ETS-Testconsult Limited 8/F, Block B, Veristrong Industrial Centre 34-36 Au Pui Wan Street Fo Tan, Hong Kong

Attention: Mr. C L Lau

Dear Mr. Lau,

RE: Contract No. CV/2020/08 Handling of Surplus Public Fill (2021-2024) Monthly EM&A Report (No. 52) for August 2021 for the Tuen Mun Area 38 Fill Bank

Reference is made to your submission of the draft Monthly EM&A Report for August 2021 for the Tuen Mun Area 38 Fill Bank received by email on 21 September 2021.

We are pleased to inform you that we have no further comment on the captioned report.

Thank you for your attention. Please do not hesitate to contact the undersigned should you have any queries.

Yours faithfully,

Toam Jan Bearg

EXECUTIVE SUMMARY

This monthly Environmental Monitoring and Audit (EM&A) report No.52 was prepared by Environmental Team (ET) of ETS-Testconsult Ltd (ETL) for the "Contract No. CV/2015/07 Handling of Surplus Public Fill (2016-2018) – Tuen Mun (TM) Area 38 Fill Bank" (The Project).

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at TM Area 38 in August 2021.

Site Activities

As informed by the Contractor, the site activities in this reporting period were as below:

- 1. Operation of the 2 Public Fill Reception Facilities at TMFB;
- 2. Delivery of public fill to Taishan at TMFB;
- 3. Operation of Crushing plant at TMFB;
- 4. Operation of the Integrated Public Fill Reception at TMFB;
- 5. Personnel Position Tracking and Proximity Detection System of Moving Plant at TMFB;
- 6. Setting up a Digital Works Supervision System (DWSS) for TMFB;
- 7. Carrying out of preliminary sorting of public fill for 3RS project at TMFB;

Environmental Monitoring Progress

The summary of the monitoring activities in this monitoring month is listed below:

- 24-hour TSP Monitoring: 5 Occasions at 2 designated locations
- 1-hour TSP Monitoring: 15 Occasions at 2 designated locations
- Noise, Daytime: 9 Occasions at 2 designated locations
- Marine Water Quality Monitoring: 13 Occasions at 4 designated locations
- Weekly-site inspection: 4 Occasions

Air Monitoring

No exceedance of Action and Limit level was recorded for 1-hr and 24-hr TSP monitoring in the reporting period.

Noise Monitoring

No exceedance of Action and Limit level for noise monitoring was recorded in the reporting period.

Marine Water Quality Monitoring

No exceedance of action and limit level was recorded in the reporting period.

Weekly Site Inspection

In general, performance on environmental mitigation measures implemented was found to be satisfactory in this reporting period. The major findings observed during site inspections are presented in the Section 7.0.

Environmental Complaints, Notification of summons and successful prosecutions

No complaint, notification of summon and prosecution with respect to environmental issues was received in this reporting period.

Future Key Issues

Based on the site inspections and forecast of engineering works in the coming month, key issues to be considered are as follows:

- Dust generation from activities on site, such as vehicular movements along unpaved area and rock crushing activities;
- Noise impact from operating equipment and machinery on site;
- Wastewater and surface runoff from the site discharged into nearby water body; and
- Storage and usage of chemicals / fuel and chemical waste / waste oil.

1.0 INTRODUCTION

China Harbour – Zhen Hua Joint Venture (CHZH-JV) appointed Environmental Team (ET) of ETS-Testconsult Limited (ETL) to undertake the Environmental Monitoring and Audit (EM&A) for the "Contract No: CV/2015/07 –Handling of Surplus Public Fill (2016-2018) – Tuen Mun (TM) Area 38 Fill Bank" (The Project).

In accordance with the Condition 4 of Part C of Environmental Permit (No.: EP-210/2005/D) (the EP), an EM&A programme as set out in the Project Profile should be implemented.

The EM&A programme requires environmental monitoring for air quality, water quality and environmental site inspections for air quality, water quality, landscape and visual, and waste management. The EM&A requirements for each parameter described in the following sections include:

- All monitoring parameters;
- Monitoring schedules for the reporting month and forthcoming months;
- Action and Limit levels for all environmental parameters;
- Event/Action Plans;
- Environmental mitigation measures, as recommended in the Project Profile; and
- Environmental requirements in contract documents.

Baseline monitoring was completed in May 2003 by Stanger Asia Ltd. Action and Limit Levels were established for air and water quality parameters based on the baseline monitoring results.

This report documented the findings of EM&A Works conducted during the operation phase of Fill Bank at Tuen Mun Area 38 in August 2021.

2.0 **PROJECT INFORMATION**

2.1 Construction Programme

Details of construction programme are shown in Appendix G.

2.2 Project Organization and Management Structure

The organization chart and lines of communication with respect to the on-site environmental management and monitoring program are shown in Appendix A.

2.3 Contact Details of Key Personnel

The key personnel contact names and telephone numbers are shown in Table 2.1.

Organization	Name of Key Staff	Project Role	Tel. No.	Fax No.
CEDD	Leo Lam, T M Yeung, May Lau	Engineer's Representative	2762 5555	2714 0113
IEC (Acuity)	Mr. F C Tsang	IEC	2698 9097	2333 1316
Contractor (CHZH-JV)	Zhou Chang Ying	Senior Project Manager	96266299	22474108
ET (ETL)	C. L. Lau	ET Leader	2946 7791	2695 3944

 Table 2.1
 Contact Details of Key Personnel

3.0 CONSTRUCTION PROGRESS IN THIS REPORTING MONTH

As informed by the Contractor, the activities in the reporting month include:

- 1. Operation of the 2 public fill reception facilities at TMFB;
- 2. Delivery of public fill to Taishan at TMFB;
- 3. Operation of Crushing Plant at TMFB;
- 4. Operation of Integrated Public Fill Reception Platform at TMFB;
- 5. Setting up a Digital Works Supervision System (DWSS) for TMFB;
- 6. Installation, Operation and maintenance of AI System for the Crushing Plant at TMFB;
- 7. Enhancement of Traffic Signs and Road Markings at TMFB:
- 8. Carrying out preliminary sorting of Public Fill for 3RS project at TMFB;
- 9. Providing input for the GI Works at TMFB;

4.0 AIR QUALITY MONITORING

4.1 Monitoring Requirement

1-hr and 24-hr TSP levels were monitored in the reporting month. Table 4.3 shows the Action and Limit Levels for the environmental monitoring works.

4.2 Monitoring Equipment

Both 1-hour and 24-hour TSP air quality monitoring was performed using a GMWS2310 High Volume Air Sampler (HVS) located at each of the designated monitoring station. Table 4.1 summarizes the equipment used in the air quality monitoring programme. Copies of the calibration certificates for the HVS and calibrator are attached in Appendix B1.

Table 4.1	Air Quality Monitoring Equipment
1 able 4.1	All Quality monitoring Equipment

Equipment	Model and Make
HVS	Greasby GMWS2310
Calibrator	Tisch TE-5025A

4.3 Monitoring Parameters, Frequency and Duration

Table 4.2 summarizes the monitoring parameters, monitoring duration and frequencies of air quality monitoring.

Table 4.2	Monitoring parameters,	duration, frec	quency of air o	uality monitoring
	,			

Parameter	Duration	Frequency	
24-hr TSP	24 hr	Once per six days	
1-hr TSP	1 hr	Three times per six days	

4.4 Monitoring Locations and Schedule

In accordance with the Project Profile, two air-quality monitoring stations, namely TM-A1 and TM-A2, were selected for the 1-hr TSP and 24-hr TSP sampling.

Since the area for existing air monitoring station TM-A2 near Tipping Hall No.1 was handed over to EcoPark, air monitoring station TM-A2 was cancelled and the air monitoring was carried out at an alternative air monitoring station TM-RA2 (refer to Figure 1 attached) from 28 October 2008.

The locations of monitoring stations are shown in Figure 1.

During the reporting month, 1-hr and 24-hr TSP monitoring were carried out as the schedule. The details for 24-hr and 1-hr TSP monitoring carried out in this reporting month are summarized in Appendix B2.

4.5 Monitoring Methodology

Both 1-hr and 24-hr air quality monitoring (High Volume Sampler)

Instrumentation

High volume sampler, as HVS, (Greasby GMWS2310) complete with appropriate sampling inlets were employed for both 1-hour and 24-hour TSP monitoring. The sampler is composed of a motor, a filter holder, a flow controller and a sampling inlet and its performance specification complies with that required by USEPA standard Title 40, Code of Federation Regulations Chapter 1 (Part 50).

