Attn: Mr. Chris Leung

28 December 2022

Dear Sir

Contract No. EP/SP/86/15 Organic Waste Treatment Facilities Phase 2 Quarterly Environmental Monitoring & Audit Report (Sept - Nov 2022)

Referring to your report referenced above dated 23 December 2022, we hereby verify that the captioned report ref. no. TCS01062/19/600/R0278v2 complied in general with the requirements as set out in the EM&A Manual.

Should you have any queries, please contact the undersigned at 2268 3437.

Yours faithfully

Ricky Chui Independent Environmental Checker

EXECUTIVE SUMMARY

ES01 This is the 12th Quarterly Environmental Monitoring and Audit (EM&A) Summary Report for the Service Contract to summarized environmental monitoring results and inspection findings during the period from 1 September 2022 to 30 November 2022 (hereinafter 'the Reporting Period').

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES02 Environmental monitoring activities under the EM&A program in this Reporting Period are summarized in the following table.

Table ES-1Summary of Environmental Monitoring Activities Undertaken in the
Reporting Period

Issues	Environmental Monitoring Parameters / Inspection	Sessions
Construction Noise	Leq (30min) Daytime	56
Construction Noise during Restricted Hours	Leq (5min) during restricted hours 19:00-07:00 including public holidays and Sundays	100
Inspection / Audit	ET Regular Environmental Site Inspection	13

BREACH OF ACTION AND LIMIT (A/L) LEVELS

ES03 Three (3) construction noise monitoring action level exceedance was recorded as three (3) noise complaint was received in this Reporting Period. The statistics of environmental exceedance and investigation of exceedance are summarized in the following table.

Table ES-2	Summary	of	Environmental	Monitoring	Parameter	Exceedance	in	the
	Reporting	Peri	od					

Environmental	Monitoring	Action	Limit	Event &	z Action
Issues	Parameters	Level	Level	Investigation Results	Corrective Actions
Construction Noise	Leq30min Daytime	0	0	NA	NA
	Leq _{5min} Restricted hour	3	0	Investigation revealed that the construction work carried out during the complaint period were complied with the CNP requirement.	NA

SITE INSPECTION

ES04 During the Reporting Period, weekly joint site inspections were undertaken to evaluate the site environmental performance. No non-compliances were observed during the weekly site inspection and environmental audit of the Reporting Period. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

ENVIRONMENTAL COMPLAINT

ES05 Three (3) environmental complaint was recorded in this Reporting Period for the Project. The statistics of environmental complaint are summarized in the following table.

Table ES-3	Summary of Environmental	Complaint Records in	the Reporting Period
	Summary of Environmental	Complaint Records in	me neperang i entea

1 – 31 October 2022	0	0	NA	NA
1 – 31 November 2022	0	0	NA	NA

REPORTING CHANGE

ES07 No reporting change was made in this Reporting Period.

FUTURE KEY ISSUES

- ES08 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.
- ES09 In addition, all effluent discharge from the construction site shall fulfill the discharge licence stipulation.

1. INTRODUCTION

1.1 PROJECT BACKGROUND

- 1.1.1 Environmental Protection Department (hereinafter referred as "EPD") is the Project Proponent for the Project "*Organic Waste Treatment Facilities Phase 2*" (hereinafter referred as "the Project"). The Project is a Designated Project to be implemented under Environmental Permit No. EP-460/2013 (hereinafter referred as "the EP"). The major construction work of the Project included:
 - (i) Demolition and removal of the existing above ground structures of the Sha Ling Livestock Waste Composting Plant (SLCP);
 - (ii) Construction of superstructure for an administration building and enclosed waste reception area;
 - (iii) Installation of treatment facilities including waste pre-treatment equipment, digesters, biogas holding tanks, composting, wastewater treatment, air treatment systems; and
 - (iv) Facilities for biogas processing, utilization and transmission;
- 1.1.2 AJA Joint Venture (hereinafter referred as "AJAJV") has been awarded the *EPD Contract No. EP/SP/86/15* "Organic Waste Treatment Facilities Phase 2". In accordance with the Works Contract requirements, AJAJV shall take over the responsibility of the EP. Based on the requirement, Further Environmental Permit application was submitted by AJAJV to EPD on 10 September 2019 and granted on 2 October 2019. A variation of Further Environmental Permit was submitted on 21 August 2020 and granted on 14 September 2020. The Further Environmental Permit is named as FEP-01/460/2013/A.
- 1.1.3 According to the approved Environmental Monitoring and Audit Manual (hereinafter referred as "the EM&A Manual"), AJAJV employed Action-United Environmental Services & Consulting (hereinafter referred as "AUES") as Environmental Team (hereinafter referred as "ET") to implement monitoring programme and as well as the associated duties.
- 1.1.4 According to the EM&A Manual, construction noise was identified as the only key environmental issue during the construction phase of the Project and it is required to carry out construction noise monitoring throughout the construction phase. Furthermore, baseline noise monitoring as part of the EM&A programmes shall be conducted prior to the commencement of the construction works under the Project. Thus, baseline noise monitoring was conducted by ET from 25 September 2019 to 8 October 2019. The baseline monitoring report compiled by the ET was verified by Independent Environmental Checker (hereinafter the "IEC") and was submitted to EPD on 19th November 2019 for endorsement.
- 1.1.5 This is the 12th Quarterly EM&A Summary Report for the Service Contract to summarized monitoring results and inspection findings during the period from 1 September 2022 to 30 November 2022 (hereinafter 'the Reporting Period').

1.2 REPORT STRUCTURE

1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-

Section 1	Introduction
Section 2	Project Organization and Construction Progress
Section 3	Summary of Impact Monitoring Requirements
Section 4	Construction Noise Monitoring
Section 5	Waste Management
Section 6	Site Inspections
Section 7	Environmental Complaints and Non-Compliance
Section 8	Implementation Status of Mitigation Measures
Section 9	Conclusions and Recommendations

2. PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1.1 Organization structure and contact details of relevant parties with respect to on-site environmental management are shown in *Appendix B*. Details of responsibilities of respective parties can be referred to EM&A Monthly Report.

