g. chemical resistant jackboot, liquid tight gloves) to site workers; and | To minimise the potentially adverse effects on health and safety of construction workers during the course of site remediation. | Contractor | Identified contaminated sites | Site remediation and prior to construction phase | N/A | | | |

| Test specifications | | | | |

1, The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.

- 2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.
- The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Actual Measurement data are documented on worksheets.

Approved Signatory:

Feng Jungi

2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

| Test: | Subtest | Status | Expanded Uncertanity (dB) | Coverage Factor |
|-------------------|------------------------|--------|------------------------------|--------------------|
| Acoustic response | Weighting A at 125 Hz | Pass | 0.3 | |
| | Weighting A at 8000 Hz | Pass | 0.5 | |

3, Response to associated sound calibrator

N/A

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

The standard(s) and equipment used in the calibration are traceable to national or international recognised standards and are calibrated on a schedule to maintain the required accuracy level.

Test specifications

- 1, The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.
- 2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.
- 3, The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Actual Measurement data are documented on worksheets.

Approved Signatory: 0 Feng Junqi

Air pressure:

Test specifications

1, The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B and the lab calibration procedure SMTP004-CA-156.

2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.

 The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure changes.

Test results

This is to certify that the sound calibrator conforms to the requirements of annex B of IEC 60942: 1997 for the conditions under which the test was performed. This does not imply that the sound calibrator meets IEC 60942 under any other conditions.

Details of the performed measurements are presented on page 2 of this certificate.

Approved Signatory:

1005 ± 5 hPa

Date: 26-Mar-2020

Comments: The results reported in this certificate refer to the conditon of the instrument on the date of calibration and carry no implication regarding the long-term stability of the instrument.

CERTIFICATE OF CALIBRATION

(Continuation Page)

Certificate No.:

20CA0324 01

Page: 2 of

2 of 2

1, Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties.

| Frequency | Output Sound Pressure | Measured Output | Estimated Expanded |
|-----------|-----------------------|----------------------|--------------------|
| Shown | Level Setting | Sound Pressure Level | Uncertainty |
| Hz | dB | dB | dB |
| 1000 | 94.00 | 94.14 | 0.10 |

2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

| At 1000 Hz | STF = 0.014 dB |
|--------------------------------|----------------|
| Estimated expanded uncertainty | 0.005 dB |

3, Actual Output Frequency

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

| At 1000 Hz | Actual Frequency = 1002.6 Hz | |
|--------------------------------|------------------------------|-------------------------|
| Estimated expanded uncertainty | 0.1 Hz | Coverage factor k = 2.2 |

4, Total Noise and Distortion

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

| At 1000 Hz | TND = 1.5 % |
|--------------------------------|-------------|
| Estimated expanded uncertainty | 0.7 % |

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

EXECUTIVE SUMMARY

Introduction

 This is the 72nd monthly Environmental Monitoring and Audit (EM&A) Report prepared by Wellab Limited for MTR Shatin to Central Link (SCL) Works Contract 1121 – NSL Cross Harbour Tunnels. This report documents the findings of EM&A Works conducted from 1 to 28 February 2021.

Summary of Construction Works undertaken during Reporting Month

- 2. The major site activities undertaken in the reporting month include:
 - Internal finishes and defect remedial works at NOV at Hung Hom
 - Access shaft closing (up track) and backfilling at Up and Down track
 - Waterproofing work at roof slab (previous shaft opening at up track)
 - Re-provision of Finger Pier and reinstatement work at Hung Hom
 - IMT internal fit out works

Environmental Monitoring and Audit Progress

3. A summary of the monitoring activities in this reporting period is listed below:

Regular Impact Air Quality Monitoring

• 24-hour TSP monitoring at AM1 Harbourfront Horizon

5 times

Water Quality Monitoring

4. No water quality monitoring was conducted in this reporting period.

Waste Management

5. Wastes generated from this Project include inert construction and demolition (C&D) materials and non-inert C&D materials. Details of waste management data is presented in Section 5 and Appendix J.

Landscape and Visual

6. Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 1 and 17 February 2021. Most of the necessary mitigation measures have been implemented and recommended follow-up actions have been discharged by the Contractor. Details of the audit findings and implementation status are presented in Section 6.

Environmental Site Inspection

7. Joint weekly site inspections were conducted by representatives of the Contractor, Engineer and Contractor's ET on 1, 8, 17 and 22 February 2021. The representative of the IEC joined the site inspection on 22 February 2021. Details of the audit findings and implementation status are presented in Section 6.

Environmental Exceedance/Non-conformance/Complaint/Summons and Successful Prosecution

- 8. No exceedance of the Action and Limit Levels of regular air quality monitoring was recorded during the reporting period.
- 9. No non-compliance event was recorded during the reporting period.
- 10. No environmental complaint was received and no notification of summon / successful prosecutions were received in this reporting period.

Reporting Changes

11. No reporting changes in this reporting period.

Future Key Issues

- 12. Major site activities for the coming reporting month will include:
 - Internal finishes and defect remedial works at NOV at Hung Hom
 - Access shaft backfilling at Up and Down track
 - Saw cutting the temporary access shaft structure (to approx. 2m below finish ground level)
 - Re-provision of Finger Pier and reinstatement work at Hung Hom
 - IMT internal fit out works
 - External irrigation system construction
- 13. Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality and waste management.

1 INTRODUCTION

1.1 Wellab Limited was appointed by Penta Ocean – China State Joint Venture (PCJV) as the Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the MTR Shatin to Central Link (SCL)Works Contract 1121 – NSL Cross Harbour Tunnels (hereafter referred to as the Project).

Purpose of the Report

1.2 This is the 72nd EM&A report which summarises the impact monitoring results and audit findings for the EM&A programme during the reporting period from 1 to 28 February 2021. The major construction works for Contract 1121 commenced on 2 March 2015.

Structure of the Report

1.3 The structure of the report is as follows:

Section 1: Introduction - details the scope and structure of the report.

Section 2: **Project Information** - summarises background and scope of the project, site description, project organization and contact details, construction programme, the construction works undertaken and the status of Environmental Permits/Licenses during the reporting period.

Section 3: **Environmental Monitoring Requirement -** summarises the monitoring parameters, monitoring programmes, monitoring methodologies, monitoring frequency, monitoring locations, Action and Limit Levels, Event / Action Plans, environmental mitigation measures as recommended in the EIA report and relevant environmental requirements.

Section 4: **Implementation Status on Environmental Mitigation Measures -** summarises the implementation of environmental protection measures during the reporting period.

Section 5: Monitoring Results - summarises the monitoring results obtained in the reporting period.

Section 6: **Environmental Site Inspection -** summarises the audit findings of the weekly site inspections undertaken within the reporting period.

Section 7: Environmental Non-conformance - summarises any monitoring exceedance, environmental complaints and environmental summons within the reporting period.

Section 8: **Future Key Issues -** summarises the impact forecast and monitoring schedule for the next three months.

Section 9: Conclusions and Recommendations

2 PROJECT INFORMATION

Background

- 2.1 The Shatin to Central Link Hung Hom to Admiralty Section (hereafter referred to as SCL (HUH-ADM)) is an approximately 6 km extension of the East Rail Line including a rail harbor crossing from Hung Hom across the harbor to Admiralty on Hong Kong Island. It is a Designated Project under the Environmental Impact Assessment Ordinance (Cap. 499) (EIAO).
- 2.2 The Environmental Impact Assessment (EIA) Report for SCL Hung Hom to Admiralty Section [SCL (HUH-ADM)] (Register No.: AEIAR-166/2012) was approved on 17 February 2012 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, Environmental Permits (EP) (EP No: EP-436/2012) was granted on 22 March 2012 for their construction and operation.
- 2.3 Various Environmental Review Reports (ERR) / Supplementary Information Paper had been submitted for the following purposes:

| Environmental Review Reports / Supplementary Information Paper | DateofSubmissiontoEPD | Purpose(s) |
|---|-----------------------|---|
| Environmental Review Report – Design Changes of North Ventilation Building and Shek O Casting Basin | February 2014 | To identify and assess the likely environmental issues pertinent to the proposed design changes at North Ventilation (NOV) Building and Shek O Casting Basin, and to identify any additional environmental mitigation measures that may be required for compliance with environmental standards. |
| Environmental Review Report – Variation for IMT Extension | February 2015 | To identify and assess the likely environmental issues pertinent to the proposed alternative scheme of IMT extension. |
| Supplementary Information Paper for Optimized Scheme for IMT Construction in CBTS | January 2016 | To demonstrate that no unacceptable impacts would be resulted from the Optimized Scheme in CBTS. |
| Environmental Review Report of Dredging Scenarios | November 2016 | To demonstrate that unacceptable water quality impact is not anticipated from an alternative dredging option (including (i) using two smaller closed grab dredgers instead of one large closed grab dredger; and (ii) proposed daily production rate) within the open Victoria Harbour outside |

Table 2.1 Environmental Review Reports/Supplementary Information Paper for thisProject

| | | | Causeway Bay Typhoon Shelter (CBTS) |
|--|------------|----------|---|
| Environmental Review Report – Arrangement of the fixed plant noise Sources at NOV | 31 2018 | December | To update the Fixed Plant Noise Sources at North Ventilation Building, Plant Rooms and Emergency Access (NOV) |

- 2.4 Variation of environmental permit (VEP) was subsequently applied for EP-436/2012 and the latest Environmental Permit (EP No: EP-436/2012/F) was issued by Director of Environmental Protection (DEP) on 23 January 2019.
- 2.5 The construction of the SCL (HUH-ADM) has been divided into a series of civil construction Works Contracts and this Works Contract 1121 comprises of the Permanent Works and the associated Temporary works required for the construction of the North Ventilation Building (NOV) at the Hung Hom Landfall, and construction of cut & cover tunnel and Immersed Tunnel (IMT) sections extending across the harbour from the NOV to the Causeway Bay Typhoon Shelter (CBTS). This construction contract was awarded to Penta Ocean China State Joint Venture (PCJV) in December 2014.
- 2.6 The IMT construction within CBTS has been completed in June 2019. The post-project water quality monitoring at Station 9 in Victoria Harbour has been completed on 26 July 2019 for four weeks. The silt screen at Windsor House has been handed over to Central-Wan Chai Bypass Project.
- 2.7 The Dredging / filling operation in Victoria Harbour has been completed in December 2019. The post-project water quality monitoring at Station C1, C2, 21, 34, A, WSD9 and WSD17 in Victoria Harbour has been completed on 28 January 2020 for four weeks. The silt screens maintained under this Project at water intake 21, 34, 35, WSD9 and WSD17 have been removed in mid-June 2020.

General Site Description

2.8 The site layout plans for the Works Contract 1121 are shown in **Figure 1a-1b**.

Construction Programme and Activities

- 2.9 A summary of the major construction activities undertaken in this reporting period is shown as follows. The tentative construction programme is presented in **Appendix A**.
 - Internal finishes and defect remedial works at NOV at Hung Hom
 - Access shaft closing (up track) and backfilling at Up and Down track
 - Waterproofing work at roof slab (previous shaft opening at up track)
 - Re-provision of Finger Pier and reinstatement work at Hung Hom
 - IMT internal fit out works

Project Organisation

2.10 The project organizational chart and contact details are shown in Figure 2.

Status of Environmental Licences, Notification and Permits

2.11 A summary of the relevant permits, licences, and/or notifications on environmental protection for this Project is presented in **Table 2.2**.

 Table 2.2
 Summary of the Status of Environmental Licences, Notification and Permits

| Permit / License No. | Valid | | |

Summary of EM&A Requirements

- 2.12 The EM&A programme under Works Contract 1121 requires regular dust and water quality monitoring as well as environmental site audits. The EM&A requirements are described in the following sections, including:
 - All monitoring parameters;
 - Action and Limit levels for all environmental parameters;
 - Event / Action Plans;
 - Environmental mitigation measures, as recommended in the Project EIA study final report; and
 - Environmental requirements in contract documents.
- 2.13 The advice on the implementation status of environmental protection and pollution control/mitigation measures is summarized in Section 6 of this report.

2.14 This report presents the monitoring results, observations, locations, equipment, period, methodology and QA/QC procedures of the required monitoring parameters, namely marine water quality monitoring as well as audit works for the Project in the reporting month.

3 ENVIRONMENTAL MONITORING REQUIREMENTS

Regular Construction Dust Monitoring

3.1 In accordance with the EM&A Manual, impact 24-hour TSP monitoring should be conducted to monitor the air quality throughout the construction period. The impact monitoring works was handed over to MTR Contract 1121 from MTR Contract 1112 in November 2020. Impact 24-hour TSP monitoring were conducted for at least once in every six days at one air quality monitoring station. **Appendix B** shows the established Action and Limit Levels for the air quality monitoring work.

Monitoring Locations

3.2 Impact air quality monitoring were conducted at one designated air quality monitoring stations, namely AM1, according to the EM&A Manual. The locations of the air quality monitoring stations are described in **Table 3.1** and illustrated in **Figure 4**.

Table 3.1Locations for Air Quality Monitoring Stations

| Monitoring Stations | Location | Location of Measurement |
|---------------------|----------------------|--|
| AM1^ | Harbourfront Horizon | Roof of the Site Office Building next to Harbourfront Horizon* |

^Different IDs were used in various EM&A Manuals for dust monitoring location at Harbourfront Horizon, DMS-12 was used in EM&A Manual for SCL(TAW-HUH), AM2 were used in EM&A Manual and EIA report for SCL(MKK-HUH), and DMS-1 Works Contract 1112 were used in EM&A Manual and EIA report for HHS. AM1 was used in EM&A Manual and EIA report for SCL(HUH-ADM). For ease of future reference, the monitoring station namely as AM1, will be adopted for EM&A reporting for Works Contract 1121 when referring to this monitoring location upon the termination of MTR Contract 1112 EM&A programme.

*Air quality monitoring location at Harbourfront Horizon is the same as monitoring station CD6a as proposed in the EM&A Manual for "Kwun Tong Line Extension (KTE)". Access to Harbourfront Horizon was rejected by the owner during preparation for baseline monitoring for the KTE in early 2011. A representative monitoring location at the adjacent Finger Pier, at about 25m from Harbourfront Horizon, was adopted as an alternative monitoring location for KTE. This monitoring location is considered the most appropriate alternative monitoring location for AM2 and have been adopted for dust monitoring for MTR Contract 1112.

Monitoring Parameters, Frequency and Duration

3.3 **Table 3.2** summarizes the monitoring parameters and frequencies of impact air quality monitoring for the impact monitoring. The air quality monitoring schedule for this reporting period is shown in **Appendix D**.

 Table 3.2
 Impact Air Quality Monitoring Parameters, Frequency and Duration

| Monitoring Station | Parameter | Period | Frequency |
|-----------------------|-------------|----------|---|
| AM1 | 1-hour TSP | 1 hour | 3 times in every 6 days when one documented and valid complaint is received |
| | 24-hour TSP | 24 hours | Once in every 6 days |

Monitoring Equipment

3.4 **Table 3.3** summarizes the equipment used in the air quality monitoring programme and **Appendix C** shows the copies of calibration certificates for the equipment at AM1.

| Equipment | Model | Serial no. | Qty. |
|-------------|--------------------------|------------|------|
| HVS Sampler | TISCH: Model no. TE-5170 | 1535 | 1 |
| Calibrator | TISCH: Model TE-5025A | 2896 | 1 |

Table 3.3Air Quality Monitoring Equipment

Monitoring Methodology and QA/QC Procedure

Instrumentation

3.5 High Volume Sampler (HVS) (TISCH: Model no. TE-5170) completed with appropriate sampling inlets were deployed for air quality monitoring. Each sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA Standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

HVS Installation

- 3.6 The following guidelines are adopted during the installation of HVS:
 - A horizontal platform with appropriate support to secure the samplers against gusty wind was provided.
 - No two samplers were placed less than 2 metres apart;
 - The distance between the sampler and an obstacle, such as buildings, was at least twice the height that the obstacle protrudes above the sampler;
 - A minimum of 2 metres of separation from walls, parapets and penthouses was required for rooftop samplers;
 - A minimum of 2 metres of separation from any supporting structure, measured horizontally was required;
 - No furnace or incinerator flue was nearby;
 - Airflow around the sampler was unrestricted;
 - The sampler was more than 20 metres from the dripline;
 - Any wire fence and gate, to protect the sampler, should not cause any obstruction during monitoring;
 - Permission and access to the monitoring stations have been obtained to set up the samplers; and
 - A secured supply of electricity was needed to operate the samplers.

Filters Preparation

- 3.7 Fiberglass filters have a collection efficiency of larger than 99% for particles of 0.3 μm diameter will be used. A HOKLAS accredited laboratory, Wellab Ltd., is responsible for the preparation of 24-hr conditioned and pre-weighed filter papers for the monitoring team. Glass fibre filters, TE-G653 were labelled and sufficient filters that were clean and without pinholes were selected.
- 3.8 All filters, which are prepared by Wellab Ltd., are equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature is around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) is < 50% and not variable by more than ±5%. A convenient working RH is 40%.

Operating/Analytical Procedures

- 3.9 Operating/analytical procedures for the air quality monitoring are highlighted as follows:
 - Prior to the commencement of the air quality monitoring, the flow rate of the HVS was properly set (between 1.1 m³/min. and 1.4 m³/min.).
 - The power supply was checked to ensure the sampler worked properly.
 - Upon sampling, the sampler was operated for 5 minutes to establish thermal equilibrium before placing any filter media at the designated air quality monitoring station.
 - The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centred with the stamped number upwards, on a supporting screen.
 - The filter was aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter. Then the filter holding frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
 - The shelter lid was closed and secured with the aluminium strip.
 - The timer was then programmed. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number).
 - After sampling, the filter was removed and sent to the Wellab Ltd. for weighing. The elapsed time was also recorded.
 - Before weighing, all filters were equilibrated in a conditioning environment for 24 hours. The conditioning environment temperature should be between 25°C and 30°C and not vary by more than ± 3 °C; the relative humidity (RH) should be < 50% and not vary by more than $\pm 5\%$. A convenient working RH is 40%. Weighing results will be returned to Wellab for further analysis of TSP and RSP concentrations collected by each filter.

Weather record

3.10 The wind data was made reference from Hong Kong Observatory and is shown in **Appendix L**. The general weather conditions (i.e. sunny, cloudy or rainy) was recorded by the field staffs during the monitoring day.