Installation

The installation of HVS refers to the requirement stated in Appendix D2 "General Technical Requirements of Environmental Monitoring" in the Environmental Monitoring and Audit Guidelines for Development Projects in Hong Kong published by EPD.

Operation/Analytical Procedures

Operating/analytical procedures for the operation of HVS are as below:

- Prior to the commencement of the dust sampling, the flow rate of the high volume sampler was properly set (between 0.6m³/min and 1.7m³/min.) in accordance with the manufacturer's instruction to within the range recommended in USEPA Standard Title 40, CFR Part 50. The flow rate is indicated on the flow rate chart.
- For TSP sampling, fiberglass filters (GA-55) were used.
- The power supply was checked to ensure the sampler worked properly.
- On sampling, the sampler was operated 5 minutes to establish thermal equilibrium before placing any filter media at designated air monitoring station.
- The filter holding frame was then removed by loosening the four nuts and carefully a weighted and conditioned filter was centered with the stamped number upwards, on a supporting screen.
- The filter was aligned on the screen so that the gasket formed an air-tight seal on the outer edges of the filter. Then the filter holder frame was tightened to the filter holder with swing bolts. The applied pressure should be sufficient to avoid air leakage at the edges.
- The programmable timer will be set for a sampling period of 1 hour / 24 hours. Information was recorded on the record sheet, which included the starting time, the weather condition and the filter number (the initial weight of the filter paper can be found out by using the filter number.).
- After sampling, the filter was transferred from the filter holder of the HVS to a sealed plastic bag and sent to the laboratory for weighting. The elapsed time was also recoded.
- Before weighting, all filters were equilibrated in a 3esiccators for 24 hour with the temperature of 25°C <u>+</u> 3°C and the relative humidity (RH) <50% <u>+</u>5%.

Maintenance & Calibration

- The HVS and their accessories should be maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- HVS should be calibrated at bi-monthly intervals.

Wind Data Monitoring

Wind data included wind speed and wind direction were directly extracted from Tuen Mun Station of Hong Kong Observatory during this reporting month. The wind data are presented in Appendix E.

4.6 Action and Limit Levels

Table 4.3 shows the Action and Limit levels for 24-hr TSP and 1-hr TSP monitoring.

Monitoring	24-hr TSP (μg/m³)		1-hr TSP (μg/m³)			
Location	Action Level	Limit Level	Action Level	Limit Level		
TM-A1	192	260	344	500		
TM-RA2 *	192	260	344	500		

Table 4.3 Action and Limit Levels for 24-hr TSP and 1-hr TSP

Remark (*): Since the area for existing air monitoring station TM-A2 near Tipping Hall No.1 was handed over to EcoPark, air monitoring station TM-A2 was cancelled and the air monitoring was carried out at an alternative air monitoring station TM-A2 from 28 October 2008. Since dust monitoring stations TM-A2 and TM-RA2 are located close to the major dust emission sources and no significant difference between them on the prevailing meteorological conditions, the baseline data from TM-A2 can also be valid in the case of TM-RA2.

4.7 Event-Action Plans

Please refer to Appendix F for details.

4.8 Results and Observations

All monitoring data of both 1-hr and 24-hr TSP monitoring is provided in Appendix B2. Graphical presentation of 1-hr and 24-hr TSP monitoring results for the reporting period is shown in Appendix B3. Wind data, including wind speed and wind direction, are annexed in Appendix E.

No exceedance of Action and Limit level was recorded for 1-hr and 24-hr TSP monitoring in the reporting month.

Generally, the Contractor implemented sufficient dust mitigation measures, including operation of wheel washing facilities and road dampening by water bowsers on the main haul roads and unpaved areas.

5.0 MARINE WATER QUALITY MONITORING

5.1 Monitoring Requirements

In accordance with the Project Profile, impact marine water quality monitoring was conducted three days per week. Measurements were taken at both mid-flood and mid-ebb tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed) at two control monitoring stations (TM-FC1 and TM-FC2) and two impact monitoring stations (TM-FM1and TM-FM2).

5.2 Monitoring Locations

As stipulated in the EM&A requirement, there were four monitoring stations undertaken during the impact monitoring. Figure 2 shows the locations of the marine water quality monitoring stations.

5.3 Monitoring Parameters and Frequency

Monitoring of the marine water quality parameters and frequency are listed in Table 5.1.

Monitoring Station	Monitoring Station Parameter		No. of Depths
	Depth (m)		3 (Surface, mid-
Control Stations:	Temperature (°C)		
TM-FC1 (Mid-ebb) and	Dissolved Oxygen	2 dave/wook	
1 W-FC2 (Wild-11000)	(mg/L and % saturation)	3 uays/week,	
Impact Stations:	Turbidity (NTU)	2 liues/uay	depth & bottom)
TM-FM1 and TM-FM2	Salinity (ppt)		
	Suspended solids (mg/L)		

 Table 5.1 Monitoring Parameters and Frequency of the marine water

5.4 Monitoring Methodology and Equipment Used

For Location of the monitoring stations

Global Positing System (GPS)

A hand-held digital GPS was used to identify the designated monitoring stations prior to water sampling.

For Water Depth measurement

Echo Sounder

A portable, battery-operated echo sounder was used for the determination of water depth at each designated monitoring station.

For In-situ Water Quality Measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use, and subsequently recalibrated at 3 monthly intervals or sometimes longer throughout all stages of the water quality monitoring.

Dissolved Oxygen, Salinity, Turbidity and Temperature Measuring Equipment

A portable, weatherproof multiparameter water quality meter (YSI Pro DSS) which complete with cable, sensor and DC power source were used for measuring DO, turbidity, salinity, pH and temperature:

■a dissolved oxygen level in the range of 0 to 50 mg/L and 0-500 % saturation;

- ■a turbidity in range 0-4000 NTU;
- ■a salinity in range 0-70 ppt;
- ■a temperature of -5-70 degree Celsius

A membrane electrode with automatic temperature compensation complete with a cable was installed.

For Water Sampling and Sample Analysis

In-situ monitoring was carried out at three depths: 1 meter below water surface, at mid-depth and 1 meter above the seabed. At each sampling depth, duplicate readings of dissolved oxygen content and turbidity were taken. The probes were drop into water, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. The difference between the two readings of each set was more than 25% of the value of the first reading while a third measurement would be conducted to ensure data precision.

Water Sampler

A water sampler comprising a transparent PVC cylinder, with a capacity of not less than 2 liters, was lowered into the water body at the predetermined depth. The both opening ends of the sampler were then closed accordingly by dead weight and water samples were collected.

Water Container

The sample container, made by high-density polythene, was rinsed with a portion of the water sample. The water sample was then transferred to the container, labeled with a unique sample ID and sealed with a screw cap. The water samples were stored in a cool box maintained at 4°C. The water samples were then delivered to a local HOKLAS-accredited laboratory (Environmental Laboratory, ETS-Testconsult Ltd, HOKLAS Registration No. 022) on the same day for analysis.

The summary of testing method of testing parameter as recommended by EIA or required by EPD, with the QA/QC results in accordance with the requirement of HOKLAS or international accredited scheme is shown in Table 5.2. For the QA/QC procedures, one QC sample, one duplicate sample and one sample spike of every batch of 20 samples were analysis. The QA/QC results are summarized in Appendix N.

Table 5.2Summary of testing procedure

Laboratory Analysis Testing Procedure		Detection Limit
Total suspended solids	In house method based on APHA 19 th ed 2540D	1.0 mg/L

In-situ measurement

All in-situ monitoring instruments were checked, calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme before use. Responses of sensors and electrodes were checked with certified standard solutions before each use. The DO sensor was calibrated by wet bulb method and a zero check in distilled water was performed with the turbidity and salinity sensor before the strat of measurement.

At each measurement/sampling depth, two consecutive measurements of dissolved oxygen (DO), dissolved oxygen saturation (DOS), turbidity and salinity were taken. For DO, DOS, Turbidity and Salinity, measurements were conducted three days per week at both mid-ebb and mid-flood tides at three depths (i.e. 1m below surface, mid depth and 1m from seabed). The duplicate measurements were averaged if the difference was not greater than 25%. If the difference is greater than 25%, repeat measurement will be required to be carried out.