2.2 CONSTRUCTION PROGRESS

2.2.1 3-month rolling construction program of the Project is enclosed in *Appendix D*; and the major construction activities undertaken in the Reporting Period is presented as below:

September 2022

- Granulation Building Raft Slab construction at Northern side
- AD Tanks AD3 Lifting work and AD4 Roof slab preparation works
- Digestate Tank Lifting work

October 2022

- AD Tanks AD1 and AD3 Lifting work and AD4 Roof slab preparation works
- Footbridge Piers construction work
- Sitewide underground utilities work

November 2022

- AD Tanks AD1 and AD3 Roof slab works
- Footbridge Piers construction work
- Sitewide underground utilities work

2.3 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

2.3.1 Summary of the relevant permits, licenses, and/or notifications on environmental protection for the Project of contract 1 are presented in *Tables 2-1*.

Table 2-1Status of Environme	ental Licenses and Permits of the Project
------------------------------	---

		License/Permit Status		
Item	Description Permit no./ account		Valid Period	Status
		no./ Ref. no.	From To	Status
1	Notification pursuant to Air pollution Control (Construction Dust) Regulation	Application No. 448863	9 Sep NA 2019	Valid
2	Chemical Waste Producer Registration	Ref. No. 5211-641-A2957-01	9 Oct NA 2019	Valid
3	Water Pollution Control Ordinance - Discharge License	ApplicationNo.448913		Application made on 10 Sep 2019
4	Waste Disposal Regulation - Billing Account for Disposal of Construction Waste	Account No. 7035307	2 Oct NA 2019	Valid
5	Further Environmental Permit	FEP-01/460/2013/A	14 Sep NA 2020	Valid
6	Construction Noise Permit	GW-RN0602-22	20Jul12Jan20222023	Valid
7	Waste Water Discharge License	WT00035196-2019	20 Mar31 Mar20202025	Valid

3. SUMMARY OF IMPACT MONITORING REQUIREMENTS

3.1 GENERAL

3.1.1 According to Environmental Monitoring and Audit requirements set out in the Approved EM&A manual, construction noise was identified as the only key environmental issues during the construction phase of the Project.

3.2 MONITORING PARAMETERS

3.2.1 The construction noise monitoring requirement stated in the approved EM&A Manual is summarized in *Table 3-1*.

Environmental Issue	Parameters
Noise	 Leq(30min) in normal working days (Monday to Saturday) 07:00-19:00 except public holiday Supplementary information for data auditing, statistical results such as L₁₀ and L₉₀ shall also be obtained for reference Leq(5min) if construction works are extended to restricted hours 19:00-07:00 including public holidays and Sundays

 Table 3-1
 Summary of EM&A Requirements

3.3 MONITORING LOCATIONS

3.3.1 According to the EM&A Manual Section 4.2.3, four (4) designated noise sensitive receivers (NSR) were recommended as construction noise monitoring stations. Since two of the designated monitoring locations N2 and N3 were found not accessible, alternative monitoring locations N2a and N3a were therefore proposed for the noise monitoring and were approved by EPD on 1 June 2021. Details of the locations for construction noise monitoring in the Reporting Period is listed in *Table 3-2* and showed in *Appendix C*.

ID	Location
N1	Village House No. 308, Sha Ling
N2a	Village House No. 318, Sha Ling
N3a	Village House No. 261, Sha Ling
N4	Village House in Sha Ling

Table 3-2Impact Monitoring Stations – Construction Noise

3.4 MONITORING FREQUENCY AND PERIOD

- 3.4.1 Noise monitoring shall be conducted at the all available designated monitoring stations or alternative locations. The monitoring frequency shall depend on scale of the construction activities. According to EM&A manual, regular noise monitoring should be carried out once a week when noise generating activities are underway and the monitoring requirement is presented below:
 - one set of Leq_(30min) measurements between 07:00 and 19:00 hours on normal weekdays
- 3.4.2 If construction works are extended to restricted hours 19:00-07:00 in normal working days (Monday to Saturday), and 00:00-24:00 during public holidays including Sunday, additional weekly impact monitoring should be carried out during the respective restricted hour periods. Leq_(5min) measurements should be employed during the restricted hours.

3.5 MONITORING EQUIPMENT

3.5.1 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in ms⁻¹.

3.6 ACTION/LIMIT (A/L) LEVELS

3.6.1 Action and Limit levels for construction noise as stipulated in the approved Environmental Monitoring and Audit Manual are listed in *Tables 3-3*.

Monitoring Location	Action Level	Limit Level in dB(A)	
Time Period:	0700-1900 hours on normal weekdays		
N1			
N2a	When one or more documented		
N3a	complaints are received	75 dB(A)	
N4			
Time Period:	19:00-07:00 in normal working days (Monday to Saturday), and 00:00-24:00 during public holidays including Sunday		
N1			
N2a	When one or more documented complaints are received		
N3a		60 dB(A)	
N4			

Table 3-3Action and Limit Levels for Construction Noise

Note: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority should be followed.

4. CONSTRUCTION NOISE MONITORING

4.1 GENERAL

4.1.1 In the Reporting Period, construction noise monitoring was performed at monitoring location N1, N2a, N3a and N4.

4.2 **RESULTS OF NOISE MONITORING**

4.2.1 In the Reporting Period, a total of 56 sessions of daytime construction noise monitoring and 100 sessions of additional weekly noise monitoring during restricted hours were performed at the agreed monitoring locations in the reporting period. The daytime noise monitoring results and additional weekly noise monitoring results during restricted hours are summarized in *Table 4-1* and *Table 4-2*, respectively. The graphical plots of construction noise monitoring result are shown in *Appendix E*.

Table 4-1Summary of Construction Noise Monitoring Results

Monitoring	Leq, 30n	nin (dB((A))
Location	Min	Max
N1	58.9	66.9
Record Date	14-Sep-22	4-Nov-22
N2	49.9	63.7
Record Date	28-Nov-22	12-Oct-22
N3a	62.6	72.6
Record Date	28-Nov-22	14-Sep-22
N4	60.2	67.3
Record Date	16-Nov-22	20-Sep-22

 Table 4-2
 Summary of Additional Noise Monitoring Results during Restricted Hours

Monitoring	Leq, 5m	nin (dB((A))
Location	Min	Max
N1	49.4	57.2
Record Date	8-Sep-22	2-Oct-22
N2	46.4	58.6
Record Date	27-Nov-22	7-Oct-22
N3a	49.0	59.1
Record Date	20-Nov-22	23-Nov-22
N4	45.7	56.1
Record Date	10-Nov-22	23-Oct-22

- 4.2.2 As shown in *Table 4-1*, all the measured results during normal daytime were below 75 dB(A) of the acceptance criteria. In addition, all the measured results during restricted hours shown in *Table 4-2* were below 60 dB(A) of the acceptance criteria as set out in Technical Memorandum on Noise from Construction Work other than Percussive Piling. No adverse weather condition which may affect the monitoring result was encountered during the course of noise monitoring in the reporting period.
- 4.2.3 Three (3) documented noise complaint is received in the reporting period. Hence three (3) construction noise monitoring action level exceedance was recorded.
- 4.2.4 Summary of A/L Level exceedance of construction noise and statistical analysis of compliance for construction noise monitoring results are summarized in *Table 4-3*.