Maintenance/Calibration

- 3.11 The following maintenance/calibration are required for the HVS:
 - The high volume motors and their accessories were properly maintained by the monitoring team. Appropriate maintenances such as routine motor brushes replacement and electrical wiring checking were made to ensure that the equipment and necessary power supply are in good working condition.
 - All HVSs were calibrated (five point calibration) using TE-5170 Calibration Kit prior to the commencement of the impact monitoring. The five-point calibration would be carried out every two months

Regular Water Quality Monitoring

- 3.12 In accordance with the EM&A Manual and the ERRs, marine water quality monitoring should be carried out during the dredging and filling operation, and IMT construction within CBTS (for Station 9 only); and throughout the construction period of removal of earth bunds at Northern and Southern gates.
- 3.13 Water Quality Monitoring at Station 8 and 14 is suspended as the water intakes are not in use. The statuses of the intakes will be kept in view such that once the water intakes are occupied, water quality monitoring will resume. In the presence of temporary reclamation in the Causeway Bay Typhoon Shelter (CBTS) under this Project, only Dissolved Oxygen (DO) level monitoring would be maintained at Station 8 for checking of potential odour concern.
- 3.14 The water quality monitoring stations and control stations of Project are shown in **Figure 3**. The co-ordinates of the monitoring stations are listed in **Table 3.4**. As shown in **Table 3.4**, the locations are classified as Impact Station and Control Station according to their functions.

| Station | Description | Coord | inates | |
|------------|---|------------------|--------|--|
| | | Easting | North | |
| Shek O Ca | sting Basin | | | |
| GB3 | Turtle Cove Beach | 841120 | 810280 | |
| C3 | Control Station for ebb tide | 841200 | 806210 | |
| C4 | Control Station for flood tide | 843330 | 807320 | |
| Victoria H | arbour | | | |
| 8 | Cooling Water Intake for Excelsior Hotel and World Trade Centre / No. 27 – 63 Paterson Street | 837036 | 816008 | |
| 9 | Cooling Water Intake for Windsor House | 837223 | 816150 | |
| 14 | Flushing Water Intake for Kowloon Station | 834477 | 817891 | |
| 21 | Cooling Water Intake for East Rail Extension | 836484 | 817642 | |
| 34 | Cooling Water Intake for Metropolis | polis 836828 817 | | |
| А | Wan Chai WSD Flushing Water Intake (Reprovisioned) ⁽¹⁾ | 836268 | 816045 | |
| WSD9 | Tai Wan WSD Flushing Water Intake ⁽²⁾ | 837930 | 818357 | |
| WSD17 | Quarry Bay WSD Flushing Water Intake | 839863 | 817077 | |
| C1 | Control Station 1 | 833977 | 817442 | |
| C2 | Control Station 2 | 841088 | 817223 | |

Table 3.4 Water Quality Monitoring Stations

Note:

- (1) According to the Baseline Water Quality Monitoring Report for SCL (MKK-HUH & HUH-ADM), the original coordinates of monitoring location A (Easting: 836286, Northing: 816024) is the exact location taken from the design of reprovisioned Wan Chai Salt Water Pumping Station and Salt Water Intake Culvert. Based on actual site condition for taking water sampling, minor adjustment was made on monitoring location.
- (2) According to the Baseline Water Quality Monitoring Report for SCL (MKK-HUH & HUH-ADM), the original coordinates of monitoring location WSD9 (Easting: 838133, Northing: 817790) as proposed in WQMP were moved closer to sensitive receiver according to the actual site condition.

Monitoring Parameter, Frequency and Programme

3.15 Water quality monitoring was conducted in accordance with the requirements stipulated in the approved SCL(HUH-ADM) EM&A Manual and the ERRs. **Table 3.5** summarized the monitoring frequency and water quality parameters for the impact monitoring.

| | Impact Monitoring |
|---|---|
| | <u>Victoria Harbour</u> During the dredging and filling operation |
| Monitoring Period | <u>CBTS (Station 9 only)</u> During IMT construction within CBTS |
| | Shek O Casting Basin Throughout the construction period of removal of earth bunds at Northern and Southern gates. |
| Monitoring Frequency ⁽¹⁾ | 3 Days in a Week, at mid-flood and mid-ebb tides |
| Monitoring Locations ⁽³⁾⁽⁴⁾ | GB3, C3, C4, 8, 9, 14, 21, 34, A, WSD9, WSD17, C1 and C2 |
| Monitoring Parameters ⁽²⁾ | DO, temperature, turbidity, pH, salinity and SS |
| Intervals between 2 Sets of Monitoring | Not less than 36 hours |
| Tidal Range | Individual flood and ebb tides not less than 0.5m |

Table 3.5Water Quality Impact Monitoring Programme

Notes:

1. For selection of tides for in-situ measurement and water sampling, tidal range of individual flood and ebb tides should be not less than 0.5 m.

2. Turbidity, DO, pH, temperature and salinity should be measured in situ whereas SS should be determined by laboratory.

3. Water Quality Monitoring at Station 8 and 14 were suspended as the water intakes are not in use.

4. As the IMT construction within CBTS has been completed in June 2019, the post-project water quality monitoring at Station 9 in Victoria Harbour has been completed on 26 July 2019 for four weeks.

5. As the Dredging / filling operation in Victoria Harbour has been completed in December 2019, the post-project water quality monitoring at Station C1, C2, 21, 34, A, WSD9 and WSD17 in Victoria Harbour has been completed on 28 January 2020 for four weeks.

Monitoring Equipment and Methodology

pH Measurement Instrument

3.16 The instrument consisted of a potentiometer, a glass electrode, a reference electrode and a temperature-compensating device. It is readable to 0.1pH in a range of 0 to 14. Standard buffer solutions of at least pH 7 and pH 10 is used for calibration of the instrument before and after use.

Dissolved Oxygen and Temperature Measuring Equipment

3.17 The Dissolved Oxygen (DO) measuring equipment is portable and weatherproof. It is completed with cable and senor, and a DC power source. The equipment is capable of measuring:

12

- a DO level in the range of 0 20 mg·L⁻¹ and 0 200% saturation; and
- a temperature of 0 45 degree Celsius (°C).
- 3.18 It has a membrane electrode with automatic temperature compensation complete with a cable.
- 3.19 Should salinity compensation not be built-in to the DO equipment, in-situ salinity should be measured to calibrate the DO measuring equipment prior to each DO measurement.

Turbidity Measurement Instrument

3.20 The turbidity measuring instrument is a portable and weatherproof using a DC power source. It has a photoelectric sensor capable of measuring turbidity between 0 - 1000 NTU (for example, Hach model 2100P or an approved similar instrument).

Sampler

3.21 A water sampler was required for SS monitoring. It comprises a transparent PVC cylinder, with a capacity of not less than 2 litres, which can be effectively sealed with latex cups at both ends. The sampler has a positive latching system to keep it open and prevent premature closure until released by a messenger when the sampler is at the selected water depth (for example, Kahlsico Water Sampler or an approved similar instrument).

Water Depth Detector

3.22 A portable, battery-operated echo sounder is used for the determination of water depth at each monitoring station. This unit can either be hand-held or affixed to the bottom of the work boat, if the same vessel is to be used throughout the monitoring programme.

Salinity

3.23 A portable salinometer capable of measuring salinity in the range of 0 - 40 parts per thousand (ppt) is provided for measuring salinity of the water at each monitoring station.

Sample Containers and Storage

3.24 Water samples for SS monitoring were stored in high density polythene bottles with no preservative added, packed in ice (cooled to 4 °C without being frozen) and delivered to the laboratory and analyzed as soon as possible after collection.

Monitoring Position Equipment

3.25 A hand-held or boat-fixed type digital Differential Global Positioning System (DGPS) with way point bearing indication and Radio Technical Commission for maritime (RTCM) Type 16 error message "screen pop-up" facilities (for real-time autodisplay of error messages and DGPS corrections from the Hong Kong Hydrographic Office), or other equipment instrument of similar accuracy, was provided and used during marine water monitoring to ensure the monitoring vessel at the correct location before taking measurements.

Calibration of In-Situ Instruments

3.26 The pH meter, DO meter and turbidimeter was checked and calibrated before use. DO meter and turbidimeter was certified by a laboratory accredited under HOKLAS or any other international accreditation scheme, and subsequently re-calibrated at 3 monthly

intervals throughout all stages of the water quality monitoring. Responses of sensors and electrodes were checked with certified standard solutions before each use. Wet bulb calibration for a DO meter was carried out before measurement at each monitoring location.

3.27 Sufficient stocks of spare parts were maintained for replacements when necessary. Backup monitoring equipment were made available so that monitoring can proceed uninterrupted even when some equipment are under maintenance, calibration, etc.

Laboratory Measurement / Analysis for Marine Water

3.28 Duplicate samples from each independent sampling event are required by EPD for all parameters. Analysis of suspended solids was carried out in a HOKLAS or other international accredited laboratory. Sufficient water samples were collected at the monitoring stations for carrying out the laboratory SS determinations, with detection limit shown in **Table 3.6**. The SS determination work was started within 24 hours after collection of the water samples. The analyses followed the standard methods according to **Table 3.6** and as described in "American Public Health Association (APHA) Standard Methods for the Examination of Water and Wastewater", 19th edition, unless otherwise specified.

| Table 3.6 | Analytical Methods to be applied to Marine Water Quality Samples | |
|-----------|--|--|
|-----------|--|--|

| Determinant | Standard Method | Detection Limit |
|-------------------------|-----------------|-----------------|
| Suspended Solids (mg/L) | APHA 2540 D | 0.1 mg/L |

Action and Limit Levels

3.29 The action and limit levels for water quality monitoring are presented in Appendix B.

Event and Action Plan

3.30 Should non-compliance of the criteria occur, action in accordance with the Event and Action Plan in **Appendix G** shall be carried out.

Landscape and Visual

3.31 In accordance with the EM&A Manual, the landscape and visual mitigation measures shall be implemented and a site inspection shall be conducted once every two weeks throughout the construction period. The implementation status is summarised in Table 6.1 of Section 6.

4 IMPLEMENTATION STATUS ON ENVIRONMENTAL PROTECTION REQUIREMENTS

4.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Report, the Environmental Permit, EM&A Manual and the ERR. The implementation status of the environmental mitigation measures of the reporting period is summarized in **Appendix I**. Status of required submissions under the Environmental Permit (EP) of the reporting period is presented in **Table 4.1**.

| EP Condition | Submission | Submission Date |
|---|------------|------------------|
| Condition 3.4 Monthly EM&A Report (January 2021) | | 11 February 2021 |

5 MONITORING RESULTS

Air Quality Monitoring

5.1 **Table 5.1** summarizes the monitoring results at AM1 in the reporting month. Detailed monitoring results and graphical presentations of 24-hour TSP monitoring results are shown in **Appendix E**.

 Table 5.1
 Summary of 24-hour TSP Monitoring Result in the Reporting Month

| Monitoring | Concentration (µg/m ³) | | Action Level, | Limit Level, |
|------------|------------------------------------|-------------|-------------------|--------------|
| Station | Average | Range | μg/m ³ | $\mu g/m^3$ |
| AM1 | 43.0 | 16.7 – 56.9 | 182 | 260 |

- 5.2 All 24-hour TSP monitoring was conducted as scheduled in the reporting month. No Action/Limit Level exceedance was recorded. Summary of exceedance is presented in **Appendix H**.
- 5.3 Should project-related non-compliance of the criteria occur, action in accordance with the Event and Action Plan in **Appendix G** shall be carried out.

Water Quality Monitoring

- 5.4 The Dredging / filling operation in Victoria Harbour has been completed on 31 December 2019. A post-project water quality monitoring at station C1, C2, 21, 34, A, WSD9 and WSD17 in Victoria Harbour has been completed on 28 January 2020 for four weeks.
- 5.5 The IMT construction within CBTS has been completed in June 2019. A post-project water quality monitoring at station 9 in Victoria Harbour has been completed on 26 July 2019 for four weeks.
- 5.6 The removal of southern dock gate has been completed on 20 November 2017. A postproject water quality monitoring had been completed on 18 December 2017 in Shek O for four weeks.

Waste Management

- 5.7 Waste generated from this Project includes inert construction and demolition (C&D) materials, non-inert C&D materials and marine sediments. Non-inert C&D materials are made up of C&D waste which cannot be reused or recycled and has to be disposed of at the designated landfill sites. With reference to relevant handling records of this Project, the quantities of different types of waste generated in the reporting month are summarised in **Table 5.2**. Details of waste management data is presented in **Appendix J**.
- 5.8 208.6 m³ inert C&D materials were generated during the reporting month by this Project. No inert C&D materials were received from SCL Contract 1111, 1112, 1114, 1123 and 1128. Inert C&D materials received were collected and stored on-site and 208.6 m³ inert C&D materials were disposed as public fill. No chemical waste was collected by licensed collector during the reporting month. 2110 kg metal was generated during the reporting month. 1684 kg paper/cardboard packaging and No plastic were generated during the reporting month.

| | Quantity | | | | | | |
|------------------|--|---------------------|--|---------------------|--------------------|--------|---------|
| D | | | C&D Materials (non-inert) ^(b) | | | | |
| Reporting | C&D | Sediments | | | Recycled materials | | |
| Month | Materials (in bulk (inert) ^(a) volume) | (in bulk volume) | | Paper/ cardboard | Plastics | Metals | |
| February 2021 | $208.6 m^3$ | $0 m^3$ | 26.2 tonnes | 0 kg | 1684 kg | 0 kg | 2110 kg |

Table 5.2 Quantities of Waste Generated from the Project

Notes:

(a) Inert C&D materials include soft materials, rocks and artificial hard materials to be delivered to TKO 137 and TM 38 public fill reception sites or, alternatively, receptor sites to be identified for beneficial reuse as proposed by the Contractor.

(b) Non-inert C&D materials include C&D waste which cannot be reused or recycled and has to be disposed of at North East New Territories (NENT) Landfill. It also includes steel, paper/cardboard packaging waste, plastics. Steel materials generated from the project are grouped into non-inert C&D materials as the materials were not disposed of with other inert C&D materials.

Landscape and Visual

5.9 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 1 and 17 February 2021. The observations and recommendations made during the audit sessions are summarized in **Table 6.1**.

6 ENVIRONMENTAL SITE INSPECTION

Site Audit

- 6.1 Site audit was carried out by ET on weekly basis to monitor the timely implementation of proper environmental management practices and mitigation measures in the Project site. The summaries of site audit are attached in **Appendix F**.
- 6.2 Site audits were conducted on 1, 8, 17 and 22 February 2021 by ET. A joint site audit with the representative with IEC, ER, the Contractor was carried out on 22 February 2021. The details of observations during site audit can refer to **Table 6.1**.

Implementation Status of Environmental Mitigation Measures

- 6.3 According to the EIA Study Report, Environmental Permit and the EM&A Manual of the Project, the mitigation measures detailed in the documents are recommended to be implemented during the construction phase. An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is provided in **Appendix I**.
- 6.4 During site inspections in the reporting month, no non-conformance was identified. The observations and recommendations made during the audit sessions are summarized in **Table 6.1**.

| Parameters | Date | Observations and Recommendations | Follow-up |
|-----------------------------------|---------------------|---|---|
| Water Quality | | | |
| Noise | | | |
| Landscape and Visual | | | |
| | 1 February 2021 | <u>Reminder</u> Stockpile should be covered with impervious material properly. | The item was remarked for further following up during the audit session on 8 February 2021. |
| Air Quality | 8 February 2021 | <u>Reminder</u> Contractor was reminded to cover the stockpile with impervious materials properly. | The item was observed to be improved/rectified by the Contractor during the audit session on 17 February 2021. |
| | 17 February 2021 | The item was remarked for further following up during the audit session on 22 February 2021. | |
| | 22 February 2021 | <u>Reminder</u> Stockpile should be covered with impervious materials. | Follow-up action will be reported in the next monthly report. |
| Waste / Chemical Management | | | |
| Permits/ Licenses | | | |

 Table 6.1
 Observations and Recommendations of Site Audit

7 ENVIRONMENTAL NON-CONFORMANCE

Summary of Exceedances

Water Monitoring

7.1 No water quality monitoring was conducted in the reporting month.

24-hour TSP Monitoring

7.2 No Exceedance of Action Limit Levels of air quality was recorded during the reporting period. The summary of exceedance is provided in **Appendix H**.

Summary of Environmental Non-Compliance

7.3 No environmental non-compliance was recorded in the reporting month.

Summary of Environmental Complaint

7.4 No environmental complaint was received in the reporting month. The Cumulative Complaint Log since the commencement of the Project is presented in **Appendix K**. The investigation status and result is also reported in **Appendix K**.

Summary of Environmental Summon and Successful Prosecution

7.5 There was no successful environmental prosecution and no notification of summons received in this reporting period. The Cumulative Log for environmental summon and successful prosecution since the commencement of the Project is presented in **Appendix K**.

8 FUTURE KEY ISSUES

Construction Programme for the Next Month

- 8.1 A tentative construction programme is provided in **Appendix A**. The major construction activities in the coming month will include:
 - Internal finishes and defect remedial works at NOV at Hung Hom
 - Access shaft backfilling at Up and Down track
 - Saw cutting the temporary access shaft structure (to approx. 2m below finish ground level)
 - Re-provision of Finger Pier and reinstatement work at Hung Hom
 - IMT internal fit out works
 - External irrigation system construction

Key Issues in the Next Month

8.2 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, noise, water quality and waste management in Hung Hom.

Monitoring Schedule in the Next Month

8.3 The tentative schedule of regular impact air quality monitoring at the monitoring location in the next reporting period is presented in **Appendix D**.

9 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

9.1 The Environmental Monitoring and Audit (EM&A) Report presents the EM&A works undertaken during the period from 1 to 28 February 2021 in accordance with EM&A Manual and the requirement under EP.

24-hour TSP Monitoring

- 9.2 No exceedance of the Action and Limit Levels of regular air quality monitoring was recorded at the designated monitoring stations during the reporting month.
- 9.3 4 times of joint weekly site inspections were conducted by representatives of the Contractor, Engineer and Contractor's ET and 2 times of bi-weekly inspection of the implementation of landscape and visual mitigation measures were conducted during the reporting period.
- 9.4 No environmental complaint and no notification of summon / successful prosecution were received during the reporting month.
- 9.5 The ET will keep track on the EM&A programme to ensure compliance of environmental requirements and the proper implementation of all necessary mitigation measures.

