

## **2 NOISE IMPACT**

### **2.1 Introduction**

2.1.1 In accordance with the EIA Report, no noise sensitive receiver (NSR) was identified within 300m from the Project. Construction noise monitoring is therefore not considered necessary. With recommended mitigation measures properly in place, no adverse noise impact is expected during the operation phase of the Project and no noise monitoring is hence proposed.

### **2.2 Operation Phase**

2.2.1 With reference to the EIA report, no environmental monitoring and audit for potential noise impact during the operation phase is considered necessary.

### **2.3 Mitigation Measures**

2.3.1 The recommended mitigation measures for noise impacts during construction & operation phases are presented in the Implementation Schedule in **Appendix A**.
