Predicted Road Traffic Noise Levels at Representative NSRs For AM Peak Hour (Unmitigated Scenario)

Table with 14 columns: NAP ID, NAP Description, Floor, mPD*, Criteria, Other Roads Only, Project Roads Only, Overall, D = C - A, Project Road [Y/N], Project Road Contribution (D<1.0) [Y/N], Overall Noise Level [Y/N], Project Road Contribution and Overall Noise Level [Y]?, Mitigation Measures Required [Y/N]. Rows include various site identifiers like E16_TN06 and E21_TN01.

Predicted Road Traffic Noise Levels at Representative NSRs For AM Peak Hour (Unmitigated Scenario)

*: Assessment level for Road Traffic Noise

#: For NSRs "SHRW" and "HPRW", the type of welfare use cannot be confirmed at this stage and the criteria for different uses vary. According to the EIAO-TM, 55 dB(A) shall apply to diagnostic rooms and wards in clinics, convalescences and home for the aged that rely on openable windows for ventilation while 65 dB(A) shall apply to educational institutions, including kindergartens and nurseries that rely on openable windows for ventilation.

With reference to "Environmental Impact Assessment Review for Updated Development Scheme and the Proposal to Remove Selected Segments of Road Side Noise Barriers along Existing Hing Kwai Street and Planned Road L54A in front of Site 3/4 (West) in Tuen Mun Area 54", mitigation measures have been taken into account (i.e. Reduction of 1 dB(A) by baffle type acoustic window/balcony
