

**Additional Control Measures
Recommended for the PRD Economic Zone**

Based on the findings of the Mid term Review, the following additional control measures are recommended for adoption in the PRD Economic Zone:

- to require all new coal-fired power plants to install denitrification (de-NOx) systems;
- to introduce more stringent local emission standards for industrial and commercial boilers on or before 2010;
- to promote cleaner production in the printing industry in the PRD Economic Zone, to encourage the use of printing inks that complied with the environmental standards for the industry, and to promote the wider use of product certification system across the industry;
- to tighten emissions control on local vessels, including the implementation of relevant emission standards for local vessels on or before 2010;
- to promote cleaner production in the manufacturing of paint products, to introduce a combined mandatory audit and voluntary declaration system for the paint products, and to strengthen efforts on promoting cleaner production in the paint industry;
- to implement in phases a labelling scheme for VOC-containing products in the PRD Economic Zone;
- to require manufacturers of VOC-containing domestic consumer products, such as aerosol insecticide, detergent and adhesives sold in the PRD Economic Zone, to meet cleaner production requirements so that their products would meet environmental certification standards; and
- a public awareness programme should be established to promote use of

products with low VOC contents.