 Table 4-3
 Summaries of Construction Noise Action/Limit Level Exceedance

Station	Limit Level	Action Level	Received Date
N1	0		
N2	0	2	8 September 2022 &
N3a	0	3	21 November 2022

5. WASTE MANAGEMENT

5.1 GENERAL WASTE MANAGEMENT

5.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

5.2 **RECORDS OF WASTE QUANTITIES**

- 5.2.1 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse; and
 - Excavated Soil.
- 5.2.2 The quantities of waste for disposal in this Reporting Period are summarized in *Tables 5-1* and *5-2*.

Table 5-1 Summary of Quantities of Inert C&D Materials

	Quantity				
Type of Waste	Sep 2022	Oct 2022	Nov 2022	Disposal Location	
Total C&D Materials (Inert) ('000m ³)	1.296	0.642	0.206	-	
Reused in this Contract (Inert) ('000m ³)	0	0	0	-	
Reused in other Projects (Inert) ('000m ³)	0	0	0	-	
Disposal as Public Fill (Inert) ('000m ³)	1.296	0.642	0.206	TM38	

Table 5-2Summary of Quantities of C&D Wastes

	Quantity				
Type of Waste	Sep 2022	Oct 2022	Nov 2022	Disposal Location	
Recycled Metal ('000kg)	0	0	0	-	
Recycled Paper / Cardboard Packing ('000kg)	0	0	0	-	
Recycled Plastic ('000kg)	0	0	0	-	
Chemical Wastes ('000kg)	0	0	0	-	
General Refuses ('000m ³)	0.197	0.211	0.128	NENT	

6. SITE INSPECTION

6.1 **REQUIREMENTS**

6.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulated by ET Leader. Weekly environmental site inspections should be carried out to confirm the environmental performance.

6.2 FINDINGS / DEFICIENCIES DURING THE REPORTING PERIOD

- 6.2.1 In the Reporting Period, *13* events of joint site inspection by the Employer's Representative (ER), ET, IEC and the Contractor were undertaken for the Contract to evaluate the site environmental performance. No non-compliance was identified during the site inspection. The summaries of findings / deficiencies recorded in the site inspection during the Reporting Period are presented in *Table 6-1*.
- 6.2.2 The findings / deficiencies of the Project observed during the weekly site inspection are listed in *Table 6-1*.

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
September 2022	7, 14, 21 and 28 September 2022	6	Completed
October 2022	5, 12, 19 and 26 October 2022	5	Completed
November 2022	3, 9, 16, 23 and 30 November 2022	4	Completed

 Table 6-1
 Summary of Reminders/Observations of Site Inspection in Reporting Period

7. ENVIRONMENTAL COMPLAINT, NOTIFICATIONS OF SUMMONS AND SUCCESSFUL PROSECUTIONS

7.1 ENVIRONMENTAL COMPLAINT, SUMMONS AND PROSECUTION

- 7.1.1 In the Reporting Period, three (3) environmental complaint (which is an Action Level exceedance) was received with respect to construction noise arising from the project. Besides, no summon and prosecution under the EM&A Programme was lodged for the project. The statistical summary table of environmental complaint is presented in *Tables 7-1, 7-2* and *7-3*.
- 7.1.2 Complaints received on 8 September 2022
 - (i) Environmental complaints were received by EPD regarding the noise nuisance generated from the construction site under the Project on 24 August 2022 evening after 7pm and 7 September 2022 evening after 7pm respectively. As advised by the Contractor, timber mold dismantling and general house-keeping work were conducted at construction site during the complaint periods. PMEs used on site include one (1) tower crane, one (1) generator and two (2) hand-held drill which are allowed in the issued CNP (GW-RN0602-22). Noise mitigation measures such as a semi noise enclosure for generator and acoustic blankets along the site perimeter were implemented properly by Contractor.
 - (ii) In addition, according to the additional noise monitoring conducted during the week of the complaints received, the noise monitoring results recorded at NSRs were well below 60 dB(A) which reveal the noise impact generated the construction work are acceptable at NSRs. The investigation revealed that noise mitigation measures were properly implemented and requirement of the issued CNP was strictly followed.

7.1.3 <u>Complaint received on 21 November 2022</u>

- (i) Environmental complaint was received by EPD regarding the suspected noise nuisance generated from the construction site under the Project during evening after 7pm. As advised by the Contractor, concrete rendering work and general house-keeping work were conducted at construction site during the complaint period of 19:00 21:00 from 16 November 2022 to 23 November 2022. No PME was used during the complaint period. Noise mitigation measures such as acoustic blankets along the site perimeter were implemented properly by Contractor.
- (ii) In addition, according to the weekly additional noise monitoring conducted during 19:00 21:00 from 16 November 2022 to 23 November 2022, the noise monitoring results recorded at NSRs were well below 60 dB(A) which reveal the noise impact generated the construction work are acceptable at NSRs. The investigation revealed that the noise complaint is unlikely due to the Project since no PME was used and the site activities during the complaint period should not produce significant noise to surrounding. In addition, noise mitigation measures were properly implemented and requirement of the issued CNP was strictly followed.

 Table 7-3
 Statistical Summary of Successful Prosecutions

ENVIRONMENTAL MITIGATION IMPLEMENTATION SCHEDULE

7.2 GENERAL REQUIREMENTS

- 7.2.1 The environmental mitigation measures that recommended in the Environmental Mitigation Implementation Schedule (EMIS) in the approved EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in *Appendix H*.
- 7.2.2 AJAJV had been implementing the required environmental mitigation measures according to the Environmental Monitoring and Audit Manual subject to the site condition. Environmental mitigation measures generally implemented by AJAJV in this Reporting Period are summarized in *Table 8-1*.