Table 5.3 shows the equipment used for in-situ monitoring of water quality. The calibration certificates are attached in Appendix C1.

		, ,		/
Parameter	Model	Date of Calibration	Due Date	Equipment No.
Coordinate of Monitoring stations	Garmin eTrex 10			ET/EW/005/09
Dissolved Oxygen (Saturation), Temperature, Salinity, Turbidity	YSI Pro DSS Multiparameter Water Quality Meter	02/07/21	01/10/21	ET/EW/008/010*
Water Depth	Speedtech SM-5			ET/EW/002/08

 Table 5.3
 Details of Marine Water Quality Monitoring Equipment (In-site measurement)

Remark: Indicates the instrument should be calibrated on site.

5.5 Action and Limit Levels

The water quality criteria, namely Action and Limit (A/L) levels are presented in the table below.

Parameter	Action Level	Limit Level
DO (mg/L)	Surface & Middle	Surface & Middle
	<4.78 mg/L (5%-ile of baseline data)	<4.00 mg/L (1%-ile of baseline data)
	<u>Bottom</u>	<u>Bottom</u>
	<4.16 mg/L (5%-ile of baseline data)	<2.00 mg/L
SS (mg/L)	>120% of the upstream control station's	>130% of the upstream control station's
(Depth-	SS at the same tide on the same day	SS at the same tide on the same day
averaged)		
Turbidity (NTU)	>120% of the upstream control station's	>130% of the upstream control station's
(Depth-	turbidity at the same tide on the same	turbidity at the same tide on the same
averaged)	day	day

Table 5.4Water Quality Action and Limit Levels

5.6 Event and Action Plan

Please refer to the Appendix F for details.

5.7 Monitoring Duration and Period in this reporting period

Table 5.5 is the time schedule for the marine water quality monitoring events that were conducted in this reporting period. Duration of marine water quality monitoring is detailed in Appendix C2.

				Intering		
	August 2021					
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1	2	3	4	5 •	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31 •		·		·

Table 5.5 Time Schedule of Marine Water Quality Monitoring

Remark: $(\mathbf{\nabla}) =$ Marine water quality monitoring carried out by ET

5.8 Marine Water Quality Monitoring Results

The impact water quality measurement results are detailed in Appendix C2. Appendix C3 presents the water quality monitoring data and graphical presentations of monitoring results respectively. The summary of marine water quality exceedances is shown in Table 5.6.

Table 5.6	Summon	of Marina	Watar	Quality	Evenedance	in thia	roporting porio	4
	Summary		vvalei	Quality	EXCEPTION	1111115	reporting period	J

		Evoodonoo	DO				
Tide	Station	Level	Surface & Middle	Bottom	Turbidity	SS	Total
		Action	0	0	0	0	0
Mid Ehh		Limit	0	0	0	0	0
TM-FM2		Action	0	0	0	0	0
	TIVI-FIVIZ	Limit	0	0	0	0	0
		Action	0	0	0	0	0
Mid- Flood TM-FM2		Limit	0	0	0	0	0
		Action	0	0	0	0	0
	TIVI-FIVIZ	Limit	0	0	0	0	0
Total		Action	0	0	0	0	0
		Limit	0	0	0	0	0

According to the summary of marine water monitoring results, no exceedance of action and limit level was recorded in this reporting month.

6.0 Noise Monitoring

6.1 Monitoring Requirements

Noise monitoring was conducted at 2 designated monitoring stations as specified in the Sections 25.10A of the Particular Specification for good site practice.

The equipment, parameter, frequency, duration, methodology, calibration details, results and observations of the noise monitoring for the reporting month are presented in this section.

6.2 Monitoring Equipment

An Integrating Sound Level Meter was used for noise monitoring. It was a Type 1 sound level meter capable of giving a continuous readout of the noise level reading including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (Lx). It complies with International Electro Technical Commission Publications IEC 61672 Type 1 specification, and speed in m/s was used to monitor the wind speed.

Table 6.1 summarizes noise monitoring equipment model being used. A copy of the calibration certificate for noise meter and calibrator are attached in Appendix D1.

Table 6.1	Noise Monitoring	Equipment
-----------	------------------	-----------

Equipment	Model
Sound Level Meter	Rion NL-31 / Rion NL-52
Calibrator	Rion NC-73 / Castle GA607

6.3 Monitoring Parameters, Duration and Frequency

Duration, frequencies and parameters of noise measurement are presented in Table 6.2.

Table 6.2 Duration, Frequencies and Parameters of Noise Monitorin	ıg
---	----

Time period	Duration/min	Parameters	Frequency
Day-time: 0700-1900 hrs on normal weekday	30	L _{eq} , L ₁₀ , L ₉₀	Twice per week

6.4 Monitoring Locations and Period

Since Lands Dept did not approve to carry out noise monitoring at their own area where the noise monitoring stations TM-N1 and TM-N2 located due to the security, noise monitoring carried out at two noise monitoring stations TM-RN1 and TM-RN2 (refer to the figure 3 attached) from 18 December 2007.

The noise monitoring locations, TM-RN1 and TM-RN2 are shown in Figure 3. The noise measurement at TM-RN1 and TM-RN2 are façade measurement.

The noise-monitoring period of monitoring stations is summarized in Appendix D2.

6.5 Monitoring Procedures and Calibration Details

Operation/Analysis Procedures

- The Sound Level Meter was set on a tripod at a height of 1.2m above the ground.
- For free field measurement, the meter was positioned away from any nearby reflective surfaces.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - Frequency weighting: A
 - Time weighting : Fast
 - Time measurement : 30 min

- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1000HZ. If the difference in the calibration level before and after measurement was more than 1dB, the measurement would be considered invalid and repeat measurement would be required after re-calibration or repair of the equipment.
- The wind speed was frequently checked with a portable wind meter.
- During the monitoring period, the Leq, L10 and L90 were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
- Free Field correction to the measurements should be made. Correction factor of +3dB(A) should be made to the free Field measurements. Noise monitoring would be cancelled in the presence of fog, rain, wind with a steady speed exceeding 5m/s, or wind gusts exceeding 10m/s.

Maintenance and Calibration

- The microphone head of the sound level meter and calibrator are cleaned with soft cloth in quarterly intervals.
- The meter is sent to the supplier or HOKLAS laboratory to check and calibrated in yearly intervals.

6.6 Action and Limit Levels

The Action and Limit levels for noise levels derived as illustrated in Table 6.3.

Table 6.3Action and Limit Levels for noise monitoring

Time Period	Action	Limit
0700-1900 hrs on normal weekdays	When one documented complaint is received	65 dB(A)

6.7 Event-Action Plans

Please refer to the Appendix F for details.

6.8 Results and Observation

The detail of the noise monitoring is provided in Appendix D2. Graphical presentation of the monitoring result for the reporting period is shown in Appendix D3.

Since no documented complaint on noise issue was received in this reporting period, no Action Level exceedance was recorded. Besides, no exceedance in Limit Level was recorded according to the result from Day-time noise monitoring.

The major sources of noise pollution observed in this reporting month were noise from the traveling dump trucks and from the operation of site machines.

7.0 ENVIRONMENTAL AUDIT

7.1 Weekly ET Site Inspections and EPD's Site Inspection

7.1.1 Weekly ET Site Inspections

Weekly site inspections were carried out by ET to monitor the timely implementation of proper environmental pollution control and mitigation measures for the Project. In this reporting month, four weekly site inspections were conducted on 05, 12, 19 and 24 August 2021. Summaries of key findings of weekly ET site inspections in this month are described in Table 7.1.

Table 7.1	Key Findings of Weekly ET Site Inspections in this reporting month				
Date	Key Findings	Action(s) Taken recommended by ET	Action(s) Taken by the Contractor during the site audit	Rectification Status by ET	
05 August 2021	Stagnant water were observed near workshop. (New item)	To clean the stagnant water properly		Follow-up	
12 August	Stagnant water were observed near workshop.	To clean the stagnant water properly	Stagnant water were cleaned.	Closed	
2021	Stagnant water were observed near 3RS	To clean the stagnant water properly		Follow-up	
19 August	Stagnant water were observed near 3RS	To clean the stagnant water properly	Stagnant water were cleaned	Closed	
2021	Overgrown weeds were observed near CEDD office	To clean the overgrown weeds properly		Follow-up	
24 August 2021	Overgrown weeds were observed near CEDD office	To clean the overgrown weeds properly	Overgrown weeds were cleaned.	Closed	

7.1.2 EPD's Site Inspection

EPD's site inspection was carried out at TMFB on 23 August 2021..