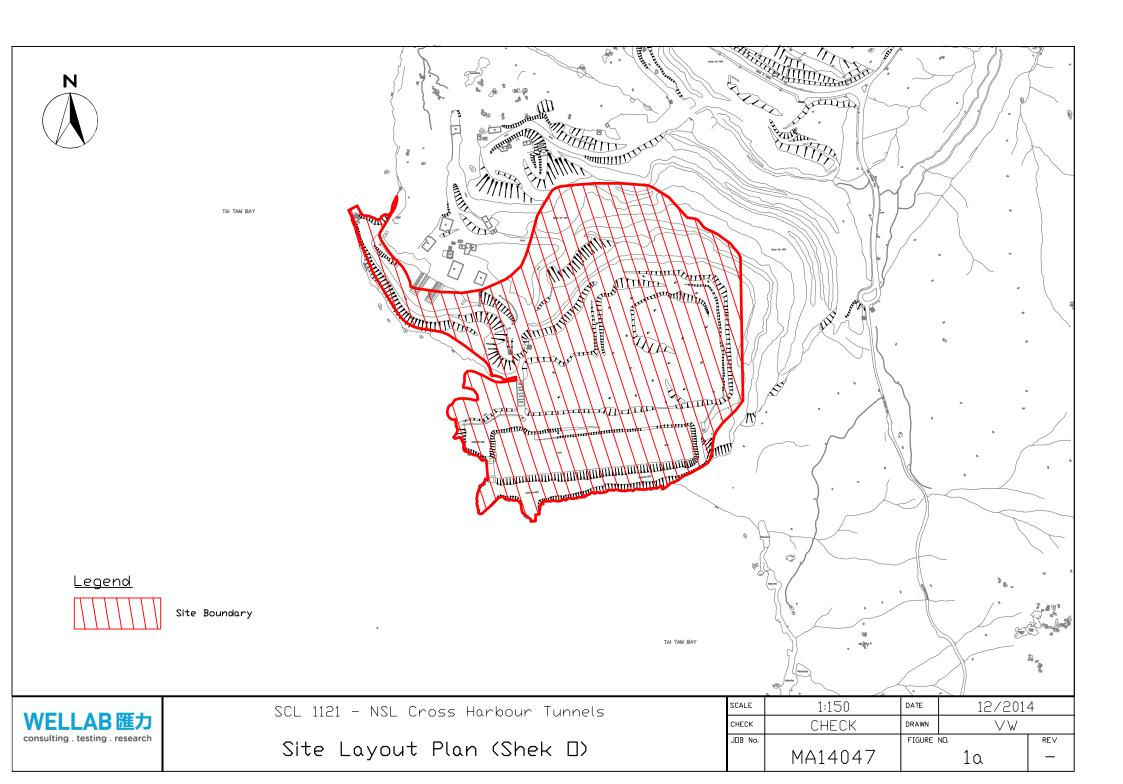

Recommendations

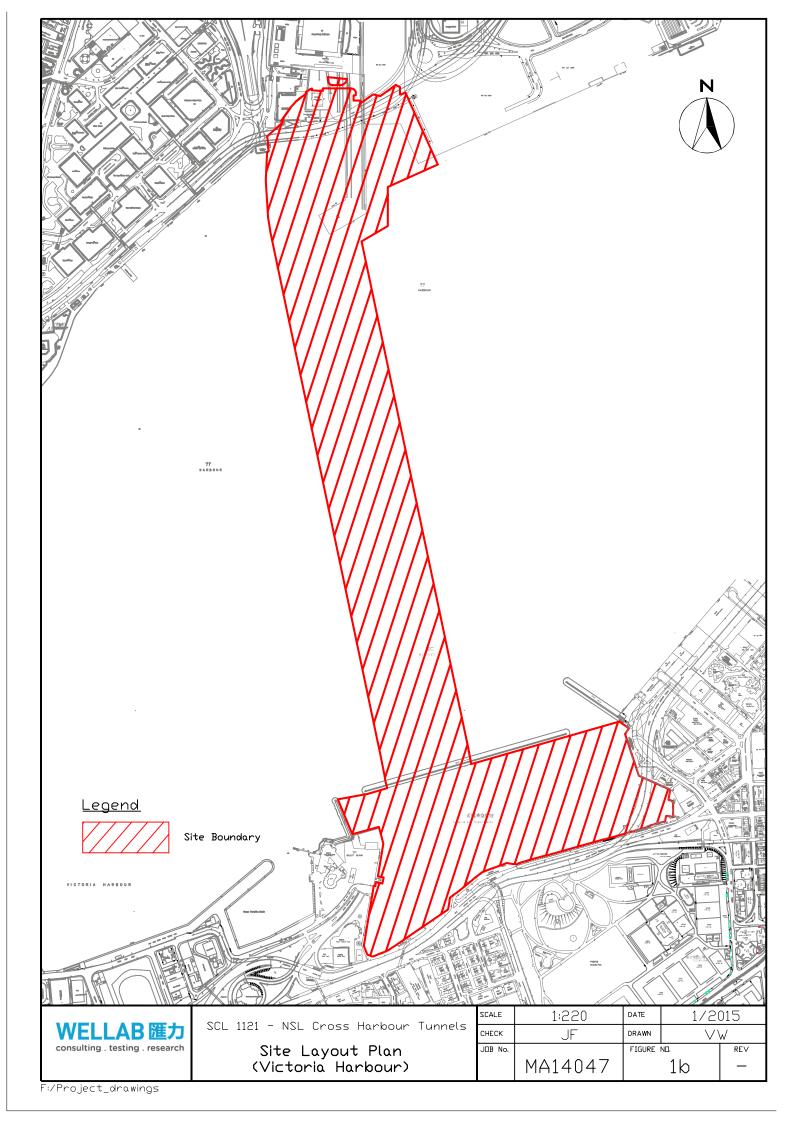

9.6 According to the environmental audit performed in the reporting month, the following recommendations were made:

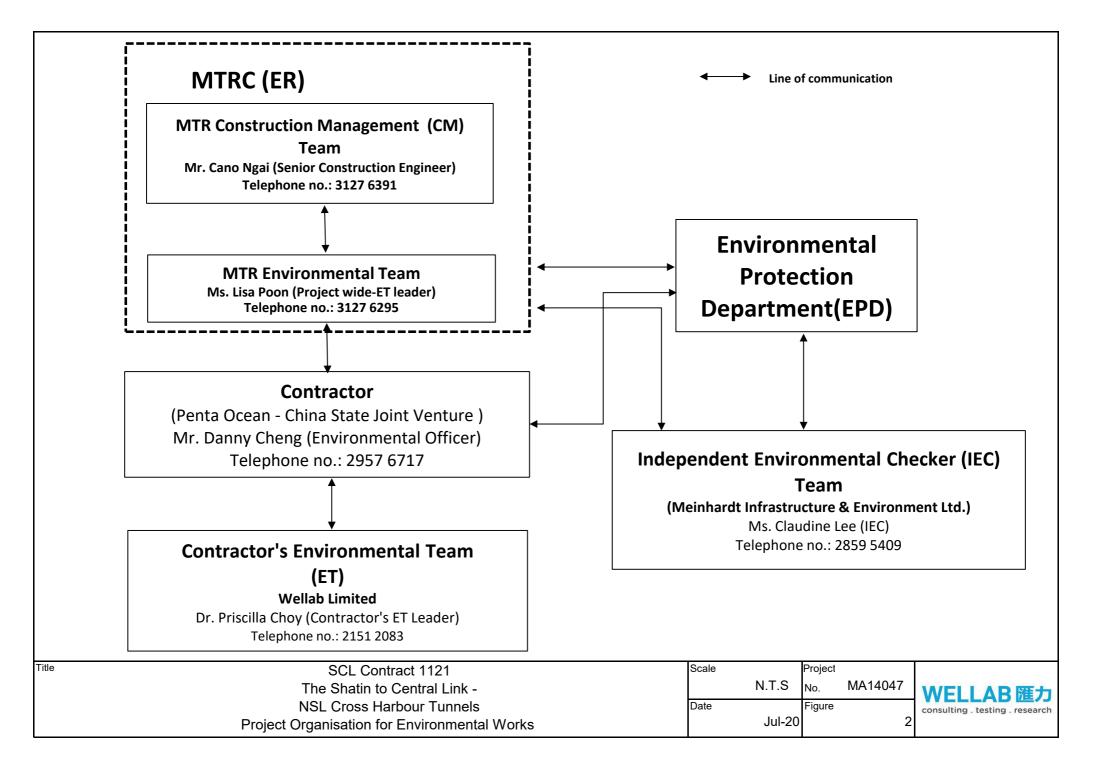

Air Quality

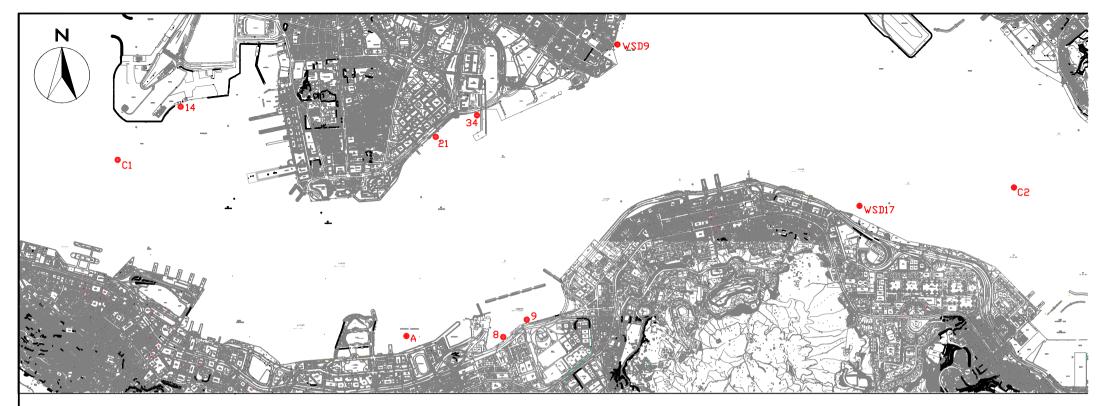

• To mitigate dust generation by providing adequate water spraying during dry days.

|----------|--|--|---|---------------------------------|---------------------------------------|---|--------|
| | prevent splashing of material into the surrounding water. Barges or hoppers shall not be filled to a level that will cause the overflow of materials or polluted water during loading or transportation | | | | | | |
| S11.253 | There is a need to apply to EPD for a discharge licence for discharge of effluent from the construction site under the WPCO. The discharge quality must meet the requirements specified in the discharge licence. All the runoff and wastewater generated from the works areas shall be treated so that it satisfies all the standards listed in the TM-DSS. Minimum distances of 100 m shall be maintained between the discharge points of construction site effluent and the existing seawater intakes. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimize water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring shall be carried out in accordance with the WPCO license which is under the ambit of Regional Office (RO) of EPD. | To minimize water quality impact from effluent discharges from construction sites | Contractor | All construction works areas | Construction phase | • EIAO-TM • WPCO • TM-DSS | Λ |

| | dumping permit under the Dumping at Sea Ordinance | | | | | | |
| S12.89 | Sediments | To determine the best | Contractor | All works areas | Construction | ETWB TC(W) No. | |
| | The contractor for the excavation / dredging works shall apply | handling and disposal | | with sediments | Phase | 34/2002 & | N/A |
| | for the site allocations of marine sediment disposal based on | option of the sediments | | concern | | Dumping at Sea | |
| | the prior agreement with MFC/CEDD. A request for | | | | | Ordinance | |
| | reservation of sediment disposal space have been submitted | | | | | | |
| | to MFC for onward discussions of disposal approach and | | | | | | |
| | feasible disposal sites and the letter is attached in Appendix | | | | | | |
| | 12.6. The Project proponent shall also be responsible for the | | | | | | |
| | application of all necessary permits from relevant authorities, | | | | | | |
| | including the dumping permit as required under DASO from | | | | | | |
| | EPD, for the disposal of dredged and excavated sediment | | | | | | |
| | prior to the commencement of the excavation works. | | | | | | |
| S12.91-12.94 | Sediments | To ensure handling of | Contractor | Work Sites, | Construction | ETWB TC(W) No. | |
| | - Stockpiling of contaminated sediments shall be avoided | sediments are in | | Sediment | Phase | 34/2002 & | N/A |
| | as far as possible. If temporary stockpiling of | accordance to statutory | | disposal sites | | Dumping at Sea | |
| | contaminated sediments is necessary, the excavated | requirements | | | | Ordinance | |
| | sediment shall be covered by tarpaulin and the area shall | | | | | | |
| | be placed within earth bunds or sand bags to prevent | | | | | | |
| | leachate from entering the ground, nearby drains and/or | | | | | | |
| | surrounding water bodies. The stockpiling areas shall be | | | | | | |

I-35

| EIA Ref. | Recommended Mitigation Measures | Objectives of the recommended Measures & Main Concerns to address | Who to implement the measures? | Location of the measures | When to Implement the measures? | What requirements or standards for the measures to achieve? | Status |
|----------|--|--|---|--------------------------|---------------------------------------|---|--------|
| | completely paved or covered by linings in order to avoid | | | | | | |
| | contamination to underlying soil or groundwater. Separate | | | | | | |
| | and clearly defined areas shall be provided for stockpiling | | | | | | |
| | of contaminated and uncontaminated materials. Leachate, | | | | | | |
| | if any, shall be collected and discharged according to the | | | | | | |
| | Water Pollution Control Ordinance (WPCO). | | | | | | |
| | - In order to minimise the potential odour / dust emissions | | | | | | N/A |
| | during excavation and transportation of the sediment, the | | | | | | |
| | excavated sediments shall be wetted during excavation / | | | | | | |
| | material handling and shall be properly covered when | | | | | | |
| | placed on trucks or barges. Loading of the excavated | | | | | | |
| | sediment to the barge shall be controlled to avoid | | | | | | |
| | splashing and overflowing of the sediment slurry to the | | | | | | |
| | surrounding water. | | | | | | |
| | - The barge transporting the sediments to the designated | | | | | | N/A |
| | disposal sites shall be equipped with tight fitting seals to | | | | | | |
| | prevent leakage and shall not be filled to a level that | | | | | | |
| | would cause overflow of materials or laden water during | | | | | | |
| | loading or transportation. In addition, monitoring of the | | | | | | |
| | barge loading shall be conducted to ensure that loss of | | | | | | |
| | material does not take place during transportation. | | | | | | |

| EIA Ref. | Recommended Mitigation Measures | Objectives of the recommended Measures & Main Concerns to address | Who to implement the measures? | Location of the measures | When to Implement the measures? | What requirements or standards for the measures to achieve? | Status |
|----------|---|--|---|---|---------------------------------------|---|--------|
| | Transport barges or vessels shall be equipped with automatic selfmonitoring devices as specified by the DEP. In order to minimise the exposure to contaminated materials, workers shall, when necessary, wear appropriate personal protective equipments (PPE) when handling contaminated sediments. Adequate washing and cleaning facilities shall also be provided on site. | | | | | | N/A |
| S12.95 | Sediments A possible arrangement for Type 3 disposal is by geosynthetic containment. A geosynthetic containment method is a method whereby the sediments are sealed in geosynthetic containers and, at the disposal site, the containers would be dropped into the designated contaminated mud pit where they would be covered by further mud disposal and later by the mud pit capping, thereby meeting the requirements for fully confined mud disposal. The technology is readily available for the manufacture of the geosynthetic containers to the project-specific requirements. Similar disposal methods have been used for projects in Europe, the USA and Japan and the issues of fill retention by the geosynthetic fabrics, possible | To ensure handling of sediments are in accordance to statutory requirements | Contractor | Work Sites, Sediment disposal sites | Construction Phase | ETWB TC(W) No. 34/2002 & Dumping at Sea Ordinance | N/A |

Notes:

(2)

(1) The performance targets are given below:

- All excavated materials to be sorted for recovering the inert portion of C&D materials, e.g. hard rocks, soil and broken concrete, for reuse on the Site or disposal to designated outlets;
- All metallic waste to be recovered for collection by recycling contractors;
- All cardboard and paper packaging (for plant, equipment and materials) to be recovered, properly stockpiled in dry and covered condition to prevent cross contamination;
- All chemical wastes to be collected and properly disposed of by specialist contractors; and
- All demolition debris to be stored to recover broken concrete, reinforcement bars, mechanical and electrical fittings, hardware as well as other fitting / materials that have established recycling outlets.
- Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (3) Broken concrete for recycling into aggregates.
- (4) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
- (5) All the C&D material come from SCL1111, 1112, 1114, 1121, 1123, 1128 will be reussed in other project

EXECUTIVE SUMMARY

Shatin to Central Link Contract 1123 – Exhibition Station and Western Approach Tunnel (hereafter called "the Project") covers part of the construction of the Shatin to Central Link (SCL).

The Project comprises the construction of an underground station (Exhibition Station) and 300 m of cut and cover tunnel (Western Approach Tunnel) along Convention Avenue.

The EM&A programme commenced on 1 June 2015. The impact EM&A for the Project includes air quality and noise monitoring.

This report documents the findings of EM&A works conducted in the period between 1 and 28 February 2021. As informed by the Contractor, major activities in the reporting period were:

| Location | Site Activities |
|----------------------------|--|
| Exhibition Station (Zone 1 | Waterproofing and backfill above roof slab |
| - PTI Area) | Station ABWF |
| | Entrance B - Structure |
| Harbour Road Sport | Above Ground Structure |
| Cenrtre (Zone 2) | Station ABWF |
| | Entrance A - Structure |
| Exhibition Station (Zone 3 | Above Ground Structure |
| - Swimming Pool Area) | Station ABWF |
| (including W7a, W7b, W4, | |
| W5 and partial W6) | |
| Exhibition Station (Zone 4 | Station ABWF |
| - Tunnel at Tonnochy | WCSG reprovision works-Storeroom and Pump room Structure |
| Road) | WCSG - Pile removal |
| Fleming Road Junction | Backfill |
| Area E | |
| Western Vent Shaft and | Backfill (include mass concrete fill) |
| WAT Area C | WVS ABWF |
| | External Drainage works |
| WAT Area B | Backfill |
| | Breakthrough with 1128 Interface |
| WAT Area A | Backfill |
| Area W22 | Material Storage |

Breaches of Action and Limit Levels for Air Quality

No exceedance of Action and Limit Level of air quality was recorded in the reporting month.

Breaches of Action and Limit Levels for Noise

Regular Noise Monitoring

No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.

No exceedance of Limit Level of noise was recorded in the reporting month.

Complaint, Notification of Summons and Successful Prosecution

No complaint, notification of summons and successful prosecution were received in the reporting month.

Reporting Changes

There was no reporting change in the reporting month.

Future Key Issues

Key issues to be considered in the next three months included:

| Location | Site Activities |
|----------------------------|--|
| Exhibition Station (Zone 1 | Station ABWF |
| - PTI Area) | Entrance B - Structural steel and metal roof |
| Harbour Road Sport | Entrance A Structure |
| Cenrtre (Zone 2) | Entrance A - ABWF |
| | Station ABWF |
| | Entrance A - Structural steel and metal roof |
| | Toilet RC structure |
| Exhibition Station (Zone 3 | Above Ground Structure |
| - Swimming Pool Area) | Station ABWF |
| (including W7a, W7b, W4, | |
| W5 and partial W6) | |
| Exhibition Station (Zone 4 | Station ABWF |
| - Tunnel at Tonnochy | WCSG Reprovision |
| Road) | Bored Pile for WCSG |
| Western Vent Shaft and | Backfill |
| WAT Area C | WVS ABWF |
| | External Drainage and road works |
| WAT Area B | Connection with1128 Interface |
| WAT Area A | Break D-wall and Backfill |
| Area W22 | Material Storage |

Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

1 INTRODUCTION

Leighton – China State Joint Venture (JV) was commissioned by MTR as the Civil Contractor for Works Contract 1123. AECOM Asia Company Limited (AECOM) was appointed by JV as the Environmental Team (ET) to undertake the Environmental Monitoring and Audit (EM&A) programme during construction phase of the Project.

1.1 Purpose of the Report

1.1.1 This is the sixty-ninth monthly EM&A Report which summaries the impact monitoring results and audit findings for the Project during the reporting period between 1 and 28 February 2021.

1.2 Report Structure

- 1.2.1 This monthly EM&A Report is organized as follows:
 - Section 1: Introduction
 - Section 2: Project Information
 - Section 3: Environmental Monitoring Requirement
 - Section 4: Implementation Status of Environmental Mitigation Measures
 - Section 5: Monitoring Results
 - Section 6: Environmental Site Inspection and Audit
 - Section 7: Environmental Non-conformance
 - Section 8: Future Key Issues
 - Section 9: Conclusions and Recommendations

2 **PROJECT INFORMATION**

2.1 Background

- 2.1.1 The Shatin to Central Link (SCL) is a 17km extension of the existing Ma On Shan Line (MOL) and East Rail Line (EAL) comprising (i) The East-West Corridor which extends the MOL from Tai Wai via East Kowloon to connect with the West Rail Line (WRL) at Hung Hom Station (HUH); and (ii) The North-South Corridor which is an extension of the East Rail Line (EAL) at Hung Hom across the harbour to Admiralty Station (ADM).
- 2.1.2 The Environmental Impact Assessment (EIA) Reports for SCL Hung Hom to Admiralty Section [SCL (HUH-ADM)] (Register No.: AEIAR-166/2012) was approved on 17 February 2012 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) was granted on 22 March 2012, which covers SCL (HUH-ADM) EP No.: EP-436/2012), for the construction and operation. Variation of EP (VEP) was subsequently applied and the latest EP (EP No. EP-436/2012/F) was issued by the Director of Environmental Protection (DEP) on 23 January 2019.
- 2.1.3 The construction of the SCL is divided into different civil construction works contracts and Works Contract 1123 Exhibition Station and Western Approach involves the construction of an underground station (Exhibition Station) and 300m of cut and cover tunnel (Western Approach Tunnel) along Convention Avenue.
- 2.1.4 The site layout plan of the Project is shown in **Figure 1.1** and **Figure 1.2**.

