#### APPENDIX A VISUAL PLUME OCCURRENCE FROM 2017 TO 2021

## 1. INTRODUCTION

### 1.1 Background

CLP Power Hong Kong Limited (CLP) and Castle Peak Power Company Limited (CAPCO) are responsible for providing a safe, highly reliable and clean supply of electricity to over 80% of Hong Kong's population at reasonable cost. Within Hong Kong, CLP operates three power stations, namely the Castle Peak Power Station (CPPS), Black Point Power Station (BPPS) and Penny's Bay Power Station (PBPS), all owned by CAPCO, a joint venture between CLP and China Southern Power Grid Company Limited, in which CLP holds a 70% interest.

To support the HKSAR Government's objective of improving air quality and environmental performance in Hong Kong, and consistent with the HKSAR Government's medium-term strategy of increasing the use of natural gas for local power generation, and reducing carbon intensity of local electricity generation, CAPCO propose to install up to two additional gas-fired generation units by phase, with total capacity not exceeding 1,200MW, at the BPPS to both increase local gas-fired electricity generating capacity and accommodate growth in electricity demand. The additional gas-fired generation units will adopt combined cycle gas turbine (CCGT) configuration using natural gas as the primary fuel. Such configuration is aimed at reducing emissions as compared with coal-fired generation, thereby providing a relatively clean source of electricity for Hong Kong.

### 1.2 Purpose of this Plan

This *Cooling Tower Plume Abatement Plan* is prepared for the operation of cooling tower installed for the CCGT Unit No.2 (hereafter referred to as "the D2 Project") for deposit to the Director of Environmental Protection in accordance with Condition 2.11 of the Environmental Permit (EP-507/2016/D) as below.

*2.11 At least one month before the commencement of operation of Unit No.2, the Permit Holder shall deposit a Cooling Tower Plume Abatement Plan to the Director, which shall include details of the plume abatement measures to be implemented during the operation of Unit No.2, for controlling the visual plume occurrence no more than 8% of the time annually.*

The expected commencement of operation of Unit No.2 will be in June 2023.

### 1.3 Structure of this Plan

Following this introductory section, the remainder of this *Cooling Tower Plume Abatement Plan* is organised as follows:

- *Section 2* presents the summary of cooling tower design and the details of the plume abatement measures;
- *Section 3* presents the results for the visual plume occurrence;
- *Section 4* provides the summary and conclusions of the *Cooling Tower Plume Abatement Plan*.

## 2. COOLING TOWER DESIGN AND THE DETAILS OF THE PLUME ABATEMENT MEASURES

The D2 Project comprises the construction and operation of one additional CCGT unit supported by associated facilities such as power generation equipment enclosed in buildings, outdoor pipe racks and underground pipes and cables. The technology of CCGT Unit No.2 is similar to the one adopted in CCGT Unit No.1, with the exception that it will adopt the forced draft cooling (FDC) system. The D2 Project will make use of the existing cooling water intake and discharge facilities at the BPPS to support the FDC system.

Make-up water will be supplied to the FDC system from the existing BPPS cooling water intake to the cooling tower basin for replenishment of evaporation and blowdown losses. Blowdown from cooling tower will be discharged via the existing BPPS cooling water system and outfall to maintain acceptable cooling water concentration levels. As with the current practice at the BPPS, continuous or intermittent chemical dosing to control biological growth will be added to the cooling water system.

Atmospheric discharge from the cooling towers would be of higher temperature and humidity relative to the ambient conditions. Periodically localised plume may be present under certain atmospheric conditions, i.e. cold weather or high relative humidity. Without plume abatement measures, it is estimated that a visible plume would be generated up to around 17% of the time annually.

Based on the latest information, the final design of the D2 Project has now been confirmed by CAPCO. Plume abatement measures will be operated in the cooling towers to minimise the visual plume, which is generally achieved by mixing the wet exhaust air with warm dry air within the tower plenum area. The plume formation hence will be reduced by lowering the humidity ratio of wet exhaust air before it is discharged. The plume abatement technology will keep the cooling tower discharge in the plume under-saturated condition for the majority of the prevailing ambient conditions. Details of the visual plume occurrence without and with plume abatement measures are presented in **Figures 2.1** and **2.2**, respectively. **Figure 2.1** indicates the visual plume occurrence frequency under different weather conditions without plume abatement measures. It is expected that a plume would only be visible during daytime, as during nighttime the visibility of a plume would be much diminished against a dark backdrop in the surrounding environment. If ambient temperature and relative humidity during daytime are falling into the visual plume area of the curve, visual plume is expected to occur. **Figure 2.2** indicates that plume abatement measures are effective in reducing the occurrence of visual plume. Both figures are provided by the original equipment manufacturer of the cooling tower of the D2 Project. The design plume point for the cooling tower is 12 °C to 30 °C which covers the average temperature range of Hong Kong.