7.2 Review of Environmental Monitoring Procedures

The monitoring works conducted by the ET were inspected internally on a regular basis. The following observations have been recorded for the monitoring works:

Air Quality Monitoring

- The monitoring team recorded the observations around the monitoring stations within and outside of the construction site.
- The monitoring team recorded the temperature, air pressure and general weather condition on the monitoring day.

Water Quality Monitoring

- The monitoring team recorded the observations around the monitoring stations, which might affect the results; and
- Major water pollution sources were identified and recorded.

Noise Monitoring

- The monitoring team recorded the observations around the monitoring station, which might affect the results.
- Major noise sources were identified and recorded.

7.3 Status of Environmental Licensing and Permitting

All permits/licenses valid in this reporting month are summarized in Table 7.2.

Table 7.2	Summary of environmental licensing and permit	t status
	ourning of crivitorintental licensing and permit	. Status

Description	Permit No.	Valid	Period	Section
		From	То	
Environmental Permit	EP- 210/2005/D	25/05/20	31/12/23	Issued
Chemical Waste Producer	5296-421- C4184-01	20/04/17		Spent battery containing heavy metals and spent lubricating oil
Effluent Discharge License	WT0002870 1-2017	25/09/17	30/09/22	Effluent arising from vehicle washing and dust suppression activities and contaminated surface runoff treated by screening facilities and sedimentation tanks (sedimentation and chemical precipitation).
Marine Dumping Permit	EP/MD/22- 022	20/07/21	30/09/21	Approval for dumping 499,999 tons (approximately equal to 277,777 cu.m. bulked quantity) of Public Fill (Reclamation Materials) from Tseung Kwan O Area 137 Fill Bank and Tuen Mun Area 38 Fill Bank to designated dumping area at Guanghaiwan of Taishan
Billing Account for Waste Disposal	7027643	22/05/17		
Notification Pursuant to Section 3(1) of the Air Pollution Control (Construction Dust)	415661	12/04/17		

7.4 Implementation Status

7.4.1 Implementation Status of Environmental Mitigation Measures

An updated summary of the Environmental Mitigation Implementation Schedule (EMIS) is presented in Appendix I. Most of the necessary mitigation measures were implemented properly.

7.4.2 Implementation Status of Event and Action Plan

No exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting month. Apart from this, there was no exceedance on noise recorded in this month.

According to the marine water monitoring results, no action-level and limit-level exceedance was recorded in this reporting period.

Hence, no further action was required to be implemented.

7.4.3 Implementation Status of Environmental Complaint, Notification of Summon and Successful Prosecution Handling

No complaint, notification of summon and prosecution with respect to environmental issues was received in this monitoring month.

A summary of environmental complaints, notifications of summons and successful prosecutions was given in Table 7.3.

Complair	nts logged	Summor	is served	Successful Prosecution							
August 2021	Cumulative	August 2021	Cumulative	August 2021 Cumulativ							
0	0 3		0	0	0						

Table 7.3 Summary of Environmental Complaints and Prosecutions

8.0 LANDSCAPE AND VISUAL

Landscape and visual site audit was carried out on a weekly basis to monitor environmental issues in order to ensure that all mitigation measures were implemented timely and properly. The findings in this reporting period were:

- The maximum stockpiling height at the Fill Bank was limited to a maximum of +40 mPD;
- The Contractor hydroseeded the outer slopes of the Fill Bank as far as practicable;
- The Contractor removed the stockpile of public fill in a sequence to allow the outer hydroseeded to be removed later than other portions as far as practicable; and
- Lighting was set to minimize night-time glare.

9.0 WASTE MANAGEMENT

9.1 Summary of Waste disposed of in this period

The actual amounts of different types of waste disposed of by the activities of the Project in the period are shown in Table 9.1 and the Monthly Summary Waste Flow Table is shown in Appendix K.

	generated in the reper	
Waste Type	Actual Amount	Disposal Locations
Public Fill ('000m ³)	0	Tuen Mun 38 Fill Bank
C&D Waste ('000kg)	94.15	WENT Landfill
Chemical Waste (kg)/(L)	0(L)	Collected by licensed collector

 Table 9.1
 Actual amounts of Waste generated in this reporting month

9.2 Advice on the Solid and Liquid Waste Management Status

The Contractor should provide sufficient preventive measures during equipment maintenance works so as to avoid oil leakage on the ground. In the event of any oil leakage, the Contractor should clean up the polluted soil and handle all the materials used for this cleaning works as chemical waste.

The drain outlet of all the bunded areas should be plugged properly. Besides, pre-cast drip trays were provided for oil drums at several areas, such as workshop and chemical storage area. The Contractor should collect and dispose of any stagnant water accumulated in the concrete bunding and drip trays and handle them as chemical waste.

The Contractor should use suitable containers with proper labels to store chemical wastes in accordance with Code of Practice on the Packaging, Labeling and Storage of Chemical Waste. The Contractor should also advise their workers of the proper procedures in handling the chemical waste. All the trip tickets for chemical waste disposal should be properly kept in the site office.

The Contractor was reminded to increase the frequency of inspection and cleaning of the site drainage system, including permanent desilting chambers, desilting facilities, oil interceptor bypass tank and all the trapezoidal channels. Moreover, the Contractor should apply approved pesticides in the stagnant water ponds.

All the runoff from the parking area should be pumped to the desilting facilities and oil interceptors to remove suspended solids and oil & grease prior to discharge.

10.0 ENVIRONMENTAL NON-CONFORMANCE

10.1 Summary of air quality, noise and marine water quality

No exceedance of Action and Limit level was recorded for 1-hr and 24-hr TSP monitoring in the reporting period.

According to the marine water monitoring results, no action-level and limit-level exceedance was recorded in the reporting period.

The noise level measured at the monitoring station complied with the Limit Level of 65dB(A). No complaint was received regarding noise issue in this reporting period.

10.2 Summary of Environmental Complaints

No complaint was received in this reporting period.

10.3 Summary of Notification of Summons and Prosecution

There was no notification of summon and prosecution respect to environmental issues registered in this reporting period.

11.0 CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Impact monitoring of air quality, noise and water quality were carried out at designated locations in this reporting period.

According to the summary of air monitoring results, no exceedance of Action and Limit levels was recorded for 1-hr and 24-hr TSP monitoring in the reporting period.

According to the marine water monitoring results, no action-level and limit-level exceedance was recorded in the reporting period.

The noise level measured at the monitoring station complied with the Limit Level of 65dB(A). No complaint was received regarding noise issue in this reporting period.

According to the weekly site inspections carried out in this reporting period, the Contractor generally implemented sufficient dust mitigation measures, including operation of the mist spraying systems and automatic wheel washing facilities, dampening of haul roads and stockpiling areas.

No complaint, prosecution or notification of summons was received in this reporting period.

Recommendations

According to the environmental site inspections performed in the reporting period, the following recommendations were provided:

Air Quality

- Ensure the frequency of water spraying on haul roads, unloading areas and stockpiles to be sufficient to suppress the dust sources;
- Provide proper maintenance for the powered mechanical equipment and barges to avoid emission of dark smoke;
- Provide water spraying onto the truckloads during inspection of fill material;
- Conduct road sweeping on all paved haul roads and public roads especially outside and near the site egress by the road sweeper. Undertake water spraying on stockpiling area by water bowser;
- Erect adequate speed limit signs to advise the truck drivers of the speed limit;
- Operate mist spraying systems and automatic water sprinklers in the Fill Bank;
- Implement the dust mitigation measures for the construction activities;
- Designate proper haul roads to ensure effective water spraying; and
- Ensure all vehicles to be washed before leaving the site egress by provision, operation and maintenance of automatic wheel washing facilities.

Noise

- Conduct noisy activities at a farther location from the NSRs.
- Proper schedule of noisy operation and use of quiet machineries on site.