2.2 Site Description

- 2.2.1 The major construction activities under Works Contract 1123 include:
 - (a) Site preparation;
 - (b) Demolition works;
 - (c) Utilities works;
 - (d) Box Culvert works;
 - (e) Diaphragm wall construction and piling works;
 - (f) Pile Removal works;
 - (g) Excavation & Lateral Support (ELS) works; and
 - (h) Reprovisioning/ Reinstatement works.

2.3 Construction Programme and Activities

| 004 | $ \pm$ 1. $ -$ | 1 |
|-------|--|--------|
| 2.3.1 | The major construction activities undertaken in the reporting month are summarised | below: |

| Location | Site Activities |
|-----------------------|--|
| Exhibition Station | Waterproofing and backfill above roof slab |
| (Zone 1 - PTI Area) | Station ABWF |
| | Entrance B - Structure |
| Harbour Road Sport | Above Ground Structure |
| Cenrtre (Zone 2) | Station ABWF |
| | Entrance A - Structure |
| Exhibition Station | Above Ground Structure |
| (Zone 3 - Swimming | Station ABWF |
| Pool Area) (including | |
| W7a, W7b, W4, W5 | |
| and partial W6) | |
| Exhibition Station | |
| (Zone 4 - Tunnel at | |
| Tonnochy Road) | WCSG - Pile removal |
| Fleming Road | Backfill |
| Junction Area E | |
| Western Vent Shaft | Backfill (include mass concrete fill) |
| and WAT Area C | WVS ABWF |
| | External Drainage works |
| WAT Area B | Backfill |
| | Breakthrough with 1128 Interface |
| WAT Area A | Backfill |
| Area W22 | Material Storage |

2.3.2 The construction programme is presented in **Appendix A**.

2.4 Project Organisation

2.4.1 The project organization structure is shown in **Appendix B**. The key personnel contact names and numbers for the Project are summarised in **Table 2.1**.

| Party | Role | Position | Name | Telephone | Fax |
|-----------|--|---|---------------------|-----------|-----------|
| | Residential | Construction Manager | Mr. Mike Bezzano | 3959 2128 | 3959 2200 |
| MTR | Engineer (ER) | SCL Project Environmental Team Leader | Ms. Lisa Poon | 3127 6295 | 3127 6422 |
| Meinhardt | Independent Environmental Checker | Independent Environmental Checker | Ms. Claudine Lee | 2859 5409 | 2540 1580 |
| N / | Orașterator | Project Director | Mr. Brian Shepstone | 3973 0838 | 04054400 |
| JV | | Environmental Engineer | Ms. Doris Law | 3973 1498 | 31051126 |
| AECOM | Contractor's Environmental Team (ET) | ET Leader | Mr. Y W Fung | 3922 9366 | 2317 7609 |

 Table 2.1
 Contact Information of Key Personnel

2.5 Status of Environmental Licences, Notification and Permits

2.5.1 Relevant environmental licenses, permits and/or notifications on environmental protection for this Project and valid in the reporting month are summarized in **Table 2.2**.

 Table 2.2

3 ENVIRONMENTAL MONITORING REQUIREMENT

3.1 Construction Dust Monitoring

Monitoring Requirements

3.1.1 In accordance with the approved EM&A Manuals, 24-hour Total Suspended Particulates (TSP) level at the designated air quality monitoring station is required. Impact 24-hour TSP monitoring should be carried out for at least once every 6 days. The Action and Limit level of the air quality monitoring is provided in **Appendix D**.

Monitoring Equipment

3.1.2 24-hour TSP air quality monitoring was performed using High Volume Sampler (HVS) located at the designated monitoring stations. The HVS meets all the requirements of the EM&A Manual. Brand and model of the equipment is given in **Table 3.1**.

Table 3.1 Air Quality Monitoring Equipment

| Equipment | Brand and Model |
|--------------------------------------|---|
| High Volume Sampler (24-hour TSP) | Andersen Total Suspended Particulate Mass Flow Controlled High Volume Air Sampler (Model No. GS 2310 (S/N:809)) |
| Calibration Kit | TISCH Environmental Orifice (Model TE-5025A (Orifice I.D.: 0988)) |

Monitoring Locations

3.1.3 The monitoring station for construction dust monitoring pertinent to the Project has been identified based on the approved EM&A Manual for SCL (HUH-ADM) of the Project. The location of the construction dust monitoring stations are summarised in **Table 3.2** and shown in **Figure 3.1**.

Table 3.2 Locations of Construction Dust Monitoring Station

| ID | Air Sensitive Receiver (ASR) ID in EIA Report Dust Monitoring Station | |
|-----------------------|---|-------------------------------------|
| AM2 ^[1] | EXA6 | Wanchai Sports Ground |
| AM3 ^{[2][3]} | EXA5 | Existing Harbour Road Sports Centre |

Note:

[1] The impact monitoring at AM2 was handed over from Contract SCL1128 on 28 October 2015.

[2] The impact monitoring at AM3 was handed over from Contract SCL1126 in June 2015.

[3] The impact monitoring at AM3 terminated on 6 May 2017 as demolition of Existing Harbour Road Sports Centre commenced on 8 May 2017.

Monitoring Methodology

- 3.1.4 24-hour TSP Monitoring
 - (a) The HVS was installed in the vicinity of the air sensitive receivers. The following criteria were considered in the installation of the HVS as far as practicable:-
 - (i) A horizontal platform with appropriate support to secure the sampler against gusty wind was provided.
 - (ii) Two samplers should not be placed less than 2m apart from each others;
 - (iii) The distance between the HVS and any obstacles, such as buildings, was at least twice the height that the obstacle protrudes above the HVS.
 - (iv) A minimum of 2 meters separation from walls, parapets and penthouse for rooftop sampler.
 - (v) A minimum of 2 meters separation from any supporting structure, measured horizontally is required.
 - (vi) No furnace or incinerator flues nearby.
 - (vii) Airflow around the sampler was unrestricted.

- (viii) The sampler was located more than 20 meters from any dripline.
- (ix) Any wire fence and gate, required to protect the sampler, did not obstruct the monitoring process.
- (x) Permission was obtained to set up the samplers and access to the monitoring station.
- (xi) A secured supply of electricity was obtained to operate the sampler.
- (b) Preparation of Filter Papers
 - (i) Glass fibre filters, G810 were labelled and sufficient filters that were clean and without pinholes were selected.
 - (ii) All filters were equilibrated in the conditioning environment for 24 hours before weighing. The conditioning environment temperature was around 25 °C and not variable by more than ±3 °C; the relative humidity (RH) was < 50% and not variable by more than ±5%. A convenient working RH was 40%.
 - (iii) All filter papers were prepared and analysed by ALS Technichem (HK) Pty Ltd., which is a HOKLAS accredited laboratory and has comprehensive quality assurance and quality control programmes.
- (c) Field Monitoring
 - (i) The power supply was checked to ensure the HVS works properly.
 - (ii) The filter holder and the area surrounding the filter were cleaned.
 - (iii) The filter holder was removed by loosening the four bolts and a new filter, with stamped number upward, on a supporting screen was aligned carefully.
 - (iv) The filter was properly aligned on the screen so that the gasket formed an airtight seal on the outer edges of the filter.
 - (v) The swing bolts were fastened to hold the filter holder down to the frame. The pressure applied was sufficient to avoid air leakage at the edges.
 - (vi) Then the shelter lid was closed and was secured with the aluminium strip.
 - (vii) The HVS was warmed-up for about 5 minutes to establish run-temperature conditions.
 - (viii) A new flow rate record sheet was set into the flow recorder.
 - (ix) On site temperature and atmospheric pressure readings were taken and the flow rate of the HVS was checked and adjusted at around 1.3 m³/min, and complied with the range specified in the EM&A Manual (i.e. 0.6-1.7 m³/min).
 - (x) The programmable digital timer was set for a sampling period of 24 hrs, and the starting time, weather condition and the filter number were recorded.
 - (xi) The initial elapsed time was recorded.
 - (xii) At the end of sampling, on site temperature and atmospheric pressure readings were taken and the final flow rate of the HVS was checked and recorded.
 - (xiii) The final elapsed time was recorded.
 - (xiv) The sampled filter was removed carefully and folded in half length so that only surfaces with collected particulate matter were in contact.
 - (xv) It was then placed in a clean envelope and sealed.
 - (xvi) All monitoring information was recorded on a standard data sheet.
 - (xvii) Filters were then sent to ALS Technichem (HK) Pty Ltd. for analysis.
- (d) Maintenance and Calibration
 - (i) The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
 - (ii) HVSs were calibrated using TE-5025A Calibration Kit upon installation and thereafter at bi-monthly intervals.
 - (iii) Calibration certificate of the TE-5025A Calibration Kit and the HVSs are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.1.5 The schedule for environmental monitoring in February 2021 is provided in **Appendix F**.

3.2 Construction Noise Monitoring

Monitoring Requirements

3.2.1 In accordance with the EM&A Manual, impact noise monitoring should be conducted for at least once a week during the construction phase of the Project. **Table 3.3** summarises the monitoring parameters, frequency and duration of impact noise monitoring. The Action and Limit level of the noise monitoring is provided in **Appendix D**.

Table 3.3 Noise Monitoring Parameters, Frequency and Duration

| Parameter and Duration | Frequency |
|--|------------------------|
| 30-mins measurement at each monitoring station between 0700 and 1900 on normal weekdays. Leq, L ₁₀ and L ₉₀ would be recorded. | At least once per week |

Monitoring Equipment

3.2.2 Noise monitoring was performed using sound level meter at each designated monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Brand and model of the equipment is given in **Table 3.4**.

Table 3.4 Noise Monitoring Equipment for Regular Noise Monitoring

| Equipment | Brand and Model |
|------------------------------|--|
| Integrated Sound Level Meter | Model No. B&K 2250-L (S/N: 2681366) Model No. B&K 2238 (S/N: 2800927) |
| Acoustic Calibrator | Model No. CAL21 (S/N: 34113610(2011)) |

Monitoring Locations

3.2.3 The monitoring station for construction noise monitoring pertinent to the Project has been identified based on the approved EM&A Manual for SCL (HUH-ADM) of the Project. Location of the noise monitoring station is summarised in **Table 3.5** and shown in **Figure 3.1**.

 Table 3.5
 Noise Monitoring Station during Construction Phase

| Identification No. | Noise Sensitive Receiver (NSR) ID in EIA Report | Noise Monitoring Station | Alternative Noise Monitoring Location |
|-----------------------|---|--------------------------|--|
| NM2 ^[1] | EX1 | Causeway Centre, Block A | Harbour Centre ^[2] |

Note:

[1] The impact monitoring at NM2 was handed over from Works Contract SCL1126 in June 2015.

[2] The Access to the designated monitoring location NM2 (i.e. Block A, Causeway Centre) was denied before the commencement of impact monitoring under Works Contract 1126. An alternative monitoring location at Harbour Centre was approved by the ER, agreed by IEC. The alternative monitoring location was approved by EPD on 18 December 2017.

Monitoring Methodology

- 3.2.4 Monitoring Procedure
 - (a) Façade measurements were made at NM2.
 - (b) The battery condition was checked to ensure the correct functioning of the meter.
 - (c) Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:

- (i) frequency weighting: A
- (ii) time weighting: Fast
- (iii) time measurement: L_{eq(30-minutes)} during non-restricted hours i.e. 0700 1900 on normal weekdays.
- (d) Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator for 94 dB(A) at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1 dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after re-calibration or repair of the equipment.
- (e) During the monitoring period, the L_{eq}, L₁₀ and L₉₀ were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- (f) Noise measurement was paused during periods of high intrusive noise (e.g. dog barking, helicopter noise) if possible. Observations were recorded when intrusive noise was unavoidable.
- (g) Noise monitoring was cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind with gusts exceeding 10m/s.
- 3.2.5 Maintenance and Calibration
 - (a) The microphone head of the sound level meter was cleaned with soft cloth at regular intervals.
 - (b) The meter and calibrator were sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
 - (c) Calibration certificates of the sound level meters and acoustic calibrators are provided in **Appendix E**.

Monitoring Schedule for the Reporting Month

3.2.6 The schedule for environmental monitoring in February 2021 is provided in **Appendix F**.

3.3 Continuous noise monitoring

3.3.1 According to EP conditions under EP-436/2012/F (Condition 2.7 and 2.8), the latest Construction Noise Mitigation Measures Plan (CNMMP) and Continuous Noise Monitoring Plan (CNMP) were submitted to EPD in June 2016, it is predicted that no residual air-borne construction noise impact exceeding the relevant noise criteria is anticipated. No continuous noise monitoring is required under this Contract.

3.4 Landscape and Visual

3.4.1 As per the EM&A Manuals, the landscape and visual mitigation measures shall be implemented and site inspections should be undertaken once every two weeks during the construction period. A summary of the implementation status is presented in **Section 6.**

4 IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

4.1.1 The Contractor has implemented environmental mitigation measures and requirements as stated in the EIA Reports, the EP and EM&A Manuals. The implementation status of the environmental mitigation measures during the reporting period is summarized in **Appendix C**. Status of required submissions under the EP during the reporting period is summarised in **Table 4.1**.

Table 4.1 Status of Required Submission under Environmental Permit

| EP Condition | Submission | Submission Date |
|-------------------------------|---|------------------|
| Condition 3.4 (EP-436/2012/F) | Monthly EM&A Report for January 2021 | 11 February 2021 |

5 MONITORING RESULTS

5.1 Construction Dust Monitoring

- 5.1.1 The monitoring station at AM2 was handed over from Contract SCL1128 on 28 October 2015.
- 5.1.2 The monitoring results for 24-hour TSP are summarised in **Table 5.1**. Detailed air quality monitoring results and wind monitoring data extracted from the nearest Automatic Weather Station are presented in **Appendix G**.

Table 5.1 Summary of 24-hour TSP Monitoring Result in the Reporting Period

| ID | Average (μg/m³) | Range (µg/m³) | Action Level (μg/m³) | Limit Level (µg/m³) |
|--------------------|-----------------|---------------|-------------------------|------------------------|
| AM2 ^[1] | 43.2 | 13.4 – 72.9 | 160 | 260 |
| Note: | • | | • | |

[1] The impact monitoring at AM2 was handed over from Contract SCL1128 on 28 October 2015.

- 5.1.3 No Action and Limit Level exceedance were recorded for 24-hour TSP monitoring at the monitoring locations in the reporting month.
- 5.1.4 The event and action plan is annexed in **Appendix I**.
- 5.1.5 Major dust sources during the monitoring included construction dust, nearby traffic emission and other nearby construction sites.

5.2 Regular Construction Noise Monitoring

5.2.1 The monitoring results for noise are summarized in **Table 5.2** and the monitoring data is provided in **Appendix H**.

Table 5.2 Summary of Construction Noise Monitoring Results in the Reporting Period

| ID | Range, dB(A), L _{eq (30 mins)} | Limit Level, dB(A), L _{eq (30 mins)} | |
|--------------------|--|--|--|
| NM2 ^(*) | <baseline< th=""><th>75</th></baseline<> | 75 | |

(*) Baseline correction will be made to the measured Leq when the measured noise level exceeded the corresponding baseline noise level and presented in the table.

- 5.2.2 No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.
- 5.2.3 No Limit Level exceedance of noise was recorded at the monitoring station in the reporting month.
- 5.2.4 The event and action plan is annexed in **Appendix I**.
- 5.2.5 Major noise sources during the monitoring included construction noise from the Project site, nearby traffic noise and the community.

5.3 Waste Management

- 5.3.1 C&D materials and wastes sorting were carried out on site. Receptacles were available for C&D wastes and general refuse collection.
- 5.3.2 As advised by the Contractor, 1,673 m³ of inert C&D material was generated and disposed of as public fill in the reporting month. No inert C&D materials were reused in other projects or in the Contract in the reporting month. No fill material was imported in the reporting month. 461 m³ general refuse was generated in the reporting month. 48,690 kg of metals was collected by recycling contractor in the reporting month. 250kg of paper/cardboard packaging material, 45 kg of plastic and no chemical waste were collected by licensed contractor in the reporting period. No Type 1 and Type 2 of Marine sediment were disposed of at Confined Marine Disposal Facility to the East of Sha Chau. The waste flow table is annexed in **Appendix K**.
- 5.3.3 The Contractor is advised to properly maintain on site C&D materials and wastes collection, sorting and recording system and maximize reuse / recycle of C&D materials and wastes. The Contractor is reminded to properly maintain the site tidiness and dispose of the wastes accumulated on site regularly and properly.
- 5.3.4 The Contractor is reminded that chemical waste containers should be properly treated and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.

5.4 Landscape and Visual

5.4.1 Bi-weekly inspection of the implementation of landscape and visual mitigation measures was conducted on 11 and 25 February 2021. A summary of the site inspection is provided in **Appendix C**. The observations and recommendations made during the site inspections are presented in **Table 6.1**.

ENVIRONMENTAL SITE INSPECTION AND AUDIT 6

- 6.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the mitigation measures implementation schedule is provided in Appendix C.
- In the reporting month, 4 site inspections were carried out on 4, 11, 19 and 25 February 2021. 6.1.2 Joint inspections with the IEC, ER, the Contractor and the ET were conducted on 19 February 2021. No non-compliance was recorded during the site inspection. Details of observations recorded during the site inspections are presented in Table 6.1.

| Table 6. | Table 6.1 Observations and Recommendations of Site Audit | | | | |
|----------------------------------|--|--|---|--|--|
| Parameters | Date | Observations and Recommendations | Follow-up | | |
| | 28 January 2021 | Reminder: • The Contractor was reminded to replace the decolored NRMM label on air compressor at Zone 2. | This item was rectified on 4 Feb 2021. | | |
| Air Quality 4 February 2021 | | • Muddy stain was observed on the nearby pedestrian pathway at Zone 4. The Contractor was advised to remove the muddy stain to maintain the tidiness of nearby pedestrian pathway. | This item was rectified on 5 Feb 2021. | | |
| | 25 February 2021 | • Muddy water was observed outside the site entrance of Zone 4. The Contractor was advised to remove it for site tidiness. | This item will be followed up in next reporting period. | | |
| Noise | 11 February 2021 | Noise mitigation measure was not observed during breaking at WAT. The Contractor was advised to provide proper noise mitigation measure for noise screening. | This item was rectified on 17 Feb 2021. | | |
| Water Quality | 19 February 2021 | Oil stain was observed on the ground at Zone 4. The Contractor was advised to clean it up in timely manner. | This item was rectified on 25 Feb 2021. | | |
| Waste/ Chemical Management | 11 February 2021 | General refuse was accumulated on the ground at Zone 2. The Contractor was advised to remove the waste regularly for site tidiness. | This item was rectified on 11 Feb 2021. | | |
| Landscape & Visual | Nil | Nil | Nil | | |
| Permits/ Licenses | Nil | Nil | Nil | | |

| ble 6.1 Observat | ions and Recommendations of Site Audit |
|------------------|--|
|------------------|--|

Most of the follow-up actions requested by Contractor's ET and IEC during the site inspection 6.1.1 were undertaken as reported by the Contractor and confirmed in the following weekly site inspection conducted during the reporting period. Some outstanding follow-up actions will be reported in the next reporting period.

7 ENVIRONMENTAL NON-CONFORMANCE

7.1 Summary of Monitoring Exceedances

- 7.1.1 All 24-hour TSP result was below the Action and Limit level at all monitoring locations in the reporting month.
- 7.1.2 No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.
- 7.1.3 No Limit Level exceedance for noise was recorded at all monitoring stations in the reporting month.