Table 8-1	Environmental Mitigation Measures
Issues	Environmental Mitigation Measures
Water Quality	 Any wastewater generated should be appropriately treated by treatment facilities; Drainage channels were provided to convey run-off into the treatment facilities; and Drainage systems were regularly and adequately maintained.
Air Quality	 Regular watering to reduce dust emissions from all exposed site surface, particularly during dry weather; Frequent watering for particularly dusty construction areas and areas close to air sensitive receivers; Cover all excavated or stockpile of dusty material by impervious sheeting or sprayed with water to maintain the entire surface wet; Public roads around the site entrance/exit had been kept clean and free from dust; and Tarpaulin covering of any dusty materials on a vehicle leaving the site.
Noise	 Good site practices to limit noise emissions at the sources; Use of quite plant and working methods; Use of site hoarding or other mass materials as noise barrier to screen noise at ground level of NSRs; Use of shrouds/temporary noise barriers to screen noise from relatively static PMEs; Alternative use of plant items within one worksite, where practicable.
Waste Management	 Any excavated material should be reused on site as far as possible to minimize off-site disposal. Scrap metals or abandoned equipment should be recycled if possible; Waste arising should be kept to a minimum and be handled, transported and disposed of in a suitable manner; Trip ticket system for the disposal of C&D materials to any designed public filling facility and/or landfill was implemented; and Chemical waste shall be handled in accordance with the Code of Practice on the Packaging, Handling and Storage of Chemical Wastes.
General	The site was generally kept tidy and clean.

 Table 8-1
 Environmental Mitigation Measures

8. CONCLUSIONS AND RECOMMENDATIONS

8.1 CONCLUSIONS

- 8.1.1 This is the 12th Quarterly Environmental Monitoring and Audit (EM&A) Summary Report for the Service Contract to summarized monitoring results and inspection findings during the period from 1 September 2022 to 30 November 2022 (the Reporting Period).
- 8.1.2 In the Reporting Period, no construction noise limit level exceedance during daytime and restricted hours was recorded. However, three (3) action level exceedance was record in the reporting period as three (3) noise complaint were received by the Project Consultant, EPD and the Contractors during restricted hours. The investigation result of the complaint revealed that noise mitigation measures were properly implemented, results of additional noise monitoring during the complaint period were below 60 dB(A) of the acceptance criteria and requirements of the issued CNP were strictly followed.
- 8.1.3 During the Reporting Period, weekly joint site inspections were undertaken to evaluate the site environmental performance. No non-compliances were observed during the weekly site inspection and environmental audit of the Reporting Period. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- 8.1.4 No notification of summons or successful prosecution was received under the Project. However three (3) documented complaint regarding construction noise was received in the Reporting Period.

