
Appendix 3.3
Assumption and Input
Parameters for EMFAC-HK

Appendix 3.3 Estimation of Vehicular Emission for the Study Area by EMFAC-HK

Assessment Years

The Project is planned for completion by the end of Year 2015. Another new roads project, namely the “Road Works at West Kowloon” shall also be completed by Year 2015. Part of the new road works under the project CKR is planned to be completed by Year 2020 which are within the Project Study Area. Internal roads of WKCD development planned to be completed by Year 2017. Sensitivity test have been conducted to assess the worst assessment year between Year 2016 and Year 2030 (both inclusive) as shown in Appendix 3.2. Sensitivity test indicated that Year 2016 was found to be the worst-case assessment year within 15 years of the commencement of the Project even considering the planned CKR and WKCD projects.

Model Years

The calculation of EMFAC-HK includes vehicle model for 45 years. The starting model year is 45 years proceeding the assessment year for year 2016.

Road Grouping

Appendix 3.1 shows the road networks within the Study Area covered in EMFAC-HK (version 2.5.1) model and all the road networks are categorized into 9 road types. No cold start at the middle of roads other than road type 1. The road type 5 and type 6 are present in tunnel related road for CKR project only and not be considered for the worst assessment year in 2016. The road types considered in this Project are provided in following table.

Type No.	Road Type
#Type 1	Local Road 50km/hr with cold start
Type 2	Local Road 50 km/hr
Type 3	District Distributor with 50km/hr
Type 4	Primary Distributor with 50km/hr
*Type 5	Tunnel Related Road with 70km/hr
*Type 6	Tunnel Related Road with 80km/hr
Type 7	Trunk Road with 70km/hr
Type 8	Trunk Road with 80km/hr
Type 9	Trunk Road with 100km/hr

* Road type for CKR related road as presented in the traffic data of Year 2021 and Year 2030.

Speed Profile

Based on the information from the Project traffic consultant, there is no major difference on travel speed between vehicular types for specific type of road. However, speed limit of 70km/hr have been applied for heavy good vehicles > 15t (Vehicle Class No.08), non-franchised bus (No. 15, 16) and franchised bus (No. 17, 18). For public light bus (No. 11) and private light bus (No. 12, 13), speed limit of 80km/hr has been applied. The speed profiles for different road types are also provided in Appendix 3.1.

Vehicle Population

The vehicle population data (in Year 2010) published by EPD have been used for future assessment years in the EMFAC-HK modeling. The Year 2010 HK licensed vehicle population data are made reference to the EPD's website (http://www.epd.gov.hk/epd/english/environmentinhk/air/guide_ref/emfac.html). The default vehicle populations forecast in EMFAC-HK v2.1 shall be used for this Project.

Temperature & Relative Humidity

The hourly temperatures and relative humidity profiles required by the modelling were provided from the meteorological station (at Tsim Sha Tsui) of the Hong Kong Observatory (HKO) in Year 2011. The key assumptions (including vehicle population, technology fractions, hourly temperature and relative humidity) for the EMFAC-HK model are shown in Table below.

Temperature and Relative Humidity Adopted in the EMFAC-HK Model

HKO Year 2011

	Temperature °C	%RH (Hourly Average of Year)
0000-0100	22.3	80.1
0100-0200	22.2	80.6
0200-0300	22.0	81.1
0300-0400	21.9	81.1
0400-0500	21.7	81.1
0500-0600	21.6	81.2
0600-0700	21.6	80.8

0700-0800	21.9	79.5
0800-0900	22.4	76.9
0900-1000	22.9	74.2
1000-1100	23.7	71.1
1100-1200	24.5	68.8
1200-1300	24.9	67.6
1300-1400	25.0	67.4
1400-1500	25.0	67.8
1500-1600	24.8	69.0
1600-1700	24.2	71.1
1700-1800	23.6	73.6
1800-1900	23.2	75.5
1900-2000	23.1	76.6
2000-2100	22.9	77.6
2100-2200	22.8	78.2
2200-2300	22.7	79.0
2300-0000	22.5	79.8

Vehicle Emission Standard Implementation Programme and Technology Fraction

The requirements of the Air Pollution Control (Vehicle Design Standards) (Emission) Regulations must be complied for all first registration motor vehicles in Hong Kong. Therefore, it is considered applicable for this assessment.

