

Appendix 3.4 Emission Inventory of Vehicular Emission Source

Estimation of Vehicular Emission for the Study Area with EMFAC-HK model

The major air quality impact arisen by the Project is the construction activities during the construction phase. Open road emission also contribute to the cumulative air quality in the Study Area. As particulate matters are the key pollutants for the construction activities, the estimation shall also focus on vehicular emission in particulate matters namely TSP, RSP and FSP. EMFAC-HK v4.3 model is adopted to estimate the vehicular emission rates of particulate matters including TSP, RSP and FSP. The input parameters and model assumptions made in EMFAC-HK model are summarised as follows:

Model Year

EMFAC-HK considers 45 years of model years for the estimation of vehicular emission. The model years start from 45 years preceding the year of interest to the year of interest as the final model year. The following table summarizes the starting and final model years of the assessment year implemented in EMFAC-HK.

Table 1 Starting and Final model years in EMFAC-HK

Scenario Year	Starting Model Year	Final Model Year
2023	1979	2023
2024	1980	2024
2025	1981	2025
2026	1982	2026
2027	1983	2027
2028	1984	2028
2029	1985	2029
2030	1986	2030

Vehicle Emission Standard Implementation Programme and Technology fraction

According to EPD's Guideline on Modelling Vehicle Emissions – Appendix III, the implementation schedules of Euro V and Euro VI standards are in the middle of a year for some vehicle classes or fuel types. Since the detailed fraction data is not available after Year 2021, by EMFAC-HK default, the technology fraction of the new emission standard is assumed to be the fraction of effective time in a year (e.g. effective since 1st Oct, the technology fraction for in new emission standard will be 25%), while the same fraction of other technologies are assumed to switch to the new emission standard (e.g. originally Technology A is 50%, A will become $50\% \times (1 - 25\%) = 37.5\%$). Evaporative technology fraction in the model is based on the default value.

The “2016 Licensed Vehicle by Age and Technology Group Fractions” provided in EPD's website, are adopted in this assessment. Since the provided exhaust technology fractions are only up to Year 2016 at the time of the assessment, those after Year 2016 are projected as abovementioned in accordance with EPD's Guideline on Modelling Vehicle Emissions – Appendix III “Implementation Schedule of Vehicle Emission Standards in Hong Kong (Updated as at May 2020)” and Appendix IV “EMFAC-HK Technology Group Indexes (Released in January 2020)”.

Vehicle Population

As recommended in the EPD's Guideline on Modelling Vehicle Emissions, default vehicle populations forecast in EMFAC-HK was used.

Vehicle Accrual

The default accrual rates in EMFAC-HK are estimated from the local mileage data adjusted to reflect the total VKT for each vehicle class. The default value was used.

Vehicle Kilometre Travel (VKT)

The “vehicle fleet” refers to all motor vehicles operating on roads within this assessment area. The modelled fleet was broken down into 18 vehicle classes based on the information in the Transport Monthly Digest and vehicle population provided by EPD.

Vehicle-kilometer-travelled (VKT) represents the total distance travelled on a weekday. The VKT is calculated by multiplying the number of vehicles, which based on the highest predicted hourly traffic flow, and the length of road travelled in the assessment area. The diurnal variation of VKT in the assessment area was provided by the traffic consultant, and the input in the model is by vehicle/fuel/hour.

Vehicle Speed

Vehicle speed on each road link at each hour was provided by the traffic consultant. All the vehicle classes on the same road link were assumed to have the same travelling speed, except medium goods vehicles, heavy goods vehicles, buses and public light buses.

In accordance with the Road Traffic Ordinance, for any road with design speed limit of 70 kph or above, the speed limit for medium goods vehicles, heavy goods vehicles and buses would be limited to not more than 70 kph. Thus, the speeds of medium goods vehicles, heavy goods vehicles and buses from the flow speed or 70 kph, whichever is lower, were adopted. For the public light buses, the speed limit should be limited to post speed of the carriageway or 80 kph, whichever is lower, were adopted.

Temperature and Humidity Profile

The lowest temperature and relative humidity in a year were extracted from the meteorological data of Year 2020 provided by HKO Tuen Mun Children and Juvenile Home Station are adopted for the model input.

Estimation of Composite Vehicular Emission Factor

Referring to the EPD's Guideline on Modelling Vehicle Emissions, “Emfac mode” generates emission factors in terms of grams of pollutant emitted per vehicle activity. It was applied for this Project, since it can provide hourly vehicular emissions, taking into account of ambient conditions and speeds combined with vehicle activity.

The hourly emissions of TSP, RSP and FSP were divided by the number of vehicles and the distance travelled to obtain the emission factors in gram per miles per vehicle. The calculated 24-hour composite emission factors of 18 vehicle classes for each road type were adopted in the subsequent air dispersion modelling.

Vehicular Emission Burden by EMFAC-HK

Vehicular emission burden for TSP, RSP and FSP were calculated based on the traffic forecast and EMFAC-HK v4.3 model. The results are summarized as below:

Table 2 Vehicular Emission Burden of Open Road Source

	Scenario Year	TSP (kg/day)	RSP (kg/day)	FSP (kg/day)
Scenario 1	2023	10.35	10.32	9.49
	2024	10.64	10.62	9.77
	2025	11.01	10.99	10.11
Scenario 2	2026	11.35	11.32	10.42
	2027	11.42	11.39	10.48
	2028	11.42	11.40	10.49
	2029	10.51	10.48	9.65
	2030	9.53	9.51	8.75

According to the results, Year 2025 and Year 2028 is selected as the worst affected year for Scenario 1 and Scenario 2 respectively.

Appendix 3.4 Emission Inventory of Vehicular Emission Source

Region	Road Network	Average Daily Vehicle-Kilometre
		Year 2020
Hong Kong Island	Major	4,691,050
	Minor	1,032,862
Sub-total		5,723,912
Kowloon	Major	7,744,913
	Minor	990,825
Sub-total		8,735,737
New Territories	Major	19,379,692
	Minor	2,670,039
Sub-total		22,049,731

Minor Road Sub-total	4,693,726
Total	36,509,380
Minor Road Percentage	12.9%
