Appendix B – Broad Brush Tree and Vegetation Plan

Appendix C – Broad Brush Tree and Vegetation Survey Schedule

Appendix D – Photographic Record of Existing Tree Groups

Appendix E – Tentative Tree Treatment Plan for TPIs and the Justifications for Removal for the TPIs

## SECTION 1 BACKGROUND INFORMATION

#### 1.1 Background

In order to meet the project requirements and specifications of Contract SPW 11/2020 "Topographic and Tree Surveys for upgrading of Tai Po Sewage Treatment Works-Investigation", Otherland Limited was associated with Engineering Surveys Limited as the subconsultant to carry out the Detailed Tree Survey and the Broad Brush Tree and Vegetation Survey Separately.

This Broad Brush Tree and Vegetation Survey, according to the scope, has been carried out for the area within 500m from the Project site (Tai Po Sewage Treatment Works) to identify dominant tree species, maturity, rarity and any plant species of conservation interest within the topographical survey area).

#### 1.2 Objective and Purpose of this Broad Brush Tree and Vegetation Survey Report

The objective of this report is to provide the broad brush tree survey & vegetation survey to supply baseline information on the Landscape resources and Landscape Character Areas in accordance with Annex 18 of Technical Memorandum issued by EPD to identify factors such as Tai Po Sewage Treatment Works-Topographic and Tree Survey VII DSD dominant tree species, maturity, rarity, and any plant species of conservation interest within each tree group.

#### 1.3 Structure of this Report

This Report contains Tree Group Identification and Condition Survey including photo records showing existing tree group conditions. Following this introductory section, the remaining sections of the Report is arranged as follows:

- Section 1 describes project background and objectives
- Section 2 describes environmental legislations, standards and guidelines related to tree survey;
- Section 3 illustrates the broad tree survey methodology;
- Section 4 describes the surveyed environment;
- Section 5 presents the broad tree survey findings;

## SECTION 2 ENVIRONMENTAL LEGISLATIONS, STANDARDS AND GUIDELINES

#### 2.1 Government Publications, Guidelines and Reports

# 2.1.1 Government Publications, Guidelines and Reports related to Broad Brush Tree & Vegetation Survey include:

- Environmental Impact Assessment Ordinance (EIAO) (Cap. 499) and relevant annexes 8,
   9, 11, 16, 17, 20 and 21 of the associated Technical Memorandum (EIAO-TM)
- Agriculture, Fisheries and Conservation Department AFCD Nature Conservation Practice Note No. 2 - Measurement of Diameter at Breast Height (DBH).
- Agriculture, Fisheries and Conservation Department AFCD Nature Conservation Practice Note No. 3 - The Use of Plant Names.
- HyD TC No. 3/2008 Independent Vetting of Tree Works under the Maintenance of Highways Department.
- Lands Department, Lands Administration Office Instructions (LAOI) Section D-12 Tree Preservation.
- Proper Planting Practices issued by Greening, Landscape and Tree Management Section of Development Bureau.

#### **2.1.2** Technical Circulars related to Tree Survey:

- DEVB TC(W) No. 4/2020 Tree Preservation.
- DEVB TC(W) No. 5/2020 Registration and Preservation of Old and Valuable Trees.

#### 2.2 Ordinances and Regulations

#### **2.2.1** Ordinances and Regulations related to Tree Survey:

- Forests and Countryside Ordinance (Cap. 96) and its subsidiary legislation, the Forestry Regulations (Cap. 96A)
- Plant Varieties Protection Ordinance (Cap. 490)
- Protection of Endangered Species of Animals and Plants Ordinance (Cap. 586) and its subsidiary legislation

## SECTION 3 METHODOLOGY

#### 3.1 Tree Survey Methodology

All existing trees with a trunk diameter larger than 95mm measured 1300mm above ground level will be surveyed in group and identified with the following information recorded with the following information in **Appendix C**, with photographic record provided in **Appendix D**:

- Tree Group ID.
- Approx. No of trees in Group
- Tree Species
- Range of Height
- Overall Health
- Overall Form
- Overall Amenity Value
- Conservation Status