Water Quality

- Maintain the drainage system, including the trapezoidal channels and permanent desilting chambers regularly; and
- Remove the stagnant water or provide approved pesticides for the stagnant water in the permanent desilting chambers, if any.

Chemical and Waste Management

- Remove waste materials from the site to avoid accumulation regularly;
- Handle and store chemical wastes properly;
- Remove unwanted material in the existing stockpiles and avoid further dumping of such material;
- Provide and maintain sufficient drip trays for diesel drums, chemical containers, chemical waste storage drums and diesel operated generator set;
- Maintain good housekeeping at the workshop area;
- Ensure sufficient tarpaulin sheets are provided to cover drip trays; and
- Avoid soil being polluted during oil filling and equipment maintenance; hence, properly remove and store the contaminated soil, if any.

Landscape and Visual

- Provide hydroseeding on the exposed slopes, on which the final profile has been formed;
- Erect all the site hoarding/chaining fences in accordance with agreed design at proper location; and
- Maintain the hydroseeded slopes properly.

12.0 FUTURE KEY ISSUES

Based on the site inspections and forecast of engineering works in the coming month, key issues to be considered are as follows:

- Dust generation from activities on site, such as vehicular movements along unpaved area and rock crushing activities;
- Noise impact from operating equipment and machinery on site;
- Wastewater and surface runoff from the site discharged into nearby water body;
- Regular checking of the drainage system;
- Flood prevention; and
- Noise from operation of the crushing plant.

Calibration Certificates for Impact Marine Water Quality Monitoring Equipments

<u>**Performance Check / Calibration of Multiparameter Water Quality Meter</u>**</u>

Equipment Ref. No. :	ET/EW/008/010	Manufacturer	:	YSI	
Model No. :	Pro DSS	Serial No.	:	18E105421	
Date of Calibration :	2/7/2021	Calibration Due Date	:	1/10/2021	

<u>Results</u>

1. Temperature

(Method Reference: Section 6 of internation Accreditation New Zealand Technical Guide no. 3 Second edition March 2008: Working Thermometer Calibration Procedure)

Reading of Reference Thermometer (°C)	Displayed Reading (°C)	Tolerance (°C)
16.2	16.3	+0.1
25.0	25.3	+0.3
29.3	29.4	+0.1

Tolerance Limit (°C): ± 2.0

2. pH

(Method Reference: APHA 19ed 4500-H⁺ B)

Expected Reading (pH unit)	Displayed Reading (pH unit)	Tolerance (pH unit)
4.00		
6.86		
9.18		

Tolerance Limit (pH unit): ± 0.10

3. Conductivity

(Method Reference: APHA 19ed 2510 B)

Expected Reading (µS/cm)	Displayed Reading (µS/cm)	Tolerance (%)
146.9	149.5	+1.8
1412	1435	+1.6
12890	13156	+2.1
58760	59862	+1.9

Tolerance Limit (μ S/cm): ± 10.0%

4. Salinity

(Method Reference: APHA 19ed 2520 B)

Expected Reading (g/L)	Displayed Reading (g/L)	Tolerance (%)
10.0	9.60	-4.0
20.0	19.30	-3.5
30.0	28.90	-3.7

Tolerance Limit (g/L): $\pm 10.0\%$

Perform	ance Check / Ca	alibration of Multiparameter	er Water Quality Meter
Equipment Ref. No. :	ET/EW/008/010	Manufacture	r : YSI
Model No	Pro DSS	Serial No.	18E105421
Detection .	2/7/2021		1/10/2021
Date of Calibration :	2/7/2021	Calibration L	the Date : $1/10/2021$
5. Dissolved Oxygen (Method Reference: AP	'HA 19ed 4500-O G)		
Expected Readin	ng (mg/L)	Displayed Reading (mg/L)	Tolerance (mg/L)
1.76		1.80	+0.04
4.21		4.26	+0.05
6.49	·	6.52	+0.03
6. Turbidity (Method Reference: AP	HA 19ed 2130 B)		· · · · · · · · · · · · · · · · · · ·
Expected Readin	ng (NTU)	Displayed Reading (NTU)	Tolerance (%)
10		9.61	-3.9
40		38.47	-3.8
100		97.28	-2.7
Tolononoo Limit (NTLI)	. 10.00/	382.99	-4.2
The equipment complies	s [#] / does not comply [#] v	vith the specified requirements and is de	emed acceptable [#] / unacceptable. [#] for use.
Calibrated by			<i>.</i>

Calibration Certificates for Impact Noise Monitoring Equipments

Calibration Certificate

Certificate No.	009927		Page	1	of	2	Pages		
Customer :	ETS-Testconsult Limited								
Address :	8/F., Block B, Veristrong Indust	rial Centre, 34-36 Au	i Pui Wan St., Fo	otan,	Hong	Kon	g.		
Order No. :	Q04004		Date of receipt	t :			6-Oct-20		
Item Tested									
Description :	Sound Level Calibrator								
Manufacturer :	Rion		I.D. : ET/EN/002/01						
Model :	NC-73		Serial No.	:	1019) 694	3		
Test Conditi	ons								
Date of Test :	15-Oct-20		Supply Voltage	e :	:				
Ambient Temp	erature : (23 ± 3)°C		Relative Humidity : (50 ± 25) %						
Test Specifi	cations								
Calibration cher	∧k								
Ref Document/	Procedure : F21, Z02,								
Hon. Doournona									
Test Results	3								
All results were	within the manufacturer's specif	ication.							
The results are	shown in the attached page(s).								
Main Test equir	oment used:								
Equipment No.	Description	<u>Cert. No.</u>		<u>Tra</u>	ceabl	<u>e to</u>			
S014	Spectrum Analyzer	005018		NIN	1-PRC) & S	CL-HKSAR		
S240	Sound Level Calibrator	003053		NIM	1-PRC) & S	CL-HKSAR		
S041	Universal Counter	001622		SCI	L-HKS	SAR			
S206	Sound Level Meter	007031		SCI	L-HKS	3AR			
The values given in	this Calibration Certificate only relate to	the values measured at	the time of the test a	nd an	y uncei	rtainti	es quoted		
will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, were adding mischandling, or the canability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable									
for any loss or dam	age resulting from the use of the equipr	nent.							

The test equipment used for calibration are traceable to International System of Units (SI), or by reference to a natural constant. The test results apply to the above Unit-Under-Test only

Calibrated	by	:	

Elva Chong

Approved by : Alan Chu 15-Oct-20 Date:

This Certificate is issued by: L Hong Kong Calibration Ltd. Unit 8B, 24/F., Well Fung Industrial Centre, No. 58-76, Ta Chuen Ping Street,Kwai Chung, NT,Hong Kong. Tel: 2425 8801 Fax: 2425 8646

The copyright of this certificate is owned by Hong Kong Calibration Ltd.. It may not be reproduced except in full.

Calibration Certificate

Certificate No. 009927

Page 2 of 2 Pages

Results :

1. Level Accuracy (at 1 kHz)

UUT Nominal Value	Measured Value	Mfr's Spec.
94.0 dB	94.1 dB	± 1 dB

Uncertainty : $\pm 0.2 \text{ dB}$

2. Frequency Accuracy

UUT Nominal Value	Measured Value	Mfr's Spec.
1 kHz	0.984 kHz	± 2 %

Uncertainty : ± 0.1 %

- 3. Level Stability : 0.0 dBUncertainty : $\pm 0.01 \text{ dB}$
- Total Harmonic Distortion : < 0.5 % Mfr's Spec. : < 3 % Uncertainty : ± 2.3 % of reading

Remarks: 1. UUT : Unit-Under-Test

- 2. The uncertainty claimed is for a confidence probability of not less than 95%.
- 3. Atmospheric Pressure : 1 004 hPa