7.2 Summary of Environmental Non-Compliance

7.2.1 No environmental non-compliance was recorded in the reporting month.

7.3 Summary of Environmental Complaints

7.3.1 No environmental related complaint was received in the reporting month. Cumulative statistics on environmental complaints is provided in **Appendix J**.

7.4 Summary of Environmental Summon and Successful Prosecutions

7.4.1 No environmental related prosecution or notification of summons was received in the reporting month. Cumulative statistics on notification of summons and successful prosecutions is provided in **Appendix J**.

8 FUTURE KEY ISSUES

8.1 Construction Programme for the Next Three Month

8.1.1 The major construction works between March and May 2021 will be:

| Location | Site Activities |
|--|--|
| Exhibition Station (Zone 1 | Station ABWF |
| - PTI Area) | Entrance B - Structural steel and metal roof |
| Harbour Road Sport | Entrance A Structure |
| Cenrtre (Zone 2) | Entrance A - ABWF |
| | Station ABWF |
| | Entrance A - Structural steel and metal roof |
| | Toilet RC structure |
| Exhibition Station (Zone 3 | Above Ground Structure |
| - Swimming Pool Area) | Station ABWF |
| (including W7a, W7b, W4, | |
| W5 and partial W6) | |
| Exhibition Station (Zone 4 - Tunnel at Tonnochy | Station ABWF |
| Road) | WCSG Reprovision |
| Western Vent Shaft and | Bored Pile for WCSG |
| Wat Area C | Backfill |
| WAT Alea C | WVS ABWF |
| | External Drainage and road works |
| WAT Area B | Connection with1128 Interface |
| WAT Area A | Break D-wall and Backfill |
| Area W22 | Material Storage |

8.2 Key Issues for the Coming Month

8.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, water quality and waste management.

8.3 Monitoring Schedule for the Next Three Month

8.3.1 The tentative schedules for environmental monitoring in between March and May 2021 are provided in **Appendix F**.

9 CONCLUSIONS AND RECOMMENDATIONS

9.1 Conclusions

- 9.1.1 24-hour TSP and noise monitoring were carried out in the reporting month.
- 9.1.2 No Action and Limit Level exceedance was recorded for 24-hour TSP monitoring at the monitoring locations in the reporting month.
- 9.1.3 No Action Level exceedance was recorded since no noise related complaint was received in the reporting month.
- 9.1.4 No Limit Level exceedance for noise was recorded at all monitoring stations in the reporting month.
- 9.1.5 4 nos. of environmental site inspections were carried out in February 2021. Recommendations on remedial actions were given to the Contractor for the deficiencies identified during the site audit.
- 9.1.6 No environmental complaint was received in the reporting month.
- 9.1.7 No notification of summons and successful prosecution were received in the reporting month.
- 9.1.8 Referring to the Contractor's information, no notification of summons and successful prosecution was received in the reporting month.

9.2 Recommendations

9.2.1 According to the environmental site inspections performed in the reporting month, the following recommendations were provided: -

Air Quality Impact

- The Contractor should remove the muddy stain to maintain the tidiness of nearby pedestrian pathway; and
- The Contractor should remove the muddy water for site tidiness

Construction Noise Impact

• The Contractor should provide proper noise mitigation measure during breaking.

Water Quality Impact

• Oil stain should be removed in timely manner and disposed of as chemical waste.

Chemical and Waste Management

• The Contractor should remove the waste regularly for site tidiness .

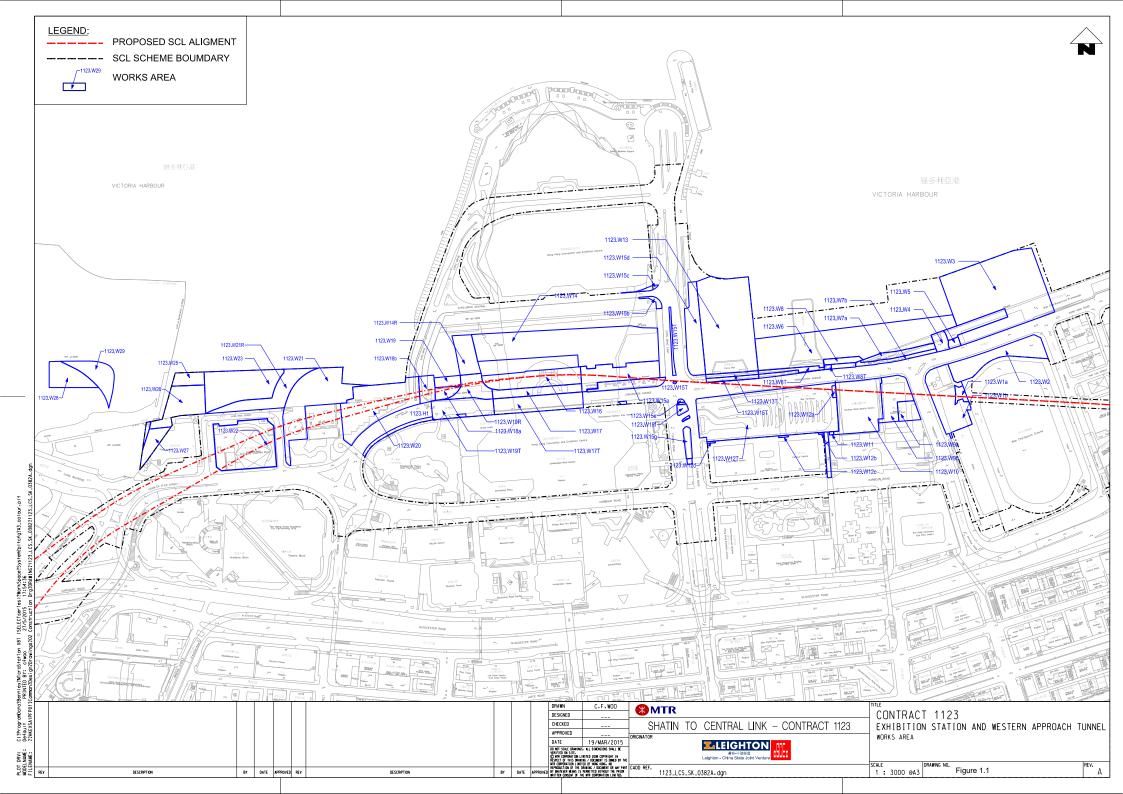

Landscape & Visual Impact

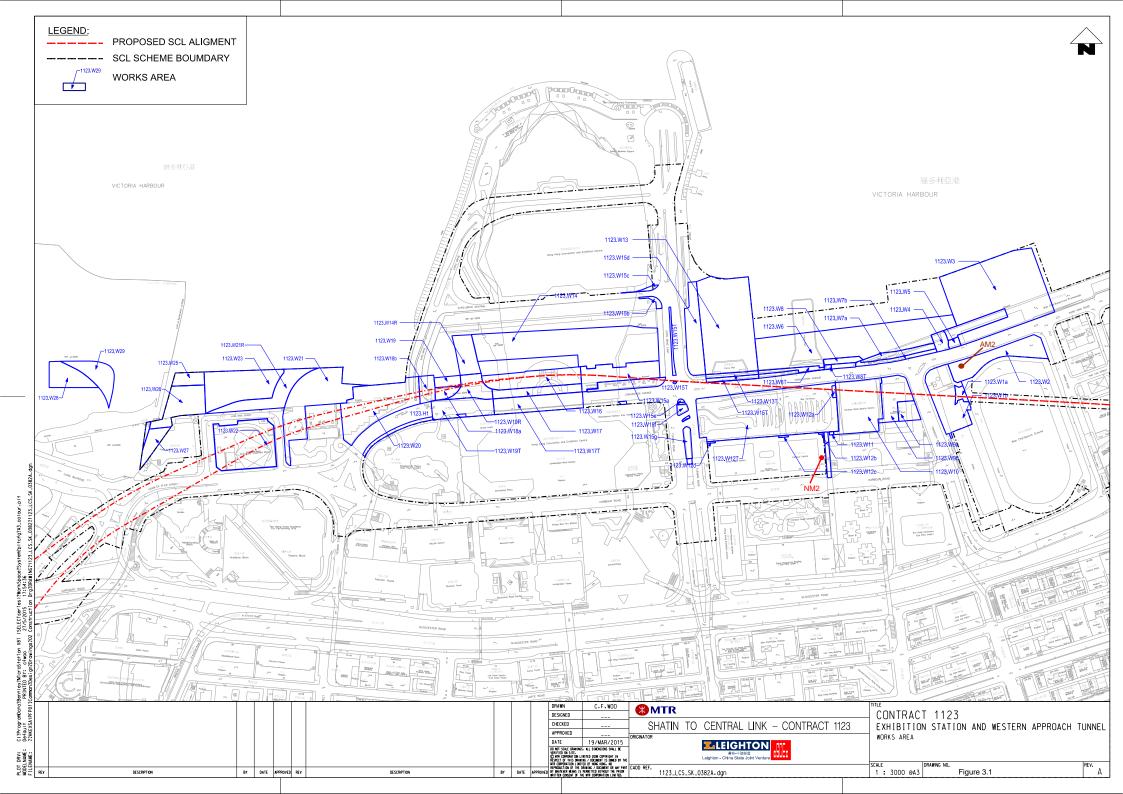

• No specific observation was identified in the reporting month.

Permits/licenses

• No specific observation was identified in the reporting month.

| Constructio | on Dust Impact | | | | | |
| Table 8.5 | Barging facilities: (i) Transportation of spoils to the barging point – Pave all road surfaces within the barging facilities and provide watering once along with the haul road for every working hours to reduce dust emission by 91.7%. This dust suppression efficiency is derived based on the average haul road traffic, average evaporation rate and an assumed application intensity of 1.0 Lm ² once every working hour. Any potential dust impact and watering mitigation would be subject to the actual site condition. For example, a construction activity that produces inherently wet conditions or in cases under rainy weather, the above water application intensity may not be unreservedly applied. While the above watering frequency is to be followed, the extent of watering may vary depending on actual site conditions but should be sufficient to maintain an equivalent intensity of no less than 1.0 L/m ² to achieve the removal efficiency. The dust levels would be monitored and managed under an EM&A programme as specified in the EM&A Manual. | To minimize dust impacts | Contractor | All barging points | Construction phase | v |

AECOM

Shatin to Central Link 1123 Exhibition Station and Western Approach Tunnel Monthly EM&A Report for February 2021

Appendix C – Environmental Mitigation Implementation Schedule

| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
|--------------------------------|---|---|--------------------------------------|----------------------------|---------------------------------------|--------------------------|
| | (ii) Unloading of spoil materials – Undertake the unloading process within a 3-sided screen with top tipping hall. Provide water spraying and flexible dust curtains at the discharge point for dust suppression. | | | | | V |
| | (iii) Vehicles leaving the barging facilities – Pass vehicles through the wheel washing facilities provided at site exits. | | | | | V |
| 8.63 | For concrete batching plant, the requirements and mitigation measures stipulated in the Guidance Note on the Best Practicable Means for Cement Works (Concrete Batching Plant) BPM 32(93) shall be followed and implemented. | To minimize dust impact | Contractor | Concrete Batching Plant | Construction phase | N/A |
| able 8.6 | During operation of concrete batching plant: (i) Unloading of aggregates from the tipper trucks to receiving hopper – unload the aggregates from the tipper trucks to the receiving hopper equipped with enclosures on 3 sides and top cover, and water spraying system. (ii) Unloading of cement and PFA from tankers into the silo – Directly load the cement and PFA into the silo via a flexible duct. Install dust collectors at cement/PFA silos. (iii) Storage of aggregates in overhead storage bins. Store the aggregates in fully enclosed overhead storage bins. Cover the top of overhead storage bins with cladding. Install water spraying system at the top of storage on for watering the aggregates, and fully enclose aggregates storage bins. (iv) Weighing and batching of cementitious materials – Perform the whole process of weighing and mixing in a fully enclosed environment. Equip all the mixers with dust collectors. (v) Loading of concrete from mixer into transit mixer of a truck – Directly load the concrete from the mixer into the transit mixer of a truck in "wet form". (vi) Tipper trucks and cement tankers leaving the Concrete Batching Plant – Haul road within the site is unpaved. Install wheel washing pit at the gate of the concrete batching plant. (vi) Transportation of materials within the plant – Provide watering twice a day would be provided. | To minimize dust impacts | Contractor | Concrete Batching Plant | Construction phase | N/A |
| 8.89 | Watering once every working hour on active works areas, exposed areas and paved haul roads to reduce dust emission by 91.7%. This dust suppression efficiency is derived based on the average haul road traffic, average evaporation rate and an assumed application intensity of 1.7 L/m2 for Kowloon side and 1.0 L/m2 for Hong Kong side once every working hour. Any potential dust impact and watering mitigation would be subject to the actual site condition. For example, a construction activity that produces inherently wet conditions or in cases under rainy weather, the above water application intensity may not be unreservedly applied. While the above watering frequency is to be followed, the extent of watering may vary depending on actual site conditions but should be sufficient to maintain an equivalent intensity of no less than 1.7 L/m2 for Kowloon side and 1.0 L/m2 for Hong Kong side to achieve the removal efficiency. The dust levels would be monitored and managed under an EM&A programme as specified in the EM&A Manual. | To minimize dust impact | Contractor | Works areas | Construction Phase | V |
| 3.89 | Enclosing the unloading process at barging point by a 3-sided screen with top tipping hall, provision of water spraying and flexible dust curtains to reduce dust emission | To minimize dust impact | Contractor | All barging points | Construction phase | V |

| 8.90 | Dust suppression measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices: Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather. Use of frequent watering for particularly dusty construction areas and areas close to ASRs. Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines. Open stockpiles shall be avoided or covered. Where possible, prevent placing dusty material storage piles near ASRs. Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations. Establishment and use of vehicle wheel and body washing facilities at the exit points of the site. Provision of wind shield and dust extraction units or similar dust mitigation measures at the loading area of barging point, and use of valcies of loose material, particularly in dry seasons/ periods. Provision of not less than 2.4m high hoarding from ground level along site boundary where adjoins a road, streets or other accessible to the public except for a site entrance or exit. Imposition of speed controls for vehicles and positioning of construction plant shall be at the maximum possible distance from ASRs. Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides. | Concern to Address | Contractor | Works areas | Construction phase | V V V V V V V V V V V V V V V V |
| | Instigation of an environmental monitoring and auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise Dust suppression measures (con't) De-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement The portion of any road where along the site boundary should be kept clear of dusty materials. Use of frequent watering for any dusty construction process (e.g. breaking works) to reduce dust emissions. | To minimize dust impacts | Contractor | Works areas | Construction phase | V V @ V |
| | Entission from Vehicles and Plants Emission from Vehicles and Plants All vehicles shall be shut down in intermittent use. Only well-maintained plant should be operated on-site and plant should be serviced regularly to avoid emission of black smoke. | ater Quali | ty Impact | | | | | |
| nstructio | n Phase | | | | | |
| 1.216 | The following mitigation measures are proposed to minimize the potential water quality impacts from the construction works at or close to the seafront: • Temporary storage of construction materials (e.g. equipment, filling materials, chemicals and | To minimize release of construction wastes from construction works at or close to the | Contractor | Construction works at or close to the seafront | Construction Phase | v |
| | Temporary storage of construction materials (e.g. equipment, filling materials, chemicals and fuel) and temporary stockpile of construction and demolition materials shall be located well away from the seawater front and storm drainage during carrying out of the works. | seafront | | | | |
| | Stockpiling of construction and demolition materials and dusty materials shall be covered and located away from the seawater front and storm drainage. | | | | | V |
| | Construction debris and spoil shall be covered up and/or disposed of as soon as possible to avoid being washed into the nearby receiving waters. | | | | | N/A |
| 1.222 to .245 | The site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" shall be followed where practicable. <u>Surface Run-off</u> • Surface run-off from construction sites shall be discharged into storm drains via adequately designed sand/sitr meroval facilities such as sand traps, silt traps and sedimentation basins. Channels or earth bunds or sand bag barriers shall be provided on site to properly direct stormwater to such silt removal facilities. Perimeter channels at site boundaries shall be provided where necessary to intercept storm | To minimize water quality impacts from construction site runoff and general construction activities | Contractor | Works areas | Construction Phase | v |
| | run-off from outside the site so that it will not wash across the site. Catchpits and perimeter channels shall be constructed in advance of site formation works and earthworks. Silt removal facilities, channels and manholes shall be maintained and the deposited silt and grit shall be removed regularly, at the onset of and after each rainstorm to prevent local flooding wy practical options for the diversion and re-alignment of drainage shall comply with both engineering and environmental requirements in order to provide adequate hydraulic capacity of all drains. Minimum distances of 100 m shall be maintained between the discharge points of construction silt enumber and the discharge points of construction silt enumber. | | | | | v |
| | existing saltwater intakes. • Construction works shall be programmed to minimize soil excavation works in rainy seasons (April to September). If excavation in soil cannot be avoided in these months or at any time of year when rainstorms are likely, for the purpose of preventing soil erosion, temporary exposed slope surfaces shall be covered e.g. by tarpaulin, and temporary access roads shall be protected by crushed stone or gravel, as excavation proceeds. Intercepting channels shall be provided (e.g. along the crest / edge of excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements shall always be in place in such a way that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. | | | | | V |
| | Earthworks final surfaces shall be well compacted and the subsequent permanent work or surface protection shall be carried out immediately after the final surfaces are formed to prevent erosion caused by rainstorms. Appropriate drainage like intercepting channels shall be provided where necessary. | | | | | N/A |
| | Measures shall be taken to minimize the ingress of rainwater into trenches. If excavation of trenches in wet seasons is necessary, they shall be dug and backfilled in short sections. Rainwater pumped out from trenches or foundation excavations shall be discharged into storm drains via silt removal facilities. | | | | | N/A |
| | Open stockpiles of construction materials (e.g. aggregates, sand and fill material) on sites shall be covered with tarpaulin or similar fabric during rainstorms. | | | | | v |
| | Manholes (including newly constructed ones) shall always be adequately covered and temporarily sealed so as to prevent sili, construction materials or debris from getting into the drainage system, and to prevent storm run-off from getting into foul sewers. Discharge of surface run-off into foul sewers must always be prevented in order not to unduly overload the foul sewerage system. Good site practices shall be adopted to remove rubbish and litter from construction sites so as to | | | | | V |
| | prevent the rubbish and littler from spreading from the site area. It is recommended to clean the construction sites on a regular basis. | | | | | v |

