

**View 7: Po Lin Monastery**

The cable car terminal is located in the direction of this view but will be screened due to the low-lying topography of the Ngong Ping plateau as well as the many mature trees and village houses between the Monastery and terminal site.

**View 8: Di Tan Platform**

The cable car terminal is located in the direction of this view but will be screened behind mature trees. Glimpses of the cable span between Towers 6 and 7 may be partly visible although the towers themselves should be screened behind the knolls and side spur of Nei Lak Shan. It should be noted that the cable car would not intrude on views from the Di Tan to the Buddha or Po Lin Monastery.

**View 9: Lin Chi Temple**

Although the Lin Chi Temple is located close to the cable car alignment Tower 7 has been located behind and well below the knoll shown to screen the cable car from view.

Note: Broken line in view indicates approximate visible alignment of cable car
