1. INTRODUCTION

Project Background

1.1 A Contamination Assessment Plan (CAP) for Shatin to Central Link (SCL) – Mong Kok East to Hung Hom Section [SCL (MKK-HUH)] had been prepared and was approved by the Environmental Protection Department (EPD) under the EIA Study Brief (ESB) No. ESB-192/2008 on 8 October 2009 (the "approved CAP"). Due to site constraints/current land use, the site investigation (SI) for potentially contaminated areas was proposed to be divided into two stages, namely Stage 1 and Stage 2. Stage 2 SI was planned to be carried out after decommissioning of facilities and prior to commencement of construction works at relevant sites.

1.2 Subsequent to the approval of the abovementioned CAP, part of the Stage 2 SI at sites within MTR property was proposed to be advanced before the decommissioning stage as "Post-Stage 1 SI" by relocation of the sampling locations so as to overcome the site constraints. A subsequent Supplementary CAP (the "approved Supplementary CAP") was submitted and approved on 11 March 2010 for these land lots/ facilities, together with an additional works area at Mong Kok Freight Terminal.

1.3 Another change subsequent to the approval of the above-mentioned CAPs involved minor shift of the Project alignment at the section from Portal 1A to Chatham Road Interchange (CRI). The SI plan for one of the Assessment Areas (i.e. Area 1) in the approved CAP is slightly modified to accommodate the alignment and works changes. A Supplementary CAP for Works Area in Area 1 (the "approved Supplementary CAP for Area 1") for the shifted alignment was submitted to EPD on 7 October 2010 and it was approved on 23 November 2010. Proposed sampling works for the shifted alignment together with the remaining sampling locations required for Stage 2 SI under the approved CAP were carried out accordingly, known as Stage 2 SI.

1.4 The latest project layout is shown in **Figure No. NEX2213/C/361/ENS/M50/501.**

1.5 The ESB requires a land contamination assessment to be carried out, including the submission of a CAP, Contamination Assessment Report (CAR) and, if land contamination is confirmed, a Remediation Action Plan (RAP) to the Director of Environmental Protection (DEP) for endorsement.

1.6 Land contamination impact is required to be addressed in the EIA study in accordance with *Clause 3.4.5 of the ESB*. The Site Investigation (SI) works were conducted by the following parties:

- Stage 1 Gammon Construction Limited
- Post-Stage 1 Geotechnics & Concrete Engg. (H.K.) Ltd.
- Stage 2 Driltech Ground Engineering Ltd.

1.7 SI included rotary drilling of boreholes, logging of ground materials, groundwater sampling and reinstatement of excavations. All laboratory analyses were carried out by ALS Technician (HK) Pty Limited (ALS) and the results were tabulated for preparation of this CAR. AECOM [rebranding the former "ENSR Asia (HK) Limited"] collated the information obtained and prepared this CAR.

Objectives

1.8 This CAR is prepared to fulfil the requirements of *Clauses 3.4.5.5 of the ESB* and aims to present the findings and to assess the nature, level and extent of contamination.

2. CONTAMINATION ASSESSMENT REPORT

Introduction

2.1 Details of the sampling rationale for sites under Stage 1, Post-Stage 1 and Stage 2 SI have been documented in the approved CAP, approved Supplementary CAP and approved Supplementary CAP for Area 1. For easy reference, an extract of the sampling schedule for all SI sites is provided in **Appendix A**. This CAR presents findings on SI works including fieldworks, laboratory analyses and the assessment of the nature, level and extent of contamination.

Progress of Site Investigation Works

2.2 As described in Sections 1.7 and 1.8, the Stage 1, Post-Stage 1 and Stage 2 SI have been completed in accordance to the relevant CAPs. The as-built sampling locations are shown in **Figure Nos. NEX2213/C/361/ENS/M57/507** through **NEX2213/C/361/ENS/M57/510**. Summary of the SI works is summarised in **Table 2.1** below.

Area 4				
4-04 [Waste diesel storage area at the site office of Drainage Services Department (DSD)]	According to the latest design, no works will be carried out at Area 4. No SI will, therefore, be carried out.			

Assessment Methodology

Soil Boring and Sampling

2.3 The Stage 1 SI works were carried out from March 2008 to July 2009. A total of seven boreholes and five trial pits were constructed at the assessment areas.

2.4 The Post-Stage 1 SI works were carried out from March to July 2010. A total of eight boreholes and five trial pits were constructed.

2.5 The Stage 2 SI works were carried out from October to December 2010. A total of nine boreholes were constructed.

2.6 In general, soil samples were collected at depths of 0.5 m, 1.5 m, and 3.0 m below ground surface (bgs) for trial pits, and at 3 m intervals thereafter to the bottom of excavation or until bedrock was encountered for boreholes. Soil samples that could not be collected at the depths proposed in the approved CAPs and any changes in sampling locations are summarised in **Table 2.2**.