| EIA Ref. / EM&A Log Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
|--------------------------------|--|---|--------------------------------------|--|---------------------------------------|--------------------------|
| S11.249 | If land contaminated site is identified from the Stage 2 SI work (refer to Sections 11.188 to 11.191 of the EIA Report), the following mitigation measures shall be implemented for the identified contaminated area. Any transient pile of contaminated soil / material shall be minimized and shall be bottom-lined, bunded and covered with impervious membrane during rain event to avoid generation of contaminated runoff. Appropriate intercepting channels and partial shelters shall be provided where necessary to prevent rainwater from collecting within trenches or footing excavations. Any contaminated water and wastewater generated from the decontamination process shall not be directly discharged to public sewers or site drainage. They shall be treated or tanked away as necessary. | To control site run-off generated from any potential contaminated works areas. | Contractor | Any potential contaminated areas to be identified from the Stage 2 SI | Construction Phase | N/A |
| S11.250 & S11.251 | No direct discharge of groundwater from contaminated areas shall be adopted. If fand contamination impact and generation of contaminated groundwater is identified from the Stage 2 SI works (refer to Sections 11.189 to 11.192 of the EIA Report), the following mitigation measures shall be adopted. Any contaminated groundwater shall be either properly treated in compliance with the requirements of the TM-DSS or properly recharged into the ground. If wastewater treatment is deployed for treating the contaminated groundwater, the wastewater treatment unit shall deploy suitable treatment processes (e.g. oil interceptor / activated carbon) to reduce the pollution level to an acceptable standard and remove any prohibited substances (such as TPH) to an undetectable range. All treated effluent from the wastewater treatment plant shall meet the requirements as stated in TM-DSS and shall be discharged into the foul severs. If groundwater recharging wells are deployed, the recharging wells shall be appropriate for recharging the contaminated groundwater back into the ground. The recharging overlas shall be selected at places where the groundwater quality will not be affected by the recharge operation as indicated in Section 0.2.3 of the TM-DSS. The baseline groundwater quality shall be dotermined prior to the selection of the recharge wells, and submit a working plain (including the laboratory analytical results showing the quality of groundwater at the proposed recharge location(s) as well as the pollutant levels of groundwater to be recharged to EDP for agreement. Polluton levels of groundwater to be recharged all not be higher than pollutant levels of all products shall be tremoved as necessary by installing the petrol interceptor. The Contractor shall apply for a discharge licence under the WPCO through the Regional Office of EPD for groundwater recharge operation or discharge of treated aroundwater. | To minimize potential water quality impact from discharge of contaminated groundwater | Contractor | Any potential contaminated areas to be identified from the Stage 2 SI | Construction Phase | N/A |
| S11.252 | The following good site practices shall be adopted for the proposed barging points: all vessels shall be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash all hopper barges shall be fitted with tight fitting seals to their bottom openings to prevent leakage of material construction activities shall not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water within the site loading of barges and hoppers shall be controlled to a level that will cause the overflow of materials or polluted water during loading or transportation | To minimize water quality impacts generated from the barging points. | Contractor | Barging points | Construction Phase | N/A |
| S11.253 | There is a need to apply to EPD for a discharge licence for discharge of effluent from the construction site under the WPCO. The discharge quality must meet the requirements specified in the discharge licence. All the runoff and wastewater generated from the works areas shall be treated so that it satisfies all the standards listed in the TM-DSS. Minimum distances of 100 m shall be maintained between the discharge points of constructions aite effluent and the existing seawater intakes. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimize water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring shall be carried out in accordance with the WPCO license which is under the ambit of Regional Office (RO) of EPD. | To minimize water quality impact from effluent discharges from construction sites | Contractor | All construction works areas | Construction Phase | V |

|------------------------------|---|--|--------------------------------------|---|---|--------------------------|
| | marine dumping permit under the Dumping at Sea Ordinance. | | | | | |
| 312.89 | Sediments (con't) The contractor for the excavation / dredging works shall apply for the site allocations of marine sediment disposal based on the prior agreement with MFC/CEDD. A request for reservation of sediment disposal space have been submitted to MFC for onward discussions of disposal approach and feasible disposal sites and the letter is attached in Appendix 12.6. The Project proponent shall also be responsible for the application of all necessary permits from relevant authorities, including the dumping permit as required under DASO from EPD, for the disposal of dredged and excavatio sediment or prior to the commencement of the excavation works. | To determine the best handling and disposal option of the sediments | MTR / Contractor | All works areas with sediments concern | Detailed Design Stage and Construction Phase | N/A |
| 312.91 – 2.94 | Sediments (con't) Stockpiling of contaminated sediments shall be avoided as far as possible. If temporary stockpiling of contaminated sediments is necessary, the excavated sediment shall be covered by tarpaulin and the area shall be placed within earth bunds or sand bags to prevent leachate from entering the ground, nearby drains and/or surrounding water bodies. The stockpiling areas shall be completely paved or covered by linings in order to avoid contamination to underlying soil or groundwater. Separate and clearly defined areas shall be provided for stockpiling of contaminated and uncontaminated materials. Leachate, if any, shall be collected and discharged according to the Water Pollution Control Ordinance (WPCO). In order to minimise the potential odour / dust enachate, if any, shall be collected and discharged according to the water developed on trucks or barges. Loading of the excavated sediment shall be protential odour / dust enachate, if and overflowing of the sediment shall be properly covered when placed on trucks or barges. Loading of the excavated sediment surrounding water barge shall be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water. The barge transporting the sediments to the designated disposal sites shall be equipped with tight fitting seals to prevent leakage and shall not be filed to a level that would cause overflow of materials or laden water during loading or transportation. In addition, monitoring of the barge loading shall be conducted to ensure that loas of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP. In order to minimise the exposure to contaminated materials, workers shall, when necessary, wear appropriate personal protective equipments (PPE) when handling contaminated sediments. Adequate washing and cleaning facilities shall als be provided on site. | To ensure handling of sediments are in accordance to statutory requirements | Contractor | Work Sites, Sediment disposal sites | Construction Phase | N/A |
| 312.95 | Sediments (con't) A possible arrangement for Type 3 disposal is by geosynthetic containment. A geosynthetic containment method is a method whereby the sediments are sealed in geosynthetic containers and, at the disposal site, the containers would be dropped into the designated contaminated mud pit where they would be covered by further mud disposal and later by the mud pit capping, thereby meeting the requirements for fully confined mud disposal. The technology is readily available for the manufacture of the geosynthetic containers to the project-specific requirements. Similar disposal methods have been used for projects in Europe, the USA and Japan and the issues of fill retention by the geosynthetic container on the seabed have been addressed. | To ensure handling of sediments are in accordance to statutory requirements | Contractor | Work Sites, Sediment disposal sites | Construction Phase | N/A |
| 312.97 | Containers for Storage of Chemical Waste The Contractor shall register with EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Containers used for storage of chemical waste shall: Be compatible with the chemical waste being stored, maintained in good condition and securely sealed; Have a capacity of less than 450 litters unless the specifications have been approved by EPD; | To register with EPD as a Chemical waste producer and store chemical waste in appropriate containers | Contractor | Work Sites | Construction Phase | V V |

| IA Ref. / M&A Log lef. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | When to implement the measures? | Implementation Status |
|------------------------------|---|---|--------------------------------------|---|---------------------------------------|--------------------------|
| | Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Waste Disposal (Chemical Waste) (General) Regulation. | | | | | V |
| 12.98 | Chemical Waste Storage Area Be clearly labeled to indicate corresponding chemical characteristics of the chemical waste and used for storage of chemical waste only; Be enclosed on at least 3 sides; Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest; | To prepare appropriate storage areas for chemical waste at works areas | Contractor | Work Sites | Construction Phase | V V V |
| | Have adequate ventilation; Be covered to prevent rainfall from entering; and Be properly arranged so that incompatible materials are adequately separated. | | | | | V V V |
| 12.99 | Chemical Waste Lubricants, waste oils and other chemical wastes would be generated during the maintenance of vehicles and mechanical equipments. Used lubricants shall be collected and stored in individual containers which are fully labelled in English and Chinese and stored in a designated secure place. | To clearly label the chemical waste at works areas | Contractor | Work Sites | Construction Phase | N/A |
| 12.100 | Collection and Disposal of Chemical Waste A trip-ticket system shall be operated in accordance with the Waste Disposal (Chemical Waste) (General) Regulation to monitor all movements of chemical waste. The Contractor shall employ a licensed collector to transport and dispose of the chemical wastes, to either the approved CWTC at Tsing Yi, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | To monitor the generation, reuse and disposal of chemical waste | Contractor | Work Sites | Construction Phase | N/A |
| 12.101 | General Refuse General Refuse shall be stored in enclosed bins or compaction units separate from C&D materials and chemical waste. A reputable waste collector shall be employed by the contractor to remove general refuse from the site, separately from C&D materials and chemical wastes. Preferably, an enclosed and covered area shall be provided to reduce the occurrence of wind-blown light material. | To properly store and separate from other C&D materials for subsequent collection and disposal | Contractor | Work Sites | Construction Phase | V |
| 12.102 | General Refuse (con't) The recyclable component of general refuse, such as aluminum cans, paper and cleansed plastic containers shall be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste shall be set up by the Contractor. The Contractor shall also be responsible for arranging recycling companies to collect these materials. | To facilitate recycling of recyclable portions of refuse | Contractor | Work Sites | Construction Phase | V |
| 12.103 | General Refuse (con't) The Contractor shall carry out an education programme for workers in avoiding, reducing, reusing and recycling of materials generation. Posters and leaflets advising on the use of the bins shall also be provided in the sites as reminders. | To raise workers' awareness on recycling issue | Contractor | Work Sites | Construction Phase | V |
| | Accidental spillage To prevent accidental spillage of chemicals, the following is recommended: Proper storage and handling facilities will be provided. All the tanks, containers, storage area will be bunded and the locations will be locked as far as possible from the sensitive watercourse and stormwater drains. | To minimize potential adverse environmental impacts arising from accidental spillage | Contractor | Work Sites | Construction Phase | V V |
| | The contractor will register as a chemical waste producer if chemical wastes would be generated. Storage of chemical waste arising from the construction activities will be stored with suitable labels and warnings. Disposal of chemical wastes will be conducted in compliance with the requirements as stated in | | | | | v v |
| and Conta | the Waste disposal (Chemical Waste) (General) Regulation. mination Impact | | I | <u> </u> | l | I |

| | odours, which may also indicate soil and/or groundwater contamination. If soil materials suspected to be contaminated are encountered during excavation, sampling and testing shall be undertaken to verify the presence of contamination. The soil extracted during demolition, excavation and cut & cover construction shall be temporary stockpiled. Shall concentrations of contaminants of concern (COCS) exceed relevant RBRGs as indicated by laboratory analyses, remediation works shall be undertaken with reference to the Contamination Assessment Report (CAR) and Remediation Action Plans (RAP). | during excavation works for Cut-and-Cover. | | | | |
| S13.30 | For some sites with currently no SI proposed (i.e. sites ID 2-02, 2-18, 2-22, 2-23, 2-27, 2-28), to be conservative, visual inspection shall be conducted during demolition and excavation to detect any abnormal colour, smell or other characteristics of the soil, due to the nearby land use and/ or construction method. If abnormal colour, smell or other characteristics of contamination are identified for any of these sites, sampling and testing shall be undertaken to verify the presence of contamination. The soil extracted during demolition, excavation and cut & cover construction shall be temporary stockpiled. Should the concentrations of contaminants of concern (COCs) exceed relevant RBRGs as indicated by laboratory analyses, remediation works shall be undertaken with reference to the CAR and RAP. | To act as a general precautionary measure to screen soils for the presence contamination during excavation works for Cut-and-Cover. | Contractor | Areas with no SI proposed (Sites ID 2-02, 2-18, 2-22, 2-23, 2-27, 2- 28) | During excavation works for Cut-and- Cover | N/A |
| S13.36 – 13.38 | For areas inaccessible for proper site appraisal and investigation (Stage 2 SI) (i) Site 2-15 Upon site access being granted, visual inspection shall be carried out where intrusive works and soil excavation is encountered, for attention on any potential contamination due to its current operation A supplementary CAP shall then be submitted to EPD for endorsement. A CAR/RAP shall be prepared and submitted to EPD for endorsement. Shall remediation be undertaken a Remediation Report (RR) shall be prepared and submitted to EPD for endorsement to demonstrate that the decontamination work is adequate and is carried out in accordance with the endorsed CAR and RAP. Information such as soil treatment/ disposal records (including trip tickets), confirmatory sampling results, and photographs shall be included in the aforesaid RR. No construction work shall be carried out prior to the endorsement of the RR by EPD. | To identify areas with land contamination concern, report laboratory results and propose remediation measures if necessary. To ensure remediation works have been undertaken to before the commencement of any construction works of the Project. | Contractor | Areas unable to be accessed during Stage 1 SI (Site 2-15) | After land resumption and prior to the construction works commencement at the site | N/A |
| S13.39 | The Outsiduation work share during out to the encodement of the KN by ET D. Potential Remediation of Contaminated Soil Excavation profiles must be properly designed and executed with attention to the relevant requirement sfor environment, health and safety; Excavation shall be carried out during dry season as far as possible to minimise contaminated runoff from contaminated soils; Supply of suitable clean backfill material is needed after excavation; If remediation is required with chemical oxidation proposed as a contaminant mass reduction technology, chemicals will be securely and separately stored away from sources of ignition or oxidisable items. Handling will be undertaken by personnel with appropriate training and personal protective equipment (PPE). Vehicles containing any excavated materials shall be suitably covered to limit potential dust emissions or contaminated wastevater run-off, and truck bodies and taligates shall be sealed to prevent any discharge during transport or during vet conditions; Speed control for the trucks carrying contaminated materials shall be enforced; Vehicles wheel and body washing facilities at the site sexit points shall be established and used; and Pollution control measures for air emissions e.g. from blower, and water discharges e.g. runoff control shall be implemented and complied with relevant regulations and outgelines. | To remediate contaminated soil | Contractor | Identified contaminated sites | Site remediation | N/A |
| \$13. 40 | and guidelines. In order to minimize the potential adverse effects on health and safety of construction workers during the course of site remediation, the Occupation Safety and Health Ordinance (OSHO) (Chapter 509) and its subsidiary Regulations shall be followed by all site personnel working on the site at all times. In addition, the following basic health and safety measures shall be implemented as far as possible: • Set up a list of safety measures for site workers; • Provide written information and training on safety for site workers; • Keep a log-book and plan showing the contaminated zones and clean zones; | To minimise the potentially adverse effects on health and safety of construction workers during the course of site | Contractor | Identified contaminated sites | Site remediation and prior to construction phase | N/A |

| Air pressure: | 1005 ± 5 hPa | | | |
| Test specifications | | | | |

- 1, The Sound Level Meter has been calibrated in accordance with the requirements as specified in BS 7580: Part 1: 1997 and the lab calibration procedure SMTP004-CA-152.
- 2, The electrical tests were performed using an electrical signal substituted for the microphone which was removed and replaced by an equivalent capacitance within a tolerance of ±20%.
- 3. The acoustic calibration was performed using an B&K 4226 sound calibrator and corrections was applied for the difference between the free-field and pressure responsess of the Sound Level Meter.

Test results

This is to certify that the Sound Level Meter conforms to BS 7580: Part 1: 1997 for the conditions under which the test was performed.

Details of the performed measurements are presented on page 2 of this certificate.

Actual Measurement data are documented on worksheets.

1, Electrical Tests

The electrical tests were perfomed using an equivalent capacitance substituted for the microphone. The results are given in below with test status and the estimated uncertainties. The "Pass" means the result of the test is inside the tolerances stated in the test specifications. The "-" means the result of test is outside these tolerances.

| Test: | Subtest: | Status: | Expanded Uncertanity (dB) | Coverage Factor |
|-------------------------|--|---------|------------------------------|--------------------|
| Colf generated pairs | | Deee | | |
| Self-generated noise | A C | Pass | 0.3 | |
| | | Pass | 0.8 | |
| recorder to a r | Lin | Pass | 1.6 | |
| Linearity range for Leq | At reference range, Step 5 dB at 4 kHz | Pass | 0.3 | |
| | Reference SPL on all other ranges | Pass | 0.3 | |
| | 2 dB below upper limit of each range | Pass | 0.3 | |
| | 2 dB above lower limit of each range | Pass | 0.3 | |
| Linearity range for SPL | At reference range, Step 5 dB at 4 kHz | Pass | 0.3 | |
| Frequency weightings | A | Pass | 0.3 | |
| | С | Pass | 0.3 | |
| | Lin | Pass | 0.3 | |
| Time weightings | Single Burst Fast | Pass | 0.3 | |
| | Single Burst Slow | Pass | 0.3 | |
| Peak response | Single 100µs rectangular pulse | Pass | 0.3 | |
| R.M.S. accuracy | Crest factor of 3 | Pass | 0.3 | |
| Time weighting I | Single burst 5 ms at 2000 Hz | Pass | 0.3 | |
| 33 | Repeated at frequency of 100 Hz | Pass | 0.3 | |
| Time averaging | 1 ms burst duty factor 1/10 ³ at 4kHz | Pass | 0.3 | |
| | 1 ms burst duty factor 1/10 ⁴ at 4kHz | Pass | 0.3 | |
| Pulse range | Single burst 10 ms at 4 kHz | Pass | 0.4 | |
| Sound exposure level | Single burst 10 ms at 4 kHz | Pass | 0.4 | |
| Overload indication | SPL | Pass | 0.3 | |
| | Leq | Pass | 0.4 | |

2, Acoustic tests

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

| Test: | Subtest | Status | Expanded Uncertanity (dB) | Coverage Factor |
|-------------------|------------------------|--------|------------------------------|--------------------|
| Acoustic response | Weighting A at 125 Hz | Pass | 0.3 | |
| | Weighting A at 8000 Hz | Pass | 0.5 | |

3, Response to associated sound calibrator

N/A

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

The standard(s) and equipment used in the calibration are traceable to national or international recognised standards and are calibrated on a schedule to maintain the required accuracy level.

```
Page 2 of
```

1, Electrical Tests

The electrical tests were perfomed using an equivalent capacitance substituted for the microphone. The results are given in below with test status and the estimated uncertainties. The "Pass" means the result of the test is inside the tolerances stated in the test specifications. The "-" means the result of test is outside these tolerances.

| | | | Expanded | Coverage |
|-------------------------|--|---------|------------------|----------|
| Test: | Subtest: | Status: | Uncertanity (dB) | , Factor |
| Self-generated noise | A | Pass | 0.3 | |
| 5 | С | Pass | 1.0 | 2.1 |
| | Lin | Pass | 2.0 | 2.2 |
| Linearity range for Leg | At reference range, Step 5 dB at 4 kHz | Pass | 0.3 | |
| | Reference SPL on all other ranges | Pass | 0.3 | |
| | 2 dB below upper limit of each range | Pass | 0.3 | |
| | 2 dB above lower limit of each range | Pass | 0.3 | |
| Linearity range for SPL | At reference range, Step 5 dB at 4 kHz | Pass | 0.3 | |
| Frequency weightings | A | Pass | 0.3 | |
| | С | Pass | 0.3 | |
| | Lin | Pass | 0.3 | |
| Time weightings | Single Burst Fast | Pass | 0.3 | |
| | Single Burst Slow | Pass | 0.3 | |
| Peak response | Single 100µs rectangular pulse | Pass | 0.3 | |
| R.M.S. accuracy | Crest factor of 3 | Pass | 0.3 | |
| Time weighting I | Single burst 5 ms at 2000 Hz | Pass | 0.3 | |
| | Repeated at frequency of 100 Hz | Pass | 0.3 | |
| Time averaging | 1 ms burst duty factor 1/10 ³ at 4kHz | Pass | 0.3 | |
| | 1 ms burst duty factor 1/10 ⁴ at 4kHz | Pass | 0.3 | |
| Pulse range | Single burst 10 ms at 4 kHz | Pass | 0.4 | |
| Sound exposure level | Single burst 10 ms at 4 kHz | Pass | 0.4 | |
| Overload indication | SPL | Pass | 0.3 | |
| | Leq | Pass | 0.4 | |

2, Acoustic tests

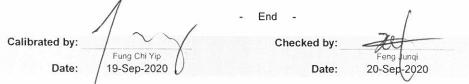

The complete sound level meter was calibrated on the reference range using a B&K 4226 acoustic calibrator with 1000Hz and SPL 94 dB. The sensitivity of the sound level meter was adjusted. The test result at 125 Hz and 8000 Hz are given in below with test status and the estimated uncertainties.

| Test: | Subtest | Status | Expanded Uncertanity (dB) | Coverage Factor |
|-------------------|------------------------|--------|------------------------------|--------------------|
| Acoustic response | Weighting A at 125 Hz | Pass | 0.3 | |
| | Weighting A at 8000 Hz | Pass | 0.5 | |

3, Response to associated sound calibrator

N/A

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

The standard(s) and equipment used in the calibration are traceable to national or international recognised standards and are calibrated on a schedule to maintain the required accuracy level.