Environmental Checklist	Implementation Stages*		ation *	Remark
	Yes	No	N/A	
Fugitive Dust Emission				
Dust control / mitigation measures shall be provided to prevent dust nuisance.	\checkmark			
Water sprays shall be provided and used to dampen materials.	\checkmark			
All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition.	V			
 Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin. 	V			
Unpaved areas should be watered regularly to avoid dust generation.	\checkmark			
The designated site main haul road shall be paved or regular watering.	V			
The haul road inside the site and public road around the site entrance should be kept clean and free from dust.	\checkmark			
Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site.	1			
Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.	\checkmark			
The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water.	\checkmark			
Vehicle and equipment should be switched off while not in use.	\checkmark			
All plant and equipment should be well maintained e.g. without black smoke emission.	\checkmark			
Open burning should be prohibited.	\checkmark			
 Approval or exemption Non-road Mobile Machinery (NRMM) labels should be painted or securely fixed on regulated machines and non- road vehicles at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation (APCO Cap.311). 	\ \			
Noise Impact				
The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted.	\checkmark			
The constructions works should be scheduled to minimize noise nuisance.	\checkmark			
Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.	√			
Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.	\checkmark			
Air compressors and hand held breakers should have noise labels.	_√			
Compressors and generators should operate with door closed.	√			
 Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. 	√			
Noisy equipment and mobile plant shall always be site away from NSRs.	√			

Environmental Checklist	Implementation Stages*		ation	Remark
	Yes	No	N/A	
Water Quality				
 Drainage system and the sand / silt removal facilities should be adequate and well maintained to prevent flooding and overflow, especially after rain storms. 	V			
 The storm water intercepting system shall be effective to collect of runoff and remove suspended solids before discharge. 	\checkmark			
 Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. 		\checkmark		Item 1
 The material shall be properly covered to prevent washed away especially before rainstorm. 	\checkmark			
 The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. 	\checkmark			
 Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shotconcrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD. 	\checkmark			
 Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. 	V			
 A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. 	V			
 The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcores to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. 	\checkmark			
 Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. 	\checkmark			
 The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities. 	\checkmark			
 Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water. 	\checkmark			
 The barges shall be in right size such that adequate clearance in maintained between the vessels and the seabed at all states of the tide to ensure the undue turbidity is not generated by turbulence from vessel movement or propeller wash. 	~			· · · · · · · · · · · · · · · · · · ·
 All vessels used for transportation of fill material shall have tight fitting seals to their bottom openings to prevent leakage of material during transport. 	\checkmark			
 Barges shall not be filled to a level which may cause the overflow of material during loading or transportation. Barge effluents shall be properly collected and treated before disposal. 	\checkmark			
 Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. 	\checkmark			
 The work activities shall not cause any visible foam, oil, grease, scum, litter or other objectionable matters to be present on the water in the vicinity of the barging facilities. 	1			
 A waste collection vessel shall be deployed to remove floating debris. 	\checkmark			
Landscape and Visual				Martin Salarit
 The maximum stockpiling height at the fill bank shall be limited to a maximum of +40mPD. 	\checkmark			
Surface of outer slopes of the Fill Bank shall preferably be hydroseeded.				
• Stockpile of public fill shall be removed in a sequence to allow the outer hydrseeded to be removed later than other portions as far as practicable.				
 Casuarina equisetifolia were planted as buffer tree along the northern perimeter of the Site. The height of Casuarina equisetifolia was maintained at bleast 3m above soil level. 	1			
Lighting shall be set to minimise night-time glare.	\checkmark			

Waste Management

Construction Waste Management

Handling of Surplus Public Fill (2016 - 2018) - Tuen Mun Area 38 Fill E

Be arranged so that incompatible materials are adequately separated.

D Contract No.: CV/2015/07 Iling of Surplus Public Fill (2016 – 2018) - Tuen Mun Area 38 Fill Bank			Ē	東業德勤測試顧問有限公司 ETS-TESTCONSULT LTD.
Environmental Checklist	Imple S	menta tages'	ation *	Remark
	Yes	No	N/A	1
ste Management				
nstruction Waste Management				
Relevant licence / permits for disposal of construction waste or excavated materials available for inspection.				
Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal.				· · · · · · · · · · · · · · · · · · ·
Mud and debris should be removed from waterworks access roads and associated drainage systems.	\checkmark			
Provision of sufficient waste disposal points and regular collection for disposal. Appropriate measures should be employed to minimise windblown	\checkmark			

 $\sqrt{}$

 $\sqrt{}$

litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal.

Be covered to prevent rainfall entering (water collected within the bund must be tested and disposal as chemical waste if necessary).

ſ	Chemical Waste Management			
	 Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials. 	\checkmark		
	 In order to monitor the disposal of C&D material and solid wastes at public filling areas and landfills, and to control fly-tipping, a trip-ticket system should be included as one of the contractual requirements. 	√		
	 Prior to disposal of C&D waste, recyclable materials should be salvaged for reuse (such as wood and metal) and metal and metal and inter waste durised as public nin to minimise the quantity of waste to be disposed of to landfill. 	Ň		

It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal $\sqrt{}$ Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the $\sqrt{}$ Packaging, Labelling and Storage of Chemical Wastes. Spent chemicals should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed $\sqrt{}$ facility in accordance with the Chemical Waste (General) Regulation. $\sqrt{}$ Chemical wastes should be separated for special handling and appropriate treatment at the Chemical Waste Treatment Facility. Chemical wastes including waste oil should be stored properly in designated areas, e.g. chemical waste storage area. $\sqrt{}$ $\sqrt{}$ The designated chemical waste storage area should only be used for storing chemical wastes. The set-up of chemical waste storage area should Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition. $\sqrt{}$. $\sqrt{}$ Be enclosed on at least 3 sides and securely closed. . Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the $\sqrt{}$. chemical waste stored in that area, whichever is the greatest. Have adequate ventilation. $\sqrt{}$.

Environmental Checklist	Imple	Implementation Stages*		Remark
	Yes	No	N/A	
Warning panels should be displayed at the waste storage area.	1			
 Waste storage area should be cleaned and maintained regularly. 	1			
 Chemical waste should be transported regularly by a registered chemical waste collector to a facility licensed to receive chemical waste. 	1			
All generators, fuel and oil storage should be within bundle areas.	1	1		
Oil leakage from machinery, vehicle and plant should be prevented.	1			
 In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed. 	√			
 The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place. 	√			
Good Site Practices				
 Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. 	V			
 Training of site personnel in proper waste management and chemical handling procedures should be provided. 	1			
Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment.	√		-	
Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	1			
The Environmental Permit should be displaced conspicuously on site.	V			···· · · · · · · · · · · · · · · · · ·
Construction noise permits should be posted at site entrance or available for site inspection.	1			
 Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste. 	V			
Chemical storage area provided with lock and located on sealed areas.	1			
 All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank). 	1			
Any unused chemicals or those with remaining functional capacity should be recycled.	V			
 Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors. 	V			
To encourage collection of aluminium cans by individual collectors.	V	-		
 Separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce. 	V			
 A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods. 	√			
 A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be bunded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system. 	V

Waste Management			- Starte			
Construction Waste Management						
 Relevant licence / permits for disposal of construction waste or excavated materials available for inspection. 	\checkmark					
 Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal. 	1					
 Mud and debris should be removed from waterworks access roads and associated drainage systems. 						
 Provision of sufficient waste disposal points and regular collection for disposal. Appropriate measures should be employed to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers. 	V					
 Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal. 	V					
 Prior to disposal of C&D waste, recyclable materials should be salvaged for reuse (such as wood and metal) and inert waste utilised as public fill to minimise the quantity of waste to be disposed of to landfill. 	V					
 In order to monitor the disposal of C&D material and solid wastes at public filling areas and landfills, and to control fly-tipping, a trip-ticket system should be included as one of the contractual requirements. 	, √					
 Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials. 	V					
Chemical Waste Management						
 It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. 	V					
 After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. 	. 1					
 Spent chemicals should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation. 	V					
 Chemical wastes should be separated for special handling and appropriate treatment at the Chemical Waste Treatment Facility. 	\checkmark					
Chemical wastes including waste oil should be stored properly in designated areas, e.g. chemical waste storage area.	V	_				
The designated chemical waste storage area should only be used for storing chemical wastes.						
The set-up of chemical waste storage area should						
 Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition. 	\checkmark					
Be enclosed on at least 3 sides and securely closed.	\checkmark					
 Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest. 	$\overline{\mathbf{v}}$					
Have adequate ventilation.	\checkmark					
Be covered to prevent rainfall entering (water collected within the bund must be tested and disposal as chemical waste if necessary).						
Be arranged so that incompatible materials are adequately separated.	\checkmark					