2.7 Before excavation and/or drilling, the sampling tools and all equipment in contact with the ground were thoroughly decontaminated prior to use at each sampling location by laboratory-grade detergent and steam-cleaning/high-pressure hot water jet.

2.8 Soil samples were properly labelled and stored in cool boxes at approximately 4^{o}C until delivered to the analytical laboratory. All the collected soil samples were analysed by ALS in accordance with the analysis schedules as detailed in the relevant CAPs.

Table 2.2 Changes of SI Sampling Plan Due to Site Constraints

Sampling Locations (Stage of SI)	Sampling Depth (m bgs)	Changes Made	Justifications and Precautionary Measures
2209/SCL/ETT103	0.5, 1.5, 3.0	Sampling location slightly shifted	Relocated due to the site constraints (original sampling location close to a road with busy traffic). Visual inspection for the signs of contamination should be carried out during excavation works in proximity to this sampling location. If signs of land contamination are found during the visual inspection, further sampling and testing, and remediation (if contamination found) should be carried out.
11202/SCL/EDH138	0.5, 1.5, 3.0 and every 3 m interval until 24.0	Sampling location slightly shifted	Slightly shifted to suit the workshop in operation at the locomotive running shed.
11202/SCL/EDH139	0.5, 1.5, 3.0 and every 3 m interval until 36.0	Sampling location slightly shifted	Slightly shifted to suit the workshop in operation at the locomotive running shed.
11202/SCL/EDH140	0.5, 1.5, 3.0 and every 3 m interval until 36.0	Sampling location slightly shifted	Slightly shifted to suit the operations at the locomotive running shed.
11202/SCL/EDH141	0.5, 1.5, 3.0 and every 3 m interval until 42.0	Sampling location slightly shifted	Slightly shifted to suit the operations at the locomotive running shed.
11202/SCL/EDH142	0.5, 1.5, and 3.0	Borehole converted to a trial pit	Could not be drilled to the proposed depth since obstruction was encountered at 3.13 m bgs. Another inspection pit was excavated at a nearby possible location but an obstruction (presumed to be a concrete slab) was encountered at 2.8 bgs. Other potential sampling locations are constrained by limited working space. Further sampling have been conducted during Stage 2 SI at 11203/SCL/EB146.

Sampling Locations (Stage of SI)	Sampling Depth (m bgs)	Changes Made	Justifications and Precautionary Measures
2209/SCL/ ETT165	0.5, 1.5, 3.0	Borehole converted to a trial pit and renamed	A box culvert was encountered during the construction of the inspection pit; sampling from a trial pit was conducted during Stage 1 SI. Visual inspection for the signs of contamination should be carried out during excavation works in proximity to this sampling location. If signs of land contamination are found during the visual inspection, further sampling and testing, and remediation (if contamination found) should be carried out.
2209/SCL/EDH231	0.5, 1.5, 3.0 and every 3 m interval until 15.0	Sampling location slightly shifted	Slightly relocated to adjust to the site conditions (currently operated as a freight yard and area for traffic).
2209/SCL/EDH256	0.5, 1.5, 3.0 and every 3 m interval until 12.0	Sampling location relocated to the nearby area in the open car park	Slightly relocated due to site constraints (currently operating as an open car park of the International Mail Centre) This location was previously proposed in the CAP to assess potential land contamination due to its historic operations as an open storage with unknown purposes. The relocated sampling location does not compromise the original objective.
2209/SCL/EDH257 (P)	0.5, 1.5, 3.0 and every 3 m interval until 12.0	Sampling location relocated to the nearby area in the open car park	Slightly relocated due to site constraints (currently operated as an open car park of the International Mail Centre). This location was previously proposed in the CAP to assess potential land contamination due to its historic operations as an open storage with unknown purposes. The relocated sampling location does not compromise the original objective.
2209/SCL/EDH229 (P)	0.5, 1.5, 3.0 and every 3 m interval until 12.0	Sampling location slightly shifted and renamed	Slightly relocated to adjust to the site conditions (currently operated as a freight yard and area for traffic).
11203/SCL/EB118	0.5, 1.5 and 3.0	Borehole to 3m by hand held tool	The proposed Temporary Traffic Management Plan for drilling rig mobilisation was rejected by the RMO and therefore only hand held tools can be deployed for this location. Visual inspection for the signs of contamination should be carried out during excavation works in proximity to this sampling location. If signs of land contamination are found during the visual inspection, further sampling and testing, and remediation (if contamination found) should be carried out.