© Soils & Materials Engineering Co., Ltd.

Form No.CARP152-2/Issue 1/Rev.C/01/02/2007

HKAS has accredited this laboratory (Reg. No. HOKLAS 028) under HOKLAS for specific calibration activities as listed in the HOKLAS directory of accredited laboratories. The results shown in this certificate are traceable to the International System of Units (SI) or recognised measurement standards. The results relate only to the item(s) calibrated. This certificate shall not be reproduced except in full without approval of the laboratory.

Test specifications

1, The Sound Calibrator has been calibrated in accordance with the requirements as specified in IEC 60942 1997 Annex B and the lab calibration procedure SMTP004-CA-156.

2, The calibrator was tested with its axis vertical facing downwards at the specific frequency using insert voltage technique.

 The results are rounded to the nearest 0.01 dB and 0.1 Hz and have not been corrected for variations from a reference pressure of 1013.25 hectoPascals as the maker's information indicates that the instrument is insensitive to pressure changes.

Test results

This is to certify that the sound calibrator conforms to the requirements of annex B of IEC 60942: 1997 for the conditions under which the test was performed. This does not imply that the sound calibrator meets IEC 60942 under any other conditions.

Details of the performed measurements are presented on page 2 of this certificate.

Approved Signatory:

Feng Junqi

Date: 26-Mar-2020

LINGINGER COMPANY STOS ** 011

Comments: The results reported in this certificate refer to the conditon of the instrument on the date of calibration and carry no implication regarding the long-term stability of the instrument.

CERTIFICATE OF CALIBRATION

(Continuation Page)

Certificate No.:

20CA0324 01

Page: 2 of

2 of 2

1, Measured Sound Pressure Level

The output Sound Pressure Level in the calibrator head was measured at the setting and frequency shown using a calibrated laboratory standard microphone and insert voltage technique. The results are given in below with the estimated uncertainties.

| Frequency | Output Sound Pressure | Measured Output | Estimated Expanded |
|-----------|-----------------------|----------------------|--------------------|
| Shown | Level Setting | Sound Pressure Level | Uncertainty |
| Hz | dB | dB | dB |
| 1000 | 94.00 | 94.14 | 0.10 |

2, Sound Pressure Level Stability - Short Term Fluctuations

The Short Term Fluctuations was determined by measuring the maximum and minimum of the fast weighted DC output of the B&K 2610 measuring amplifier over a 20 second time interval as required in the standard. The Short Term Fluctuation was found to be:

| At 1000 Hz | STF = 0.014 dB |
|--------------------------------|----------------|
| Estimated expanded uncertainty | 0.005 dB |

3, Actual Output Frequency

The determination of actual output frequency was made using a B&K 4180 microphone together with a B&K 2673 preamplifier connected to a B&K 2610 measuring amplifier. The AC output of the B&K 2610 was taken to an universal counter which was used to determine the frequency averaged over 20 second of operation as required by the standard. The actual output frequency at 1 KHz was:

| At 1000 Hz | Actual Frequency = 1002.6 Hz | |
|--------------------------------|------------------------------|-------------------------|
| Estimated expanded uncertainty | 0.1 Hz | Coverage factor k = 2.2 |

4, Total Noise and Distortion

For the Total Noise and Distortion measurement, the unfiltered AC output of the B&K 2610 measuring amplifier was connected to an Agilent Type 8903 B distortion analyser. The TND result at 1 KHz was:

| At 1000 Hz | TND = 1.5 % |
|--------------------------------|-------------|
| Estimated expanded uncertainty | 0.7 % |

The expanded uncertainties have been calculated in accordance with the ISO Publication "Guide to the expression of uncertainty in measurement", and gives an interval estimated to have a level of confidence of 95%. A coverage factor of 2 is assumed unless explicitly stated.

Monthly Summary Waste Flow Table for 2021

Comments:

1) Assumption: The densities of Rock, Soil, Mixed Rock and Soil, and Regular Spoil are 2.0 ton/m³; the density of general refuse is 1.0 ton/m³; the density of waste oil is 1.0 kg/L.

2) The cut-off date of waste amount in February is 28/2/2021 for Public Fill Facilities and Landfill.

3) The amounts of waste in February are 461.38 tons for Landfill and 3346.88 tons for Public Fill.

4) The amount of import fill in February is 0 ton, for cut-off date as 28/2/2021.

5) The amount of metal waste generated in February is 48690 kg, for cut-off date as 28/2/2021.

- 6) The amount of paper waste generated in February is 250 kg, for cut-off date as 28/2/2021.
- 7) The amount of plastic waste generated in February is 45 kg, for cut-off date as 28/2/2021.

EXECUTIVE SUMMARY

- ES.01 Build King SCL 1124 Joint Venture (hereinafter 'JV") has been awarded by the MTR Corporation Limited (MTR) of the Contract No. MTR 1124 Admiralty SCL Related Works (hereinafter "Contract 1124').
- ES.02 Admiralty Station (ADM) will become an interchange station for four railway lines. The works of Contract 1124 are mainly the Alteration and Additional (A&A) works at the interface between the existing Admiralty Station (ADM) and the new ADM, construction of internal structure at the new ADM and associated road works and building services etc.
- ES.03 The Environmental Monitoring & Audit (EM&A) Programme for Contract 1124 was commenced on 1 February 2017.
- ES.04 This is the **49th** Monthly Environmental Monitoring and Audit (EM&A) Report summarizing the impact monitoring results and audit findings for Contract 1124 during the period from **1** to **28** February 2021 (the Reporting Period).

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.05 Environmental monitoring activities under the EM&A Programme in this Reporting Period are summarized in the following table.

| Issues | Environmental Monitoring Parameters / Inspection | Occasions |
|--------------------|---|-----------|
| Inspection / Audit | ET Regular Environmental Site Inspection | 4 |

ENVIRONMENTAL COMPLAINT

ES.06 No environmental complaint was recorded or received in this Reporting Period.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.07 No environmental summons or successful prosecutions were recorded in this Reporting Period.

REPORTING CHANGE

ES.08 No reporting changes were made in this Reporting Period.

FUTURE KEY ISSUES

ES.09 Special attention should be paid to on the potential environmental impacts arising from the forthcoming activities such as water quality and waste management.

1 INTRODUCTION

1.1 PROJECT BACKGROUND

- 1.1.1 The Shatin to Central Link (SCL) is a 17km extension of the existing Ma On Shan Line (MOL) and East Rail Line (EAL) comprising (i) The East-West Corridor which extends the MOL from Tai Wai via East Kowloon to connect with the West Rail Line (WRL) at Hung Hom Station (HUH); and (ii) The North-South Corridor which is an extension of the East Rail Line (EAL) at Hung Hom across the harbour to Admiralty Station (ADM).
- 1.1.2 The Environmental Impact Assessment (EIA) Reports for SCL Hung Hom to Admiralty Section [SCL (HUH-ADM)] (Register No.: AEIAR-166/2012) was approved on 17 February 2012 under the Environmental Impact Assessment Ordinance (EIAO). Following the approval of the EIA Report, an Environmental Permit (EP) was granted on 22 March 2012, which covers SCL (HUH-ADM) EP No.: (EP-436/2012), for the construction and operation. Variation of EP (VEP) was subsequently applied and the latest EP (EP No. EP-436/2012/F) was issued by the Director of Environmental Protection (DEP) on 31 December 2018.
- 1.1.3 Major works of Contract 1124 including the following:-
 - (a) Alteration and Additional (A&A) works at the interface between the existing ADM and the new ADM;
 - (b) Construction of internal structures at the new ADM;
 - (c) Alteration and addition works for plant rooms;
 - (d) Demolition of Vent Shaft X;
 - (e) Road works including drainage, traffic aids, road markings, lighting, signage, utilities diversion, demolition, reinstatement and TTM schemes to facilitate the construction works and any works require TTM submission;
 - (f) Tree planting and soft and hard landscaping works;
 - (g) Design and construction of ABWF works.
 - (h) Supply and installation of doors and ironmongeries, signs and advertising panels, Customer Service Centre (CUC), Platform Supervisor Booths (PSB) and Common Station Components etc.
- 1.1.4 The general layout of the Project is shown in *Appendix A*.
- 1.1.5 Action-United Environmental Services & Consulting (hereinafter referred as "AUES") was appointed by the Contractor as an Environmental Team (hereinafter referred as "the ET") to implement the relevant EM&A programme in accordance with the EM&A Manual and EP during construction phase of the project.
- 1.1.6 This is the **49th** Monthly EM&A Report summarizing the impact monitoring results and audit findings for Contract 1124 in the period of **1** to **28 February 2021.**

1.2 REPORT STRUCTURE

1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

| Section 1 | Introduction |
|-----------|---|
| Section 2 | Project Organization and Construction Progress |
| Section 3 | Summary of Impact Monitoring Requirement |
| Section 4 | Waste Management |
| Section 5 | Site Inspection |
| Section 6 | Environmental Complaint and Non-Compliance |
| Section 7 | Implementation Statue of Mitigation Measures |
| Section 8 | Conclusions and Recommendation |

2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1 PROJECT ORGANIZATION AND MANAGEMENT STRUCTURE

2.1.1 The organization structure and contact details of key personnel with respect to environmental management are shown in *Appendix B*.

2.2 CONSTRUCTION PROGRESS

2.2.1 The Construction Program of the Contract 1124 is enclosed in *Appendix C* and the major construction activities undertaken in this Reporting Period are listed below:-

Civil & ABWF Works

- Site clearance and defect rectification.
- T&C for smoke vent.
- Installation of smoke curtain
- Installation of fire shutter and signage.
- ABWF testing and commissioning works
- Removal of covered walkway.
- Excavation for external drainage along Harcourt road.
- Skylight installation of glazing works and weathertight <u>BS Works</u>
- BS T&C.
- FSD pre-inspection.

2.3 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.3.1 Summary of the relevant permits, licences, and/or notifications on environmental protection for Contract 1124 in this Reporting Period is presented in *Table 2-1*.

| | | nit Status | | | |
|------|--|---|------------------|--------------------------|----------------------------|
| Item | Description | Ref. no. | Valid | Status | |
| | | | From | То | |
| 1 | Environmental permit | EP-436/2012/F | 23 Jan 2019 | End of the Project | Valid |
| 2 | Notification pursuant to Air pollution Control (Construction Dust) Regulation | Ref No.: 400699 | 1 Apr 2016 | End of the Project | Valid |
| 3 | Chemical Waste Producer Registration | Waste Producers Number: 5213-124-B2482- 01 | 11 May 2016 | End of the Project | Valid |
| 4 | Water Pollution Control Ordinance - Discharge License | No.WT00025943- 2016 | 27 Oct 2016 | 31 Oct 2021 | Valid until 31 Oct 2021 |
| 5 | Waste Disposal Regulation - Billing Account for Disposal of Construction Waste | Account No. 7024833 | 21 April 2016 | End of the Project | Valid |
| 6 | Construction Noise Permit | GW-RS0682-20 | 1 Oct 2020 | 31 Mar 2021 | Valid until 31 Mar 21 |

3 SUMMARY OF IMPACT MONITORING REQUIREMENT

3.1 GENERAL

- 3.1.1 The impact monitoring for air quality, construction noise as well as landscape and visual inspection are not required for Contract 1124.
- 3.1.2 The impact monitoring requirement for Contract 1124 shall include waste management and site inspection.

4 WASTE MANAGEMENT

4.1 GENERAL WASTE MANAGEMENT

4.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

4.2 **RECORDS OF WASTE QUANTITIES**

- 4.2.1 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse; and
 - Excavated Soil.
- 4.2.2 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 4-1* and *4-2* and the Monthly Summary Waste Flow Table is shown in *Appendix D*. Whenever possible, materials were reused on-site as far as practicable.

 Table 4-1
 Summary of Quantities of Inert C&D Materials for the Project

| | | Quantity | | |
|--|-----------------|--|-----------|----------------------|
| Type of Waste | Prior Months | Reporting Month (February 2021) | Cumulated | Disposal Location |
| Total C&D Materials generated (Inert) (in '000m ³) | 1.903 | 0 | 1.903 | |
| Reused in this Project (Inert) (in '000m ³) | 0 | 0 | 0 | |
| Reused in other Projects (Inert) (in '000m ³) | 0 | 0 | 0 | |
| Disposal as Public Fill (Inert) (in '000m ³) | 1.903 | 0 | 1.903 | TKO 137 |

Table 4-2Summary of Quantities of C&D Wastes for the Project

| Type of Waste | Prior Months | Reporting Month (February 2021) | Cumulated | Disposal Location |
|---------------------------------------|-----------------|--|-----------|----------------------|
| Metals ('000kg) | 0 | 0 | 0 | |
| Paper / Cardboard Packing ('000kg) | 0 | 0 | 0 | |
| Plastics ('000kg) | 0 | 0 | 0 | |
| Chemical Wastes ('000kg) | 0 | 0 | 0 | |
| General Refuses ('000m ³) | 6.141 | 0.07 | 6.211 | SENT |

5 SITE INSPECTION

5.1 **REQUIREMENTS**

5.1.1 According to the EM&A Manual, the environmental site inspection shall be formulated by ET Leader. Weekly environmental site inspections should be carried out to monitor the implementation of mitigation measures and environmental performance.

5.2 FINDINGS / DEFICIENCIES DURING THE REPORTING MONTH

- 5.2.1 In the Reporting Period, joint site inspection to evaluate the site environmental performance by the MTR, ET and the Contractor were carried out on **3**, **10**, **17 and 26 February 2021** and IEC had joined the site inspection on **17 February 2021**. Furthermore, no site inspection was conducted by EPD during the Reporting Period. No non-compliance was noted during the site inspection in the Reporting Period.
- 5.2.2 The observations and reminders recorded in the weekly site inspection in the Reporting Period are summarized in *Table 5-1*.

| Parameters | Date | Observations / Reminders | Follow-Up Status |
|--|------------------------------------|---|--|
| Air Quality | Nil | Nil | Nil |
| Noise | Nil | Nil | Nil |
| Water Quality | 10 February 2021 | Milky wastewater was observed at the WetSep. The Contractor should check and carry out maintenance work for the WetSep to ensure all wastewater are properly treated prior discharge. | No milky wastewater was observed and the WetSep was maintained in good condition. |
| Waste/ Chemical Management Permits/ licenses | 10 & 17 February 2021 Nil | The Contractor should remove chemical containers at site vehicle entrance. Nil | Chemical containers were removed. Nil |

Table 5-1Site Observations

6 ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

6.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

6.1.1 No environmental complaints, summons and prosecution were received in this Reporting Period. The statistical summary table of environmental complaint is presented in *Tables 6-1*, 6-2 and 6-3.

Table 6-1 Statistical Summary of Environmental Complaints

| Domonting Dominal | Enviro | nmental Complaint | Statistics |
|----------------------|-----------|-------------------|-------------------------------------|
| Reporting Period | Frequency | Cumulative | Complaint Nature |
| 1 – 28 February 2021 | 0 | 1 | Air Quality (Uncover dump truck) |

| Reporting Period | Frequency | Cumulative | Prosecution Nature |
| 1 – 28 February 2021 | 0 | 0 | NA |

7 IMPLEMENTATION STATUS OF MITIGATION MEASURES

7.1 GENERAL REQUIREMENTS

- 7.1.1 The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the EM&A Manual covered the issues of dust, noise, water quality and waste management and they are summarized presented in *Appendix E*.
- 7.1.2 The Contractor has implemented the environmental mitigation measures and requirements as stated in the EIA reports the EP and EM&A Manuals subject to the site condition. The major environmental mitigation measures implemented by the Contract in this Reporting Period are summarized in *Table 7-1*.

| Issues | Environmental Mitigation Measures | | | | | |
|-------------------------------------|---|--|--|--|--|--|
| Water Quality | • Wastewater to be treated by the filtration systems i.e. sedimentation tank before to discharge. | | | | | |
| Air Quality | Maintain wet surface on access road All vehicles must use wheel washing facility before off site Sprayed water during breaking works | | | | | |
| Noise | Restrain operation time of plants from 07:00 to 19:00 on any working day except for Public Holiday and Sunday. CNP was granted for construction works during restricted hours Keep good maintenance of plants Shut down the plants when not in used. | | | | | |
| Waste and Chemical Management | On-site sorting prior to disposal Follow requirements and procedures of the "Trip-ticket System" Predict required quantity of concrete accurately Collect the unused fresh concrete at designated locations in the sites for subsequent disposal | | | | | |
| General | The site was generally kept tidy and clean. | | | | | |

 Table 7-1
 Environmental Mitigation Measures

7.1.3 Status of required submissions under the EP during the reporting period is summarized in *Table 7-2*.

Table 7-2 Status of Required Submission under Environmental Permit

| EP Condition | Submission | Submission Date |
|---------------|--------------------------------------|------------------|
| Condition 3.4 | Monthly EM&A Report for January 2021 | 11 February 2021 |

7.2 TENTATIVE CONSTRUCTION ACTIVITIES IN THE COMING MONTH

- 7.2.1 Construction activities listed below will be undertaken in the coming month for Contract 1124.
 - Installation of remaining Stone Claddings, Floor tiles & VE Panels at hoarding interfaces.
 - Fire Shutters, E-Sign, Smoke Vent & Smoke Curtain T&C.
 - Signage installation (INF signs only).
 - Hoarding removal at 2600 above FFL.
 - Sprinkler system flow test.
 - Chilled water system T&C.
 - SBCS T&C for the smoke zone modification.
 - Smoke extraction duct modification as per FSD comment on Concourse level, Upper, Lower and SCL platforms.
 - To dismantle the existing PD pipes on Concourse after the WSD Part V issued for the

PD pipes diversion

7.3 ISSUES FOR THE COMING MONTH

- 7.3.1 Key issues to be considered in the coming month for the Contract include:
 - Ensure dust suppression measures are implemented properly;
 - Implementation of construction noise preventative control measures
 - Management of chemical wastes;
 - Follow-up of improvement on general waste management issues; and
 - Potential wastewater quality impact

8 CONCLUSIONS AND RECOMMENTATIONS

- 8.1 CONCLUSIONS
- 8.1.1 This is the **49th** Monthly EM&A report, covering the construction period from **1 to 28** February 2021.
- 8.1.2 No documented complaint, notification of summons or successful prosecution was received in the Reporting Period.
- 8.1.3 Joint site inspection to evaluate the site environmental performance by the RE, ET and the Contractor were carried out on **3**, **10**, **17** and **26** February 2021 and IEC had joined the site inspection on **17** February 2021. No adverse environmental issue was observed in the reporting period.

