Subject: Re: Development of Lok Ma Chau Loop - Reuse of Swamp Deposit and Sediments on site or concurrent projects such as NENT NDAs

Dear Emily,

Please be advised that the NENT NDAs project has no objection to accepting the estimated quantity of swamp deposit and sediments (stated in your email below) exported from Loop project subject to the suitability of materials and works programme of NENT NDAs project. Your consultants/agents shall properly treat and demonstrate that the materials can comply with the relevant specification/standards as fill materials before exporting the materials to our sites.

Thanks and regards,
Carrie TO

Subject: Development of Lok Ma Chau Loop - Reuse of Swamp Deposit and Sediments on site or concurrent projects such as NENT NDAs

EDMS No.: Doc. Src. :

Dear Carrie (Project Officer of NENT NDA's team) ,

I refer to our recent conversation with NENT NDA's team regarding EPD's request of written consent on the possibility to reuse swamp deposit and sediment from Lok Ma Chau Loop Development in concurrent projects such as North East New Territories New Development Areas.

Please note that Arup (our consultants) have checked with both Loop's and NENT NDAs' civil team that the estimated 30,300m³ swamp deposit and 63,700m³ sediments (as detailed below) could be reused in concurrent projects such as NENT NDAs subject to future treatment and testing as well as the implementation programme of both projects.

Works area	Waste type	Quantity
Adjacent area in Hong Kong outside LMC Loop	Non-inert swamp deposit	30,300m ³

	Sediment	32,700m ³ from fishpond; & 31,000m ³ from meander.
--	----------	---

Would you please kindly provide the consent as requested by EPD?

Many thanks.

Regards,

Emily L. F. Chan