Sampling Locations (Stage of SI)	Sampling Depth (m bgs)	Changes Made	Justifications and Precautionary Measures
11203/SCL/EB119	0.5, 1.5, 3.0 and every 3 m interval until 6.0	Borehole to 6.5m	The existing Water Services Department watermains were encountered during the drilling. Visual inspection for the signs of contamination should be carried out during excavation works in proximity to this sampling location. If signs of land contamination are found during the visual inspection, further sampling and testing, and remediation (if contamination found) should be carried out.
11203/SCL/EB121	0.5, 1.5 and 3.0	Borehole to 3m by hand held tool	Existing utilities were encountered during the construction of inspection pit. Visual inspection for the signs of contamination should be carried out during excavation works in proximity to this sampling location. If signs of land contamination are found during the visual inspection, further sampling and testing, and remediation (if contamination found) should be carried out.

Strata Logging

2.9 Strata logging for boreholes was undertaken during the course of drilling and sampling by qualified geologists. The logs included general stratigraphic descriptions, depth of soil sampling, sample notation and level of groundwater (if encountered). The presence of rocks/boulders/cobbles and foreign materials such as metals, wood and plastics was also recorded.

Groundwater Sampling

2.10 After completion of soil sampling, groundwater samples, if encountered, were collected. All groundwater samples were analysed in accordance with the analysis schedules detailed in the relevant CAPs and reproduced in **Appendix A**.

Assessment Criteria

Criteria for Soil and Groundwater Contamination

2.11 The assessment methodology is adopted in accordance with the *Guidance Note for Contaminated Land Assessment and Remediation* (Guidance Note 1)*, Guidance Manual for Use of Risk-based Remediation Goals for Contaminated Land Management* (Guidance Manual) and *Guidance Notes for Investigation and Remediation of Contaminated Sites of Petrol Filling Stations, Boatyards, and Car Repair/Dismantling Workshops* (Guidance Note 2) issued by the EPD.

2.12 Interpretation of results has made reference to those Risk-Based Remediation Goals (RBRGs) presented in Tables 2.3 and 2.4 as stipulated in the Guidance Manual.

2.13 The new RBRGs were developed based on a risk assessment approach to suit the local environmental conditions and community needs in Hong Kong. Decisions on contaminated soil and groundwater remediation are based on the nature and extent of the potential risks that are posed to human receptors as a result of exposure to chemicals in the soil and/or groundwater. RBRGs are

developed for four different land use scenarios reflecting the typical physical settings in Hong Kong under which people could be exposed to contaminated soil and groundwater. A description of each land use scenario is as follows:

- Urban residential – Sites located in an urban area where main activities involve habitation by individuals. The typical physical setting is a high rise residential building situated in a housing estate that has amenity facilities such as landscaped yards and children's playgrounds. The receptors are residents who stay indoors most of the time except for a short period each day, during which they are outdoors and have the chance of being in direct contact with soil at landscaping or play areas within the estate.

- Rural residential – Sites located in a rural area where the main activities involve habitation by individuals. These sites typically have village-type houses or low rise residential blocks surrounded by open space. The receptors are rural residents who stay at home and spend some time each day outdoors on activities such as gardening or light sports. The degree of contact with the soil under the rural setting is more than that under the urban setting both in terms of the intensity and frequency of contact.

- Industrial – Any site where activities involve manufacturing, chemical or petrochemical processing, storage of raw materials, transport operations, energy production or transmission, etc. Receptors include those at sites where part of the operation is carried out directly on land and the workers are more likely to be exposed to soil than those working in multi-storey factory buildings.

- Public parks – Receptors include individuals and families who frequent parks and play areas where there is contact with soil present in lawns, walkways, gardens and play areas. Parks are considered to be predominantly hard covered with limited areas of predominantly landscaped soil. Furthermore, public parks are not considered to have buildings present on them.

2.14 In addition to the RBRGs, screening criteria (soil saturation limits, C_{sat}, developed for Non-Aqueous Phase Liquid [NAPL] in soil and water solubility limits for organic chemicals in groundwater) for the more mobile organic chemicals must be considered to determine whether a site requires further action.

2.15 Since this Project involves the construction of a new railway, the Industrial RBRGs are adopted for this land contamination assessment.

2.16 Relevant soil and groundwater RBRGs for this land contamination assessment including C_{sat} and the Solubility Limits are selectively presented in **Table 2.3** below.

Table 2.3 Relevant RBRGs for Soil and Groundwater

Chemical	Soil (mg/kg)		Groundwater (µg/L)	
	RBRGs for Industrial	Soil Saturation Limits	RBRGs for Industrial	Solubility Limits
VOCs				
Acetone	10,000	***	10,000,000	***

Note: NA - Not Available
*** indicates that the C_{sat} value/ solubility limit exceeds the 'ceiling limit' therefore the RBRGs applies

Results and Interpretation

Field Records

2.17 Stage 1, Post-Stage 1 and Stage 2 SI works were undertaken in accordance with the sampling plan detailed in the relevant CAPs. Soil profile logs results are summarised in **Appendix B**.

