

## 13 3-Dimensional EIA

In order to facilitate Continuous Public Involvement (CPI), a web-site [www.nent-ext.com](http://www.nent-ext.com) has been developed for the presentation of 3-D Environmental Impact Assessment Public Engagement Tools which aims to facilitate awareness of the development proposals and promote greater public participation in the decision making process. All the EIA findings and mitigation measures have been presented in the form of 3D EIA animation. The public can make use of the 3D EIA public engagement tools to offer suggestions, innovative solutions, alternative options and mitigation measures. Consensus can be developed through this re-iterative information exchange, engagement and informed dialogue process offered by the tools.