Environmental Checklist		ementa itages	ation *	Remark
	Yes	No	N/A	
Warning panels should be displayed at the waste storage area.	√			
Waste storage area should be cleaned and maintained regularly.	\checkmark			
Chemical waste should be transported regularly by a registered chemical waste collector to a facility licensed to receive chemical waste.	\checkmark			
All generators, fuel and oil storage should be within bundle areas.	1			
Oil leakage from machinery, vehicle and plant should be prevented.	1			
 In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed. 	√.			
 The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place. 	√			
Good Site Practices		-		
 Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site. 	√			
 Training of site personnel in proper waste management and chemical handling procedures should be provided. 	1			
Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment.	V			
Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	\checkmark			
The Environmental Permit should be displaced conspicuously on site.	V			
Construction noise permits should be posted at site entrance or available for site inspection.	V			
 Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste. 	V			
Chemical storage area provided with lock and located on sealed areas.	V			
 All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank). 	V			
 Any unused chemicals or those with remaining functional capacity should be recycled. 	\checkmark			
 Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors. 	V			
 To encourage collection of aluminium cans by individual collectors. 	\checkmark			
 Separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce. 	\checkmark			
• A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods.	1	-		
 A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be bunded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system. 	1

Fugitive Dust Emission				
Dust control / mitigation measures shall be provided to prevent dust nuisance.	V			
 Water sprays shall be provided and used to dampen materials. 	V			
 All stockpile of aggregate or spoil should be enclosed or covered and water applied in dry or windy condition. 	V			
 Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin. 	V			
Unpaved areas should be watered regularly to avoid dust generation.	V			
The designated site main haul road shall be paved or regular watering.	\checkmark			
The haul road inside the site and public road around the site entrance should be kept clean and free from dust.	V			
Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site.	V			
Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.	V			
The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water.	V			
Vehicle and equipment should be switched off while not in use.	√			
All plant and equipment should be well maintained e.g. without black smoke emission.	1			
Open burning should be prohibited.	1			
 Approval or exemption Non-road Mobile Machinery (NRMM) labels should be painted or securely fixed on regulated machines and non-road vehicles at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation (APCO Cap.311). 	V			
Noise Impact				
The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted.	√			
The constructions works should be scheduled to minimize noise nuisance.	\checkmark			
Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.	\checkmark			
Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.	\checkmark			
Air compressors and hand held breakers should have noise labels.				
Compressors and generators should operate with door closed.				
• Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum.	\checkmark			
 Noisy equipment and mobile plant shall always be site away from NSRs. 				

Environmental Checklist			ation	Remark
	Yes	No	N/A	
Water Quality				
 Drainage system and the sand / silt removal facilities should be adequate and well maintained to prevent flooding and overflow, especially after rain storms. 	1			
The storm water intercepting system shall be effective to collect of runoff and remove suspended solids before discharge.	\checkmark			
 Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. 	\checkmark			
 The material shall be properly covered to prevent washed away especially before rainstorm. 	1			
 The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. 	V			
 Final slope surfaces, especially those facing to the north of the site shall be treated by compaction, followed by hydroseeding, vegetation planting or sealing with shotconcrete, latex, vinyl, bitumen, or other suitable surface stabilizer approved by CEDD. 	V			
 Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. 	· √			
 A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. 	V			
 The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcores to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains. 	V			
 Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. 	\checkmark			
 The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities. 	\checkmark			
 Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water. 	\checkmark			
 The barges shall be in right size such that adequate clearance in maintained between the vessels and the seabed at all states of the tide to ensure the undue turbidity is not generated by turbulence from vessel movement or propeller wash. 	\checkmark			
 All vessels used for transportation of fill material shall have tight fitting seals to their bottom openings to prevent leakage of material during transport. 	1			
 Barges shall not be filled to a level which may cause the overflow of material during loading or transportation. Barge effluents shall be properly collected and treated before disposal. 	1			
 Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. 	√			
 The work activities shall not cause any visible foam, oil, grease, scum, litter or other objectionable matters to be present on the water in the vicinity of the barging facilities. 	V			
 A waste collection vessel shall be deployed to remove floating debris. 	V			
Landscape and Visual				
 The maximum stockpiling height at the fill bank shall be limited to a maximum of +40mPD. 	V			
 Surface of outer slopes of the Fill Bank shall preferably be hydroseeded. 	1			
 Stockpile of public fill shall be removed in a sequence to allow the outer hydrseeded to be removed later than other portions as far as practicable. 		\checkmark		Item 2
 Casuarina equisetifolia were planted as buffer tree along the northern perimeter of the Site. The height of Casuarina equisetifolia was maintained at bleast 3m above soil level. 	1			
Lighting shall be set to minimise night-time glare.	\checkmark

Implementation Schedule of Mitigation Measures

Environmental Mitigation Implementation Schedule

			Implementation Status				
Environmental Protection Measures		Implemented	Partially implemented	Not implemented	Not Applicable		
Air Quality							
Dust control / mitigation measures shall be provided to prevent dust nuisance.	All areas						
Water sprays shall be provided and used to dampen materials.	All areas						
All stockpile of aggregate or soil should be enclosed or covered and water applied in dry or windy condition.	All areas						
• Any vehicle with open load carrying area used for moving materials which has the potential to create dust shall have properly fitting side and tail boards. Material having the potential to create dust shall not be loaded to a level higher than the side and tail boards, and shall be covered by a clean tarpaulin.	All areas	\checkmark					
 Unpaved areas should be watered regularly to avoid dust generation. 	Site Egress						
The designated site main haul road shall be paved or regular watering.	All haul roads						
The public road around the site entrance should be kept clean and free from dust.	All areas						
 Wheel washing facilities including high-pressure water jet shall be provided at the entrance of work site and wash-water shall have sand and silt settled out or removed before being discharged into storm drains. 	Site Egress	\checkmark					
Every vehicle shall be washed to remove any dusty materials from its body and wheels before leaving the fill bank.	Site Egress						
 The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water. 	All areas						
 Vehicle and equipment should be switched off while not in use. 	All areas	\checkmark					
 All plant and equipment should be well maintained e.g. without black smoke emission. 	All areas	\checkmark					
Open burning should be prohibited.	All areas	V					
 Approval or exemption Non-road Mobile Machinery (NRMM) labels should be painted or securely fixed on regulated machines and non-road vehicles at a conspicuous position according to the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation (APCO Cap.311). 	All areas	\checkmark					
Noise Impact							
 The approved method of working, equipment and sound-reducing measures (e.g. use of silenced type of equipment, etc.) shall be adapted. 	All areas	\checkmark					
Only well maintained plant should be operated on-site and plant should be serviced regularly during the construction works.	All areas	\checkmark					
Powered mechanical equipment (PME) should be covered or shielded by appropriate acoustic materials.	All areas						
Air compressors and hand held breakers should have noise labels.	All areas						
 Machines and plants that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. 	All areas	\checkmark					
 Noisy equipment and mobile plant shall always be site away from NSRs. 	All areas	\checkmark					

Contract No.: CV/2015/07 Handling of Surplus Public Fill (2016-2019) - Tuen Mun Area 38 Fill Bank

Environmental Protection Measures		Implementati			
Environmental Protection Measures		Implemented	Partially implemented	Not implemented	Not Applicable
Water Quality					
The existing / realigned intercepting channels and the sand / silt removal facilities shall be used and maintained.	All areas	\checkmark			
 Temporary intercepting drains should be used at the stockpiling area to divert polluted stormwater to the intercepting channels. Earth bunds and sand bay barriers shall be used to assist the diversion of polluted stormwater to the intercepting channels. 	All areas	\checkmark			
The storm water intercepting system shall be effective to collect of runoff and remove suspended solids before discharge.	All areas	\checkmark			
The material shall be properly covered to prevent washed away especially before rainstorm.	All areas	\checkmark			
 Unnecessary water retained in receptacles and standing water should be avoided to prevent mosquito breeding. 	All areas		\checkmark		
The temporary slope surfaces shall be covered with impermeable sheet or sprayed with water.	Temporary Slopes	\checkmark			
 Existing and newly constructed Catchpits, sand and silt removal facilities and intercepting channels shall be maintained, and the deposited silt and grit shall be removed weekly and on a need basis especially at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times. 	All areas	\checkmark			
A wheel washing bay shall be provided at the site exit and wash-water shall have sand and silt settled out or removed before being discharged into storm drains.	Wheel Washing facility	\checkmark			
The section of construction road between wheel washing bay and the public road shall be paved with concrete, bituminous materials or hardcores to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains.	Site Egress	\checkmark			
 Sewage from toilets shall be discharged in to a foul sewer, or chemical toilets shall be provided. 	Site Office	\checkmark			
The chemical toilets (if use) shall be provided by a licensed contractor, who will be responsible for disposal and maintenance of these facilities.	All areas	\checkmark			
 Tipping halls enclosed with top and 3-side to prevent spillage of material into marine water. 	All areas	\checkmark			
 Adequate environmental control measures shall be provided to prevent / avoid dropping of fill material into the sea during the transfer. 	Along the seafront	\checkmark			
A waste collection vessel shall be deployed to remove floating debris.	Along the seafront	\checkmark			
Landscape and Visual					
The maximum stockpiling height at the fill bank shall be limited to a maximum of +40mPD.	All areas	\checkmark			
Surface of outer slopes of the Fill Bank shall preferably be hydroseeded.	Completed slopes	\checkmark			
Stockpile of public fill shall be removed in a sequence to allow the outer hydrseeded to be removed later than other portions as far as practicable.	Completed slopes	\checkmark			
Casuarina equisetifolia were planted as buffer tree along the northern perimeter of the Site. The height of Casuarina equisetifolia was maintained at least 3m above soil level.	Site boundary	\checkmark			
Lighting shall be set to minimise night-time glare.	All areas				
Waste Management					
Construction Waste Management					
Relevant licence / permits for disposal of construction waste or excavated materials available for inspection.	All areas	\checkmark			