#### 3.2 Terms Used in the Broad Brush Tree and Vegetation Survey Schedule

#### 3.2.1 Tree Group ID.

Surveyed tree group reference number recorded

#### 3.2.2 Approx. No of trees in Groups

The estimate of the number of trees within the group

#### 3.2.3 Tree Species

Botanical names and Chinese common names of the surveyed tree recorded

#### 3.2.4 Range of Height

Range of height measured from ground level to the top branch in meters of the trees in the group

#### 3.2.5 Overall Form

Estimated according to the condition of the canopy, branch and trunk of the trees in the group

(G) = Good Well-balanced canopy and straight strong trunk(s) without any broken

branch

(F) = Fair Slightly unbalanced canopy and non-straight trunk(s)

(P) = Poor Heavily leaning, unbalanced canopy misshapen, awkwardly-forked

trunk or with any broken branch or trunk

#### 3.2.6 Overall Health

Estimate according to the condition of foliage, exposed roots, branches and trunk of the trees in the group

(G) = Good Without any visible disease or defect, sound and healthy tree

(F) = Fair With few visible defects or health problem

(P) = Poor With many visible defects or health problem such as rot, cavities in the

main trunk, insect or fungi attack, lack of vigour and crown die back, etc.

#### 3.2.7 Overall Amenity Value

Amenity value of a tree should be assessed by its functional values for shade, seasonal interest, screening, reduction of pollution and noise and also its fung shui significance, and classified into the following categories.

(G) = High Important trees which should be retained by adjusting the design layout

accordingly.

(F) = Medium Trees that are desirable to be retained in order to create a pleasant

environment, which includes healthy specimens of lesser importance

than "High" trees.

(P) = Low Trees that are dead, dying or potentially hazardous and should be

removed.

#### 3.2.8 Conservation Status

State the rarity and protection status of the species under relevant ordinances in Hong Kong. References such as Rare and Precious Plants of Hong Kong, the IUCN Red List of Threatened Species and the Forests and Countryside Ordinance (Cap. 96) are used.

## SECTION 4 DESCRIPTION OF THE SURVEYED ENVIRONMENT

#### 4.1 Surveyed Environment

The surveyed area falls within the Outline Zoning Plan (OZP) Plan No. S/TP/28, which is defined as approximately 500m from the Project Site (Tai Po Sewage Treatment Works) Tai Po Sewage Treatment Works-Investigation.

The East of the Project Site is a piece of land (Lot Abbr. GLA-TTP Lot No. 240) at the Shuen Wan Landfill in Tai Po where has been zoned for use as Other Specified Uses (Golf Course). The vegetation in the land mainly consists of mixed woodlands and slopes trees.

The North, West and South of the Project Site are areas mainly used as the industrial activities, where also falls within the Outline Zoning Plan (OZP) Plan No. S/TP/28, zoned Other Specified Uses (Industrial Estate).

#### Broad Brush Tree and Vegetation Survey for Upgrading of Tai Po Sewage Treatment Works-Investigation

# SECTION 5 TREE SURVEY FINDINGS

#### 5.1 Existing Broad Brush Tree & Vegetation Survey Findings

The tree survey was carried out between 11<sup>th</sup> January, 2021 and 9<sup>th</sup> February, 2021. A total of **81** tree groups which comprise **approximately 15170** nos. trees were surveyed within Surveyed. The Broad Brush Tree & Vegetation Survey Plan is enclosed in **Appendix B**.

No Registered Old and Valuable Trees (OVT) are recorded. Most of trees are common tree species such as *Acacia confusa*, *Macaranga tanarius var. tomentosa*, *Eucalyptus spp.*, and undesirable species such as *Leucaena leucocephala*. They are generally in poor to fair form, poor to fair health and low to medium amenity value; the overall height ranges from **1.5m** to **18m**.

1 no. of tree (*Aquilaria sinensis*) is species protected under the Protection of Endangered Species of Animals and Plants Ordinance (Cap.586) while 295 nos. of trees are species protected under The Forests and Countryside Ordinance (Cap. 96a) including 2 nos. of *Lagerstroemia indica*, 292 nos. of *Lagerstroemia speciose* and 1 no. of *Michelia x alba*.

Tree group identification and condition of tree group surveyed is tabled in Broad Brush Tree and Vegetation Survey Schedule in **Appendix C**. Photographic Record of Existing Tree Groups is shown in **Appendix D**.