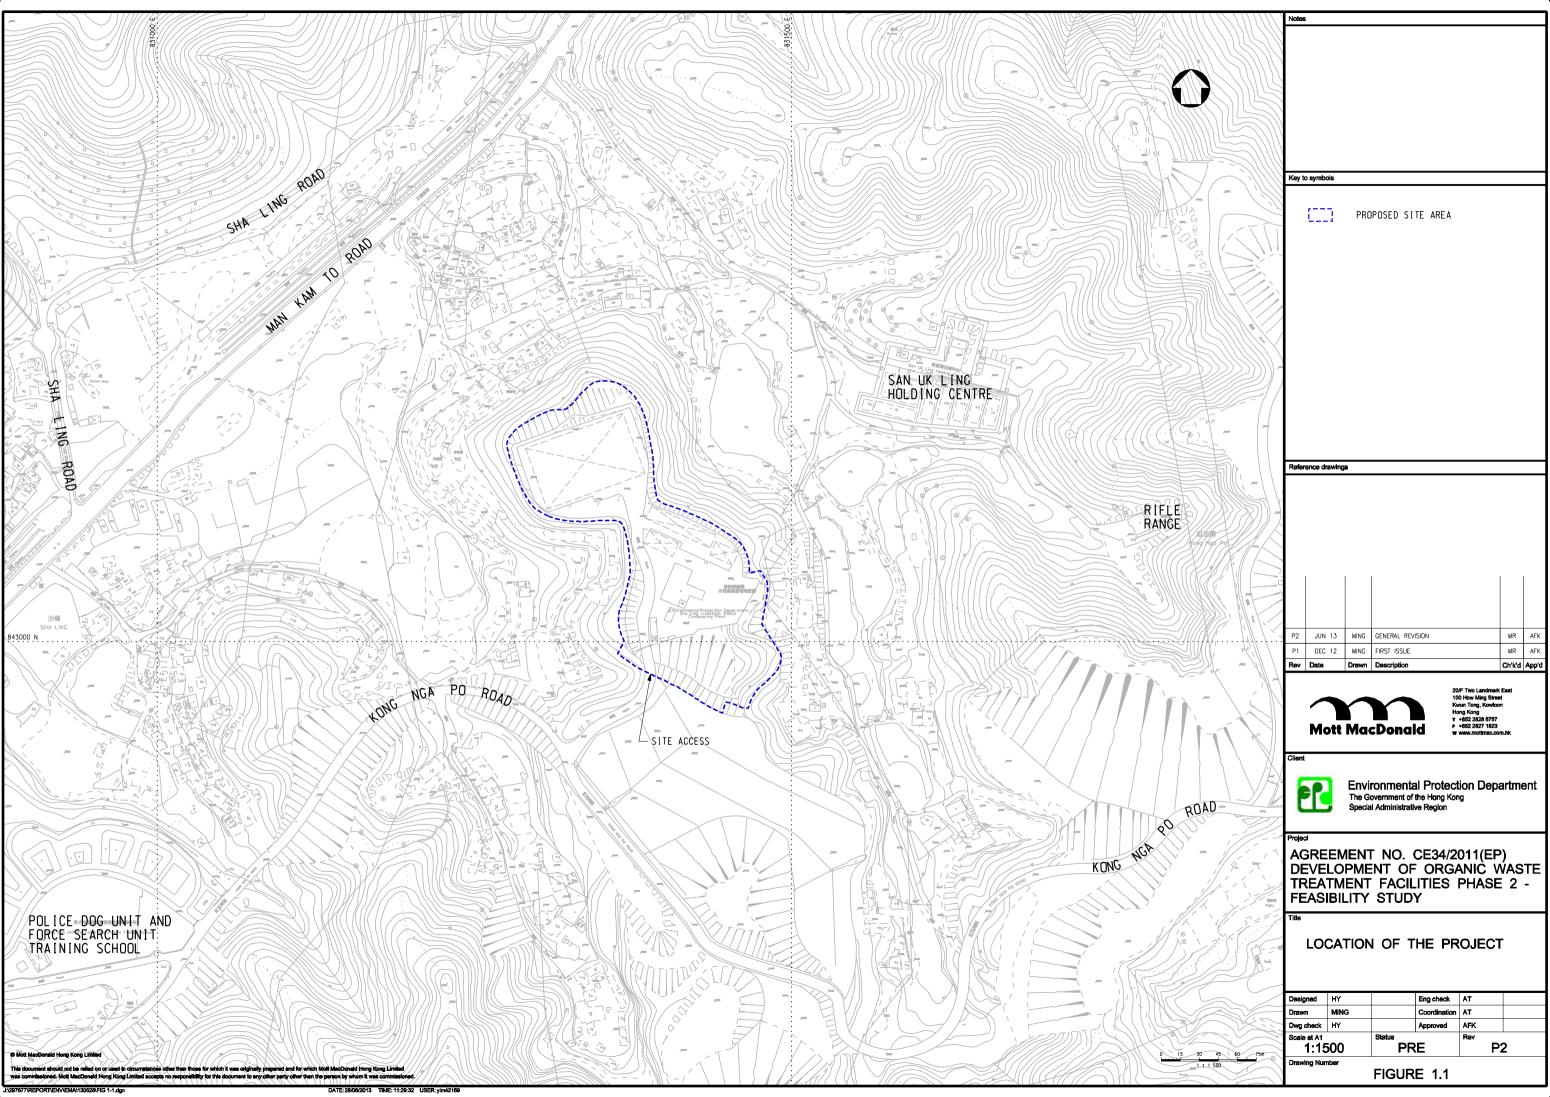

8.2 **RECOMMENDATIONS**

- 1.2.1 Construction noise should be a key environmental impact during the works. The noise mitigation measures such as use of quiet plants or temporary noise barrier installation at the construction noise predominated area should be implemented in accordance with the EM&A requirement and the latest CNP.
- 8.2.1 In addition, all effluent discharge shall be ensured to fulfill the discharge license stipulation.
- 8.2.2 All the trees proposed to be retained in-situ should be properly preserved and protected during the construction works. Tree Preservation and Protection Works for these retained trees shall follow Section 3 and 26 of CEDD's General Specification for Engineering Works and Section 26 of Contract Specification Part B.
- 8.2.3 Trees to be felled shall be in accordance with the Tree Preservation and Removal Proposal (TPRP) to be approved by relevant approval authority. The tree removal work shall only commence after such approval has been granted.
- 8.2.4 Contract Specification Part B Section 1.78 "Waste Management" and DEVB's "Guidelines on Yard Waste Reduction and Treatment" should be referred before tree removal and plan the necessary arrangement.

## **Additional Noise Monitoring**

Appendix F

**Meteorological Information** 

#### The weather of September 2022

With much sunnier weather than usual in the month, September 2022 was exceptionally hot in Hong Kong. The monthly mean maximum temperature of 32.7 degrees, mean temperature of 29.6 degrees and mean minimum temperature of 27.3 degrees were 2.2 degrees, 1.7 degrees and 1.2 degrees above their corresponding normals and all of them were the second highest on record for September. There were 3 days with daily maximum temperatures at the Hong Kong Observatory equal to or higher than 35.0 degrees in the month, the highest number on record for September. The total duration of bright sunshine of 237.4 hours in the month was about 36 percent higher than the normal of 174.4 hours and the eighth highest on record for September. The month was also drier than usual with a monthly rainfall of only 171.2 millimetres, about 53 percent of the normal of 321.4 millimetres. The accumulated rainfall this year up to September was 1999.0 millimetres, about 11 percent lower than the normal figure of 2242.8 millimetres for the same period.

### The weather of October 2022

Mainly attributed to the stronger than normal subtropical ridge over southern China, October 2022 was sunnier than usual in Hong Kong. The duration of bright sunshine in the month was 241.0 hours, 43.2 hours above normal. The mean maximum temperature of 29.5 degrees and mean temperature of 26.2 degrees were 1.4 degrees and 0.5 degrees above the respective normals and were respectively one of the highest and one of the eighth highest for October on record. The month was also drier than usual with a monthly rainfall of only 49.9 millimetres, about 41 percent of the normal of 120.3 millimetres. The accumulated rainfall this year up to October was 2048.9 millimetres, about 13 percent lower than the normal figure of 2363.1 millimetres for the same period.

### The weather of December 2022

With the northeast monsoon over southern China generally weaker than normal for most of the time in the month, November 2022 was much warmer than usual in Hong Kong. The mean minimum temperature of 22.0 degrees and mean temperature of 23.4 degrees were 1.7 degrees and 1.2 degrees above the respective normals and were respectively the second and the third highest for November on record. Together with the exceptionally hot weather in September 2022, Hong Kong experienced the warmest autumn on record from September to November 2022. The mean maximum temperature of 29.2 degrees and the mean temperature of 26.4 degrees for September to November 2022 were both the highest on record for the same period. Moreover, the mean minimum temperature of 24.4 degrees was also one of the highest on record for the same period. Attributing to the rainfall associated with tropical cyclone Nalgae in early November, the month was also much wetter than usual. The monthly total rainfall was 130.8 millimetres, more than three times of the normal figure of 39.3 millimetres. The accumulated rainfall up to November this year was 2179.7 millimetres, a deficit of around 9 percent compared with the normal of 2402.4 millimetres for the same period. The month was also unseasonably gloomy with only 100.3 hours of bright sunshine, about 42 percent below the normal figure of 172.3 hours and the lowest for November on record.

*The detailed meterological data for each successive day can be referred to in the Monthly EM&A Reports (Sep 2022, Oct 2022 and Nov 2022).