The latest updated implementation programme of the vehicle emission standards in Hong Kong is adopted in this assessment based on the available data in EPD's website (March 2013). The exhaust technology fractions have been made reference to the latest 2010 licensed vehicle by age and technology group fractions for different vehicle classes as provided in EPD's web site (http://www.epd.gov.hk/epd/english/environmentinhk/air/guide_ref/emfac.html). The latest implementation programme and technology fractions adopted in the EMFAC-HK are also provided in this appendix.

Vehicle Accrual

The default “Vehicle Accrual” in EMFAC-HK v2.5.1 has been adopted for the assessment.

Vehicle Kilometre Travelled (VKT)

VKT is calculated by multiplying the number of vehicles for each of the 16 vehicle types by the length of road travelled in the Study Area for each road type. The hourly traffic flows for the 16 vehicle type for different road type were provided by the Project traffic engineer. The forecast traffic flow and speed fraction for Year 2016 with 16 vehicle classes have been submitted to the Transport Department (TD) for agreement with the methodology of traffic forecast.

Trips

Trip in EMFAC-HK is referred to the number of cold start trip. Since there is no information on specific different between the local road in the Study Area and the local road within HKSAR, it is proposed to estimate the number of trips within the study area weighting by the VKT of local road within the study area and the VKT of local road within HKSAR. This can be achieved by applying the scale factor (ratio of the VKT within the study area and the VKT within the HKSAR) to the population within HKSAR (EMFAC-HK default population) for the assessment year. The scaling factor and the adjusted population are provided in this appendix. Since no cold start at the middle of roads other than road type 1, this scaling method has been adopted for road type 1 only.

Vehicular Emission Factor

The hourly emissions in Year 2016 (worst-case scenario) is first divided by the number of vehicles and the total distance travelled to obtain the local VKT information for each of road type for 16 vehicle types.

For the calculation of emission factor for road type 1 (with cold start trip), “**Burden**” mode is used for predicting the vehicular emission of 16 vehicle classes. By applying the VKT ratio between the Study Area and the HKSAR to adjust the population data in the EMFAC-HK, the pollutants emission (in tonne per day) can be calculated by the EMFAC-HK for each vehicle type for road type 1. The vehicular emission factor is calculated by dividing the total VKT to the pollutant emission.

“EmFac” mode in the EMFAC-HK is used for predicting the hourly vehicular emission of 16 vehicle classes for road type 2 to 9 (roads without cold start trips). Hourly temperature, relative humidity and vehicular speed for 16 vehicle classes are

the input parameters for the “EmFac” mode that the hourly running exhaust emission (in grams/km) can be calculated by the EMFAC-HK for each vehicle type for each road type.

The calculated hourly vehicular emission factors in gram per mile per vehicle are then selected for incorporation into the air dispersion model. The calculated vehicle emission factors together with the hourly forecasted traffic flow are used to calculate the emissions of the road links within the study area and the 24 hour emission for model input in this Project. The calculation of maximum fleet vehicle emission for Year 2016 with 16 vehicle classes is presented in Appendix 3.4. The calculated vehicular emissions of NOx and RSP for different vehicle classes for different road types are listed below. Those zero emission factor means that no vehicle is forecasted for that type of vehicle for this specific road type.

Notation for EMFAC-HK Model

Vechicle Class No.	Vehicle Class Description	Notation
1	Private Cars (PC)	PC
2	Placeholder (P1)	P1
3	Taxi	Taxi
4	Light Goods Vehicles (<=2.5t)	LGV3
5	Light Goods Vehicles (2.5-3.5t)	LGV4
6	Light Goods Vehicles (3.5-5.5t)	LGV6