#### **5.2** Proposed Tree Treatment

All 14,640 nos. of trees outside the Project Site would be retained.

Approximate 74 out of 530 nos. of trees (14%) within the Project Site would be retained while 456 nos. of trees (86%) would be transplanted or removed.

There are total of 11 nos. of trees of particular interest (TPI) identified within the Project Site. Their locations are indicated in **Appendix B** and their photos are provided in **Appendix D**. The detailed tree schedule for the TPIs is presented in **Appendix C**.

The tentative tree treatment plan and the justifications for removal for the TPIs is provided in **Appendix E**. One no. of TPI would be retained and ten (10) nos. of TPI would be removed. The proposed tree treatment for the TPI identified within the Project Site is summarized below:

	ree ID	<b>Botanical Name</b>	Chinese Name	Height (m)	DBH (mm)	Crown Spread (m)	Remarks	Treatment
,	T1	Aquilaria sinensis	土沉香	5	178	4	Cap. 586	Retain
,	Т2	Ficus microcarpa	細葉榕	15	2483	30	DBH ≥ 1000mm	Remove

Т3	Ficus microcarpa	細葉榕	12	1082	25	DBH ≥ 1000mm;	Remove
	ricus microcurpu	学术位	12	1002	23	Crown Spread ≥ 25m	
T4	Ficus microcarpa	細葉榕	15	1974	25	DBH ≥ 1000mm;	Remove
	ricus microcurpu	和未怕	13	13/4	23	Crown Spread ≥ 25m	
T5	Ficus microcarpa	細葉榕	15	2451	25	DBH ≥ 1000mm;	Remove
	ricus microcurpu		13	2431	23	Crown Spread ≥ 25m	
T6	Ficus microcarpa	細葉榕	10	1194	20	DBH ≥ 1000mm	Remove
T7	Ficus microcarpa	細葉榕	13	1210	14	DBH ≥ 1000mm	Remove
T8	Ficus benjamina	垂葉榕	18	1241	14	DBH ≥ 1000mm	Remove
T9	Ficus benjamina	垂葉榕	11	1416	20	DBH ≥ 1000mm	Remove
T10	Ficus benjamina	垂葉榕	10	1019	6	DBH ≥ 1000mm	Remove
T11	Ficus benjamina	垂葉榕	14	668	28	Crown Spread ≥ 25m	Remove