Laboratory Analytical Results

2.18 A total of 231 soil samples (66 for Stage 1; 113 for Post-Stage 1; 52 for Stage 2) and 20 groundwater samples (6 for Stage 1; 8 for Post-Stage 1 SI; and 6 for Stage 2 SI) were collected for laboratory analyses. A summary table of laboratory testing results are presented in **Appendix C.** A summary of the laboratory testing results for Stage 1, Post-Stage 1 and Stage 2 SI are presented in **Table 2.4** below.

Table 2.4 Summary of Laboratory Testing Results

Site ID (Description)	Sampling Locations	No. of Sample Tested		Compliance to Industrial RBRGs
		Soil	Groundwater	
Stage 1				
Area 1				
1-18 (Emergency generator room and the associated fuel tank room)	2209/SCL/ETT103	3	0	All sample results indicated compliance
1-10 (Open storage and previous paint storage area)	2209/SCL/EDH249(P)	10	1	All sample results indicated compliance
Area 2				
2-05 (USTs near the locomotive running shed)	2209/SCL/ETT165	3	0	All sample results indicated compliance
2-06 (Aboveground storage tank of lubricating oil near the locomotive running shed)	2209/SCL/ETT102	3	0	All sample results indicated compliance.
2-07 (Dispenser west and north of the locomotive running shed)	2209/SCL/EDH244	11	1	All sample results indicated compliance
2-09 (D.G. storage containers near the Southern Warehouse)	2209/SCL/EDH231	7	1	All sample results indicated compliance
L17 (International Mail Centre)	2209/SCL/ETT106	3	0	All sample results indicated compliance

Site ID (Description)	Sampling Locations	No. of Sample Tested		Compliance to Industrial RBRGs
		Soil	Groundwater	
2-05 (USTs near the locomotive running shed)	11203/SCL/EB140	5	1	All sample results indicated compliance
	11203/SCL/EB141	5	1	All sample results indicated compliance
Total number of samples tested		**231**	**20**	-

2.19 The analytical results indicate that soil and groundwater concentrations of the Chemicals of Concern (COCs) analysed at all investigated sites in **Table 2.4** above did not exceed the adopted RBRG (industrial), saturation limits or solubility limits.

Conclusion and Recommendation

2.20 A total of 231 soil samples and 20 groundwater samples were collected at 34 locations identified as potentially contaminated sites. According to the analytical results, no exceedances of the adopted RBRGs (industrial) were found among any of the soil and groundwater samples analysed and as such remediation of soil or groundwater is not required at the investigated sites.

Sampling and Testing Plan for Potential Contaminated Sites

Table 5.1 Sampling and Testing Plan for Potentially Contaminated Sites

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference
Area 1							
1-10	Demolished storage for paints, currently used as an open storage for construction materials Approx. area of 100 m^2	At the hotspot to verify any residual contamination 2209/SCL/EDH249(P)	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m.	Lead, Zinc VOCs, SVOCs, Cyanide	NEX2213/C/361/ENS/M57/008
				GW	One GW sample per location if encountered.	VOCs, SVOCs	
1-18	Emergency generator room and the associated fuel tank room at STA Building Approx. area of 30 m^2	Close to but outside both rooms, due to sampling constraints at this stage. 2209/SCL/ETT103	Trial pit	Soil	Soil samples at depths of 0.5, 1.5 and 3.0 m Since this site is within the cut & cover works area where excavation/ ground works are expected, visual inspection should be conducted to detect any abnormal colour, smell or other characteristics of the soil during demolition and excavation	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/008
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
Area 2							
2-05	USTs near the Locomotive Running Shed Approx. area of 150 m^2	Northwest of the USTs 2209/SCL/EDH246 (Two extra sampling locations at the west, southeast of the USTs are proposed and will be conducted during the decommissioning of this site;	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m.	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference
		detailed in **Table 5.2**)					
2-06	Above ground lubricating oil tank near the Locomotive Running Shed Approx. area of 10 m^2	Close to and south of the lubricating oil tank 2209/SCL/ETT102	Trial pit	Soil	Soil samples at depths of 0.5, 1.5 and 3.0 m bgs	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
2-07	Dispenser west of the Locomotive Running Shed Approx. area of 10 m^2	Next to the hotspot 2209/SCL/EDH244	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m.	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
2-09	D.G storage containers near the Southern Warehouse Approx. area of 20 m^2	Close to but outside of the D.G. storage containers, due to sampling constraints at this stage. 2209/SCL/EDH231	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m. Since this site is within the hoarding area where excavation/ ground works are expected, visual inspection should be conducted to detect any abnormal colour, smell or other characteristics of the soil during demolition and excavation	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/010
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
Area 3							