Contract No.: CV/2015/07 Handling of Surplus Public Fill (2016-2019) - Tuen Mun Area 38 Fill Bank

		Location	Implementation Status			
	Environmental Protection Measures		Implemented	Partially implemented	Not implemented	Not Applicable
•	Excavated material to be generated from construction works to be re-used on-site as far as practicable to reduce off-site disposal.	All areas	\checkmark			
•	Mud and debris should be removed from waterworks access roads and associated drainage systems.	All areas	\checkmark			
•	Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal.	All areas	\checkmark			
•	Prior to disposal of C&D waste, recyclable materials should be salvaged for reuse (such as wood and metal) and inert waste utilised as public fill to minimise the quantity of waste to be disposed of to landfill.	All areas	\checkmark			
•	In order to monitor the disposal of C&D material and solid wastes at public filling areas and landfills, and to control fly-tipping, a trip-ticket system should be included as one of the contractual requirements.	All areas	\checkmark			
-	Any soil contaminated with chemicals/oils shall be removed from site and the void created shall be filled with suitable materials.	All areas	\checkmark			
Cł	nemical Waste Management					
•	It is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes.	Waste Storage Area	\checkmark			
•	After use, chemical wastes (e.g. cleaning fluids, solvents, lubrication oil and fuel) should be handled according to the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes.	Waste Storage Area	\checkmark			
•	Spent chemicals should be stored and collected by an approved operator for disposal at the Chemical Waste Treatment Facility or other licensed facility in accordance with the Chemical Waste (General) Regulation.	Waste Storage Area	\checkmark			
•	Chemical wastes should be separated for special handling and appropriate treatment at the Chemical Waste Treatment Facility.	Waste Storage Area	\checkmark			
•	Chemical wastes including waste oil should be stored properly in designated areas, e.g. chemical waste storage area.	Waste Storage Area	\checkmark			
•	The designated chemical waste storage area should only be used for storing chemical wastes.	Waste Storage Area	\checkmark			
Th	e set-up of chemical waste storage area should					
•	Be suitable for the substance they are holding, resistant to corrosion, maintained in a good condition.	Waste Storage Area	\checkmark			
•	Be enclosed on at least 3 sides and securely closed.	Waste Storage Area	\checkmark			
•	Have an impermeable floor and bunding, of capacity to accommodate 110% of the volume of the largest container or 20% by volume of the chemical waste stored in that area, whichever is the greatest.	Waste Storage Area	\checkmark			
•	Have adequate ventilation.	Waste Storage Area	\checkmark			
•	Be covered to prevent rainfall entering (water collected within the bund must be tested and disposal as chemical waste if necessary).	Waste Storage Area	\checkmark			
•	Be arranged so that incompatible materials are adequately separated.	Waste Storage Area	\checkmark			
•	Warning panels should be displayed at the waste storage area.	Waste Storage Area	\checkmark			

Contract No.: CV/2015/07 Handling of Surplus Public Fill (2016-2019) - Tuen Mun Area 38 Fill Bank

		Location	Implementation Status			
	Environmental Protection Measures		Implemented	Partially implemented	Not implemented	Not Applicable
•	Waste storage area should be cleaned and maintained regularly.	Waste Storage Area	\checkmark			
•	Chemical waste should be transported by a registered chemical waste collector to a facility licensed to receive chemical waste.	All areas	\checkmark			
•	All generators, fuel and oil storage should be within bundle areas.	All areas	\checkmark			
•	Oil leakage from machinery, vehicle and plant should be prevented.	All areas	\checkmark			
•	In the event of chemical waste / dangerous goods / chemicals spillage or leakage, the procedures as outlined in the Spillage Response Plan should be followed.	All areas	\checkmark			
•	The dangerous goods / chemical spillage or leakage procedures (including equipments) should be in place.	All areas	\checkmark			
G	ood Site Practices					
•	Nomination of approved personnel, such as site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site.	All areas	\checkmark			
•	Training of site personnel in proper waste management and chemical handling procedures should be provided.	All areas	\checkmark			
•	Good site practices should be adopted to clean the rubbish and litter on a regular basis so as to prevent the rubbish and litter from dropping into the nearby environment.	All areas	\checkmark			
٠	Proper storage and site practices to minimise the potential for damage or contamination of construction materials.	All areas	\checkmark			
•	The Environmental Permit should be displaced conspicuously on site.	Site Entrance	\checkmark			
•	Construction noise permits should be posted at site entrance or available for site inspection.	Site Entrance				
•	Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste.	All areas	\checkmark			
•	Chemical storage area provided with lock and located on sealed areas.	Chemical Storage Area	\checkmark			
•	All chemicals should be placed at the banded area with adequate band capacity (>110% of largest tank).	Chemical Storage Area	\checkmark			
•	Any unused chemicals or those with remaining functional capacity should be recycled.	All areas	\checkmark			
•	Regular cleaning and maintenance programme for waste storage area, drainage systems, silt traps, sumps and oil interceptors.	All areas	\checkmark			
•	To encourage collection of aluminium cans by individual collectors, separate labelled bins should be provided to segregate this waste from other general refuse generated by the workforce.	All areas	\checkmark			
•	A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be used, e.g. trip ticket system for chemical waste disposal. Quantities could be determined by weighing each load or other suitable methods.	All areas				
•	A collection area should be provided where waste can be stored and loaded prior to removal from site. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. If an open area is unavoidable for the storage or loading/unloading of wastes, then the area should be bunded and all the polluted surface run-off collected within this area should be diverted into wastewater treatment system.	All areas	\checkmark			
•	Remove wastes in a timely manner.	All areas	\checkmark

Monthly Summary Waste Flow Table for 2021

Notes: (1) The performance targets are given in PS Clause 1.110(14)

(2) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the site.

(3)Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.

Complaint Log

Complaint Log

Log Ref.	Location	Received Date	Details of Complaint	Investigation / Mitigation Action	Status
001	Lung Mun Road near Tuen Mun Area 38 Fill Bank	24 May 2017	One complaint received on 24 May 2017, which was forwarded to ET on 03 June 2017, from public against the rocks and debris deposited on the road surface along Lung Mun Road near Tuen Mun Area 38 Fill Bank. The complainant complained that waste generated caused an environmental nuisance.	 Refer to the ET site investigation on 06 June 2017, the condition of Lung Mun Road near Tuen Mun Area 38 Fill Bank was found satisfactory. Details of Action(s) Taken by the Contactor: Regular water spraying by water lorries is provided for road cleaning at Lung Mun Road; Regular cleaning on Lung Mun Road and the access road at the site exit by road sweeper to remove mud and gravel is arranged four times on each working day; Site vehicles are washed to remove any dusty materials from their bodies and wheels by using high pressure water jet manually at the entrance of work site before leaving; Site vehicle for transporting materials are covered properly by using clean tarpaulin sheets; Regular cleaning at the site haul road is provided to minimize the fugitive dust emission. 	Closed