Total (since 2019)	97.208	0.000	0.000	83.508	13.467	0.233	337.486	1.250	0.700	0.000	3.357

Note 1	The waste flow table shall also include C&D materials that are not specified in the Contract to be imported for use at the Site
2	Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material
3	The Contractor shall also submit the latest forecast of the amount of C&D materials expected to be generated from the Works, together with a breakdown of the nature where the total amount of C&D materials expected to be generated from the Works is equal to or exceeding 50,000m3.
4	All recyclable materials, including metals, paper / cardboard packaging, plastics, etc. will be collected by registered collector for recycling.
5	Conversion factors for reporting purpose:
	in-situ: $rock = 2.5 tonnes/m^3$ ; $soil = 2.0 tonnes/m^3$
	excavated: $rock = 2.0 tonnes/m^3$ ; soil = 1.8 tonnes/m ³ ; broken concrete and bitumen = 2.4 tonnes/m ³
	C&D Waste (including tree waste) = $0.9$ tonnes/m ³ ; bentonite slurry = $2.8$ tonnes/m ³
6	Numbers are rounded off to the nearest three decimal places
7	The "Total Quantity Generated" equals to the sum of "Reuse in the Contract", "Reuse in Other Projects" and "Disposed as Public Fill"
8	The "Hard Rock and Large Broken Concrete" were disposed as public fill
9	The amount in "Disposed as Public Fill" includes the "Hard Rock and Large Broken Concrete" disposed as public fill
10	The "Reused in other projects" include C&D inert material and hard rock and large broken concrete

## Environmental Mitigation Implementation Schedule (Extracted from EM&A Manual)

					Imp	lementa	ation S	tage ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
Air Qual	ity Impact	(Construction)							
3.8.1.1	2.4	General Dust Control Measures Dust emissions could be suppressed by regular water spraying on site. In general, water spraying twice a day could reduce dust emission from active construction area by 50%. However, for the Project more frequent water spraying is proposed. Watering eight times per day, or once every 1.5 hours, is suggested at all active works areas in order to achieve a higher dust suppression efficiency of 87.5%.	Within construction site / Duration of the construction phase	Contractor		~			EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
3.8.1.2	2.4	Best Practice For Dust Control	Within construction site /	Contractor		· √			EIA
		The relevant best practices for dust control as stipulated in the <i>Air Pollution Control (construction Dust) Regulation</i> should be adopted to further reduce the construction dust impacts of the Project. These best practices include: <i>Good Site Management</i>	Duration of the construction phase						Recommendation and Air Pollution Control (Construction Dust) Regulation
		<ul> <li>Good site management is important to help reducing potential air quality impact down to an acceptable level. As a general guide, the Contractor should maintain a high standard of housekeeping to prevent emissions of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission. Any piles of materials accumulated on or around the work areas should be carried out in a manner so faultite and the work areas should be carried out in a manner minimising generation of fugitive dust emissions. The material should be handled properly to prevent fugitive dust emission before cleaning.</li> <li>Disturbed Parts of the Roads</li> </ul>							
		<ul> <li>Each and every main temporary access should be paved with concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or</li> </ul>							
		<ul> <li>Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road</li> </ul>							

					Imp	lementa	tion St	age ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		surface wet.							
		Exposed Earth							
		Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies.							
		Loading, Unloading or Transfer of Dusty Materials							
		<ul> <li>All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet.</li> </ul>							
		Debris Handling							
		<ul> <li>Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides.</li> </ul>							
		<ul> <li>Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped.</li> </ul>							
		Transport of Dusty Materials							
		<ul> <li>Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards.</li> </ul>							
		Wheel washing							
		<ul> <li>Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.</li> </ul>							
		Use of vehicles							
		<ul> <li>The speed of the trucks within the site should be controlled to about 10km/hour in order to reduce adverse dust impacts and secure the safe movement around the site.</li> </ul>							
		<ul> <li>Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.</li> </ul>							
	_	<ul> <li>Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely</li> </ul>							

					Imple	ementa			
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle.		•	·				
		Site hoarding							
		Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit.							
Air Qual	lity Impact	(Operation)							
3.8.2	2.3	Odour patrol at site boundary of the Project	Site boundary / During operation stage ( the need to continue the odour patrol after the end of the 2-year monitoring period would depend on the monitoring results and should be agreed with EPD)	OWTF Operator	~		~		EIAO-TM
3.8.2	2.4	Install gas cleaning equipment and stack on the CHP and odour treatment unit	CHP and odour treatment unit	Design Consultant / OWTF Operator	~		$\checkmark$		EIA Recommendatio
		The preliminary design suggests the use of a two stage process involving either a biofilter or Ultraviolet Light (UV-C) together with ozone treatment as the first stage, and an activated carbon filter as the second stage for the odour treatment unit. It is recommended to install the UV-C and ozone treatment system with second stage active carbon filters as this has a lower footprint requirement than the biofilter option. However, the actual unit installed depends on the final design by the contractor in the design phase.							
		<ul> <li>The preliminary design incorporates a combination of thermal and catalytic treatment processes to remove pollutants from the exhaust gasses from the CHP.</li> </ul>							
		<ul> <li>Both the odour treatment unit and the CHP emissions are suggested to be directed to a flue to aid the dispersion and minimise effects on ASRs.</li> </ul>							

					Imp	lementa	tion S	tagal	
EIA Ref.	EM&A Ref.	ef. r	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con		Dec	Relevant Legislation & Guidelines
4.9	3.2	<ul> <li>The HA has assumed that the following "Good Practices" and "recommended design measures" for the safe operation of OWTF 2 shall be carried out as far as reasonably practicable:</li> <li>The process plant building will be provided with adequate number of gas detectors distributed over the various areas of potential leak sources to provide adequate coverage.</li> <li>All electrical equipment inside the building will be classified in accordance with the electrical area classification requirements. No unclassified electrical equipment will be used during operations or maintenance.</li> <li>Reference can be made to Codes of Practice and guidance issued in Europe that applies to places where explosive atmospheres may occur (called 'ATEX' requirements). These are covered as part of the European Directive: the Explosive Atmospheres Directive (99/92/EC) and the UK regulations, Dangerous Substances and Explosive Atmospheres Regulations 2002 (DSEAR). Where potentially explosive atmospheres may occur in the workplace, the requirements include, identifying and classifying (zoning) areas where potentially explosive atmospheres may occur; avoiding ignition sources in zoned areas, in particular those from electrical and mechanical.</li> </ul>	completion of	Design Consultant / OWTF Operator	· √		✓		
		<ul> <li>electrical and mechanical equipment; where necessary, identifying the entrances to zoned areas; providing appropriate anti-static clothing for employees; and before they come into operation, verifying the overall explosion protection safety of areas where explosive atmospheres may occur.</li> <li>All safety valves design shall take into account discharging any released fluid to a safe location, or stopping misdirection</li> </ul>							
		<ul> <li>of fluid flows in order to avoid hazardous outcome.</li> <li>Safety markings and crash barriers will be provided to the aboveground piping, digesters and the gas holder near the entrance.</li> </ul>							
		<ul> <li>Lightning protection installations will be installed following IEC 62305, BS EN 62305, AS/NZS 1768, NFPA 780 or equivalent standards.</li> </ul>							
		A 10m high boundary wall with fire resistance will be							