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference
L17*	D.G. store and chemical storage room at the IMC Approx. area of 20 m^2	Close to but outside (west) of both rooms, due to sampling constraints at this stage. 2209/SCL/ETT068	Trial pit	Soil	Soil samples at depths of 0.5, 1.5 and 3.0 m bgs. Since the D.G. store and chemical storage room are within the works area and close to the hoarding area, visual inspection should be conducted to detect any abnormal colour, smell or other characteristics of the soil during demolition and excavation	VOCs, SVOCs, full list of metals, TPH, Cyanide	NEX2213/C/361/ENS/M57/010
				GW	One GW sample per location if encountered.	VOCs, SVOCs, Mercury, TPH	
	Emergency generator room and the associated fuel tank room Approx. area of 20 m^2	Close to but outside (north) of both rooms, due to sampling constraints at this stage. 2209/SCL/ETT106	Trial pit	Soil	Soil samples at depths of 0.5, 1.5 and 3.0 m bgs. Since the D.G. store and chemical storage room are within the works area and close to the hoarding area, visual inspection should be conducted to detect any abnormal colour, smell or other characteristics of the soil during demolition and excavation	VOCs, SVOCs, full list of metals, TPH	NEX2213/C/361/ENS/M57/010
				GW	One GW sample per location if encountered.	VOCs, SVOCs, Mercury, TPH	
	Historic unknown open storage Approx. area of 2000 m^2 (within the hoarding area)	At the historic open storage area of IMC 2209/SCL/EDH256 and 2209/SCL/EDH257	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m. Since this site is within the works area and partly within the hoarding area where	VOCs, SVOCs, full list of metals, TPH	NEX2213/C/361/ENS/M57/010

					excavation/ ground works are expected, visual inspection should be conducted to detect any abnormal colour, smell or other characteristics of the soil during demolition and excavation		
				GW	One GW sample per location if encountered.	VOCs, SVOCs, Mercury, TPH	
3-02	Container stacker refuelling and maintenance area at Hung Hom Freight Year (HFY) Approx. area of 700 m^2	Sampling between this area and the works area for preliminary screening of the presence of contamination plume 2209/SCL/EDH229 and 2209/SCL/EDH124(P)	Borehole	Soil	0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m.	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/010
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	

Notes:

*: Site L17 is the overlapping works area under both this Project and EWL. Sampling locations are proposed for potential contamination hotspots for Site L17 with reference to the approved CAP of this area under EWL.

1. bgs: below ground surface; GW = groundwater
2. VOCs = The whole list of COCs listed under VOCs in Appendix IV of Guidance Note 1; SVOCs = The whole list of COCs listed under SVOCs in Appendix IV of Guidance Note 1.
3. BTEX = *Benzene, Toluene, Ethylbenzene* and *Xylene.*
4. PAHs = The whole of COCs listed under group of SVOCs in the RBRGs Table except *bis-(2-Ethylhexyl)phthalate, Hexachlorobenzene* and *Phenol.* Since RBRGs value of *Benzo(a)anthracene Benzo(a)pyrene, Benzo(g,h,i)perylene Benzo(k)fluoranthene Dibenzo(a,h)anthracene and Indeno(1,2,3-cd)pyrene* were not available for groundwater, the captioned chemicals parameters would not be tested in groundwater sample.
5. Heavy Metals - The whole list of COCs listed under Metals in Appendix IV of Guidance Note 1.
6. Since the RBRGs value of *Benzo(a)anthracene Benzo(a)pyrene, Benzo(g,h,i)perylene Benzo(k)fluoranthene bis-(2-Ethylhexyl)phthalate Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene* and *Phenol* were not available for groundwater, the captioned chemicals parameters would not be tested in the groundwater sample.
7. If there are any spatial and headroom constraints for the proposed sampling locations, trial pit(s) should be considered as an alternative to collect soil samples. The maximum depth of trial pits should be at least 2m - 3m bgs subject to site conditions.

vii. Areas with Site Investigation (SI) Constraints at This Stage

5.8 In addition to areas which are not feasible for inspection or identification of hot spots, sites with constraints for sampling works at current stage are listed in **Table 5.2** below. Supplementary CAP(s) will be prepared and submitted for EPD endorsement; CAR, RAP and RR will be prepared and submitted subsequently, if necessary.