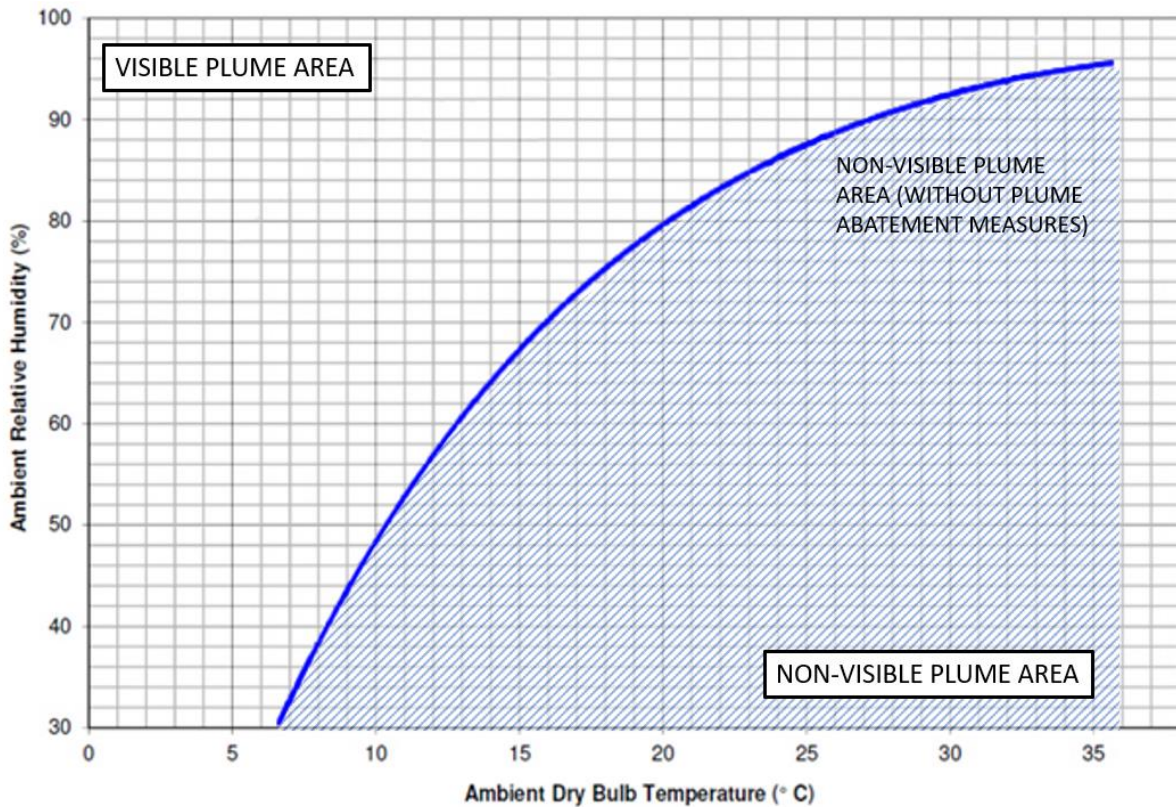

In order to maximise energy efficiency of the cooling tower, the plume abatement measures would only be implemented during daytime when the plume abatement measures are effective in minimising the visual plume. The operation conditions of the plume abatement measures are summarised in the **Table 2.1**.

