

## **The Livestock Waste Control Scheme : Guidelines for Wet Muck-out and Hybrid Systems**

### ***GENERAL PRECAUTIONS***

For effective performance of a Wet Muck Out or a Hybrid system, the following general principles should be adhered to:

- (a) Check and clean up the dung channels, screens and reception tank regularly.
- (b) Prevent overflowing throughout the system. This may be achieved through proper design (eg. units should be of sufficient capacity and capability), construction and maintenance (eg. regular desludging). Allowing overflow to occur will result in prosecution.
- (c) Always adhere to the supplier's recommended operating and maintenance procedures.