Table 5.2 Sampling and Testing Plan of SI Works for Sites upon Decommissioning

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference
Area 2							
2-04	The following hotspots are all located in the Locomotive Running Shed: Workshop, approx. area of 300 m^2 Servicing area, approx. area of 500 m^2 Chemical storage area, approx. area of 20 m^2 Waste oil storage area, approx. area of 20 m^2	Workshop: HUH-2 (section inside the running shed), HUH-9 (section outside the running shed): Servicing area: HUH-3, HUH-5 Chemical storage area: HUH-4 Waste oil storage area: HUH-6	Borehole	Soil	Soil samples at depths of 0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m	Workshop: Lead, Chromium, Copper, TPH, VOCs, SVOCs Servicing area: Lead, Chromium, Copper, TPH, VOCs, SVOCs Chemical storage area: Lead, TPH, VOCs, SVOCs Waste oil storage area: Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	Workshop: VOCs, SVOCs, TPH Servicing area: VOCs, SVOCs, TPH Chemical storage area: VOCs, SVOCs, TPH Waste oil storage area: BTEX, TPH,	

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference

2-05	USTs near the Locomotive Running Shed Approx. area of 150 m^2	West of the USTs: HUH-8 Southeast of the USTs: HUH-10	Borehole	Soil	Soil samples at depths of 0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
2-07	North dispenser of the Locomotive Running Shed Approx. area of 10 m^2	Exactly at this hotspot HUH-7	Borehole	Soil	Soil samples at depths of 0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m	Lead, BTEX, TPH, PAHs,	NEX2213/C/361/ENS/M57/009
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
2-02	Traverser and the ground underneath Total approx. area of 800 m^2; approx. area within the cut & cover works area where excavation is expected is < 100 m^2	At the hotspot for preliminary screening of the presence of potential land contamination HUH-1 Should contamination be confirmed, deeper and more extensive sampling will be proposed with reference to Guidance Note 2, upon agreement with MTR.	Borehole	Soil	Soil samples at depths of 0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m	Lead, BTEX, TPH, PAHs	NEX2213/C/361/ENS/M57/010
				GW	One GW sample per location if encountered.	BTEX, TPH, PAHs	
2-08	Railway tracks in W2 Total approx. area of 15,000 m^2	Sampling based on grid (100 m x 100 m). Total sampling locations in this area: 5 (RWT-1 through RWT-5) Five locations in Area W2: Railway tracks nos. G10, G12, G13, G15,	Borehole If contamination is confirmed, further SI would be recommended and conducted,	Soil	For concrete-based railway tracks in this area (G17 and G18): soil samples at depths of 0.5, 1.5 3.0, 4.5 and 6.0 m bgs. For ballast-based railway tracks in this area (G10, G12 G13, G15 and the northern section of G6): soil	Lead, BTEX, PAHs, TPH	NEX2213/C/361/ENS/M57/012

Site ID	Hotspot Identified	Sampling Location/ Sampling ID	Sampling Method	Sample Matrix		Parameters to Be Tested	Figure Reference
		G17 and G18, based on a 100 m x 100 m grid pattern, between two neighbouring tracks: RWT-1 through RWT-5 Exact sampling locations and number shall also depend on the practical conditions when sampling is conducted	upon agreement with MTR		samples at depths of 0.5, 1.5, 3.0 and 6.0 m; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m. If contamination is confirmed, further (smaller grid, e.g. 50 m interval) and deeper (sampling until the bedrock or the bottom of excavation, whichever is shallower) site inspection would be conducted upon agreement with MTR		
				GW	One GW sample per location if encountered.	BTEX, PAHs, TPH	
Area 4							
4-04	Waste diesel storage area at DSD site office	Exactly at the hotspot DSD-1	Borehole	Soil	Soil samples at depths of 0.5, 1.5, 3.0 and 6.0 m bgs; further with 3.0 m intervals to the bottom of excavation or upon encountering bedrock, whichever is shallower if there is excavation works greater than 6.0 m	Lead, BTEX, PAHs, TPH	NEX2213/C/361/ENS/M57/011
				GW	One GW sample per location if encountered.	BTEX, PAHs, TPH	

Notes:
1. bgs = below ground surface; GW = groundwater
2. VOCs = The whole list of COCs listed under VOCs in Appendix IV of Guidance Note 1; SVOCs = The whole list of COCs listed under SVOCs in Appendix IV of Guidance Note 1.
3. BTEX = *Benzene, Toluene, Ethylbenzene* and *Xylene.*
4. PAHs = The whole of COCs listed under group of SVOCs in the RBRGs Table except *bis-(2-Ethylhexyl)phthalate, Hexachlorobenzene* and *Phenol.* Since RBRGs value of *Benzo(a)anthracene Benzo(a)pyrene, Benzo(g,h,i)perylene Benzo(k)fluoranthene Dibenzo(a,h)anthracene and Indeno(1,2,3-cd)pyrene* were not available for groundwater, the captioned chemicals parameters would not be tested in groundwater sample.
5. Heavy Metals - The whole list of COCs listed under Metals in Appendix IV of Guidance Note 1.
6. Since the RBRGs value of *Benzo(a)anthracene Benzo(a)pyrene, Benzo(g,h,i)perylene Benzo(k)fluoranthene bis-(2-Ethylhexyl)phthalate Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene* and *Phenol* were not available for groundwater, the captioned chemicals parameters would not be tested in the groundwater sample.