					Imp	lementa	tion St	tage ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		provided in the vicinity of the digester tanks, gasholders and gas purification equipment to protect the equipment against external fires, and to provide some protection to external areas from the effects of fire/explosion.							
		Suitable fire extinguishers will be provided within the site. An External Water Spray System (EWSS) will be installed in appropriate areas, such as around the gasholders, gas purification, desulphurisation units, and digester areas. The facilities will also be equipped with fire and gas detection system and fire suppression system. Stringent procedures are implemented to prohibit smoking or naked flames to be used on-site.							
		<ul> <li>Fixed crash barriers will be provided in areas where process equipment is adjacent to the internal roadway to protect against vehicle collision. Adequate warning signage and lighting will also be provided and maximum speed limit will also be in place.</li> </ul>							
Noise I	mpact (Con	struction)						•	•
5.9.1	4.2.7	Good Site Practice Good site practice and noise management can significantly reduce the impact of construction site activities on nearby NSRs. The following package of measures should be followed during each phase of construction:	Within construction site / During construction phase	Contractor		~			EIAO, EIAO-TM and Noise Contro Ordinance
		<ul> <li>only well-maintained plant to be operated on-site and plant should be serviced regularly during the construction works;</li> </ul>							
		<ul> <li>machines and plant that may be in intermittent use to be shut down between work periods or should be throttled down to a minimum;</li> </ul>							
		<ul> <li>plant known to emit noise strongly in one direction, should, where possible, be orientated to direct noise away from the NSRs;</li> </ul>							
		<ul> <li>mobile plant should be sited as far away from NSRs as possible; and</li> </ul>							
		<ul> <li>material stockpiles and other structures to be effectively utilised, where practicable, to screen noise from on-site</li> </ul>							

					Imp	lementa	ation St	age ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		construction activities.		•					•
5.9.1	4.2.7	Selection of Quieter PME The recommended quieter PME adopted in the assessment were taken from the EPD's QPME Inventory and British Standard, namely <i>Noise Control on Construction and Open</i> <i>Sites, BS 5228: Part 1: 2009</i> . It should be noted that the silenced PME selected for assessment can be found in Hong Kong.	Within construction site / During construction phase	Contractor		√			EIAO, EIAO-TM and Noise Control Ordinance
5.9.1	4.2.7	Use of Movable Noise Barriers Movable noise barriers can be very effective in screening noise from particular items of plant when constructing the Project. Noise barriers located along the active works area close to the noise generating component of a PME could produce at least 10 dB(A) screening for stationary plant and 5 dB(A) for mobile plant provided the direct line of sight between the PME and the NSRs is blocked.	Within construction site / During construction phase	Contractor		~			EIAO, EIAO-TM and Noise Control Ordinance
5.9.1	4.2.7	Use of Noise Enclosure/ Acoustic Shed The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and generator. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the EIAO Guidance Note No.9/2010.	Within construction site / During construction phase	Contractor		~			EIAO, EIAO-TM and Noise Control Ordinance
5.9.1	4.2.7	Use of Noise Insulating Fabric Noise insulating fabric can also be adopted for certain PME (e.g. pilling machine etc). The fabric should be lapped such that there are no openings or gaps on the joints. According to the approved Tsim Sha Tsui Station Northern Subway EIA report (AEIAR- 127/2008), a noise reduction of 10 dB(A) can be achieved for the PME lapped with the noise insulating fabric.	Within construction site / During construction phase	Contractor		~			EIAO, EIAO-TM and Noise Control Ordinance
Noise Ir	npact (Ope	ration)							
5.9.2	4.2.7	<ul> <li>Fixed Plant Noise</li> <li>Specification of the maximum allowable sound power levels of the proposed fixed plants should be followed. The following noise reduction measures should be considered as far as practicable during operation:</li> <li>Choose quieter plant such as those which have been effectively silenced;</li> </ul>	Within construction site / During operation phase / Throughout operation phase	Design Consultant / Contractor	~		~		EIAO, EIAO-TM and Noise Control Ordinance

					Imp	lementa	ation S	tage ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		<ul> <li>Include noise levels specification when ordering new plant (including chillier and E/M equipment);</li> </ul>				•		•	
		<ul> <li>Locate fixed plant/louver away from any NSRs as far as practicable;</li> </ul>							
		<ul> <li>Locate fixed plant in walled plant rooms or in specially designed enclosures;</li> </ul>							
		<ul> <li>Locate noisy machines in a completely separate building;</li> </ul>							
		<ul> <li>Install direct noise mitigation measures including silencers, acoustic louvers and acoustic enclosure where necessary; and</li> </ul>							
		<ul> <li>Develop and implement a regularly scheduled plant maintenance programme so that equipment is properly operated and serviced in order to maintain a controlled level of noise.</li> </ul>							
Water Q	uality Impa	act (Construction)	•	•					•
6.8.1.1	5.3	Construction site runoff	Within construction site /	Contractor		~	•		ProPECC Note
		The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and sensitive uses of the coastal area, and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts:	Duration of the construction phase						PN 1/94
		At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels, earth bunds or sand bag barriers should be provided on site to direct storm water to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractor prior to the commencement of construction;							
		<ul> <li>Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt</li> </ul>							

					Impl	lementa	tion St.	age ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractors prior to the commencement of construction.							
		<ul> <li>All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.</li> </ul>							
		Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.							
		All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.							
		<ul> <li>Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.</li> </ul>							
		<ul> <li>Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into</li> </ul>			,	·			