**Table 2.1 The Operation Conditions of the Plume Abatement Measures**

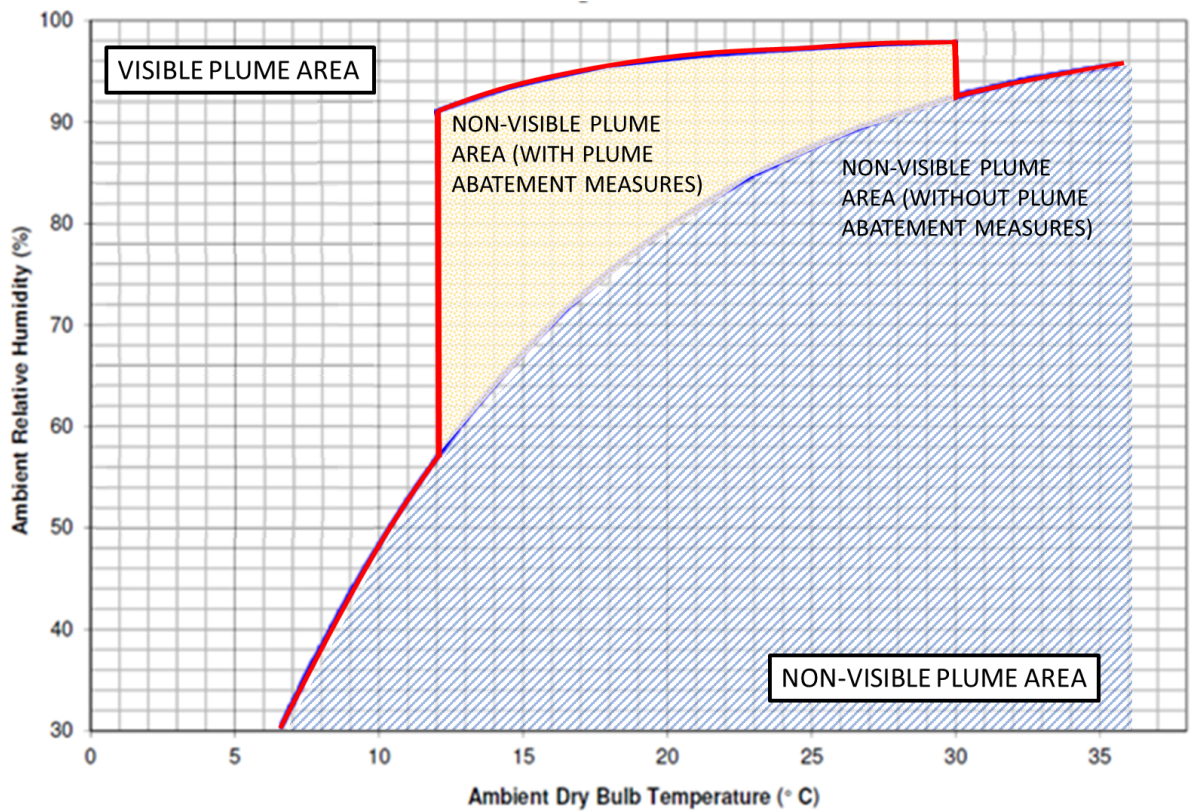

Operation Mode	Conditions
With Plume Abatement Measures	<ul style="list-style-type: none"> <li>■ When the ambient temperature and corresponding relative humidity during daytime (6am to 8pm) falls in the range of non-visible plume area (with plume abatement measures) as shown in the <b>Figure 2.2</b>.</li> </ul>
Without Plume Abatement Measures	<ul style="list-style-type: none"> <li>■ When the plume abatement measures are not applicable; or</li> <li>■ During night-time (8pm to 6am) as the visibility of plume will be insignificant</li> </ul>

**Note:**

(a) The operation mode of cooling tower will be determined based on the weather forecast.

**Figure 2.1 Visual Plume Occurrence without Plume Abatement Measures**

**Figure 2.2 Visual Plume Occurrence with Plume Abatement Measures**

### 3. ANALYSIS OF THE VISUAL PLUME OCCURRENCE

As mentioned in the **Section 2**, the plume would be present under certain atmospheric conditions. An analysis of the visual plume occurrence is conducted. The closest Weather Station to the D2 Project is located at the Tuen Mun Children and Juvenile Home. The hourly mean temperature and relative humidity from 2017 to 2021 was used for analysis.

The visual plume occurrence has been analysed based on the hourly mean temperature and relative humidity from 2017 to 2021 without and with Plume Abatement Measures according to **Figures 2.1** and **2.2**, respectively, with details presented in **Appendix A**. The summary of the visual plume occurrence without and with plume abatement measures is presented in **Table 3.1**. It is anticipated the visual plume occurrence will be not more than 8% of the time annually with the implementation of plume abatement measures based on the past 5-year historic weather data in Hong Kong.

**Table 3.1 Summary of the Visual Plume Occurrence at day time without and with the Plume Abatement Measures**

Year	Number of Total Hours <sup>(a)</sup>	Number of Visual Plume Occurrence		Percentage of the Visual Plume Occurrence	
		Without Plume Abatement Measures	With Plume Abatement Measures	Without Plume Abatement Measures	With Plume Abatement Measures
2017	8754	1316	251	15.03%	2.87%
2018	8753	1410	403	16.11%	4.60%
2019	8534	1380	286	16.17%	3.35%
2020	8783	1204	276	13.71%	3.14%
2021	8758	984	241	11.24%	2.75%

**Note:**

(a) Numbers of total hours are subject to the data availability provided by HKO.

## 4. CONCLUSIONS

This *Cooling Tower Plume Abatement Plan* is prepared for the D2 Project to include details of the plume abatement measures to be implemented during the operation of CCGT Unit No.2, for controlling the visual plume occurrence no more than 8% of the time annually.

According to the analysis of the visual plume occurrence as discussed in **Section 3**, the annual visual plume occurrence from 2017 to 2021 was all below 8%. Thus, it is concluded that final design of the plume abatement measures installed for the cooling tower in the CCGT Unit No. 2 would fulfil the requirement stated in EP Condition 2.1 of plume occurrence no more than 8% of the time annually under typical ambient conditions of temperature and relative humidity in Hong Kong.

---