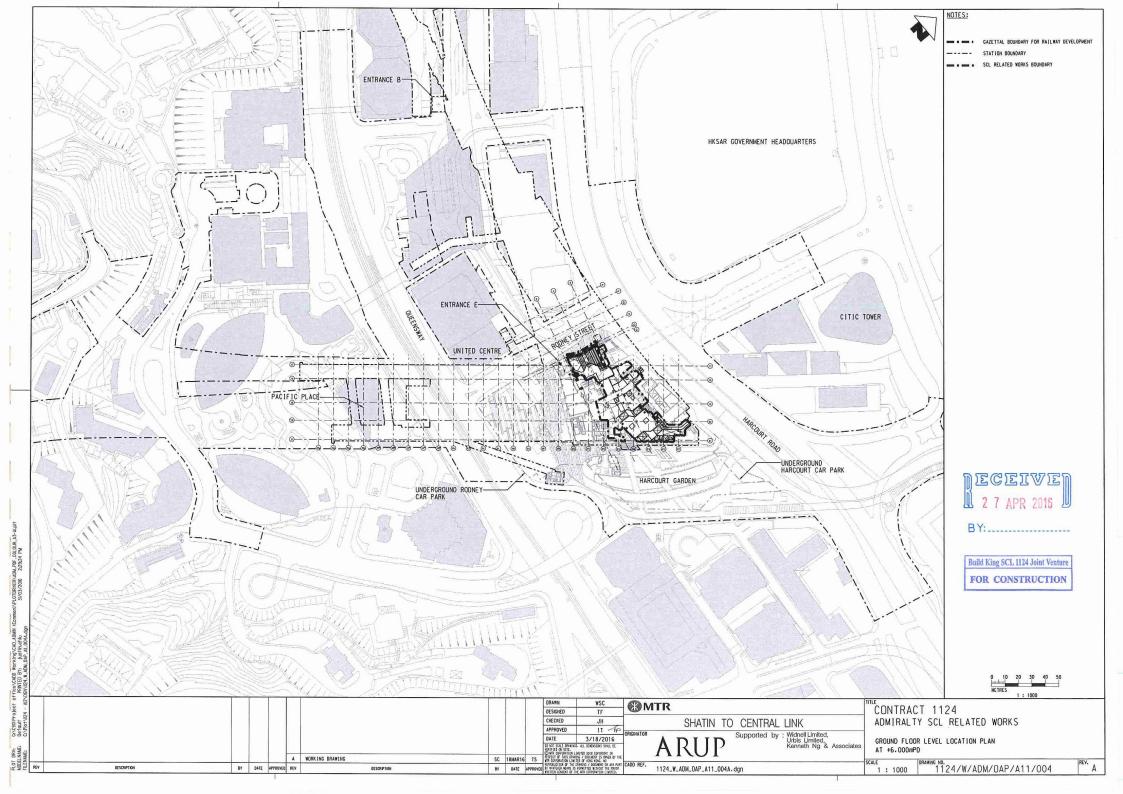

8.2 **RECOMMENDATIONS**

- 8.2.1 Special attention should be paid to on the potential environmental impacts arising from the forthcoming activities such as air quality, water quality and waste management.
- 8.2.2 The Contractor was reminded to properly maintain the wastewater treatment facilities and ensure the discharge complied with the relevant licence requirement.
- 8.2.3 The Contractor was reminded that the C&D waste and general refuse should be disposed in a timely manner, and chemical containers should be provided with drip tray to avoid leakage on ground during construction period.
- 8.2.4 The Contractor is also reminded to implement the recommended environmental mitigation measures according to the EM&A Manual.

IMPLEMENTATION SCHEDULE FOR ENVIRONMENTAL MITIGATION MEASURES (ISEMM)

MTR Shatin to Central Link Contract 1124 Admiralty SCL Related Works Monthly Environmental Monitoring and Audit (EM&A) Report – February 2021

AUES

| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
|----------------------|---|---|---|---|--------------------------|
| Culture H | eritage Impact (Construction Phase) | | | | |
| S4.93 & Table 4.2 | Erection of decorative and sensibly designed hoarding along the boundary of the works area | To mitigate the temporary visual impact due to surface works | Contractor | Works Areas in Causeway Bay and Wan Chai, and Works Shaft in Admiralty | V |
| | Impact (Construction Phase) | 1 | r | 1 | |
| S5.134 | Accidental chemical spillage and construction site run-off to the receiving water bodies, mitigation measures such as removing the pollutants before discharge into storm drain and paving the section of construction road between the wheel washing bay and the public road as suggested in Sections 11.216 and 11.219 to 11.256 of the EIA Report shall be adopted | To minimize the contamination of wastewater discharge | Contractor | All land based works areas | V |
| Landscape | e and Visual Impact (Contraction Phase) | | | | |
| Table 7.9 | CM1 - Trees unavoidably affected by the works shall be transplanted as far as possible in accordance with ETWB TC(W) 3/2006 – Tree Preservation. | Transplanting and reuse of affected trees. | MTR | Works Sites | N/A |
| Table 7.9 | CM2a - Compensatory tree planting shall be provided in accordance with ETWB TC(W) 3/2006 – Tree Preservation to compensate for felled trees and maintained until end of the establishment period. | Compensation for the removal of existing trees due to the Project. | MTR | Works Sites | N/A |
| Table 7.9 | CM2b - Compensatory shrub planting shall be provided to compensate for the loss of shrub planting in amenity areas. | Compensation for the removal of existing trees due to the Project. | MTR | Works Sites | N/A |
| Table 7.9 | CM3 - Control of night-time lighting glare | Minimize the night time glare due to the Project during construction phase | MTR | Works Sites | V |
| Table 7.9 | CM4 - Erection of decorative screen hoarding compatible with the surrounding setting. | Minimize the visual impact of the Project during construction phase | MTR | Works Sites | V |
| Table 7.9 | CM5 - Management of facilities on work sites which give control on the height and disposition/arrangement of all facilities on the works | | MTR | Works Sites | V |

Z:\Jobs\2016\TCS00838\600\EM&A Report\Monthly Report\2021\February 2021\R0072v2.doc

MTR Shatin to Central Link Contract 1124 Admiralty SCL Related Works Monthly Environmental Monitoring and Audit (EM&A) Report – February 2021

AUES

| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
|--------------|---|--|---|-------------------------|--------------------------|
| | site to minimize visual impact to adjacent VSRs | arrangement of temporary facilities in works areas | | | |
| Table 7.9 | CM6 - All hard and soft landscape areas disturbed temporarily during construction shall be reinstated on like-to-like basis to the satisfaction of the relevant Government Departments. | Reinstatement of temporary works areas | MTR | Works Sites | N/A |
| / | All retained/exist trees shall be properly protected during construction period. | Tree protection | Contractor | Works Sites | N/A |
| Dust Impa | act (Construction Phase) | | 1 | | |
| / | Emission from Vehicles and Plants • All vehicles shall be shut down in intermittent use. • Only well-maintained plant should be operated on-site and plant should be serviced regularly to avoid emission of black smoke. • All diesel fuelled construction plant within the works areas shall be powered by ultra low sulphur diesel fuel (ULSD) | Reduce air pollution emission from construction vehicles and plants | Contractor | Works Sites | V |
| \$8.89 | Watering once every working hour on active works areas, exposed areas and paved haul roads to reduce dust emission by 91.7%. This dust suppression efficiency is derived based on the average haul road traffic, average evaporation rate and an assumed application intensity of 1.7 L/m2 for Kowloon side and 1.0 L/m2 for Hong Kong side once every working hour. Any potential dust impact and watering mitigation would be subject to the actual site condition. For example, a construction activity that produces inherently wet conditions or in cases under rainy weather, the above water application intensity may not be unreservedly applied. While the above watering frequency is to be followed, the extent of watering may vary depending on actual site conditions but should be sufficient to maintain an equivalent intensity of no less than 1.7 L/m2 for Kowloon side and 1.0 L/m2 for Hong Kong side to achieve the removal efficiency. The dust levels would be monitored and managed under an EM&A programme as specified in the EM&A Manual. | To minimize dust impact | Contractor | Works areas | V |
| S8.90 | Dust suppression measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices: • Use of regular watering to reduce dust emissions from exposed site surfaces | To minimize dust impact | Contractor | Works areas | V |

| | - | | | - | |
|--------------|--|---|---|-------------------------|--------------------------|
| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
| | and unpaved roads, particularly during dry weather. • Use of frequent watering for particularly dusty construction areas and areas close to ASRs. • Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines. • Open stockpiles shall be avoided or covered. Where possible, prevent placing dusty material storage piles near ASRs. • Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations. • Establishment and use of vehicle wheel and body washing facilities at the exit points of the site. • Provision of wind shield and dust extraction units or similar dust mitigation measures at the loading area of barging point, and use of water sprinklers at the loading area where dust generation is likely during the loading process of loose material, particularly in dry seasons/ periods. • Provision of not less than 2.4m high hoarding from ground level along site boundary where adjoins a road, streets or other accessible to the public except for a site entrance or exit. • Imposition of speed controls for vehicles on site haul roads. • Where possible, routing of vehicles and positioning of construction plant shall be at the maximum possible distance from ASRs. • Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides. • Instigation of an environmental monitoring and auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise | | | | |
| / | Dust suppression measures $(con't) \bullet$ De-bagging, batching and mixing processes carried out in sheltered areas during the use of bagged cement | To minimize construction impact | Contractor | Works areas | V |
| Noise Imp | act (Construction Phase) | | | | |
| \$9.55 | The following good site practices shall be implemented: • Only well-maintained plant shall be operated on-site and plant shall be serviced regularly during the construction program • Silencers or mufflers on construction equipment shall be utilized and shall be | To minimize construction noise impact | Contractor | Works areas | V |

MTR Shatin to Central Link Contract 1124 Admiralty SCL Related Works Monthly Environmental Monitoring and Audit (EM&A) Report – February 2021

Objectives of the Who to EM&A Recommended implement Location of the Implementation **Recommended Mitigation Measures** Ref. Measures & Main the measure Status **Concern to Address** measures? facilities. If disposal of sewage to public sewerage system is not construction site runoff general feasible, appropriate numbers of portable toilets shall be provided by a and licensed contractor to serve the construction workers over the construction activities construction site to prevent direct disposal of sewage into the water environment. The Contractor shall also be responsible for waste disposal and maintenance practices. Notices shall be posted at conspicuous locations to remind the workers not to discharge any sewage or wastewater into the nearby environment. S11.248 In case seepage of uncontaminated groundwater occurs, groundwater To minimize impact Contractor Works area N/A shall be pumped out from the works areas and discharged into the from discharge of storm system via silt removal facilities. Uncontaminated groundwater uncontaminated from dewatering process shall also be discharged into the storm system groundwater via silt traps S11.253 There is a need to apply to EPD for a discharge licence for discharge of То minimize water Contractor All construction works V effluent from the construction site under the WPCO. The discharge quality impact from areas quality must meet the requirements specified in the discharge licence. effluent discharges All the runoff and wastewater generated from the works areas shall be from construction sites treated so that it satisfies all the standards listed in the TM-DSS. Minimum distances of 100 m shall be maintained between the discharge points of construction site effluent and the existing seawater intakes. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimise water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the monitoring shall be carried out in accordance with the WPCO license which is under the ambit of Regional Office (RO) of EPD minimize S11 254 Contractor must register as a chemical waste producer if chemical All construction works То water Contractor ٦7 wastes would be produced from the construction activities. The Waste quality impact from areas Disposal Ordinance (Cap 354) and its subsidiary regulations in accidental spillage of particular the Waste Disposal (Chemical Waste) (General) Regulation chemica shall be observed and complied with for control of chemical wastes. S11.255 Any service shop and maintenance facilities shall be located on hard To minimize All construction works N/A water Contractor standings within a bunded area, and sumps and oil interceptors shall be quality impact from areas

| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
|--------------------|---|--|---|---------------------------------|--------------------------|
| | provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage shall only be undertaken within the areas appropriately equipped to control these discharges | accidental spillage of chemical | | | |
| S11.256 | Disposal of chemical wastes shall be carried out in compliance with the Waste Disposal Ordinance. The "Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes" published under the Waste Disposal Ordinance details the requirements to deal with chemical wastes. General requirements are given as follows: - Suitable containers shall be used to hold the chemical wastes to avoid leakage or spillage during storage, handling and transport Chemical waste containers shall be suitably labelled, to notify and warn the personnel who are handling the wastes, to avoid accidents Storage area shall be selected at a safe location on site and adequate space shall be allocated to the storage area | To minimize water quality impact from accidental spillage of chemical | Contractor | All construction works areas | V |
| Vaste Ma S12.75 | nagement (Construction Phase) Good Site Practices and Waste Reduction Measures - Prepare a Waste Management Plan (WMP) approved by the Engineer/Supervising Officer of the Project based on current practices on construction sites; - Training of site personnel in, site cleanliness, proper waste management and chemical handling procedures; - Provision of sufficient waste disposal points and regular collection of waste; - Appropriate measures to minimize windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers; - Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors; and - Separation of chemical wastes for special handling and appropriate treatment. | To reduce waste management impacts | Contractor | All construction works areas | V |
| S12.76 | Good Site Practices and Waste Reduction Measures (con't) - Sorting of demolition debris and excavated materials from demolition works to recover reusable/ recyclable portions (i.e. soil, broken concrete, metal etc.); - Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; - Encourage collection of aluminum cans by providing separate labeled bins to enable this waste | To achieve waste reduction | Contractor | All construction works areas | V |

|--------------|---|---|---|------------------------------|--------------------------|
| | to be segregated from other general refuse generated by the workforce; - Proper storage and site practices to minimize the potential for damage or contamination of construction materials; - Plan and stock construction materials carefully to minimize amount of waste generated and avoid unnecessary generation of waste; and - Training shall be provided to workers about the concepts of site cleanliness and appropriate waste management procedures, including waste reduction, reuse and recycle. | | | | |
| S12.77 | Good Site Practices and Waste Reduction Measures (con't) - The Contractor shall prepare and implement a WMP as part of the EMP in accordance with ETWBTCW No. 19/2005 which describes the arrangements for avoidance, reuse, recovery, recycling, storage, collection, treatment and disposal of different categories of waste to be generated from the construction activities. Such a management plan shall incorporate site specific factors, such as the designation of areas for segregation and temporary storage of reusable and recyclable materials. The EMP shall be submitted to the Engineer for approval. The Contractor shall implement the waste management practices in the EMP throughout the construction stage of the Project. The EMP shall be reviewed regularly and updated by the Contractor, preferably in a monthly basis. | To achieve waste reduction | Contractor | All construction works areas | V |
| S12.78 | C&D materials would be reused in other local concurrent projects as far as possible. If all reuse outlets are exhausted during the construction phase, the C&D materials would be disposed of at Taishan, China as a last resort | To achieve waste reduction | Contractor | All construction works areas | V |
| S12.79 | Storage, Collection and Transportation of Waste Should any temporary storage or stockpiling of waste is required, recommendations to minimize the impacts include: - Waste, such as soil, shall be handled and stored well to ensure secure containment, thus minimizing the potential of pollution; - Maintain and clean storage areas routinely; - Stockpiling area shall be provided with covers and water spraying system to prevent materials from wind-blown or being washed away; and - Different locations shall be designated to stockpile each material to enhance reuse | To minimize potential adverse environmental impacts arising from waste storage | Contractor | All construction works areas | V |

| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
|-------------------|---|---|---|---------------------------------|--------------------------|
| S12.80 | Storage, Collection and Transportation of Waste (con't) Waste haulier with appropriate permits shall be employed by the Contractor for the collection and transportation of waste from works areas to respective disposal outlets. The following suggestions shall be enforced to minimize the potential adverse impacts: - Remove waste in timely manner- Waste collectors shall only collect wastes prescribed by their permits - Impacts during transportation, such as dust and odour, shall be mitigated by the use of covered trucks or in enclosed containers - Obtain relevant waste disposal permits from the appropriate authorities, in accordance with the Waste Disposal Ordinance (Cap. 354), Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 345) and the Land (Miscellaneous Provisions) Ordinance (Cap. 28) - Waste shall be disposed of at licensed waste disposal facilities - Maintain records of quantities of waste generated, recycled and disposed | To minimize potential adverse environmental impacts arising from waste storage | Contractor | All construction works areas | V |
| \$12.81 | Storage, Collection and Transportation of Waste (con't) - Implementation of trip ticket system with reference to DevB TC(W) No.6/2010 to monitor disposal of waste and to control fly-tipping at PFRFs or landfills. A recording system for the amount of waste generated, recycled and disposed (including disposal sites) shall be proposed | To minimize potential adverse environmental impacts arising from waste storage | Contractor | All construction works areas | V |
| S12.83 – 12.86 | Sorting of C&D Materials - Sorting to be performed to recover the inert materials, reusable and recyclable materials before disposal off-site Specific areas shall be provided by the Contractors for sorting and to provide temporary storage areas for the sorted materials The C&D materials shall at least be segregated into inert and non-inert materials, in which the inert portion could be reused and recycled as far as practicable before delivery to PFRFs as mentioned for beneficial use in other projects. While opportunities for reusing the non-inert portion shall be investigated before disposal of at designated landfills Possibility of reusing the spoil in the Project will be continuously investigated in the detailed design and construction stages, it includes backfilling to cut and cover construction works for the Hung Hom south and north approach tunnels | To minimize potential adverse environmental impacts during the handling, transportation and disposal of C&D materials | Contractor | All construction works areas | V |

|--------------|--|--|---|---------------------------------|--------------------------|
| S12.97 | Containers for Storage of Chemical Waste The Contractor shall register with EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Containers used for storage of chemical waste shall: - Be compatible with the chemical wastes being stored, maintained in good condition and securely sealed; - Have a capacity of less than 450 litters unless the specifications have been approved by EPD; and - Display a label in English and Chinese in accordance with instructions prescribed in Schedule 2 of the Waste Disposal (Chemical Waste) (General) Regulation. | To register with EPD as a Chemical waste producer and store chemical waste in appropriate containers | Contractor | All construction works areas | V |
| \$12.98 | Chemical Waste Storage Area - Be clearly labeled to indicate corresponding chemical characteristics of the chemical waste and used for storage of chemical waste only; - Be enclosed on at least 3 sides; - Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest; - Have adequate ventilation; - Be covered to prevent rainfall from entering; and - Be properly arranged so that incompatible materials are adequately separated | To prepare appropriate storage areas for chemical waste at works areas | Contractor | All construction works areas | V |
| S12.99 | Chemical Waste - Lubricants, waste oils and other chemical wastes would be generated during the maintenance of vehicles and mechanical equipments. Used lubricants shall be collected and stored in individual containers which are fully labelled in English and Chinese and stored in a designated secure place. | To clearly label the chemical waste at works areas | Contractor | works areas | @ |
| S12.100 | Collection and Disposal of Chemical Waste A trip-ticket system shall be operated in accordance with the Waste Disposal (Chemical Waste) (General) Regulation to monitor all movements of chemical waste. The Contractor shall employ a licensed collector to transport and dispose of the chemical wastes, to either the approved CWTC at Tsing Yi, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | To monitor the generation, reuse and disposal of chemical waste | Contractor | works areas | V |
| S12.101 | General Refuse General refuse shall be stored in enclosed bins or compaction units separate from C&D materials and chemical waste. A reputable waste collector shall be employed by the contractor to | To properly store and separate from other C&D materials for | Contractor | works areas | V |

| EM&A Ref. | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concern to Address | Who to implement the measures? | Location of the measure | Implementation Status |
|--------------|---|---|---|-------------------------|--------------------------|
| | remove general refuse from the site, separately from C&D materials | subsequent collection | | | |
| | and chemical wastes. Preferably, an enclosed and covered area shall be provided to reduce the occurrence of wind-blown light material | and disposal | | | |
| S12.102 | General Refuse (con't) The recyclable component of general refuse, such as aluminum cans, paper and cleansed plastic containers shall be separated from other waste. Provision and collection of recycling bins for different types of recyclable waste shall be set up by the Contractor. The Contractor shall also be responsible for arranging recycling companies to collect these materials | To facilitate recycling of recyclable portions of refuse | Contractor | works areas | V |
| S12.103 | 3 General Refuse (con't) The Contractor shall carry out an education programme for workers in avoiding, reducing, reusing and recycling of materials generation. Posters and leaflets advising on the use of the bins shall also be provided in the sites as reminders. | To raise workers' awareness on recycling issue | Contractor | works areas | V |