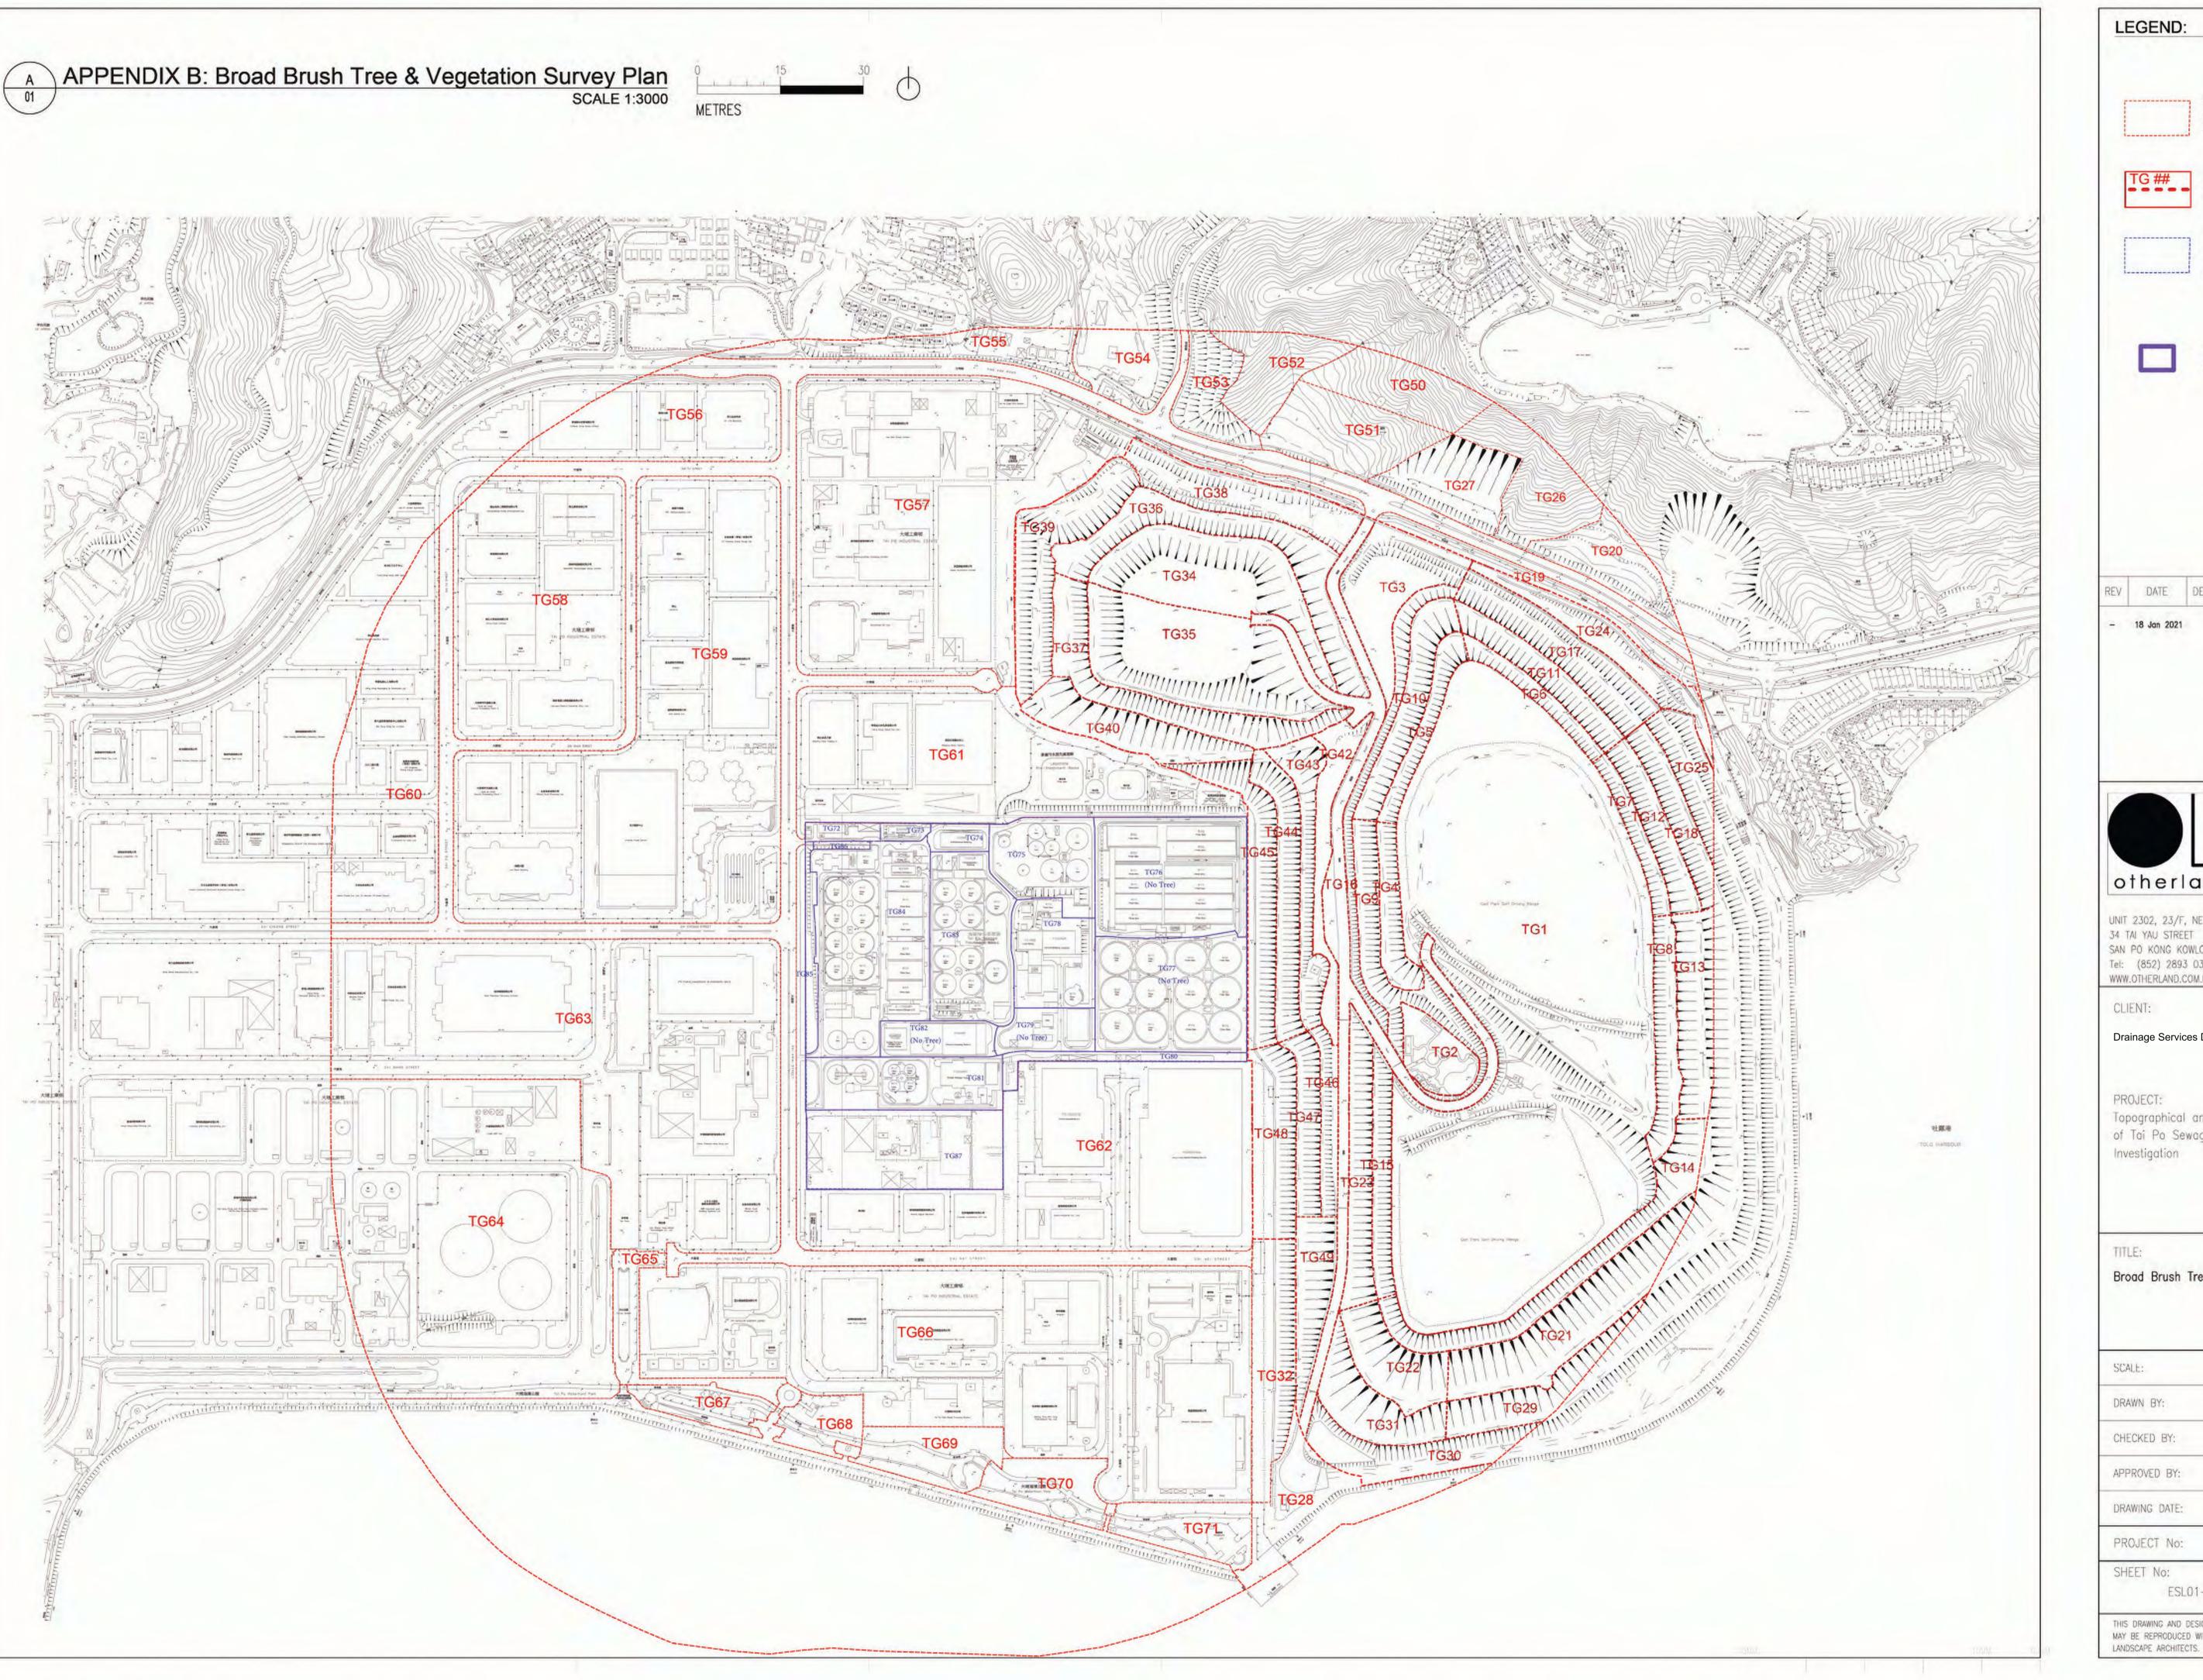

The tree treatment is tentatively proposed