7. If there are any spatial and headroom constraints for the proposed sampling locations, trial pit(s) should be considered as an alternative to collect soil samples. The maximum depth of trial pits should be at least 2m - 3m bgs subject to site conditions

Table 5.1 Changes in Sampling and Testing Plan at Area 2 in Hung Hom Freight Terminal

REMARKS

1. Inspection pit was dug to 3.00m depth.
2. Ground gas measurement was carried out at 9.45m depth. (CO 0ppm, H2S 0ppm, LEL 0%, Oxy 20.90%)
3. Packer (Water Absorption) tests were carried out at 16.00m-21.00m and 22.00m-25.67m depths.
4. Water sample was taken at 6.00m depth.

REMARKS

1. Inspection pit was dug to 3.00m depth.
2. Ground gas measurements were carried out at 2.00m and 8.10m depths. (CO 0ppm, H2S 0ppm, LEL 0%, Oxy 20.90%)
3. Water sample was taken at 6.00m depth.

REMARKS

1. Inspection pit was dug to 3.00m depth.
2. Ground gas measurement was carried out at 2.00m depth. (CO 0ppm, H2S 0ppm, LEL 0%, Oxy 20.90%)
3. Constant head permeability permeability tests were carried out at 6.00m-7.50mm and 14.00m-15.50m depths.
4. Packer (Water Absorption) test was carried out at 20.00m-25.00m depth.

HOLE NO. **11203/SCL/EB146**

SHEET **1** of **1**

PROJECT **Stage II Further Ground Investigation for Shatin to Central Link**

METHOD **ROTARY**	CO-ORDINATES E **836896.61** N **818348.41**	WORKS ORDER NO. **D-463**
MACHINE **SD2**		DATE **17.11.2010** to **17.11.2010**
FLUSHING MEDIUM **NONE**	ORIENTATION **VERTICAL**	GROUND LEVEL **+3.90** mPD

Drilling Progress	Casing Size	Water Level (m) Shift Start/ End	TCR%	SCR%	RQD%	Fracture Index	Tests	Samples	Reduced Level	Depth (m)	Legend	Grade	Description
17.11.2010	SW							1 0.45	+3.90	0.00			Loose, reddish brown to greyish brown, fine to coarse SAND with some subangular fine to coarse gravel. (FILL)
								2 0.95					
								3 1.45	+2.40	1.50			Loose, greyish brown, clayey silty fine to coarse SAND with some subangular fine to coarse gravel of rock fragments and with occasional steel fragments. (FILL)
								4 1.95					
								5 2.45					
	SW 3.00m								+0.90	3.00			
	PW		0				B=10	3.00					Loose to medium dense, reddish brown to grey, clayey silty fine to coarse SAND with some subangular fine to coarse gravel of rock and wood fragments. (FILL)
								6 3.45					
			0				B=8	3.50					
								7 3.95	-0.10	4.00			
													Dry drilling, assumed to be FILL.
									-2.10	6.00			
			0				B=15	6.00					Medium dense, greenish grey, clayey silty fine to coarse SAND with some subangular fine gravel. (FILL)
								8 6.45	-2.60	6.50			
													Dry drilling, assumed to be FILL.
									-5.10	9.00			
		2.00 at 1800	0				B=23	9.00					Medium dense, reddish yellow, clayey silty fine to coarse SAND with some angular to subangular fine gravel. (FILL)
17.11.2010	PW 9.50m						▲	9 9.45	-5.60	9.50			
													End of hole at 9.50 m.

- SMALL DISTURBED SAMPLE
- LARGE DISTURBED SAMPLE
- U76 SAMPLE
- PISTON SAMPLE (76mm)
- MAZIER SAMPLE
- SPT LINER SAMPLE
- WATER SAMPLE
- U100 SAMPLE
- STANDARD PENETRATION TEST
- IN-SITU VANE SHEAR TEST
- PACKER TEST
- PERMEABILITY TEST
- PRESSUREMETER TEST
- BOREHOLE TELEVIEWER
- PIEZOMETER TIP
- STANDPIPE TIP

LOGGED **L. Zhang**

DATE **22.11.2010**

CHECKED **C. Lun**

DATE **01.12.2010**

REMARKS

1. An inspection pit was excavated to 2.50m deep by hand tools.
2. Soil samples taken by U76 sampler were removed from the sampler tubes for environmental testing.
3. Water sample was taken at 9.50m.

