SS at mid-depth
SS at bottom level
SS at surface level

Adult Fisheries Production
500m envelope from Site

Note: The contour shows the predicted highest SS concentration over the whole simulation period and such a level may only be predicted for a very short period of time.

A) Dry Season, After mitigation with (1+1) silt curtain system
B) Wet Season, After mitigation with (1+1) silt curtain system

2012 Dry & Wet Season Predicted Maximum Sediment Plumes and Fisheries Production in North Lantau Waters (Mitigated Scenario)