			·		Impl	ementa	tion S	tage ¹	
EIA Ref.	EM&A Ref.	Environmental Protection Measures	Location / Duration of measures / Timing of completion of measures	Implementation Agent	Des	Con	Ор	Dec	Relevant Legislation & Guidelines
		foul sewers.							
		Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.							
		Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.							
6.8.1.2	5.3	General construction activities	Within construction site /	Contractor		$\checkmark$			ProPECC Note
		Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby storm water drain. Stockpiles of cement and other construction materials should be kept covered when not being used.	During construction phase						PN 1/94
6.8.1.3	5.3	Excavation works	Within construction site /	Contractor		$\checkmark$			ProPECC Note
		The construction programme should be properly planned to minimise excavation works during the wet season (April to September), temporarily exposed slope/soil surfaces should be covered by a tarpaulin or other means, as far as practicable. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC PN 1/94.	During construction phase						PN 1/94
6.8.1.4	5.3	Accidental spillage	Within construction site /	Contractor	•	~	•	•	ProPECC Note
		<ul> <li>The Contractor should register as a chemical waste producer</li> </ul>	During construction phase						PN 1/94 and Waste Disposa

6.8.2.1	5.3	Sewage effluent and sewerage impact	Within construction site /	Design Consultant	~		$\checkmark$		EIA
		In order to minimise the risk of exceeding capacity of the sewerage system, on-site underground storage of effluent is recommended for the OWTF 2, with a capacity of 6 hours of peak flow. Using the values presented in the preliminary design, the on-site storage required to buffer excess capacity would be equivalent to 30 m ³ . A below ground effluent retention tank would function to store effluent produced during peak periods when usage of the Sha Ling pumping station is high. Effluent stored during such periods could then be pumped out of the retention tank and discharged into the public sewer during off-peak times when capacity is sufficient.	During design and operation phase	/ OWTF Operator					recommendatior

Landsc	ape and Vis	ual Impact (Construction)							
Table 10.7 (CP1)	Table 8.1 (CP1)	Preservation of Existing Vegetation The development proposals would avoid disturbance to the existing trees as far as practicable within the confines of the development site. A preliminary tree survey has been undertaken to establish the existing resources. A tree survey review with formal tree removal application will be submitted to the relevant government departments for approval in accordance with ETWB TC(W) 03/2006 Tree Preservation, during the detailed design phase of the Project. Based on the preliminary findings it would be possible to retain 441 of the existing trees. If possible, all trees which are not in conflict with the proposals would be retained and shall be protected through the means of fencing, where appropriate, to prevent potential damage to tree canopies and root zones from vehicles and materials storage. Specifications for the protection of existing trees will be circulated to the relevant government authorities for approval together with the formal tree removal application. 		<ul> <li>The location and appearance of site accommodation should be carefully designed to minimise potential landscape and visual impact.</li> </ul>	of all construction activities						
		<ul> <li>Site lighting should be carefully designed to prevent light spillage,</li> </ul>							
		<ul> <li>Extent of the works area and construction period should be minimised as far as practicable.</li> </ul>							
		<ul> <li>Screen hoarding with compatible design to blend into the surrounding natural environmental should be considered.</li> </ul>							
		<ul> <li>Temporary works areas should be reinstated at the earliest possible opportunity.</li> </ul>							
Table	Table	Transplantation of existing trees	Construction site /	Contractor	$\checkmark$	1			Technical Circular
10.7 (CP3)	8.1 (CP3)	Under current proposal, no tree is recommended to be transplanted since the trees in conflict with the proposed works are not suitable to be transplanted. However, should transplantation be proposed in the detailed design stage after an update tree survey, the recommended final recipient sites should be adjacent to their current locations. Enough time should be reserved for tree transplantation works to increase the survival rate of the transplanting trees. To ensure the survival of transplanted trees, protection work should be considered. The tree transplantation proposal will be submitted to relevant authorities for approval together with the formal tree removal application. 		such as, single-storey, lower than the adjacent building structures, and avoiding large built structure for supporting facilities to reduce the intrusion of mass in the rural areas.							
		<ul> <li>Treatment of built structures – the structural design should seek to reduce the apparent visual mass of the facilities further through the use of natural materials such as wooden frames or other sustainable materials such as recycled plastics.</li> </ul>							
		<ul> <li>Responsive building finishes – Natural tones should be considered for the colour palette for proposed structures. Non-reflective finishes are recommended on the outward facing building facades to reduce glare effect.</li> </ul>							
		<ul> <li>Responsive lighting design – Aesthetic design of architectural and lighting with following glare design measures:</li> </ul>							
		<ul> <li>Directional and full cut off lighting is recommended within the boundaries of OWTF to minimise light spillage to the surroundings;</li> </ul>							
		<ul> <li>Minimise geographical spread of lighting, only applying for safety at the key access points and staircases; and</li> </ul>							
		Limited lighting intensity to meet the minimum safety and operation requirement.							
Table	Table 8.2 (OP2)	Amenity / Compensatory Planting	Construction site / during design and operation stage	Design Consultant	~		~		Technical Circular
10.8 (OP2)		Tree retention within the works area is considered to be important. New tree plantings will be concentrated in the proposed amenity areas along the boundaries of the site and along the exterior of OWTF buildings. Although a preliminary planting proposal is not yet available at the moment of producing this EIA Report, anticipated new tree planting within the Project site should be able to fully compensate for the loss of 14 trees proposed to be felled in terms of both quantity and quality. 441 existing trees will be retained through preserving them at their current locations. Establishment of newly planted trees is expected. Trees with high amenity value will be placed along the access routes to provide shade and soften the hard structures of OWFT buildings. Amenity plantings will utilise native tree species found on existing neighbouring slopes or		/ OWTF Operator					(Works) Nos. 7/2002 and 3/200

		woodland areas to improve the ecological connectivity between existing habitats and create a coherent landscape network. Tree species with aggressive roots should be avoided to prevent damage to OWTF buildings and structures. Trees with high or moderate amenity value and low to medium maintenance should be considered as part of landscape resource enhancement. Recommended tree species include <i>Celtis sinensis</i> and <i>Liquidambar formosana</i> . These proposals will be subjected to review at detail design stage of the Project.							
Table 10.8 (OP3)	Table 8.2 (OP3)	<b>Treatment of Slopes</b> In accordance with GEO Publication No. 1/2011 "Technical Guidelines on Landscape Treatment for Slopes", these engineering structures will be aesthetically enhanced through the use of soft landscape works including tree and shrub planting to give man-made slopes a natural appearance, blending into the natural landscape. Whip-sized plantings are preferred on the face of soil cut slopes, at the crest and toe of the slope and within bern planters. These smaller, younger plants can adapt to their new growing conditions quicker than larger sized stock and establish a naturalistic effect rapidly. Recommended tree species include <i>Mallotus paniculatus, Broussonetia papyrifera</i> and <i>Alangium chinense</i> .
