* From 2023, Marine refuse data of the AFCD include the refuse collected from Marine Parks, Marine Reserve and Special Cleanup.

Marine refuse data of the MD includes the palm stearin collected in August (i.e. 89 tonnes).

[^] The quantities of marine refuse reported by MD in “tonnes” before 2021 are estimated by volume, instead of actual weight. In response to the recommendation of the Public Accounts Committee’s Report, the actual weight of marine refuse collected by MD in tonnes is used in accordance with records provided by the Environmental Protection Department since 2021, which included marine refuse collected from ships, floating refuse and refuse collected from locally-licensed and river trade vessels.