according to the preliminary design and subject to change during the detailed design stage.

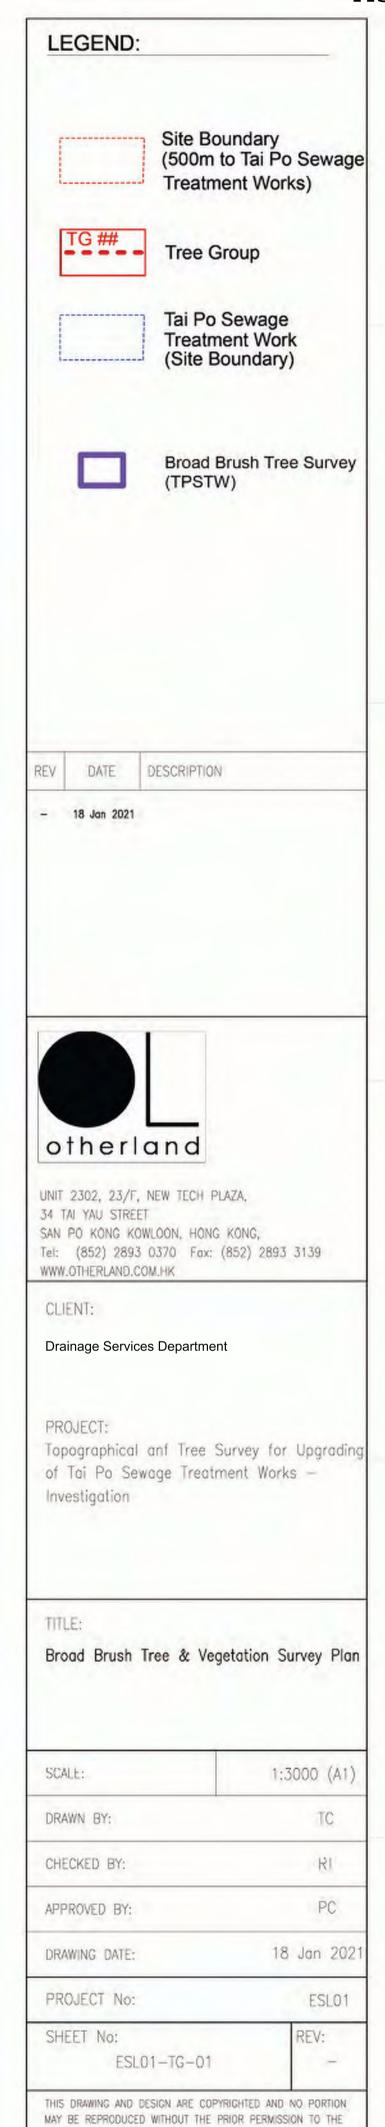

- End-

<sup>^</sup> Conservation Status:

OVT = Tree specimens registered as Old & Valuable Trees in the OVTs' register

POVT = Trees identified with potential for the Registered Old and Valuable Trees

TPI = Trees of Particular Interest

TS = Species included in the latest version of IUCN Red List of "Threatened Species"

Cap. 96 = Protected species under Forestsand Countryside Ordinance

Cap. 586 = Protection and Endangered Species of Animals and Plants Ordinance

NT = Species listed in "Rare and Precious Plants of Hong Kong" (AFCD, 2003)

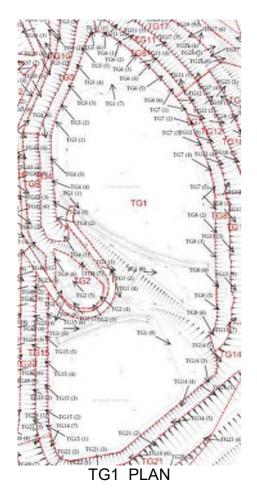

#### #Justification:

- a. Affected by proposed work, impossible to retain in-situ
- b. Poor form (e.g. canopy lopsided & unbalanced, tree trunk leaning dangerously, tree trunk crooked, with hazard-beam bending)
- c. Poor health (e.g. tree severely stressed, diseased, insect-pest infected, thin foliage density cover, dieback of canopy)
- d. Poor structure (e.g. tree trunk decayed, with decayed hollow cavity, dangerous bifurcation codominant stems with included-bark likely to split apart)
- e. Root ball not extractable for transplant (e.g. trees grown on slope/masonry wall; trees with roots are tangled together with adjacent tree)
- f. Ubiquitous species easily replaceable by new compensatory planting of better quality in term of ecological value
- g. Undesirable Species: According to DEVB TC(W) No. 4/2020
- h. Oversized tree not feasible for transportable/ transplantable

### **APPENDIX E**

TENTATIVE TREE TREATMENT PLAN FOR TPIS AND THE JUSTIFICATIONS FOR REMOVAL FOR THE TPIS

### Appendix E – Justifications for Removal of Mature Trees

T8 would directly conflict with proposed Pre-dewatered Centrifuge and Co-digestate Drying Area. T2, T3, T6, T9, T10 and T11 would directly conflict with proposed Co-Digestate Silo Area. T4 and T5 would directly conflict with proposed Sidestream Treatment Facilities. T7 would directly conflict with proposed Secondary Sewage Treatment. As the whole area of TPSTW is fully occupied, moving those facilities to other places are not feasible.

For the proposed Pre-dewatered Centrifuge and Co-digestate Drying Area and Sidestream Treatment Facilities, some equipment would be commonly used / associated with other equipment, and these facilities / equipment would need to be placed on the same floor. Hence, reduction of footprint of these two facilities by providing higher buildings to store related facilities on separate floors are technically not feasible. Removal of T4, T5 and T8 would be unavoidable.

For the Co-Digestate Silo Area, the area surrounding for the silos would be reserved for truck movement and sludge loading/unloading purpose. In addition, building structure enclosing the silos and the surrounding trunk loading / unloading area would be built to mitigate the odour impact and more space would be needed. Hence, removal of T2, T3, T6, T9, T10 and T11 would be unavoidable.

A compact sewage treatment technology has been adopted for the new sewage treatment facilities in the proposed expansion site. The dimensions of other proposed sludge and co-digestion related tanks / silos / buildings in the remaining Project area have been designed to meet various engineering requirements. For example, the tank size of new digesters has been optimized to facilitate the mixing of digester contents. Standby tanks are also required to allow backup storage and digester maintenance. Further increasing the tank height and reducing the tank diameter or building one large digester to reduce the footprint would also be technically infeasible.

<sup>\*</sup> The proposed layout is tentative and subject to change during detailed design stage.

Adjustment of the proposed development layout to preserve the concerned mature trees has been critical reviewed to be not feasible.
