Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

CKR Tunnel	CKRTEVB	24	-	-	-	-	0.421	-	0.396	-	-	-	-

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO₂ and 80% of RSP and it is assumed that there is 7.5% NO₂ among NOx from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) Assume 50%/50% split into portal & VB (referenced from the approved EIA Study "Kai Tak Development" (AEIAR-130/2009))
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehiclar Emission factor"

Tunnel	Vent. Bld./Portal	Hour	Tunnel Length (km)	Traffic Flow (veh/hr)	Emission Factor (g/VKT)	Emission Rate (g/hr)	Emission Rate (g/s)	To East Tunnel (g/s)	Overall Emission Rate (g/s)	To Vent. BLD. (g/s)	To Portal (g/s)	First 50m (g/s)	Second 50m (g/s)

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO2 and 80% of RSP and it is assumed that there is 7.5% NO2 among Nox from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO2 and 80% of RSP and it is assumed that there is 7.5% NO2 among Nox from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

Notes:

Notes:

(3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO2 and 80% of RSP and it is assumed that there is 7.5% NO2 among Nox from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.

(4) It is assumed that APS also has a 80% removal efficiency on FSP.

Notes:

- (1) The calculation is referenced to "Appendix 4.8 - Details of Emission from Portals and Ventilation Buildings and Calculations" of the approved CKR EIA report.
- (2) Emission factors and Traffic flow are listed in "Appendix 3.3 - Vehicular Emission factor"
- (3) The Air Purification System (APS) installed in CKR ventilation system can remove 80% of NO2 and 80% of RSP and it is assumed that there is 7.5% NO2 among Nox from the tailpipe emission according to EPD's Guidelines on Choice of Models and Model Parameters.
- (4) It is assumed that APS also has a 80% removal efficiency on FSP.