Appendix C

Analytical Laboratory Testing Results for Soil and Groundwater Samples and Standard Form 3.2 – 3.5

Summary Report of Soil and Groundwater Samples

(Stage-1 SI)

Note:
[#] indicates that the actual reporting limit of barium, cobalt, manganese, and tin for soil samples, which are lower than their proposed limits in the CAP, are accredited under HOKLAS.
* indicates samples that have lead concentration tested twice and only the most conservative value (the higher one) is listed in this table.
** indicates duplicate samples were collected, and the results represents the highested detected concentrations
*** indicates that the Csat value exceeds the 'ceiling limit' therefore the RBRG applies
Underline indicates exceedance of soil saturation limit
Full analytical results should be referred to laboratory report

Soil Sample Analysis under RBRG Industrial Limits

Note:
** indicates that the actual reporting limit of benzene, toluene, ethylbenzene, and xylenes for groundwater samples, which is lower than the proposed 0.5 µg/L in the CAP, is accredited under HOKLAS.
*** indicates that the the solubility limit exceeds the 'ceiling limit' therefore the RBRG applies
NA= Not Applicable
Bold and shaded indicates exceedance of the RBRG Level
Underline indicates exceedance of the soil saturation limit
Full analytical results should be referred to laboratory reports

Summary Report of Soil and Groundwater Samples

(Stage 2 SI)

Soil Sample Analysis under RBRG Industrial Limits

						VOC												Metals														
Site ID	Sampling Locations	Ground level (mPD)	Sampling Date	Sub-sample Depth (m)	Parameters	Acetone	Benzene	Bromodichloromethane	2-Butanone	Chloroform	Ethylbenzene	Methyl tert-Butyl Ether	Methylene Chloride#	Styrene	Tetrachloroethene	Toluene	Trichloroethene	Xylenes (total)	Antimony	Arsenic	Barium	Cadmium	Cobalt	Copper	Lead	Manganese	Molybdenum	Nickel	Tin	Zinc	Mercury	Chromium III	Chromium VI

Note:

# indicates that the actual reporting limit of methylene chloride for soil samples, which is lower than its proposed limit in
*** indicates that the Csat value exceeds the 'ceiling limit' therefore the RBRG applies
Bold and shaded indicates exceedance of RBRG Industrial limit
Underline indicates exceedance of soil saturation limit
Full analytical results should be referred to laboratory report

Note:
*The actual reporting limit for methylene chloride is lower than the proposed limit in the CAP, and is accredited under HOKLAS.
*** indicates that the Csat value exceeds the 'ceiling limit' therefore the RBRG applies
NIL= Maximum concentration detected is below the respective RBRG or solubility limit
NA= Not Applicable

Standard Form 3.3 – Groundwater Data Summary and Comparison to RBRGs and Solubility Limit

Chemical	Frequency of detection (x/y)	Range of Detected Concentration (µg/L)	Range of Method Reporting Limit (µg/L)**	Analytical Method	Relevant Land Use Categories	Most Stringent RBRG(s) (µg/kg)	Solubility Limit (µg/L)	Maximum Detected Concentration Exceeds (check if applicable)

	11203/SCL/EB123	18.00-18.15	1.1	NIL	NIL	NA
	11203/SCL/EB123	21.00-21.15	0.8	NIL	NIL	NA
	11203/SCL/EB123	27.00-27.15	0.7	NIL	NIL	NA
	11203/SCL/EB146	0.50	13.1	NIL	NIL	NA
	11203/SCL/EB146	1.50	7.7	NIL	NIL	NA
	11203/SCL/EB146	3.50-3.95	30.8	NIL	NIL	NA
	11203/SCL/EB146	6.00-6.45	3.4	NIL	NIL	NA
	11203/SCL/EB146	9.00-9.45	25.4	NIL	NIL	NA

Chemical	List Samples		Concentration (mg/kg)	Check if RBRG Exceeded	Check if Csat Exceeded	Approximate Size of Affected Area* (m^2)
	Sampling Locations	Sample Depth (m, bgs)				
Chromium VI	NA	NA	NA	NIL	NIL	NA
Petroleum Carbon Ranges						
C6 - C8	11203/SCL/EB140	3.00-3.45	7	NIL	NIL	NA
C9 - C16	11203/SCL/EB122	6.00-6.45	203	NIL	NIL	NA
	11203/SCL/EB140	3.00-3.45	1840	NIL	NIL	NA
C17 - C35	11203/SCL/EB140	0.50	2330	NIL	NIL	NA
	11203/SCL/EB140	3.00-3.45	1480	NIL	NIL	NA

Note:
NA= Not Applicable
ND= Not Dectectable
NIL= Maximum concentration detected is below the respective RBRG or Csat
* = Comfirmatory tests would be carried out to further confirm size of the affected area

Standard Form 3.5 – Groundwater Sample Concentrations and Exceedances of RBRGs and Solubility Limits

Chemical	List Samples Sampling Locations	Concentration (µg/L)	Check if RBRG Exceeded	Check if Solubility Limit Exceeded	Approximate Size of Affected Area (m^2)
